INTRODUCTION TO *LIGHT RAILWAY NEWS* pdf VERSION

From December 1977 to December 1997 *Light Railway News* was published separately to *Light Railways* magazine. It was the Society's news magazine. Since the February 1998 issue of *Light Railways* all the information previously published in *Light Railway News* is now published in *Light Railways*. This enabled a much higher quality of presentation.

Information published in *Light Railway News* included:

- o Field reports - these are reports of visits to sites of abandoned specialised railways
- o Research column - a 'help-wanted' section for those involved in historical research
- o Locomotive, rolling stock & equipment manufacturers - news of items currently under construction or recently delivered
- o Industrial Railway News - a state by state listing of reports from operating specialised railways, in which Queensland sugar tramways are a major feature
- o Heritage and Tourist Railway News
- o Meetings notices

VARIATIONS FROM PRINTED ISSUES

Over the period of its publication *Light Railway News* changed in the form of printing, and page format several times. The earliest editions were duplicated, without any illustrations. Over the years the quality of printing, and therefore ease of reading, has varied widely. The great majority of issues were printed to A5 size, which is the page size used in this edition.

This edition of *Light Railway News* has been completely reformatted to present a uniform appearance, and style of presentation.

All the content of the original issues is included in this edition, including photographs, maps, and diagrams.

The following modifications have been made to the text:

- Where items were corrected in later issues, the corrections have generally been made to the original entry, and cross-referenced to the correction. Where the correction may be contentious, the original entry has not been changed, but a cross reference has been made to the corrections. No change has been made to the original entry where the correction has been considered frivolous or pedantic.

- Where the sequence of items could be made more logical, items within an issue have been resequenced, e.g. where the printing process forced photographs to be separated from their corresponding news items, or where a stop-press item was received at the last minute and published on the last page.
- Information required for postal purposes has been deleted.
- Tables of contents have been deleted.
- Typographical errors have been corrected.
- Changes have been made to style of presentation of dates, to make them uniform.

LOCOMOTIVE WHEEL ARRANGEMENTS

The Whyte system of wheel classification is used throughout *Light Railway News*, with the exceptions outlined below (see "When the Whyte system is not used").

The Whyte system breaks locomotive wheels in to three groups:

- Leading unpowered wheels
- Driving wheels connected to each other by outside rods
- Trailing unpowered wheels.

Tender wheels are ignored.

Hence a 2-6-0 has two leading unpowered wheels, six driving wheels connected by outside rods, and no trailing unpowered wheels.

For steam locomotives without separate tenders, the following suffixes are used:

T	Tank. Water is carried in tanks on each side of the boiler.
ST	Saddle tank. Water is carried in a tank on top of the boiler.
WT	Well tank. Water is carried in a tank, or tanks, between the frames below the boiler.
BT	Back tank. Water is carried in a tank at the back of the locomotive.
CT	Crane tank. A tank (T) locomotive fitted with a crane to lift loads.
TT	Tender and Tank. Water is carried in tanks on the locomotive as well as in a separate tender.
VB	Vertical boilered locomotive.
G	Geared locomotive.

For non-steam locomotives, the following suffixes are used:

- D** Diesel locomotive, unknown transmission system.
- DM** Diesel locomotive with mechanical gearbox.
- DH** Diesel locomotive with hydraulic transmission.
- DE** Diesel locomotive with electric transmission.
- P** Petrol or kerosene locomotive, unknown transmission system.
- PM** Petrol or kerosene locomotive with mechanical gearbox.
- PH** Petrol or kerosene locomotive with hydraulic transmission.
- PE** Petrol or kerosene locomotive with electric transmission.
- BE** Battery powered electric locomotive.
- WE** Overhead wire powered electric locomotive.
- R** Railcar, usually used in conjunction with other suffixes above, e.g. DMR = diesel mechanical railcar.

Special applications of the Whyte system.

The Whyte system is modified for articulated steam locomotives with two sets of driving wheels, each coupled together with outside rods. There have been few of these locomotives on light railways in Australia, but some examples are:

- 0-4-4-0T No leading or trailing unpowered wheels, two sets of four driving wheels, each coupled by outside rods, e.g. Mallet locomotive used on Magnet tramway in Tasmania.
- 2-6-0--0-6-2 Two leading unpowered wheels, two sets of six driving wheels each coupled by outside rods, two trailing unpowered wheels. Examples are the Beyer-Garratt locomotives used on the Victorian Fyansford cement works railway; and G42, the Beyer-Garratt locomotive owned by the Puffing Billy Railway.

When the Whyte system is not used.

Where the driving wheels are not connected by outside rods, the Whyte system is not used in *Light Railway News*. Examples of these exceptions are as follows:

- B-B DH Diesel hydraulic locomotive running on two four-wheel bogies, with all wheels powered.

B-B WE	Overhead wire powered electric locomotive running on two four-wheel bogies, with all wheels powered.
2-2wDH	Four wheel diesel-hydraulic locomotive with two wheels unpowered, and two wheels powered.
4wDM	Four-wheel diesel-mechanical locomotive with all wheels powered, the axles being connected internally by chains or gears.
6wPM	Six-wheel petrol-mechanical locomotive with all wheels powered, the axles being connected internally by chains or gears.
4w+4wTG	Steam locomotive with geared drive, running on two four-wheel bogies. All wheels of the bogies are powered. The wheels of each bogie are not connected by outside rods, but by gears and shafts (e.g. Climax locomotive on Puffing Billy Railway), or in some rare cases, by chains (e.g. Harman locomotive on Victorian Forests Commission Tyers Valley Tramway).

The Light Railway Research Society of Australia

No.1

December 1977

Hon. Editor: John Browning, P.O. Box 111, INDOOROOPIILLY, Qld. 4068

Hon. Secretary, LRRSA NSW Division: R. Mason, P.O. Box 290, BURWOOD, NSW 2134

Hon Secretary, LRRSA Vic Division: A.. Straffen, P.O. Box 21, SURREY HILLS. Vic 3127

WELCOME TO LIGHT RAILWAY NEWS

The Council of the LRRSA Victorian Division was recently very pleased to accept an offer by John Browning, of Brisbane, to act as a News Editor for the Society. Prior to coming to Australia three years ago, John worked as a volunteer of the Festiniog Railway and Howdenclough Light Railway in the U.K., and is currently a member of the Board of the Australian Narrow Gauge Railway Museum Society.

Light Railway News will be published six times a year, and with each issue members will receive supplements giving meeting details and news of other Society activities. LRN will largely take over the role of 'News, Notes and Comments' in *Light Railways*, as it was never possible to publish up-to-date news in LR due to delays of up to seven months between receipt and publication of news items. *Light Railways* will continue to be published on a quarterly basis, and will contain historical articles, letters, and photographs of current light railway activities

The Council sees the aims of LRN as:

- An information service for members
- A publicity outlet for preservation societies
- A means of building up Society records
- A means of stimulating interest in light railways

The real success of LRN will of course depend on the contributions received by the Editor. That's where you come in. We hope you will support this new

venture by actively contributing news items.

(Frank Stamford, on behalf of LRRSA Vic. Div. Council)

EDITORIAL

When you visit a site of light railway interest, or get news from a friend or the press remember all the other enthusiasts who would like to hear about it. While the news is still fresh, drop me a line about it at the above address. Preservation groups in particular can benefit by coverage in LRN.

The success of the next issue depends on you. The deadline for the February issue is 6 January. Get those reports rolling in!

NEW SOUTH WALES

BELBIN FAMILY. St.Ives. Sydney 2ft. gauge

Members of the Belbin family now own four steam locos. 0-4-2T John Fowler 17881 of 1929 which operated at South Johnstone Mill, currently operates at Central Park, Forrester's Beach (see cover of LR 57), 0-4-2T Perry 2714.51.1 of 1951, from Mourilyan Mill, is currently stored. 0-4-2T Baldwin 10533 of 1899, originally from Fairymead Mill, has been purchased from Bruce Macdonald of Goulburn in a dismantled state, as a long-term restoration project. The fourth loco is a Hudswell, Clarke 0-6-0 donated by CSR Ltd. and believed to be either '5' (1548 of 1925) from Macknade or *Sydney* (1838 of 1950) from Victoria Mill. The Belbins hope to eventually operate a 2ft gauge line in the Sydney area.

STOP PRESS

The Hudswell Clarke loco donated by CSR Ltd to the Belbin family is *Sydney* which is currently at Forrester's beach.

(Railway Digest, 11/77)

MINERS MEMORIAL PARK, FREEMANS WATERHOLES 3ft. 6ins. gauge

Freeman's Waterholes is a popular picnic area in the area west of Newcastle close to the West Wallsend and Cessnock coalfields. An interesting collection of colliery equipment is preserved in the open, for the picnickers to view as they nibble their sandwiches. The central feature is a winding head from an old coalmine, and a number of items of rail mounted colliery equipment are displayed. These include a drilling 'jumbo', a four wheeled battery locomotive, and other equipment which was used to load and transport the coal to the surface.

(Ian Crellin, Editor 5/77)

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY, Albion Park Gauges various.

(P. O. Box 1036 Wollongong 2500)

CSR Ltd have donated Hudswell, Clarke 0-6-0 *Cairns* (1706 of 1938) from their Victoria Mill to this group. The loco's gauge is 2 ft, as is most of the equipment owned by ILRMS.

(Tony Madden, 10/77)

TIMBERTOWN, Wauchope 2 ft gauge

A Hudswell, Clarke 0-6-0 loco, donated by CSR Ltd., has arrived here. Formerly '6' on the Macknade Mill roster, its builder's number is 1862 of 1953.

(Townsville Daily Bulletin, 9/77)

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Brisbane.

(P.O. Box 270, North Quay 4000)

Gauges 2 ft & 3 ft 6 in.

The Society has acquired a number of interesting locomotives during 1977. Three large 2ft gauge four wheeled petrol locos were purchased along with a quantity of workshop equipment from the estate of Alwyn Zinn, an Ipswich railwayman who had built them himself before his untimely death in 1976. A 3ft 6in gauge four wheeled petrol locomotive formerly used at the Ipswich sawmill of Arthur Foote and Sons, arrived at one of the Society's storage sites in July. It is believed to have been built in the Forrers Foundry, Ipswich, sometime between the wars. During October, two more locos arrived, this time 2ft gauge steam engines. One was the only surviving Innisfail Tramway steamer, QR B9-1/2 Class 0-6-2'11" (John Fowler 17110 of 1927). This had been displayed in a park in Innisfail since 1964, and was donated by the Johnstone Shire Council. The second was a loco donated by CSR Ltd. This is Hudswell, Clarke 0-6-0 *Melbourne* (1701 of 1938), formerly of Victoria Mill.

(Editor 10/77)

BUCASIA PROGRESS ASSOCIATION PARK. Bucasia 2 ft gauge

An ex-Pleystowe Mill 0-6-2T (John Fowler 20764 of: 1937) was observed here in a rather sorry condition and without its funnel, in August. However, by October, it was reported to have disappeared. Further details of its disposal are awaited.

(Editor 8/77, Tony Madden 10/77)

MARIAN MILL 2 ft gauge

This season, there have been two steam locos in daily use. The Perry 0-6-2T (2601.51.1 of 1951) has been used on yard shunting duties, while the John Fowler 0-6-2T (20277 of 1934), which had been spare engine for a number of years, has been used on ballast trains.

(Editor 8/77)

MILLAQUIN MILL,. Bundaberg 2ft gauge

Three steam locomotives remain at the mill as follows:

6	0-6-2T Bundaberg Foundry	6 of 1952
8	0-4-2T Bundaberg Foundry	3 of 1952
9	0-4-2T Perry	9737.45.1 of 1945

'6' was reported in use on 28 July. On 1 September, work was being done on the front tubeplate of '8'. Apparently, the mill wishes to keep both Bundaberg Fowlers in running order in case of emergencies. '9' is out of use.

(Alan Robert 8/77, Editor 8/77, Sunshine Express 10/77)

QUNABA MILL 2 ft gauge

Qunaba Mill has remained the last all steam mill during the 1977 season. Three locos have generally been in use during the day out of the mill's more modern locos:

21901	<i>Delta</i>	0-6-2T Perry	7967.50.4 of 1950
21902	<i>Skipper</i>	0-6-2T Perry	1850.46.1 of 1946
21903	<i>Flash</i>	0-6-2T Perry	6160.48.1 of 1948
21905	<i>Jumbo</i>	0-6-2T Bundaberg Foundry	1 of 1952

The fifth loco, 0-6-2T *Invicta*, a John Fowler (11277 of 1907) was used early in the year in filming for the movie *The Mango Tree*. However, it has seen little or no use since then, and is apparently out of use.

(Alan Robert 8/77, Editor 8/77)

QUEENSLAND RAILWAYS, INNISFAIL TRAMWAY 2 ft gauge.

As many members will know, the tramway has been sold by QR to the local sugar mills, Mourilyan and South Johnstone. The rolling stock was handed over on 21.6.77, with the exception of the two Fairmont navy trolleys which have been retained by QR for regauging to 3 ft 6 in gauge.

South Johnstone Mill received the grass cutter in addition to three locos. The line between Innisfail and Harbour Jct., which provided access to the Innisfail loco depot is no longer needed, but the section from Currajah Jct. to Mourilyan including the Queensland Bridge over the South Johnstone River will no longer be used either, as all South Johnstone sugar now goes to

Mourilyan Harbour by road. The three South Johnstone locos are:

10	DL112	Mourilyan	0-6-0DM	Baguley	3390 of 1954
	DL17	Currajah	0-6-0DM	Com-Eng	AA1544 of 1960
	DL20	Pin Gin	0-6-0DM	Com-Eng	AI77111 of 1975

In August, these locos were observed running in QR livery, with *Mourilyan* having received an additional running number. Only PIN GIN had retained its nameplates, although all the locos retained their names painted on the cab rear.

Mourilyan Mill (Howard Smith Industries) received the remaining locos and rolling stock (6 locos, 110 wagons, 2 brake wagons, 3 ballast hoppers, 3 goods wagons and a poison unit). However, only four locos were retained at Mourilyan Mill, as two were sent south during July to Howard Smith's other mill - Moreton Mill at Nambour. Shortly after Mourilyan loaned another loco to Goondi. The position as observed in August was as follows:

Mourilyan Mill

	DL15	Nerada	0-6-0DM	Com-Eng	B1111 of 1956
No.6	DL16	Korabine	0-6-0DM	Com-Eng	AA1543 of 1960
No.7	DL18	Coorumba	0-6-0DM	Com-Eng	AJ2359 of 1962

DL15 is spare loco, and apart from losing its nameplates, retains its QR identity. DL16 and DL18 have been repainted in mill livery of grey and yellow, and have been renumbered.

Moreton Mill

	DL13	Innisfail	0-6-0DM	Baguley	3389 of 1954
	DL19	Kalbo	0-6-0DM	Com-Eng	H1 022 of 1958

These were in QR livery.

Goondi Mill (on loan from Mourilyan Mill)

	DL14	Johnstone	0-6-0DM	Com-Eng	B1112 of 1956
--	------	-----------	---------	---------	---------------

This loco was being used as yard shunter. It was in QR livery but had lost its metal nameplates, though retaining the painted name.

(Editor 8/77, Sunshine Express 10,/77)

RACECOURSE MILL, Mackay 2 ft gauge

One problem facing sugar mills nowadays is ballast haulage. The large bogie ballast hoppers coming into increasing use are too much for a Simplex loco on anything but level track. However, main line locos are needed for cane haulage during the season, and need maintenance during the slack. To provide suitable motive power for ballast trains, Racecourse Mill has purchased three small diesel locos from a Sydney dealer. Two are 8 tonne E.M. Baldwin four wheeled diesel hydraulics, built for tunnelling work.. One

of these is 6/2612.1 of 1968. The third is a Ruston & Hornsby Type 48DLG (392120 of 1955) which formerly worked at Southern Portland Cement, Berrima, NSW and Mount Alexandra Mine, Mittagong, NSW. These locos are being completely reconditioned and modified for their new purpose in the mill workshops.

(Editor 8/77)

SUGAR INDUSTRY MUSEUM, Mourilyan 2ft gauge.

TOWNSVILLE a Hudswell, Clarke 0-6-0 (1099 of 1919) - has been donated to the museum by CSR Ltd. This loco, from Victoria Mill, has associations with the district, for it used to work at Goondi Mill. Exhibited inside the museum is a small pump trolley.

(Editor 8/77)

TANAWHA WORLD. Tanawha 2 ft gauge

This tourist attraction on the Bruce Highway south of Nambour acquired an unidentified Ruston & Hornsby loco from Moreton Mill in 1976 with the idea of operating it on a short line. (This loco had been exported second-hand from the U.K. in about 1970). It was decided that it was too heavy for the light track laid, so it was kept as a static exhibit with a view to its disposal. Instead, a passenger railcar was built for the line by a Mr. Drysdale of Woodridge, Brisbane. This is a bogie vehicle loosely based on old QR practice, with a petrol engine driving by means of a chain on to the front axle of the rear bogie which seems to be fixed rigidly on to the main frame. There is also a small passenger coach. In September, the Ruston loco was observed in the shed at the Sunshine Plantation, Forest Glen, so it appears to have been sold.

(Editor 9/77)

VICTORIA MILL, Ingham 2 ft gauge

Hudswell, Clarke 0-6-0 HOMEBUSH (1067 of 1914) has been retained at the mill as a preservation project. In August, it was observed in the shed, undergoing overhaul. All the other steam locos from Victoria (and Macknade) have been disposed of to outside bodies for preservation (see elsewhere in this issue).

(Editor 8/77)

NEW CANE LOCOS

12 new diesel locos are known to have been delivered to sugar mills during 1977. Full details will appear in LRN 2.

TASMANIA

IDA BAY RAILWAY. Ida Bay 2ft gauge

The Tasmanian Government recently purchased a 6.5 kilometre section of the Ida Bay Railway for \$81,000 so that it could be operated as a tourist venture. The Ida Bay Railway Act was passed in the State Parliament on 21.9.77, authorising the operation of the railway from the town of Ida Bay to the terminus at the Deep Hole, Southport. It is expected to be operating for the 77/78 tourist season.

(Ralph Proctor)

SECOND RIVER Tramway, Karoola (Tasmanian Steam Preservation Society) 2ft gauge

Further to the item in LR. 51, Krauss 0-4-0T '1' has been fitted with a new set of tyres. (Although this loco incorporates many parts including works plates from Krauss 5682, its mainframe is apparently that of 5800 of 1907 - Ed). Krauss 0-4-0T '2' (6067 of 1910) has been repainted and lined out. The ex-Mount Lyell ballast hopper wagon has been fitted with ex-TGR Zeehan & N.E. Dundas bogies and couplings, and work is underway on the building of a guard's van.

Recent trackwork has extended the operating distance to over 1/4 mile, and more is planned for 1978.

(Ralph Proctor)

VAN DIEMEN LIGHT RAILWAY Society Don 3 ft 6 in & 2 ft gauge

(P O Box 887, Launceston 7250)

CSR Ltd is believed to have donated a Hudswell, Clarke 2 ft gauge 0-6-0 to this group. The loco in question is either '5' from Macknade Mill (1548 of 1925) or SYDNEY (1838 of 1950) from Victoria Mill.

(Editor)

WEE GEORGIE WOOD STEAM RAILWAY INC., Tullah 2 ft gauge

A meeting was held at the Tullah Hotel on 6/4/77, which resulted in the formation of the above group, which plans to operate the John Fowler 0-4-0WT stored in the loco shed at the Tullah mine site, after some boiler repair work is carried out. (Is this loco in fact the authentic WEE GEORGIE WOOD? - Ed.)

It is believed that track will be laid to a new lake in the area, which is to be formed by a new hydro-electric dam, and it is expected that this will become a popular tourist attraction

(Ralph Proctor)

VICTORIA

EMERALD TOURIST RAILWAY BOARD 2 ft 6 in gauge

The ETRB took over ownership of the entire Puffing Billy operation from the Victorian Railways Board from 1.10.77. (The ETRB is a Statutory Authority with a majority of PBPS nominees). On 1.10.77, 7A (2-6-2T Newport 1905) hauled the last VR narrow gauge train, the 11.10 departure from Belgrave to Lakeside. (It had previously hauled the last train on the Walhalla line in 1954, and the last train between Upper Ferntree Gully and Belgrave in 1958). The inaugural train of the ETRB, hauled by a gleaming '14A'. (2-6-2T Newport, 1914), was the 2.10 departure.

'8A' (2-6-2T Newport, 1908) is undergoing a complete rebuild at Belgrave. It is expected that a new all-welded boiler will be ordered shortly at an estimated cost of \$40,000. Loco '3A' (2-6-2T Newport, 1900) was recovered from the Lord Mayor's Camp at Portsea and moved to Menzies Creek in April. It is expected that it will be moved to Belgrave shortly and will initially be used as a source of spares but a complete rebuild has not been completely discounted.

Heavy repairs are overdue for the four operating locos, due to a lack of preventive maintenance under VR. Garratt G42 (2-6-0+0-6-2 Beyer Peacock 6268 of 1926), has been taken into the workshops for boiler examination and the old firebox has been removed for scrap. The long term aim is to restore this loco to working order using PBPS labour. A small diesel loco (details not to hand) has been donated by the Melbourne & Metropolitan Board of Works but will require some attention before being put into service on ballast trains etc.

A \$200,000 grant for the year 1977-8 has been received from the State Government in response to a submission regarding a five year programme of expenditure involving major locomotive works, the regrading of Belgrave yard, new pedestrian access from the VR Belgrave station and loco maintenance facilities

(Narrow Gauge 9/77)

PUFFING BILLY MUSEUM Menzies Creek Gauges various

Outline approval has been given for the relocation of the museum to a site at Lakeside.

In March a 2ft gauge Malcolm Moore four wheeled petrol locomotive was collected from the State Electricity Commission at Redcliffs. During the same month, the 2 ft gauge ex-Pleystowe Mill 0-4-2ST (Hudswell Clarke 1559 of

1925) was steamed for the first time since its withdrawal in 1964. A 2ft gauge steam loco has been donated by CSR Ltd. This is believed to be '9', an 0-6-0 from Macknade Mill (1863 of 1953).

(Narrow Gauge 6/77, 9/77)

WESTERN AUSTRALIA

PUBLIC WORKS DEPARTMENT 2ft gauge

A 2ft gauge railway system is being used in the construction of a sewerage outlet tunnel from the new Beenyup Plant at Mullaloo to the sea, a distance of over a mile. Three George Moss battery electric locos are being used to remove spoil and take in materials.

(Western Rails 10/77)

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION

(P.O.Box 2379 Cloverdale 6105) Gauges various)

This group was formed in April 1976 and was incorporated in October of the same year, with the aim of preserving material from the light railways of WA.. Work has started to construct a 2 ft gauge line on a farm property in the Darling Ranges near Perth, while steps are taken to find a site for a permanent and public line.

2 ft gauge diesel loco has been purchased from the Kalgoorlie Lake View mine system. It is a 'Planet' (F.C. Hibberd & Co.) built in 1938, which became redundant with the cessation of rail operations at Lake View in 1975. A number of items of rolling stock have also been acquired, of 2 ft, 18 in and 15 in. gauges

The Light Railway Research Society of Australia

No.2

February 1978

Hon. Editor: John Browning, P.O. Box 111, INDOOROOPIILLY, Qld. 4068

Hon. Secretary, LRRSA NSW Division: R. Mason, P.O. Box 290, BURWOOD, NSW 2134

Hon Secretary, LRRSA Vic Division: A. Straffen, P.O. Box 21, SURREY HILLS. Vic 3127

EDITORIAL

Response to LRN 1 was favourable, but this has not been matched by contributions by members. While I wish to thank those members who have sent in contributions, I would like to point out to the rest that I do not intend, nor will I be able, to continue to base most of the contents of LRN on my own observations, It's true to say that most people think that what happens on their own doorstep won't be of interest to others but news of progress or events in the various preservation groups will have to form the basis of future editions of LRN. Even if you feel unable to put pen to paper, a copy of your group's newsletter sent to me will enable news of your group to gain a wide currency. Most preservation groups hope to attract new members, and sooner or later visitors. By publicising your group's activities, you will be building up support.

It is very tempting to see the Society as something we pay to make use of - receiving our publications and perhaps attending meetings. However, -the Society is no more than the sum total of its members and whatever each one of us gets out of the Society has usually been put in by somebody else. Perhaps you can put something in - I would be very grateful to receive from you absolutely any news of Light Railway interest for inclusion in the next issue of LRN - particularly if your state was not represented in this issue.

VOLUNTEERS WANTED

- A letter from Ted Stuckey

Over the past seven years, the success of the LRRSA has largely depended on the work of three people:

Frank Stamford - Publications Editor

Arthur Straffen - Secretary

Steve Martin - Sales Officer

Frank, Arthur and Steve have indicated that they can no longer devote as much of their time to the affairs of the Society, and will not accept nomination again for the positions they now hold on the Council.

On your behalf, I want to express our appreciation and thanks for their work over the past years. At the same time, I want to draw every member's attention to the vacancies that will exist and ask you all to seriously consider taking an active role in the Society's affairs by nominating for one of these positions.

All the retiring council members have indicated that they will make the transition to "new management" as easy as possible and can be called on to assist if required in the event of any major problems occurring.

The LRRSA fills a valuable role covering private railway history and associated aspects of industrial archaeology. It should not be allowed to fade because of lack of support.

Will you volunteer your services?

E.G. Stuckey

NEW SOUTH WALES

ELCOM COLLIERIES PTY. LTD., AWABA STATE COAL MINE, Awaba. 1067 mm. gauge.

Awaba State Coal Mine is an underground mine located south-west of Newcastle. Elcom Collieries Pty Ltd is owned by the Electricity Commission of NSW, and the mine supplies coal for the nearby Wangi Power Station. During a visit to the mine on 28 November 1977, I inspected the mining operations and the associated mine railway system.

The coal is won by conventional mining rather than by continuous mining, which is used at most other underground coal mines in NSW. In continuous mining, the coal is cut and loaded from the coal face in one operation with a single machine (the continuous miner). Conventional mining is a system in which the coal is undercut, drilled, charged with explosives, blasted, and then loaded in separate operations.

After blasting, the broken coal at the face is loaded into rubber-tyred shuttle-cars which feed conveyor belts. The belts in turn deliver to a centrally located surge bin. From the surge bins the coal is loaded into a 20 car set of mine cars, which is spotted by using a creeper mechanism, between the rails. The loaded set is then hauled approximately 2.4 km to an unloading point and bin by a single trolleywire electric locomotive. From the bin, the coal is transported by conveyor belt up a short inclined drift to the surface. After unloading, the trolleywire locomotive pushes the empty set back to the underground surge bin and loading point.

During a normal shift, three sets of mine cars and two trolleywire locomotives are engaged on coal haulage. The trolleywire locomotive road is a single track with one crossing loop where full and empty sets cross. Four-wheeled 20 ton Jeffrey trolleywire locomotives are used. Current collection is by trolleypole and a conventional single-wire trolleywire system. I noted two trolleywire locomotives on coal haulage underground, and a third receiving attention in the surface workshops. The mine-cars are bottom-dump four-wheel cars with a capacity of 5.7 tonnes. Men and materials haulage to the production panels, which are beyond the end of the trolleywire locomotive road, is by battery locomotive. Rubber-tyred vehicles transport materials from the end of the rails to the face areas. During my visit I noted three four-wheeled battery locomotives underground. (Believed to be also built by Jeffrey - Editor)

(Anthony Weston 11/77)

CSR LTD, CONDONG MILL, Murwillumbah 610 mm gauge

Preserved outside the mill is a complete train. The loco is Ruston & Hornsby Type 40DLU 371959 of 1953, a four wheeled diesel in yellow and black livery. The other vehicles are a cane truck, a set of rail bogies, a four wheeled ballast wagon, a bogie ballast hopper, a bogie flat car, and a bogie passenger car.

(Editor, 1/78)

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY, Gauges various

Tongarra Road, Albion Park. (P. O. Box 1036, Wollongong 2500)

The museum has a developed area of 1.6 ha with about 0.30 km of 610 mm gauge track. The South Coast Model Engineering Society occupy part of this area with 3-1/2 in and 5 in gauge, ground level track.

610 mm gauge locomotives currently at the museum are Davenport 0-4-0ST 1596 of 1917 soon to run, Perry 0-6-2T 7967.49.1 of 1949 being rebuilt, and a "Leyland--Krauss" four wheeled petrol engined unit built on the frame of Krauss 0-4-0T 2179 of 1889 by Newbolds General Refractory Co. There is also

a Gemco electric loco, a Mancha battery-electric, and. a Lloyd-Hartnett petrol engined rail tractor. A petrol engined cane inspector's rail car from Victoria Mill, Qld. is, at the moment, in a disassembled state. Privately owned locos at the museum include a four wheeled petrol engined Malcolm Moore used for shunting, Krauss 0-4-OT 6611 of 1912 from Mount Bauple Mill, Qld. being rebuilt, and an incomplete Fowler 0--4 -OT (20284 of 1934) from Qunaba Mill.

About 50 items of rolling stock are at the museum comprising bogies, side tippers, skips, hoppers, a meat van from Victoria Mill, and a number of flat wagons, some of which have been fitted with seats and hand rails.

Two incomplete 762 mm gauge Shays (Lima 906 of 1904 & 2097 of 1908) from Hampton, Qld. will ultimately be rebuilt into one static exhibit. A short length of standard gauge track accommodates South Bulli No. 2, Hudswell, Clarke 0-6-OT 297 of 1888, a Corrimal coal hopper, a Newnes D wagon and a CHG brake van from Australian Iron & Steel.

Stationary exhibits consist of a vertical boiler which provides steam for a single cylinder horizontal engine, two twin cylinder winches and a Westinghouse air compressor. Stationary items recently received from the Wollongong Gas Co. comprise a Reader single cylinder engine coupling to a Weller rotary exhaustor, a Worthington twin cylinder pump and various sizes of Weir pumps.

Headquarters at the museum is the former Yallah railway station building.

(J. Reynolds 12/77)

NYMBOIDA COLLIERY, Nymboida 610 mm gauge

Two Ruston & Hornsby four wheeled diesels operate here. One is a 20DLU, 331246 of 1952, while the other is a 30DLG, 385901 of 1956. A second 20DLU, 331266 of 1952, has been dismantled for spare parts, and only the frame now remains.

(Editor, 1/78)

PEARSON BRIDGE PTY. LTD, Beaumont Road, Mt. Kuring-gai 610 mm gauge

This firm of civil engineering contractors sold two E.M. Baldwin tunnelling locos to Racecourse Mill, Qld in 1977 (see LRN1). Stored in their yard at Mt. Kuring-gai on 6 January were two E.M. Baldwin four wheeled diesel hydraulic 3 tonne tunnelling locos. They are builder's numbers 4661-1-7-72 and 4661-2-7-72 of 1972, model DH3T.

(Editor 1/78)

HIGHLANDS LIGHT RAILWAY, SOUTHERN HIGHLANDS TRANSPORT MUSEUM (P.O. Box 93, Mittagong 2575) 610 mm gauge

This short line is in a very pleasant rural setting, amid many other transport relics. Pride of place in the collection must go to Hudswell, Clarke 0-4-0WT 1423 of 1922. Built for agents Robert Hudson, this loco worked at the National Portland Cement Co. Maria Island, Tasmania and later at the Corrimall Colliery near Wollongong. It is very nicely restored in a black livery. There is also a four wheeled diesel loco by Planet (F. C. Hibberd & Co.), builder's number 2380, which is turned out in a green livery. Rolling stock includes a bogie coach built at the museum. Please note that this premises is private property, and all visits must be by prior arrangement.

(Editor 1/78)

TIMBERTOWN, Wauchope 610 mm gauge

THE GREEN HORNET, John Fowler 0-6-0T 12271 of 1910 was working the train as usual. It has no boiler lagging or plates to cover the boiler shell. This is to make the loco look "more authentic" (!). Another unusual feature is that the balloon stack is painted green. The Simplex four wheeled petrol loco (Motor Rail 4214) was by a newly constructed shed, which contained Hudswell, Clarke 0-6-0 1862 of 1952 from Macknade Mill, Qld. The oil-burning apparatus has been removed and the loco is now a wood burner. The sandboxes, turbo-generator and headlights have also been removed, and the loco was being painted green. It is expected to be in service during January. A new bogie coach is under construction incorporating improvements on the original design so that wheelchairs and prams may be accommodated.

(Editor 1/78)

WARATAH PARK, Terrey Hills 610 mm gauge

This Sydney animal park, "the home of Skippy", operates two locos on its railway. One is a four wheeled Simplex diesel (Motor Rail 11035 of 1956) formerly of Condong Mill. The other is an interesting B-B petrol loco built at the park. Under construction was a steam outline loco - the park has apparently built a number of such locos for tourist attractions in the Sydney area.

(Editor 1/78)

QUEENSLAND

NEW CANE LOCOS

The following is a list of locomotives etc. known to have been delivered to sugar mills during 1977. All are of 610 mm gauge.

BUILDER'S No.	MODEL	CUSTOMER	NAME/NO
E. M. Baldwin B-B Diesel Hydraulic			
7070-1-3-77	DH24B Mk5A	Victoria Mill	MAITLAND
7070-2-4-77	DH24B Mk5A	Victoria Mill	ADELAIDE
7070-3-4-77	DH24B Mk5A	Macknade Mill	19
7070-4-4-77	DH24B Mk5A	Macknade Mill	20
7126-1-5-77	DH24B	Pleystowe Mill	SHANNON
7135-1-7-77	DH24B Mk5A	Victoria Mill	GOWRIE
7220-1-6-77	DH32B	Farleigh Mill	FOULDEN
7244-1-8-77	DH24B	S.Johnstone Mill	6
7267-1-6-77	DH24B	Isis Mill	10
7303-1:-7-77	DH28B	Mossman Mill	DAINTREE
?	DH26B	Kalamia Mill	SEAFORTH

In addition, E.M. Baldwin are understood to have built a DH24B loco for stock

Commonwealth Engineering (Qld) 21 tonne B-B Diesel Hydraulic			
NA59112	Cattle Creek Mill	4	
Commonwealth Engineering (Qld) 18 tonne 0-6-0 diesel hydraulic			
A060113	Tully Mill	No. 18	
Plasser Australia, 4 wheeled diesel hydraulic ballast tamper			
116	KMX-06	Tully Mill	-

(Stack Talk, 70, 71, 72, 73)

ACLAND COAL CO., ACLAND COLLIERY, Acland 610 mm gauge

One of the last old-time small mines, situated on the Darling Downs. Four men work underground in a mine that was opened up about eight years ago to replace an older one. Four wheeled diesels of Jenbach design are used. Jenbach 1137 of 1952 was under repair in the shops, while outside lay the frame of Jenbach 1139 of 1952 - the loco has been cannibalised for spares. Underground, Jenbach 1138 of 1952, which arrived last year from Burgowan No.13 Colliery, was in use hauling trains of eight loaded skips of 18 cwt capacity from the coal face to the bottom of the shaft, a distance of about 0.80 km, and returning with the empties. The skips are hauled up and let

down a short inclined drift by cable. At the coal face was Bundaberg Foundry 16 of 1955. Its duties consisted of hauling one skip containing two miners, at the start and finish of the shift.

(Editor 1/78)

BURGOWAN COLLIERIES PTY LTD, BURGOWAN No.13 COLLIERY, Torbanlea 610 mm gauge

This colliery had six four wheeled diesels of Jenbach design until its closure about a year ago, when they were put up for sale at \$1,000 each. Rather surprisingly by mid-December, three had been sold. Loco details as follows:

	Jenbach	1079	1951	
2	Jenbach	1138	1952	sold to Acland Colliery
3	Jenbach	1191	1954	sold for a pleasure line at Moura
4	Jenbach	1077	1951	
5	Rusty	Bundaberg Foundry	19	1956
	Jenbach	1155	1953	sold for a pleasure line at Blackwater

(Editor 12/77)

MOSSMAN MILL 610 mm gauge

The Centenary celebrations of the Douglas Shire took place in November, and the mill took a notable part in them. John Fowler 0-4-2T IVY (15947 of 1922) which had been "preserved" in the mill yard for ten years, was repainted and placed on a semi-trailer with an old loco tender and a steel ex-Douglas Shire Tramway wagon. This formed the mill's exhibit in the Centenary procession on 6 November.

The next day, the mill put on two special excursion trains to the Mowbray River. 388 passengers were conveyed free of charge on each train which was hauled by new bogie diesel hydraulic *Daintree* (E.M. Baldwin 7301-1-7-77), and consisted of eight bogie flats (normally used for conveying "canetainers"), fitted with seats and safety rails. The first train left Mossman at 8 a.m. and returned from Mowbray River soon after arrival. The second left Mossman at 11 a.m., and passengers attended a picnic at Mowbray River before departing for Mossman at 3 p.m.

(E.M.Loveday 12/77)

QUEENSLAND PIONEER STEAM RAILWAY 1067 mm gauge

A syndicate purchased ex QR 4-6-0 PB15 class No.448 (Walkers 93 of 1908) from Pioneer Valley Park, Kuraby, during 1977. It is currently stored on private property at Redbank, near Ipswich, and has a current boiler certificate. The

group is now investigating the possibility of running the locomotive in S.E. Queensland. Anyone wishing to view the locomotive should contact M. Wagner, 10 Kiama St., Wavell Heights 4012.

(Sunshine Express 10/77)

SUGAR INDUSTRY MUSEUM, Mourilyan 610mm gauge

The museum has purchased the unique jackshaft drive John Fowler 0-4-2T (4667 of 1881) from Goulburn Steam Museum. The loco had previously been purchased in 1976 from Miller's Machinery in Melbourne where it had been since about 1917. It is believed to have been used by the contractor, Bashford, in the construction of Mourilyan Mill. Unfortunately, the boiler inspector is believed to have refused permission for the loco to be steamed at Mourilyan, which is a great disappointment, as *Townsville*, Hudswell, Clarke 0-6-0 1099 of 1919 from Victoria Mill has also been refused a boiler certificate.

(Narrow Gauge Times 6, David Mewes 12/77, 1/78)

SUNSHINE PLANTATION, Forest Glen 610 mm gauge

Many members may be familiar with the "Big Pineapple" just south of Nambour on the Bruce Highway. The main feature of this tourist attraction is a tramway circuit of about 1 km or so on which visitors travel around the 'tropical' plantation, which contains examples of many different crops grown in Queensland. A taped commentary describing and explaining the different products to be seen is played, and the driver must control the train's speed so that it is in the appropriate place at the right time. The tramway opened at Christmas 1971, and has operated very successfully since that time. Two trains each of eleven permanently coupled four wheeled carriages each seating four passengers are often in continual use.

The first locomotive at the Plantation was a Ruston & Hornsby 30DLU builder's number 371386 of 1954. This loco originally worked at the Maranoa Colliery and then at the Caledonian Colliery before being acquired for the Sunshine Plantation. It was remodelled in 1971 by George Hadley of Nambour, to give it some resemblance to a steam locomotive. It carries the name SUNSHINE PLANTATION EXPRESS and is numbered DLU30. In January 1978, it was out of use and some parts had been removed.

At some time, another 30DLU was acquired for spare parts. This loco was one of a batch of six purchased by the Victorian State Rivers & Water Supply Commission (builder's numbers 285338-43 of 1949). It carries no builder's plate, and there is evidence that its engine has been exchanged with one of the other SR&WSC locos, but it seems fairly certain to be builder's number 285338 or 285341. Very little of this loco remains now apart from the frame

and part of the engine.

The second loco to operate at the Plantation was another Ruston & Hornsby, but this time a 48DLG, 398072 of 1957. This first worked at the Berrima Colliery of the Southern Portland Cement Co, in NSW, and then at the Mount Alexander Mine, Mittagong. For running at the Plantation it received a new cab and some body alterations. It is named SUNSHINE PLANTATION SPECIAL and numbered DLG48.

The next loco is a Ruston & Hornsby 48DL which is believed to have originated with the Ministry of Defence in the UK. It was imported into Australia around 1970 for the Moreton Mill, where it received a new cab and was equipped for use on the mill tramway. However, it was never a real success here, and in 1976 passed to Tanawha World, a new tourist attraction nearby.

It was never used here as it was found to be too heavy for the kind of work envisaged. It came to the Plantation in 1977. Its cab was cut down to enable it to enter the shed, and some work was done on the gearing and engine timing which it is claimed have greatly improved its haulage power. It has now been painted green like the other locos and carries the name SUGAR CANE TRAIN No.3. The loco has had all maker's plates removed, and the editor would welcome any advice as to its identity.

The latest locomotive here arrived towards the end of 1977. It started life as a Ruston & Hornsby 48DLG, 379072 of 1954, and worked at Berrima and Mittagong like SUNSHINE PLANTATION SPECIAL. Having been acquired by the Sunshine Plantation, it was sent to the Castle Hill Works of E.M. Baldwin & Sons in Sydney, and the chassis and wheels were used in the construction of a four wheeled diesel hydraulic loco with a VM four-cylinder diesel engine. New body and cab were fitted to give it a "steam outline". It carries a brass E.M. Baldwin rebuild plate giving the number 7807-11-77, and is named SUGAR CANE TRAIN No.4. The original engine is now at the Plantation as a source of spare parts. The success of this loco has led to the decision that another loco will be dealt with in the same way. Most likely this will be DLU30.

Last but not least, *Coolum*, a John Fowler 0-6-0T (16036 of 1923) ex Moreton Mill is "preserved" on a block of concrete near the restaurant.

(Editor 1/78)

TASMANIA

TASMANIAN TRANSPORT MUSEUM SOCIETY, Glenorchy 1067mm gauge

The Society has recently been donated an 0-4-0 vertical boilered locomotive

by Chesterman's Sawmills, Sharp's Siding, in the Derwent Valley. The loco was apparently built in 1892, and worked at Southport and Geeveston before going to Sharp's Siding in about 1936. The loco is situated in the bush far from road access, and its recovery is likely to present quite a problem. (see *Light Railways* 57 p.13).

(Trolley Wire 172)

VICTORIA

EMERALD TOURIST RAILWAY BOARD 762mm gauge

The end of VR narrow gauge operations was incorrectly reported in LRN1 as having taken place on 1-10-77. In fact, the special train of this date marked the inauguration of the ETRB, but Puffing Billy continued in VR ownership until 29-10-77. The handover train was the 11.10 departure on the 29th, which was hauled out of Belgrave by 14A and 12A after a ceremony at the station, in which the General Manager of VicRail, Mr Ian Hodges, presented the Chairman of the ETRB, Mr P.Wymond, with the official green flag.

It has been decided that total reconstruction of 3A will follow that of 8A as funds become available. 6A is being retubed at present, and 7A, will follow when this is complete, though the boilers of both locos have a strictly limited life expectancy. A tender by Fabsteam Ltd for two boilers together with special die blocks at a cost of \$107,000 has been recommended to the Board by the Society.

(Narrow Gauge, 68)

PUFFING BILLY MUSEUM, Menzies Creek Gauges various

610 mm gauge Hudswell, Clarke 0-4-2ST 1559 of 1925 was steamed at the museum on 29-10-77 to mark the handover of Puffing Billy by VR. 610mm gauge Hudswell, Clarke 0-6-0 1863 of 1953 had arrived at the museum .from Macknade Mill a few days before and was steamed on 3-12-77.

(Narrow Gauge, 68)

GEE LONG STEAM PRESERVATION SOCIETY 1067mm gauge

GSPS has continued to operate at Belmont Common, while continuing to push on with its plans to establish the "Bellarine Peninsula Railway", a 16 km long line to be built on the trackbed of the VR Queenscliff line from Drysdale to Queenscliff. Some problems have recently been encountered with the Queenscliff Borough Council's opposition to GSPS operating trains over the last 2 km into the town. Meanwhile, ex TGR 4-6-2 M6 (Robert Stephenson & Hawthorn 7429 of 1951) has been undergoing restoration work at Queenscliff.

On the Belmont Common Railway, ex QR PB15 4-6-0 No. 54, which entered service in June 1976, has been sharing duties with ex SAR 4-8-0 T 251. These locos were both built by Walker's of Maryborough, being builder's numbers 99 of 1909 and 276 of 1917 respectively. T276 had to be removed from service in October for repairs to a leaking boiler plug. Hudswell, Clarke 0-4-2ST No. 6 *Wesley B. McCann* (Builder's number 646 of 1903) was used several times for boiler washout and shunting duties during September and November. A Whiting Trackmobile has been acquired from Alcoa, Port Henry. Perhaps some member will be able to supply details of this unit.

(The Commoner, 11/77)

WALHALLA & THOMSON RIVER STEAM TRAMWAY 762 mm gauge

Ron Kain announced in October that he intended to move himself and his train from Walhalla. This announcement came nine years after he came to the town, and follows many years of frustration involving opposition from some quarters in Walhalla and a lack of support from government bodies. Track only extended to the station limits, and the locomotive, a 2-4-2ST Yankee-style rebuild of an 1886 Couillet from Melbourne Gas Works had spent most of its time in the shed.

(Walhalla Improvement League Newsletter, 11/77 via Steve Martin)

DIAMOND VALLEY RAILWAY LTD, Eltham, Vic 184 mm gauge

Proposals have been made for an "outer circle" track extension in Eltham Park. A new carriage shed has been erected, enabling a bigger workshop to be established in the existing building. Of great interest and value to all involved in the building or operation of a railway of any gauge of 184 mm gauge or larger, is a booklet containing a draft for a complete specification of the "formation, construction, installation and maintenance of all permanent way and associated features" for the Diamond Valley Railway Ltd.

(Diamond Rails, 5, 6)

TOORONGO VALLEY RAILWAY, Toorong Falls Road, Noojee, Vic. 260 mm gauge

This line has been built as a Tourist Attraction and is approximately 1.5 km in length at present, with a possible extension of 10 km in mind for the future. The line's first loco is a scale model of a VR 'W' class built by Miersch Engineering Co. Ltd, of Heidelberg. Consideration is being given to the construction of a 'B' class locomotive as well as a 2-8-2 or 4-6-2 steam loco and passenger cars. The line is open-every weekend and public holiday to anyone interested in railways.

EDITORIAL

Many thanks to all those who sent in contributions for LRN 3. Please keep those reports flowing in. This issue of LRN includes two new features - Research column and members ads. I hope that they will add to the interest and usefulness of LRN.

OBITUARY - ANDREW ROBERTSON LYELL

Victorian members of the Light Railway Research Society of Australia learnt with sorrow and regret that one of their fellow members, Andrew R. Lyell, had died in hospital on 8 January after a short illness. He was 64.

Andy was an authority specialising in the history of early mining railways and tramways of Victoria, besides being an outstanding photographer and patient researcher. He was a contributor to *Light Railways* of notes and photographs.

A former Councillor and Vice-President of the Australian Railway Historical Society's Victorian Division, he was also a long-time member of the Victorian Model Railway Society. In that capacity, he participated enthusiastically in helping to create detailed working models of historic V.R. locomotives and rolling stock to operate on the elaborate model railway built by V.M.R.S. members in association with the V.R., which was one of the outstanding exhibits during the Railway Centenary Celebrations in September 1954. In

this project he was aided and abetted by his wife, who became equally skilled as a model-maker.

Andy contributed also to the Railway Centenary by the initiation and production of the commemorative brass plaque which marks the approximate site of the departure point of the first passenger train for Sandridge (Port Melbourne) on 12 September 1854. This is on the wall facing No.1 platform at Flinders Street Station, Melbourne.

Andy had a wide circle of friends in many fields - in photography, geology, the C.M.F. in which he held commissioned rank during the 1939-45 war, and his family of two sons and a daughter.

He worked as a senior photographic technician at the Prahran Institute of Technology until shortly before his death. This, and kindred Societies, is the poorer for his passing, but the richer for his friendship.

J.L.B. 2/78

RESEARCH COLUMN

The idea of this section of LRN is to enable members publicise requests for information about areas in which they are conducting research.

LAKE GEORGE MINES, NSW

A17825 Sergeant McDonald, c/- Sergeants' Mess, RAAF Williamtown, NSW 2314, is interested to know what happened to the battery electric locomotives which worked here. Two 'trammer' 5½ hp locos were supplied by Mancha in 1937 (builder's numbers 1838 & 1839), and ten 4½ ton 18½ hp locos were supplied by Atlas between 1938 and 1956. These were numbered 1 to 10 and their respective Atlas order numbers and dates of construction are as follows: 1E1665 of 1938 (two locos), E4498 of 1940, E9585 of 1943, F5690 of 1946, F8550 of 1948, G3541 of 1950, H497 of 1954, H3236 of 1956, H4515 of 1956. All these locos were of 1 ft 7¾ in gauge. Keith thinks that some of them may have gone to Mt. Lyell in Tasmania.

TASMANIA

Paul Simpson, c/- PO Box 290, Burwood, NSW 2134 writes as follows. If you have purchased a copy of the book *Tasmania Remembered* (available from LRRSA Sales Depts.), refer to page 54 on which the text refers to the loco depicted on p.55 as a Krauss product, when in fact the loco is an Orenstein & Koppel product (possibly B/n 2748 of 1898). The "radial" valve gear is quite evident in the photo and is unlike the outside Stephenson valve gear as used on the Krauss locos.

While on the subject of Krauss locos, can anyone comment on the photo on p.26 of *A pictorial history of the Railway & Tramways of Western Tasmania* where the caption states that the loco depicted in the centre photo is a Krauss product, in spite of its general appearance not being that of a Krauss. Has any reader a comment on this loco?

VICTORIA

Mike McCarthy, 30 Miller Rd, The Basin, Vic 3154, would be very pleased to hear from any member having information, photographs etc. relating to any of the tramways in the area bounded by Nar-Nar-Goon, Moe, Noojee and Tanjil Bren in Gippsland. At least 50 tramways are known to have existed in the area over the last 100 years, but the actual number is probably much higher than this.

SOUTH AUSTRALIA

J.B. Mackinnon has submitted for the interest of members a list of 2 ft gauge Loco and horse-worked lines known to have existed in the state. This list was published in *The Buffer Stop* (Journal of the S.A. Railway Modellers Assoc. Inc.)

Explosives tramway - Dry Creek to Broad Creek Wharf - horsedrawn (Bob Yuill, c/- 45 Flinders Rd, Hillcrest 5086, S.A., is researching this); Gypsum tramway - Kangaroo Island - steam; Gypsum tramways - Yorke Peninsula - all near Inneston - 1 horse worked, two with locos; Construction line - Baker Range Drain - horses & locos; Slate tramways - three quarries around Willunga; Mineral tramway near Coffin Bay; Stone tramway near Cobdogla for the Murray locks construction; Salt works lines at Price; Salt works line apparently still operating at Langhorne Creek; Brickyard at Torrensville; Glenelg fun fair had a steam hauled line, either 24 in or 18 in before 1948; Adelaide Zoo.

NEW SOUTH WALES

CENTRAL PARK RAILWAY, Foresters Beach 610 mm gauge

In January 1978, a fierce storm caused damage to the Central Coast Region. The Central Park site was awash with mud and other debris, and as a result, the track was scoured out over 70% of its length. Some sections were left suspended in mid air, while much rail was bent and forced out of gauge. Several concrete supported sections were undermined, and ditches and culverts were destroyed. Repairs have been carried out by the proprietor of Central Park, but not to a high enough standard to allow the operation of the steam loco.

A great deal of work has been done on the complete rebuilding of ex QR railmotor trailer PL121, with the replacement of much timber work and steel panelling. This vehicle, and another as yet untouched will be mounted on ex-South African Railways bogies which have been completely overhauled. Only preliminary work has so far been carried out on *Sydney*, Hudswell, Clarke 1838, which has a current NSW boiler certificate.

Len King 2/78

THE COMMONWEALTH PORTLAND CEMENT CO. LTD. Portland 1435 mm gauge

One of the last strongholds of regular steam locomotive operation in Australia. The company owns and operates a short branchline (1.5 km) from the cement works to Portland railway station on the Wallerawang - Mudgee railway.

Three locomotives now work the line but over the years the company has owned a total of six engines. Those still in service are: Number 3, Andrew Barclay 0-6-0T (B/n 1234 of 1911), Number 5, Andrew Barclay 0-6-0T (B/n 1470 of 1916) and ex-NSWGR 2605, Dubs 2-6-2ST (B/n 2794 of 1892).

A visit to the works on 23.1.78 revealed No.3 operating the branch, having come out of overhaul about a month before. In the loco shed No.5 was chocked up on blocks of wood minus its driving wheels and still undergoing overhaul. 2605 although operational, was out of steam and stored on a siding adjacent to the loco shed.

At the time of visiting, traffic was not very brisk, a total of five trips being made. The engine was in steam by 7.45 am and after taking coal and water departed light engine to the main line to pick up empties, (all rolling stock used on the line is owned by the NSW PTC.) The next trip was just before lunch, the rest being in the afternoon. These trips comprised of taking the cement hoppers, two at a time, back to the mainline and returning to the works light engine.

No.3 sports a livery of black with green tank and cab sides. No.5 is in a similar livery but with a lighter shade of green. 2605 retains the all black livery (complete with numbers) which it carried while in government ownership. It appears that no attempt is made to keep the engines clean.

David Allen 2/78

GOULBURN STEAM MUSEUM 610 mm gauge

Mr. Bruce Macdonald, founder of the Marsden Museum of Historic Engines, now the Goulburn Steam Museum, left the museum on Monday, 30 January, taking with him his own locomotives. In addition, several other steam-

powered road items owned by private individuals have been removed. Only one locomotive remained to operate the railway at the museum - *Stella* 0-6-0T Krauss 3423 of 1897 ex Gin Gin Mill, owned by the Goulburn City Council. *Stella* is in poor boiler condition with badly leaking tubes.

In a press statement appearing in the Goulburn Evening Post, the Chairman of the Goulburn Steam Museum scotched rumours of the museum closing and indicated that the museum was considering diversifying into smaller indoor displays. The new curator is Mr Bruce Krylott, a former engineer with the Cobargo Butter Works which has recently closed down after 94 years of operation.

During the last few years, the number of locomotives at Goulburn has gradually decreased. Disposals include:

- Davenport 0-4-0ST B/n 1597 of 1917 (rebuild with B/n 1517) ex Kiama Quarries, to Illawarra Light Railway Museum Society.
- *Wollondilly* Fowler 0-4-0T B/n 16089 of 1923 ex Kiama Quarries to private ownership.
- Baldwin 0-4-2T Forney Patent B/n 10533 of 1889 ex Fairymead Mill, to private ownership (see LRN 1, p.2).
- Krauss 0-4-0T B/n 6927 of 1914 ex Corrimal Coal Co, remains only, to private ownership.
- Krauss 0-4-0T B/n 6611 of 1912 ex Mt.Bauple Mill, dismantled, to private ownership. (stored at Illawarra L.R.M.S. site).
- Baldwin 4-6-0T B/n 42155 of 1916 ex R.O.D. & Racecourse Mill, sold for rebuilding for a tourist line to be opened in Queensland.
- Decauville 0-4-2T B/n 455 of 1906 ex Mulgrave Mill disposal details not known.
- Maffei 0-6-0WT B/n 3777 of 1912 (without boiler) ex Plane Creek Mill, to private ownership.
- Perry 0-6-2T B/n 5643-51-1 of 1951 ex Bingera Mill, to private ownership.
- Orenstein & Koppel 0-6-0T B/n 4241 of c.1910 ex Lake View & Star Mine, WA, to museum at Wodonga, Vic.
- Fowler 0-4-2T ex Miller's Machinery Melbourne, to Sugar Industry Museum, Mourilyan Qld. (see LRN 2, p.7)

Locomotives retained and removed by Mr. Macdonald were:

- Fowler 0-6-0T B/n 11885 of 1909 ex Gin Gin Mill.
- Hudswell, Clarke 0-6-0 B/n 1098 of 1915 ex Gin Gin Mill.
- *Jack* 0-4-0T Krauss B/n 5945 of 1907 ex Fairymead Mill.

"Perry" 2/78

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY, Albion Park Gauges various

(P.O. Box 1036, Wollongong 2500)

CAIRNS, the 0-6-0 Hudswell, Clarke (1706 of 1936) from Victoria Mill, Ingham, arrived at Albion Park on 24 February. A complete set of tubes was purchased from the mill at a discounted price, and were strapped to the tender for the journey. The engine complete but empty weighs 17.9 t. and the tender 5 t. The tender holds 4000 l. of water weighing 4 t. and an estimated 1.5 t. of coal. The boiler holds 3 t. of water giving a total weight in working order of 31.4t with a maximum axle load of approximately 7t. The loco has been shunted round to see how it handles the Albion Park trackwork, and it does with ease.

Three, possibly five boiler tubes need replacement on the Davenport.

A major step forward has been the granting of an extension to the site lease by Shellharbour Municipal Council. This is stage two of the development and involves a loop 0.5 km in length.

J. Reynolds 3/78

LEIGHTON CONTRACTORS PTY. LTD, 360 Edgar St., Bankstown. Gauge 610 mm

A visit to Leighton's storage yard at Bankstown on 3 March revealed a variety of 610 mm gauge tunnelling equipment, including a Ruston & Hornsby diesel loco. The equipment was used by Leighton's for the construction of an ocean outfall sewer tunnel at Warriewood.

In addition to the Ruston, a Lister locomotive was also apparently used at Warriewood. The Lister has since been sold. The Ruston is a small 20 hp four wheeled diesel mechanical loco, B/n 285298 of 1949 (corrected, see LRN8), Model 20DLU originally purchased by the Melbourne & Metropolitan Board of Works. Other items at the yard included two rocker shovels (used for loading broken rock at the tunnel face), nine four-wheel Granby muck cars, and two small four-wheel trolleys. Three four-wheel side-tipping trucks, minus bodies were also noted, though it is not known if these were also used at Warriewood.

Anthony Weston, 3/78

LITTLE HARTLEY FARM, Great Western Highway, near Lithgow. 610 mm gauge.

A health farm is being promoted here, replacing an unsuccessful Tourist Farm. A steam outline petrol engined loco hauls passengers on ex-canefield track.

"Perry", 2/78

PEARSON BRIDGE PTY LTD, Mt. Kuring-gai 610 mm gauge

Inspection of the two E.M. Baldwin four wheeled tunnelling locos (B/n 4661-1-7-72 & 4661-2-7-72) (see LRN 2, p.4) showed them to be, despite external appearances, in basically sound condition. Although they are not for sale, the firm retaining them for future tunnelling contracts, their market value was stated to be in the vicinity of \$2,000 each. Both locos have 4-cylinder 40hp Perkins diesel engines.

Also in the storage compound were two bogie muck cars type 1 HRST 90 B approximately 30 ft in length. They were built in 1972 by Joy Manufacturing Pty Ltd of Mascot, Sydney, under licence from Haglunds. Both have a capacity of 9 cubic metres and have a conveyor belt running down the middle of the hopper driven by a model PA23 air motor, and presumably for use in conjunction with mucker equipment (vehicles used to collect debris after the face of a tunnel has been charged). These cars are probably those reported to be (then) in use in the construction of the Tuggeranong sewerage tunnel in the ACT (See *Light Railways* 41). Also in storage is a large stack of light rails (20-30 lb) used for various tunnelling projects.

David Allen 3/78

SNOWY MOUNTAINS SCHEME, GUTHEGA HAULAGE

Adjacent to the pipelines that descend the hill from the Guthega pressure tunnel to the Guthega power station is found an inclined haulage.

Of approximately three foot gauge, the single line track rises steeply up the hill parallel to the pipes and is about 1.5 km in length. The pipelines and power station were completed in 1955 and the general condition of the trackwork suggests that the haulage has probably seen little if any service since. Most of the sleepers are well rotted, and many of the dogspikes have come loose. The rails are in good condition, the only damage being a buckle about half way up. Towards the bottom of the haulage, the permanent way is relatively free of vegetation but further up bushes and grass have begun to take over, while near the top the tracks have become invisible under the cover of grass.

The grades on the incline vary greatly, comprising of two steep sections cut in half by a long section on a very shallow rise. Electric winding gear is found at the top and at the commencement of the second steep descent. These are housed in small buildings to one side. The only rolling stock to be found on site were four welded steel four wheel trolleys with outside frames. There are no sidings on the line and the actual use of the haulage seems unclear although no doubt it played some part in the construction of the

pipelines and pressure tunnel from Guthega pondage. (Perhaps some other reader may be able to give more details). The bottom of the haulage ends in a concrete buffer stop adjacent to the power station while at the top the tracks level out and enter a building.

David Allen 3/78

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Gauges various

(P.O. Box 270, North Quay 4000)

Another steam locomotive has been acquired, donated by Pioneer Sugar Mills Ltd. It is *Kilrie* a Perry 0-4-2T (B/n 265 of 1925) from the 1067 mm gauge Pioneer Mill system, originally built as an 0-4-0T for the Hume Weir Construction project of the Victorian State Rivers & Water Supply Commission. After being sold at auction in 1939, it eventually came to Pioneer Mill (having worked at Mount Morgan Mines, according to some accounts). At Pioneer Mill, it was rebuilt as an 0-4-2T and in 1960, was converted to oil firing. At present, it is stored at the mill.

Editor, 3/78

QUEENSLAND COAL MINING CO. LTD, COOK COLLIERY, BLACKWATER 1067 mm gauge

Cook Colliery is located approximately 30 km south of Blackwater. It is one of two underground coal mines (the other being Leichardt Colliery) which have been opened in the Blackwater area by BHP through its subsidiary, Queensland Coal Mining. The Colliery was visited on 22 February.

Both Cook and Leichardt Collieries have 1067 mm gauge rail systems for the transport of men and materials underground. At Cook Colliery, coal is brought from the face to the surface by rubber-tyred shuttle cars and a system of belt conveyors. Access to the coal seam being mined at Cook Colliery is by a drift (Inclined tunnel) which contains a belt conveyor and rail track. The drift is on a gradient of 1 in 3.25 and intersects the seam approximately 200 m below the surface. The drift continues down a short distance to a second seam which is not being mined at present.

Men travel down the drift in a set of cars lowered by a drift winder. Near the bottom of the drift they transfer to four-wheel diesel personnel cars built by Fox. Materials trolleys are lowered down the drift in a similar way and are then hauled by Fox four-wheel diesel locomotives. Two locos and three personnel cars were noted underground as well as at least one personnel car

on the surface.

Anthony Weston 3/78

MILLAQUIN MILL, Bundaberg 610 mm gauge

All three steam locos, 6 Bundaberg Foundry 6 of 1952, 0-6-2T, 8 Bundaberg Foundry 3 of 1952, 0-4-2T and 9 Perry 9737.45.1 of 1945, 0-4-2T, will all be available on standby for the 1978 season. The Perry loco has been substantially retubed during the 1977-8 slack season but the locos are not receiving substantial maintenance. One loco is being repainted for exhibition in the "Pioneer section" of the Bundaberg Field Days to be held on 26-27 April. It is planned to transport the loco to the site, jack it just clear of the ground and have it in steam for the two days.

Alan Robert 3/78

QUNABA MILL 610 mm gauge.

The situation regarding the locos during the slack was as follows:

Invicta 0-6-2T Fowler 11277 of 1907 out of use.

Jumbo 0-6-2T Bundaberg Foundry 1 of 1952 - cylinders rebored, new pistons and rings, valves refaced, all running gear overhauled.

Delta 0-6-2T Perry 7967.50.4 of 1954 and *Skipper* 0-6-2T Perry 1850.46.1 of 1946 - many new frame rivets, complete overhaul of running gear, replacement bushes etc.

Flash 0-6-2T Perry 6160.48.1 of 1948 being fitted with a new boiler! This was lowered into position on 3.3.78, having been stored at the mill for some time. Qunaba had to call on all its resources plus help from elsewhere to assemble a team for the large amount of rivetting required, and the opportunity was taken to carry out rivetting work on the other locos as well.

Alan Robert 3/78

ROCKY POINT MILL, Woonlgoolba . 610 mm gauge

The mill planned to hold celebrations to mark the Centenary of the sugar industry in the district during 1978 but at the moment this scheme is suspended after a poor season in 1977, and pending some indication of the prospects for 1978. In connection with the planned celebrations, the mill is restoring the one and only locomotive to have worked on its tramway. The loco, a diminutive Fowler 0-4-0WT, B/n 16249 of 1923 (corrected, see LRN8), was used until the end of the 1951 season when the mill changed over to road transport. The mill negotiated a loan of "their" engine from Gilltraps Auto Museum at Coolangatta, where it had been on display for some time. Unfortunately the condition of the boiler was too poor to consider any

restoration to working condition. However the possibility of some other form of propulsion has been looked into.

Owned by W. Heck & Sons Pty Ltd, the mill still uses rail-based bins for processing operations; the usual four-wheel bins are conveyed to the mill to the various farm sidings by road vehicles for loading and return to the mill, to be placed on the tracks in the mill yard. They are then hauled by tractor over a short tramway through the unloading tippler to the despatching area.

"Perry" 3/78, Editor 3/78

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM - Adelaide

As well as 18 locomotives and railcars from main-line railways, the museum has a number of former industrial locomotives as follows:

Peronne 0-6-0T Andrew Barclay 1545 of 1919 (1067mm gauge) ex Broken Hill Associated Smelters, Port Pirie.

4 4-6-0 Baldwin 41242 of 1914 (1067 mm gauge) ex BHP Iron Knob-Whyalla.

Four wheel petrol loco by Malcolm Moore ex S.A..Harbours Board, Price (1067mm gauge) Two Ruston and Hornsby diesels from the Waratah Gypsum Company's 610mm gauge line from Stenhouse Bay to Marion Lake. One is B/n 187078 of 1938, a four-wheel diesel of model 44/48 hp. The second is B/n 393981 of 1956, an 0-4-0 diesel of model LHT (82½ hp). Also on show is an explosives van which was used on the Dry Creek tramway.

The last industrial loco used to work in Barry's Brickyard, Torrensville. It has a 4 hp four-stroke Moffat-Virtue engine and was converted from 610 mm gauge to operate on the 18 in gauge miniature railway at Mile End.

R.Sanders 1/78, Editor 3/78.

PICHI RICHI RAILWAY, Quorn 1067 mm gauge

(P. O. Box 504, Port Augusta 5700)

This railway began operations in 1974, running on the former SAR 3 ft 6 in line from Quorn to Stirling North. Initially trains ran the five miles to "Summit", while it is hoped that in 1978, trains will run as far as Woolshed Flat, 10 miles from Quorn. Trains operate on long weekends and on certain days in the school holidays.

The line has three ex-WAGR W class 4-8-2 locos, W916, W933 & W934 built by Beyer, Peacock (B/n 7393, 7410 & 7411 of 1951), of which the first is not yet restored to running order. Ex-SART class T186, a 4-8-0 built by James Martin in 1909 (B/n 198) was put into service in September 1976, following overhaul

by the SAR. Currently under restoration is NJAB 1, an ex-SAR and CR steam rail motor donated by the Northern Territory National Trust in 1975. The engine unit was built by Kitson in 1905 (B/n 4356), and is a 2-2-0WT. Also to be restored is Brill Railcar 106, recently purchased from SAR. There is a large collection of ex-SAR rolling stock, including the recently acquired former Eyre Peninsula Commissioner's Train.

Naturally, a great deal of track work has had to be carried out, including the replacement of over 5000 sleepers, and the relaying of many curves with 50 1b or 60 1b rail. Fortunately, the construction of the new running shed and workshops was financed under the Regional Employment Development Scheme.

Interstate visitors are welcome on working bees, and accommodation is available in narrow gauge sleeping cars at Quorn, though advance booking at P.O.Box 96, Blackwood 5051 is advisable.

Richard Atkinson 2/78

STEAMTOWN PETERBOROUGH PRESERVATION SOCIETY 1067 mm gauge

Formed in 1977, this group plans to preserve the line between Peterborough and Quorn when it is closed by SAR. Ex-SAR T class 4-8-0 T199 (James Martin 201 of 1912) is to be removed from a local park and restored to working order. In addition a Pmr class Pacific built in 1950 has been purchased from WAGR.

Richard Atkinson 2/78

TASMANIA

IDA BAY RAILWAY, Ida Bay 610 mm gauge

The railway appears to be well supported. A total of three bogie wagons have been rebuilt as passenger carriages, of which two are ex TGR Zeehan & North east Dundas tram bogies of 1896. A balloon loop has been constructed at each terminus of the line where the complete train is turned for the return journey.

*Australian Gems & Crafts Magazine, Feb-March 78 via Ruth Kerr,
Ralph Proctor, 3/78*

SECOND RIVER TRAMWAY, Karoola 610 mm gauge

(c/- 12 Melbourne Street, Launceston 7250)

Work on the guards van continues at a steady rate, with the roof completed and the ex-TGR look-outs permanently fitted in position. Krauss No.2 (B/n 6067 of 1910) is having a new copper boiler tube fitted, and repairs to the

sanding gear. Rails are being welded together in 72 ft lengths for the next main line extension. The welding generator is powered by a Marshall single cylinder portable steam engine in the rear of the loco shed.

Ralph Proctor 3/78

DON RIVER TRAMWAY (Van Diemen Light Railway Museum Society) 610 & 1067 mm gauges

(P.O. Box 887, Launceston 7250)

Macknade No.5, the 610 mm gauge Hudswell Clarke 0-6-0 donated by CSR, (B/n 1548 of 1925) arrived at the Don site early in February. Repairs to the firebox of 1067 mm gauge Fowler 0-6-0T 5265 of 1885 have been carried out, and in addition some stays have been replaced and a partial retubing has commenced. Work has continued on ex-TGR Pacific MA2 (Stephenson & Hawthorn 7421 of 1951) for a boiler test. *Heemskirk* ex-Emu Bay Railway 4-8-0 built by Dubs in 1900 (B/n 3856), which has been rusting away on the seafront at Burnie for some time has been acquired by VDLRS, but transport to Don has yet to be arranged. The only locomotive authorised to operate on the Don River Tramway at present is Ruston & Hornsby 1067 mm gauge four-wheel diesel 279571 of 1949, model 40DL, and this only on works trains. However, this has not deterred the VDLRS for they have hired 2-6-0 CCS23 from Australian National Railways (Beyer, Peacock 4415 of 1902) to operate on the tramway on steam days.

*Mercury 15.2.78, Advocate 13.2.78,
Steam Echoes No.13/14, all via R. Proctor.*

WEE GEORGIE WOOD STEAM RAILWAY INC., Tullah 610 mm gauge

Members have recently been busy preparing a loco shed/workshop area near the main highway in Tullah in which to house the steam loco. They will commence track laying soon, with 61 lb rail.

Ralph Proctor 3/78

VICTORIA

ALEXANDRA & DISTRICT HISTORICAL SOCIETY 1029 mm & 610 mm gauge

Efforts are being made to restore the 3 ft 4½ in gauge Day's tractor ex Ruoak Timber Company (see LR44). Also under restoration is the 610 mm gauge Kelly & Lewis 0-6-0 diesel (B/n 4271 of 1935), as plans are being formulated to construct a tourist line utilising this loco and a Malcolm Moore four wheel petrol loco (B/n 1049 of 1943), ex-SECV Yallourn, which was obtained from

the Gippsland Folk Museum at Moe recently. The Society also hopes to obtain a Krauss loco one day, similar to those that operated prior to 1935 on the Rubicon Lumber and Tramway Company tracks at Alexandra.

Paul Simpson 2/78

GEELONG STEAM PRESERVATION SOCIETY 1067 mm & 610 mm gauge

(P.O. Box 166, Belmont 3216)

Christmas and New Year season running on the Belmont Common Rail way was very successful, with - trains being handled by ex-SAR 2-8-0 T251 and ex-QR railmotor RM76. Negotiations towards the establishment of the Bellarine Peninsula Railway have been progressing satisfactorily, and there is a prospect that the entire length of track between Queenscliff and Drysdale may be regauged at one go. GSPS now has the tenancy of the Departmental Residence at Queenscliff station.

Details of the 610 mm gauge Day's tractor at Belmont Common (see LR 59) are to hand. Two such tractors were operated by Cheetham Salt to haul salt from the salt pans at Moolap to the refinery, and bagged salt to the VR siding at Whittington, on the Geelong-Queenscliff line. They have been out of use for about 20 years. One was obtained by GSPS about 6 years ago, while the other may have gone to an Illawarra LRMS member.

The Commoner Jan 78, Neil F. Murray, 2/78

WALHALLA & THOMSON RIVER STEAM TRAMWAY 762 mm gauge

Speaking in February, Ron Kain said his locomotive would be operating again at Easter. There was no hint in his conversation that he or his railway would be leaving Walhalla, although he did mention continuing local opposition.

Ruth Kerr 3/78

former WHISTLE STOP 762 mm gauge

It was reported in LR 48 that the "Whistle Stop" amusement park in Frankston had its equipment auctioned October 1974, but that the Couillet 0-4-0T B/n 861 of 1886, was withdrawn from sale when the reserve price of \$30,000 was not met. Reports indicate that the loco is still unsold and now resides in the suburb of Red Hill.

Paul Simpson 2/78

WESTERN AUSTRALIA

BUNNING BROTHERS, Manjimup 1067 mm gauge

Martin built 2-6-0 B/n 178 of 1898 was still stored at Bunnings workshops, Manjimup in January 1978. Originally SAR Y 176, she was purchased by Bunnings in August 1937. She was converted to Yx 176 (Belpaire firebox) in 1956. Another locomotive still at Manjimup in Bunnings Workshops Yard, "THING", can be described as a combination of locomotive parts, from WAGR G class and SAR Y class locos. These two types were to a similar design originally based on the Beyer, Peacock C class 2-6-0 design introduced on the TGR in 1885. No.131 has been uncovered on "THING's" buffer beam which would make it an ex-WAGR G class purchased by Bunnings from Commonwealth Railways North Australia Railway in 1946-7. The tender is a four-wheel example with the number 7 being discernible in the rust on the rear (possibly ex-SAR U 7). This locomotive is being painted by a local group for possible inclusion in a Timber Museum.

L.G..Watson, 2/78

BUSSELTON JETTY TRAMWAY 1067 mm. gauge

Since the decline of Busselton Jetty as an export outlet and the condemning of the same for locomotive use in 1973, the general impression was that the railway line would fall into disrepair and eventually be pulled up. The main jetty length of 2 km is well lit with mercury vapour lights installed in 1963. The rail jetty joins the main jetty approximately 0.5 km out, to make the form of a Y. Further out, where the ships tie up, the tracks separate into 2 parallel tracks serving each side of the jetty. The line used is short 45 lb/yard material with one safety rail provided. The Busselton Apex Club have constructed a small lightweight train to take tourists for a run to the end of the jetty. The locally built locomotive could be described as an 0-4-0 powered by a petrol engine, and there are 2 small four-wheel coaches giving the train a capacity of 16 persons. A third coach may be added later. The entire train is painted bright yellow with red and white striped roof. Trips are run on weekends and public holidays starting at 10 am and running regularly throughout the day.

L.G. Watson 2/78

HAWKER SIDDELY, Manjimup 1067 mm gauge

S.S.M.2, Beyer Peacock 4-6-0, B/n 5475 of 1911, is preserved in front of Hawker Siddely's Mill offices at Manjimup. Originally known as *The Hewer* she is currently being repainted black by a local concern. She was purchased new by the Timber Hewer Co-operative Society, who were later bought out by

the government-owned. State Saw Mills, who sold out to Hawker Siddely on 1.7.1961.

L. G. Watson 2/78

MILLARS, Jardee 1067 mm gauge

Ruston & Hornsby four wheel diesel B/n 404982 of 1957 Type LBT (31½ hp) is used to shunt at Millars operation at Jardee south of Manjimup. This loco is ex Public Works Department, Perth Narrows Bridge Construction.

L.G. Watson 2/78

PEMBERTON 1067 mm gauge

S.S.M.7, Martin 2-6-0 B/n 117 of 1895 is preserved opposite the Pemberton Tourist Bureau. She is ex WAGR 53, acquired by State Saw Mills from Commonwealth Railways, North Australia Railway where she was number 69. After S.S.M. 7 finished operation during the 1960s at Pemberton, she lay unused at Pemberton Mill loco shed for many years.

L.G. Watson 2/78

PINJARRA STEAM & HILLS RAILWAY PRESERVATION SOCIETY 1067 mm gauge

(P.O.Box 197, Pinjarra 6208)

Dubs built 4-6-0 B/n 3495 of 1895 was acquired by the PS&HRPS from Millars, Australia on 27.11.77. The locomotive, G71, *Menzies* had been stored in the shed at Yarloop since boiler failure in May 1973. It and its six-wheel tender were moved to the Pinjarra steam depot by road transport. The PS&HRPS hope to run the veteran eventually, but its mechanical condition at the moment can only be described as very poor.

MEMBERS ADVERTISEMENTS

WANTED Back issues of *Light Railways* Numbers 16, 17, 18, 19, 20, 21, 23, 24, 25, 26, 28, 29, 30, 31 & 36. Paul Simpson, C/- P.O. Box 290, Burwood NSW 2134.

IMPORTANT NOTICE

ALL MEMBERS PLEASE NOTE SITUATIONS VACANT

A position exists within this Society for a keen, interested and enthusiastic member to take over the position of Honorary Secretary. The present incumbent has held the post for about eight years and wishes to hand over

to someone with more energy.

Essential duties include attending Council meetings, recording the minutes and circulating them to other Council meetings. Keeping Society correspondence up to date is the chief passtime, hence the ability to write, or preferably type, a readable letter is required.

A minimum of about one hour per month on Society business is involved; there is no maximum and we would all benefit, and be delighted (not to say astounded) if an ideas person full of new proposals and the energy to implement them came along.

This is a splendid opportunity for someone to move into an interesting and possibly influential position within the society. The post is vacant, this is my third annual resignation and this time I mean it.

EDITORIAL

Welcome to the new-look version of *Light Railway News*. LRRSA Council has agreed to allow this printing process to be continued for a trial period of three issues to gauge support for the publication. Your Editor would be very pleased to hear of any comments, together with any suggestions for improvements.

Unfortunately, the amount of news available for publication this time has decreased somewhat. A "faithful few" have enabled the news section to assume reasonable proportions. Just because a line has already been featured in LRN does not mean that future news will not be welcomed. Even if little or no change has occurred in the situation since the last published report, a further report may still be useful, and could help to fix the date of a loco movement, for example. Don't worry if you feel your prose is not good enough for publication. The Editor considers it to be within his competence to improve spelling or grammar where appropriate! The success of LRN depends on you.

RESEARCH COLUMN

TASMANIA

H.J.W. Stokes of P.O. Box 25, Canberra, ACT 2600 writes as follows: Mr. Simpson is quite correct in his belief that the North Farrell Tramway loco pictured on pages 55, 57 & 58 of *Tasmania Remembered* is an Orenstein & Koppel. It is in fact the former Magnet Tramway No. 2 which spent its later years at Tullah. I don't know how long it survived at work after the Fowlers arrived, but its abandoned frame could still be seen at Tullah in the early 1960s. (Now in the possession of the Van Diemen L.R.S. - Ed.)

The loco in the picture at the Silver Spray Mine on p. 26 of *A Pictorial History of the Railways & Tramways of Western Tasmania* was Kerr Stuart 742 of 1900, which carried the name SPRAY.

While on the subject of *Tasmania Remembered*, I should like to draw readers' attention to the photo of the couple on the fettler's bike which appears on the front cover and again on p. 50. According to the caption this was taken at Guildford on the Emu Bay Railway, but I am almost certain that it was in fact taken at Kelly Basin on the North Lyell Railway. From the position of the shadows the photo was taken in a southerly direction, which would be correct for Kelly Basin, but not true of Guildford. On the extreme left of the photo can be seen the shadow of a building which would be the right place for the Kelly Basin goods shed, whereas there was no building in an equivalent location at Guildford. Furthermore, if the photo had been taken at Guildford, the water tank should be visible at the far end of the platform. Finally, I should mention the evidence that first started me thinking about the photo - the rather rusty and grass-grown state of the track and the numerous broken bricks which were always a feature of Kelly Basin.

BLACKWOOD, VICTORIA

G.P.Newton of 4 Melrose Avenue, East Malvern 3145, Victoria writes of a pair of wheels found in the bush near Blackwood. These are relics of a tramway system used to haul Blackwood logs from the forest to a sawmill; the evidence of the tracks and mill still exist. He would be happy to arrange a visit to the site with interested members.

BENDIGO TRAMWAYS

John L. Buckland of 7 Burwah Avenue, East Brighton, Vic 3187, writes, in a letter too long to quote in full, of his interest regarding the fate of the standard gauge steam tram motors which were displaced in 1903 with electrification.

Five were Baldwin 0-4-0ST tramway motor type engines imported in 1891 (Builder's numbers 12241-5), presumably numbered 1-5. Three similar locos were supplied in 1892 by the Phoenix Foundry, Ballarat (Builder's numbers 315-7, later duplicated on three AA class 4-4-0s for the Victorian Railways), and presumably numbered 6-8.

The fate of seven of the motors after January 31, 1903, when steam traction ceased, is given below:

One Baldwin (No. 2?) to the standard gauge tramway from Cave Hill Quarry, Lilydale, operated by David Mitchell Estate Limeworks, for firewood haulage. One Baldwin converted to 5 ft 3 in gauge, worked at Warrnambool on some project (apparently not the harbour breakwater construction) and in 1920 was inspected in a Port Melbourne yard prior to reconversion to 4 ft 8-1/2 in gauge and sale to the Mackay Harbour Board, Queensland for their Mount Bassett Quarry line.

One Baldwin to Hayden's tramway (3 ft 6 in gauge), Barwon Downs in the Otways, Victoria. Later to State Rivers & Water Supply Commission of Victoria and was used on the Hume Reservoir Construction project, based at Ebdon, North-Eastern Victoria, from 1927. One Baldwin to Gunn's Tramway at Crossover, on the Noojee line in Victoria, where regauged to 3 ft 6 in.

One Phoenix (No. 7) also to David Mitchell Estate, Lilydale. One Phoenix to Tasmanian P.W.D. for use on Marrawah Tramway after regauging to 3 ft 6 in where it operated as SPIDER.

One Phoenix to Lee & Sons Tramway, Smithtown. Regauged to 3 ft 6 in.

What became of the other motor? Can any member/reader add anything to the above?

SNOWY MOUNTAINS SCHEME, GUTHEGA

(see LRN 3 p.5)

Anthony Weston supplies further information, as follows: The incline running parallel to the pressure pipelines from the Guthega pressure tunnel to the Guthega power station appears to have been used in the construction of the pressure pipelines. According to one source, 24 ft. long pipe sections weighing approximately 9 tons were transported up the hill on the incline and placed in position by man handling. I do not know whether the incline was also used in conjunction with the construction of the Guthega pressure tunnel.

The whole Guthega project included the construction of the Guthega dam (and diversion tunnel), pressure tunnel, pressure pipeline and power station. Descriptions of the project indicate that light railways played a part in the construction of each of these works.

I visited the Murray 1 power station of the Snowy Mountains Scheme on 13 December 1972 and inspected the lower end of an incline similar to that at Guthega, though of wider (perhaps standard) gauge. The incline commenced about 30 m. above the level of the roadway at the power station and ran parallel to the pressure pipelines up the hill behind the power station. I did not walk up the incline so I do not know how far it extended up the hill. The Murray 1 power station and pressure pipelines were completed in 1967 and at the time of my visit in 1972, the incline appeared to be disused.

BOOK REVIEWS

Directory of Australasian Railway & Tramway Societies - 1978.

Published by the editors, Brian M. Coleman and Robin E. Quaife, and available from D.A.R.T.S., 5 Highgate Grove, Ashburton, Vic 3147.

This directory lists, by states or territories, the model engineering societies, tramway and railway museum societies and related organisations in Australia and New Zealand.

Details of the various groups vary from a name and address for some to a most comprehensive coverage of others. From the reviewer's point of view, it would seem obvious which of these groups took an interest in providing the necessary information!

This booklet, with a suitable index at the end, provides an invaluable guide for the enthusiast whose interests lie within the subjects covered, and would be most useful when travelling interstate to make contact with the group(s) of his (or her) choice. Meeting and opening times and dates are given where possible, and in some cases a map directing one to the location is shown, and state and territory maps showing all the groups would prove useful in planning a journey. In this way, the booklet lives up to its title 'directory' extremely well.

There is an adequate selection of photographs, illustrating some of the groups mentioned, and although page numbers directing one to the group to which they refer are included, the reviewer would have preferred to have

seen them included in that section or adjacent to it. Obviously block-making costs have had a hand in their placement.

Recommended.

(RFE.)

Preserved Railway and Tramway Rolling Stock in Australia.

First Edition 1.7.1977.

Compiled by Peter L. Charrett, and published by the Association of Railway Enthusiasts (ARE), Box 4810, Mail Exchange, Melbourne, Vic 3001.

This booklet manages to pack a wealth of information into its 118 pages, and covers locomotives held for special purposes, railway museums, both static and operating, tourist lines, locomotives owned by individuals and organisations, locomotives 'preserved' and 'retained', and a similar coverage for trams. Also included is an interesting alphabetical list of Australian locomotive and rolling stock builders, and two indexes - one by builder and builder's number, the other by location or organisation.

This is a booklet for the real enthusiast, with builder's details, rolling stock details, numbers, date of purchase, transfer and retention, and a whole host of other interesting snippets. Where appropriate, locations have been given in detail which will enable the enthusiast to easily locate his favourite item. Peter expresses in his introduction that changes are continually taking place, and to have tried to keep up to date with it all would have meant the book would never have been published, but there's still plenty to go on with until the next edition appears.

The reviewer does not envy Peter his task in keeping track of all the items one little bit, and he is to be congratulated on the excellent effort he has made with this first edition. Now that Peter has got it started, it's up to us to fill in the missing details, and keep him advised of what is going on, wherever it may be in Australia.

One cannot be critical of the areas where information is not included due to its non-availability, or where there is a conflict of opinion in identity, at the time of compilation. However, the reviewer would have preferred to have seen more illustrations included, and this may be possible with the next edition.

Highly recommended.

(RFE.)

LRRSA POWELLTOWN TRIP. SUNDAY 23 APRIL 1978

Seventeen people in ten vehicles participated in the first trip to be

organised by the Victorian Division for almost four years. The starting point was Yarra Junction station, from where the convoy headed towards Powelltown, stopping at the sites of Gladysdale, Black Sands, Three Bridges and Gilderoy stations.

Gladysdale has been somewhat damaged in recent years due to new clearing on the site, and the trestle bridge just beyond Gladysdale no longer exists, only a few abutments remaining. The low cutting on the Yarra Junction side of Hazeldene Road at Gladysdale has also been obliterated. The remains of cattle grids still exist where the tramway crossed the Little Yarra Road between Gladysdale and Black Sands, on the south side of the road, but they take some finding.

Little has changed at Black Sands station site in the past few years, and the formation of the branch tramway to the Black Sands Creek area is quite visible. On the east side of Black Sands the formation has been bulldozed for some distance where there is now a tip.

At Three Bridges the site of the three trestle bridges which gave the station its name are easy to find, but very little remains of the bridges themselves. The site that the station occupied can be easily found, as it is immediately opposite the old Three Bridges school, which is now used as a barn.

Gilderoy station site is located in a cleared paddock immediately to the east of Gilderoy Road, and fronts onto the Little Yarra Road. A grotesque oak tree grows close to the site of the station waiting shelter. This tree was

damaged in the 1939 fires. Earthworks of the loading bank to the west of the station, where sawn timber from Worlley's tramway used to be transshipped can be clearly seen.

The walk along Reid's Tramway as far as Tin Mine Creek was completed without difficulty, the distance being 1-1/2 miles each way. Beyond Tin Mine Creek the formation has not been cleared, and we did not visit this section. This tramway was very well graded, and follows a valley filled with many large tree-ferns. Originally it was laid with steel rails when owned by the Little Yarra Sawmilling Co. - a subsidiary of the Victorian Hardwood Co. - but when taken over by Reid the VHC removed the steel rails for use on the Powelltown line, and Reid replaced them with wooden rails. Whether locomotives were used on the line in its steel railed days is an interesting question; the grades certainly would have allowed for them. At Tin Mine Creek are the fairly well preserved remains of a long trestle bridge.

{bmc d:\lrrsa\lrn\graphics\lrn004c.bmp}

The party then went down Mackley Road, which is built on the formation of the Powelltown Tramway, and had lunch at a remote spot in the bush, where the walk along the bush section of the Powelltown line commences. This is a two mile walk to the Tunnel site, and includes detours around two large trestle bridges. One of these detours included a very slippery steep section which provided the only difficulty in the whole walk. The two trestle bridges have been partially dismantled but are still interesting to see. It is best to make the walk from Mackley Creek to the Tunnel, so that the up-hill part of the walk is completed first. The return journey is then easy because it is all downhill!

On the way back along Mackley Road, a stop was made at the site of the 'big bridge', the famous high-curved trestle which appears in many photos. The site of this is very difficult to find, and the only remains readily visible from the road are abutments. The wreckage of the bridge in the valley is completely obscured by foliage and trees.

The last part of the trip was a visit to the Upper Yarra Historical Society Museum at Yarra Junction, which has many interesting photographs, as well as the Malcolm Moore tractor which was used on the bush section of the Powelltown tramway, and subsequently used at Powelltown mill.

A most enjoyable day was had by all, and it was good to see that a number of members' wives participated.

Frank Stamford

ERRATUM - PICHI RICHI RAILWAY - LRN 3 p.8

The wheel arrangement of the engine unit of rail motor NJAB1 is 2-2-0WT,

not 0-4-0WT.

NEW SOUTH WALES

CITRA CONSTRUCTIONS LTD.. Burroway Road,, Homebush Bay.

1000 mm. & 1067 mm. gauges

At Citra's Homebush Bay storage yard there are three small diesel locomotives and a number of four-wheel trucks. The four-wheel diesel-mechanical locos were built by S.A. des Anciens Etablissements Billard & Cie. (Billard) of Tours, France. They have Citra plant numbers 11E1 - 11E3 and are the Billard T75P VM model. When first noted at Homebush Bay in May 1974, they were all 1000 mm gauge, but a visit on 3 March 1978 showed that one loco had been overhauled and regauged to 1067 mm gauge. Builder's numbers and other details are summarised below:

11E1 4wDM Billard T75P VM 224 1000 mm. gauge

11E2 4wDM Billard T75P VM 227 1067 mm. gauge

11E3 4wDM Billard T75P VM 228 1000 mm. gauge.

They are powered by a Panhard 4HL four-cylinder diesel engine which has an output of 75 cv. (55 kW) at 2000 r.p.m. The engine drives through a mechanical gearbox and roller chains. The locomotives are fitted with water exhaust scrubbers which remove harmful gases from the exhaust and allow them to operate underground.

The locomotives were apparently used at some time on tunnelling work in Tasmania. They were last used on the construction of the Carcoar Dam, which is a concrete-arch span on the Belubula River in the central west of NSW. Work on the dam commenced in February 1969, and construction work was completed in December 1970.

Anthony Weston 4/78

THE ELECTROLYTIC REFINING & SMELTING COMPANY OF AUSTRALIA LTD, Port Kembla. 610 mm gauge.

The Electrolytic Refining & Smelting Company of Australia Ltd. operates a copper smelter and refinery at Port Kembla. A compact 610 mm gauge railway system is centred around the reverberatory furnaces at the works. These furnaces are charged with blister copper and copper scrap to produce a refined copper for casting into anodes, and subsequent electrolytic refining. The railway system is worked by four small four-wheel diesel locomotives and a variety of four-wheel and bogie rolling stock.

During a visit on 10 April, 1978, two diesel locomotives were in use. One

was shunting four-wheel trucks with feed for the reveratory furnaces and another was transferring bogie trucks loaded with copper anodes to the tankhouse for electrolytic refining. The diesel locomotives are the 'Hudson-Hunslet' type built by the Hunslet Engine Co., Leeds, UK, for sale by Robert Hudson Ltd, Gildersome, Leeds, UK. Locomotive details are summarised below:

1	4wD	Hunslet	4577	1953
2	4wD	Hunslet	4578	1953
3	4wD	Hunslet	4580	1955
4	4wD	Hunslet	4582	1955

Anthony Weston 4/78

GREENS MOTORCADE PARK, Leppington. 610 mm gauge.

This tourist attraction has a short railway with a petrol engined steam outline locomotive. Numbered X759 it is a '4-4-2T', and was built by John Dunlop, of Waratah Park, Terrey Hills. (see LRN 2, p.4)

Anthony Weston 4/78, Editor

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY, Albion Park Gauges various.

P O. Box 1036, Wollongong 2500

A petrol engined Malcolm Moore loco tractor arrived at Albion Park on 25 February. It was purchased from Fairymead Mill, Queensland, where it carried the number 123. Weighing in at 4 tonnes, it is fitted with a Fordson engine of 4 cylinders, designed to run on petrol and kerosine. Of 610 mm. gauge, its two axles are chain-driven.

Another 610 mm gauge locomotive to be acquired by ILRMS is the Ruston & Hornsby four wheeled diesel from Leighton Contractors, Bankstown (see LRN 3, p.5). This is builder's number 285298 of 1949 (corrected, see LRN 8), and was obtained along with other equipment mentioned in LRN 3.

ILRMS Review 55 via R. Henderson, Anthony Weston 4/78.

TARONGA PARK ZOO 610 mm gauge?

John Dunlop of Waratah Park, Terrey Hills, built a locomotive for a line here. However, this may well have now closed, as an advertisement in the *Sydney Morning Herald* of 8 April 1978 offered for sale 'a train, ex Sydney Zoo, loco, 3 carriages.'

Anthony Weston 4/78.

SOLE BROTHERS PARKLAND PTY LTD, Wild Australia, Dunmore. 610 mm gauge

There is a line at this tourist attraction with a rather primitive petrol locomotive and a number of four-wheel passenger cars. The locomotive appears to have been built originally as a 2-2-0, but an additional leading truck has been added, presumably in an attempt to prevent derailments, which must have been a fairly frequent occurrence before, judging by the construction of the loco. Some attempt has been made to make it look like a steam loco.

Editor.

Private collections. Sydney Metropolitan Area. 610 mm gauge

The following items are to be found in the private collections of two Sydney enthusiasts. They are not available for public viewing at present.

Torpedo 0-4-2T Hunslet 1187 of 1915 ex Inkerman Mill, Qld., and Queens Beach Park, Bowen, Qld.

0-6-0DM Kelly & Lewis 5957 of 1936 ex Ruook Timbers, Alexandra, Vic.

Chiverton 0-6-2T Perry 6776 of 1938 ex Kalamia Mill, Qld., and Jaycee's Park, East Ayr, Qld.

Perry Perry 5643.51.1 of 1951 ex Bingera Mill, Qld., and Goulburn Steam Museum

4wDM Motor Rail 20560 of 1955 ex Maritime Services Board, NSW.

4wDM Ruston & Hornsby 387892 of 1956 ex Charles Brand, UK, an unknown operator in Southern Africa, and Gin Gin Mill, Qld.

4wDM Jenbach 2216 of 1958 ex Excelsior Colliery, NSW.

2-2-0PM Fairmont trolley ex Fairymead Mill, Qld, and possibly originally ex Beaudesert Shire Tramway, Qld. (regauged from 3 ft 6 in).

Editor

QUEENSLAND

BP SUGAR INN. Bruce Highway, Childers. 610 mm gauge.

The former Isis Mill number 10, an 0-4-2 built by Sharp, Stewart & Co. Ltd, Atlas Works, Glasgow, UK, in 1898 (Builder's number 4432) has been put on display at this service station. This locomotive was formerly Tasmanian Government Railways G2, which came to Isis Mill in 1935, and was rebuilt from a tank engine to a tender engine in 1950. Some attempt has been made to clean the loco before painting, but the side rods, boiler cladding and tender are missing, making it rather a sorry sight when compared to its

operating condition. It now sports the BP colours of Red, Green & Yellow.

Editor 5/78

THE MILLAQUIN SUGAR CO. PTY. LTD., MILLAQUIN MILL. Bundaberg. 610 mm gauge

A visit on 11 May revealed little activity around the loco shed, inside which were four diesel locos as follows:

11901	B-B DH	E.M. Baldwin	5317-1 -11-73 of 1973
11903	B-B DH	E.M. Baldwin	6456-1 -11-75 of 1975
11904	0-6-0DH	Clyde	57-159 of 1957
11905	0-6-0DH	Clyde	65-441 of 1965

Also present was a four wheeled petrol engined navy trolley. Outside the shed were two steam locos, both in rather poor external condition:

8	0-4-2T	Bundaberg Foundry	3 of 1952
9	0-4-2T	Perry	9737.45.1 of 1945

The other steam locomotive was to be found round the back of the mill, resplendent in clean paint after being exhibited at the Field Day at the end of April (see LRN 3 p. 7);

0-6-2T	Bundaberg Foundry	6 of 1952
--------	-------------------	-----------

At about 4.15 pm, a navy train arrived at the shed, consisting of a four wheeled diesel hydraulic trolley hauling a wagon. The trolley appeared to have been possibly made at the mill, and managed to carry a large number of men, who seemed to be hanging on at every conceivable perch in spite of a relative lack of seating capacity.

Editor 5/78

THE MILLAQUIN SUGAR CO. PTY. LTD., QUNABA MILL. 610 mm gauge

Further to the report in LRN 3, a visit on 12 May found work in connection with the fitting of the new boiler to FLASH (Perry 0-6-2T 6160.48.1 of 1948) continuing. DELTA (Perry 0-6-2T 7967.50.4 of 1950) has been fitted with brand new tanks, and the other two Perrys are to receive new tanks also. An unusual visitor to Qunaba was an E.M..Baldwin bogie diesel, Millaquin Mill's 11902 (Builder's number 6104-1-8-75 of 1975). This was to be stationed at Qunaba for about a week on weed poisoning train duties. Millaquin's and Qunaba's tramway systems are interconnected, but worked separately.

Editor 5/78

JOE HAWKES, Airlie Beach 610 mm gauge

Proserpine Mill's Bundaberg Fowler (0-6-2T Bundaberg Foundry 8 of 1953) has been moved to the home of Joe Hawkes, near the water front at Airlie Beach. The locomotive had been stored out of use at the mill for a number of years, and it was the wish of the Proserpine management that it should remain in the district. It is believed that Joe also acquired an old Ruston & Hornsby diesel from Proserpine Mill, probably during 1977. This four wheeled diesel, builder's number 179872 of 1936, 18/21 hp. type had been lying at the mill in a derelict state for some time, and it is apparently the intention to rebuild it for service on the Ansett Transport Industries tramway on Hayman Island.

J.Nichols 5/78, P. Chengody 5/78, Editor.

TASMANIA

IDA BAY RAILWAY

A visit was made here on 6 March, during the long weekend, but a ride was not possible as the four scheduled trips were fully booked, and the bookings for each day of Easter were nearly filled also. The train departs from the depot at 10am, 12 noon, 2pm, and 4pm, arriving at the 'Deep Hole' about 40 to 45 minutes later. The train departs on the return journey at 11am, 1pm, 3pm, and 5pm.

The locomotive normally used is one of the Malcolm Moore four-wheelers that has recently been fitted with a diesel engine and a 2-way mobile radio. One regular use of the radio is for the driver to advise the Depot of his impending crossing of the road, in sufficient time for an attendant to display red flags and stand by at the crossing. However, on the above-mentioned day, another Malcolm Moore loco with its V8 petrol engine was being used by special arrangement with a vintage Ford Car Club that was having an outing there that day.

The superstructure of the three carriages appeared to be just a tubular frame, including the small gates for each cross bench seat. There is a roof too. It seems that when the weather is windy and it gets cold or rains whilst on a trip, the driver would be the only person protected, by the enclosed cab of the loco.

The station platform at the depot is made up of several lengths of round logs lined up on the outside of the balloon loop, on a downhill section. Earth and gravel filling up to the top of the logs completes the platform.

It was noted that the section of track from the Depot to the limestone

quarry that is not being used is still intact although covered over where it crosses a forestry road.

Chas. W. Goodwin 4/78.

VICTORIA

EMERALD TOURIST RAILWAY BOARD 762 mm gauge

Puffing Billy 'went walkabout' on 30 January, with the appearance of ETR 2-6-2T 6A (Newport, 1901) and 610 mm. gauge museum loco Pleystowe No.4 (Hudswell, Clarke 0-4-2ST 1559 of 1925) at North Wharf, Melbourne. This was in connection with a Cavalcade of Transport to celebrate the Australia Day unveiling of the transport mural at Spencer Street Station. The locomotives were conveyed and exhibited on low-loaders, one of which was by courtesy of the Readymix Group.

Of the ETR's NA class 2-6-2Ts, 6A's retubing is now completed, while 7A (Newport, 1905) and 12A (Newport, 1910) have been relegated to stand-by use because of a need for mechanical attention. 14A (Newport 1914) is in operating condition, but is next in line for retubing, with seven tubes now plugged. No wonder that major efforts are being made to completely restore 8A (Newport, 1908) to be in 'as new' condition for next summer, while work has been done on reboring and resleeving the cylinders of 3A (Newport, 1900). The diesel locomotive donated by the Melbourne & Metropolitan Board of Works is Ruston & Hornsby 296058 of 1951, a four wheeled diesel mechanical of type 48DL, which was originally purchased as a 3 ft gauge machine by the State Electricity Commission of Victoria. It is to receive a cab discarded from a Clyde diesel at a CSR mill in Queensland, and new wheels.

Restoration and re-assembly of car 26NAB commenced at the Emerald Car Shops during February. It is to be fitted with guards equipment and re-coded NAC. This will mean that both car sets will have passenger vans at each end, and will obviate the need to use NC vans on passenger trains.

Extensions to the locomotive workshops at Belgrave have been completed, and a temporary extension is to be added to the Belgrave loco running shed pending the provision of a permanent new running shed.

Narrow Gauge 3/78

GEELONG STEAM PRESERVATION SOCIETY 1067 mm gauge.

(P.O. Box 166 , Belmont 3210)

Ex-SAR 2-8-0 T251 (Walker's 276 of 1917) was taken out of service on 29 January, after holes in the ashpan had let through burning pieces of coal, causing fires along the track. While professional repairs to the ashpan were

in hand, ex-QR 4-6-0 PB15 454 (Walker's 99 of 1909) returned to traffic in February and March, although holes, though smaller, were found in its ashpan, too. Former cane loco KLONDYKE, a Perry 0-4-2T builder's number 271 of 1927, ex Pioneer Mill, Qld., Mount Morgan Mines, and the State Rivers & Water Supply Commission of Victoria Hume Weir project, is nearing the stage of restoration where a steam test may soon be made.

Work has been going on on ex-SAR carriage No 450, with work concentrated on the roof. Meanwhile, two ex-Fyansford Cement Works four-wheel open trucks were placed on the main line and were loaded with sleepers. Rail motor RM76 has been withdrawn from service, pending clutch replacement and starter motor repairs.

The Commoner 3/78

MELBOURNE ZOO. Royal Park. 610 mm gauge.

There is a small circuit here with a diesel loco built by Day's Engineering. Painted black and white stripes, it is named ZEBRA EXPRESS. Although its wheel arrangement is 4-4-0, it bears some resemblance to the VR S-class Pacifics. A VR poster dating back at least to the 1950s shows the loco in what appears to be a VR-like livery, and carries the caption 'Come to the zoo by train' Perhaps some member may be able to supply further details of its history.

PUFFING BILLY MUSEUM, Menzies Creek. Gauges various

See EMERALD TOURIST RAILWAY BOARD

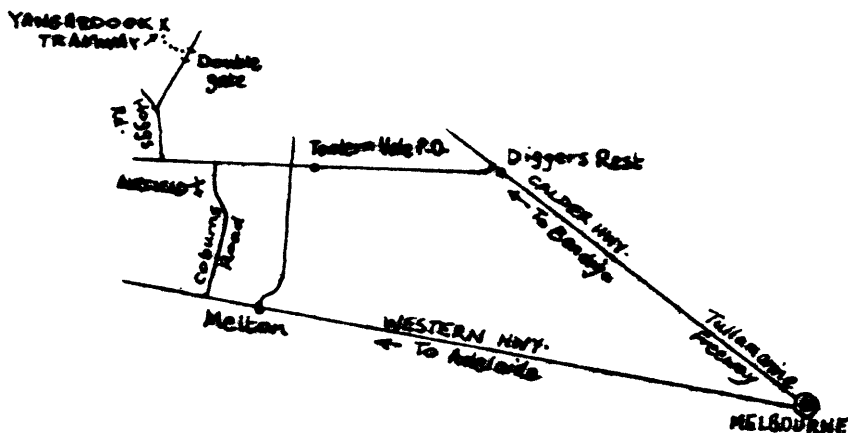

YANGARDOOK TRAMWAY Hoggs Road. Toolern Vale 610 mm gauge

In addition to four-wheeled petrol mechanical Malcolm Moore 1090 of 1943, a Motor Rail four wheeled diesel mechanical (9979 of 1953) has been obtained, from Racecourse Mill, Qld. Other rolling stock includes a handpump trolley, and ex-NSWGR rail-bike-with-outriggers, three coal skips from Wonthaggi Mine, two roller-bearing trolleys from Oatlands Army Depot, one of which has been converted to a four-seater passenger carriage, about half a dozen coal-skip underframes from Wonthaggi Mine, one of which has been

made into a guard's van, and two cane truck underframes from Racecourse Mill.

The main station on the line is Bansions, which is the front verandah of Jim Baines' house, and there is a total of 1225 yards of track, the main line being 1050 yards long. The track is laid with 20 lb/yard rail laid on sleepers which

are half 7 ft. red-gum 5 in x 3 in fence posts. The gradients follow the lie of the land, with a 1 in 18 grade at one place. It is possible to free-wheel the entire line by trolley in the north-south direction.

The line runs through beautiful bush country along a ridge at the top of a hill, and is open to passengers at weekends. Just park at the double gate and walk up to the railhead.

Jim Baines 8 4/78, Regional News-Gazette, 28.7.77 via Jim Baines.

WESTERN AUSTRALIA

BUSSELTON JETTY TRAMWAY 1067 mm gauge

After LRN 3 went to press, the news was received that storms had done severe damage to Busselton Jetty, on 4 April. The future of the Jetty tramway described on page 11 of LRN 3 is unknown.

Rusty Rails 4/78

KALGOORLIE-BOULDER LOOPLINE RAILWAY 1067 mm gauge

A group is proposing to run a tourist service on three miles of track from

Boulder to Trafalgar. Initial rolling stock will be ex-WAGR 17-seat Wickham cars. If running is successful, then it is hoped to convert a Gemco-Funkey diesel loco from 610 mm gauge. A steam loco may eventually be used.

The Commoner 3/78

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION

Gauges various

(P. O. Box 237, Cloverdale 6105)

Work parties have been held to continue restoration work on the Hibberd diesel from the Lake View & Star 610 mm gauge system at Kalgoorlie. Some members have purchased three of the bottom discharge hoppers once hauled by the loco at Lake View. Two of these vehicles have brakes, and the third is to be stripped down and converted to an experimental passenger vehicle. If this is successful, another will be similarly treated, but the last will be retained in original condition.

Locomotive and train at Southend, Yangardook Tramway, Toolern Vale, Victoria.
Loco is Malcolm Moore 1090 of 1943.

Photo Jim Baines

A rather battered four wheeled petrol locomotive in the shed at a saltworks near Langhorne Creek, South Australia. 18 June, 1978.

Photo Lee Rodda

EDITORIAL

In spite of appeals for information, the response from LRRSA members in supplying news has been disappointing. A fair number of industrial operators (some previously little known), and some private preservation schemes have been featured in past issues, and it is hoped that this will continue. However, it is particularly difficult to understand that so little news of the more major preservation operations has been received. Only three or four of the major societies have supplied any official information. Surely there must be members who could supply regular news from Puffing Billy, Zig Zag, Hunter Valley, Pichi Richi and Thirlmere to name but a few. No railway preservation project should feel that its activities are of no relevance to LRN. It's up to you, the members, to halt and reverse the decline in the news content of LRN, otherwise this publication, which has received wide praise, may wither away.

Readers will have noted that our cover now features photos. The editor would be pleased to receive any photos suitable for publication in future issues. The range of subjects suitable is as wide as the scope of the contents of LRN.

RESEARCH COLUMN

TASMANIA

E.J.Milbourne of 190 Main Road, Austins Ferry, Tasmania 7011 writes as follows: "During the first fortnight of June I visited Zeehan and whilst on the West Coast walked into Kelly Basin along the embankment of the North Mount Lyell Railway. Mr. Stokes' comments in LRN 4 concerning the picture on the front cover of *Tasmania Remembered* appear correct as apart from the evidence he gives for assuming the picture to have been taken at Kelly Basin, the contour of the hills visible in the picture matches the hills visible from the old station site. Although almost entirely overgrown, the location of the yards is easily identified and some relics remain including about forty metres of track still in position.

The loco pictured on p. 26 of *A Pictorial History of Railways and Tramways of Western Tasmania* interests me because some years ago, I was told by the late Arch Edwards of Zeehan that he had helped prepare that loco for sale after it had lain idle in a shed for several years. Arch, who acted as caretaker/curator of the locos at the Zeehan Museum only died in the past few months. Like other old Zeehanites he always referred to the Spray Mine by that name. The appearance of the name 'Silver Spray Mine' in the booklet referred to raises the question of the correct title. Mines Department publications refer to the mine simply as 'Spray Mine'.

Keith McDonald believes that this locomotive was named LUCKIE before becoming Zeehan Tramway No.2. It eventually went to South Australia and is now preserved at Redcliffs, Victoria.

NEW SOUTH WALES TIMBER TRAMWAYS

Mr Ray Cooper of 59 Randall Street, Wauchope, NSW 2446, the Station Master of that town and the Deputy Chairman of the 'Timbertown' museum is currently researching the logging tramway which ran from Kendall to Lorne in northern NSW. Ray would be interested to hear from any member who has information on the tramway or the B class Climax which operated there. In addition, Ray has offered to provide information on this or any NSW north coast tramway to members so interested.

QUEENSLAND

Your editor would be interested to hear of any information concerning the fate of two small diesel locos which were sold by the Haughton Sugar Company, Invicta Mill, Giru to Simsmetal Pty Ltd. The locos arrived at

Simsmetal's Northgate depot in Brisbane in 1973 and were later sold. The locos concerned are both 2 ft gauge four-wheeled diesels, Ruston & Hornsby 354040 (Model 20DLU), and Bundaberg Foundry 11, both of 1953.

BENDIGO TRAMWAYS, VICTORIA

Thanks to Bruce Macdonald of Goulburn, NSW, it is now possible to distinguish quite positively, and therefore identify, the parentage of former Bendigo Tramway steam motor dummies of 0-4-0T type, which were the subject of an enquiry by John Buckland in LRN 4.

The basic, though minor, differences between the Baldwin originals and the Phoenix Foundry copies can be summarised as under:

Part	Baldwin	Phoenix
Steam chest cover (rectangular)	10 bolts in semi-circle and central socket for lubricator feed.	12 bolts around perimeter and absence of lubricator inlet in raised section.
Frame support for rear end of slidebars	Radial top corner of single stretcher extending across frame.	Square top corner and both rivetted/bolted to main frame on either side.
Crosshead	Four bolts	Six bolts
Steam dome	Relatively short and large diameter with line of rivets visible around perimeter at top.	Taller and narrower and no rivets visible at top of dome barrel.

These distinctive features are plainly visible in several of the photographs available which prove conclusively that the Hume Dam, Mackay Harbour Board and Tasmanian PWD *Spider* on the Marrawah Tramway were definitely Baldwin products, while those at Crossover (Gunn's Mill), one at Lilydale, and probably Lee's Tramway at Smithton, Tasmania were Phoenix Foundry built.

The whereabouts of the other two Baldwin motors now remains to be resolved.

It was only recently discovered thanks to the enquiries of George Bond that the ex-Bendigo motor acquired by the Mackay Harbour Board in 1920, for service on its standard gauge Mount Bassett Quarry line was one that had been previously regauged from standard to 5 ft 3 in gauge for use on the extension of Warrnambool Harbour breakwater, circa 1912, and prior to sale to the Queensland operator, was restored to 4 ft 8½ in gauge.

SOUTH AUSTRALIA

Keith McDonald of 7 Dean Avenue, Raymond Terrace, NSW 2324 supplies

additional information on narrow gauge tramways.

The gypsum tramway on Kangaroo Island was owned by the Commonwealth Salt Co., later named Australian Salt Co. They owned two 0-4-2T Kerr Stuart locos numbered 1 & 2 and carried builder's numbers 1053 of 1910 and 1290 of 1915. Gauge was 2 ft 6 in. They were scrapped in 1941. To replace these locomotives, a 10/20 hp tractor was converted to run on rails, but its date of scrapping is unknown.

The South Australian Mines Dept. had five 0-4-0 Battery-electrics of 2 ton and 5 hp type, Mancha builders numbers 3578-3582 inclusive of 1953. Broken Hill Associated Smelters had Mancha 'Hercules' 40 hp 0-4-0 Battery electrics builders numbers 2688-2691 inclusive of 1947.

The Adelaide Cement Co., Kleins Point, near Stansbury had two Fordson locos of 1926 and 1940 vintage, possibly built by Malcolm Moore. They were sold to the Department of Marine & Harbours in 1954, going to Franklin Harbour and Price respectively as numbers 2 & 3. In addition to these two locos, the DoM&H had two more locos in 1968. No. 1 was a Ruston & Hornsby 48hp loco, builders number 244869 of 1946, which was used at Price until 1964, and then went to the store at Glanville. No.4 was another 1926 Fordson which came from the SAR in 1951 and was used at Franklin until 1964 and then went to Price.

The SA Gas Company had a 3 ft 6 in gauge loco built by the Sentinel Wagon Works in 1925, which was converted to diesel in 1948 and was stored in 1968. BHP Rapid Bay had two 3 ft 6 in gauge Bo-Bo electrics built by Perry Engineering in 1941 These were laid aside in 1957 and scrapped in 1967. Identical locos worked at Iron Knob near Whyalla.

The SA Engineers & Water Supply Dept. had three Baguley 0-4-0ST locos on 3 ft 6 in gauge, These were purchased in 1923 and were builders numbers 2025-2027. All were sold in 1940. There were also several petrol and kerosine locos. Three Fordson (Malcolm Moore?) locos were retained in 1968, but had not been used since 1956.

The Waratah Gypsum Co. at Ridleyton had five 2 ft gauge locomotives in store in 1968. Two were Ruston & Hornsby locos now at the Mile End Museum in Adelaide (see LRN 3). The other three were built by Vulcan Iron Works, USA. Two came from the Marion Bay line in 1930 and were builders numbers 3549 (8 ton, Caterpillar engine) and 3550 (7 ton). The third was another 7 ton machine, 4182 of 1935. (There had also apparently been three Malcolm Moore locos - Ed.)

ICI, Dry Creek, had four locos on its 2 ft gauge tramline, Ruston & Hornsby 179875 of 1936 was sold to Solar Salt Ltd. in 1958. Ruston & Hornsby 179876 of 1936 went to Fairymead Mill, Queensland, in 1956. Two Malcolm Moores

went to Moreton Mill, Queensland, in 1956. One became JOE and the other *Dutchy*.

NEW SOUTH WALES

THE COMMONWEALTH PORTLAND CEMENT CO. LTD Portland 1435 mm gauge

(see LRN3 p. 3)

The current depressed state of the building industry means that demand for cement is low, and the Portland works is operating at minimum capacity, it was stated in a letter written to the Financial Editor of the *Sydney Morning Herald*. The writer predicted a gloomy future for workers at Portland and Blue Circle's other plants when work on a new 750000 tonne-per-year cement plant is completed this year.

Sydney Morning Herald March 16th & April 4th via John R. Horne.

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY, Albion Park Gauges various

(P.O.Box 1036, Wollongong 2500)

Retubing of *Cairns* (0-6-0 Hudswell, Clarke 1706 of 1936) had progressed well by June, with only beading over in the firebox remaining to be done. A new smokebox was manufactured and welded into place and the smokebox ring bolted on. Engine and tender were repainted and all cab fittings bolted into position. The locomotive was then inspected, and given a ticket for 1100 kPa (160 psi). Steam was raised on Monday, 3 July, and the loco became the first steam loco to run at the Albion Park Museum. Some cautious running was undertaken as the track had not previously experienced a loco of this weight and axle load. A few track deficiencies and tight clearances were noted.

Five suspect tubes have been replaced in the Davenport (0-4-0ST 1596 of 1917), and a hydraulic test carried out using mains pressure. 1035 kPa was attained and some leaks were evident. In tightening down the regulator to stop a leak, a flange broke and the test had to be abandoned. Repair and strengthening of the regulator flange will be required before further testing of the boiler can be undertaken.

Ruston & Hornsby 285298 from Leighton Contractors has been made presentable with panel beating and painting and it runs most weekends.

The Mancha battery loco (B/n unknown) is operational and as well as inaugurating night running, it was the first powered vehicle to run on the

partially completed electric tramway track.

A steel framed, bogie passenger carriage has been constructed for the Society by a local engineering firm. As delivered it consists of underframe and superstructure and will be clad and lined by the Society.

Another local firm has donated a diesel powered 3m³/min air compressor which has powered pneumatic tools used in retubing the locos and in track extensions.

A water column has been erected in the loco compound and work is proceeding at a furious rate to connect it to the meter at the front boundary fence. The vertical boiler has been inspected and its ticket renewed.

The Society has made good progress in the past financial year and this is due in no small part to assistance from local industry. It is estimated that \$10,000's worth of assistance was given in the past year.

J. Reynolds 6/78 & 7/78.

ZIG ZAG RAILWAY CO-OP. LTD. 1067mm gauge

A number of washaways affected the Co-op following heavy rains on 19 & 20 March. This meant that great efforts had to be made to allow train operations at the weekend four days later, a task some felt was beyond completion in less than three weeks.

The NSW government has made a cash grant of \$21,800 to finance the purchase and overhaul of a Plasser Track Tamper. The unit was to be transported from Northam in Western Australia to Sydney for overhaul at the Co-op's expense. In addition, two West Rail ballast wagons have been purchased.

Service vehicles normally attached to passenger trains are to be painted the passenger livery of chocolate & cream. Other service vehicles are to be grey.

Zig Zag Railway Newsletter 5/78 via Rob Henderson.

QUEENSLAND

APEX PLAYGROUND. Musgrave Street. West Bundaberg 1067mm. gauge

"Preserved" here is Tulloch 0-4-0DH Builder's number 002 of 1958 ex Millaquin Mill. This would be the first example of a sugar mill diesel suffering such a fate.

Stack Talk, 6/78

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Gauges various

P. O. Box 270, North Quay 4000

The Society took part in the annual Redbank Museum Field Day organised in the ARHS Queensland Division on May 27th. South Johnstone No.5 loco (0-4-2T Hudswell, Clarke 1705 of 1938 built for John Fowler and allocated Fowler B/n 22752) was exhibited on the back of a low loader as it had in the previous year's Field Day. It is hoped that this loco will also be exhibited in the Warana Festival procession in September.

External restoration of a number of locomotives, using pneumatic tools for scraping down has been progressing well. Attention is being concentrated on *Melbourne* (0-6-0 Hudswell, Clarke 1701 of 1938) ex Victoria Mill, and *R.D.Rex* (0-4-2T Perry 7650.49.1 of 1949) ex Douglas Shire Tramway and Mossman Mill. It is hoped to have a locomotive in steam by the end of the year.

Arrangements for the transport of 1067 mm. gauge *Kilrie* from Pioneer Mill (see LRN 3 p.6) have been halted by the mill, but the reason is not known at present.

ANGRMS Newsletter 6/78, Stack Talk, 6/78, Editor

HAUGHTON SUGAR CO., Invicta Mill. Giru 610mm gauge

Negotiations have reached an advanced stage which could result in a growers' co-operative (to be formed) constructing an extension of the tramline from the terminus at Claredale to Dalbeg, a distance of 46km, according to the company's annual report.

The Australian July 6th.

MOSSMAN MILL 610 mm. gauge

The mill's tramway colour scheme has been changed, Both locomotives and 'canetainers' are being painted yellow instead of blue above the frame, and blue instead of yellow below. In this way, safety is improved while the attractive colour combination is retained.

Stack Talk 6/78

MOUNT ISA MINES HOLDINGS LTD, Mount Isa 1067mm & 610mm gauge

A large amount of tramway equipment was included in one of Australia's largest ever auctions held at Mount Isa between 25 & 28 June. Obsolete equipment was for sale and the arrangements were handled by F.R. Strange Pty Ltd. Among the items detailed in the catalogue were four Com-Eng locomotives, one of 22 tons and 3 of 12 tons. Many overseas buyers from nearby countries as well as Australian buyers were attracted. 1067 mm.

gauge ComEng diesel EC4585 of 1964 passed through Brisbane en route for Bougainville Copper during July. Carrying plant number 2792 and painted with Lot No.31, this machine is rated at 220 hp and has a Caterpillar D333A engine. It was purchased by Mount Isa Mines from contractors Monier, McNamara & Hardeman in 1969.

F R. Strange Pty Ltd. 6/78, Ray Ellis 7/78, David Mewes 7/78.

OAKLEIGH COLLIERY, Rosewood 508mm gauge

One of a dwindling number of collieries in the area, this still retains an underground tramway system. Seen at the surface on 9 May was a 20 hp Jenbach four wheeled diesel. It was in a deep red livery and seemed to be in good condition, It was builder's number 2260 of 1960.

Editor.

SOUTH AUSTRALIA

Saltworks near Langhorne Creek 610 mm gauge

In the low country on the northern edge of Lake Alexandrina at the mouth of the Murray lie a number of natural brine lakes. One of these, about 1 square kilometre in area, supports a small salt works supplying crushed and bagged salt to local properties. In late summer when the lake has dried, the salt is harvested by forking the hard crusts into 2 ft gauge side-tipping skips for haulage to the works stockpile.

The track extends from the crusher shed and unloading chute, dividing by a crude stub point into two spurs to the east and south along embankments which partition the lake. From these, light temporary track sections are laid down along the dried bed of the pans.

The motive power is a four wheel petrol-mechanical tractor, with a side-valve V8 engine driving through an automotive-type gearbox and differential, and chain drive to the rear axle. The chassis is unsprung and the bodywork rudimentary.

Any further information on this or other similar SA lines would not only be much appreciated by your editor for publication in LRN, but also by the writer, c/- P. O. Box 87, Kingswood 5062.

Lee Rodda 7/78

TASMANIA

THE MOUNT LYELL MINING & RAILWAY CO. LTD. Mount Lyell Mine. Queenstown. 610 mm & 900 mm gauge

The Mount Lyell Mine is an underground copper mine with a number of separate orebodies served by a 610 mm. gauge underground railway system. The main function of the system is the transport of ore on the 11 level from underground loading points to the ore concentrator plant on the surface. The mine was visited on 26 May 1978, and an inspection was made of railway operations in the tunnel yard, where ore trains emerge from the two haulage tunnels and are unloaded adjacent to the concentrator plant.

The ore haulage trucks are four-wheel, bottom dump ASEA units with a 7 tonne capacity. The trucks are normally made up in trains of 16 to 18 units hauled by electric trolleywire locomotives. The main type of electric locomotive used is the ASEA four-wheel 9 tonne dual battery/trolleywire loco, but there are also four-wheel 15 tonne 'Gemco' and 10 tonne English Electric trolleywire locomotives at the mine. The ASEA locos are each fitted with a single pantograph and the others with a trolleypole

During my visit a train of ore trucks with a four-wheeled van and with an ASEA loco at each end was unloaded, and an empty train departed from the tunnel yard double-headed by two 'Gemco' locos. Two English Electric locos and a number of four-wheel battery locos were noted on sidings in the yard. There was also quite a variety of rolling stock in the yard, including at least one 'Hagglund' truck.

Plans for the installation of a new 900 mm. gauge haulage system on the 17 level have been deferred, and it is understood that the locomotives and trucks intended for use on this system were stored at the mine, (see *Light Railways* No.51, p.20).

(With the announcement in June that the Federal Government's subsidy will continue for only another three months, the future of the mine and its tramway system seems precarious - Ed.)

Anthony Weston 7/78.

SECOND RIVER TRAMWAY, Karoola 610 mm gauge

(c/- 12 Melbourne St., Launceston 7250)

A further extension to the main line was added during July when another 150 feet of track was laid. Krauss loco No.2 (B/n 6067) has been fitted with a Pyle-National turbo generator, and wiring of the lighting circuits is underway.

Ralph Proctor 7/78

WEE GEORGIE WOOD STEAM RAILWAY INC., Tullah 610mm gauge

During June, it was noted that the boiler from the 2 ft gauge Fowler 0-4-0WT was in the Emu Bay Railway Workshops at Burnie for a complete overhaul. Some sections of the outer firebox just above the foundation ring had been cut out and new plate will be welded in.

It is understood that tracklaying at Tullah has begun on this narrow gauge tourist project,

Ralph Proctor 7/78

VICTORIA

EUREKA TRAMWAY, Clunes 610 mm gauge

Brian Peart owns this small preservation project. His first loco was *Rusty*, a Ruston & Hornsby four wheel diesel from Moreton Mill. This loco, of Type 40DL, builder's number 223725 was built in 1944 for the British Ministry of Supply. It was returned to Ruston & Hornsby however, and was despatched to the Melbourne & Metropolitan Board of Works in June 1947. Having been purchased by Moreton Mill in 1948, it was acquired by Brian in 1976. Since arrival in Clunes, it has been repainted and has received a car alternator for lighting.

The second loco, as yet not operational, was obtained, engineless, from Moreton Mill in May 1977. It is Malcolm Moore *Dutchy* which worked at ICI, Dry Creek, South Australia before coming to Moreton in 1956.

Brian has also built a couple of motor trolleys, one of which can be easily transported by car on expeditions to Queensland!

Brian Peart 8/77, 7/78.

GEELONG STEAM PRESERVATION SOCIETY Gauges various

P. O. Box 166, Belmont 3210

Ex-SAR 4-8-0 T251 (Walkers 276 of 1915) operated over the Easter period, before being placed on standby on 30 April for small boiler repairs in preparation for a boiler inspection.

Ex-QR PB15 454 (4-6-0 Walkers 99 of 1909) returned to service on 30 April after repairs to ashpan, injectors, and firehole door.

By the end of May, little work remained to be done to ex-TGR 4-6-2 M6 to put it into steamable condition. Work recently completed included the overhaul of boiler fittings, replacement of boiler tubes and some stays. This loco is stored at Queenscliff.

Ex-Fyansford Cement Works 0-4-2ST *Wesley B. McCann* (Hudswell Clarke

646 of 1903) is second standby at present, but motion and eccentric gear is due for overhaul.

Ex-Fyansford Cement Works 0-6-0ST *Arthur T. Middleton* (Vulcan Iron Works 2539 or 2541 of 1916) is in store pending axle box work and the replacement of a split tube.

Australian Standard Garratt G33 on display at the ARHS Victorian Division's North Williamstown Museum was due to receive a fresh coat of paint from GSPS members. This locomotive will be loaned for use on the Bellarine Peninsula Railway. With a wheel arrangement of 4-8-2+2-8-4, this locomotive is the last of its ill-fated breed in existence.

All the above locos are of 1067 mm. gauge, but GSPS has recently acquired a four-wheel road/rail 'trackmobile' of 914 mm gauge from Alcoa. No.T02 or 37, it was built by Whiting Corporation, Harvey, Illinois, USA, Serial No. 2TMA 883, Engine No. R3J169401.

The Commoner 5/78, Peter L. Charrett 7/78

MELBOURNE & METROPOLITAN BOARD OF WORKS. East Malvern 762mm & 610 mm gauge

Apart from those locos previously reported in *Light Railways*, the following have been noted at East Malvern on the South Eastern Sewer: In July 1970, No. 14 built by Geo. Moss and No. 030 built by Baldwin. In December 1971, No. 027 and No. 029, both 0-4-0D

In April 1977, out of use No. 37 4wDH E.M. Baldwin 5366.5.1974 Model DH4T/5 engine No 699627, and two internal-combustion front end muck loaders built by Scoma of Italy, numbers 93 and 113 of 1975.

Peter L. Charrett 7/78.

MELBOURNE UNDERGROUND RAILWAY CONSTRUCTION 1067 mm gauge

One of the contractors on the Melbourne Underground construction, Codelfa (or is it Cogefar?) is using a 1067 mm gauge railway to haul spoil from the underground construction to the surface at the Jolimont lines exit in Flinders Street.

Codelfa is believed to be using six locomotives for hauling trains. The following locomotives were seen in use on 9 June 1978:

26/1	0-4-0D	Caterpillar engine	working
26/7	0-4-0D	Caterpillar engine	parked
	0-4-0D	Caterpillar engine	parked

26/2	0-4-0D	Caterpillar engine	working
------	--------	--------------------	---------

26/	0-4-0D	Caterpillar engine	working
-----	--------	--------------------	---------

One worker thought that they may have been built by Baldwin, but there were no builder's plates or identification. All were of similar build.

Peter L. Charrett 7/78

GIPPSLAND FOLK MUSEUM, Moe 610 mm gauge

On 30 June 1978, three of the side tipping skips were still on display here. It is probable that the other three skips went with the Malcolm Moore locomotive (see LRN 3 p.10). The timber bogies also appear to have gone.

Peter L. Charrett 7/78

WONTHAGGI STATE COAL MINE HISTORICAL PARK

Although the coal mines at Wonthaggi closed about ten years ago, there are still some remains of their tramways left.

South Dudley.

Some attempt has been made here to preserve the remains of the buildings. As well some 610 mm gauge track has been laid across the site of the former 1600 mm gauge tracks and around some mullock heaps. A notice here says "Train Rides 2pm - 4pm Saturday/Sunday". When seen in May 1978, the track was overgrown and did not appear to have been used for some time. A circular for Easter 1977 advertised "skip rides" (amongst other attractions). Scattered around the area in various states of rust were five four wheel "carriages" (probably converted skips) with the numbers in weld on the end of them - 631, 528, 11.65, and five open frame skips. There was one four wheel wooden box skip locked away in the rescue station.

South Wonthaggi Coal Mine

The area here had been worked out after the other areas, and there was still track in situ out of use. There were many four wheel steel bins with wooden underframes lying around rusting along with the remains of a few wooden bins.

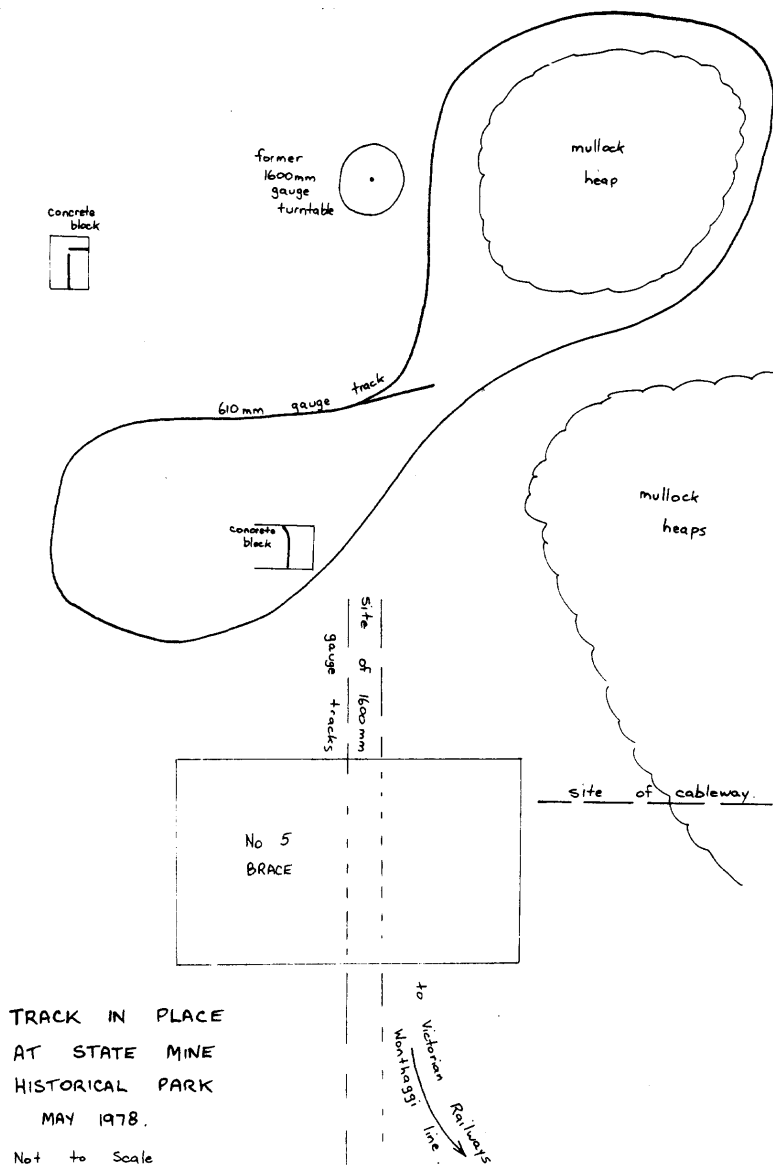

Kirrak Coal Mine

All the track here was gone, but the Brace still remained. There were many wooden underframes without wheels, some remains of steel bins and one open frame.

North Dudley

The area here had not been worked here for many years. Two former hopper wagons, formerly belonging to the Victorian Railways had been raised up to provide an overhead loader. The numbers of these wagons were O 246 and O 253, and the last date on them being 5.57.

Peter L. Charrett 7/78

NEWS FROM THE SALES DEPARTMENT

RAILWAY SCENE No. 2/77 Price 95c.

This issue features 'Industrial Steam in England' as the lead article, and is basically a concise listing of "steamy" locations in Britain. A short summary of loco workings and approximate times of usage are included.

Other articles are: Diesel locomotives in China
Lines de la fer de Halouze (France)
The Silesian sand railway (Poland)
News - Literature etc.

STACK TALK No. 73 Price 95c.

Features: Milling around (Sugar Mill happenings),
Switzerland
South Johnstone No. 5 goes on display
Scale drawing (Johnstone Shire Council Car No.1)
Index to articles 1977.

NARROW GAUGE & SHORTLINE GAZETTE Jan/Feb 1978 Price \$2.65

Full of interest to admirers of the US scene, both model and prototype.

Articles include: Fine scale mill complex
A Tweetsie Reminiscence
Ore processing - Part 2
An innovative concept
plus much more.

In stock once more are the following:

RUSTON & HORNSBY LOCOMOTIVES Price \$3. 90

92 pages of facts, figures and photos.

DAY'S TRACTORS Price 80c.

Short resume of rail tractors built by Day & Sons. Includes several photos and two drawings.

Scale drawing - SHAY Price 40c.

The drawing shows side and front elevations of one of the two 3ft gauge Lloyd Copper Co. (NSW) Shays that later went to Powelltown in Victoria.

Please note: Stocks of the last two items are limited.

TASMANIA REMEMBERED is now out of print.

EDITORIAL

I wish to thank all those who have contributed news for this issue of LRN, and hope that if you have enjoyed reading this issue, you will be encouraged to send in information too.

The issue has been raised as to whether LRN should include details of “main line” preservation projects. My own feeling is that LRRSA members will tend to be generally interested in all preserved and private railways, and that in any case, there is a gap that needs to be filled as no other publication seems to aim for a comprehensive coverage of preservation projects. I would welcome members’ thoughts on this issue,

The deadline for the inclusion of items in LRN is now about one week into the month prior to publication.

RESEARCH COLUMN

BASALT QUARRIES LTD, Woy Woy,

Craig L. Wilson of 22 Jackson St., Pennant Hills, 2120 NSW, is researching the above firm (who owned ex Wallaroo and Moonta No.2) and would like to hear from anyone with any information.

BHP. Iron Knob.

Following Keith McDonald’s notes on South Australia published in LRN 5, Craig L. Wilson writes that in 1927, BHP introduced several Fordson tractors converted for rail use to transport the ore from the quarry face to the loading bins at the quarry. They replaced compressed air winches and horses

FOOTSCRAY

Darryl Grant of 4/43 Kent Road, Box Hill, Vic 3128 writes as follows:

Some relics of what was presumably an industrial light railway system in Footscray, Melbourne, were noticed recently on the north side of Ryan St., just south of the railway line between Footscray and South Kensington stations. Narrow gauge tracks of approximately 3 ft gauge are set in the roadway for a distance of almost 100 metres. At the western (Footscray) end is a small turntable, almost buried under the asphalt, from which two tracks, also buried, cross Ryan Street and disappear under the opposite kerb. The rails are grooved street tramway rail, laid unusually with the groove on the outside of the rails, not the inside as is usual. Perhaps some reader of LRN may be able to throw some light on the history of this relic.

KAISER ENGINEERS, Snowy Mountains Scheme

Keith McDonald of 7 Dean Avenue, Raymond Terrace 2324 NSW has been researching into the locomotives used in the Snowy Mountains Scheme and is particularly keen to find out more about their disposal. A list of locos used by Kaiser Engineers is shown below, and Keith would be very glad to hear of what happened to them. Theiss Brothers and Utah Construction also used many locos, and it may be possible to print lists of these in a later issue.

Plymouth 0-6-0DH 6139

Plymouth 0-4-0DH 6156

Goodman 0-4-0BE 10 ton - 6395, 6396, 6400, 6401, 6404, 6405, 6412, 6413, 6414 all of 1954

Goodman 0-4-0WE 20 ton - 6408, 6409, 6410 all of 1954.

SORRENTO TRAMWAYS

A group of people living in Sorrento have become very interested in the steam tram that ran in Sorrento between 1890 and 1920. The group is interested in restoring and placing on display an engine of the type used. The engines were Baldwin 0-4-0STs. Any reader who knows of the existence of an engine of the above type, or who can offer any other information, is asked to contact P.R.Collins at P.O.Box 55, Sorrento, 3943 Victoria.

S.A. HARBORS BOARD.

The following drawings were done in the late 40's, early 50's, for the S.A. Harbors Board workshops, to manufacture various replacement parts which presumably were not readily available otherwise. They might possibly be of use to someone with access to workshop facilities, to make up spares.

For 1926 (approx.) Malcolm Moore/Fordson tractor: drawings of various forged and fabricated transmission gears and sprockets.

For Ruston & Hornsby 40DL: drawing of cast iron L.H. or R.H. brake shoe.

Copies are available on request from Lee J. Rodda, P.O.Box 87, Kingswood 5062, SA.

OVERSEAS SIDELINE

NATIONAL RAILWAY MUSEUM, York 610 mm. gauge

Ex-TGR Beyer-Garratt K1 has been placed here on loan by the Festiniog Railway, who had stored it after the closure of Beyer Peacock with a view to its eventual restoration and use. The 0-4-0+0-4-0 compound loco (Beyer Peacock 5292 of 1909), the first Garratt to be built, was on display in the museum. It is to be repainted, according to some reports, in "photographic

grey" livery.

NEW SOUTH WALES

AUSTRALIAN IRON & STEEL PTY LTD. Collieries Central Office, Wollongong.

An advertisement in the December, 1977 issue of *Australian Mining* offered for sale a 4 ft 8½ in (1435 mm) gauge Ruston & Hornsby diesel locomotive, and four 3 ft 6 in (1067 mm) gauge E.M. Baldwin diesel personnel cars. The diesel loco would be R&H 326064 of 1952, Model 88DS, which has been used for shunting at Metropolitan Colliery, Helensburgh. The personnel cars would probably have been used at one or more of the AIS collieries.

Anthony Weston 7/78

HUNTER VALLEY STEAM RAILWAY & MUSEUM 1435mm gauge

(P. O. Box 125, Broadmeadow 2292)

This group has gathered together an impressive collection of locomotives which are stored at a closed colliery in Newcastle, to which public access cannot be allowed, although Society members are able to carry out restoration and maintenance work as required

The Society's aim is to reopen the 43 mile Glenreagh to Dorrigo line near Coffs Harbour. The line was closed in December 1972 and is scenically outstanding, running through National Park and State Forest for most of its length.

A list of the group's locomotives appears below. A substantial amount of rolling stock is also preserved.

1	JUNO	0-4-0ST	Andrew Barclay	1739	1923	ex Commonwealth Steel

There are also four smaller crane locos, one an- 0-4-0 with vertical boiler built by Appleby ex Hexham Engineering, 1061 a steam coal grab built by Harman in 1918, 1075 an 0-4-0 with vertical boiler built by Grafton Crane Co. in 1923, and a diesel crane built by Taylor & Hubbard, all ex NSW PTC. The above items represent an outlay of \$86,454 by the group. It is intended that all exhibits will be preserved in authentic colours and condition.

Keith Jones 8/78

LACHLAN VINTAGE VILLAGE; Forbes 610 mm & 1435mm gauge

(see LR 57 p.15-18)

Services on the Britannia Steam railway here were due to be taken over by a Fowler loco, *Alice*, around the beginning of August. This loco is one of two ex-Tully Mill 0-4-2Ts, believed to be 16339 & 16341 of 1925 acquired by Lachlan Vintage Village. The loco has received new boiler tubes, smokebox, bearings, boiler lagging and water tanks, at a cost, reportedly, of \$4,000. *Alice* will replace ex-Bingera Mill *Ralf* (0-6-2T Bundaberg Fowler 4 of 1952) as the working loco. *Ralf* has evidently been in rather poor condition for some time. Since the Village was officially opened in 1975, approximately 100,000 passengers have been carried, and revenue from the railway now runs at \$10,000 per annum.

One of the Village's standard gauge locos is reported to be on display at the entrance to the site. This is believed to be ex-NSWGR 1919, a Beyer, Peacock

0-6-0 (1761 of 1878).

Lachlan Vintage Village Press Release, Len King 9/78, Editor.

PARRAMATTA PARK STEAM TRAMWAY 1435 mm gauge

The Steam Tram & Railway Preservation (Co-op) Society Ltd operates this tramway on the third Sunday of every month. Locomotives currently in use are 103A Baldwin Steam Tram 0-4-0T (11676 of 1891), ex NSW Government Tramways, and claimed to be the only one of its type still operating in the world, and 1022, Vulcan Iron Works 0-4-0ST (2506 of 1916) ex NSWGR. Under restoration is 2, Robert Stephenson 0-6-0ST (2994 of 1899) ex Commonwealth Portland Cement, Portland. There is also a historic collection of rolling stock.

Peter Stock 7/78

RAILWAYTOWN. Broken Hill 1067 mm gauge

(see LR49 p. 19-24)

This museum has been given a grant of around \$45,000. Three locomotives, several wagons and a four-wheel passenger carriage comprise the collection at present. All the locomotives are ex-Silverton Tramway Co. and are:

Y1	2-6-0	Beyer, Peacock	2971	1888
W24	4-8-2	Beyer, Peacock	7553	1951
"SAM" 26	0-6-0DH	Andrew Barclay	391	1953

The Commoner 7/78

STEAM TRAINS PTY. LTD. Kurrajong 610 mm

The group who formerly operated the steam loco at Forresters Beach (see LRN3 p.3), removed their property from there on 17 August, following a breakdown in the operating agreement between Steam Trains Pty Ltd and the proprietors of Central Park. Restoration work will be carried on at private property at Kurrajong, west of Sydney.

Because of gently sloping land at Kurrajong, preparations had to be made to give a level site for storage, and this was undertaken by members of the group. About 250 ft of track was assembled, one short length for each carriage, and one long straight to take both locomotives, the four ex South African bogies for the cars, and the two ½-ton bogies from the Hudswell Clarke tender. The track consists of 201b rail (which originally saw service at Taronga Park Zoo) screwed to hardwood sleepers. It was supplied and laid by John Dunlop, assisted by members of the group. A large "platform" was built over a bad dip in the access road. This is approximately 100 ft long and constructed with layers of 6 ft ex-pier timbers.

Four articulated transports were used to carry the equipment from Forresters Beach to Kurrajong, two tri-axes and two twin-axle semis. A 13-ton crane first loaded ex-QGR rail motor trailer PL122, which contained all seats from both carriages, along with timber, sheet steel and other materials. PL121 - partially restored - was the next to become airborne, loaded onto the second of the twin-axle sets. This car held larger and heavier pieces of timber, made into a false floor to carry smaller parts. (The original floor had been stripped out for replacement).

The crane was then chained to the buffer beam of the Fowler 0-4-2T (17881 of 1929), and using the slewing action, was able to haul the loco along the siding. The Hudswell Clarke 0-6-0 *Sydney* (1838 of 1950) was also moved in the same way. This enabled the tender to be hauled into a more accessible position so that it could be loaded, minus its bogies, which were then placed in the coal space. When the second 13-ton crane arrived, it combined with the first to lift the Fowler onto the same trailer as the tender. Some anxiety was experienced when the trailing truck hung down low, but this was remedied. *Sydney* was then brought further forward in the siding by the crane, and loaded without difficulty onto the fourth trailer.

On the morning of 19 August, the vehicles and their loads safely arrived at Kurrajong, and within a few hours all the stock was placed on the rails. The new site has excellent security and all facilities necessary for continuation of the restoration programme. There is power, a workshop with welder and other tools and free use of a truck and tractor for lifting and moving equipment.

It is stressed that the current storage site is not open to the public. It is hoped that the result of final negotiations now taking place will be that an operating line will be established along an exciting route at the St.Ives Showground.

Bruce Belbin, Len King 8/78

TIMBERTOWN, Wauchope 610mm gauge

(see LRN 2 p.4)

Hudswell Clarke 0-6-0 1862 of 1952 was ready to be placed into service at the end of the August/September school holiday period. A new headlight has been fitted to the loco. When it replaces *The Green Hornet*, Fowler 0-6-0T 12271 of 1910 as the operating loco, the Fowler's wheels will go to the NSW PTC shops at Broadmeadow for reprofiling. The new coach is now in use.

Len King 9/78

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY 610mm gauge

(P.O. Box 270, North Quay 4000) (see LRN 5 p.6)

ANGRMS have been invited to take part in celebrations marking the opening of the new Brisbane cross-river rail link on 18-19 November. A short tramway is to be operated near to the river adjacent to Stanley Street, and it is hoped to have ex-Pleystowe Mill No.5 (0-6-2T Bundaberg Fowler 5 of 1952) in steam to haul passengers. The loco is being repainted in mill colours of Hawthorn Green and Red.

Stack Talk 76

BUNDABERG TOURIST TRAMWAY PRESERVATION SOCIETY

This new society has been set up in Bundaberg to preserve some of Queensland's railway history, and an application has been made for the transfer of 14 acres of Crown Land adjacent to Baldwin Glen to the Council for leasing to the Society. It is hoped that about 3 km of track will be laid around the area's perimeter. The first loco to be acquired by the group is the unique *Felin-Hen* 0-6-2T (Baldwin 46828 of 1917) which has suffered bad neglect after being placed in a park at the entrance to the city some years ago. Built for the United States Transportation Corps in World War I, it later passed into the ownership of the Penrhyn Slate Quarries in North Wales where it hauled slate, before being sent to Australia in 1940 to work at Fairymead Mill. Here it was fitted with modified tanks and a spark arrestor, and was converted from a 2-6-2T by having the leading truck removed. The BTTPS plan to restore the loco to working order.

Bundaberg News-Mail 28.8.78 via Alan Robert.

CSR LTD. Victoria Mill 610mm gauge

(see LRN 1 p.5)

Homebush, Hudswell Clarke 0-6-0 1067 of 1914 has been completely overhauled at the mill for retention as a working preservation project. It has been repainted in the Grey, Yellow & Black colour scheme last used for steam locomotives at the mill. *Homebush* was expected to be in use on 19 August when it was to haul passengers between Lucinda and Halifax in connection with a local school centenary.

Stack Talk 76

ROYAL NATIONAL ASSOCIATION Brisbane 610 mm gauge

Moreton, Krauss 0-6-0T 4867 of 1901 ex Moreton Mill was placed on display in the historical precinct at the Brisbane Exhibition Grounds during July. The loco had been "Preserved" in a park at Nambour before being stored at the property of Gordon Simpson, M.L.A who had plans of operating a tourist tramway venture at Yandina.

Stack Talk 76

SOUTH AUSTRALIA

EDITHBURGH PLATEWAY.

A few miles east of Stenhouse Bay lies the quiet fishing port of Edithburgh, once a busy centre exporting bagged wheat and salt, with the help of a mile or so of 3 ft 6 in gauge lines, from the town centre and foreshore down to the jetty. In May 1977, little remained apart from one standard flat truck on the jetty, and a few rails still in the roadside.

However, outside a small private museum in the main street, a most unusual plateway waggon, like a large, flat-topped dray, stood on a couple of iron rails of around 1800 mm gauge. These were in the form of a shallow angle with the guiding lip on the inside edge. Apparently there were once some miles of this track laid to bring bagged salt from local lakes. Unfortunately, the museum itself was closed at the time and no further details were recorded, but this would be well worth investigation on a future visit.

Lee Rodda 9/78

MILE END RAILWAY MUSEUM (SA) INC., Adelaide Gauges various

(see LRN 3, p.7)

Ex-SAR narrow gauge 2-6-0 Y97 (Beyer, Peacock 3147 of 1889) is being repainted in Hawthorn Green livery, while ex-SAR broad gauge units Railcar 8, F255 (4-6-2T Perry 255 of 1922) and 504 (4-8-4 Armstrong Whitworth 637 of 1926 (corrected - see LRN8)) have also been undergoing restoration work. A new steam loco is to be constructed for the 18 in gauge operating line, for which a new section car has been constructed by members.

Mile End Railway Museum Newsletter 6/78, 9/78

PICHI RICHI RAILWAY PRESERVATION SOCIETY 1067mm gauge

(see LRN 3 p.8)

The breaking of SA's three-year drought in dramatic style on 3-5 June meant that 50 members were stranded in Quorn for several days. Water was actually

seen flowing under local bridges, to the great delight of certain railway photographers. The railway dam at Quorn filled, now containing 8,000,000 gallons! Little serious damage was done to the Pichi Richi track, maintenance on the drains proving to have been well worth while.

Some trains have been run onto the Hawker line for the reclamation of track materials. Four miles of this line are retained by PRRPS. T 186 handled the work trains. The work of loading the trains with track materials has been done by beneficiaries of a state Unemployment Relief Scheme. A special members' train was also run on the Hawker line on the weekend of 15-16 July.

On the weekend of 29-30 April, the Third Field Squadron of the Royal Australian Engineers (formerly CMF), assisted the Society by placing new bridge timbers on the Saltia bridge, and in upgrading track on Curve 42. A triangle has been installed at Woolshed Flat, and T186 became the first loco ever to turn there on 21 May. A great deal of track work has been done between Pichi Richi and Woolshed Flat, and as a result, the first regular trains to Woolshed Flat were due to be run in the August/September school holiday. This running was to coincide with the centenary of Quorn township, and between 31 August and 9 September, twelve public trains were due to run plus a Quorn Reunion special and a Hawker line work train.

Boiler certificates have been renewed on the Society's three operational locos, 4-8-0 T186 (Martin 198 of 1909), and 4-8-2s W933 & W934 (Beyer Peacock 7410/1 of 1951). Work on the 2-2-0WT Rail Motor NJAB1 (Kitson 4356 of 1905) is progressing steadily, and this is to be a high-quality restoration job. Brake van G.B.4891, the Society's first piece of rolling stock has received an overhaul, and car 403 is nearing the end of its repaint and reroofing. Car *Lincoln* is in the shops and will be returned to service in near original condition with longitudinal seating and centre toilets.

The next major program is for the provision of more covered storage for rolling stock. While on the subject of buildings, the PRRPS has been given control of the ex-National Fitness Council camp at Woolshed Flat, formerly CR ganger's quarters.

Richard Atkinson 8/78

WARATAH GYPSUM, Stenhouse Bay. 610 mm gauge

On a trip to the southern foot of Yorke Peninsula in May 1977, a visit was paid to Stenhouse Bay, where until the 1960s the Waratah Gypsum Company operated a line to bring salt the three miles from Marion Lake for shipment. The company, having turned to road haulage for a few years, had then just recently abandoned the site altogether, and the land was reverting to the State as an enlargement of Innes National Park.

Little could be seen of the former system, but on a length of rails in front of the old company office, loco No. 301 stood at the head of a line of skips. This massively proportioned bar-framed 0-4-0 diesel was one of three from the Vulcan Iron Works (U.S.A.) to work the line. Before being put on display, its engine and bonnet panelling had been removed, and replaced by a sheet metal shroud of similar outline to the original.

Lee Rodda 9/78

TASMANIA

DON RIVER TRAMWAY (Van Diemen Light Railway Society Inc.) 610mm & 1067mm gauge

P O. Box 887, Launceston 7250

2-6-0 CCS23 (Beyer Peacock 4415 of 1902) was donated to the VDLRS by ANR during June. Previously, the loco had been hired on five occasions from the Government Railways at a cost of around \$2,000.

Heemskirk, ex-Emu Bay Railway No 8 (4-8-0 Dubs 3856 of 1900) was removed from its resting place at Hilder Parade, Burnie by slewing the ANR Western line to connect with a temporary track laid down to where the loco stood. A local diesel shunter was then able to remove the loco. It has been placed in store at the old EBR loco shed to be prepared for towing over ANR metals to Don Junction.

MA2 was being worked on with a view to its being operable for the summer. All valves and fittings are being overhauled on this Pacific, Robert Stephenson & Hawthorn 7421 of 1951. Work on the Fowler 0-6-0T (5265 of 1887) is continuing slowly, restoration of the tubeplates requiring specialist attention. 610 mm gauge Hunslet 0-4-2T (1844 of 1936) has been dismantled for boiler washout and inspection.

Steam Echoes 15 & 16.

ELECTROLYTIC ZINC COMPANY OF AUSTRALASIA LTD, Hercules Mine, Williamsford 610 mm gauge

I visited Williamsford on 24 May 1978, and inspected the bottom of the incline to the Hercules Mine, which is a small, underground lead-zinc mine. Ore is brought down the 2 ft (610 mm) gauge, double track incline in two large bogie trucks, which are operated in balance. Near the bottom of the incline, ore is dumped from the trucks and loaded into small skips for transport by aerial ropeway to the mill at Roseberry. At the bottom of the incline, the tracks curve round and end in a few sidings. At the time of my visit, the incline and aerial ropeway were working, and there was a passenger car and a small

underground battery locomotive (minus battery) at the bottom of the incline.

Anthony Weston 7/78

MOUNT BISCHOFF. 914 mm gauge

Mount Bischoff is about one kilometre north of the township of Waratah, and is the site of abandoned open-cut and underground mine workings. Tin mining commenced at Mount Bischoff in 1873 and continued until 1947. Since 1947, tin mining in the area has only been small scale. I visited the open cut workings on 22 May, and saw at least three 3 ft (914 mm) gauge, four-wheel bottom dump trucks in varying states of repair, as well as the remains of small narrow-gauge box or end-dump trucks. There was also a 3 ft gauge truck, similar to those at Mount Bischoff, located in the grounds of the public library at Waratah. These 3 ft gauge trucks were apparently used on the railway which transported ore from the mine workings to the mill in Waratah. The railway used steam, electric and petrol motive power at various periods up to 1947.

Anthony Weston 7/78

VICTORIA

ATKINSON-HOLLAND THOMSON YARRA TUNNEL PROJECT, East Warburton. 762mm gauge?

An auction was due to be held at East Warburton on 12 & 13 September of equipment used on this project. The rail equipment to be sold comprised:

10 - Baldwin 12 ton locos	47 Moore side tipping muck cars, 7 cu. yd
6 - Baldwin 8½ ton locos	19 Flat cars.
2 - Elmco Model 40H muckers	9 Rail cars - 40 ft
	Rail line, steel, RSJ

Sunday Sun 3/9/78.

BURRENGEEN PARK Marysville. 1067mm gauge

A 1067 mm gauge 0-6-0 internal combustion Day tractor with a Fordson engine is "preserved" in Burrengeen Park, Marysville, together with two timber bogies supporting a large timber log. The engine has been painted blue, but no other attempt has been made at restoration, and the locomotive is open for children to clamber all over.

I do not know where the locomotive came from, but the following are some thoughts: my records say that Anderson's tramway near Marysville was 914

mm gauge. The line closed about 1968 and did have a locomotive fitting the above description, except for gauge. The Marysville Historical Society was trying to establish a permanent display featuring this tractor, which was seen at the mill in 1967. The Goodwood Timber and Trading Co., Noojee, was 1067 mm gauge, and did have an 0-6-0D Day-Fordson built in 1936 which was sold after closure in 1939. Brimbonga sawmill, Warburton, had one tractor built by Day, which was abandoned in the bush, and was said to be scrapped by 1972. Unknown gauge.

Peter L. Charrett 7/78

GEELONG STEAM PRESERVATION SOCIETY 1067 mm gauge

P.O Box 166, Belmont 3210 (see LRN 5 p.9)

GSPS has been granted \$100,000 to establish a narrow gauge tourist railway on the disused Drysdale to Queenscliff line. The grant is on a two-for-one basis, which means the Society must raise \$50,000, of which Bellarine Shire and Queenscliff Borough Council will contribute \$34,000. The Society hopes to have the 3 km section from Queenscliff to Laker's Siding operating by Christmas. VicRail will lease the rail reserve to the Society long-term, at nominal rent. The section of line from Drysdale to South Geelong has been retained by VicRail ready for any possible extension of the line in the future.

Locomotive M6 (4-6-2 Robert Stephenson & Hawthorn 7429 of 1951) was steamed at Queenscliff station on June 22-23. PB15 454 (4-6-0 Walkers 99 of 1909) is currently running the passenger services at Belmont, while locos T251 (4-8-0 Walkers 276 of 1915) and No. 6 (0-6-0ST Vulcan Iron Works 2539 or 2541 of 1916) are awaiting boiler inspection.

Moves have been made towards obtaining ex-Fyansford Cement Works 0-6-0ST No.5 (the sister engine to No.6 above) from Jubilee Park, Ringwood, with a view to restoration to running order. A deposit has been placed on NSWGR BOB cars owned by the ARHS ACT Division, which will be converted to 1067 mm gauge for use on the Bellarine Peninsula Railway if an appeal to raise the necessary finance is successful. Meanwhile, work has been done on salvaging parts from the interiors of derelict VR Tait cars at Newport Workshops. Two broad gauge oil tanker wagons have been donated by BP Australia for conversion to narrow gauge.

Geelong Advertiser 26.6.78, Bellarine Peninsula Echo 28.6.78 via N.F Murray, The Commoner 7/78

MELBOURNE ZOO. 610 mm gauge

(see LRN 4 p. 12)

A brief visit here in July 1978 brought the disappointing discovery that

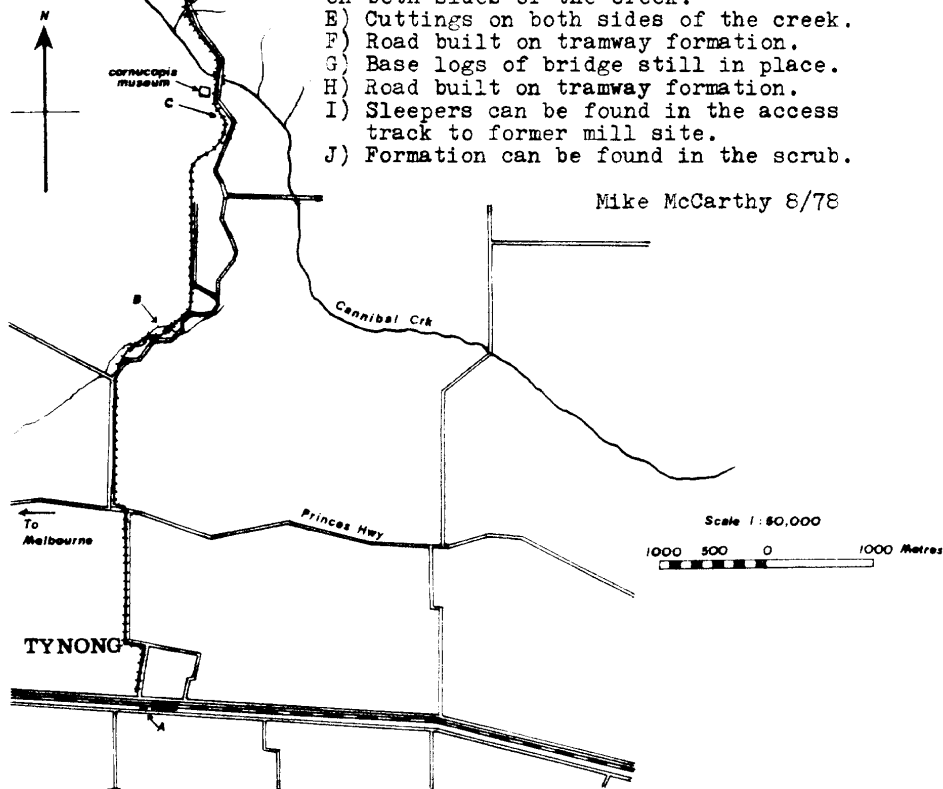

In 1913 the Tynong Sawmilling Coy. constructed a tramway from the Company mill on the Diamond Creek to a point just short of the Tynong Railway Station. A few years later H. Nash extended the tramway to his mill about 2 kilometres away.

The tramway ceased operating about 1920, however fifty eight years later some remains can still be found at the following points:-

- A) The dam used for watering horses can still be found on the South side of the railway.
- B) Formation visible.
- C) Formation can be found in the scrub.
- D) Cuttings and bridge timbers can be found on both sides of the creek.
- E) Cuttings on both sides of the creek.
- F) Road built on tramway formation.
- G) Base logs of bridge still in place.
- H) Road built on tramway formation.
- I) Sleepers can be found in the access track to former mill site.
- J) Formation can be found in the scrub.

Mike McCarthy 8/78

the 2 ft gauge miniature railway which was a feature for so many years, had been lifted. The formation was grassed over, although the tunnel, the girder bridge, and, surprisingly, the semaphore signal, were still in place.

A “train ride” had appeared in the amusements compound, being a fairly tight circle of apparently 2 ft gauge, on which a 4-2-0 petrol contraption chased its tail of two open trolleys.

Lee Rodda 9/8

TYNONG

In 1913 the Tynong Sawmilling Co. constructed a tramway from the Company mill on the Diamond Creek to a point just short of the Tynong Railway Station. A few years later H. Nash extended the tramway to his mill about 2 kilometres away.

The tramway ceased operating about 1920, however fifty eight years later some remains can still be found at the following points:

- A The dam used for watering horses can still be found on the South side of the railway.
- B Formation visible
- C Formation can be found in the scrub
- D Cuttings and bridge timbers can be found on both sides of the creek.
- E Cuttings on both sides of the creek.
- F Road built on tramway formation.
- G Base logs of bridge still in place.
- H Road built on tramway formation.
- I Sleepers can be found in the access track to former mill site.
- J Formation can be found in the scrub.

Mike McCarthy 8/78

EMERALD TOURIST RAILWAY 762 mm gauge

(see LRN 4 p.11) ETRB_LRN003

On 19 August, Puffing Billy's two millionth passenger was carried. This day was also significant in that locomotive 14A was released to service in VR “Canadian Pacific” Red livery. This is as an experiment to determine the feasibility of a variety of colour schemes.

The PBPS “Image” Committee has recently made recommendations about various aspects of locomotive appearance. Regarding paint colours, the following recommendations were made:

3A - Baldwin Green - Light Ivy Green with Gold lining (this livery was not

actually carried by this loco, but represents that applied to the original Baldwin locos, 1A & 2A), or as an alternative, VR Green livery - Two-tone Green with White lining.

6A - VR Green livery.

7A - VR Red livery - Canadian Pacific Red and Chocolate with White lining

8A - VR Black livery - all over Black.

12A & 14A - VR/PBPS livery - Black with Red headstocks, valances and handrails.

In addition, it was recommended that as the locomotives are preserved on an "operating museum" railway, it is desirable that each NA be restored to the historical configuration appropriate to the historical period represented by the colour scheme.

After the return of 6A to service in March, a special test train of 13 vehicles was pulled by double headed 6A and 12A to check draft gear performance. During the run, steam was shut off on 12A, but 6A was able to carry on regardless! 14A has been retubed and received a valve machinery overhaul; a new bunker and cab end plate were fitted. Progress on the reconstruction of 8A has been slowed by a delay in boiler construction. New wheels were obtained for the Ruston diesel (296058 of 1951), which were pressed on the

axles by the Tramways workshops at Preston.

Narrow Gauge 70

WESTERN AUSTRALIA

BUSSELTON JETTY TRAMWAY 1067 mm gauge

(see LRN 4 p. 13)

Since Cyclone Alby's damage to the jetty, operations have ceased, although the railway is still complete. Contrary to popular belief, the rail jetty was not washed away, the crossbracing to enable it to take heavier loads of rail vehicles saving it, although rail alignment has shifted in some places. The walking jetty was the part that suffered due to the weather and was washed away in three places.

In fact, rail trolleys and Kalamazoos have been used on the rail to ferry debris, volunteer workers and equipment in the cleaning-up operation.

L G. Watson, 7/78, Rusty Rails 7/78

ANACONDAS REDROSS NICKEL MINE. Widgiemooltha. via Kalgoorlie.

A disposal of plant was due to be held on 2-3 August. Included for sale was a Gemco 3½ ton underground locomotive (battery electric?) and three Granby 66 cubic foot trucks built by Gemco, as well as other underground equipment such as bidders that operate on rail tracks.

Rusty Rails 7/78, David Whiteford 8/78

L. WHITEMAN, MUSSEL POOL. Caversham. 610 mm. gauge

Two steam locomotives of this gauge are situated at a private park at Caversham, WA. Named "Mussel Pool" and owned by Mr L. Whiteman, the founder of a leading brick works in the Swan District, the park has been in the news recently as Mr. Whiteman wishes to hand the park over to the Government as a State recreation area.

The locomotives were purchased by Mr Whiteman during the 1960s. Both came from the Kalgoorlie area. The smaller one is a Krauss built 0-4-0WT locomotive (B/No,2181 of 1889). Originally from Victoria, it came to Western Australia to work with the East Murchison United Gold Mines before being sold to Western Machinery Co., Kalgoorlie, where it stayed until 1963. In that year, it was taken to Midland Workshops (WAGR), and stored until 1975, when Mr. Whiteman took delivery of it at Caversham. Unfortunately, the condition of the little loco is derelict, as it is virtually boiler, frame, wheels, and half the cab, with many parts missing. On the last inspection it was still unpainted, and presented a sorry sight,

The second locomotive is a Mallet 0-4-4-0T, originally from the Magnet Tramway of Tasmania. Two Mallets were purchased from the Island State during the 1930s by WA gold mine, Great Boulder Ltd., Kalgoorlie. Only one was used in WA, and included many parts of both. Its state at Mussel Pool is nearly complete, and it is painted red and blue. (Believed to be Orenstein & Koppel 2609 of 1907 according to my records - Ed.)

The park also contains many other items, such as early tractors, portable

boilers, steam shovels etc.

L. G. Watson, 7/78

**WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION
INC. Gauges various.**

(P.O.Box 237, Cloverdale 6105)

The three hoppers mentioned in LRN 4 were acquired from a metropolitan scrap dealer on 24 April 1978. They are in fact side discharge vehicles, and represent some of the modern equipment from Lake View & Star. These 610 mm gauge large capacity wagons are in quite reasonable condition, and are fitted with roller bearings, coil spring suspension, and Lake View & Star's link pin coupling system. Two have the added feature of handbrake and platform for brakeman at one end where the brake wheel could be operated. It is thought that these wagons were used at the end of a typical LV&S train in the capacity of brake van. Another modification on one of the braked wagons was the provision of a caged bracket for a tail light. A plate stating the builder to be Malcolm Moore of Melbourne is exhibited on a wagon side, and as with most LV&S equipment, a canary yellow paint scheme predominates.

EDITORIAL

One of the purposes of LRN is to inform readers of places of Light Railway interest around Australia so that they can become better known and be visited by enthusiasts. In spite of the many reports which have been published about locations not known to more than a handful of enthusiasts, very few "follow-up" reports by readers who have visited these locations have been received. There are many details awaiting recording and publication about all aspects of light railway operation. Whatever your interest is, why not send in details for publication? In particular, any changes from the situation last recorded in LRN should be notified so that everyone can be informed for future reference.

One problem facing the editor in dealing with some reports is the lack of precise detail about locomotives in some correspondents' news. Wheel arrangement and basic information about engine and transmission in the case of internal combustion locos is invaluable. Also builder's number should

be given wherever possible. This makes it much easier for researchers to trace locomotives which may have moved around during their lifetime. While on the subject of loco details, readers will note how I have used the convention commonly used in Britain to distinguish between small internal combustion locos. For example, 0-4-0DM means a four-wheeled diesel-mechanical loco with wheels connected with coupling rods, while 4wDM means a four-wheeled diesel-mechanical with wheels connected by chains or similar.

I wish to extend to all readers best wishes for Christmas and for the New Year.

BOOK REVIEW

AUSTRALIAN SUGAR INDUSTRY LOCOMOTIVES

56pp. duplicated inc. 18 diagrams of diesel locomotive types and eight area maps. Compiled by John Browning and David Mewes. The Australian Narrow Gauge Railway Museum Society, Brisbane.

This informative booklet is a 'First' in this field as it provides an invaluable reference for the narrow gauge (2 ft or 610 mm) railway enthusiast for it contains up-to-date rosters for all Queensland Sugar Mills and Bulk Sugar Terminals operating locomotives, including builders, builder's serial numbers and locomotive types, fully annotated.

Its compilers on behalf of A.N.G.R.M.S. acknowledge the assistance of others and plan to keep the information current by the issue of amendment lists as necessary from time to time. The information listed is at August 1978.

As a guide for those interested in the over 300 locomotives - now alas almost wholly diesel - used by the Queensland sugar industry on almost 2000 miles (3200 km) of 610 mm gauge track by 28 mills and the four bulk sugar terminals, this booklet is invaluable.

The scale of operations on these tramways (i.e. railways) is surprising: trains or up to 1000 tons are hauled on the Victoria Mill (CSR) system of 150 miles served by 20 mainline locomotives. The longest haul involves a round trip of 70 miles from the mill!

The cane tramways work during the winter 'crush' for six months each year from June to November, after which both locomotives, rolling stock and track receive heavy maintenance.

In addition to the mills themselves, the booklet lists the locomotives used at the four bulk sugar terminals served by rail; there are useful notes on the locomotive builders, their classification and numbering practices, and there are indexes to the maps, the mills and the locomotive drawings which are

scaled 3.5 mm to the foot.

What may surprise some readers is the sophistication of many of the operations which now employ radio-controlled brake wagons activated from the locomotive (continuous brakes are not yet in vogue) and quite a number of mills employ radio control, ballast tampers and other machines for track maintenance.

At the give away price of \$1.50 plus 40c. for postage and packing, this is indeed a bargain. Copies are available from Ray Ellis, A.N.G.R.M.S. Sales Officer, 152 Copperfield Street, GEEBUNG 4034 Queensland or the L.R.R.S.A. (see sales list).

JLB 10/78

NEW SOUTH WALES

E.M.BALDWIN & SONS PTY LTD. Castle Hill, NSW.

Four locomotives are known to have been on order, or delivered by this manufacturer during 1978. 610 mm gauge B-B DH 7240-1-4-78 of 1978 left Baldwin's in April for South Pacific Sugar Mills, Fiji. It was probably the same loco which was pictured in the *Fiji Times* of 12 June, being unloaded from a boat at Lambasa Mill. A 1067 mm gauge 4wDH flameproofed 20 tonne loco was delivered to Bellambi Coal in April. A 610 mm gauge 4wDH 12 tonne loco was delivered to CSR Ltd., Goondi Mill in August. A 1067 mm gauge B-B DH 40 tonne loco is on order by Australian Iron & Steel Collieries. This flameproofed loco will be Baldwin's first underground bogie loco.

A.R.H.S. Bulletin Supplement 11/78, Industrial Railway Society Bulletin 247, Keith McDonald 8/78.

CENTRAL PARK RAILWAY. Forresters Beach 610 mm gauge

(see LRN 3 p.3)

Proprietor Kevin Ruby completed track relaying at Forrester's Beach in the first week of September. The 'Simplex' loco, Motor Rail 4wDM 11023 of 1955 was in use on 4 September. However, the John Fowler 0-6-0DM 16830 of 1925 does not seem to be used much. The track on which the Steam Trains Pty Ltd locos had been stabled had been lifted, and no signs of their tenancy remained. (see LRN 6 p.6)

Len King 9/78

STEAM TRAINS PTY LTD. 610 mm gauge

(see LRN 6 p.6)

After a long wait, approval in principle has been given for the St.Ives

Showground railway project by the NSW Minister of Lands. Ku-ring-gai Council is to reaffirm its approval granted in 1976. Approvals have still to be obtained from the Department of Main Roads and Police Department.

The line will be approximately 1.7 km in length and run through bushland at the rear of the Showground. The line will be constructed in 23 kg rail spiked to treated wooden sleepers in blue metal ballast. The sharpest main line curve will be 36 metres radius and the steepest grade 3%. It is hoped work can commence in 1979.

NSW Digest, 11/78

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY, Albion Park. Gauges various

(P.O. Box 1036, WOLLONGONG 2500)

Cairns Hudswell Clarke 0-6-0 1706 of 1938 was steamed every weekend following its first steaming in early July, principally to enable drivers in training to log the required hours. It was soon discovered that the sight of a loco in steam attracted passers-by on the adjacent Illawarra Highway. This was capitalised on by placing a donation box in a prominent position on top of the firebox, and offering footplate rides. In this way a small but significant income is provided. However, such activities with *Cairns* were brought to an abrupt halt when the Department of Labour and Industry revoked the boiler ticket. The reason would appear to be discrepancies in the records regarding thickness of the firebox tubeplate. A DLI boiler inspector is scheduled to inspect the boiler in the near future and it is hoped that the situation will be speedily resolved.

The Davenport 0-4-0ST (1517 of 1915/1595 of 1917) has been given a ticket for 689 kPa (100 psi) and was steamed for the first time on Saturday 14 October. It is a rough rider with a touchy regulator. The former characteristic is probably due in part to its high centre of gravity and to its being less than 2 ft gauge - most probably 60 cm. A less than armchair ride is experienced when the loco runs through check rails and across points. Difficulty has been experienced in packing the piston and valve rod glands and steam still leaks at these points. Special white metal seals are required and the services of a professional steam fitter have been obtained to overcome this problem,

Shay locomotive No.2 (Lima B/n 2097 of 1908), which until recently was generally referred to as a relic, has lately taken on the appearance of a locomotive. Timber framework for an American style cab has been bolted into position, and the name of the original owners, A. & D. Munro, has been lettered-in white on the sides of the bunker. No.2 is resting on 2 ft gauge bogies in the work compound, while the remains of No.1 (Lima B/n 906 of

1904) and parts of both locos are stored elsewhere at the museum. Both locos were recovered from Palm Tree, Qld in 1974, and worked on the 2 ft 6 in gauge Munro's Hampton Tramway (see *Light Railways* 61)

The frame of the Perry 0-6-2T 7967-49-1 of 1949 was recently lowered onto its wheels, and with members holding coupling rods into position, was shunted briefly by the Ruston diesel. The Perry had been stripped for a particularly thorough job of restoration. Unfortunately, other priorities have meant that work on the loco has all but ceased in the past few months.

Tongue and groove floorboards have been laid in the passenger saloon car referred to in LRN 5 p.5 and work is proceeding on wall and roof cladding. Seating will be courtesy of J.Hills, Wollongong, who donated a former government 31 seater bus minus engine. Modifications to the bogies to improve ride quality have been undertaken but have yet to be trialled.

The Society participated in the Model Train '78 exhibition held in the Keira Boys' High School hall over the weekend of 26 and 27 August. Society members manned a stall inside and outside member Richard Youl operated his 2 ft gauge half-size Birney tramcar on 85 m of portable track and overhead. A set of car batteries with appropriate charging and back up equipment provided the power. It was a successful weekend, particularly from a financial point of view.

The Ruston diesel (4wDM 285298 of 1949) has been painted green and recently spent several hours propelling an improvised but effective track cleaning vehicle around the electric tramway at Albion Park. Work is well advanced for overhead wiring for the tram.

John Reynolds 9/78, 10/78

SYDNEY LIGHT RAILWAY SOCIETY LTD 610 mm gauge

P.O . Box 105 PANANIA 2213)

The 610 mm gauge light railway that formerly operated at the Southern Highlands Transport Museum, Colo Vale (see LRN 2, p.4) has now ceased operations and the track has been lifted and stored pending removal.

The operating group of the Highlands Light Railway is to form a new company, Sydney Light Railway Society Ltd, to take over the assets of the ELR. The line will be relocated to a new site at Menangle which affords greater public access, longer trackage, and an easier grade.

Present rolling stock consists of 1 0-4-0WT Hudswell Clarke 1423 of 1922 built for agents Robert Hudson and ex National Portland Cement, Maria Island, Tasmania and Corrimall Coal Co., NSW, and 2 4wDM F.C.Hibberd 2380 of 1941 ex NSW; Public Works Department. In addition there are two bogie carriages which use regauged 20 in bogies ex Balls Head Coal loader wagons.

It is intended to run a regular tourist railway-when established. Also operating at the same location will be the NSW Steam Preservation Society Co-op who are moving their equipment from Ingleburn. A possible name for the new enterprise could be Menangle Steam Park.

Paul Simpson 11/78

T.A. MELLEN PTY LTD, Picnic Point. 610 mm gauge

The electrical contracting firm of T.A. Mellen Pty Ltd. of Villawood, NSW, have been awarded a contract to lay cables for the Electricity Commission of NSW over a difficult route between Picnic Point substation and the City of Sydney.

Although the majority of the cable laying involved the digging of trenches along various main streets and the provision of several special bridges over creeks etc., one mountain side section adjacent to Henry Lawson Drive between Salt Pan Creek and Little Salt Pan Creek proved that a tunnel was required and so work commenced on a 100 metre tunnel some 3 m diameter approximately.

As work on the tunnel face proceeded, a 610mm (2 ft) gauge railway was progressively laid down, the track, 20 lb/yard in 3 metre lengths carrying a Gemco 'Trammer' 0-4-0BE built by George Moss Pty Ltd. of Leederville, WA. The loco would haul a single Gemco 22 cubic feet side tip wagon from the workface to the Liverpool end of the tunnel for dumping of the spoil.

The track, loco and wagon were removed during September 1978 when the tunnel was completed. This rolling stock appeared to be ex Metropolitan Water, Sewerage & Drainage Board equipment possibly purchased at the MWS&DB surplus equipment auctions.

Paul Simpson 11/78

QUEENSLAND

ANSETT TRANSPORT INDUSTRIES LTD. Hayman Island. 610 mm gauge

The loco working trains from the jetty and helipad to the main resort area was Ruston & Hornsby 4wDM 285339 of 1949, Type 30DLU. This loco is painted black and red and is ex Victorian State Rivers & Water Supply Commission. A second Ruston & Hornsby, apparently a new arrival, was also seen. This is 4wDH 179872 of 1936, type 18/21 hp. It started its working life at the British War Department's Corsham Depot before coming to Proserpine Sugar Mill, where it was derelict by 1972. It left the mill in 1977 to be rebuilt at Airlie Beach by Joe Hawkes (see LRN 4, p.10). It had received a new engine and radiator and was painted green, but was not yet in service and was lacking

bodywork. A third locomotive, apparently a 'Simplex' Motor Rail 4wPM with a four-cylinder Standard car motor was also observed. Its identity is unknown. The island has had a 2ft gauge railway system since at least 1950, and further details of its locomotives and rolling stock would be welcome.

George Bond 8/78, Editor.

AUSTRALIAN NARROW GAUGE MUSEUM SOCIETY 610 mm gauge

(P.O. Box 270, NORTH QUAY 4000) (see LRN 6, p.7)

On the weekend of 18-19 November, the Society operated its first steam trains on the occasion of the opening of the Brisbane cross-river rail link. The Society was invited to take part in the 'Rotary Railway Revel' by operating a tramway adjacent to the south bank of the Brisbane River in South Brisbane. Twenty 8-yard panels of track were prefabricated from new sleepers and ex-Australian Army rail. The locomotive used was Pleystowe Mill No.5 (Bundaberg Foundry 'Bundaberg Fowler' 0-6-2T 5 of 1952). This locomotive had previously been partially dismantled and was in good condition so a decision was made to prepare it for boiler test and to repaint it in mill colours of Hawthorn Green and Red. Work started in June to prepare the locomotive and was delayed by members' work commitments at weekends and by the absence of some boiler washout plugs. When new ones were made, difficulty was experienced in getting them to seat properly. However, the locomotive passed a hydrostatic test in early November and was given a ticket for full pressure (180 psi). It was steamed for the first time since 1965 on 11 November. Track was moved onto site and bolted together in the week following. The loco was hurriedly reassembled by craning into position the cab and tanks. In the meantime, a four-wheeled carriage from the now closed Children's Adventureland at Samford, was obtained and modified for use. Rolling stock was moved onto site on 17 November.

When the locomotive was steamed the following morning, the only problems encountered were briefly experienced injector blockages caused by debris washed out of the tanks. The loco worked without any further difficulties for two days, operating from 1 to 11 pm on 18 November, and 10 am to 8 pm on 19 November, covering more than 26 miles and hauling more than 1400 passengers. This trouble-free operation reflected the care it received at Pleystowe Mill and the work which went into its overhaul.

The Society displayed South Johnstone No.5 (Hudswell Clarke 0-4-2T 1705 of 1938 built as John Fowler 22752) in the Warana Procession of 30 September and the Wynnum Spring Fair Procession on 14 October. In these events, the locomotive whistle was blown by using a supply of compressed air from a small compressor on the float.

Editor 11/78

GIBSON & HOWES PTY LTD. BINGERA MILL 610 mm gauge

On a visit on 27 August, *St.Kilda*, an E.M. Baldwin rebuild of an-ex Snowy Mountains scheme 0-6-0DM was seen without its name, seemingly lost as a result of a slack season repaint. This loco is now an 0-6-0DH and carries Baldwin rebuild number 6-2179-1-6-67 of 1967. Three locos were seen dismantled and under overhaul near the workshop. These were Hibberd 'Planet' 4wDM 3919, a Bingera-rebuilt Ruston & Hornsby Type 48DL (4wDM 387893 of 1955), and an unidentified Malcolm Moore 4wDM with a Perkins 4-cylinder engine. The other locos were around the mill with the exception of three stationed at Wallaville (the site of the old Gin Gin Mill), and one at McIlwraith for working the light lines in that area. The Wallaville locos are *Thistle* 0-6-0DM Com-Eng A1207 of 1955, *Invicta* 0-6-0DM Com-Eng A1513 of 1956 and a Malcolm Moore converted from 4wPM to 4wDH. The McIlwraith loco is another Malcolm Moore 4wDM. The long haul from the mill to Wallaville has been the scene of many unsuccessful attempts to introduce a 'Locotrol' operation using Baldwin B-B DHs. However, it seems that the problems have at last been overcome for on 17 August, *Oakwood* and *Givelda* (E.M. Baldwin 5800-1 -5-75 & 5800-2-6-75 both of 1975) were seen acting as 'master' and 'slave' locos at either end of trains on this line.

Stack Talk 77, Sunshine Express 11/78, Editor.

ISIS CENTRAL SUGAR MILL CO. LTD, ISIS MILL 610 mm gauge

Because of poor weather conditions, only a very short crushing season was forecast for 1978. As a result, there was plenty of time to spend on the maintenance of the mill's loco fleet. Loco 9 Clyde 0-6-0DH 75-812 of 1975, of model HG-3R had previously received cylindrical auxiliary sand reservoirs on each side of the radiator grille. The other six Clyde locos, all the smaller DHI-71 type have received the same treatment this slack. These locos are as follows:

3	0-6-0DH	Clyde	55-66	1955
4	0-6-0DH	Clyde	56-113	1956
5	0-6-0DH	Clyde	58-191	1958
6	0-6-0DH	Clyde	59-204	1959
7	0-6-0DH	Clyde	61-220	1961
8	0-6-0DH	Clyde	64-385	1964

PVC blinds were being fitted to these locos on 27 August, and in addition, every locomotive had been repainted in the mill colours of grey, light yellow, red, and green.

Two brake wagons had arrived from E.M. Baldwin a few weeks before. Brake wagon No.1 was coupled to loco 6, which was to work to Goodwood during the crush. No.2 was coupled to Baldwin loco 10 (B-B DH 7267-1 6-77 of 1977) which was to work to Farnsfield. Both brake wagons carried the same builder's number on the control console (7937-1-7-78), and are of type BV24 (24 tonnes). One will be B/n 7937-2-7-78.

The mill's other two locos are Fowler diesels. Loco 1 (20776 of 1935) and 2 (4110019 of 1950) were seen near the mill. Both were rebuilt by the Bundaberg Foundry, in 1955 and 1954 respectively.

One of the old steam locos still lies derelict. This is a Sharp, Stewart 0-4-2 (4619 of 1900), formerly 9 on the mill's roster. It started life as a Tasmanian Government Railways 0-4-2T (see LRN 4, p.9). It recently came into the possession of the Childers Lions Club, and has reportedly been purchased by someone in Sydney. Hopefully, it may one day be restored to operating condition.

Stack Talk 77, Alan Robert 10/78, Editor.

THE MILLAQUIN SUGAR CO. PTY LTD, MILLAQUIN MILL Bundaberg 610 mm gauge

(see LRN4, p.9)

No fewer than four navvy linecars were seen in the loco shed on 27 August. All had recently received a repaint and were yellow in colour. One is diesel engined with a hydraulic transmission and belt drive onto both axles. It is normally stationed at the mill. There were also three basically similar petrol engined units built on cane truck frames. The Kohler 12 hp engine drives onto the rear axle via a hydraulic drive. Only one of these units has previously been regularly seen at the mill, so the other two must presumably be stationed at out-depots. By the end of October, the mill's two remaining Bundaberg Fowlers, 0-6-2T 6 and 0-4-2T 8 (Bundaberg Foundry 6 & 3 of 1952) had been put to work at Qunaba Mill to cover loco failure there. This left 9, Perry 0-4-2T 9737-45-1 of 1945 mouldering away by the loco shed.

Stack Talk 77, Alan Robert 10/78.

THE MILLAQUIN SUGAR CO. PTY LTD. QUNABA MILL 610 mm gauge

(see LRN 4, p.9)

The three Perry 0-6-2Ts, 1 *Delta* (7967-50-4), 2 *Skipper* 1850-46-1) and 3 *Flash* (6140-48-1) have all received new, larger tanks. During August and September, *Delta* and *Flash* were seen in operation along with 4 Jumbo (0-6-2T Bundaberg Foundry 1 of 1952), renumbered since last season. Millaquin's Bundy Fowler 6 (0-6-2T Bundaberg Foundry 6 of 1952) was also seen at

Qunaba during this period, where it had been apparently sent for repairs. It received new piston rings, and was sent for a trial run on 28 August. However, by 30 October, the position had completely changed. *Delta*, *Skipper* and *Jumbo* were all out of action, reportedly withdrawn for the rest of the season with boiler troubles. Working alongside *Flash* were Millaquin's 6 and also 8 (0-4-2T Bundaberg Foundry 3 of 1952).

Meanwhile *Invicta* 0-6-2T John Fowler 11277 of 1907 is out of use and its boiler ticket has expired. It was exhibited during October in the Bundaberg Harvest Festival Procession by the Bundaberg Tourist Tramway Preservation Society.

Stack Talk 77, Len King 9/78, Alan Robert 10/78, Bundaberg News-Mail via Alan Robert.

MORETON CENTRAL SUGAR CO., MORETON MILL, NAMBOUR 610 mm gauge

On a visit on 16 August, all the mill's main-line locomotives were seen in service, including the ex-Innisfail Tramway locos, which remain in QR livery (see LRN 1, p.4). However, *Sandy*, a Malcolm Moore 4wPM (1051 of 1943), the last petrol-engined Malcolm Moore in sugar mill service, and the main character in a children's storybook (*Sandy the Cane Train* recently re-released in a new edition by Angus & Robertson), was seen dumped out of use without its gearbox. Steam loco *Eudlo* John Fowler 0-6-0T 16207 of 1925 remains out of use in the mill yard. A new deviation of the Valdora tramline was almost complete at the time of visit. It cuts out a difficult and lightly laid upland section with a more direct line, laid in 601b rail.

Stack Talk 77

MOUNT MORGAN MINES 1067 mm gauge

One electric locomotive was seen in use over 400 yards of track on 15 September, hauling QR wagons of lime. Power supply is by 600v. overhead supply, with trolley collection.

Len King 9/78

SUNSHINE PLANTATION, Forest Glen 610 mm gauge

(see LRN 2, p.7)

The fire which destroyed the main building on the night of 10 September did not prevent operation of the railway, although the first train of Monday 11 September, which ran at 10.30 am, operated from the depot rather than the station, as police searched for clues to the identity of the burglars/arsonists.

Len King 9/78

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (SA) INC. Gauges various

(see LRN 6, p 8)

A 1000 ft circuit of 18 in track runs around the museum complex. There is also about 800 ft of sidings. One steam loco is used at present, an 0-4-2 built by Clarrie Hall of Mildura and now owned by John Norris. Internal-combustion locos are a 4-2-0 powered by an Austin car engine and built at the Museum, and a four-wheeled petrol loco with a Moffat/Virtue 4-stroke 4 hp engine converted from 2ft gauge and formerly ex Barry's Brickyard, Torrensville. There is also a 4 wheeled section car built recently by I. Thomas, R.& R. Sanders and R. Humphries. Another 0-4-2 steam loco is under construction. Much of the rolling stock consists of ex 2ft gauge equipment.

Rob Sanders 8/78

STEAMTOWN PETERBOROUGH PRESERVATION SOCIETY 1067 mm gauge

(see LRN 3, p 6)

It is reported that two W class 4-8-2s and a Pmr 4-6-2 have been purchased from WAGR for use in South Australia, and it is believed that these will be going to Peterborough.

Rusty Rails 11/78

TASMANIA

SECOND RIVER TRAMWAY Karoola 610 mm gauge

(C/- 12 Melbourne Street, LAUNCESTON 7250), (see LRN 5 p.9)

The wiring of electrical lighting on Krauss loco No. 2 0-4-0T 6067 of 1910 was completed and tested early in November. Exterior work on the guard's van being built in Launceston is now completed and external painting in green is underway. Further ballasting of the line will be carried out over the next few weeks.

Ralph Proctor 11/78

WEE GEORGIE WOOD STEAM RAILWAY INC., Tullah 610 mm gauge

(see LRN 5 p.9)

The re-conditioned boiler of the Fowler 0-4-0WT was returned to Tullah during the first week of November and placed into position on the underframe. The work was carried out at the Emu Bay Railway Co. workshops

at Burnie and included complete re-tubing. The boiler has also been lagged and painted. The Society hopes to have the mechanical work and fittings replaced on the loco by Christmas, when it is expected to raise steam again. Several lengths of track have been laid in position, and work has included culvert installation and the construction of a railway/road crossing.

Ralph Proctor 11/78

VICTORIA

ALEXANDRA & DISTRICT HISTORICAL SOCIETY 1029 mm & 610 mm gauge

(P.O. Box 21, ALEXANDRA 3714) (See LRN 3, p.9)

The Society has presented a proposal to the Alexandra Shire Council to construct a 2 ft gauge tourist tramway in the Alexandra area. A committee of Shire Councillors and members of the Historical Society to consider a proposal to locate the railway in Leckie Park on the north side of UT Creek and leading to the site of the Society's museum at the railway station has been established.

Restoration of the 3 ft 4½ in gauge 0-6-0PM Day's Tractor is reaching finalisation. On 11 July, the motor was cranked over and after several attempts burst into life after a lapse of some 30 years or more. Painting has proceeded to a stage where only the frame and wheels remain to be painted. As the loco has six inch wide wheels, it is possible a wooden railway will be laid for it to run on, once it has been determined how wooden rails are bent for curves.

The 2ft gauge Kelly & Lewis 0-6-0DM 4271 of 1935, the first diesel loco to be built in Australia, has reached a stage where the Dorman diesel motor has been stripped down to free the four seized pistons, after which the motor and loco can be reassembled, enabling it to be operated again. This will be for the first time since the loco was stored away in the late 1940s.

In April, the Society took delivery of 2 ft gauge Malcolm Moore 4wPM 1049 of 1943, which had previously been used by the SECV at Yallourn, and had been on display at the Gippsland Folk Museum, Moe. Eight dump trucks were obtained from the same source. A top overhaul has been carried out on the Ford V8 motor, and it should be operating by the time that this is in print.

It is intended to construct passenger coaches on timber bogies for operation on the railway.

Ian Bowering, the railway Project Manager would be pleased to hear from anyone interested in Alexandra's project, particularly anyone who can assist physically in the restoration and railway work.

Alexandra & Eildon Standard, OHB, FS, 9/78, Paul Simpson 11/78.

EMERALD TOURIST RAILWAY 762 mm gauge

(see LRN 6 p.13)

(P.O. Box 156, BELGRAVE 3160)

Of the NA class 2-6-2Ts, 12A and 14A were in service in late October, while 6A had to be withdrawn for a few days for welding of some minor cracking which appeared in the boiler backplate. 7A's overhaul has turned out to be even more extensive than previously planned. First the cab and side tanks were removed for complete rebuilding and tubes were removed. After this, further boiler problems were discovered which have resulted in it being sent to Fabsteam Engineering for repair. 7A is not now expected to be back in service before the end of February. Wheel sets have been fitted to 8A and driving axle brasses have been machined, preparatory to the arrival of the first new boiler from Fabsteam which is now expected before Christmas. Work has ceased on 3A pending completion of work on 8A. Meanwhile, the last crown stays have been removed from the boiler shell of Garratt G42.

Detailed planning for the commencement of Belgrave Station redevelopment is in progress. A temporary station will be constructed at Belgrave East Loop for use while work is in progress. Advice is awaited regarding possible government finance before redevelopment work can commence. During November, work on the new walkway between broad gauge station car park and narrow gauge station should be completed.

About 9 miles of track have been purchased from the VR Sea Lake to Kulwin line. The rail is 601b and in excellent condition. Other acquisitions from VR have been several ornamental lamp stands from the Daylesford line, and negotiations are in progress for the purchase of a railway house at Merton for re-erection at Emerald. This would enable the releasing of car 14NB from accommodation duties, and its eventual return to passenger service.

Puffing Billy Preservation Society.

GEELONG STEAM PRESERVATION SOCIETY 1067 mm gauge

(see LRN 6, p.11)

(P.O. Box 166, BELMONT 3210)

Work has now officially begun on The Bellarine Peninsula Railway. On 10 August, six men employed under the Subsidised Youth Employment Training Programme commenced work on resleepering and regauging the Queenscliff to Laker's Siding section.

Loco M6 (4-6-2 Robert Stephenson & Hawthorn 7429 of 1951) steamed into Queenscliff Station on 16 September. This was after a replacement main internal steam pipe was fitted and repair work done to the top row of

superheater elements. Boiler lagging and cladding work was also carried out.

Loco 6 *Wesley B.McCann* (0-4-2ST Hudswell Clarke 646 of 1903) has recently been return to service on the Geelong Common line. Loco 4 *Arthur T. Middleton*, the Vulcan Ironworks 0-6-0ST of 1916 needs quite extensive repair before re-entering service. It is hoped that it might be able to appear in the Gala Day Parade in Geelong on 3 November, continuing on board a load loader for delivery at Queenscliff. T251, the Walkers 4-8-0 (276 of 1915) is out of service awaiting the return of its regulator valve after repairs. In the meantime, painting work has been carried out on boiler, cab sides and cab interior.

A further locomotive has been acquired and was delivered to Queenscliff in September. It is a Malcolm Moore rail tractor built in 1946 and was purchased from Upton Engineering, Corowa, NSW. It has a Fordson petrol/ kerosine engine. Wagon C552 has been purchased from the Tasmanian railway system and should arrive by ship shortly. The Society is taking steps to purchase two WAGR steam locomotives as follows:

S547	<i>Lindsay</i>	4-8-2	WAGR Midland Workshops 1947
V1209		2-8-2	R. Stephenson & Hawthorn 7778 1955 (built for Beyer Peacock 7735 1955)

Prices are \$7800 and \$8500 respectively.

Fencing is being commenced of a security compound 610 ft by 102 ft at Mannerim. A steel framed structure 165 ft by 38 ft has been obtained for use as a carriage shed and is now at Mannerim. Another shed, like the first a victim of Freeway construction in South Melbourne has been obtained for use as a heavy workshop. It is 40 ft by 150 ft and contains a five ton capacity electric travelling crane. An enormous structure some 600 ft long had to be purchased to obtain the workshop building, but within 15 minutes this had been sold at a handsome profit to the Society. A large amount of removable fittings were salvaged from the building, which will enable the workshops to be fitted out to a very high standard.

The Commoner 9/78

WESTERN AUSTRALIA

KALGOORLIE-BOULDER LOOPLINE RAILWAY 1067 mm gauge

Good support has been received for the re-opening of the Boulder to Trafalgar section of the former Kalgoorlie/Boulder suburban network. Two

Wickham rail motors have been acquired, one from Westrail and the other from Coolgardie Tourist Bureau. One will be used as an 8-passenger capacity power car, and the other as a 9 passenger capacity trailer. It is hoped to obtain a lease of the still intact line between Golden Gate, Boulder, Kamballie and Trafalgar, last used in 1973.

Western Rails Winter 1978.

METROPOLITAN BRICK CO. PTY LTD, Maylands 610 mm gauge

A 2ft. gauge railway is still operated by this company in a near city suburb near the banks of the Swan River. The line was established in 1927 with the commencement of the company's Maylands operation. Originally man powered, a rope was brought into use for winch operation on the main line workings and up the incline into the works. As the main line extended, so was the winch rope but in 1951, two F.C.Hibberd 'Planet' 4wDMs were bought and by the end of 1952 the winch haulage was reduced to the incline only. Four-wheel side-tip wagons are in use on the tramway, and the trains travel over ex-WAGR rail. The 'Planets' are now out of use and the remains lie very derelict near the railway. The locomotives used today are two 4wPMs with Holden engines that were constructed in the company's Maylands workshop. Recently, instead of storing the locomotives in the loco shelter on the main line or in a siding, they are now kept in a disused tunnel under Johnson Road. This tunnel is one of two; one is still in use while the other has been bricked up at the clay pit end and has a heavy door placed across the other to protect the locos. Trains run almost every day, Monday to Friday, though there is no working schedule. This is a very interesting line and is the lone survivor of many such claypit tramways that existed in WA.

David Whiteford 9/78

PINJARRA STEAM & HILLS RAILWAY PRESERVATION SOCIETY 1067mm gauge

(see LRN 3, p.12)

(P.O.Box 197, PINJARRA 6208)

This Society operates the Hotham Valley Railway between Pinjarra and Dwellingup. It was formed in 1974 and incorporated in October 1975. The first steam-hauled passenger train ran to Dwellingup on 12 September 1976. There were many advantages enjoyed by the scheme. The branch could be operated without interfering with the Westrail main line, the area is only 50 miles from Perth, and near the holiday area of Mandurah, the line passes through picturesque country, and suitable locomotives, rolling stock and servicing facilities were available from Westrail.

Locomotives at present on the line are as follows:

W903	<i>Marrinup</i>	4-8-2	Beyer Peacock	7380	1951	ex WAGR 7/77
W920	<i>Sir Ross McLarty</i>	4-8-2	Beyer Peacock	7397	1951	ex WAGR 7/76
W945	<i>Banksiadale</i>	4-8-2	Beyer Peacock	7457	1951	ex WAGR 7/77
G71	<i>Menzies</i>	4-6-0	Dubs	3495	1895	ex Millars 11/77

There are also two coaches, Dining Car AV426 and Sleeper Car AQM 287, the latter of which is owned by the Lions Club of Pinjarra. Apparently WAGR coaching stock is used on trains which operate at least one Sunday a month. At present, W920 and W945 double head trains up the range.

W920 was sent to the Westrail Workshops for overhaul, but a team of fitters and boilermakers has now been recruited to prepare the other locomotives. It is hoped to have G71 in service in vintage condition with copper chimney flange and pipes, brass steam dome and headlamp in approximately two years.

Western Rails Winter 1978.

WESTERN AUSTRALIAN GOVERNMENT RAILWAYS. Perth 610 mm gauge

Upon the demolition of some of the old Perth carriage sheds in August/September, a short length of what appeared to be 2 ft gauge track became one of the casualties. This track ran beside the 1067 mm gauge carriage siding, and small trolleys were used on it to aid in the servicing of stock. No sign was seen of the trolleys that operated on the line upon the demolition of the sheds.

David Whiteford 9/78

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC. Gauges various

(P O. Box 237, CLOVERDALE 6105) (see LRN 6, p-14)

Plans have been drawn up for the construction of a 2 ft gauge coach to be made from one of the Association's Lake View & Star wagons. They envisage a vehicle 6 ft wide by 6 ft high by 12 ft long and incorporating bench seating.

Work has been proceeding on the restoration of the 2 ft gauge Hibberd 'Planet' diesel loco ex Lake View & Star. Parts of the frame have been scraped back to bare metal and primed, and work has been done to restore the water pump and small starting engine. It is planned to remove the loco's roof for panel beating.

It has been decided to end the Association's project to assist in the preservation of ex WAGR 1067mm gauge 4-6-2 Pmr 721 at the old Northam

Railway Station. This locomotive, North British Loco 26565 of 1949, had been mostly covered by protective primer by Association members but it has now been decided that a greater priority must be given to the Association's own equipment.

Rusty Rails 8-9/78, 10/78

OVERSEAS

NATIONAL RAILWAY MUSEUM, York. UK 610 mm gauge

(see LRN 6, p.3)

On 24 August, K1 was on display, almost fully restored. It was painted in a light grey body colour, with black edging and white lining, the traditional 'photographic' livery. The smokebox and funnel were black, the buffer beams and the outside balance weights on the wheels were red, as was the number plate background. At the time, not all the motion was assembled. The loco was on a standard gauge well waggon, which in turn was standing on what is known as turntable 'A' (the northernmost of the two turntables). It was well positioned for photography and looked very smart.

EDITORIAL

Firstly, may I apologise to readers for the change in paper size experienced with LRN 7. This was due to a mental lapse on my part, at a time when pressure of work was rather too great for comfort.

Secondly, I wish to point out that one of the most-reported items received by me relates to a locomotive situated approximately 12,000 miles away at the National- Railway Museum in York. It's good to know that our far-flung correspondents are supporting LRN, but what about you people back home? Don't leave it all to someone else to write in about.

The deadline for this issue of LRN was 2 January, and for the next issue it will be 7 March.

RESEARCH COLUMN

SORRENTO TRAMWAYS

(see LRN 6, p.3)

John Buckland writes that there are only two of the type of 0-4-0ST Baldwin engines similar to those which used to work at Sorrento left in Australia, both preserved. They are:

Sandfly Baldwin 7860 of 1886 on the station platform at Port Augusta, S.A.

Kia Ora Baldwin 7111 of 1884 much rebuilt, at the ARHS museum, Bassendean, W.A.

NEW SOUTH WALES

E.M. BALDWIN & SONS PTY. LTD. Castle Hill.

(see LRN 7, p.3)

The 1067mm gauge 40 tonne B-B DH loco mentioned in the last issue was completed early in 1978. The Bellambi Coal Company loco stated as having been delivered in April was in fact delivered in the first week of July, and numbered 'D3'. A second loco has been supplied to the Sunshine Plantation, Queensland (which see for further details).

Stack Talk 78, Editor

COALEX PTY. LTD., Lithgow Valley Colliery, Lithgow. 1067mm gauge

A quick visit to this mine on 20 December revealed that it has recently closed, and that demolition of surface structures has already commenced. A 1067mm gauge railway was formerly used for the transport of men and materials underground. Some trackwork remained on the surface, and some locos and rolling stock were stored, out of use in two 'loco sheds', and out in the open.

An E.M. Baldwin 4wDH loco (6-2350-6-68 of 1968) was in its shed. Two 4w battery-electric locos numbered 4 and 5 were located in another building. The above three locos appeared trafficable, Three more locos were sitting in the open. These were a Hunslet 0-6-0D (4059 of 1950), a North British 0-4-0D (27297 of 1952), and a 4w battery electric loco numbered 3, carrying a

Gibson Battle builder's plate. The Hunslet and North British locos have been out of use since at least 1973. All locos except the Gibson Battle 4wBE carried roughly painted numbers in the range 601 to 606. There were also some items of rolling stock remaining, mainly four-wheel minecars adapted for a variety of uses. (In April 1976, there were four battery electric locos here, all Gibson Battle products. In addition to locos 3, 4 & 5 listed above, there was also a similar loco numbered 2 - Ed.)

Anthony Weston 12/78

BRIAN PINE. Penrith South. 610 mm gauge

The former Isis Mill number 9, Sharp Stewart 0-4-2 4619 of 1900, (see LRN 7, p.7) has been purchased by Mr Brian Pine, a LRRSA member. It is expected that the loco will be on a property at Luddenham (near Penrith) by the time this issue of LRN reaches members.

From various notes appearing in past issues of *Light Railways*, the following brief history of the locomotive has been compiled

Isis number 9 was originally built as an 0-4-2T locomotive by Sharp, Stewart & Co., of Glasgow, Scotland in 1900 as builder's number 4619 for the Tasmanian Government Railways - to be utilised on their 18 mile North East Dundas Tramway, with its 1 in 25 grades and numerous 1½ - 2 chain radius curves. The locomotive was a replacement for the original G1, which was destroyed in a boiler explosion in Zeehan Yard on 17 May, 1899. Following the closure of the North East Dundas Tramway in 1932, this second G1, together with its sister, Sharp, Stewart 4432 of 1897, were purchased by Isis Central Sugar Mill becoming number 9 (and 10) on the Mill's locomotive roster. The only immediate alteration made by the mill was the fitting of diamond spark arrestor chimneys. Doubtless the steep grades and winding curves around and over the hilly terrain which surrounds the Cordalba mill site would have made the two locos feel at home! After some twenty years as tank engines with the mill, number 9 and its sister were converted to tender-type engines, presumably to extend their operational range. In retrospect, it is interesting that this major undertaking took place as the mill was dieselising and it was only a few seasons more before the two locomotives were finally withdrawn from service. Towards the end of the 1960 season, number 9 developed a rent in the boiler near the dome. By welding, the mill kept the locomotive in service until the end of the season but it failed to pass the boiler inspector at his next visit in March 1961, when the boiler was condemned. Number 10 followed a year later.

'Perry' 12/78

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY Albion Park Gauges various

(P O.Box 1036, WOLLONGONG 2500) (See LRN 7, p.4)

Two further locomotives have been obtained by the Society, and were delivered to the site on 1 December. The first is the ex-Corrimal Colliery *Burra*, an 0-4-0ST built to 2 ft. gauge by R.& W. Hawthorn Leslie of Newcastle-upon-Tyne in England in 1923, receiving builder's number 3574. After many years work at Corrimal, the loco was taken to the Australian Iron & Steel Port Kembla Steel Works for restoration in late 1967, and was placed on display at the A.I. & S. Port Kembla Visitors' Centre in 1968. The Society now owns this loco, and also another Hawthorn Leslie product formerly displayed at the Visitors' Centre, standard gauge *Wallaby*. This loco was built in 1913 (B/n. 2988) for G.& C. Hoskins of Lithgow for the No.2 blast service, and is an 0-4-0ST which last saw use in 1963.

The Society's new carriage was hurriedly finished off to a state in which it could be brought into traffic on 19 November. The vehicle was needed for the Kaiser Refractories childrens Christmas party, held at Albion Park. Train rides were provided by the Davenport 0-4-0ST hauling the coach up the grade in a southerly direction, with return trips handled by the Ruston & Hornsby diesel (285298 of 1949) or the 'Leyland-Krauss' petrol loco, *Newbold*. The 2ft gauge electric tram made its debut at the museum and proved popular. A special running day for the Davenport was due to be held on 16 December for those who contributed to its purchase appeal.

On Monday 13 November, the Society's Yallah station building was severely damaged by an arsonist. Valuable Society property was destroyed, but the fire brigade was able to save part of the structure. It is felt that the station building will now have to be moved inside the security compound and other measures aimed at security taken before there will be any point in attempting restoration. In the meantime, a former government bus body now serves as headquarters on site.

It appears that some tubes will have to be removed from *Cairns*, Hudswell Clarke 0-6-0 1706 of 1938, to enable inspection of the tubeplate to take place in order to discover its thickness. Hopefully, then the boiler ticket may be reinstated, although possibly at reduced pressure.

ILRMS Review 11-12/78 via Rob Henderson, 'Perry' 12/78.

STEAM TRAINS PTY. LTD. Kurrajong 610mm gauge

(see LRN 7 p.3)

Since the completion of temporary site facilities at Kurrajong, which include

power, water, shed and annex, and toilet, work has resumed on *Sydney*, Hudswell Clarke 0-6-0 1838 of 1950, and the ex-Queensland railmotor trailer. On removal of the footplate from *Sydney's* tender, it was found that some of the mainframe cross members had rusted out, although the mainframe itself was still sound. It is intended to turn the tender on to its side to carry out repairs to the corroded sections as well as stopping leaks in the water tank. Descaling of the underframe and rustproofing will also be carried out. Much of the loco itself has been chipped back and primed, and all brass fittings have been removed for thorough cleaning.

The group is proposing to have two open, bogie gondola type passenger cars approximately 24 ft long constructed by outside interests, as it is envisaged that the second railmotor trailer will not be restored in time for the opening of the St.Ives railway which is hoped to be in about 1980. These cars would augment the capacity of the first railmotor trailer which is about 40 people.

David Allen 12/78

JOHN LYSAGHT (AUSTRALIA) LTD. Newcastle and Cringila 1435mm gauge

Four standard gauge steam locomotives were at one time operated by John Lysaght (Australia) Limited at either their Newcastle or Cringila works, and all have been preserved:

N.S.W.Rail Transport Museum Thirlmere

Kathleen, an 0-4-0ST, built by the Avonside Engine Co. Ltd, of Bristol, England, (B/n. 1862 of 1921), originally saw service at Newcastle, but was transferred to Cringila in December 1964 to replace *Marian* (see below). It was donated, together with *Alison* (see below) to the NSWRTM following displacement at Cringila. Originally moved to Enfield for display purposes in October 1972, the two engines were subsequently moved dead, and attached to each other to the museum's current site at Thirlmere in July 1975.

Alison, also an 0-4-0ST loco, but built by Andrew Barclay, Sons & Co., of Kilmarnock, Scotland (B/n. 1738 of 1923), commenced duty with Lysaghts firstly at Newcastle, being transferred to Cringila seven years later. It was donated to the NSWRTM with *Kathleen* (see above).

Lake Macquarie Locomotive Society, Edgeworth

This live steam miniature railway group have an ex-Lysaghts loco preserved at their site. It is *Marjorie*, an 0-4-0ST built by the Clyde Engineering Co. of Granville, NSW (B/n. 462 of 1938). After working all its life at Newcastle, this loco was withdrawn from service in June 1972.

Hunter Valley Steam Railway & Museum (see LRN 6, p.4)

Marian, another 0-4-0ST from the Andrew Barclay stable (B/n.2224 of 1948) was withdrawn after only 14 years service at Cringila and was subsequently placed on a short length of track on open display at the Lysaghts Recreation Centre, Figtree Oval. Following approaches by the HVSR&M, Lysaghts agreed to exchange *Marian* for suitable playground equipment. After preparatory work by Museum members, *Marian* was removed by low loader from its display site on Saturday 25 November, and by the predawn hours of the following day, the locomotive had arrived at the Museum's storage and restoration area in the Newcastle district.

'Perry' 12/78, HVSR&M Newsletter 12/78.

QUEENSLAND

THE AUSTRALIAN ESTATES CO. LTD. Kalamia Mill 610 mm gauge

E.M. Baldwin soundproofed cabs have been fitted to two of the ComEng diesels here, the first of their type to have been so treated. The locos concerned are *Airdmiilan*, AH3068 of 1963, and *Delta*, FD5094 of 1965, both 0-6-0DH. Another cab is at the mill for fitting to Com-Eng 0-6-0DM *Chiverton*, C1030 of 1958. Com-Eng 0-6-0DM *Kalamia*, A1409 of 1955 is spare loco, and *Seaforth*, Baguley/Drewry 0-6-0DM 2514 of 1954 is out of use.

Stack Talk 78.

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY 610 mm gauge

(P O.Box 270, NORTH QUAY 4000)

The Society has made an approach to establish its museum and operating railway on the Woodford - Wamuran section of the old Kilcoy branch. The line would be situated about half way between Brisbane and the Sunshine Coast in beautiful country, and includes a range section in State Forest. The proposal has been well received locally, but negotiations are still in the early stages.

Stack Talk 78, Editor

AUSTRALIAN SUGAR INDUSTRY MUSEUM Mourilyan 610 mm gauge

(see LRN 2, p.7)

John Fowler 0-4-2T 4667 of 1882 is on display in a maroon livery. It is reputed to be Mourilyan Mill No.1, and to have worked there from 1883 to 1921. It arrived at Mourilyan from Goulburn Steam Museum on 4 January 1978. Another item on display is a four wheeled petrol rail trolley powered by

a 350cc. J.A.P. engine. It has been painted in the South Johnstone Mill colours of Yellow and Green, so it may have originated from there. There are several photographs of tramway interest displayed.

Stack Talk 78

BRAMPTON ISLAND 762 mm gauge

A tramway about 2 km in length connects the jetty with the tourist complex, with both passengers and freight being carried. Rolling stock noted on a visit in October was two tankers, five flat wagons, and four passenger cars, all four wheeled. The locomotive seen was an F.C.Hibberd 'Planet' 4wDM, builder's number 3475 of 1950. This had been apparently recently painted in a new colour scheme to replace the blue usually seen in publicity material. The new colours are black undergear, hood and cab sides, yellow footplate, headstocks and cab roof, and white exhaust stack. (My records show an identical loco, 3476 of 1950 here also. Can any member shed light on the origin of these locos, said to have come 'from a mine in NSW'? - Ed.)

BUCASIA PROGRESS ASSOCIATION PARK. Bucasia 610mm gauge

(see LRN 1, P.3)

The disappearance of John Fowler 0-6-2T 20764 of 1935 (not 1937 as shown previously), recorded in this publication 14 months ago, has apparently become known to its owners, the local Apex Club, only recently. When last observed, in August 1977, the loco was in poor condition and painted in multicoloured hues. Basic colour scheme, however, was red tanks and cab below waist level, green cab front and yellow cab sides above waist level, yellow underframe, and white smokebox with a face painted on the smokebox door. Anyone having any information about the fate of this locomotive is urged to contact the Apex Club or the Queensland Police at Mackay.

Len Heaton via David Mewes 10/78

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD, Farleigh Mill. 610 mm gauge

A 24-tonne E.M. Baldwin brake wagon arrived during 1978, carrying builder's number 7901-1-6-78 of 1978. An interesting recent discovery is that one of the mill's Motor Rail 'Simplex' 4wDM locos (7369 of 1939) spent the first ten years of its existence working for the Glasgow Corporation Housing Department in Scotland.

Stack Talk 78, Editor

CSR LTD. Goondi Mill 610mm gauge

(see LRN 1, p.4)

This mill was the only one to receive a new locomotive in 1978. Numbered '6', it is E.M. Baldwin 4wDH 8002-1-8-78 of 1978, Model DH12.0.4.0., and is fitted with a GM 125 hp engine. It is unusual in not having side rods and is to be used as yard shunter. The fact that it carries number 6 is rather confusing as up until now, *Adelaide Clyde* 0-6-0DH 56-90 of 1956, transferred from Victoria Mill in 1976, has been known as No.6, although never carrying this number.

Es-Innisfail Tramway DL14 *Johnstone*, Com-Eng 0-6-0DM B1112 of 1956 was returned to Mourilyan Mill at the end of the 1977 season. Sister engine DL15 *Nerada*, B1111 of 1956, still in QR livery, was loaned by Mourilyan to Goondi to act as yard shunter during the 1978 season until the arrival of the new loco. Subsequently, it was retained by Goondi as spare loco until the end of the season. The remains of *Bullett*, John Fowler 0-6-0DM 18808 of 1930 were cut up during August.

Stack Talk 78, David Mewes 10/78.

CSR LTD. Hambledon Mill. Edmonton 610mm gauge

4, Clyde Model DHI-71 0-6-0DH 56-86 of 1956, was fitted with an E. M. Baldwin built soundproofed cab during 1977. However, the other Clyde locomotives at the mill are fitted with fold-down cabs to enable them to pass beneath a low railway bridge at Redlynch. It is believed that a fold-down design of soundproofed cab is being prepared by E.M. Baldwin for fitting to these locos.

MARIAN MILL CO-OPERATIVE SOCIETY LTD. Marian Mill 610 mm gauge

(see LRN 1, p.3)

The two steam locomotives have again seen use during 1978. Perry 0-6-2T 2601.51.1 of 1951 has continued as yard shunter. It is not allowed to leave the yard, as it has no spark arrestor, and has started several fires when leaving the confines of the yard. John Fowler 0-6-2T 20277 of 1934 has continued to work on heavy track maintenance work, mainly ballasting.

A tramline extension of 3½ miles on the Kuttabul tramline to Narpi has been opened. Further extensions have been discussed, to be developed from Mirani West. These would be conditional on the mill being allowed to share the Queensland Railways bridge across the Pioneer River at Mirani.

Stack Talk 78, David Mewes 10/78

HAUGHTON SUGAR CO. Invicta Mill, Giru 610 mm gauge

(see LRN 5, p.7)

The mill has taken delivery of a new ballast tamper, Plasser 133 of 1978. The locomotives are to be repainted in a Yellow livery to replace the former Cream. *Selkirk*, E.M. Baldwin B-B DH 6750-1-8-76 was delivered in this livery in 1976, and *Northcote*, Com-Eng 0-6-0DH AH4091 of 1965 was repainted in yellow during 1978. Preparations are well under way for the \$4 million tramline extension from Steepy Banks (Clare) towards Milaroo and Dalbeg which it is hoped will be completed by 1980/81.

Stack Talk 78.

LIONS PARK, Brandon 1067mm gauge

Airdale, an Avonside Engine Co. 0-6-0T (B/n. 2043 of 1930) is to be found here. This ex-Pioneer Mill locomotive is painted in a yellow and red colour scheme.

Stack Talk 78

CSR LTD Macknade Mill 610 mm gauge

Model HG-3R Clyde 0-6-0DHs 11 and 12 (65-383 and 65-434 both of 1965) were fitted with E.M. Baldwin soundproofed cabs during 1978. The two Clyde Model DHI locos, 16 and 18 (DHI.1 and DHI.5, both of 1954) received similar treatment during 1977. '3', a Motor Rail 'Simplex' 4wPM: 3365, lies partially dismantled in the sand shed, having lost its engine. Outside was observed the grass cutter with a radiator from a Fowler petrol loco.

Stack Talk 78, Editor.

MOSSMAN CENTRAL MILL CO. LTD. Mossman 610 mm gauge

(see LRN 5, p. 7)

A new locomotive colour scheme is being introduced to replace the former livery of light blue with light yellow buffer beams and running boards. An experimental livery had been applied to *Daintree* (E.M. Baldwin B-B DH 7303-1-7-77 of 1977) when it was new, this being light yellow with light blue running boards. The same light yellow was also applied to some of the mill's bogie 'canetainers'. however, it has been decided to use a bright yellow in future. The new livery will be a bright yellow with black main frames and pale blue buffer beams and running boards. The same bright yellow will be adopted for canetainers. The only locomotive which had received the new livery in September was *Mossman* Com-Eng 0-6-0DH B1719 of 1957.

A 'five year plan' of improvement and upgrading of the tramway system has recently been completed. This was a reversal of a previous policy which

had aimed at the elimination of the tramway system and its replacement by road transport.

Stack Talk 78, David Mewes 10/78

MULGRAVE CENTRAL MILL CO. LTD, Gordonvale 610 mm gauge

Apparently sabotage was the cause of a major breakdown at the mill on 10 October. A tramway wheelset was placed in a bin of cane, which caused serious damage to the number one mill. A number of steel objects had been through the mill during the previous week including a motor vehicle differential. The No.1 mill was bypassed for the rest of the season.

One strange locomotive at the mill is used by the navvies and is generally known as 'THE PIE CART'. It is supposed to have been built by the mill around 1960, and is reminiscent in shape of a European steam tram motor. It is a four-wheeled diesel powered machine with a Ford 4-cylinder engine. The appearance of its underframe, however, suggests that it may have been built on the chassis of an earlier locomotive.

Stack Talk 78, Editor

PIONEER SUGAR MILLS LTD. Inkerman Mill 610 mm gauge

All the locomotives here have lost their former individual liveries in exchange for yellow with green trim, with the exception of Baguley 0-6-0DM 3354 of 1951, stored out of use, and *lyah*, E.M. Baldwin B-B DH 6558-1-6-76 of 1976, still in orange-red livery. A massive 20-tonne capacity bogie ballast hopper built by Com-Eng Aresco was noted. This vehicle, measuring 5998mm long x 2313mm wide x 2770mm high, has wheels only 310 mm in diameter.

Stack Talk 78, David Mewes 10/78

PIONEER SUGAR MILLS LTD. Pioneer Mill 1067mm gauge

The Clyde 0-6-0DH locos here were formerly painted in individual colours, but now all are painted yellow with the exception of the top of the engine cowling which retains the former colour used. The Walkers 0-6-0DH, 583 of 1968, which was purchased from the Aramac Shire Council Tramway in 1976 has been painted yellow also, but does not carry a name. Oil-burning Perry 0-4-2T *Kilrie* (265 of 1927) is still stored out of use.

Stack Talk 78.

PLANE CREEK CENTRAL MILL CO. LTD, Plane Creek Mill. Sarina 610 mm gauge

E.M. Baldwin B-B DH 6890-1-10-76 of 1976 has had its number altered from 'B12' to 'D12'. The original numbering was in error; all the locos are referred to as having the prefix 'D' even though the others do not carry it. The mill's

tramline system has mile posts installed for the information of operating staff. In addition, on the Koumala line to the south, the names of creek and gully crossings are also signposted.

Stack Talk 78

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

Proserpine Mill.

A new yard layout has been implemented, which has resulted in a spacious and efficient operation, and obviates the former need to enter the mill yard from the south through the back streets of the town.

This mill has a highly mechanised and efficient tramway maintenance organisation. A ballast regulator has recently been acquired to assist in this, built by Com-Eng Aresco, and carrying builder's number BR 683 of 1978. It has a Ford four-cylinder diesel engine. Five Com-Eng Aresco bogie ballast hoppers similar to that described at Inkerman Mill have also been purchased. A petrol navvy car built by George Moss in Perth has been returned to the makers for modifications.

Stack Talk 78, David Mewes 10/78

PROSERPINE SHIRE COUNCIL PARK. Main Street, Proserpine 610 mm gauge

A British War Department First World War Hunslet 4-6-0T is in a park in Proserpine, and used to work at the Sugar Mill. Proserpine Mill had two such engines, *Fritz*, Hunslet 1219 of 1916, and *Digger*, 1317 of 1918. These locomotives were withdrawn from service in the 1950s, and one of them, usually said to be *Digger*, is the one placed in the park, though it probably contains parts from both. The engine is quite well cared for, a contrast to many others 'preserved' in parks and playgrounds.

Stack Talk 64, 78

RACECOURSE CO-OPERATIVE SUGAR ASSOCIATION LTD, 610mm gauge Racecourse Mill. Mackay

(LRN 1, p.4)

A new locomotive shed has been built which has set a standard of excellence against which the facilities of other mills will be judged in future. In fact the whole Racecourse tramline system, while only modest in terms of extent and locomotive power at present is extremely well-run and immaculately maintained. The new shed has sufficient capacity for at least 16 locos (present main-line fleet is only 7 locos). There are four roads, two with

full length inspection pits, and another with three individual pits, including one with a hydraulic wheel drop. Two roads are serviced by a 5-tonne capacity travelling crane.

Of the three locos obtained from Pearson Bridge last year, two have been rebuilt and have been named, while the third was still being reconditioned in September. Details are as follows:

<i>Leo</i>	2-2wDH	E.M.Baldwin	6-2612-1-10-68	1968	Model DHC8M/ML
	2-2wDH	E.M.Baldwin	6-2612-2-11-68	1968	Model DHC8M/ML
<i>Old Smokey</i>	4wDM	Ruston & Hornsby	392120	1955	Model 48 DLG

Note that the Baldwin locomotives are driven on the rear axle only, but it is planned to convert them to four wheel drive.

Tamper (Australia), now trading under the name of Canron Railgroup, built a prototype Ballast Regulator which was demonstrated at Racecourse during 1978, and subsequently acquired by the mill. Its worksplate carries the details Canron 1775577 of 1978 Model BESM1.

Following the completion of the Goonyella Railway, the mill employed a number of the Thursday Islander navvies and began a programme of track upgrading, which is now coming to an end. During 1977, all cane crushed was transported on the tramline for the first time ever, and accidents were at a record low. A programme of tramline extensions is continuing to serve farmers situated a long distance from delivery points.

Stack Talk 78, ARHS Bulletin Supplement 11/78, David Mewes 10/78

HOWARD SMITH INDUSTRIES PTY LTD, Mourilyan Mill 610 mm gauge

(see LRN 1, p.4)

Ex-Innisfail Tramway DL14 *Johnstone*, Com-Eng 0-6-0DM B1112 of 1956, has been absorbed as part of the mill's working loco fleet. Its identity is now '8' and it has been repainted in mill livery of yellow and grey.

Blocking the line on the now disused Innisfail Tramway Queensland Bridge across the South Johnstone River was *Townsville*, Hudswell Clarke 0-6-0 1099 of 1919 ex Victoria Mill. This loco is being stored on behalf of the Australian Sugar Industry Museum, Mourilyan. Among other interesting items stationed to block the bridge were four 0-4-2T locomotive chassis used as mill roller transporters. These are the remains of John Fowler 12025 of 1910, 12961 of 1912, 20713 of 1935 and Hudswell Clarke 1556 of 1925.

Stack Talk, 78, Editor

CSR LTD. Victoria Mill 610 mm gauge

(see LRN 6, p.7)

The loco shed has been considerably enlarged, with the old loco water tank and sand drying shed having been demolished to make way for the extension. A shed was noted under construction in September where the *Homebush* (Hudswell Clarke 0-6-0 1067 of 1914) will be housed. This loco has been steamed frequently for the benefit of visitors and for local events.

All the mill's Clyde HG-3R locomotives have now been fitted with E.M.Baldwin soundproofed cabs. Details as follows:

<i>Centenary</i>	0-6-0DH	Clyde	64-381 1964	new cab fitted 1977
<i>Ingham</i>	0-6-0DH	Clyde	64-382 1964	new cab fitted 1977
<i>Canberra</i>	0-6-0DH	Clyde	65-433 1965	new cab fitted 1978
<i>Lucinda</i>	0-6-0DH	Clyde	65-436 1965	new cab fitted 1977
<i>Perth</i>	0-6-0DH	Clyde	69-682 1969	new cab fitted 1978

During the 1978 season, a number of locomotives were spare on the afternoon and night shifts. Two Drewry 0-6-0DM locos were spare (by rotation) even on the busy morning shift. The mill has 21 locos used on cane haulage.

Stack Talk 76, 78, David Mewes 10/78

SUNSHINE PLANTATION. Forest Glen 610mm gauge

(see LRN 7, p.9)

A second locomotive has been supplied by E.M. Baldwin. On visit on 10 December, it was seen in the shed, having been delivered only a few days previously. Like *Sugar Cane Train* No.4 (4wDH Ruston & Hornsby 379072 of 1954 rebuilt by E.M. Baldwin 7807-11-77 in 1977), it has been rebuilt on the chassis of a Ruston & Hornsby diesel. This time, the loco rebuilt was Ruston & Hornsby 398072 of 1957, formerly DLG48 *Sunshine Plantation Special*. It has been allocated the rebuild number 8350-1-12-78 of 1978 by E.M. Baldwin, and is similar in design to the first loco rebuilt, but with a number of detailed differences. The loco, as yet unnumbered and unnamed, has been painted yellow with black 'boiler'. The cab, body, engine and other parts of DLG48 lay near the loco shed. *Sugar Cane Train* No.3, an unidentified Ruston & Hornsby was in the shed also, while *Sugar Cane Train* No.4 worked trains. *Sunshine Plantation Express* (Ruston & Hornsby 371386 of 1954) is displayed out of use and without its gearbox. The chassis of another Ruston & Hornsby (285338 or 285341 of 1949), stripped for spare parts, has been removed from the shed/workshops area, but is believed to be still on site.

Rebuilding of the main building, destroyed by fire on 10 September, on a considerably larger scale than before, was progressing well. It believed that the new building has now been officially opened.

Editor 12/78

VICTORIA

CODELFA. Melbourne Underground Railway Construction 1067mm gauge

(see LRN 5, p.10)

The railway used in the Melbourne Underground construction finished hauling muck to the surface in about August - September. Six 0-4-0DH locos were observed parked in the yard at the Princes Bridge line in Flinders Street. They are numbers 26-1, 26-2, 26-3, 26-5, 26-6, and 26-7. 26-3 which was off the tracks still had a builder's plate on it - Com-Eng builder's number EC4596 of 1965. This was last known in use on the Melbourne & Metropolitan Board of Works Cardinia Creek Reservoir construction. (A 914mm gauge was used in the construction of the tunnel by Kalora Constructions). All have Caterpillar diesel engines. Numbers 26-1 and 26-2 are of similar appearance to 26-3, and would appear to have been also built by Com-Eng. 26-7 had been repainted, and was the only one in the shed.

Peter L. Charrett 11/78

SANDHURST TOWN MANAGEMENT PTY LTD, Eaglehawk 610 mm gauge

(see LR 66, p.21)

Locomotive power on the line at this attraction will continue to be diesel during 1979, in the shape of Ruston & Hornsby 0-4-0DM 305328 of 1954, model LHT. Perry 0-6-2TT 7967.50.3 of 1950 has been fully restored to operational condition, but will be unable to be used until trackwork has been brought to an acceptable standard. Also here are two Hudswell Clarke 0-6-0s. 1553 of 1925 is stored in the shed, apparently in good order, while 1555 of 1925 is on display at the gate, repainted but in very poor condition and without a tender.

Brian Roberts (Manager, Sandhurst Town) 12/78, Editor

WALHALLA & THOMSON RIVER STEAM TRAMWAY 762mm gauge

(see LRN 3, p.10)

When visited in August, the Tramway was still in operation, operating within the station limits on Sundays. The steam loco is normally kept in the loco shed. A 1067mm gauge loco is reputed to be in pieces in Walhalla and

to have come from a (north Queensland?!) timber mill! (Will some member please clarify this - Ed.) Other rolling stock seen at Walhalla were a steam-operated concrete mixer, five NQ wagons badly rusted and numbers indistinct, an NKS trolley, a 4w pump trolley, four frames including 12 NBH and a NU body resting on a NQ.

Peter L. Charrett 11/78

WESTERN AUSTRALIA

KALGOORLIE-BOULDER LOOPLINE RAILWAY 1067mm gauge

(see LRN 7, p.12)

Basically due to the work and leadership of Brian Smith and Mike Wheeler, two Westrail employees, the Kalgoorlie-Boulder Preservation Group was formed some time ago to restore to operation the former Brown's Hill Loop line on the Golden Mile, Kalgoorlie, as a tourist attraction.

In order to raise some revenue towards the realisation of the project, which is scheduled to have its official opening in March, 1979, when steam traction will be employed, the line had its initial operation on 18 November using a petrol-engined 'locomotive' developed from a reconditioned Ford V8 motor hauling two tiny passenger 'carriages' with a total capacity of 18. These were former Wickham railcars which run between Boulder and Kamballie stations, each Saturday/Sunday.

The address of the preservation group is C/o Kalgoorlie-Boulder Tourist Bureau, Hannan Street, Kalgoorlie 6430.

J.L.Buckland 11/78

OVERSEAS

NATIONAL RAILWAY MUSEUM. York 610 mm gauge

(see LRN 7, p.1)

Work carried out on the restoration of Tasmanian Garratt K1 has been done to a very high standard. Livery of photographic grey (a slightly yellowish shade of grey in this case) has been adopted because the Museum authorities have been unable to discover the details of the original livery carried by the locomotive. Perhaps some reader may be able to shed light on this matter, as the Museum is still anxious to obtain any information.

Because the locomotive is too large for the Festiniog Railway loading gauge, there are no plans for reconditioning the boiler and returning the engine to service at this stage, although this does not mean that the loco

could not be operated some day on a line with more generous clearances.

Australians who feel aggrieved at the fact that K1 has been preserved abroad might remember that it was only the foresightedness of Beyer, Peacock & Co. way back in 1947 which ensured that the locomotive was saved at all. K1 and sister engine K2 (Beyer Peacock 5292 and 5293 of 1909) were the first Garratts ever built, and differed from all subsequent examples in having cylinders inboard on the four-wheeled engine units. The two were out of use from the 1930s, and parts of K2 were used to make good K1 for its return to Manchester in 1947 for exhibition at Beyer Peacock's Gorton Works. The locomotive was purchased by the Festiniog Railway in 1966, and was moved to York in 1976.

EDITORIAL

No need to take up space here except to thank all those who have contributed to this issue. I look forward to a similar response for *Light Railway News* 10, for which the deadline for the receipt of items will be 4 May.

LRRSA NATIONAL CONFERENCE

This conference was held at Booth Lodge, Kallista, Victoria from 26 to 28 January, and was attended by eight Council members from Victoria and NSW, the editor of *Light Railway News*, and two other members interested in assisting with publications. The conference was chaired by Phil Jeffery, Society Vice president. Discussions centered on the Society's future publications policy, and the following decisions were made by unanimous consent.

Light Railways will continue publication in its present form, and it was decided that the editing and production of the next six issues will be handled by a number of teams of volunteers in three different states. General articles and letters are requested for inclusion in some of these issues and should be sent to The Editor, *Light Railways*, PO Box 21, SURREY HILLS 3127.

Contributions will then be forwarded to the appropriate editor.

Light Railway News will continue publication as a separate magazine six times a year, and the decision to use full commercial printing was made, involving the publication of more photographs. This magazine will be offered to LRRSA members as an optional extra to their subscription. Preservation Societies will be offered regular space and their contributions will be published under their own insignia. Supporting Preservation Societies will be offered the magazine at better than trade discount, so they can offer it to their members at an attractive subscription rate. A diary of Preservation Society activities will be included in each issue, and book reviews will be encouraged, especially of publications of the supporting Preservation Societies. Classified and display advertisements will be permitted. In brief, the aims of LRN will be to provide a wide circulation national publication to publicize the activities of the Preservation Societies and the LRRSA, to promote the interchange of ideas between Preservation Societies, and to publish news of operating light railways (such as sugar tramways) and reports of visits to the remains of defunct light railways. Contributions to LRN are always wanted, and should be sent to the editor (address on cover).

Other publications which the Society currently has under way were discussed and include Tramways of the Wombat State Forest, the Powelltown book, a sequel to Tall Timber and Tramlines and a list of locomotives of the private railways of Victoria (other states to follow).

The conference discussed the possibility of computerising various Society records, including membership addresses, indexes, locomotive lists, and word processing to aid editing.

It was decided that work should continue on the development of a programme to produce the lists of locomotives of the Private Railways of Australia, and that a preliminary Victorian list should be published as soon as this programme is working, to be followed as quickly as possible with lists covering Tasmania, Queensland and other states as data becomes available.

The conference achieved everything which it set out to do, and those attending considered it very successful. It was decided to hold a further conference during the Australia Day weekend next year and the NSW Division has been invited to host this. It was decided that this conference should be wider, with representatives from Preservation Societies supporting LRN being invited.

The conference was held in two formal sessions from 9.00am to 12.30 on Saturday and Sunday morning. Useful discussions and slide shows were held on Friday and Saturday evening, and on Saturday afternoon, the party adjourned to Powelltown for a walk along the formation of the Powelltown

tramway west of the tunnel. This was followed by a visit to the Upper Yarra Historical Society's very interesting museum at Yarra Junction.

The excellent accommodation and meals provided at Booth Lodge in a delightfully scenic area within earshot of Puffing Billy made a significant contribution to the success of the conference.

Those present at the conference were : Allan Watson, John Browning, Ray Ellis, Frank Stamford, Phil Jeffery, Ted Stuckey, Mike McCarthy Steve Martin, John Buckland, Arthur Straffen and Arthur Winzenreid.

FES/JB

OVERSEAS TOURS FOR NARROW GAUGE ENTHUSIASTS

The Association of Railway Enthusiasts, which has gained a reputation for its overseas tours, has several planned in its 1979-80 programme which look particularly interesting from the narrow gauge aspect. These include a five week tour departing in August covering the mountainous narrow gauge lines of Switzerland and Austria; a three week tour departing on 28 December visiting sugar tramways and palm oil railways in Indonesia and the Philippines, as well as the state railways of Malaysia (including Sabah) and Indonesia; and a five week tour in May/June 1980 visiting preserved railways in the U.K., Holland, West Germany and the four Scandinavian countries, as well as seeing the Rainhill Trial re-enactment depicting the history of British Railway transport.

Further details of these tours which can be well recommended, are available from ARE Overseas Tours, 15 Milton St., HEATHMONT 3135.

FES

BOOK REVIEWS

DESTINATION STH BRISBANE

An illustrated history of the Southside railways of Brisbane, by John Kerr and John Armstrong. 120 pp 210 x 295 mm with 162 b & w and 10 colour illustrations. Australian Railway Historical Society (Queensland Division), GPO Box 682, BRISBANE 4001. Price \$5.00 post free

To mark the occasion of the opening of the Merivale Bridge - the long-planned cross-river direct linking of the Southside suburban railways of Brisbane with the rest of the system, the ARHS Queensland Division has launched its most ambitious publication.

Entitled *Destination Sth Brisbane* the book is a joint production of the two authors who are well known researchers and recorders of Queensland railway

and tramway material. While this reviewer was familiar with most of the lines covered, the amount of detailed information included in the thoroughly readable text has been an eye-opener.

For LRRSA members there is included brief mention and illustrations of the long-vanished Belmont Tramway and the Beaudesert Tramway, besides Lahey's Canungra logging line, itself the subject of LR 54.

Brisbane's Southside system was in many respects unique. It was for over 80 years the 'poor relation', if not in the declining days of the steam engine an operating museum of the Queensland Railways, restricted as it was largely to engines no heavier than the ubiquitous B15 Con and PB 15 and genuine antique carriages, no two of which ever seemed quite alike!

Other highlights of the Southside which are remembered with affection were the famous fiveways series of level crossings with major roads (three originally including long-vanished double track tramways) at Woolloongabba and the equally famous Southport Expresses, with the unusual triangular exchange of through carriages at Ernest Junction with trains to and from Tweed Heads.

The Southside too, is unique in another respect as the northernmost terminal of the so-called Uniform Gauge Railway linking Brisbane with the other mainland State capitals (temporarily one hopes, Adelaide excepted) on the 4 ft 8½ in (1435mm) gauge. This 69 mile line, though owned by the Queensland Railways, and partially staffed by them, has always been operated by New South Wales, which has provided the rolling stock and locomotives.

There are small criticisms one might mention, but the copiously illustrated and detailed account of the history of Brisbane's Southside railways is well worth the asking price for the illustrations alone.

Copies are available from LRRSA Sales or ARHS Sales Centres for \$5.00 posted (or \$6.00 after 30 April 1979).

JLB

AUSTRALIAN STEAM

by A.E. Durrant, published by A.H. & A.W. Reed Pty Ltd. 128 pp. 164 x 242 mm; hardbound. Recommended retail \$8.95.

In his foreword the author asks "how can we justify this volume, written by a 'bloody Pommie bastard' with but a couple of years' residence in a country already well stocked with steam enthusiasts?". He answers his own question by claiming that an independent outsider is better placed to compare the merits of one state's locomotives with those of another. He is well qualified to make such comparisons, for he has already written many other books on subjects such as the locomotives of Eastern Europe, Indonesia, Mallet

locomotives and Garratt locomotives.

In this reviewer's opinion, the book's best feature is the comparison of Australian locomotives with well known overseas types designed for similar jobs. Revealing comparisons are also made with similar locomotives in other states.

The author puts forward the argument that Australia would have been better off with a national standard gauge of 3 ft 6 in, claiming that a great mistake was made in choosing 4 ft 8 ½ in for the Transcontinental line. To convince those readers who had not already come to the same conclusion he presents very convincing evidence that 3 ft 6 in was and still is fully capable of handling all the traffic it would have been called upon to haul in a national system.

The book commences with a general description of the geography and population distribution of Australia, and the cause of the gauge muddle. It then has seven chapters dealing with each state, and Commonwealth Railways. A potted history is given of the major locomotive classes of each system, but in a work of this size, summarization is essential, and minor classes are ignored. Unfortunately the early Victorian Railways' types are not mentioned by class, only by wheel arrangement. The final chapter supposedly deals with private railways, and is largely limited to those which provided a public service. Victorian private railways are dismissed in seven lines; timber tramways do not rate a mention, even the Powelltown line which was a public tramway.

There appear to be very few errors in the text, and most of these are of a very minor nature. But the two page map of Australia contains many inconsistencies, e.g. the Port Hedland - Marble Bar line (closed in 1951) is shown, but not the Wiluna, Laverton, Hopetoun - Ravensthorpe, or Cooktown - Laura lines; and Woodside (closed in 1954) is shown as the terminus of Victoria's South Gippsland line, but not a solitary branch is shown off the Dandenong - Orbost line.

The text is supported by a large number of well selected and well printed photos. Unlike many railway books, this one is not dry and boring. It is very well written and most thought provoking. Highly recommended.

FES

THE GREAT STEAM TRAINS OF AUSTRALIA

by David Burke. 160 pp 210 x 290 mm with end papers. Profuse illustrations in b & w and colour. Rigby Limited, Adelaide 1978.

David Burke is already well known as an author of railway-oriented books and this is undoubtedly his best. He has obviously done his homework and

produced a most readable and informative documentation of the beginnings of the main inter-capital express train services.

The coverage provided by the illustrations provided for the several passenger trains dealt with is comprehensive and diverse; some reproductions of old woodcuts from the *Sydney Mail* and the *Australasian Sketcher* and other contemporary sources, being new, or almost so.

While one may regret the substitution of kilometres for miles, this reviewer is revolted at the metrication of well-loved and remembered steam locomotive specifications, such as wheel diameters etc., which is as inexplicable as it is unwarranted.

That apart, plus a few "blues" mainly in captions, this is a book to read and enjoy and learn from. Apart from the shortcomings mentioned and some quite ghastly colour reproductions, about which the less said the better, this is the best book yet published in Australia covering the railways in general, or some aspects of them. Queenslanders and Western Australians, however, may be disappointed at the omission from the book of coverage of their premier trains even the Westland, which did rate an inter-capital connection - from an otherwise excellent document.

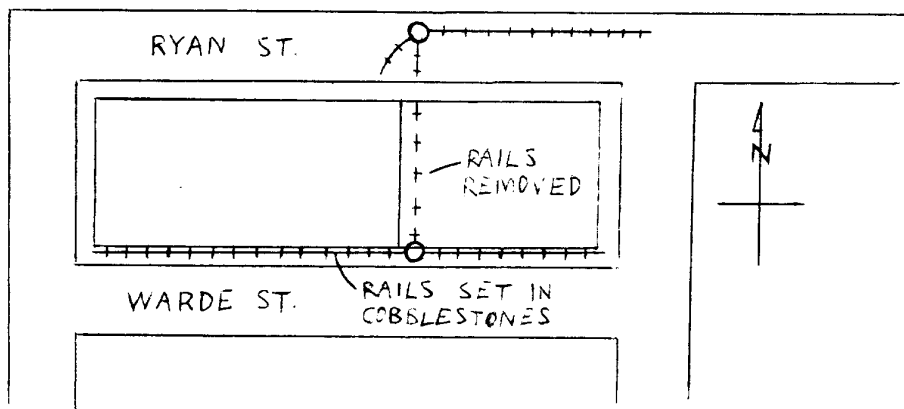

JLB

RESEARCH COLUMN

FOOTSCRAY

(see LRN 6, p. 2)

NOT TO SCALE

The map below shows further findings by Darryl Grant of 4/43 Kent Road, BOX HILL 3128

One of the tracks crossing Ryan Street appears to have run through what was presumably an old factory, of which only the foundations remain, to another wagon turntable set in the footpath on the northern side of Warde Street, the next street south of Ryan Street. The rails of this track are missing. From this turntable, rails run east and west the full length of Warde Street, set into the cobbled footpath. Whether or not there were any other turntables is difficult to determine, as parts of the footpath have been dug up or covered over. All rails are groove rail, laid correctly with the groove on the inside, unlike those in Ryan Street.

The gauge would be nearer 2 feet 6 inches rather than the 3 feet stated in the previous report.

CORRECTION

LRN 8, p.7 CSR Ltd., Goondi Mill. John Fowler 18808 is believed to have been built in 1929.

NEW SOUTH WALES

AUSTRALIAS INTERNATIONAL MINING AND EXPLORATION EXHIBITION 79, R.A.S. Showground, Sydney.

This exhibition was held from 12 to 17 February 1979, and featured a large variety of mining equipment. Australian manufacturers of underground locomotives and personnel cars were represented.

George Moss Pty Ltd of Perth ("Gemco" products) exhibited a 610 mm gauge 10 tonne four-wheeled battery-electric loco. This firm is also now offering a 15 tonne flameproof four wheeled battery electric for use in coal mines.

The Titan Manufacturing Co. Pty Ltd, of Newcastle, had a 14 man four wheeled battery personel car of 1067mm gauge on show.

Vale Engineering Pty Ltd of Moss Vale had a 17 tonne flameproof four-wheeled battery-electric loco and a 14 man four-wheeled battery personnel car, both of 1067 mm gauge and for use in coal mines.

All the above vehicles were fitted with thyristor controllers, which are now becoming more common in larger battery locomotives.

E.M.Baldwin & Sons Pty. Ltd., of Sydney, had a stand at the exhibition but no locos on display.

Anthony Weston 2/79

E.M.BALDWIN & SONS PTY LTD, Castle Hill.

(see LRN 8, p.2)

A number of interesting observations have been made here during the past few months. In October, awaiting delivery were Pearson Bridge four-wheeled diesel-hydraulic locos 4661-1-7-72 and 4661-2-7-72 of 1972 (see LRN 3, p.5). These two locomotives had been refurbished and after delivery were to be hired to the Metropolitan Water, Sewerage and Drainage Board for use on their 610 mm gauge tracks at an unknown location. They were despatched on 28 November.

Two 1067 mm gauge four wheeled diesel man riding cars ex Australian Iron & Steel numbers 26 and 35 respectively (2368-5-1-68 and 2368-14-1-68 of 1968) have been stored in Baldwin's yard for some time. They have been purchased by Huntley Colliery to replace two existing Baldwin four wheel battery-electric man-riding cars, and are to be reconditioned before delivery.

Undergoing repairs in October was South Bulli 1067 mm gauge four-wheeled diesel-hydraulic man-riding car number 19 (3652-7-4-71 of 1971). By 28 November, this had been joined by numbers 14, 15, 17 and 18 (3652-2-12-70 of 1970, and 3652-3-2-71, 3652-6-4-71, and 3652-5-3-71 of 1971 respectively).

The 1067 mm gauge 40 tonne B-B DH loco was not delivered until late 1978 or early 1979, as it was undergoing dyno trials. It carries the builder's number 7744-1-9-78 of 1978, and road number 19. It will work on materials haulage at the Australian Iron & Steel Pty Ltd's Corrimall Colliery.

A 610 mm gauge canefields bogie diesel was seen under construction for Fiji in December, as well as a 25 tonne four-wheel diesel-hydraulic flameproofed mining loco under order from Peko for one of their northern mines. A new man-riding car was observed on 28 December. This was of 1067 mm gauge and of model 150H. The builder's number noted was 8170.

Craig Wilson 1/79, 3/79, David Allen 2/79, Anthony Weston 2/79, Stack Talk 79.

BHP LTD Gauges various

Rosters have been received for the following collieries owned by BHP.

Stockton Borehole Colliery

1067mm gauge	3 Huwood Hudswell 0-6-0DM locos, 100hp, builder's numbers 1005, 1006, 1007 of 1956. All laid aside. 1 Jeffrey 10 ton 0-4-0 Battery loco B/n. 9018. 11 BHP built 10 ton 0-4-0 battery locos. 1 BHP 10 ton 0-4-0 battery loco ex AIS 36, for surface use only.
610mm gauge	1 Jeffrey 7 ton 0-4-0 battery loco. B/n. 9015

(both laid aside) 1 BHP 7 ton 0-4-0 battery loco

Burwood colliery (closed by fire January 1979)

1067mm gauge 2 Goodman 20 ton 0-4-0 trolley wire locos B/n. 5403 & 5404 of 1943 (transferred to Lambton Colliery)
1 Goodman 10 ton 0-4-0 trolley wire loco B/n. 5743 of 1943. Ex Glen Davis Shale Oil Co. Written off.
6 Jeffrey 10 ton 0-4-0 battery locos B/n 8111 8113 of 1938, 8132-8134 of 1939. 8132-8134 to Lambton Colliery.
17 BHP 10 ton battery locos
660mm gauge 1 Jeffrey 7 ton 0-4-0 battery loco. Written off.
1 BHP 7 ton 0-4-0 battery loco built 1949. Written off.

John Darling Colliery

1067mm gauge 2 Goodman 20 ton 0-4-0 trolley wire locos, B/n. 5407 - 5408 of 1943. Written off.
15 Jeffrey 10 ton 0-4-0 battery locos B/n. 8156-8162, 8191-8196, 8201-8202 of 1940. Two of these written off.
1 Jeffrey 3 ton 0-4-0 battery loco B/n. 7932 of 1936. Written off.
2 BHP 10 ton 0-4-0 battery locos built 1946.
762mm gauge 5 BHP 10 ton 0-4-0 battery locos. 2 built 1949. All written off.

Lambton Colliery

1067mm gauge 4 Goodman 20 ton 0-4-0 trolley wire locos, B/n. 5403 - 5406 of 1943. 5403-5404 ex Burwood Colliery. All written off.
2 Greenwood & Batley 8 ton 0-4-0 battery locos. One to Pelton Colliery on loan. One to BHP Steelworks for scrap.
6 Jeffrey 10 ton 0-4-0 battery locos. B/n. 4487 of 1917, 7948 of 1936, 8127 of 1939, 8132 - 8134 of 1940. (8132 - 8134 ex Burwood Colliery)
12 BHP 12 ton 0-4-0 battery locos.

Elrington Colliery (was owned by BHP with Hebburn)

1067mm gauge 7 Atlas 7 ton 0-4-0 battery locos. Two to Huntley Colliery, Two to Stockrington No.2 Colliery, One preserved at Miners' Memorial Park, Freeman's Waterholes. Two unaccounted for.

Macquarie Colliery (under development - not yet in full production)

1067mm gauge 5 BHP 10 ton 0-4-0 battery locos.

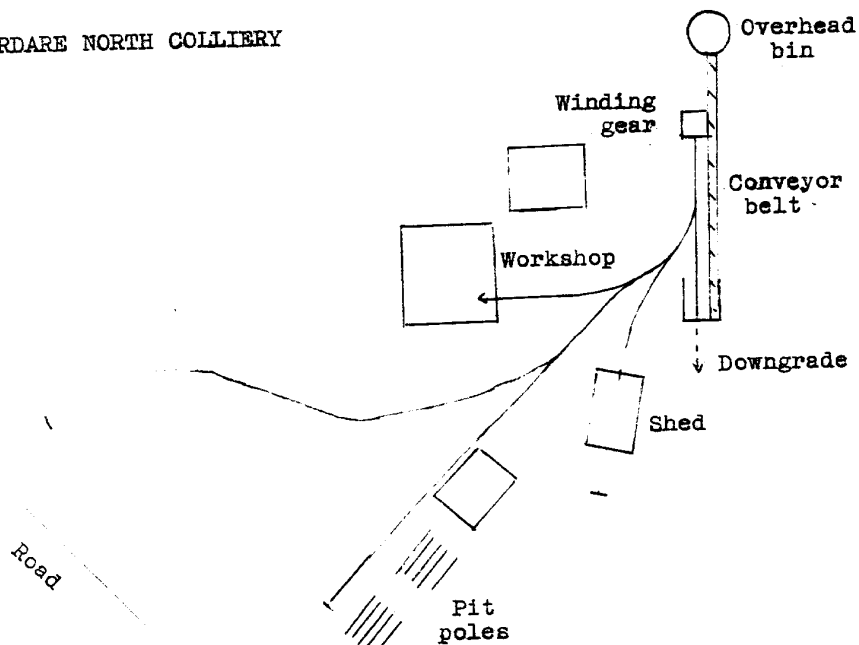

At present, the above mines use 1067mm 0-4-0 battery locos of 10 ton which are built by Jeffrey or BHP (the types are indistinguishable). Current numbers of locos as follows: Stockton Borehole 12, John Darling 14, Burwood 20, Lambton 18 and Macquarie 5.

Keith McDonald 2/79.

COAL AND ALLIED INDUSTRIES LTD, Aberdare North Colliery

Serving the Aberdare North Colliery is a small tramway of approximately 915mm gauge (3 ft). Coal is transported by conveyor belt up out of the mine to an overhead bin for road transport while the tramway appears to be used for maintenance and personnel transport. The shaft being of a considerable downgrade, the tramway works on cable haulage. Apart from various flat cars etc., there was a man-riding trailer approximately 25 ft long in an open-ended

ABERDARE NORTH COLLIERY

DA 2/1/79

David Allen, 2/79

shed. This vehicle had transverse seats and a small pantograph, probably for communication purposes.

David Allen, 2/79

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY. Albion Park Gauges various.

(P.O.Box 1036. WOLLONGONG 2500) (see LRN 8, p.4).

Regular public 'Open Days' are to be held on the second Sunday of the month at the Society's Albion Park site, and train rides will be available. An additional attraction will be operations on the adjoining South Coast Model Engineering Society's tracks. Opening times will be from 11 a.m. to 5 p.m. The first open day, on 11 February, was a great success, with an attendance of around 650. CAIRNS (Hudswell Clarke 0-6-0 1706 of 1938) was given a temporary ticket, and both it and KIAMA (Davenport 0-4-0ST) handled trains, with CAIRNS doing most of the work. Richard Youl's 2 ft. gauge Birney 'trucker' tram operated as well, after a new, heavier overhead wire had been donated by Metal Manufacturers and installed on site.

Previously, a running day had been arranged for those who had subscribed to the Davenport purchase fund. Some troubles had been experienced with KIAMA, which culminated with the fire having to be dropped late in the afternoon with blocked injectors. Regulator leaks in the locomotive had become worse, and it was decided to remove the dome cover to make an inspection on 20 January. There were some fears that the main steam pipe might be holed, but in fact the trouble was solved with the fitting of a new regulator valve gasket.

The 2 ft gauge Malcolm Moore rail tractor has been cleaned back, primed and repainted in a rich buttercup yellow. The engine and gearbox is being overhauled by apprentices at Cleary Bros, Port Kembla.

A Garratt NSWGR 60 class stoker motor has been mounted on the side of one of the Shay locos (762mm gauge Lima 2097 of 1903), in place of the missing propulsion unit. The cab is now completed.

The bogie passenger carriage has now been finished off externally in medium brown below sill level and ivory above. Some track extensions have been put in hand.

A spare Davenport boiler was recently retrieved from a property at Douglas Park where it had been used some years ago to power a sawmill. The boiler came from a sister loco to KIAMA, which formerly worked at the Menangle Sand Co. The boiler and some 18 in gauge 180 degree tip wagons were donated by Mr Mick Cleary along with a 500 gallon diesel tank which will be built into a four-wheel tank wagon for fire fighting and general use.

ILRMS Review 60, ILRMS 1/79, 3/79.

LACHLAN VINTAGE VILLAGE. Forbes 610 mm gauge

(see LRN 6 p.5)

A John Fowler 0-4-2T believed to be 16339 of 1925 was working on the 'Britannia Steam Tramway' at the village on 16 January, although the line seemed rather poorly patronised. The loco had to be brought into service hurriedly during 1978 because of the need to do heavy work on 0-6-2T Bundaberg Fowler 4 of 1952, which had worked all trains since the village's inception in 1975. The John Fowler loco carries no name or worksplates and is painted maroon. It has also apparently lost its side tanks. The explanation of this is that the tanks needed replacement and it was thought more economical to fabricate small replacement tanks which fit inside the cab on either side of the firebox. (See LRN 10). The displaced coal bunker capacity is now in a small rear bunker.

It was reported that the Bundaberg Fowler loco needed work on the firebox tubeplate. On 16 January, the loco was positioned near the station in full view of the Newell Highway, in a blue livery. By 29 January, it had been removed to the workshop area. The second John Fowler 0-4-2T, 16341 of 1925, does not seem to have had any major work carried out on it, and stands out of use on a siding,

Editor 1/79

MINERS MEMORIAL PARK. Freemans Waterholes 1435mm and 1067mm gauge

(see LRN 1, p 2)

Mounted in the coal miner's park at Freeman's Waterholes is ex J.& A. Brown ROD 2-8-0 number 23 (Great Central Railway, 1918). Along with the loco are several four wheel non-air coal hoppers, a four-wheel ex J.& A. Brown brake van and a small hand pump trolley. These vehicles have been assembled to make a small train. Adjacent to the loco is a lower quadrant signal. The whole collection is enclosed behind a 6 foot security fence. Apart from a coat of black oil on the loco, no restoration work has been carried out on the exhibits. The 1067mm gauge battery loco previously reported as being here is now known to have come from Elrington Colliery, and was built by Atlas.

David Allen 2/79, Keith McDonald 2/79

SIMSMETAL Mascot 1435mm gauge

Seen in Simsmetal scrapyard at Mascot, Sydney on 7 January was a standard gauge 165DS Ruston & Hornsby diesel shunter. The loco had been stripped of all identification, cab parts, transmission and gearbox and was in derelict condition. The remains of a pale yellow and grey colour scheme were

carried. The loco had been cut up within the week. (My records show Ruston & Hornsby 310085 and 313393 of 1952 supplied to Public Works Department of NSW, numbers 82 & 83. At B&H Disposals, Silverwater, February 1973, and transferred to Simsmetal, Mascot in 1974. Have both locos been scrapped, or has the one above been cannibalised for the other ? - Ed.)

Len King via David Allen 2/79

SOUTH MAITLAND RAILWAYS PTY LTD 1435mm gauge

A visit to the loco depot at East Greta was made on 2 January. Although mining and hence coal trains were not due to resume until 16 January, one double-header had run on the day of the visit, and were due to run on January 3, 4, 5 & 7 also, no doubt to remove stockpiled coal. Three of the line's Beyer Peacock 2-8-2Ts were in steam, two off the train, and one on standby. In the adjacent workshop, number 30 stood resplendent in a fresh coat of black paint, with the familiar SMR Pty Ltd in yellow on the tank sides.

David Allen 2/79

QUEENSLAND

BUCASIA PROGRESS ASSOCIATION PARK, Bucasia. 610mm gauge

(see LRN 8 p. 7)

The mystery of the disappearance of John Fowler 0-6-2T 20764 of 1935 ex Pleystowe Mill from the above location has been cleared up. Apparently the Progress Association wanted to dispose of the locomotive, which was regarded as a dangerous eyesore, and a local scrap dealer was induced to take the loco away. Unfortunately, it seems that no one thought to inform the loco's owners, the Apex Club, or interested preservationists, of the loco's impending disposal.

Len Heaton via David Mewes, 2/79

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD, Farleigh Mill 610 mm gauge

(see LRN 8, p. 7)

A TV news report of 8 February showed damage to the Farleigh tramway system caused by floods over the previous week. A large part of the St.Helen's Creek bridge on the Wagoora tramline had been carried away, and replacement spans were reported to be likely to cost \$100,000

Stack Talk 79

CSR LTD, Victoria Mill. 610 mm gauge

(see LRN 8, p.12)

Preserved Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) featured in a number of public appearances over the winter months. The first occasion was on 19 August, when the special event was the 60th anniversary of the Lucinda State School. This got off to an ignominious start at around 8 am when about a mile past Braemeadows on the line to Lucinda, a fusible plug blew. *Ingham*, a Clyde 0-6-0DH (64-382 of 1964) had to be sent out from the mill hurriedly to rescue the train, which consisted of *Homebush*, and a bogie passenger carriage which had been previously donated by the mill to the Halifax kindergarten and was borrowed back for the season. *Ingham* handled special trains between Lucinda and Gentle Annie Creek while the fusible plugs were refilled at the mill and pressure was raised again. By about 1 pm, *Homebush* was able to take over until 5.30 pm when the fire was dropped, and *Ingham* hauled the train back home.

Further runs with *Homebush* were on 30 August, when CSR officials were taken for a tour of the mill area, and on 16 September, when short trips were run in *Ingham* for the Maraka festival. *Homebush* has been placed in a specially built shed at the mill in a new park area near the mill offices but is to be retained in working order.

Thermit welded rail has made its appearance on the mill system with seven or eight lengths welded together and transported to site on specially modified bogies. A new line car arrived about December. It is numbered V5, and is similar to the existing four VW powered units built in *Ingham* by Hansen's Motor & Engineering Works, and numbered V1 to V4.

Stack Talk 79

THE MILLAQUIN SUGAR CO. PTY LTD, Qunaba Mill 610 mm gauge

(see LRN 7 p.8)

The two of Qunaba's three Perry locomotives taken out of service towards the end of the 1978 season will be out of use for the foreseeable future. These were 1 *Delta* (0-6-2T Perry 7967.50.4 of 1950) and 2 *Skipper* (0-6-2T 1850.46.1 of 1946). The remaining Perry, to continue in service, 3 *FLASH* (0-6-2T 6140.40.1 of 1948) received a new boiler at the start of 1978.

On 14 December, 4 *Jumbo* (0-6-2T Bundaberg Fowler 1 of 1952) was up on blocks behind the shed, and two other Bundaberg Fowlers were inside. The first, numbered 5, was Millaquin Mill's 6 (0-6-2T Bundaberg Fowler 6 of 1952), before being transferred to Qunaba during 1978. At first this was thought to be for repairs, but the transfer is now apparently permanent. Qunaba's

new number 6 was formerly Millaquin Mill's 8 (0-4-2T Bundaberg Fowler 3 of 1952), and was transferred from Millaquin late in the 1978 season.

Invicta (0-6-2T John Fowler 11277 of 1907) remained out of use at the Mill, resplendent in new paint of maroon and yellow applied by members of the Bundaberg Tourist Tramway Preservation Society.

Stack Talk 79

MOUNT ISA MINES HOLDINGS LTD, Mount Isa 1067mm gauge

(see LRN 5 p. 7)

A further Mount Isa mining loco has passed through Brisbane on its way to Bougainville. A four-wheeled diesel-hydraulic loco carrying the number 790 was observed at the yard of Rivers Trading, Northgate, during February. This loco is believed to be Com-Eng HD51101 of 1967, a 20 ton 280 hp loco. It was loaded on board ship for dispatch to Bougainville Copper on 27 February.

George Bond, Ray Ellis 2/79.

ROYAL QUEENSLAND BUSH CHILDRENS HEALTH SCHEME, Leslie Wilson Home, Rowes Bay, Townsville 610 mm gauge

Invicta, a Hunslet 4-6-0T First World War veteran, has been placed here in retirement by the local Lions Club. Built in 1916 with builder's number 1215, it worked in France before being brought to Australia by the Engineering Supply Co., and being sold to Bingera Mill. In 1956, it was sold to the Haughton Sugar Company's *Invicta* Mill at Giru, where it was apparently fitted with the cab and side tanks of sister engine Hunslet 1226 of 1916. This, the first *Invicta*, had worked at *Invicta* Mill until worn out, and the new engine acquired its name and number plates along with the tanks. The second *Invicta* worked on until 1964, and was placed in the grounds at Rowes Bay in 1967.

ARHS Bulletin Supplement 12/78, Stack Talk 64.

SOUTH JOHNSTONE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD, South Johnstone Mill, 610 mm gauge

(see LRN 1, p.4)

Malcolm Moore 4wDM locos 12 and 17 are now out of use and will provide spare parts for 13. These three are examples of the well-known type built for the Australian Army in 1943, and with their petrol engines replaced by diesel. The ex-Innisfail Tramway locos, Com-Eng 0-6-0DM *Pin Gin* A157111 of 1975 and *Curraiah* AA1544 of 1960, and Baguley 0-6-0DM *Mourilyan* 3390 of 1954, are now in mill yellow livery and carry only numbers, 7, 8 and 10 respectively. The out-depot at Silkwood has been enlarged so that the two locos normally stationed there can be accommodated under cover. The loco stationed at

Japoon out-depot still has to sit in the open.

Stack Talk 78.

SOUTH AUSTRALIA

STEAMTOWN PETERBOROUGH PRESERVATION SOCIETY 1067mm gauge

(see LRN 7, p.9)

It is confirmed that two W class and one Pmr have been purchased from WAGR for this project. Identities are:

W901	4-8-2	Beyer Peacock	7378	1951
W907	4-8-2	Beyer Peacock	7384	1951
Pmr720	4-6-2	North British	26564	1950

These locos were prepared for transport at Westrail's Midland works workshops, and one loco was despatched from Perth on 5 February.

Mile End Railway Museum Newsletter 216, Network, Ray Ellis 3/79

PICHI RICHI RAILWAY PRESERVATION SOCIETY 1067 mm gauge

(P.O. Box 504, PORT AUGUSTA 5700) (see LRN 6 p.8)=

Train services were extended through to Woolshed Flat on 5 September. On 7 September, a carriage was derailed between Woolshed Flat and Pichi Richi, due to a collapsed culvert. Trains were running normally, however, by 10 September. On 27 to 29 January, the new Saltia bridge had track laid on to it, thus once again linking up the rails from Stirling North through to Quorn, on the line's Centenary Year.

The locos in use during the latter part of 1978 were 4-8-0 T186 (James Martin 198 of 1909), and 4-8-2 W933 (Beyer Peacock 7410 of 1951). Work has been proceeding on the overhaul of 4-8-2 W934 (Beyer Peacock 7411 of 1951), and the restoration of the "Coffee Pot", 2-2-0WT motor NJAB1 (Kitson 4356 of 1905). A further locomotive has been made available to the Society. This is ANR's NB30, to be placed on permanent loan to the Society by ANR. This 140 hp 0-6-0DH was built around 1957 on the chassis of NB30, an 0-6-0ST built by Vulcan Iron Works (USA), B/n. 2533, in 1916. While in its original form as a steam loco, NB30 used to work as shunter at Quorn, so its return in its new form is appropriate. It is planned to take delivery of the loco via the loading ramp at Stirling North, and then through the pass.

Operating periods during 1979 will be at Easter weekend, May school holidays, Queen's Birthday weekend, August school holidays and Labour day weekend. Because of the uncertainty about the future of the Quorn -

Peterborough line, permission has been gained to run special trains on 2-3 June from Quorn to Peterborough and return,

Pich Richi now boasts Australia's only qualified female fireman, Mrs Meg Atkinson. Two other women are currently training for the ticket.

Richard Atkinson 2/79, Ray Ellis 3/79

TASMANIA

IDA BAY RAILWAY 610 mm gauge

The railway was visited on 20 January. Due to almost continuous rain, the two-hourly schedule of round trips soon ran late, with the 2 pm trip taking

2¼ hours, with only a ten minute layover at the jetty terminus which was used to good purpose to restock the loco's much depleted supply of sand.

The train now consists of four bogie passenger carriages, two of which are fully enclosed. Passenger loads varied from about 6 on the 10 am trip to about 40 on the 12 noon trip, the latter group fully occupying the enclosed cars due to the driving rain.

The following locos were noted (all builder's numbers taken from Editor's records.) All the locos are Malcolm Moore four-wheelers, originally built with Ford V8 engines in 1943 for the Australian Army:

- 1 B/n. 1010 frame and body panels only.
- 2 B/n. 1017 petrol engined. On standby at the depot.
- 3 B/n. 1038 petrol engined. Parked 100 yards west of depot.

IDA BAY RAILWAY - DEPOT

Not to scale

CW/JB 3/79

- 4 B/n. 1052 open cab. Out of service, dismantled.
- (5) B/n. 1056 diesel engined. In service

The railway is little changed otherwise from Commonwealth Carbide days, the major alteration being the provision of balloon loops at either end to avoid the necessity of turning the locomotive.

Craig Wilson 3/79

VAN DIEMEN LIGHT RAILWAY SOCIETY INC., Don River Tramway 1067 mm & 610 mm gauge

(P.O.Box 887, Launceston 7250) (see LRN 6 p.9)

A Tasmanian Government grant of \$5000 has been allocated to the Society recently to enable restoration work and the provision of facilities to be undertaken. In addition, an annual tourism grant of \$5000 per year for the next three years has been provisionally allocated.

A further CCS loco, CCS25, has been donated to the Society by ANR. This brings the Society's steam roster up to ten as follows:

3 ft 6 in gauge:

0-6-0T John Fowler 5265 of 1887. Donated by the Transport Commission in 1971. Under restoration at Burnie.

MA2 4-6-2 Robert Stephenson & Hawthorn 7422 of 1951. Donated by TGR, 1974. Semi-dismantled at Don awaiting boiler inspection.

MA4 4-6-2 Robert Stephenson & Hawthorn 7421 of 1951. Donated by TGR, 1974. Stored at Don.

H7 4-8-2 Vulcan Foundry 5922 of 1952. Donated by TGR, 1975. At Launceston awaiting transport to Don.

Heemskirk 4-8-0 Dubs 3856 of 1900. Donated by Burnie Council and Emu Bay Railway Co, 1977. At Burnie awaiting transport to Don.

CCS23 2-6-0 Beyer Peacock 4415 of 1902. Donated by ANR in 1978 (previously hired to VDLRS). Under restoration at Launceston.

CCS25 2-6-0 Beyer Peacock 4417 of 1905. Donated by ANR, 1978.

2 ft gauge:

Lune River 0-4-2T Hunslet 1844 of 1936. Purchased from Australian Commonwealth Carbide Co., 1972. At Don dismantled for boiler inspection.

9 0-4-0T Krauss 5988 of 1908. Donated by Electrolytic Zinc, 1972. Externally restored at Don.

5 0-6-0 Hudswell Clarke 1548 of 1925. Donated by CSR Ltd. 1977. External restoration under way at Don.

Steam Echoes 17.

VICTORIA

ALEXANDRA AND DISTRICT HISTORICAL SOCIETY. Alexandra. 1029 mm and 610 mm gauge.

(P. O. Box 21, ALEXANDRA 371 4) (see LRN 7, p.10).

Near the old railway station at Alexandra is a structure bearing the nameboard "The Little Loco". Inside are housed two locos previously operated in the district. Largely restored is a 3 ft 4½ in gauge Day's 0-6-0PM, painted red. At the rear of the shed is Australia's first diesel loco, 2 ft gauge Kelly & Lewis 4271 of 1935, which has had its engine removed for restoration. Currently stored at the hospital is 2 ft gauge Malcolm Moore four-wheeled petrol loco B/n.1049 of 1943 from the State Electricity Commission, Yallourn. This has a fully enclosed cab which has been added at some stage of its life.

Editor 1/79

CODELFA. Melbourne Underground Railway Construction 1067 mm gauge

(see LRN 8, P.13)

Five four-wheeled diesel locos were still at the Jolimont site on 22 January. 26-5 appears to be a Plymouth loco, while 26-7 may be of Baldwin manufacture, or possibly Com-Eng. 26-1 and 26-2, while not identical to 26-3, which carries Com-Eng builder's number EC4596 of 1965, are sufficiently similar to be very likely of ComEng manufacture.

David Mewes, Editor 1/79.

GEELONG STEAM PRESERVATION SOCIETY 1067mm gauge

(P. O. Box 166, BELMONT 3210) (see LRN 7, p.11)

Regauging of the Bellarine Peninsula Railway has not proceeded according to schedule, and partly due to this, the earlier cost estimates have had to be raised considerably, by a further \$84,000, according to a local newspaper report, and the Victorian Government has been asked to provide the additional funds required. The entire section from Queenscliff to Laker's Siding was relaid by early February, and was then packed by a tamping machine on loan from Tamper Australia. The unit was at Tamper's for conversion to 2 ft gauge for a Queensland Sugar mill, and was made available at minimal cost to the Society. By 7 March, regauging had been completed to the Portarlington - Queenscliff road crossing. A sleeper removing and replacing machine has been acquired from VR, and proved useful.

Pmr721, an ex-WAGR 4-6-2 (North British 26565 of 1949) has been purchased by some Society members from the City of Northam (see LRN 7, p.13). However, local objections to the purchase have halted any move for the time being. On the other hand, moves to the Town of Katherine, NT, with a view to preserve a North Australia Railway Nfb 2-6-0 (ex SAR Yx) have proved unsuccessful. Two more locos have arrived at Queenscliff. These are 4 *Arthur T. Middleton* (Vulcan 0-6-0ST of 1916), and T251 (4-8-0 Walkers 276 of 1915). Both these were delivered after being exhibited on road vehicles, at the Geelong Gala Day on 3 November, and the Transport Cavalcade in Melbourne on 29 January respectively. It was hoped that 6 *Wesley B. McCann*, (0-4-2ST Hudswell Clarke 646 of 1903) would arrive in similar fashion after the Melbourne Moomba parade in March. *Klondyke* (0-4-2T Perry 271 of 1927) has been steam tested, and reassembly is progressing at Belmont. PB15 454 (4-6-0 Walkers 99 of 1909) has handled trains at Belmont. The Malcolm Moore 4wPM entered service at Queenscliff on 10 January. It was being repainted at Queenscliff on 20 January. Apparently to be named *Major*, the following

information is found on its maker's plate: Attach Ser. No.2. Model 47. Type 1. Job No.C396. 13.12.46. It was built to work at Hume Weir in 1946, before being sold to Upton Engineering at Corowa, NSW.

\$200,000 has been requested from the State Government to pay for the transportation of rolling stock from Tasmania apparently purchase from ANR. A substantial number of carriages have been purchased, judging by the transportation costs envisaged.

The Commoner 11/78, 1/79, Bellarine Peninsula Echo 7/3/79. via Dick Hope, Editor 1/79.

MELBOURNE & METROPOLITAN BOARD OF WORKS. Dandenong Valley Trunk Sewer Construction. 762 mm gauge.

(see LRN 5, p. 10)

Work is currently in progress on construction by tunnelling of a 25 km. trunk sewer to service Melbourne's outer eastern suburbs, between Carrum and Bayswater. It is being built in five sections as follows:

Section 1 Carrum to Hammond Road, Dandenong, (4 km), built by cut and cover method. Begun in 1973 and completed in 1975.

Section 2 Hammond Road to Jolly Road (6 km), was tunnelled through wet, soft ground by a 'Mesco' tunnel boring machine, compressed air being used where necessary.

Section 3 Jolly Road to Ferntree Gully Road (8 km), tunnelled through hard rock with a 'Robbins' boring machine ('mole').

Section 4 Ferntree Gully Road to Boronia Road, Wantirna, (8 km), as for Section 3.

Section 5 Wantirna Road to Bayswater. Route to be finalised.

Tunnel diameter (lined) varies between 3.5 m at Carrum down to 1.6 m at the Bayswater end. 2 ft 6 in gauge railways have been used on sections 2, 3 & 4, and will presumably be used on section 5.

On Sunday, 25 February, the Board held a public inspection day at the Ferntree Gully Road access site. A display at the entrance included route maps, rock samples and some very interesting scale models showing tunnel construction methods. A 25 m poppet head straddles an 8.5 m diameter by 33 m deep access shaft. After the shaft was sunk, the first section of the tunnel was excavated by traditional rock mining methods to enable the 'mole' to be assembled. As the 'mole' moved along, rail tracks were laid to facilitate haulage of men and materials to the work site, enabling the progressive extension of conduits, phone cables, lighting etc. A laser beam projector was used to ensure that the tunnel centre line remained on its planned course. The tunnel on the Dandenong Road side of the shaft (Section 3) has been

concrete-lined and is thus practically complete. Lining is in progress on the Bayswater side.

Muck removal trains were run on sections 2, 3 & 4, 24 hours a day, six days a week between the 'mole' and the shaft. Each of the two trains used consisted of three trucks hauled by an E.M. Baldwin diesel loco. The railway is currently used in connection with the concrete lining of the tunnel in section 4. On display in the short section below ground level was one of the four wheeled Baldwin locos (number 032), one muck truck and a concrete agitator car. On the sidings above ground were two small four-wheeled battery locos (numbers 026 and 037), the battery box from loco 030, and a small number of sundry wagons. It is believed that there were three other locos there recently, but these have since been taken to the Board's Thomson River Dam site, north of Erica.

M.M.B.W. Notes via Steve Martin.

STATE ELECTRICITY COMMISSION OF VICTORIA. Rubicon 610 mm gauge

This four-mile long tramway runs along the side of the raceway of part of the Rubicon-Royston hydro-electric power complex, ending in a mile-long inclined plane with cable haulage. At the top of the haulage, in its shed, was observed the battery electric bogie railcar. At the small power station about half-way along the line is kept a tiny double ended four wheeled battery electric railcar. In a shed nearby was seen 26C/4, a Malcolm Moore four-wheeled petrol loco, believed to be B/n. 1003 of 1943. Lying outside the shed was that rarity on mainland 2 ft gauge railways, a snow plough. The tramline runs on top of the mountain, and is used for maintenance. It can be reached by car by a steep road which leads from near the foot of the haulage.

Editor 1/79

PUFFING BILLY PRESERVATION SOCIETY, Puffing Billy Museum, Menzies Creek. Gauges various.

(see LRN 4, p.11)

On 21 January, Hudswell Clarke 2 ft gauge 0-4-2ST 1559 of 1925, ex Pleystowie Mill number 4 was observed in steam at the museum. It had been fitted with a miniature Williamson coupler similar to those used at many sugar mills. Also fitted with this type of coupler was a bogie flat wagon which seemed to be an item of ex Innisfail Tramway rolling stock, apparently obtained from Mourilyan Mill. It is believed that a passenger carriage is to be built on this vehicle. The Malcolm Moore 4wPM which came from the State Electricity Commission, Redcliffs, has been dismantled, and it is believed it may be fitted with a diesel engine. Late in the afternoon, with the arrival of

the loco's driver, the purpose of the saddle tank being in steam became clear. It was to pull Hudswell Clarke 0-6-0 1863 of 1952 ex Macknade Mill number 6, out of the shed, and to position it over the pit in the museum yard. The tender engine has been converted back to coal firing, and Westinghouse brake equipment is being fitted. The pump is fixed on the left side of the smokebox, and an air reservoir had been placed on the left running board. The sand boxes have been removed, and the loco was painted in a white undercoat.

Editor 1/79

UPPER YARRA HISTORICAL SOCIETY MUSEUM, Yarra Junction 1067 mm gauge [sic should be 914 mm gauge]

A Malcolm Moore six wheeled petrol-mechanical loco is displayed on the platform of the former Yarra Junction Railway Station, which is now the local museum. The loco formerly worked on the Powelltown Tramway. Inside the museum, there are many historical photographs of local timber tramway scenes.

Editor 1/79

WOMBAT GULLY TRAMWAY. Leneva 457 mm gauge

(R.M.B. 1049A, WODONGA 3690)

This is a light railway built by some enthusiasts on private land, 'Cloverdale', Leneva, near Wodonga. Open days are on the last Sunday of the month, from 1pm to 5pm. There is a steam loco and a petrol loco built by members for use on the 1 ft 6 in gauge tracks.

Two buildings have recently been purchased. One, the old gang shed from Beechworth station will be used by the works section, and the second, a wooden portable will be used for the Museum section. A large lathe has been purchased from the NSWGR, and this will be used for the machining of wheels, axles and other items. A large number of 2 ft gauge wheelsets and bearings have been donated by a local brickworks. Restoration has recently been completed on a rare end tipping skip from the Daylesford area, believed to date from around 1870. Construction has begun on a new bogie coach, number 6, which will have a guard's compartment and seat 18. Bogies formerly used under coal hoppers at the Balls Head loader at Waverton, NSW, will be regauged from 20 inch gauge as soon as the new lathe is operational,

WESTERN AUSTRALIA

HOTHAM VALLEY TOURIST RAILWAY W.A. (INC) 1067 mm gauge

(P. O. Box 197, PINJARRA 6208) (see LRN 7, p. 12)

The Hotham Valley Tourist Railway, previously the Pinjarra Steam & Hills Railway Preservation Society, has commenced discussions with the State Department of Tourism, including an exploration of the Society operating over the closed line between Dwellingup and Tullis. A third W class 4-8-2 loco has been acquired for the railway. This is W908, Beyer Peacock 7385 of 1951.

Pinjarra Steam Express 12/78-1/79, ARHS Bulletin Supplement 2/79.

KALGOORLIE-BOULDER LOOPLINE RAILWAY 1067 mm gauge

(see LRN 8 p. 14)

Since the start of operations on 18 November, the Loopline had carried well over 1000 passengers by February. An official opening was to be held during March, by which time it was hoped that trains would be running from Golden Gate to Trafalgar. At the same time, the Eastern Goldfields Historical Society Museum will be opened at Boulder station. Trains will run every Saturday and Sunday from 1.30 pm to 5.00 pm.

WA Railway Institute Magazine 1/79, Goldfields Express 7/2/79, via David Whiteford.

WEST AUSTRALIAN HARBOUR & LIGHT DEPARTMENT, Wyndham 1067 mm gauge

(See LR 59)

It is reported that three locomotives still work on the Wyndham port railway. Apparently all the other locos are out of use. The locos still used are NW15 & NW16, ComEng four-wheeled diesels, B/n. GB1045 & GB1046 of 1960, and NW17, a Gemco Funkey four-wheeled diesel built in 1964.

EDITORIAL

The issue on 16 May of four railway stamps featuring steam locomotives highlights the increasing interest being shown in railways in Australia and the importance of the preservation societies in encouraging and developing this interest, as three of the locomotives featured are operated by preservation societies. Let us hope that another issue will follow, giving due consideration to a fair representation of gauges, states of origin, and private locomotive builders of Australia. *Light Railway News* has its part to play in the growth of interest in railways in Australia. The changes outlined in the last issue will soon be implemented, involving it even more in railway preservation. But this will only succeed with the support of LRRSA members, Please continue to provide the editor with whatever news of Light Railway interest you come across. The interest is contagious - by informing others, you will be sparking off their interest, and so our enthusiasm will remain alive through spreading to others.

LRRSA PUBLICATIONS

THE BEECH FOREST RAILWAY

The Society's best selling publication *West Otways Narrow Gauge* which dealt with the VR's 2 ft 6 in gauge Beech Forest - Crowes railway and its timber tramways, has been out of print for several years.

The author, Norm Houghton, has since completely rewritten the text, and greatly expanded the section dealing with the VR line. Production of this well researched and extremely interesting history is to commence shortly. The new book will be presented in the same style as *Sawdust and Steam*.

We are anxious to obtain high quality black and white photographs of the Beech Forest Railway, particularly pictures showing regular trains. Colour slides of high pictorial merit may also be considered for inclusion.

Any readers able to assist in lending such photos or slides should write or ring Frank Stamford, 9 McGregor Street, CANTERBURY Vic 3126; phone (03) 830 1640.

SAWDUST AND STEAM

The above book, dealing with the VR's Forrest railway and the mining and timber tramways of the east Otways is now almost sold out. Soft cover copies are already sold out but some hard cover copies are still available at \$6.95 plus postage of 70 cents. Should you desire a copy you should write to the Sales Department immediately.

BOOK REVIEWS

TIMBER, SPUDS AND SPA

By Murrell Osborne, published by the Australian Railway Historical Society, Victorian Division; 60 pp. 170 x 230 mm, card covers. \$3.95.

Subtitled "A Descriptive History and Lineside Guide of the Railways in the Daylesford District 1880-1978" this is a tightly written, well researched history of the Carlsruhe - Daylesford - Creswick North railway. Daylesford, lying in the shadow of Wombat Hill, was in its heyday an important town relying for its prosperity on gold, timber and tourists. By 188 (sic) it had seven trains a day, four to Ballarat and three to Woodend. The book covers all facets of the railway's history, including train services, safe working, station descriptions, track layouts, maps, tickets, and a very good selection of well printed photographs. Reproductions of timetables, tickets, and gradient profiles are included. Minor criticisms are that apparent physical connections between

timber tramways and the VR are shown on some of the track layouts, although gauge differences would have made this impossible; and the conversion into decimal currency of money figures included in direct quotes from the *Victorian Railways Magazine* of 1929-30. In the selection of typeface, cover design and general layout this book is very professionally presented. Very highly recommended.

FES

POTATOES PASSENGERS AND POSTERITY

A History of Puffing Billy's Railway by Marc Fiddian, published by the author. 144 pp. 135 x 208 mm, card covers \$8 95.

The text of this book covers the history leading up to the Gembrook line's construction, early train services, a brief description of the towns through which the line passes, attempts to close the line, broad gauge proposals, the revival of the line under the PBPS, and a brief outline of the other three VR narrow gauge lines.

Some aspects of the text were particularly interesting. I found the early history leading up to the line's construction, and the sections dealing with the many closure attempts and the subsequent re-opening well handled by the author. Unfortunately some irrelevancies in the text detract from its overall worth, e.g. several reference to the New York underground.

Seventy-eight photographs are included, all of which are poorly printed, and some of which are irrelevant or superfluous; for example two almost identical photos of Wright station, and photographs of the Belgrave, Emerald and Gembrook football grounds.

FES

NOTES AND CORRECTIONS

Regarding the John Fowler at Lachlan Vintage Village (LRN 9, p.11), Len Heaton writes that all the Fowlers at Tully Mill had tanks inside the cab beside the boiler and a coal bunker across the rear of the cab. These tanks were separate to, but connected by a balance pipe with the main tanks. Tully No.1 (John Fowler 16337) ran with a locally constructed tender in the early 1950s. By 1955, it was lying idle, and the chassis was used for a diesel powered welding plant.

LRN 9 p.8 BHP LTD should be THE BROKEN HILL PROPRIETARY CO. LTD.

LRN 9 p.9 Glen Davis Shale Oil Co. should be National Oil Pty Ltd, Glen Davis.

LRN 9 p.9 Aberdare North Colliery: should this gauge be 1067mm ?

LRN 9 p.14 Mount Isa Mines Holdings Ltd. Operations at Mount Isa are carried

on by Mount Isa Mines Ltd, a wholly-owned subsidiary of Mount Isa Mines Holdings Ltd.

LRN 9 p.17 Electrolytic Zinc. Full name is Electrolytic Zinc Co. of Australasia Ltd.

LRN 9 p. 21 W 908 is of course HVR's *fourth* W class loco.

Thanks to Tony Weston

Tony Weston also writes that he has found some Australian-built diesels which predate Kelly & Lewis 4271 of 1935 (LRN 9, p. 17). These were three 3 ft gauge locos supplied in 1930 by Armstrong Holland Ltd of Sydney to the NSW Water Conservation & Irrigation Commission. Further details will appear in a future issue of *Light Railways*.

NEW SOUTH WALES

GOULBURN STEAM MUSEUM . 610 mm gauge

(see LRN 3, p 4)

The Museum's remaining steam locomotive, *Stella* 0-6-0T Krauss 3423 of 1896, is to be withdrawn from service shortly for general overhaul. *Stella* has long needed heavy overhaul, as well as axle box attention, and as the locomotive will be due for boiler examination in August, the work is now essential. Negotiations are under way for the loan of a petrol locomotive for the time the Krauss will be out of action. There is the remote possibility of an 0-6-2T Perry loco being utilised but the excessive axle load for the track, and the need to relay the run round facility near the Crookwell Road to suit acts against this.

"Perry" 4/79

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY Albion Park. Gauges various

(P. O. Box 1036. WOLLONGONG 2500) (see LRN 9 p.10)

Work at the Albion Park Museum site has concentrated on consolidation and tidying up the museum area during the last couple of months.

The open sided shed over the stationary engines and boiler has been completed and painted, and although making natural light photography of these exhibits more difficult, has improved the general aspect as well as the weather protection. The remainder of the engines and a winch have been painted and burnished and will be put "on line" in the next week or two.

The alignment of the future main line, from the junction with the present running line, to Yallah station, has been pegged out and scrub trees cleared

prior to ballasting with blue metal, donated by a local quarry. A culvert to carry the line over the drain which bisects the Museum area, has been dug out and the timber formwork and reinforcing completed ready for concrete pouring, and is planned for completion by the end of April.

Trackwork at the north end of the existing alignment has extended the running line along its future continuous circuit by another 30 metres continuing the ILRMS main line standard of 45 lb/yard rail. The 150 metres or so, so far laid in this size rail and well ballasted and packed has given little trouble but the much earlier track laid in 30 lb rail has required progressive resleepering, and spiking where old pre-used spikes installed in the early days have bent or pulled under the recent heavy usage. This trackwork also required lifting and packing where a number of holes appeared, and still has more switchback tendencies than the main line extension.

For a number of years rail removed from Corrimal and other sources has lain in haphazard piles where dumped on arrival at Albion Park, alongside the running line, and has not presented a very pleasant sight particularly to the recent visiting public, as well as accelerating corrosion in the piles. In March a rail storage rack was erected alongside the main line away from the main area, formed by laying lengths of 60 lb rail parallel on sleeper posts, suitably braced. All the useable rail in the haphazard piles has been moved to the rack and the remainder cut up for scrap. This strip vacated will be shortly levelled with soil and grassed, and already presents a greatly improved appearance.

The ex-CSR Meat Van, in use as a mobile booking office, and positioned on the tramway connecting spur on Open Days, has been refurbished and painted in brown and ivory to match the passenger carriage.

The Open Day held on 15 May was the fourth to be held since regular public opening commenced in February. Attendance at these Open Days has averaged 600. May's Open Day was a special Benefit Day for the Illawarra Society for Crippled Children. In addition to providing free rides for the children and nursing staff, a cheque was presented from public fare revenue by the ILRMS and the South Coast Model Engineering Society, whose site adjoins that of the ILRMS.

Tony Madden 4/79

TIMBERTOWN, Wauchope 610 mm gauge

(see LRN 6, p .6)

Timbertown, an operating logging museum of the 1880/1910 era, incorporates a 2 km. 610 mm gauge railway which encircles the site. Since the official opening in December 1976, all revenue services were operated by a John Fowler 0-6-0T locomotive, B/n. 12271 of 1910, hauling originally

two locally built carriages, but since 1978, three cars. Now carrying the name *The Green Hornet*, the loco bears little resemblance to its condition when used in cane haulage at CSR's Goondi and Victoria sugar mills, as it had to be completely rebuilt following its removal from a park at Lucinda Point. Now fitted with shorter side tanks and an unlagged/unsheeted boiler, the loco works without a tender (added by CSR to extend the operating range), whilst the fuel used is forest oak wood.

The passenger cars are bogie vehicles, of semi-toastrack appearance, but actually with 2 and 1 seating, having an off-centre aisle, and are fitted with hand brake levers. Two cars each seat 26 passengers, whilst the newest seats only 23, but has provision at one end for wheelchair passengers. Before the construction of the third car, it was necessary for up to 26 trips a day to be operated to cater for 1300 passengers, but this situation is now eased.

Laid with 30 lb new rail on a well ballasted formation, the route abounds with grades as steep as 1 in 30, and numerous curves as the line meanders through picturesque bushland settings. There are two timber bridges, the longest being "S" shaped and some 128 metres long.

Although certified to operate at 140 lbs psi (approx. 965 kPa), the Fowler's safety valves were set to blow at 100 lbs psi (approx 690 kPa), because of the light load hauled. The unlagged boiler presents an unusual sight and leads to operational difficulties with the heat from the boiler raising the temperature of the water carried in the side tanks, thus affecting operation of the injectors.

Timbertown was fortunate to be amongst the organisations to receive one of the Hudswell Clarke 0-6-0 locomotives from CSR Ltd. The loco was number 6 on the Macknade roster, B/n.1862 of 1953. It had been completely retubed by the mill prior to the 1976 season, the last worked at Ingham. After arrival at Timbertown in September 1977, the loco was converted from oil to wood firing, whilst such "modern" improvements as a steam turbo-generator and electric headlight were removed. Unlike the Fowler, the Hudswell Clarke has retained its lagging and boiler sheeting, and in fact also retains its Macknade road number.

Restoration work was almost completed during the December/January school holidays, which was extremely fortunate for its services were suddenly required when the Fowler had to be taken out of service on Sunday 25 February when it was found to be dropping brass filings whilst engaged on a work train prior to the commencement of the day's activities. It had been intended to commission the Hudswell Clarke after the busy Christmas holiday period, thus allowing the Fowler to receive a much needed overhaul, as well as reprofiling of its wheels but this was done slightly earlier than anticipated.

Following minor work (refitting of sandboxes), number 6 was trialled late

on Monday 26 February, and entered revenue service the follow morning. In the following days, the crews gained confidence in the loco with its steam brake (the Fowler only had a hand brake) and its greater pulling power, although the lifting vacuum injectors caused some problems initially.

At present the Fowler is on blocks, pending completion of repairs, which could take some time. In the meantime, Timbertown is interested in increasing its motive power fleet, so that the Fowler may in the future be relegated to a display on a logging train.

Per-way work is carried out outside museum hours, and normally a small Simplex four wheeled petrol locomotive, Motor Rail 4214, is used. This loco was obtained from CSR Ltd's Harwood Mill in New South Wales after its short tramway was closed. The unit has had no restoration work carried out on it and presents a sorry appearance although it is quite functional.

Most recent railway acquisition is a 3 ft 6 in (1067 mm) gauge foot-operated fettler's three-wheel trike, obtained from Queensland Railways. It is proposed to convert this to 2 ft gauge for use at Timbertown.

(It is planned to include in a future Society publication a detailed article on the Timbertown complex and its railway, which will be fully illustrated.)

"Perry" 4/79, Timbertown News Release.

MEGALONG VALLEY RAILWAY Blackheath 610 mm gauge

A visit to this location in mid-April revealed slow progress is being made, Covered shelter in the guise of a galvanised shed has been constructed, enclosed at the sides, but open at each end for sidings to pass through. The two Perry 0-6-2Ts, 2382 of 1941 and 6634.52.1 of 1952, formerly numbers 6 & 7 of North Eton Sugar Mill, are stored under cover, together with what appears to be the body of a former Melbourne cable tram trailer. One shed road extends out the back to provide an inspection pit which is simply the track supported on pole stumps. One set of ex-P.T.C. points has been regauged for use on the railway and could because of its length, be regarded as a "high speed" turnout. There is now about 300 metres of "main line", all of which is laid in 60 lb. rail or heavier reclaimed P.T.C. rail. A water column, obtained from the P.T.C., awaits erection. Although one of the locos is serviceable, the other requiring partial retubing, there is little evidence that it has been operated for some time, judging by the rusting of the track. A discussion with the owner, Mr Keith Duncan, disclosed that he has had some difficulty with the local Council in gaining approval for his development proposal and in gaining a decentralisation grant (which, he says, ultimately went to the Zig Zag railway at Lithgow). He is also seeking the use of a small petrol or diesel locomotive for use on construction and work trains. Because

of his other commitments, and limited volunteer help, progress is slow. As mentioned earlier, the locomotives are under cover at least, and so should not deteriorate.

Two names have been "written" by a welder on the cab steps of the older of the two Perrys. On the driver's side is 'TOM BAGLEY' and on the fireman's side is 'LES SCOTT'. Perhaps these gentlemen were crew during the loco's North Eton days. Can any reader shed light on this?

Dick Hope 10/76, "Perry" 4/19

QUEENSLAND

AMALGAMATED SUGAR MILLS PTY LTD, Pleystowe Mill 610 mm gauge

This mill has been re-equipping with 6 tonne capacity cane bins, and has purchased 600 for the 1979 season, bringing the total number of this type in the mill's fleet to 1800. This has enabled 1400 of the smaller 3.2 tonne capacity to be sold to Cattle Creek Mill. It is believed that Pleystowe has now converted completely to the new type of bin, which is the same design as that used at nearby Racecourse mill, and is fitted with Willison Automatic Couplers.

Len Heaton 4/79

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY 610 mm gauge

(P.O.Box 270 NORTH QUAY 4000) (see LRN 8 p.6)

The Society was informed earlier in the year that it would have to vacate its Rocklea, Brisbane storage site during the year because of pending redevelopment. With the lease of a suitable depot area and the assurance of a run of at least 1/2 mile, the Society has decided to embark on the transportation of the equipment previously stored at Rocklea to its proposed museum site at Woodford. Negotiations are proceeding to obtain access to further sections of the old Wamuran-Woodford section of QGR branch line upon which the Society hopes to run trains in due course. With the installation of security fencing in a few weeks time, seven steam locomotives and many items of rolling stock will be moved to Woodford. Already some wagons and track materials are on site. The Society received an invitation at the beginning of April to take part in the Rocky Point sugar mill's centenary celebrations on 21 April. The final stages in the restoration of the Society's ex-Condong Mill Ruston & Hornsby four wheel diesel (279567 of 1949) were quickly completed so that the loco could be used to run a passenger train at Rocky Point. This work included cleaning of the cab interior and priming, overhaul of the fuel

system, brake adjustments, and top coats of paint. The loco was finished in the livery it had at Condong in the early 1960s, golden cream with green cab interior and ballast weights and red buffer beams. After being used at Rocky Point, the loco was exhibited at the ARHS (Qld. Division) Field Day at Redbank on 12 May, before being transported to Woodford.

During 1977, three petrol engined locomotives were acquired, together with some workshop equipment, from the estate of Alwyn Zinn, a resident of Ipswich who had constructed them in his back yard! The first loco, built in 1971, is powered by a Ford Prefect engine and weighs 2.8 tons. It was in the process of being rebuilt as a "steam outline" loco when its builder died. The second loco, built in 1972, is powered by a Ford V8 engine, and weighs 3.75 tons. This loco, like the third, is of conventional "diesel" appearance. The third, weighing in at 4.9 tons, is powered with a Leyland Cub engine, and incorporates such refinement as air brakes, air operated clutch and air horn. All three locos are four wheelers, with the rear axle only being powered. In early May, they were removed from their place of building to storage in Brisbane

The Society's Wickham line car (four wheel petrol B/n.7084 of 1955) ex Hambledon Mill, has been moved to Woongoolba for restoration to working order by Tom Hurley.

Editor.

CATTLE CREEK CO-OPERATIVE SUGAR MILLING ASSOCIATION. Finch Hatton 610 mm gauge

As recorded above, Pleystowe Mill has sold 1400 of its obsolete 3.2 tonne capacity cane bins to Cattle Creek Mill. This has made possible the complete withdrawing and sale of Cattle Creek's entire former bin fleet, which was a very motley collection of various shapes and sizes, mostly built on old whole stick cane trucks. The old bins will be readily sold to local farmers for fowl runs, cattle yards etc.

Len Heaton 4/79, Editor.

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD., Farleigh Mill

(see LRN 9 p.12)_610 mm gauge

Nine spans of the St.Helens Creek tramway bridge were washed away in floods as reported in LRN 9. The former timber structure will be replaced by a steel and concrete structure which will cost \$200,000, double the previous estimate, and will be ready for the start of crushing in June.

Stack Talk 80

THE HAUGHTON SUGAR COMPANY LTD. Invicta Mill. Giru 610 mm gauge.

(see LRN 8, p. 8)

Tenders close on 25 May for the construction of 47 kilometres of track for the Upper Burdekin Co-operative Association Limited. This line, known as the Clare-Dalbeg Tramway Extension will be worked as part of the Invicta Mill tramway system, and will replace road haulage. The tramway will run from the present terminus of the Invicta tramline, at Steepy Banks, south of Clare, to Milaroo and Dalbeg. The contract is for main line ballasted track to be laid on formation constructed by others. Rails, precast concrete sleepers and ballast to be used in the construction will be supplied by the principal. Completion is due for the 1980 season, when 200,000 tonnes of cane will be transported on the new line. Cane will be hauled in excess of 90 kilometres from Dalbeg to Giru, making this the longest haul on a cane tramway in Queensland. It is anticipated that additional locomotives for the extension will be ordered shortly.

Stack Talk 80, ARHS Bulletin Supplement 4/79, Courier-Mail 28/4/79, Editor.

MARIAN MILL CO-OPERATIVE SOCIETY LTD., Marian 610 mm gauge

(see LRN 8 p.8)

Marian's two steam locomotives will remain in use during 1979. The Perry 0-6-2T 2601.51.1 of 1951 will be used regularly on yard duties, while the John Fowler 0-6-2T 20277 of 1934 will be used as required, presumably mainly on ballast trains.

Len Heaton 4/79

W.H. HECK & SONS PTY LTD, Rocky Point Mill, Woongoolba 610 mm gauge

(see LRN 3, p.7)

Although there has been no locomotive operation here since 1950, tramway developments are nevertheless taking place, with construction of a new yard for full and empty bins, which are transported to and from the mill on road trailers. There has even been some talk of the acquisition of a diesel locomotive to shunt the expanded yard layout. Currently, the bins are shunted by a fleet of tractors.

The deferred Centenary Celebrations took place on 21 April, and were well attended. On the tramway side, a great deal of work had gone into the restoration of John Fowler 0-4-0WT 16249 of 1923. This locomotive had been returned from exhibition at Gilltrap's Museum at Kirra Beach, where it had deteriorated very badly. It was completely dismantled and restored by Tom Hurley, a mill employee. This work included the construction of a completely

new cab. Unfortunately, the boiler was too far gone to be restorable to operating condition, but the overall effect was very pleasing with the loco painted green with polished brass bands and steam dome top. The Australian Narrow Gauge Railway Museum Society was invited to participate, and with the help of the mill was able to send its newly restored Ruston & Hornsby diesel (279567 of 1949) and the small passenger carriage used at South Brisbane in November. Passengers were carried a total of one kilometre there and back in a train consisting of steam locomotive, diesel locomotive and carriage. More than 350 passengers were carried. It is not known whether the steam loco will be remaining at Rocky Point or if it will have to be returned to Gilltrap's Museum.

Stack Talk 80, Editor.

MASSEY-FERGUSON (AUSTRALIA) LTD. Geebung 1067 mm gauge

This company operates a private siding adjacent to Sunshine station to enable rail dispatch of farm machinery from its Brisbane factory. The sidings are shunted by a four-wheel petrol locomotive built by Malcolm Moore in Melbourne in 1954. This 5 ton machine, classified as L48 by its makers was built to the order of McKay Massey-Harris, predecessors of Massey-Ferguson. The locomotive is in first-class condition, being housed under cover, and is kept very clean.

Editor.

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION Proserpine Mill, 610 mm gauge

(see LRN 8, p 10)

The tramline to Kelsey Creek, to the west of Proserpine was cut at Waterson during floods early in the year, when the bridge across the Proserpine River there was carried away. The decision has been taken to build a new line direct to Waterson along the south bank of the river, thus eliminating a crossing of the QGR on the level, as well as the river crossing. The 3.7 km line is expected to cost \$120,000 part of which will be recouped from insurance payments. The new line will cross the QGR main line by means of an underpass, to be built by the mill under QGR supervision.

Stack Talk 80

PROSERPINE SHIRE COUNCIL PARK Main Street. Proserpine 610 mm gauge

(see LRN 8, p.10)

The First World War veteran Hunslet 4-6-0T here has been placed under a

shelter. Apart from losing some boiler cladding at the front, it is kept in quite reasonable condition.

Trevor Bentley 4/79

QUEENSLAND SALT PTY LTD, Bowen 610 mm gauge

This salt works is one of a very small number in Australia which use a tramway system for the harvesting of sea salt for a few weeks each year. (Others are at Laverton, Vic. and Langhorne Creek, S.A. Are there any more? - Ed.) On 29 April, 35 tip wagons were seen in line, freshly painted, with one more nearby, also newly painted but dismantled. The four locomotives were seen stored in the shed, all painted bright yellow. These are as follows (details from Editor's records): Ruston & Hornsby four wheel diesel mechanicals 174142 of 1935, 285340 and 285343 of 1949, and Motor Rail "Simplex" four wheel diesel mechanical 8653 (of 1941 ?)

Trevor Bentley 4/79

TASMANIA

Proposed railway for Cataract Gorge, Launceston

A proposal for a narrow gauge steam railway on the eastern side of the famous Cataract Gorge was submitted to the Launceston City Council during February. The line will be one kilometre in length, and would take 12 months to build. It is proposed to fire the locomotive on L.P.Gas, and the line is expected to be of 610 mm gauge.

Launceston Examiner via Ralph Proctor 3/79

IDA BAY RAILWAY, Lune River 610 mm gauge

(see LRN 9, p. 15)

During February the service was being run with the diesel loco and four carriages. However, one trip was noted running with two carriages and the standby loco (powered with a Ford V8 petrol engine).

Ralph Proctor 3/79

SECOND RIVER TRAMWAY Karoola 610 mm gauge

(c/- 12 Melbourne Street, LAUNCESTON 7250)

(see LRN 7, p.9)

A new terminus for the tramway is being built at the present time, adjacent to the Second River Road. The old siding has been dismantled and a set of 40 lb. points put in, so that a new crossing loop can be built. Work also continues on fitting out the interior of the guards van, which should be in service later

this year. During December an "Enthusiasts' Day" was held with both Krauss locos in steam, these being:

- | | | |
|---|---------------|---|
| 1 | 0-4-0T Krauss | 5662 1907 - boiler, worksplates and other parts |
| | | 5800 1907 - mainframes |
| 2 | 0-4-0T Krauss | 6067 1910 On loan from Launceston Museum. |

Double headed trains were run and there was also some night running.

Ralph Proctor

VAN DIEMEN LIGHT RAILWAY SOCIETY INC., Don River Tramway 1067 & 610 mm gauge

(P.O.Box 887, Launceston 7250) (see LRN 9 p.17)

Services are run on Sunday afternoons when the museum is open using railmotor DP12 or 102 hp diesel U2, both hired from the Australian National Railways. Steam traction is used for special occasions. Locomotive U2 is interesting as it is one of 20 100 hp 10 ton locos built for use on the Victorian S.E.C.'s Kiewa hydro-electricity scheme to 3 ft gauge about 1950. The scheme was curtailed with the Commonwealth-State agreement to support the Snowy Mountains scheme, and it is believed that very few of the locos saw any service at all at Kiewa. In the late 1950s, six were extensively rebuilt by the TGR to become the U class, while another two were converted to metre gauge for the Thai Government Railways at Launceston. Others of these locomotives were dispersed throughout Australia.

ARHS Bulletin Supplement 3/79, Editor,

WEE GEORGIE WOOD STEAM RAILWAY INC., Tullah 610 mm gauge

(see LRN 7 p. 9)

On 11 February, the Fowler 0-4-W0T was steamed and given a run on the rails at Tullah. Many Tullah residents were in attendance to witness the great event. By next summer, the Society hopes to complete 3.5 km of track which will take *Wee Georgie* around Tullah village. Driver of the train was Bill Winskill who drove for a number of years on the line from Tullah to Farrell Junction. The English comedian after whom the loco was named died on 20 February at the age of 83. It had been hoped that he would be at the opening ceremony later this year as a guest of honour. A 1067 mm gauge carriage is being rebuilt to 610 mm gauge proportions at Rosebery to run on the line.

Advocate via Ralph Proctor 3/79'

VICTORIA

ALEXANDRA AND DISTRICT HISTORICAL SOCIETY. Alexandra 1029 & 610 mm gauge.

(P.O.Box 21, ALEXANDRA 3714) (see LRN 9 p.17)

The restoration of the 3 ft 4-1/2 in. gauge Day's 0-6-0PM (or should it be 0-6-0KM as the engine is designed to run normally on power kerosene) has now been completed. The Society believes that the locomotive was originally built as an International Farm Tractor in the early 1920s and was converted to a rail tractor by W.Day and Sons in the late 1920s. It was bought in 1940 by Ruook Timbers Pty Ltd for use on their timber tramway from Nos. 4 and 5 mills in the Rubicon Range.

The Society would like to hear from any reader who could provide further details of the history of the loco. Photos of it in operation would also be most welcome, as to date none has been located. This has meant that the roof, which was not present when the loco was received has had to be replaced with one of a typical, rather than prototypical, appearance. The Society also believes that the tractor is the only Day's Rail Tractor in operating condition and would welcome comments on this. (A similar, although smaller Day's tractor is "preserved" in a park in nearby Marysville (see LRN 6, p. 10).

As indicated in LRN 9 the engine of Kelly and Lewis 4271 of 1935 has been removed. In order to do this, both the radiator and bonnet had also to be removed thus leaving a rather bare chassis and cab. The diesel engine has been dismantled in order to try to free seized pistons. Because of the unavailability of parts this operation has proved extremely difficult, and at the end of April the pistons were still stuck.

Work is also proceeding on the Malcolm Moore loco B/n 1049 of 1943. After overhaul of valves, this loco is now fully operational.

Restoration of the bodywork is now under way and to facilitate this the cab has been completely removed. Because of the poor visibility from the cab, the small perspex windows are to be replaced by larger glass ones. The doors are also being modified to include larger opening windows. The loco is being repainted green (it was yellow when received) with black under-frame, the same as the Kelly and Lewis. Painting of the bare loco, minus cab, is virtually complete.

Ian Bowering, President of the Historical Society, has been largely responsible for this project, and he is very keen to meet any LRRSA members visiting Alexandra. He can be contacted at the above address, or at the Alexandra Hospital.

Ian Bowering 5/79.

GEELONG STEAM PRESERVATION SOCIETY 1067 mm gauge

(P O Box 166, BELMONT 3216)

(see LRN 9 p.18)

May 19th was the day scheduled for the start of operations on the Bellarine Peninsula Railway, to coincide with the Centenary of the Queenscliff Railway. Trains were to operate between Queenscliff and Laker's Siding from the afternoon of the 19th.

In preparation for this, it was planned to end operations at Belmont on 15 April. Due to a lack of space at Queenscliff, it was decided that No.6 (Hudswell Clarke 646 of 1903) should remain at Belmont until the end of the line, and so it did not take part in the Moomba Parade. PB15 454 (Walkers 99 of 1909) and the carriage stock were to be transferred from Belmont to Queenscliff after Easter.

Pacific M6 (Stephenson & Hawthorn 7429 of 1951) was in service on 25 and 26 February. The first day was used as a test run in preparation for the visit of Digby Crozier, Minister for Development, Decentralisation and Tourism, the next day. The loco was then due to be stripped for boiler inspection, due in April. T251 (Walkers 276 of 1915) has had attention to the regulator to get it ready for the opening

In April, it was announced that a further grant of \$100,000 had been made available by the State Government to enable regauging to continue to Drysdale as originally programmed. A press report revealed that a group of six GSPS members had tendered for a locomotive identical to M6, ten carriages and a self-propelled rail car from Tasmania. It is not known whether funds will be made available to transport these items from Tasmania should the tenders be successful,

GSPS Newsletter 3/79, Bellarine Peninsula Echo 11/4/79 via Dick Hope.

WALHALLA & THOMSON RIVER STEAM TRAMWAY, Walhalla 762 mm gauge

(see LRN 8, p.13)

It is confirmed that a locomotive originating from Queensland has been delivered to Walhalla. It is claimed to be of 3 ft 6 in gauge and it is planned to rebuild it as a 2-4-2T. The loco is currently stored in the shed at Walhalla. Its identity is unknown to your editor, but there is some slight evidence to suggest that it may be a John Fowler loco sold from Mount Morgan mines some years ago. This would be one of the 3 ft gauge Fowlers which worked on the Warburton Timber Company's Tramway.

On the Block 2, Editor 1/79

WESTERN AUSTRALIA

HOTHAM VALLEY TOURIST RAILWAY INC. 1067 mm gauge

(P. O. Box 197, PINJARRA 6208) (see LRN 9, p. 21)

The HVR's W945 *Banksiadale* ran special trains in Perth from 10 February to 10 March, in connection with the "Festival of Perth".

For the same period, G71 *Menzies* was exhibited outside City Station in a maroon livery, although it has not yet been restored to operational condition.

Latest acquisition is a 1903 built 6-wheel self propelled steam crane which was constructed by Balmforth & Co., Luton. Latterly this machine worked at WAGR's Forrestfield wagon depot on compressed air. Formerly classified as No.26, it has a 5 tonne capacity and weighs 12 tonnes.

Pinjarra Steam Express 2-3/79, ARHS Bulletin Supplement 2/79

KALGOORLIE-BOULDER LOOPLINE RAILWAY 1067 mm gauge

(see LRN 9 p.21)

A joint official opening of the historic railway loopline and Eastern Goldfields Historical Society Museum in Boulder was due to be held on Sunday 8 April. The official opening ceremony was to be at noon, and celebrations were to last most of the day.

Kalgoorlie Miner 14.4.79. via David Whiteford,

NORTH WEST WHALING COMPANY. Carnarvon 1067 mm gauge

(see LR 50, 56, 59)

Cyclone Hazel on 12-13 March caused extensive damage to the North West Whaling Company's Babbage Island jetty at Carnarvon.

A photograph in the *Daily News* showed the tramway rails and jetty decking in a tangled mess at the jetty head. No damage was reported in the press to any rolling stock still stored on the jetty but there seems to be some doubt as to what stock may have been on the jetty at the time. The jetty is largely used by the Company for servicing prawn boats.

(Is the jetty and its tramway still in the hands of the W.A. Harbours and Lights Department, or has it been disposed of to "private enterprise"? - Ed.)

Daily News 14.3.79, David Whiteford.

Denham jetty 1067 mm gauge?

Cyclone Hazel on 12-13 March washed a prawning vessel into the local caravan park 50m. from the beach. The railway lines on the jetty were unserviceable, according to the *West Australian*. It is assumed that small man-powered trolleys are used at Denham to service the prawning vessels.

West Australian 15.3.79, David Whiteford.

EDITORIAL

This is a transitional edition of *Light Railway News*. It is the first issue to be fully commercially printed, and was edited in Brisbane, typed and designed in Melbourne, and printed in Newcastle! The logistics of this exercise were sufficiently daunting for us to have a 'trial run' with this issue, before actively involving the preservation societies in the magazine, and before launching a publicity campaign to increase its circulation.

It is intended to make LRN Australia's national railway preservation magazine, such as *Trolley Wire* is for the tramway societies. Over the past six months much 'back-room' work has been done to gauge the level of support we can expect from the preservation societies, and to date ten preservation societies have agreed to participate in the production of LRN by making regular news contributions, and submitting articles and photos for publication. Each participating society will nominate its own Contributing Editor. A Diary of Activities will be included in each issue giving name, address, subscription details and activities of each participating society. All news contributions from participating societies will be published under their own logo.

We are looking for a new name for *Light Railway News*. Probably a fairly snappy title with an explanatory subtitle would be the best.

Light Railway News will not be exclusively a railway preservation magazine. It will also include news of industrial light railways (e.g. sugar tramways, tunnel construction railways etc.) and pleasure and tourist railways.

We are always looking for contributions of news and photos from our own members. Even in its present form LRN has had good support from the preservation societies, to make it a complete success we need more support from our own members

BOOK REVIEWS

NORTHERN OUTPOST

by John Kerr, published by the Mossman Central Mill Company Limited, 154pp., 193 x 269 mm, hardbound.

This book is a sugar mill history, and as such is far more than the publications put out by other mill companies in recent years, often amounting to little more than expanded glossy brochures. *Northern Outpost* is the story of the Mossman Mill, but also of the background to settlement on the Mossman and to the north, attempts to start a sugar industry on Cape York Peninsula, the

men who worked in the industry, and the technology harnessed to it, as well as the relationship between the mill and the local community. The Mossman Mill Company is to be congratulated for taking on a venture such as this, and the author is to be congratulated for a comprehensive but readable layman's account, which goes a long way to providing an understanding of pioneer days in North Queensland and the operations of the sugar industry.

Naturally, the story of the tramlines associated with the mill will be of prime interest to readers of this review, and two chapters out of the fifteen deal exclusively with the mill tramway and the Douglas Shire Tramway, which connected with it, while much more of tramway interest can be found in other parts of the book. The treatment of the tramway history is quite well done and readers will find reference, in addition to the mill and Council tramways, to the operations of W.A.Frost, who used his own locomotives for local contract haulage on the mill tramway, as well as to the tramway at the abortive Vilele Plantation on the Bloomfield River, and an intriguing reference to a short tramway on the Lockhart River Aboriginal Mission, established in 1965.

Some aspects (possibly controversial?) seem rather glossed over, for example the mill's takeover of the Shire Tramway in 1959 (just why was a validating Act of Parliament required more than a year later?). There are a number of irritating inaccuracies such as the ascribing of 1937 as the last year of steam construction at John Fowler's (it was 1935), describing the mill's first diesel as being named *Mowbray* on arrival (it was *Mossman* at first), and increasing the confusion about the spelling of the name (which is definitely not Welsh) *Faugh-a-Ballagh* (the steam loco) and *Faugh a Balough* (the diesel) by using two different versions of each, while Bill Frost's third loco is correctly described as a Jung in one place, and then as a Krauss in another. More than twenty of the sixty eight photographs are directly related to the tramways, but reproduction is rather variable, and it would have been easy to include a photo of each of the mill's steam locos and to provide some indication of dates in the captions. There are some useful maps, including a tramline map, but interpretation of these is difficult if no scale is given.

In spite of some imperfections, the book fills a gap in histories of light railway interest and is at all times readable and interesting, even in the sections of 'potted' biographies and descriptions of technical advances. It is well produced and almost free of typographical error. Hopefully, the book will stimulate others to produce more work on the relatively neglected topic of Queensland Sugar Mill history. Excellent value at the price, this book is recommended reading.

(*Northern Outpost* is available from The Sales Officer, Australian Narrow Gauge Railway Museum Society, 152 Copperfield Street, GEEBUNG,

Queensland 4034, at \$9.00, postage and packing included).

RAILWAYS IN THE PILBARA

Written by John Joyce and Allan Tilley. Published by J.G A. Publications.

The authors of this book, John Joyce and Allan Tilley, are well known as excellent photographers, and for their photographic tributes to steam in Western Australia, Indonesia and Thailand. Once again these gentlemen have excelled themselves with an excellent book on the railways of a region which is very much in the news in recent years.

The Pilbara region of Western Australia has been the home of no less than seven railways and tramways covering three gauges - 2 ft, 3 ft 6 in, and 4 ft 8 ½ in. All have played an important part in developing the mineral resources of this interesting, if somewhat stark area.

Three chapters are devoted to the 'historic lines' - the Roebourne - Cossack Tramway, the Whim Well Tramway, and the Port Hedland-Marble Bar Railway. Each has its charm, and there is evidence of much research to present all known facts on the three lines, their locomotives and rolling stock.

If your interest lies in the 'big time' mineral lines, there is ample to keep you satisfied in the four chapters dealing with the railways built by Hamersley, Goldsworthy, Mt Newman and Cliffs Robe River. Hamersley Iron made history in 1977 by purchasing the former GWR 'Castle' class loco *Pendennis Castle* from the UK, later presented to the local railway historical society. Two pages are devoted to this famous loco and its exploits both in the UK and Australia.

The book is well illustrated with a good collection of photos from a variety of sources, including many from the authors' own cameras. Each line is represented by a map, and the Hamersley chapter includes 'station' layouts.

Highly recommended.

RFE

(*Railways in the Pilbara* is available from LRRSA Sales at \$8.95, postage and packing included).

NEW SOUTH WALES

HUNTER VALLEY STEAM RAILWAY & MUSEUM 1435 mm gauge

(see LRN 8 p.5)

(P.O. Box 125, BROADMEADOW 2292)

In addition to the many locomotives previously recorded in previous issues, the Society owns a substantial amount of rolling stock. There are 48 items of coaching stock and 64 items of goods stock, much of it stored,

along with the locomotives at a site in the Newcastle area which is not open to the public, but which is accessible to Society members for maintenance work. Latest additions to the wagon stock were L1202, a bogie water tank wagon, and L1329, a 'KF' type 4 wheel flat wagon. The Society intends to set up its operating railway on the 43 mile Glenreagh to Dorrigo line near Coff's Harbour, which was closed by the NSWGR in 1972. As part of the effort to keep the closed line in reasonable condition, a working bee was to be held during Easter to remove vegetation from the track. Equipment from the Civic Perway Workshops has been acquired by the Society, comprising not only workshop equipment but also building materials.

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY 610 mm gauge

(see LRN 10, p.8) (P.O. Box 270, NORTH QUAY 4000)

Three steam locomotives have been delivered to the Woodford site where the Society is establishing its depot for the first part of the development of what will be known as the 'Durundur Railway'. First to arrive, on 27 June was 0-6-2T *Airdmillan* (John Fowler 20763 of 1935), followed on consecutive days, by 0-4-2T *R.D.Rex* (Perry 7650.49.1 of 1949) and 0-6-2 B9½ 11 (John Fowler 17110 of 1927; tender 17112). Much work had gone into the construction of an unloading dock so that locos can be pulled off a low loader without using a crane to unload, and also storage track had been constructed.

Of the three petrol locos constructed by Alwyn Zinn, the third has been stored at the home of a member in Brisbane. The first two have been sold to Lou de Clifford, of Hall's Gap, Victoria, for use on a tourist venture, and left Brisbane on 17 May.

Editor 7/79

AUSTRALIAN RAILWAY HISTORICAL SOCIETY (QUEENSLAND DIVISION) 1067 mm gauge

(G.P.O. Box 682, BRISBANE 4001)

Plans have been announced for the establishment of a working railway and museum to be sited at Beenleigh. This will be set up with the assistance of Beenleigh Rum, and it is hoped that a two mile railway will eventually be established from the Distillery to Beenleigh. Already the Society has a steam crane and match wagon, and 'Red Fred', a railmotor and trailer. In addition, the Society has been promised 4-6-0 PBI5 738 (Walkers 385 of 1926). Before the plans can go ahead, the membership will be asked to approve of the plan at the forthcoming Annual General Meeting.

ARHS (Queensland Division) 6/79

BRISBANE TRAMWAY MUSEUM SOCIETY, Ferny Grove 1067 mm gauge

This Society has acquired its second electric locomotive. On 27 June, delivery was taken of a Goodman four-wheeled trolley wire loco (6035 of 1950), which is on long-term loan from the Australian Narrow Gauge Railway Museum Society. It joins steeple-cab four-wheeled electric Baldwin 59540 of 1926, which was donated by the Southern Electricity Commission of Queensland in 1975. Both locos were used at the Bulimba powerhouse of the SEAQ. It is hoped that the two locos may eventually be operated at Ferny Grove, where a tramway museum (standard gauge) is being developed and should open to the public for regular running soon.

Editor 6/79

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD Farleigh Mill 610 mm gauge

(see LRN 10, p.9)

Experiments and investigations are under way to assess the suitability of 'Locotrol' being put into operation on the mill's North Coast tramline. Mill executives have inspected this type of operation as used at Bingera Mill (see LRN 7, p.7). In this form of operation, a 'master' locomotive, usually at the head of a rake of bins, is used to control a 'slave' loco by means of radio signals, the 'slave' loco being either in the rake or at the rear. A further 10 km of track on the North Coast line will be relaid in 601b/yard track this year. During 1978, \$372,722 was spent on Rolling Stock maintenance, and \$528,738 on tramline maintenance.

W.H. HECK & SONS PTY LTD, Rocky Point Mill, Woongoolba 610 mm gauge

(see LRN 10, p.10)

It is reported that the John Fowler 0-4-0WT (16249 of 1923) will be returned to Gilltrap's Museum at Kirra Beach. It was lent by the Museum to the mill for restoration as a part of the mill's Centenary celebrations, as described in LRN 10. It is believed that the locomotive will be exhibited *inside* a building when it returns to Gilltrap's.

MILE END RAILWAY MUSEUM (SA) INC. Gauges various.

(See LRN 7 p.9)

After nine months' work, the repaint of 3 ft 6 in gauge 2-6-0 Y97 (Beyer Peacock 3147 of 1890) has been completed. The locomotive is now Hawthorn Green, black below the running boards, matt black smokebox, and polished

brass work. The cab interior has been painted the standard light green, with matt black firebox and silver roof. On the carriage side, work has been done on the exterior of BE42 and 294 and on the interior of Centenary Car 376 and Railcar 41.

Mile End Railway Museum Newsletter 6/79

PICHI RICHI RAILWAY PRESERVATION SOCIETY 1067 mm gauge (P.O. Box 504, PORT AUGUSTA 5700)

(See LRN 9 p.15)

The 1979 season began at Easter, with Friday 13 April seeing a works train being worked to Woolshed Flat by 4-8-2 W933 (Beyer Peacock 7410 of 1951). The next day was set down for the official opening to Woolshed Flat, and three trains were run. W933 departed at 10.00 a.m. with the first regular train of the season. The afternoon train left Quorn at 2.00 p.m. followed by 4-8-0 T186 (Martin 198 of 1909) hauling cars *Flinders* and *Wandana* carrying invited guests to the opening ceremony. Mr K.A.Smith, Chairman of Commissioners of ANR performed the ceremony. The two trains crossed at Woolshed Flat, the first time that this had been done by the Society. Both trains then returned to Quorn, and the festivities continued into the night. On Sunday, two regular trains ran, and one was operated on Monday morning. All were operated by W933 hauling up to 300 passengers in eight cars (a Society record). The May school holiday running was also very successful, with six trains operating over the Adelaide Cup weekend (19-21 May) and two more were run the following week. All were worked to Woolshed Flat by W933.

On 24 May, the Society took delivery of its fourth operating loco NB30. This 0-6-0DH constructed on the chassis of a Vulcan Iron Works 0-6-0ST of the same number (2533 of 1916) had been made serviceable by ANR at Port Augusta, and was delivered to Stirling North on a standard gauge Q wagon (for transfer of narrow-gauge stock). The loco then proceeded to Quorn under its own power. Thus NB30 is the first loco across the all-new Saltia bridge. On Saturday 26 May, NB30 returned to Stirling North hauling a W wagon (bogie open), to collect car 114 (formerly *Wanilla*) and hand crane 4887 both ex Port Lincoln. On the run to Quorn, the train must have amused passing motorists with its tiny little loco producing vast quantities of white smoke, an orange carriage also producing smoke (from the wood stove), followed by a seemingly very unstable dinosaur-like creature which seemed to be always reaching for the telegraph lines, and an open wagon in the rear, with two very cold 'guards' standing in it to act as brakemen. Car 114 is a prized possession of the Society, being unique among Pichi Richi stock in

having 6-wheel bogies. This car was formerly a 'pullman-type' sleeping car, but arrived fitted as a Per-way Kitchen/dining car. Crane 4887 is a five ton capacity, hand operated crane and should be a useful acquisition.

On 12 April, 4-8-2 W934 was steam tested and received a certificate for another year. This enabled the lagging and cladding to be replaced. Another heavy inspection should not now be needed for another five years. Overhaul was completed by the end of May. W934 will probably bear the brunt of traffic for the next couple of years. W933 will continue in service until its boiler certificate expires in November, after which it will receive a major boiler inspection and light overhaul. After the completion of work on W934, attention switched to NB30. Most fittings and mechanical components need attention, and once this work is completed, the unit should prove reliable. Work on the 'Coffee Pot' (2-2-0WT NJAB1, Kitson 4356 of 1905) is progressing slowly. Arrangements are in hand to have its hydrostatic test using the Society's own steam driven pump.

On 2 and 3 June, a memorable event was the operation of steam trains on the Quorn-Peterborough line, possibly for the last time, and certainly so while it remains under ANR control. W933 and W934 handled Saturday's long train of sitting and sleeping cars, while on the Sunday T186 made the trip from Quorn to Peterborough and return. On Queen's birthday weekend (16-18 June), six trains were operated to Woolshed Flat by W933. Future operating periods will be the August-September school holidays and the October long weekend (25 August to 2 September and 6-8 October).

Richard Atkinson 6/79

STEAMTOWN PETERBOROUGH PRESERVATION SOCIETY 1067 mm gauge

(see LRN 9 p. 14)

On 24 June, the locomotives acquired from WAGR were observed at Peterborough. These are 4-8-2s W901 and W907 (Beyer Peacock 7378 and 7384 of 1951), and 4-6-2 Pmr720 (North British 26564 of 1950). Their condition is rather derelict in appearance, but the tender of the Pmr has been undercoated. In addition, standard gauge cars AR50, ARB12, AF24, AF25 and AF49 have been purchased from ANR. All are on standard - gauge bogies, but ANR is to supply suitable narrow gauge bogies and retain the standard gauge ones.

TASMANIA

VAN DIEMEN LIGHT RAILWAY SOCIETY INC., Don River Tramway 1067 and 610 mm gauges

(P.O. Box 887, LAUNCESTON 7250)

(see LRN 10 p.12)

It was announced recently that VDLRS will be eligible to obtain a permit to operate passenger trains on the Tasmanian railway network. These would be special excursions run at weekends or public holidays. The Society was successful in several tenders when ANR recently sold off a number of locomotives and carriages. \$11,000 worth of stock was purchased including two steam locomotives, one of the State's oldest carriages, a diesel railcar and trailer and several other passenger cars. No further details of these items are available at present.

The Advocate 12/5/79 via Jim & Dick Hope

AUCTION OF TASMANIAN ROLLING STOCK

More than \$35,000 was realised when ANR put out to tender a quantity of Tasmanian locomotives and rolling stock during May. \$11,000 worth of equipment was purchased by the Van Diemen Light Railway Society (which see for more details). Other successful tenderers included the Tasmanian Transport Museum (four items), Municipality of Kingsborough (five items), Geelong Steam Preservation Society (six items), Wee Georgie Wood Steam Railway Inc. (two items), and the Hotham Valley Railway (seven items). Six other items of rolling stock went to private buyers. It is hoped that readers will submit full details of the sales for inclusion in the next issue of LRN.

VICTORIA

ALEXANDRA AND DISTRICT HISTORICAL SOCIETY, Alexandra 1029 and 610 mm gauge

(P.O. Box 21, ALEXANDRA 3714)

(see LRN 10 p. 12)

The proposal to build a 2 ft gauge railway in Leckie Park has been unsuccessful, as was a proposal to acquire the VR Alexandra-Cathkin railway for conversion to 2 ft gauge. However, a proposal to build a line from the Railway Station along the old trackbed to the Fraser Park Road Junction is being investigated. Negotiations are proceeding for the purchase of just

over a mile of 2 ft gauge track complete. Meanwhile, some surplus point materials and rail were obtained from Ruook Timbers Pty Ltd shortly before the company was purchased by J.L.Gould Sawmills Pty Ltd. A turntable has been purchased from VR for use as a bridge, and a garage hoist has been obtained for a smaller bridge.

A. & D.H.S. Annual Report via Ian Bowering 6/79

BELLARINE PENINSULA RAILWAY 1067 mm gauge

(see LRN 10, p.12)

(P.O. Box 166, BELMONT 3216)

Passenger trains operated for the first time on the railway in connection with the Centenary of the Geelong-Queenscliff railway on 19-20 May. Public response was overwhelming with hundreds of people turned away disappointed due to a shortage of carriage stock. VR gave special permission for trains to be operated between Queenscliff and Laker's Siding and 27 trips were run, bringing in a return of about \$3,500. Over 6,000 people attended, of which 2,000 were able to be accommodated on the trains. The two trains consisted of 4-8-0 T251 (Walkers 276 of 1915), South Australian carriage 86 and van 5588, and 4-6-2 M6 (Stephenson & Hawthorn 7429 of 1951), ex Tasmanian van BBL6, in a new coat of green paint, and VZ112, a van recently acquired from WAGR. A photograph featured in the local press showed T251 at Queenscliff Station, while behind it were 4-6-0 PB15 454 (Walkers 99 of 1909) and 0-6-0ST 4 (Vulcan Iron Works, built in 1916). It is hoped that permission may be obtained from VR to operate monthly until legislation is passed by the Victorian Parliament to allow the Society to operate trains in its own right.

PB15 454 had been the last loco to operate passenger trains at Belmont Common, this being on 16 April. Locos remaining at Belmont are 0-4-2ST 6 (Hudswell Clarke 646 of 1903), which requires fitting of firebars and a new spring hanger, and 0-4-2T *Klondyke*, (Perry 271 of 1927), whose restoration is substantially complete, and which has already been test run. Other items also remain behind at Belmont for the time being, including railmotor RM76.

By the end of April, regauging of the track between Queenscliff and Drysdale had reached the halfway mark, while design and plans for the workshop was soon to be submitted for the issuing of a permit for construction.

EMERALD TOURIST RAILWAY 762 mm gauge

(P.O. Box 156, BELGRAVE 3160)

(see LRN 7, p.10)

A number of problems have been experienced with two of the three NA class 2-6-2Ts currently in service. 14A developed a leaky steam pipe joint in the smoke box, while 6A has developed some tube problems. This meant that 12A had to come to the rescue in order to handle the May school holiday traffic.

The overhaul of 7A has become more protracted as more items requiring attention were discovered. Work done includes the casting and machining of a new rear cylinder cover, fitting of a complete set of main and pony truck bearings and a refurbished set of springs. These parts and many others have been robbed from 8A, on which work will be resumed on completion of 7A. 7A's smokebox was refitted to the boiler, which was replaced in the frames, and all fittings and mountings connected up for steam testing. Lagging the boiler and the fitting of the cab was to be carried out at Emerald, with the target date for the loco's return to traffic now being before the September school holidays. 8A is not expected to be in service for a year at least. Its new boiler was delivered in March with that for 3A to follow.

An appeal has been launched for the return of Garratt G42 to service. It is expected that restoration of this 2-6-0+0-6-2 loco (Beyer Peacock 6268 of 1926) will cost around \$150,000 and it is planned to obtain one third of this through donations from Society members. It is considered that should the project succeed, it will be necessary to obtain at least one and preferably two similar units to satisfy operating requirements!

The walkway to connect the VR's Belgrave station and the Puffing Billy station is now complete, and greatly improves convenience to passengers.

Narrow Gauge 73, 74

PUFFING BILLY PRESERVATION SOCIETY, Puffing Billy Museum Menzies Creek. Gauges various

(P.O. Box 156, BELGRAVE 3160) (see LRN 9, p.20)

Approval in principle has been given for the establishment of an experimental museum presence along the old right-of-way beyond Lakeside.

2 ft gauge Hudswell Clarke 0-6-0 (1863 of 1952) is being repainted in a deep maroon colour, similar to its early CSR colour scheme. The 3 ft 6 in gauge Fyansford Garratt (2-6-0+0-6-2 Beyer Peacock 6935 of 1938) is also being repainted, and similar treatment is planned for the 0-4-2T Abt loco from Mount Lyell (North British 24418 of 1938) and W22 *Justin Hancock*, the

Silverton 4-8-2 (Beyer Peacock 7418 of 1951).

Several additional items have been donated to the museum. These include a Day's 0-4-0 petrol loco and skips donated by the Geelong Steam Preservation Society and Cheetham Salt (2 ft gauge), 800 feet of new 401b rail, and four 3 ft gauge flat cars.

Narrow Gauge 73, 74

LOU DE CLIFFORD, Halls Gap 610 mm gauge

Mr de Clifford is developing his extensive native gardens to enable them to be opened to the public. It was considered that the best way to provide controlled access would be by means of a narrow gauge railway, and to this end a considerable amount of track materials and rolling stock have been obtained. Two petrol locomotives built by Alwyn Zinn of Ipswich (see LRN 10, p.8) have been purchased from the Australian Narrow Gauge Railway Museum Society, and left Brisbane on 17 May. Rail and a number of canetrucks for conversion to carriages have been obtained from a sugar mill. It is hoped that the railway may be operating by the end of the year.

Editor 6/79

WESTERN AUSTRALIA

HOTHAM VALLEY TOURIST RAILWAY INC. (see LRN 10 p.14) 1067 mm gauge

(P.O. Box 197, PINJARRA 6208)

Since the start of operations in September 1976, the total number of passengers carried has been 18,617, while locomotive mileage has been 2242. During 1978, the Society acquired a Wickham railcar, which was later sold to the Kalgoorlie-Boulder Loopline Railway (see LRN 10, p.14). In addition, the Society has three ganger trolleys, while a further three are on loan. 3,000 school children have visited the depot at Pinjarra by arrangement with the Education Department. This visit and inspection of rolling stock is carried out as part of a district tour following transport to Pinjarra by *Australind*. A 16 mm sound film entitled *Rebirth of Steam* has been produced with financial assistance from Alcoa of Australia. In addition a souvenir booklet has been produced with the co-operation and assistance of the West Australian Department of Tourism. The line from Pinjarra to Dwellingup, which forms the section operated as The Hotham Valley Railway, is still owned by WAGR and sees one goods train weekly. From Dwellingup to Boddington, the line is closed but is still in position. The Society has undertaken a feasibility study on the future of the HVR, particularly in view of any possible closure by WAGR.

This has looked at the possibility of operating from Pinjarra to Tullis, beyond Dwellingup, and also at coaching stock needs. A reply is now awaited from the State Government.

(Photo: Yorkshire Post, per Ron Cox, Narrow Gauge Railway Society)

EDITORIAL

It is indeed sad to read that the proposal to establish a 610 mm gauge steam railway in the Launceston Cataract Gorge reserve has been abandoned due to opposition by environmental groups.

One cannot be critical of the efforts of the environmentalists, as their job these days is difficult enough with the onslaught of development, though it would appear that somebody has not done their homework in this instance, as it has been proven on a number of occasions overseas that a narrow gauge railway, in many cases, can be a very effective means of crowd control in national parks, forests, etc., where it is necessary to maintain the environment.

Experience has shown that although the establishment of the railway can have a minor initial impact on the flora (for preparation of the roadbed) and fauna, this is soon overcome and both return to normal. It is understood that a walking track already exists in the area in question and from reports it would seem a simple matter to convert the walking track into a suitable roadbed (if some-what curving). The area is currently used as a means of access from the main road to a pleasant picnic area, and if a narrow gauge railway was a means of expelling the petrol burning monster altogether (access for motor vehicles exists from other parts), then all the better!!

Once the authorities agree to allow the general public into the area, it is usually much more difficult to control them, witness to this being the major problems now being experienced by Yellowstone National Park in America which is, from current reports, in a bit of a quandary as to what to do next! Admittedly a narrow gauge railway is not always the best solution, or practicable, but it can cope (if properly organised) with crowds, and the big advantage is that they are kept within a controlled atmosphere, but can still enjoy the delights such areas have to offer.

Maybe Launceston's problems are worthy of deeper study and investigation???

NEW SOUTH WALES

F. J. WALKER LTD, BYRON BAY JETTY TRAMWAY 1435mm gauge

This tramway parallels the Casino - Murwillumbah railway (PTC NSW) from Byron Bay railway station to the F. J. Walker Ltd abattoir, a distance of about 2 km. The line was formerly owned by the North Coast Steam Navigation Company (NCSN Co.) and was used to service company vessels at the jetty. The present tramway was opened about 1929 when the new jetty replaced the original structure (refer to map). Some of the old siding which once led to this jetty still exists but it appears that most of the area has been remodelled since the demolition of this jetty. The company went into liquidation in 1954 and the new jetty has been demolished some time since that date.

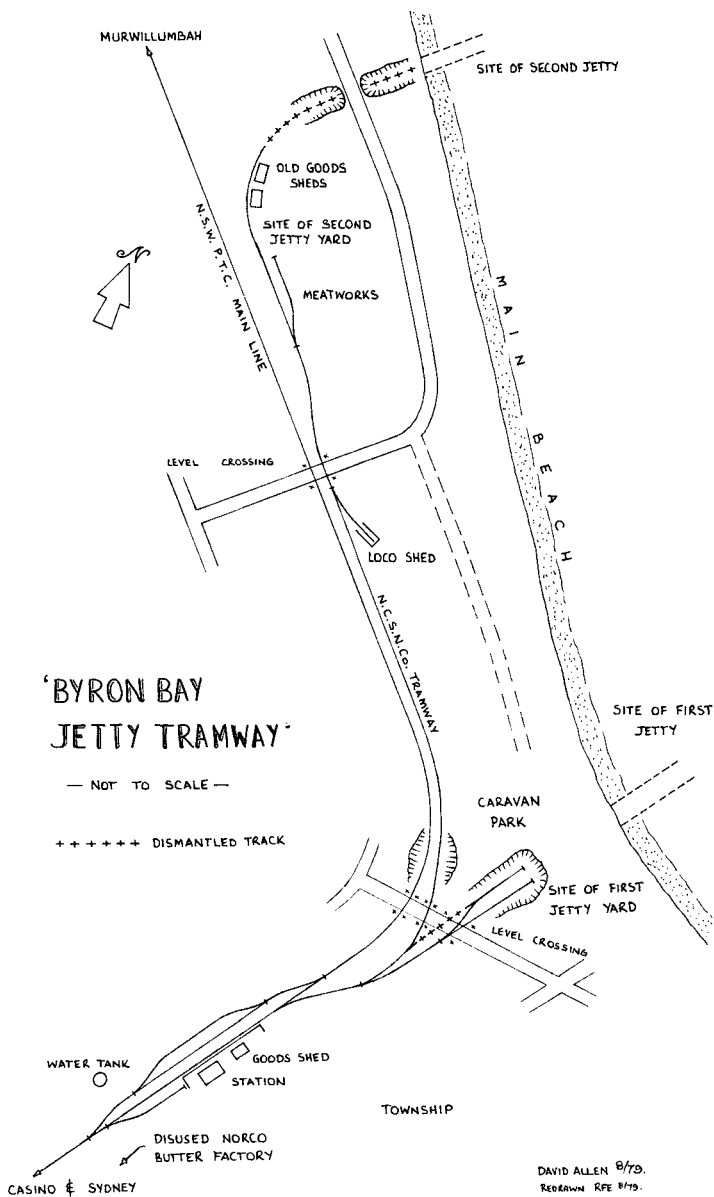

Sole motive power on the line is a 4-wheel Simplex petrol loco, B/No. 2129, powered by a 4-cylinder, 40 hp (30 kw) Dorman petrol engine with a 2-speed gearbox and chain drive to both axles. The loco has an open-sided centre cab and carries a two-tone red livery, being housed in a small timber loco shed near the meatworks. The loco was introduced to service in 1923.

Under NCSN Co ownership, a passenger service from the station to the jetty was provided using ex-NSW Government Tramways end loading 4-wheel electric trailer No. 37C and enclosed cross bench bogie steam trailer No. 74B, C2 type, both built by Hudson Bros. and both are now preserved by the Steam Tramway & Railway Preservation Society at Parramatta Park, Sydney. Remains of old wagons near the meatworks suggest that the company operated wagons of its own in addition to the Government stock that ran on the line.

Today the line is operated to serve the meatworks, but at the time of inspection (6/79) there was no Government stock present, and along with the overgrown state of the track, suggests that the majority of traffic is now handled by road.

The map shows only existing line and visible formation. To my knowledge, what is shown is all that remains of Byron Bay's once extensive yard. Little remains of the old jetty trackwork while I am unsure of just how much of the later jetty's yard remains as I did not enter the meatworks but I suspect it is little more than what is shown. A short section of the formation to the site of the second jetty has been removed due to roadwork.

The historic background has been obtained from several sources (cited below), but accurate information is scarce and tends to be conflicting, particularly regarding dates. Perhaps a reader has, or knows of, photos of workings (particularly of the passenger trams) on and around the jetties which could possibly be published.

Bibliography:

ARHS Bulletin No. 88, February 1945 (a good short history, which concentrates on the first jetty, along with a diagram of the full extent of the tramways)

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY

Donations over \$2 Tax Deductable.

MUSEUM: Tongarra Road, Albion Park.

(open 2nd Sunday. each month)

(CORRESPONDENCE: P. O. Box 1036, Wollongong. 2500)

Due probably to excellent weather the Albion Park Museum Open Days continue to be a popular attraction with steam train passengers averaging somewhat over 500 and the electric tramway about 80% of this amount.

Cairns (H-C 0-6-0 ex-CSR Victoria Mill) still handles the bulk of train working, as it handles more easily than *Kiama* (Dav. 0-4-0ST ex Quarries P/L Kiama), and has more public appeal. A steam line has been installed from the stationary engines to *Kiama's* "spot" and whilst on standby it now powers several engines and pumps leaving the vertical boiler not so breathless as when endeavouring to run eight pumps, engines, and winches by itself.

Boiler and pressure vessels were inspected in July and certificates renewed without any problems. Other news on non-operational units varied however. The spare Davenport boiler obtained from the Menangle area is reported to be in at least as good condition as the one in use, but the front tubeplate of *Burra* (HL 0-4-0ST ex-Corrimal Colliery) is badly corroded and will need replacing. The firebox of "Tully No.6" (Perry 0-6-2T ex-Tully Mill) has cracks between several stays and the edge of the lapped joints and the best means of repairing these is being sought from the Division of Inspection Services (ex-DLI). A result of the trial steaming after the inspection was that *Cairns* and *Kiama* ran double-headed for the first time. The smaller *Kiama* made its presence heard hauling *Cairns* in steam but with regulator shut, up the grade to the Tongarra Road terminus but due to its tendency to slipping had to be jockeyed cautiously. *Cairns* has reverted to something like its original appearance by having its front "wing-like" sandboxes removed and looks a much more handsome loco. Running plate sandboxes will be fitted in due course.

After many forgotten months the Cane Inspectors Railcar (ex-CSR Victoria Mill) has been tackled by a group of Junior Members with assistance as required to start straightening the badly bowed frame. New running-gear parts are being made as required and it is hoped this unit will see service again in the not too distant future. The engine unit has been almost rebuilt by a Member at home.

Restoration of a Hampton Shay to static display is well advanced, with the timber boiler lagging under way and cladding expected to be fitted shortly. Until suitable undergear can be located or built-up it remains on two "shop bogies".

Museum trackwork has recently concentrated on improvement and consolidation works. The yard spur was lifted in part to allow replacement

of the sagging timber culvert with donated pre-cast concrete sections. A sympathetic local resident owner of a backhoe greatly eased the task of excavating the required space, placing the concrete sections and back filling. New ballast and sleepers were placed and the rails relaid. At the same time the opportunity was taken to dismantle the frog of the junction turnout which was very worn (ex-Corrimal), and gave a lot of trouble especially with *Kiama*. The worn rails at the

0-4-0ST
Davenport
locomotive in a
bushland setting.

"crossing" of the frog were built up with suitable welding and reprofiled, the old running blocks dispensed with and the frog assembled on new baseplates. It now gives no trouble. At the same time the Society experimented with fitting a sprung checkrail on the curved approach to the points to more positively accommodate the smaller back-to-back spacing of *Kiama's* wheels, and still guide the wider wheeled vehicles. This has been sufficiently successful to merit the same arrangement being fitted to the points of the future main line junction to "Yallah".

Matters of general advancement include the screening of the yard from the highway by attaching green painted corrugated sheeting to the chain-wire fence, the wiring, trial and painting ready for use of a 50t hydraulic press obtained for a nominal sum last year, to be used mainly for straightening

Cairns,
Hudswell
Clarke 0-6-0
locomotive, by
night.

vertical kinks in some of the stock of 45 lb rails, the erection of a steel pole next to the loco facilities carrying two mercury vapour floodlights and single and three-phase power, and the purchase of an electric saw and heavy duty drill to relieve the wear and tear on Members' privately owned equipment.

The infant Sales Department has blossomed and now sells a small selection of books, postcards, badges etc., with the one item so far produced by the Society, a car sticker featuring *Burra*, and also home produced honey, cakes and the inevitable tea, coffee and soup, as well as Street's Ice Cream products per the medium of their fitted out caravanette delivered to the Museum in time for each open day. A lady Member has been co-opted into taking charge of these sales as Society Sales Officer which she handles capably as well as making the cakes for sale. The section of "Yallah" station used as the canteen which suffered only mainly smoke damage in last November's arson attempt

has been repainted and suitably fitted-out for its new role.

Cleaning the boiler tubes of *Cairns*.

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY 610mm gauge

(P.O.Box 270, NORTH QUAY 4000) (see LRN 11, p.6)

The remaining four locomotives formerly stored at Rocklea were successfully transferred to the Woodford site during July. This move was achieved with little difficulty, and the job was done on very advantageous terms by Aitkin Transport Ltd. There are now eight locomotives on the Woodford site as follows:

5	4wDM	Ruston & Hornsby	279567	1947	arrived 13 May
Airdmillan	0-6-2T	John Fowler	20763	1935	arrived 27 June
R. D. Rex	0-4-2T	Perry	7650.49.1	1949	arrived 28 June
B9½ 11	0-6-2	John Fowler	17110	1927	arrived 29 June
Pyramid	0-6-0T	Hudswell Clarke	1521	1924	arrived 16 July
5	0-4-2T	Hudswell Clarke	1705	1938	arrived 17 July
Melbourne	0-6-0	Hudswell Clarke	1701	1938	arrived 18 July
5	0-6-2T	Bundaberg Foundry	5	1952	arrived 19 July

The two tenders, from B9½ 11 (carries John Fowler number 17112), and *Melbourne*, arrived on 17 July. Hudswell Clarke 1705 was built under sub-

contract from John Fowler, and carries Fowler plates 22752.

The site at Woodford is not yet open to the public, but visitors or other interested people may make arrangements to visit the site by writing to the address above.

A number of smaller items were due to be cleared from the site at Rocklea in early August, leaving the site vacant. Thanks are due to the Queensland Transport Terminal and Mack Trucks who so generously made this space available. There are still a number of locomotives and other equipment stored at other sites, but there are no immediate plans to move these at present.

During July, Society members were occupied in lifting a quantity of 60 lb rail from a now closed power house in Brisbane. This rail was obtained through the good offices of the Brisbane Tramway Museum Society.

The Bundaberg Fowler has already been steamed at Woodford, and the next task in hand will be to lay some of the newly salvaged rail so that a short demonstration line can be established.

Editor

AUSTRALIAN RAILWAY HISTORICAL SOCIETY (QUEENSLAND DIVISION), Beenleigh 1067 mm gauge

(GPO Box 682, BRISBANE 4001) (see LRN 11 p.6)

Following the approval of the projected Beenleigh Museum project at the recent Annual General Meeting of the Society, the first item of rolling stock was transported to Beenleigh on 26 July. This has been placed on loan by the Australian Narrow Gauge Railway Museum Society. It is generally known as 'Foote's loco', and is a petrol-engined machine constructed on an ex-QGR 'T'wagon frame for use at Foote's Sawmill and Joinery Works in Ipswich. It probably dates from the 1920s and quite possibly was constructed by the Forrers Foundry in Ipswich, which is believed to have produced some similar machines for Gladstone Meatworks, and some smaller versions for a local colliery. However, the loco at 'The City Joinery' of Arthur Foote Ltd was rebuilt in later years with engine and bonnet from an International truck. A massive water tank over the rear axle provides ballast for traction. The locomotive is to be restored to working order at Beenleigh, and may well be the first operational loco at the new project.

Editor

BULLENS AFRICAN LION SAFARI & ZOO, Yatala 610 mm gauge

A new development here is to be the construction of a railway line. The park is situated just off the Pacific Highway between Brisbane and the Gold Coast. A yellow locomotive was observed here in June, and closer (but still

distant!) examination in July revealed that the loco appears to be a petrol-engined steam outline '0-4-2T'. General appearance seems to indicate that it may well have been built by John Dunlop, who had a similar locomotive under construction at Sydney's Waratah Park in 1978, (see LRN 2 p.4). This development raises the possibility that Bullens may be developing similar lines at their other parks. It is believed that some years ago, they purchased two Malcolm Moore four wheeled petrol locomotives from Australian Army surplus equipment. Surely some reader may be able to shed some light on this?

David Mewes 7/79, Editor

CATTLE CREEK CO-OPERATIVE SUGAR MILLING ASSOCIATION, Cattle Creek Mill, 610 mm gauge

Finch Hatton. (see LRN 10 p.9)

A derailment analysis was carried out during the 1978 season, and showed that one derailment occurred for every 3949 tonnes of cane hauled. It is expected that the recent purchase of 1400 bins from Pleystowe Mill will improve the efficiency of the transport system with their added and uniform carrying capacity, roller bearings and link and pin couplings. A new yard loop consisting of two lines, each 200 metres long, has been constructed in the mill yard to accommodate the Pleystowe bins, as they are designed to operate in one direction only. An investigation is to be made into the use of brake wagons in cane haulage on the mill's system.

Stack Talk 81

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION, Farleigh Mill 610 mm gauge

(see LRN 11, p. 7)

In addition to the improvements to the North Coast line (to Wagoora) outlined in the last issue of LRN, it has been decided to upgrade the older lines around the mill, which suffered badly from wet weather, and also from farmers who used the tramline as a headland! Extensions to the loco shed will be made during 1979.

Stack Talk 81

ISIS CENTRAL SUGAR MILL CO. LTD, Isis Mill 610 mm gauge

(see LRN 7, p. 7)

Isis Sugar Mill is relaying part of the old Queensland Government Railway line from Cordalba to Booyal as part of a major expansion programme of tramway facilities to cane farms. The new line will run for approximately 2.4

km along the old QGR formation before branching into the nearby cane farms. About 20.8 km of track is due to be laid within the next three or four years, and about half of this, including the section along the QGR formation, is expected to be ready for the 1980 crushing season.

The Queensland Government Railway branch from Isis Junction was extended from Cordalba to Dallarnil in 1913 and closed in 1955. The Dallarnil section was purchased by the Isis Sugar Mill for £65,000 and was to be converted to 610 mm gauge for the conveyance of sugar cane from cane farms in the Happy Valley area. In the event, the mill decided to carry the cane by road and the rails were lifted and used for other purposes, including the mill's (then) new tramway to Goodwood, opened in 1959.

Mention of Cordalba and the QGR reminds one of the mixed gauge (610 mm and 1067 mm) connection which connected the sugar mill with Cordalba station on the QGR. To operate the 1067 mm section, the mill initially tried the ex Belmont Shire Tramway (Brisbane) tramway motor, an 0-4-2T built by Baldwin (B/No. 35935) in 1911 and purchased by the mill in late 1914 or early 1915. It was not successful at the mill and was sold by them to the State Rivers and Water Supply Commission of Victoria in June 1921 for use on the Hume Reservoir construction. It was then the practice to employ one of the 610 mm gauge steam locos to haul the 1067mm gauge wagons on the mixed gauge connection until 1944 when the mill purchased an ex-QGR B13 class 4-6-0 No.185 from the Beaudesert Shire Tramway which had recently closed. This loco was built by Dubs (B/No. 1751) in 1883 and had been sold to the Shire in 1939. No. 185 worked the mixed gauge connection until it was condemned in March 1961 and had been scrapped before the 1961 crushing season. 610mm gauge locos again maintained the service until the QGR branch from Isis Junction to Cordalba was closed in 1964.

Bundaberg News-Mail 18/8/79 per Alan Robert, Editor 8/79

Trials were due to commence in early June of two Clyde DH1-71 0-6-0DH locomotives specially fitted up to work in multiple. As recorded elsewhere in this issue, Isis 4 (Clyde 0-6-0DH 56-113 of 1956) was hired to Millaquin Mill from 11 to 14 July.

Sunshine Express 7/79, Alan Robert 7/79.

THE MILLAQUIN SUGAR CO. PTY. LTD. Millaquin Mill, Bundaberg 610 mm gauge

(see LRN 7, p . 8)

On Tuesday 10 July, Baldwin bogie diesel 3 (6456-1-11-75 of 1975) caught fire when grass and trash was ignited by hot brake blocks. The crew had time to cut off the load and draw forward and then proceeded to fight the fire with

extinguishers until the arrival of the Fire Brigade. A fuel line burnt through and around 400 litres of diesel fuel was added to the flames. Damage to the loco made the fitting of a new Caterpillar engine and torque converter necessary.

As an immediate replacement, Qunaba Mill's 6 (Bundaberg Foundry 0-4-2T 3 of 1952) was transferred to Millaquin for the rest of the day. In the meantime, arrangements were made to hire Isis Mill's 4 for the rest of the week. This loco (Clyde 0-6-0DH 56-113 of 1956) arrived by road transport on 11 July, and was returned at the weekend in time for the start of the Isis crush that Monday. The fire-damaged loco was repaired and back on the road by Monday 16 July.

Alan Robert 7/79

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION, North Eton Mill 610 mm gauge

Tramline work for the slack season was restricted to work on the main lines, but a number of sections were completely resleepered, lifted, and packed with crushed metal ballast. Very little damage resulted to the tramlines as a result of heavy rain during the wet season. Locos generally gave a good performance during 1978 although there were some breakdowns. The mill's current roster consists of:

D1	6wDM	Bundaberg Foundry	10	1953	built under licence from Jenbach, Austria ditto
D2	6wDM	Bundaberg Foundry	13	1954	
D3	0-6-0DM	Commonwealth Engineering	A2128	1958

TASMANIA

AUCTION OF TASMANIAN LOCOMOTIVES AND ROLLING STOCK 1067 mm gauge

(see LRN 11, p. 12)

As reported in LRN 11, the ANRTasmanian Division disposed of all remaining steam locos and passenger rolling stock, and details of their disposal is as

follows:

Steam Locos

MA class 4-6-2 No. 3 (Robt. Stephenson & Hawthorn 7426/1951, ex M6) to Kingborough Municipality.

M class 4-6-2 No. 3 (Robt. Stephenson & Hawthorn 7423/1951) to Don River Tramway (VDLRS)

M class 4-6-2 No. 4 (Robt. Stephenson & Hawthorn 7424/1951) to Don River Tramway (VDLRS)

H class 4-8-2 No. 2 (Vulcan Foundry 5950/1951) to Tony Coen and David Flecker of Hobart

H class 4-8-2 No. 5 (Vulcan Foundry 5953/1951) to Hillwood Strawberry Farm

H class 4-8-2s Nos. 3, 4 and 8 were scrapped.

Passenger Carriages

Don River Tramway (VDLRS) - AAL 9, AAR 2, BBLs 11 and 12, SPs 6 and 7, SS 7, SSD 2 (8 cars)

Tasmanian Transport Museum Society - AAL 10, SP 4 (2 cars)

Geelong Steam Preservation Society - AAR 1, AAR 4 (probably), BBL 10, SPs 5 and 8 (5 cars)

Hotham Valley Railway - SSSS 1, SSD 2 (2 cars)

Kingston Apex (to form part of a static railway display) - ACS 1 (1 car)

"Wee Georgie Wood", Tullah - SP 9 (probably) (1 car)

SS1 - 6 and 8 - 9 were purchased by the Geelong Steam Preservation Society, Kingston Apex, and Hotham Valley Railway, but which vehicles went to which group is not yet known. The recipient of SP1 is also not known.

Three carriages were not sold and will presumably be scrapped, whilst one carriage has been sold for non-railway use.

Railmotors

Don River Tramway (VDLRS) - DP 22

Tasmanian Transport Museum Society - DP 15

Geelong Steam Preservation Society - DPs 28 and 29

Railmotor Trailers

Don River Tramway (VDLRS) - PT 3

Tasmanian Transport Museum Society - PT 4

"Wee Georgie Wood", Tullah - PT 5

Five railmotors and one railmotor trailer were not sold, three railmotors were sold for non-railway use, as was one of the trailers and disposal of one

railmotor is not known.

WESTERN AUSTRALIA

HOTHAM VALLEY TOURIST RAILWAY INC. 1067 mm gauge

(P.O. Box 197, Pinjarra 6208) (see LRN11, p.15)

The HVR is currently taking steps to increase its passenger stock. Negotiations are presently being undertaken with Westrail for the purchase of ten 'Albany Express' coaches. The HVR was also a successful tenderer for the purchase of coaches from ANR Tasmanian Division (see elsewhere in this issue) and these vehicles have been inspected by Society members accompanied by a senior Westrail Engineer, who acted as adviser on the safety and mechanical aspects of these coaches.

Painting of W 903 *Marrinup* (4-8-2 Beyer Peacock 7380/1951) is progressing steadily and it is hoped that the loco will emerge from the loco shed in pristine condition in time to haul the HVR Third Anniversary trip in mid-September.

In conjunction with "Back to Yarloop" week being held in early September, two steam-hauled trains will be running to Yarloop on 2/9. The HVR train will be hauled by 4-8-2 W 945 (Beyer Peacock 7457/1951) *Banksiadale*, and Bunbury Tourist Association's *Leschenault Lady* will make the trip from Bunbury to Yarloop. Other attractions will include trips in an open wagon behind Millar's (owners of Yarloop) Clyde 0-6-0DH (Model HG-3R, B/No. 61-241/1961) to the timber mill, the mill will be open for inspection as will be the historic workshops which the National Trust plans to restore as a museum. The Editor would be pleased to receive some photos of this event for inclusion in a later issue of LRN.

EDITORIAL

Thanks to Ray Ellis who assisted me in editing LRN 12 during the crucial period, I was taking a brief holiday in the UK. Ray has kindly agreed to become Assistant Editor of LRN. He will deal with the wider gauges (1067 mm gauge upwards) as a general rule. I will edit material relating to the narrower gauges, and in addition will deal with diesel and electric industrials. The Editorial address will remain as at present.

Plenty of news this time, but much of it has come to us second hand, through the pages of other enthusiast journals. It is good to see this increasing interest in preserved and industrial railways, but we would like to hear about these things first - as I am sure you would. Don't leave it to the other bloke - it doesn't take much to put in a brief report.

SWAP SHOP

(This column is open to publicise Society needs. Perhaps your Society has just the thing . . .)

Illawarra Light Railway Museum Society are looking for 11/16 in W. fishbolts/nuts and 45 lb rail four- or six-hole angle formed and flat fishplates. Also sleeper or soleplates for 45 lb rail (if these were ever made).

Van Diemen Light Railway Society require a boiler-tube expander suitable for the 1-1/2 in tubes and 1-1/4 in ferrules for their 0-6-0T Fowler.

SUBSCRIPTIONS TO *LIGHT RAILWAY NEWS*

The Light Railway Research Society of Australia offers subscriptions to *Light Railway News* to its own members only, at a special rate of \$4.80 p.a. (June 1979 to April 1980 issues). The basic membership fee of the LRRSA is \$5.00 which includes the cost of our quarterly historical journal *Light Railways*.

For further details write to: Hon. Secretary, LRRSA

GOULBURN STEAM MUSEUM

(see LRN 10 p. 4) 610 & 1435 mm gauge

In spite of the urgent need for boiler work, *Stella*, 0-6-0T Krauss 3423 of 1896 has continued in service into 1979, particularly to meet the needs of increasing motor-coach parties. However, it has been joined by a diesel companion in the shape of a "Planet", F.C. Hibberd 4wDM 2380 of 1941, formerly used at the Southern Highlands Transport Museum (see LRN 7 p. 5). This loco, and a 16-seat bogie passenger carriage arrived at the Museum in April or May. Unfortunately, there has been some difficulty in finding a local firm or organisation capable of carrying out the work necessary on *Stella*.

The Museum took delivery on 18 May of a former Southern Portland Cement (now Blue Circle), privately owned RH class four wheeled cement hopper wagon. This has been donated by a Bowral-based Rotaract Club, and was completely restored by them.

HUNTER VALLEY STEAM RAILWAY & MUSEUM

(See LRN 11, p. 5) 1435 mm gauge (PO Box 125, Broadmeadow 2292)

Recent acquisitions by this group are two buffet cars, RBS 2135 and RFV

693, and mail van KP 732.

In connection with the society's move to the Dorrigo branch in northern NSW, a Glenreagh - Dorrigo Rail Line Promotional & Liaison Committee has been set up and includes representatives of the society, PTC, local council and tourist bodies and the local press. To this end, the North Coast Regional Advisory Council has allocated a sizeable amount of money for a feasibility study into the commercial aspects of the Dorrigo railway being operated as a regional tourist attraction.

By popular choice, and in line with the society's pending move to Dorrigo, the name of the society will be changed to the Dorrigo Steam Railway and Museum, and is expected to have been incorporated in September this year.

LACHLAN VINTAGE VILLAGE, Forbes

(see LRN 9 p.11) 1435 mm gauge

Early July saw a most unusual movement of railway equipment to this location. Utilising portable track some 1200 feet long in sections of 40 feet, three locomotives and six carriages were to be conveyed from the NSW PTC

line, along Bathurst Street, Forbes, on the weekend of 7-8 July. The whole movement was to take place in a carnival atmosphere as about 50 volunteers were to lift and shift the sections, to enable the train to move about 600 ft. per hour. The cavalcade was to be hauled by *Rosie* 5367, a Clyde 2-8-0, builder's number 122 of 1914, and the other two locomotives involved were to be Beyer Garratt 6024 (4-8-4+4-8-4, Beyer Peacock 7544 of 1956) and 3026T (4-6-0, Beyer Peacock 4469 of 1903). It is apparently planned to build a standard gauge line around the perimeter of the village and to use this stock to haul visitors. It is not clear what advantage this operation would have over the existing narrow gauge line at the village.

In spite of the wide advance publicity given to this most extraordinary movement, no reports have been received of the actual event. It would be most interesting to learn how the operation functioned in practice.

Western Magazine 25/6/79 via John R. Horne, Railway Digest 7/79

NEWCASTLE COLLIERY TRAGEDY

Two miners were killed when they were crushed by an underground locomotive in a colliery near Newcastle on 10 October. They were working on the roof of a shaft with pneumatic tools and wearing earplugs at the time of the accident.

Courier-Mail 11/10/79

RICHMOND VALE RAILWAY MUSEUM 1435 mm gauge

Following the decision of the Hunter Valley group to move to Dorrigo, two former HVSR&M members plan to establish a co-operative and develop the Richmond Vale colliery between Wallsend and Kurri as a tourist attraction embracing railway, electrical and mining museums. Cessnock City Council has agreed to develop the mining museum whilst a private syndicate will be responsible for the establishment of the electrical museum in an abandoned power house at the colliery.

It is planned to lay a short railway link line from Richmond Vale to Weston to join the South Maitland Railways and it is hoped that this will give them right-of-way to South Maitland and eventually Hexham, and to operate a passenger service. To provide the motive power, the group in conjunction with the Cessnock City Council is negotiating with Coal and Allied Industries for the purchase of two locomotives currently in storage at Hexham - former J. & A. Brown Kitson 2-8-2Ts No. 9 *Pelaw Main* (Kitson 4567 of 1908) and No. 10 *Richmond Main* (Kitson 4798 of 1911). Negotiations are also proceeding for the purchase of some passenger carriages and representative coal hoppers.

Railway Digest 7/79 via Rob Henderson

SIMSMETAL, MASCOT 1435 mm gauge

(see LRN 9, p. 12)

The report of a Ruston & Hornsby 165DS 0-6-0DM shunter being scrapped here may have been premature. A Ruston of this type, believed to have been the one reported as being scrapped, was seen at the yard in October (builder's number 310085 or 313393 of 1952). Although stripped of most fittings, it has been fitted with an International diesel engine, suggesting it may be used for shunting purposes.

Two other locomotives are operated at the yard. The first is a Yorkshire Engineering Co. Ltd. 0-6-0DE, builder's number 2617 of 1957. This loco carries a green livery with yellow buffer beams, and is currently jacked up on blocks in the yard. The second loco is a Mercedes Benz powered 0-4-0DM built by Tulloch Ltd for use at their Rhodes plant in Sydney. It was acquired by Simsmetal in 1973 and carries a green and white livery.

David Allen 9/79, 10/79

SOUTH MAITLAND RAILWAYS PTY LTD 1435 mm gauge

(see LRN 9 p.12)

This, the last fully steam operated commercial railway in Australia, has been the scene of upgrading to assist in the development of Pelton Colliery, owned by Newcastle-Wallsend Coal Mining Co. Although initial ballast for the upgrading of the Pelton branch in the vicinity of Bellbird was conveyed by road, the contractor later made use of rail which involved the SMR in an unusual operation - the haulage of ballast, a commodity the SMR had never hauled before under contract. This resulted in the SMR operating full ruling loads of 11 BBW bogie ballast hoppers during July. An interesting sidelight to this operation was the interest expressed in the steam locos working the ballast trains by the contractors staff who made good use of free rides on the returning empty ballast trains!!

The SMR now operates no non-air trains, the last non-air train conveying loco coal being lifted from Aberdare on 21/9/1978. There are still one or two reminders of non-air days in the form of 4-wheel brakevans still in regular service and they made a strange sight during last winter trailing a train of large bogie hoppers with smoke trailing from the stove funnel.

Railway Digest 8/79 via Rob Henderson

STEAM TRAINS PTY LTD, KURRAJONG 610 mm gauge

(See LRN 8, p. 4)

Work still progresses with the arrangements for the establishment of what will be known as "Ku-ring-gai Valley Railway", at St. Ives showground, Sydney.

Meanwhile, work continues at Kurrajong on the restoration of equipment stored there by the group. Work has concentrated on SYDNEY, Hudswell Clarke 0-6-0 1838 of 1950, ex Victoria Mill, Ingham, Queensland. The superstructure of the loco has been stripped to bare metal, and primer applied. One leaf of a spring was found to be broken, and has been replaced. Much work has been done on the loco's tender. The tender body was separated from the frame, and large sections were removed from the bottom and front, where wastage and corrosion had taken place. The interior was stripped back to bare metal preparatory to priming and bituminising. The bogies were completely dismantled for overhaul. Extensive wear and broken parts were found, including broken and corroded springs, and worn axle block guides, hornblocks, and the spreader beam. Larger component parts have been steam cleaned, shot blasted, and treated against corrosion at Borg-Warner's plant at Parramatta, and Borg-Warner will also replace top plates, straighten bent sections, and rebuild worn surfaces.

PL121, the ex-railmotor trailer, is almost complete. Small fittings remain to be bolted on, the chassis was cleaned back, and all surfaces treated; flooring still has to be purchased, but materials for the seats are on hand. Work will soon commence on the second trailer, PL 122.

David Allen 9/79, Len King 9/79

SULPHIDE CORPORATION, COCKLE CREEK 1435 mm gauge

A Bo-Bo diesel-electric, built by Goninan in 1964, is used to transfer concentrate wagons from a siding near Sulphide Junction, Newcastle, to the company's works. The loco is of General Electric design, unnumbered, and painted predominantly green. Weighing in at 73 tonnes, the locomotive is normally used on weekdays.

Railway Digest 10/79 via Rob Henderson

UNION COAL MINING CO. PTY LTD, NYMBOIDA 610 mm gauge

(see LRN 2 p. 3)

This mine, taken over by the NSW Miners Federation, after the collapse of Nymboida Collieries Pty Ltd in 1975, closed in August when the local Koolkhan power station closed down. Three Ruston & Hornsby four-wheeled diesels had been here - 331246 of 1952 and 385901 of 1956 operational, and 331266 dismantled for spare parts. The Miners Federation has since been granted a mining lease at Warkworth in the Upper Hunter Valley.

The Australian 20/10/79, Editor

WYNDHAM ESTATE WINE CO. BRANXTON 610 mm gauge

A narrow gauge railway is being installed here to give visitors a tour of the vineyards and winemaking operations. The first stage of the project involves about 1.6 km of track, which will be extended at a later date. The track and train, described as a "sugar-cane train", have been obtained from Queensland, and development of the first stage will cost \$40,000. Your editor would be pleased to receive any further details of this operation, including locomotive and rolling stock.

Railway Digest 8/79 via Rob Henderson

ZIG ZAG RAILWAY

P. O. Box 196, HORNSBY, NSW 2077

1067 mm gauge

(See LRN 5 p. 6)

In October 1869, John Whitton (Engineer in Chief, NSW Railways) saw his masterpiece, The Great Zig Zag, brought into use. Acclaimed as one of the engineering marvels of the 19th Century, the 6 km formation, featuring three magnificent viaducts, tunnels and extraordinary earthworks, linked the western part of NSW to the seaboard, until 1910 when ten tunnels were bored to provide a double track solution to the saturated single track Zig Zag. In that year, the track was lifted and nature reclaimed its former domain.

In 1975, after seven years planning and construction, tourist trains began to operate over a 1.6 km section of track from Bottom Points (adjacent to the PTC's Main Western Line) to Top Points, featuring a journey over two of the three viaducts and through one of the tunnels, not to mention spectacular views of the valley below as the train climbs a 1 in 40 grade.

To operate this tourist venture, the following locomotives are either in service or under restoration:

Ex Queensland Railways:

DD17 class	4-6-4T	No.1046	(Ipswich Shops 205 of 1950)
DD17 class	4-6-4T	No.1047	(Ipswich Shops 206 of 1951)
DD17 class	4-6-4T	No.1049	(Ipswich Shops 208 of 1951)
AC16 class	2-8-2	No.218A	(Baldwin 69453 of 1943) originally built for the United States Army Transportation Corps during World War 11
BB18¼ class	4-6-2	No.1072	(Walkers 540 of 1956)
C17 class	4-8-0	No.934	(Clyde 501 of 1949)

Ex South Australian Railways (Peterborough Division):

400 class	4-8-2+2-8-4	No. 402	Beyer Garratt (Beyer Peacock 7624 of 1953 built under sub-contract by Franco Belge 2975 of 1953)
-----------	-------------	---------	--

At present 1047 provides the motive power with engines 1046 and 1072 undergoing restoration.

For passenger services, five bogie cars (302, 303, 305, 404, 405), one 12 wheel bogie car (390) and one brake van (GB 5575), all ex South Australian Railways (Peterborough Division) are used. Nine ex NSW PTC cars are also on the register, including three sleeping cars providing sleeping and dining facilities for members and on-site caretaker's residence. Several goods vehicles (ex South Australian Railways, Silverton Tramway Co. and Clyde Engineering, NSW) are also in use. Storage and restoration work is undertaken in a large compound at Bottom Points.

Vehicular access to the Zig Zag is by Bell Road which runs to Lithgow from Sydney via Windsor and Richmond. The Zig Zag turnoff is well signposted and located some 5 km before Lithgow. The drive to Top Points station is along the former permanent way and over the third viaduct. Plans are in hand to eventually extend the railway along this formation to meet Bell Road.

Trains operate every Saturday, Sunday and Public Holidays throughout the year and there is ample picnic, light refreshment and toilet facilities available.

Zig Zag Rly. Co-op. 10/79, Editor 10/1979

QUEENSLAND

THE AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY

Incorporated in Queensland as a Non-Profit Company

P.O. Box 270, NORTH QUAY, QLD, 4000.

(see LRN12)

The Rocklea, Brisbane, storage site was finally cleared of all Society equipment during August, as the remaining items were removed to Woodford. The most noteworthy items were the chassis of *Maria*, Jung 0-4-0WT B/n. 530 of 1904, moved to a member's house in Woodford on 11 August, and Hunslet four wheeled diesel-mechanical B/n 2660 of 1941, and a four-wheeled petrol trolley ex Proserpine Mill, which arrived at the Woodford site on 25 August.

Early November sees the celebrations to celebrate the Centenary of the Caboolture Shire, and the Society was to be fairly heavily involved in these. Locomotives were due to appear in parades at Woodford and Caboolture, on 3 and 10 November respectively, and in addition, the first Open Days were due to be held at Woodford on 3, 4, and 11 November. This will involve the running of the Society's Bundaberg Fowler locomotive (B/N. 5 of 1952), along a short section of track laid on the old QGR formation. A small platform with

"WOODFORD" nameboard has been constructed, and children's rides will be given. It is hoped that regular open days will be held on the first Sunday of the month and on public holidays from December onwards.

Quite a lot of civil engineering work has gone on at the site, with the widening out of the cutting formerly at the head of the old QGR triangle. Fill from this job has been used to widen the formation both along the triangle and on the old main line formation adjacent to it. Work will soon be put in hand to complete a security compound and provide permanent sidings for the secure storage of stock.

AUSTRALIAN RAILWAY HISTORICAL SOCIETY (QUEENSLAND DIVISION), BEENLEIGH 1067 mm gauge

(GPO Box 682, BRISBANE 4001) (see LRN 12 p. 9)

During the first weekend in September, additional rolling stock and items of equipment for the workshops were moved from various parts of south-east Queensland to the site at Beenleigh.

The machine tools moved from storage at Richlands included a 48 ins Horton centre lathe, a Herbert turret lathe (formerly at Ipswich railway workshops), and a Herbert No. 5 vertical mill, all of which will be included in the proposed workshops at Beenleigh and will form valuable editions to the Society's growing collection of machinery and tools.

The cab from B18-1/4 class 4-6-2 No. 843 (Ipswich Shops 149/1936) was moved from Redbank to Beenleigh where some thought is being given to converting it into a souvenir stand. 843 was one of seventeen locos which were retained by Queensland Railways from 23 November 1970 following the end of steam, for working special trains. The loco ran its last tour to Toowoomba on 26 October 1975 and was scrapped at Ipswich workshops on 8 April 1976 and the cab purchased by the Society.

From Ipswich Railway Workshops came "Red Fred", the famous 'red' railmotor RM 55 built at Ipswich Shops in 1930 and written off in 1966 and donated to the Society. It has been stored in the Boiler House at Ipswich Workshops since then. Accompanying it was combined passenger and luggage railmotor trailer PL 72 built at Ipswich Shops in 1931 and written off in 1967. It has also been stored at Ipswich with "Red Fred". It was recently planned to restore PL 72 and send it to the Normanton - Croydon Railway for use with railmotor RM 74, but it would appear that this proposal has now been scrapped.

Sunshine Express 9/1979, Editor 10/79

BULLENS AFRICAN LION SAFARI & ZOO, YATALA 610 mm gauge

(see LRN 12 p. 10)

A rather closer examination of the locomotive observed here has revealed it to be a "4-4-4T" with petrol engine. Of rather massive construction, the locomotive bears the legend *Safari Express* on the "tank" sides. The trailing truck of the loco appears to be a bogie originating from Condong sugar mill, while the steel toastrack carriage is mounted on similar bogies. The railway the train runs along is of very light construction, using what could be surplus contractor's materials. There is about a mile of track with a balloon loop at each end. The ride experienced was surprisingly good, but the track is laid on what appears to be potentially rather swampy ground, so track conditions may deteriorate without regular maintenance.

Editor 9/79

BUNDABERG SUGAR CO. LTD, FAIRYMEAD MILL 610 mm gauge

It is reported that a new 26-tonne bogie diesel is on order from E.M. Baldwin for the 1980 season. When it arrives, a smaller loco may be transferred to another of the mills in the Bundaberg Sugar Group.

Stack Talk 83

GIBSON & HOWES PTY LTD, BINGERA MILL 610 mm gauge

(see LRN 7, p. 7)

The Locotrol system used on the line from the mill to the site of the old Gin Gin mill at Wallaville is proving most trouble-free. The locos concerned are all 26-tonne E.M. Baldwin B-B diesel hydraulics built in 1975. *Oakwood* is B/n 5800-1-5-75, *Givelda* 5800-2-6-75, and *Delan* 58003-7-75. *Oakwood* is equipped as a 'master' loco, while either of the other two can act as 'slave'. The slave is controlled by radio, and is normally marshalled about two-thirds of the way down the loaded rake. *Oakwood* has a second set of controls above the normal control console, and a microprocessor is fitted to translate commands from these controls to be transmitted to the slave. The state of the functions of the 'slave' are also monitored by the micro-processor, and a panel of indicator lights displays the state of the functions in both locos.

Com-Eng 0-6-0DH *Tegege* (B/n FD4799 of 1966) has at last been repainted yellow to correspond with the rest of the Bingera fleet. It had kept its orange paint ever since delivery.

Stack Talk 83

ISIS CENTRAL SUGAR MILL CO. LTD, ISIS MILL 610 mm gauge

(see LRN 12, p.10)

The trials of multiple running reported in the last issue were so successful that they have been made a permanent arrangement. In September, the two locos concerned were seen coupled permanently together. They are:

7	0-6-0DH	Clyde 61-220 of 1961
and 8	0-6-0DH	Clyde 64-385 of 1964

Loco 8 leads the loaded train, but the twin unit may be controlled from either cab. Fourteen air hoses linking the units duplicate the loco functions exactly, except for the throttle control, which may be operated separately. This is the first example of multiple-unit operation on a cane tramway (as distinct from Locotrol), but the 2 ft gauge QGR Innisfail Tramway had a number of locos fitted up for multiple unit operation before the line was sold to local sugar mill interests.

Stack Talk 83, Editor

KITCHENER MINE, STANNARY HILLS 610 mm gauge

This mine has reopened in the last few months, and will be producing silver-lead and tin ores. Much of the equipment around the mine seemed to be hired from Victorian sources. Two thousand feet of tramway inside the mine is in working order. One ton iron dump trucks were seen, and under construction were some two ton side tipping ore trucks, on cane truck frames from Tully Mill all-steel trucks. Three items of battery electric rolling stock were observed, two conventional locos, and one with a small front end scoop for loading trucks.

Stack Talk 83

MARIAN MILL CO-OPERATIVE SOCIETY LTD., MARIAN MILL 610 mm gauge

(see LRN 10 p. 9)

A rather surprising addition to the loco stock here observed in August was a Gemco-Funkey four-wheeled diesel, built by George Moss in Western Australia under licence from Funkey, South Africa. The loco is fitted with an unglazed cab and was obtained second-hand from Western Australia. It was one of possibly three locos of this type advertised for sale earlier in the year, possibly coming from Lake View & Star, Kalgoorlie. On trying out their loco, Marian Mill is reported to have been so pleased with it, they tried to buy the others, but found they were already sold. Two locomotives which seemed to tally with a description of this type were seen on a railway wagon at Mile

End, South Australia around August. Where have they gone to? Your editor eagerly awaits further information.

Stack Talk 83, Bob Gough 9/79, Keith McDonald 9/79

THE MILLAQUIN SUGAR CO. PTY LTD, QUNABA MILL 610 mm gauge

(see LRN 9 p.13)

The two steam locomotives transferred from the Millaquin Mill last year have received names as follows:

5	<i>Dobbin</i>	0-6-2T	Bundaberg Foundry 6 1952
6	<i>Nipper</i>	0-4-2T	Bundaberg Foundry 3 1952

Three locomotives have been used on the day shift, with two at night. The locos used during this season have been the two above with:

4	<i>Jumbo</i>	0-6-2T	Bundaberg Foundry 1 1952
3	<i>Flash</i>	0-6-2T	Perry 6160.48.1 1948.

These seem to have been rotated fairly frequently. The other three locos have remained out of use behind the loco shed. There have been fairly persistent reports that this year may well be the last year of regular steam operation at Qunaba, which is the last mill to employ steam on mainline cane haulage on a regular basis.

Stack Talk 83

MORETON CENTRAL SUGAR CO, MORETON MILL, NAMBOUR 610 mm gauge

(see LRN 7 p. 8)

A park has been constructed at the entrance to the mill, where an old barracks used to stand until recently. Newly placed in the park are two of the mill's locos. After many years lying out of use, John Fowler 0-6-0T *Eudlo* (builder's number 16207 of 1925), has been cleaned up and painted green with yellow cab roof. Malcolm Moore 4wPM *Sandy* (builder's number 1051 of 1943), withdrawn from service last year, has been painted yellow and fitted with a new cab roof, painted green.

Stack Talk 83

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (SA) INC. Various gauges

(see LRN 11 p. 10)

Work has been proceeding on the restoration of ex Central Australian Railway NM class 4-8-0 No. 34 (Thompson 58 of 1927) and work on the boiler has revealed very bad rusting which will mean the boiler will never see a fire again. *Peronne* the ex Broken Hill Associated Smelters (Port Pirie) 0-6-0T (Barclay 1545 of 1919) is once again receiving some attention. Recent information from the UK has proved that the three original 0-6-0Ts at Port Pirie were not ordered by the British War Dept. during World War 1 as had been thought, but were ordered by BHAS. The rumour would appear to have started as their works numbers followed a series of narrow gauge 0-6-0WTs built for operation in France during WW1 and also that they carried names commemorating European battlefields.

Mile End Museum Newsletter, 9/1979 Editor, 10/1979

PICHI RICHI RAILWAY PRESERVATION SOCIETY 1067 mm gauge

(see LRN11 p. 10) (PO Box 504, Port Augusta 5700)

On 31 August the Society took delivery of two of four vans purchased from the ANR Central Australia Railway in the form of relay brake van NHRB 56 and employee's sleeping van NEA 51 which arrived at Port Augusta from Maree. To take delivery of these vehicles, it was necessary to lay a temporary connection of 1067 mm gauge over the 1435 mm gauge at Port Augusta. This was accomplished successfully, but diesel loco 0-6-0 NB 30 sent down to collect the two cars failed, and resulted in the two vans having to be man-handled over the crossing - a sure example of quick thinking and co-operation on the part of members present! Eventually NB 30 was got going, but failed again on the way to Quorn, and in the end had to be 'rescued' by T class 4-8-0 No. 186 the following day!

Another arrival on the line on 28 August was the newly purchased inspection motor car MIC 126 also obtained from the ANR.

TASMANIA

IDA BAY RAILWAY, Lune River 610 mm gauge

(see LRN 10, p.11)

This line was closed during the winter. It is believed that the former operator has given up his lease of the line. It is not known at this stage if a new lessee has been found, but in any case, extensive resleepering is believed to be necessary.

A.R.H.S. Bulletin Supplement 9/79

TASMANIAN TRANSPORT MUSEUM SOCIETY, GLENORCHY 1067 mm gauge

(see LRN 2 p. 8)

The Society has been most fortunate to have been able to purchase the body of former Tasmanian Main Line Co. 4-wheel saloon carriage A17, which was moved to the Museum on 18 April. The vehicle was taken over by the TGR on 1 October 1890 and given the classification A +, the plus sign being used to denote ex TMLR stock. It was then transferred to the isolated Bellerive - Sorrell Railway which was operated exclusively with centre-coupler ex-TMLR

locos and rolling stock, and after the line was closed in 1926, the body of the vehicle was purchased by a Bellerive resident and remained in his backyard until purchased by the Society. Despite its age, the body is in remarkably good condition.

Earlier the same month ANR diesel unit V13 originally built for the Mt. Lyell Railway was used to place ex Hobart Tramcar No. 141 on site. Since abandonment of the Hobart tramway system in 1960, the car has been stored variously in the loco roundhouse and carriage shed at Hobart prior to its removal to the Museum on 6 April.

Editor, 10/1979

VAN DIEMEN LIGHT RAILWAY SOCIETY INC., DON RIVER TRAMWAY 1067 mm gauge

(see LRN 11 p.12) (PO Box 887, Launceston 7250)

CCS class 2-6-0 No. 23 (Beyer Peacock 4415 of 1902, rblt. 1928) which has been a frequent visitor to the Don River Tramway was donated to the Society in June 1978 and travelled under its own power from Launceston to Don on 12 April.

Saloon carriage AAL 8 which was restored in 1971 by the TGR for their Centenary Celebrations as a museum car and lately stored at Don has recently been touring the State through the courtesy of ANR as a travelling education museum in conjunction with the Tasmanian Education Dept. and the Queen Victoria Museum, Launceston.

Editor, 10/1979

VICTORIA

CASTLEMAINE & MALDON RAILWAY PRESERVATION SOCIETY

P.O. BOX 246. CASTLEMAINE, VIC. 3450

Negotiations to preserve the 16 km railway are proceeding steadily. The right-of-way will be leased by the Shire of Maldon, and permissive occupancy of the Maldon station has already been granted.

Trains will run under the Tramways Act, suitably amended for a tourist operation. The Society will become incorporated before entering into an eighteen month initial stage of establishment and operation.

After insurance matters have been finalised, a lease will be taken out on the track, and work will get under way in earnest. It is almost three years since a train ran on the line, but fortunately the dry climate has slowed down the usual takeover by vegetation, and the track remains relatively clear.

Two steam locomotives were purchased from VicRail on 29 August 1979.

These were J class 2-8-0 No. 549 (Vulcan Foundry 6095 of 1954) at Ararat, and K class 2-8-0 No. 160 (Newport Workshops of 1940) at North Bendigo. E class 0-6-2T No. 371 (David Munro 14 of 1892) will also be purchased as soon as the first stage of development is completed.

Tait carriages have been offered to the Society, and enquiries have also been made regarding surplus PL, E and W type carriages. A 102 hp Walker diesel railcar was purchased by the Society last year, and is at present stored at Newport.

A fund raising program is under way, and membership is continuing to increase. Next year will see the return of steam to Maldon and the preservation of a broad gauge branch line in Victoria.

V. Findlay 29/9/79

EMERALD TOURIST RAILWAY (PUFFING BILLY) 762 mm gauge

(see LRN 11 p.14) (PO Box 156, Belgrave 3160)

The major overhaul of 7A has finally been completed after twelve months in the workshops. After running trials in late August in undercoat, the loco finally emerged from shops in the lined green livery of the VR of the early part of this century.

The rebuild of 8A will now proceed. The new boiler for 3A arrived in June, and has been placed upon the mainframe pending the start of work on her.

Passenger/guard's car 26 NAC was expected to be in service by the end of the year, enabling two such vehicles to be included in the consist of the two trains. This car has been restored in the Emerald shops.

Major formation deterioration has been discovered on the up side of 'Landslide'. A speed restriction has been applied while repair work including a slight deviation is carried out.

Narrow Gauge 75

GEELONG STEAM PRESERVATION SOCIETY

REGISTERED NON-PROFIT ORGANISATION, Licensed by the Attorney-General under Section 24 of the Companies Act (Victoria).

P.O. Box .166, Belmont, Victoria 3216

(see LRN 11)

Regauging of the Bellarine Peninsula Railway is progressing at a steady rate towards Drysdale. Resleepering has been completed through to Drysdale and all spikes removed on the rail to be moved from 1600 mm (5 ft 3 in) to 1067 mm (3 ft 6 in) gauge. Approximately 1.6 km (1 mile) of track remains to be completed early in October and should be completed by mid November. There will then remain the yard at Drysdale to regauge and siding to be laid

for the workshops and depot.

Pressure is being placed upon the relevant Victorian Government departments to ensure that the necessary legal arrangements are finalised in time for regular operations to commence during December. Trains will operate between Queenscliff and Laker's Siding, a distance of 4.8 km (3

Bellarine Peninsula Railway: M6 (Robert Stephenson & Hawthorns Ltd, 7429/1951) departs Queenscliff on Sunday 9 September 1979.

miles). Easter 1980 should see the commencement of regular operations through to Drysdale.

Following the success of operations during the Centenary of the line in May, an approach was made to the Victorian Railways for permission to operate on a similar basis during the spring school vacation. A flagman was supplied by the V.R. to control road traffic at the two P.C.R. level crossings near Laker's Siding. Trains were operated on Saturdays/Sundays 1/2 and 8/9 September. The first train departed at 10 am each day followed by others at 40 minute intervals until 5 pm. Locomotive M6 hauled all trains on their 30 minute return journey from Queenscliff to Laker's Siding.

During the first weekend, 1,714 passengers enjoyed a ride, with 2,016 the following weekend. No major problems were encountered except for late on Saturday 8 September when one trip was cancelled. M 6 was steaming badly due to some dirt which had become mixed with otherwise good coal. The patronage and public interest in the railway during the two running weekends certainly proved the great potential which the B.P.R. possesses as an operating museum railway.

The passenger rolling stock fleet on site is steadily increasing. Shipping arrangements have been finalised for the vehicles obtained in Tasmania. Three wooden bodied carriages have so far crossed Bass Strait and a fourth is scheduled to arrive at Queenscliff by mid October.

In 1972, the G.S.P.S. purchased an historic carriage ABL 9 from the Tasmanian Government Railways. It remained stored in Tasmania and after the formation of the Van Diemen Light Railway Society, mutual agreement was reached that ABL 9 should remain in Tasmania. It had been built in 1903 and was the only clerestory roof carriage remaining intact in Tasmania. The agreement early in 1974 required the V.D.L.R.S. to provide a suitable replacement vehicle as a swap within five years. A former first class saloon carriage AAL 9 was agreed upon, although still required for traffic by the T.G.R. Arrangements were made to obtain it once released by T.G.R. but before it could be secured, the Australian National Railways swallowed up T.G.R. When all passenger services were withdrawn and the rolling stock put up for tender, AAL 9 was included in order to comply with A.N.R. policy. Fortunately, the V.D.L.R.S. were able to obtain it and make it available to the G.S.P.S. to fulfil the long standing agreement.

Through the A.N.R. tenders, the G.S.P.S. obtained five steel bodied passenger carriages and an articulated diesel railcar DP 28. A society member purchased similar car DP29 for use on the B.P.R. The carriages are AAR 1, AAR 4, BBL 10, SP 5 and SP 8. Negotiations were also made with V.D.L.R.S. to obtain ABL 14 and BBL 5 from the Don River Tramway as well as Camp 164, a former AB type clerestory roof carriage. ABL 14 and BBL 5 are both "dog-box" type wooden carriages similar to BBL 6 which the Society acquired in 1972 along with ABL 9. BBL 6 was transported to Queenscliff from Tasmania early in 1976 with locomotive M 6.

AAL 9 arrived at Queenscliff in late August and entered traffic in time for the first weekend of operation in September. Transport delays prevent ABL 14 and BBL 5 arriving before that weekend, but they arrived during the following week and ABL 14 entered service the following weekend. BBL 5 requires substantial body restoration before it will enter traffic. Camp 163 is due at Queenscliff by mid October and the steel carriages and railcars will follow at approximately weekly intervals until the end of the year.

Two items of rolling stock have also been purchased from Westrail. These are VZ 112, a bogie brake van built at Midland Workshops in 1912, and VW 5112, a bogie camp car, originally built in 1909 as AF 13, a second class suburban dogbox car designed to carry 60 passengers. It was taken out of service in 1966 and converted into a camp car. Both these vehicles were used to convey spare parts for the V class also purchased from Westrail.

VZ112 arrived at Queenscliff in April and was used during the Centenary celebrations. It is intended that the goods compartment of this vehicle will be set up with the derailing equipment and act as a mobile breakdown van. VW 5112 arrived on the Centenary weekend and in its current form provides sleeping accommodation for four persons and dining, kitchen and shower facilities and will be used for accommodation by members at weekends. Both vehicles have since been painted in the yellow livery applied to Westrail service vehicles.

On the locomotive side, transport proposals are being finalised for the two locomotives purchased from Westrail, S 547 and V 1209. The tender for S 547 arrived at Queenscliff by road in early October and the V class tender should follow in a similar fashion. The two engine units are likely to be moved east early in 1980.

WOMBAT GULLY TRAMWAY, LENEVA 457 mm gauge

(see LRN 9 p. 21) (R.M.B.1049A, Wodonga 3690)

Further details are to hand of the railway operated on the last Sunday of the month at "Cloverdale", on the Beechworth Road, Leneva, about six miles south of Wodonga. The locomotive, called *Anna*, was built by Dennis Steinhauser and is an ingeniously contrived 0-4-0T resembling a tiny Krauss or Koppel which has a combination of geared, chain and rod drive. Highlight of the year for the group is the annual Easter rally, when *Anna* hauls three carriages and a brakevan accommodating about 25 children. These have been held since 1975.

Jack Elliot/JLB 9/79

WESTERN AUSTRALIA

HOTHAM VALLEY TOURIST RAILWAY INC., 1067 mm gauge

(see LRN 12 p.16) (PO Box 197, Pinjarra 620S)

The "Back to Yarloop" day on 2 September saw the operation of the largest train ever organised by the Society. Ten coaches, including some AZ cars fitted with Hotham Valley Railway coach sideboards, were run from Perth, and beyond Pinjarra, W class 4-8-2 No. 945 *Banksiadale* (Beyer Peacock 7457 of 1951) made a fine sight working 13 cars (including three added at Pinjarra) and ZJ brake van to Yarloop. On arrival at Yarloop, the *Leschenault Lady*, hauled by G class 4-6-0 No. 123 *Koombana Queen* (Dubs 3507 of 1891) was already in attendance.

Further to the report in last issue of LRN, Westrail have agreed to the lease of

ten coaches to the HVR. These comprise seven AZ 1st. class corridor sleepers built in 1929, 1st. class corridor sleepers AQZ 420 (convt. from ARS in 1958) and buffet car AQL 290 which formerly operated on *The Mullewa* service to the town of the same name.

Pinjarra Steam Express 8-9/1979

MILLARS, YARLOOP

Clyde Model HG, Serial No.61-241 (of 1961) at Yarloop, W.A., in May 1979. Owned by Millars Australia, this locomotive was purchased from B.H.A.S., Port Pirie, in May/June 1973, replacing Dübs built 4-6-0 Menzies.

OVERSEAS

PAPUA NEW GUINEA

COISEL PLANTATION PTY LTD, SORAKEN AND KUNUA, NORTH SOLOMONS PROVINCE 610 mm gauge

This company, a subsidiary of Burns Philp, operates tramlines at plantations at Soraken and Junua. The tramways were originally constructed with materials from Robert Hudson Ltd of Leeds, and date back to the 1920s at least. After 1945, the lines were reconstructed with materials from Queensland. Two Hunslet 12 tonne diesels were acquired in 1977, one for each plantation. The one at Kunua is Hunslet builder's number 7532, a four-wheeled diesel mechanical of 43h.p. Also at Kunua is the derelict remains of a Lister diesel. The ride at Kunua is rather rough as the rail is only 12 kg/m. (241b/yd) with 3 ft sleeper spacing.

(Editor's note - we are pleased to publish herewith our first report of an overseas light railway in our region of the world. Similar reports would be welcomed.)

UNITED KINGDOM

The first Fowler 2 ft gauge loco to be returned to the U.K. for preservation, and currently the only Fowler steam loco in the U.K. It is ex Natal Estates Ltd, Mount Edgecombe, South Africa, 0-4-2T Saccharine after unloading at Goole Docks, 19 April 1979, on route to the Alford Valley Light Railway, near Aberdeen, Scotland.

DIRECTORY

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY

Margaret Street, Woodford Queensland

Secretary: David Mewes, P.O. Box 270, NORTH QUAY Qld 4000

Meetings: Fourth Thursday each month, January to November at Room 19, Archibald Court, 21 Adelaide Street, Brisbane, commencing 8.00 pm

Work parties: Every Sunday at Woodford

Open Days: First Sunday of month and public holidays.

Annual subscription: Not fixed for 1980, but tentatively \$8.00 Full and \$5.00 Junior

Phone enquiries: (07) 273 2014 (David Mewes)

Aims: Preservation of equipment from narrow gauge railways (mainly 2 ft gauge) Development and operation of Durundur Railway at Woodford as an operating museum railway.

CASTLEMAINE & MALDON RAILWAY PRESERVATION SOCIETY

P.O. Box 246, CASTLEMAINE Vic 3450

Secretary: Vance Findlay (Address as above)

Annual subscription: \$5.00

Phone enquiries: (03) 29 2804

Aims: To operate steam-hauled tourist trains on the 5 ft 3 in gauge Castlemaine- Maldon Railway.

GEELONG STEAM PRESERVATION SOCIETY

Queenscliff railway station, Victoria

Secretary: Royce Jowett, P.O. Box 166, BELMONT Vic 3216

Work parties: every weekend based at Queenscliff station.

Trains run: Bellarine Peninsula Railway scheduled for reopening on regular basis from November 1979. Weekends and public holidays.

Annual subscription: Adult \$8.00, Pensioners and children 14 and under 18 \$5 00

Phone enquiries: (03) 743 6770

Aims: Collection of 3 ft 6 in gauge locomotives carriages and railcars from throughout Australia. Operation of Bellarine Peninsula Railway as an operating museum railway. 16 km (10 miles) of track between Drysdale and Queenscliff. Line regauged from 5 ft 3 in following closure by Vic Rail.

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY

Tongara Road (near Station Road), ALBION PARK RAIL NSW 2527

Secretary: Tony Madden, P.O. Box 1036, WOLLONGONG NSW 2500

Meetings: 7.45 pm, Monday 3 December 1979, A.I.S. Visitors Centre, Springhill Road, CONISTON (near Steelworks gate). All welcome.

Work parties: Every Saturday at Museum, mid-morning to dark.

Trains run: Second Sunday every month, 11.00 am to 5.00 pm. Admission free. Train and tram rides 20c.

Annual subscription: Full \$8.00; Junior \$2.00

Phone enquiries: (042) 95 1776 (Operations manager)

Aims: Preservation of local and national items of light railway interest, and operation where possible on the Museum's 2 ft gauge railway.

LIGHT RAILWAY RESEARCH SOCIETY OF AUSTRALIA

Secretary: E.G. Stuckey, P.O. Box 21, SURREY HILLS Vic 3127

Meetings: 8.00 pm, Thursday 13 December 1979 at Ashburton Uniting Church Hall, Ashburn Grove, Ashburton

New South Wales Division: Secretary: R. Mason, P.O. Box 290, BURWOOD NSW 2134

Meetings: 7.30 pm Wednesday 12 December 1979 at Conference Room, Rechabite House, 85 Campbell Street, SURREY HILLS

Annual subscription: \$5.00 (*Light Railway News* extra \$4.80)

Phone enquiries: (03) 830 1640 (Frank Stamford), (02) 771 3929 (Paul Simpson)

Aims: Research into operating and closed light railways in Australia. Publication of quarterly historical journal *Light Railways*, publication of books, maps, drawings etc.

ZIG ZAG RAILWAY CO-OP LIMITED

Site of the Great Zig Zag, near Lithgow NSW

Postal: P.O. Box 196 HORNSBY NSW 2077

Secretary: Ian Thornton

Meetings: 7.30 pm at Transport Institute, Devonshire Street Central (Opposite Central station) on 22 January 1980.

Work parties: Every Saturday and Sunday, also Public Holidays.

Trains run: every Saturday, Sunday and Public Holidays,

Annual subscription: \$10.00

Phone enquiries: (063) 51 4826

Aims: To eventually extend the railway from Top Points to the Bell Road and on to Clarence. Restoration of locomotives and carriages is a continuous activity.

PUBLICATIONS

MAPS OF VICTORIAN TIMBER TRAMWAYS - NEW SERIES

The LRRSA has obtained the permission of the Department of Defence to superimpose timber tramways on its 1:50 000 series maps. The first of these is the 'Neerim' map, covering the area between Powelltown and Noojee, showing tramways originating from Powelltown, Noojee, Neerim, Neerim

South and Warburton. The map measures 760 mm x 550 mm (30 in x 22 in) and shows as accurately as possible the relationship between roads, creeks and tramways.

Another new map to be produced by the Society covers the area from Gooding on the VR Walhalla line, to Bell's Incline Camp on the Thomson Valley Tramway, and includes gold mining tramways around Walhalla. It shows the routes of many tramways not previously recorded, and is produced to a scale of 2-1/2 in = 1 mile (1:25344). It measures 1000 mm x 700 mm (39 in x 28 in).

Both maps are dyeline printed in black only, and are available at \$2.85 each, incl. postage, from LRRSA Sales, 35 Oakern Road, MOUNT WAVERLEY Vic 3149.

TALL TIMBER AND TRAMLINES An illustrated introduction to Victoria's timber tramways, reprinted as a result of many requests for this popular publication. 61 photographs dating from the 1870s to the 1940s, six maps, 60 pages
Price \$4.10

EDITORIAL

We are now well into the third year of LRN, and this has seen us come from a duplicated newsletter to a high-quality magazine. Thanks to all who have assisted in this rapid progress. Please let us know what you see whenever you visit a preserved, industrial or pleasure railway, or railway museum.

Our new format requires a steady supply of good quality black and white photographs. Very few have been received recently. Postcard size will do, and the main requirement is a reasonable amount of contrast. You can help publicise your favourite preservation line by sending in photos of it for publication.

CORRECTION

David G..Bailey points out that the caption on the lower photo on page 11 of LRN 13 should refer to the loco illustrated as being a Clyde Model HG-3R, that is a Diesel **H**draulic Model "**G**" 300 hp **R**igid Frame.

MEMBERS ADVERTISEMENT:

John Peterson would like current information on the status of light railways in Fiji, Nauru, and particularly Ocean Island, and any other railway in this area of the Pacific, and would also appreciate names and addresses of contacts in these areas. Please write to John, C/- Niue High School, Nieuve, South Pacific.

NEW SOUTH WALES

CENTRAL PARK RAILWAY, FORRESTERS BEACH 610mm gauge

(see LRN 13 p.9)

The previous account of operations having ceased here appears to have been premature, with the arrival of four additional locomotives during the first week of October. These are all Ruston & Hornsby 4-wheel diesel mechanicals of Model 20DLU, weighing 3 tons each. Four out of a batch of eleven supplied for use in the construction of Sydney's Eastern Suburbs Railway in 1951, they did not see much, if any, use before the project was discontinued (temporarily at least) and the locomotives disappeared. Builders' numbers are 304453,

Front cover: Bellarine Peninsula Railway locomotive M6 rolls to a stand at Drysdale with the first public passenger train to arrive, Sunday 9 December 1979.

Geelong Advertiser Photograph

304455, 304457 and 304460. They were purchased from Thornton Spares (a scrap dealer), near Newcastle, and one was operating within a week of arriving at Forrester's Beach. The other three were being cleaned up at the time of the visit, with two more to be put into operating order, and the other to be kept as a source of spare parts. These small locos should be much easier on the track than were the other locomotives to have operated here.

Len King 11/79, Editor

HUNTER VALLEY STEAM RAILWAY AND MUSEUM

P.O. BOX 125, BROADMEADOW NSW 2292

(See LRN13)

This Society has been successful in its appeal to raise the necessary finance for the purchase, transport and securing of spare parts for 0-6-0ST *Badger* (AI&S 5 of 1943) from Australian Iron & Steel Ltd, Port Kembla. Remaining locomotive appeals now cover Z 19 class 0-6-0 No.1904 (Beyer Peacock 1646 of 1877), X 10 class 0-4-0 crane tank No.1052 (Hawthorn Leslie 3035 of 1914 - fitted with 7 ton crane), Z 25 class 2-6-0 No.2535 (Beyer Peacock 2322 of 1884) ex AI&S at Coniston, and 0-4-0ST *Marion* (Barclay 2224 of 1948), also ex Coniston. The crane tank is ex NSW PTC whilst 1904 is currently stored at Enfield after its intended owners, the Oberon-Tarana Steam Train Co. Ltd, failed to get their project off the ground.

Another appeal which has recently been finalised is that for the purchase of second bogie water tank, L 1202, which is currently being stored at Clyde Wagon Works. L 1202 has hook drawgear and rather than have two special match trucks come up from Sydney and then go back, the Society has applied for several more wagons to add to their collection that can also act as match trucks for transition between hook drawgear and automatic drawgear. After several years of negotiation, the Society has also been successful in securing two four wheel oil tank wagons. The Shell Co. of Australia donated their wagons SCA 002 and SCA 112 to the Museum and SCA 111 to the New South Wales Rail Transport Museum. All three wagons have been standing idle at Shell's Parramatta terminal for some years. Minor repairs to the two wagons have been carried out to allow them to be transported by rail to Cockle Creek for collection by the Society.

Because of the continuing amount of work in a wide range of activities in the Newcastle area, the Society regrets that it will not be able to move its construction train to Glenreagh in December as was originally hoped. One of the major jobs is the weatherproofing of every vehicle prior to moving to Dorrigo as it is expected the collection will need to stand in the weather there for at least two years before undercover storage can be provided or the

labour found to carry out this very necessary task.

Donations over \$2 tax deductible.

MUSEUM:: Tongarra Road. Albion Park. (open 2nd Sunday, each month)

CORRESPONDENCE: P. O. Box 1036, Wollongong 2500.

(See LRN12)

Attendance at Museum Open Days showed a serious but predicted fall in November/December due to hot weather and the counter attraction of the beaches. December visitors numbered only 50% of the peak winter months and although the tourist influx during the coming holiday period should boost figures, attendances will probably remain lower until about March. An extra Open Day is planned for Sunday, 27 January 1980, to catch a few tourist dollars and show the museum in full operation to the visiting delegates to the L.R.R.S.A. Convention being held in Sydney, and the NSW Division Members joining them on an organised coach tour visiting Albion Park and other venues of light railway interest that day. The museum is also continuing its support of local under-privileged children's charities by holding a benefit day and outing on Sunday, 10 February 1980, a regular Open Day, for the Tawara Special School, Shellharbour. These handicapped children will be guests for the day and the school will receive a cash donation from public fare revenue.

After years of preparation of suitable Memorandum and Articles by our Committee and our helpful honorary solicitor, Peter Daly, the Certificate of Incorporation of the Society arrived at his office and the I.L.R.M.S. is now a company limited by its members' guarantee as from December 1979.

Main line track extension was held up for a month due to the derailment twice on one weekend of *Cairns* (H-C 0-6-0 ex-CSR) at the entrance to the yard. Much sweating, swearing and packing saw her back on the road and the cause traced to the deterioration and poor alignment at the first yard points and start of the loco road. Originally the points had been installed temporarily with blades too short and angled as these were all that were available at the time. New ones were made but never found time to be fitted. Most of the sleepers under the points, where an unavoidable road crossing occurs, were covered in gravel and had quietly rotted away. Between Open Days the offending section was pulled up, dug out and relaid with the new blades, new lead rails, sleepers (good used), and reballasted to the sleepers and boarded between the rails, as well as rebuilding and resiting the point lever and rodding to the present system of lever parallel to track using a 90 degree crank, to allow stock clearance whilst still employing only standard-

gauge sleepers for crank/lever attachment. Main line extension then proceeded onto the curved approach to "Yallah" from the culvert and by the time this is in print should be past the station platform. Progress is slowed by the necessary continuous use of a heavy "Jim Crow" for curving the rail, and the heat holding up the best work until after 5 p.m. Screened blue metal for top ballasting (the roadbed was laid and levelled with scalplings - a mixture of irregular rocks and dust) was donated by local quarry proprietor John Cleary, who has helped the Museum in diverse other ways.

A quantity of point parts and fishplates (some ex-Marrawah Tramway) has been collected and despatched courtesy of A.N.L. to us by our friends at the Don River Tramway in Tasmania, the V.D.L.R.S.

The museum was recently offered a concrete water tank, installed in 1939 by the Defence Department at Fort Drummond, Coniston, and removed by the present tenants, WIN TV Channel 4. This arrived at the museum, was suitably grooved, received short lengths of RSJ, was set flush in the ground under our steam loco road, and is now an inspection pit, a much needed utility for getting between frames. etc.

The Perry boiler (0-6-2T ex-Tully Mill No.6) was the subject of a detailed repair quotation by a local firm when we heard it might qualify for grant assistance from the Cultural Arts Committee of the NSW Premier's Department. Somewhat shocked by the quoted price of \$33,000 for removal/renewal of inner firebox and front tubeplate which would almost buy a new all welded boiler, we decided to shelve the project until we have time to tackle most of it ourselves or can persuade a suitable sympathetic firm to take the job on at a more realistic cost to us. *Burra* (H-L 0-4-OST ex-Corrimall Colliery) has been stripped after closer boiler examination showed the thinnest part of the tubeplate to be still 9/16 - 5/8 in. thick (built 3/4 in.) - on which basis *Cairns* was finally granted a full pressure certificate. The remainder of the boiler/firebox is in excellent order except for a few bottom tubes and is being prepared for a hydrostatic pressure test. Meanwhile, the rest of the loco is being thoroughly overhauled and will possibly become the I.L.R.'s third operating loco by the end of 1980.

The museum recently acquired, through the good offices of Dr John Radcliffe (President of AETM, St Kilda, S.A.) a former horse-hauled 2 ft gauge covered "Explosives" van, once used at the S.A. Government magazines at Dry Creek. We have recanvassed the roof and repainted the body and frame and the wagon only awaits the fitting of suitable couplings.

The museum is now in telephonic communication with the outside world per a new Telecom installation, as well as having the nucleus of its own internal phone system, using salvaged vintage colliery equipment.

Tube cleaning,
Cairns.

Photo: I.L.R.M.S.

The Telecom phone was thought to be a necessity as during the week our Operations Manager who is retired is often on site by himself as are other workers occasionally and would be a long way from help in an emergency. The number is not listed in the directory for security reasons, enquirers being directed to the Op.Manager's home number.

The I.L.R.M.S. has finally been granted an Interim Development Order by

Richard Youl's half-size Birney car running at the 'Model Train Show 78' on 26 August 1978.

*Photo:
I.L.R.M.S.*

the NSW Minister for Planning & Environment, which makes the site use legal at last and hopefully, Shellharbour Council who own the land, will shortly decide to let us proceed with stage two development, including completion of the track loop.

Four members who have now had the requisite time assisting in the operation of a boiler will shortly be examined by the NSW D.I.R.T. (ex DLI and they should have left it thus), Boiler Attendants Examination Board for their Boiler Attendant's Certificates (Restricted - Locomotive Type) and provided they pass should soon after be applying for Locomotive Driver's "Permits".

LACHLAN VALLEY RAILWAY, COWRA 1435 mm gauge

(The Secretary, 2 Jendi Avenue, Bayview 2104)

Although this group 'operates' on something more than a 'light railway' e.g. the NSW PTC, the editor receives reports from correspondents on occasions and it is felt that on occasions a point could be stretched to allow the LVR to be included in our pages.

Our correspondent visited Cowra loco depot on 30 October and found ex NSWGR 59 class 2-8-2 No.5917 (Baldwin Lima Hamilton 75580 of 1952) and C30T class 4-6-0 No.3026 (Beyer Peacock 4469 of 1904; rblt. from 4-6-4T 1928) in the shed and yard respectively. Also present were several goods wagons, two 4-wheel water gins, nine various passenger cars (mostly reconditioned) and a guards van. A three road engine shed was under construction by the LVR.

5917 was expected to go to Sydney on a fan trip on 8-9 December, hauling 3026 dead, and then on to Newcastle with 3026 eventually going to the South Maitland Railways workshops at East Maitland for repairs to its boiler and firebox.

Len King 11/79

MEGALONG VALLEY RAILWAY, BLACKHEATH 610mm gauge

(see LRN 10 p.7)

Further progress has been made with the establishment of this line, with reports that both locos are now in operating condition, a 100,000 litre water tank installed, preliminary earthworks completed, and about 400 metres of track laid. Enough sleepers are available to complete the 2.5 km line planned, but more rail is still required. No passenger rolling stock is available yet, but it is expected that this will be constructed on old cane trucks, and the body of a former Sydney C class tram has been obtained for restoration and mounting on 2 ft gauge bogies.

Railway Digest 11/79 via Rob Henderson

STEAM TRAINS PTY LTD, KURRAJONG 610mm gauge

(see LRN 13 p.16)

At Kurrajong, site of the rolling stock to be used on the Ku-ring-gai Valley Railway, work commenced on rail motor trailer PL122 on 17 November. Sundry materials were removed, the seats from PL121 were taken out of storage and PL122's seats were unbolted. These parts were then placed under roofing iron to await collection by the Geelong Steam Preservation Society.

Five members then removed the ceiling, leaving wood slats visible in various condition. Extensive dry-rot and other damage was found in roof timber and struts, with rusting of sections of the steel frame. Where the roofing felt had torn away, bitumen paint was applied to stop further external deterioration. Two corners of the sub-chassis have rotted away and will need extensive work. Most lower panels of cladding can be used again, but the ends, doors and floor will have to be replaced.

Restoration continues on *Sydney*, Hudswell Clarke 0-6-0 1838 of 1950. Restoration of the cab is virtually complete, with cab exterior and boiler repainted in blue, running board and smokebox black. Concrete has been broken away from the smokebox interior so that wasted metal can be removed from the front below the door, and the steel replaced to give a neat appearance, whereas now it is a patchwork quilt of bits and pieces.

Some work has also been done on the John Fowler 0-4-2T 17881 of 1929. Rusted out lower corners of the cab were replaced, larger holes were cut in the tank tops for access, and some chipping out of rust was done inside. The tanks will have to be removed for the sheeting on the backs has rusted through and replating is necessary.

Len King 11/79

QUEENSLAND

ALMA PARK ZOO, KALLANGUR 1067 mm gauge

Placed on display on 22 December was a "copy of a 19th century American train" which it is hoped will eventually run on a 2.5 kilometre line around the zoo. The locomotive is a four-wheeled diesel hydraulic, built in the USA by Plymouth and formerly used by Evans Deakin Industries Ltd, Rocklea, before being purchased in 1977 by Bill Williams, proprietor of Alma Park. It is believed to have been built originally to 2 ft 6 in. (762 mm) gauge for use by Utah Construction Company on its Snowy Mountains Scheme contracts. Builders number is thought to be 6124. There are thirteen coaches constructed on wagon bogies (one per carriage). Twelve of them are "Cinderella coaches" in style, while the last, the guard's vehicle, is more box-like in appearance. The locomotive has been given a "steam outline" and carries the wording "Mohawk and Hudson River Railroad".

The Courier-Mail 22/12/79, Editor

THE AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY

Incorporated in Queensland as a Non-Profit Company
P.O. Box 270, NORTH QUAY Qld 4000
(see LRN13)

The Society had a very successful week in November in connection with the Centenary celebrations of the Caboolture Shire. On Saturday, 3 November the Society's ex-Condong Mill Ruston & Hornsby four wheeled diesel (279567 of 1947) was placed on a tilt-tray truck, kindly loaned by TAC Hire Services of

*Photo:
Phillip Barker*

Brisbane, to appear in a parade organised by the people of Woodford. The following Saturday, 10 November, saw the ex-South Johnstone Mill Hudswell Clarke 0-4-2T (1705 of 1938) on a low loader provided by Alzino Brothers of Caboolture to take its place in the procession held at Caboolture.

Running at Woodford took place as planned on 3, 4 and 10 November. The ex-Pleystowe Mill Bundaberg Fowler (5 of 1952) ran on about 170 yards of prefabricated 20 lb track, laid temporarily on the main line formation. Several hundred people rode on the train, and roadside signs attracted quite a reasonable casual trade.

With the heat of summer, some slowing down in progress is to be expected, but there is still plenty to be done. Currently, storage track is being laid in the cutting at the head of the triangle, where the stock on site can be placed in storage. Then a connection will be made to the main line formation, after which the temporary track there will be replaced in 60 lb materials. A water supply has now been put on site.

It has not proved possible to begin running on regular open days as forecast in the last report. This is because certain formalities requested by the Caboolture Shire Council for planning permission, particularly in relation to car parking facilities, have to be satisfied. It is hoped that regular public running will begin soon.

The Society's annual barbecue was held at Woodford on Sunday, 16 December. Good numbers were present, and special members' trains were run with the Ruston diesel.

AUSTRALIAN RAILWAY HISTORICAL SOCIETY (QUEENSLAND DIVISION)

Beenleigh 1067 mm gauge

(GPO Box 682, BRISBANE 4001) (See LRN 13 p.17)

This Society has recently released plans of its proposed development of the "Beenleigh Railway" which shows it to be compact and practical and within the capabilities of the Society, in this its first excursion into the railway preservation movement.

Details of equipment so far received have been given in previous issues of LRN, but the Society is continuing to make approaches to various firms and organisations for equipment and steam locomotives, and has had some measure of success.

The Society's proposed line begins from the southern end of the Shire car park in Beenleigh where it is intended to situate a turning angle, the inner leg of which will eventually form a complete return circle through the proposed parkland as agreed with the Albert Shire Council. The main station will be laid out here, Queensland Railways' Beenleigh station being only some three

minutes away. This station will be the site of a comprehensive interlocking display, the supply of the equipment already agreed upon with QR. It will be stored by them until it is required.

Leaving the station, the line proceeds along the formation of the old South Coast line to Southport and Tweed Heads, crosses the first of two typical QR wooden trestles on a curve, passes through a substantial cutting and then crosses another wooden bridge. These were intended to be rehabilitated by the Albert Shire Council, and, although a considerable task, negotiations are underway at present on a number of fronts to assess the best method to approach this work.

The southern end of the second bridge forms the limit of Phase One of the development from the Beenleigh Distillery and a crossing loop will be installed here. The site will eventually become the junction for the back road through the park which commences in the main station yard at Beenleigh. Continuing on past some attractive scenery, the line swings under the main road (the Pacific Highway) and enters the Distillery property on the embankment of the old siding to the Distillery.

Within the Distillery will be the workshops, engine shed, rolling stock display, station and sales area. This will enable passengers to inspect the Distillery and both schemes will complement each other.

Depending on land ownership and space required, the workshops and engine shed may be situated up from the proposed historic village where the Society's museum, suitably old fashioned to blend in with the planned development of the village, will be located. Plans for this part of the scheme have not yet been fully finalised as these schemes tend to evolve slowly, dependant on finance, acquisitions and local conditions.

The Society is currently leasing a large tin shed in the Distillery complex and this is used for restoration work and is the centre of present activities. The whole scheme has great possibilities and readers will undoubtedly view its progress with interest.

Sunshine Express 11/79

BUDERIM ZOO & KOALA PARK, TANAWHA 610 mm gauge

Three former sugar mill locomotives are to be seen at this attraction on the Bruce Highway, south of Nambour. These were in a rather poor state some years ago, but have been repainted and cleaned up. The locos are:

0-4-0ST	Hudswell Clarke	853	1908
0-4-0T	Krauss	5869	1907
0-4-0PM	Purcell	999A	1922.

The Hudswell Clarke, formerly 2 *Kanaka* of North Eton Mill, has had its saddle tank removed. The Krauss was formerly *Dulce*, used in the construction of the Burrinjuck Dam, NSW, and then at North Eton Mill. The two steam locos are painted red and green. The petrol loco, built in Australia, was formerly used at Moreton Mill, and is painted yellow.

Editor 12/79

CSR LTD, HAMBLEDON MILL, EDMONTON 610mm gauge

(See LRN 8 p.7)

A new loco livery of green and yellow has been adopted, replacing the former colours of grey and yellow. Locos seen repainted in this livery in mid-August were:

1	0-6-0DH	E.M.Baldwin	4413-2-8-72	1972
3	0-6-0DH	Clyde	64-316	1964
4	0-6-0DH	Clyde	56-86	1956

In addition, 3 has been fitted with a new low-profile cab to permit operation under the QR bridge at Redlynch, replacing a folding design previously carried. The four other locos fitted with the folding cab may be similarly treated in due course.

Stack Talk 84

DOUGLAS SHIRE COUNCIL, PORT DOUGLAS 610 mm gauge

Faugh-a-Ballagh John Fowler 0-6-0T 8733 of 1900, placed in a park here in 1967, has been substantially rebuilt and repainted, as has also a passenger carriage preserved with it. In mid-August, the Douglas Shire Council was constructing a mesh enclosure to protect these items.

Stack Talk 84

W.H.HECK & SONS PTY LTD, ROCKY POINT MILL, WOONGOOLBA 610mm gauge

(See LRN 11 p.7)

As predicted, John Fowler 0-4-0WT 16249 of 1923 was returned to Gilltrap's Museum, Kirra Beach, on 18 December. However, the other steam loco formerly on display at Gilltrap's was moved to Rocky Point for restoration later the same week. This is *Maroochy* Hudswell Clarke 0-4-2T 1078 of 1914, ex Moreton Central Mill, Nambour.

Bob Gough 12/79

MORETON CENTRAL SUGAR CO, MORETON MILL, NAMBOUR 610mm gauge (See LRN 13 p.20)

A visit on 11 December showed quite a lot of activity for the "slack". A

navvy gang was seen on the Petrie Creek line, involved in relaying in 60 lb rail, and resleepering on curves. Their train, consisting of a wide variety of service vehicles, was headed by E.M.Baldwin B-B DH *Coolum* (5565-1-10-74). At the River Depot, the bridge gang was seen returning from delivering track materials on the Coolum line, their loco being the former Innisfail Tramway (and Aramac Shire Tramway) Com-Eng 0-6-0DM, *Kalbo* (H1022 of 1958). The lifting bridge over the Maroochy River here, normally down during the crush, was in the raised position and had to be lowered to allow *Kalbo* to pass.

In tow was an interesting steel bogie flat wagon, recently built at the mill. Nearby, E.M.Baldwin 0-4-0DH *Valdora* (6-1258-5-6-65) was seen on the line between Bli Bli and River Depot, possibly on weed killing duties. At the mill, the other locos were seen around the mill yard, and a new loco shed was under construction. The locos have had to stand in the open for some years now, after mill expansion had swallowed up the old shed. The new shed will be an extension of the old bin repair shop, with two roads, and a pit beneath each road. The bin repair facilities, it would appear, will be housed in a lean-to being constructed off the main loco shed. Tramline extensions to the Dunethim Rock line, along the south bank of the Maroochy River, are programmed in the long term to enable the rail transport of cane from the Yandina area.

Editor 12/79

MOSSMAN CENTRAL MILL CO. LTD, MOSSMAN 610mm gauge

(See LRN 8 p.9)

The new loco livery of bright yellow and light blue has been applied to all the locos normally used for cane haulage, the exceptions being 1 *Mowbray* 0-6-0DM Baguley 3378 of 1954, and 4wDM Malcolm Moore 1042 of 1943.

Ivy John Fowler 0-4-2T 15947 of 1922 previously preserved in the mill grounds was completely stripped down in a shed near the loco shed in mid-August, and its boiler was being hydraulically tested. It is believed that it will be retained in working order for use on special occasions.

Stack Talk 84

RACECOURSE CO-OPERATIVE SUGAR ASSOCIATION LTD, Racecourse Mill, Mackay 610mm gauge

(See LRN 8 p.11)

During August, E.M.Baldwin 2-2wDH 6-2612-2-11-68, now named *Road Runner*, was seen being converted to 4wDH by means of the addition of outside chains to power the leading axle. Outside sandboxes were also being fitted.

The programme of tramway extensions and upgrading was continued in 1979 with a start on tramway extensions in the Sunnyside area, where there has previously been some long distance cartage by road. This involves two bridges and some eight kilometres of track. In addition, a deteriorated bridge at Bakers Creek was to be replaced. During 1978, 742,310 tonnes of cane were crushed, almost all of it hauled on the mill's tramway system.

Sunshine Express 11/79

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (SA) INC. Various gauges

(See LRN 13 p.20)

Another Glenelg Railway Co. carriage has been discovered by the Museum. This car surfaced at Tranmere where it had been used as a home until the present owner decided to remove it. The car, No.24 (SAR 232) was originally a first class car and was only 39 ft long and had an all canvas inner roof which had been repainted red and blue grey, with gold flowers as trimming. The Museum was lucky enough to obtain both the doors and both the footplates, which are inscribed 'GLENELG RAILWAY CO,' and also several glass louvres with G.R. on them. Also obtained was a length of 'bridge' rail.

A narrow gauge (1067 mm) all steel louvre van, V 1990, was obtained from the ANR recently. This van, built about 1900, is the second oldest, and the oldest preserved. It had been in use on the Gladstone - Wilmington line. Because of its height, it had to be placed on well wagon WL 8200 for the journey down to Adelaide. It has been placed behind T class 4-8-0 (Walkers 278 of 1917) and the water tank 5506, making a nice looking ex SAR narrow gauge train. V 1990 will be used for the storage of paint, thus relieving broad gauge N 251 of its duties.

Mile End Museum Newsletter, 12/79

VICTORIA

EMERALD TOURIST RAILWAY (PUFFING BILLY) 762 mm gauge

(P.O. Box 156, Belgrave 3160). (See LRN 13 p.22)

NA class 2-6-2Ts 14A (in two-toned green livery), and 7A (maroon) were in operation and hauling large loads on Sunday, 4 November. At Menzies Creek, a four-wheeled motorised work trolley and wagon were in use to carry and place concrete pipes for water reticulation from a building being erected on the platform. G class Garratt G42 (2-6-0 + 0-6-2 Beyer Peacock 6268 of 1926),

removed from the museum at Menzies Creek, stands on a siding along the line from the workshops at Belgrave. Owing to some vandalism, the loco will be moved nearer to Belgrave station.

(see LRN13)

BELMONT COMMON RAILWAY

As readers will know, operations have ceased here, and the GSPS have concentrated their efforts on the BPR (see below). Some items still remain here, however, and on 3 November our correspondent found *Klondyke*, the 0-4-2T (Perry 271 of 1927) ex Victorian State Rivers & Water Supply Commission, Hume Weir construction, and Pioneer Sugar Mill, Queensland, in the workshop and had just been finished painting in a royal blue livery, with the straw coloured lining still to be added. The loco has been fully restored and is in operating condition. *Wesley B. McCann*, the 0-4-2ST (Hudswell Clarke 646 of 1903) ex Wallaroo & Moonta Mining & Smelting Co., South Australia and Australian Cement Ltd, Fyansford, is presently stored in the works, fully operable. Also remaining at Geelong and stored in the compound at the end of the line are ex Queensland Railways 'red' railmotor RM76 (Ipswich Workshops of 1934) and passenger/luggage trailer PL127 (Ipswich Workshops of 1937). In an excellent gesture of inter-Society co-operation, Steam Trains Pty Ltd of Kurrajong, NSW, have donated 12 sheets of window glass and all the seats from their two ex Queensland Railways passenger/luggage trailers PL121 and PL122 to the BPR for eventual use in their PL127.

Len King 11/79

BELLARINE PENINSULA RAILWAY 1067 mm gauge

A visitor to the BPR on 3 November found the members' working party busily regauging the 5 ft 3 in gauge to 3 ft 6 in at Drysdale, leaving only a large curve nearer Queenscliff to be regauged by the work scheme group. Regauging of main line to Drysdale has been completed but remains to be consolidated.

At Queenscliff, T class 4-8-0 No.251 (Walkers 276 of 1917) ex South Australian Railways, was in the temporary workshop, and had recently had its main steampipe replaced. It later passed its boiler inspection after a new tube had been fitted, and was expected to be steam tested and perform a light engine trial early in December.

M class 4-6-2 No.6 (Robt.Stephenson & Hawthorn 7429 of 1951) and PB15 class 4-6-0 No.454 (Walkers 99 of 1909) ex Tasmanian and Queensland Railways respectively, stood parallel at the station throat. PB15 454 is currently awaiting its boiler inspection, with new firebars to be cast and fitted and the spring hangers to be adjusted. M 6 is serviceable and performing well.

The station track was full of ex-Tasmanian carriages in various stages of restoration or as delivered from the southern State. ABL 14, AAL 9 and BBL 5 require the roof vents refitted, AAL 9 is being repainted and having window re-glazing and internal work, BBL 5 is having a lot of work being done on it both inside and out, and 450 (ex SAR) is being refitted with newly re-upholstered seats.

The station buildings at Queenscliff have been repaired and repainted and look attractive. The turntable at Daylesford, central Victoria, has been purchased from the Victorian Railways but is still at that site. It will be installed at Queenscliff whilst a triangle will eventually be laid at Drysdale.

It was recently found that Section 36 of the Tramways Act as it currently stands, could prevent the Society from charging the public for rides on the railway and a deputation from the Bellarine Shire Council met the Minister for Local Government to discuss the problem. The deputation submitted a proposal to the Minister whereby the Tramways Act, which comes under the Minister's jurisdiction, would be amended to overcome the problem. Some support for such amendments has also been forthcoming from other Ministers, and it is expected the necessary legislation to amend the Act will be passed during the current session of Parliament.

A special members' train, the first passenger train to traverse the whole line since 1976, was expected to be run on Saturday, 8 December, but this time the train will be operating on the "correct" gauge. Train operations on a regular basis, between Queenscliff and Laker's Siding, are expected to commence as from Saturday, 15 December, and will run every Saturday, Sunday and Public Holiday. It is hoped that the Society will be able to operate each day between Christmas and New Year and some midweek days during January.

*The Echo 17/11/79 per Dick Hope, Len King 11/79,
Monthly Notice of BPR 12/79*

SANDHURST TOWN MANAGEMENT PTY LTD, EAGLEHAWK 610mm gauge

(See LRN 8 p.13)

A visit on 1 November saw no operation of the railway, laid with 80 lb rail and widely spaced sleepers. Ruston & Hornsby 0-4-0DM 305328 of 1954 was coupled to the ex-Brisbane tram 146. Perry 0-6-2TT 7967.50.3 of 1950 still shows a sign "This loco in operating condition", but parts were missing from

the motion and obviously no work had been carried out for a long time. Hudswell Clarke 0-6-0 1553 of 1925, formerly Macknade No.4, was in a similar condition, but there was nobody on the site who could give information as to whether the boiler had been tested. All stock is stored under cover, except for the parts of four 4-wheel motorised trolleys, three at least of 2 ft gauge (probably ex CSR Victoria & Macknade Mills - Ed.). Hudswell Clarke 0-6-0 1555 of 1925, on display by the gate, stands derelict and vandalised.

Len King 11/79

STATE ELECTRICITY COMMISSION OF VICTORIA YALLOURN 900 mm gauge

On the ABC T.V's Gippsland news on Thursday, 29 November, it was announced that the "temporary" railway at the first site at the S.E.C's brown coal open cut was to be replaced by a conveyor belt. The other two levels were to be replaced progressively by November 1980.

(Perhaps some member would like to make a detailed report on operations here before it is too late - Ed.)

John Peterson 12/79

WALHALLA & THOMSON RIVER STEAM TRAMWAY, Walhalla 762 mm gauge

(See LRN 10 p.13)

The 0-4-2ST loco (yet to have a front truck fitted) was operating over the 300 yards of railway in fine form on Tuesday, 6 November. The locomotive, supplied in 1886 by the French company of Decauville (Builder's number 43 of 1886) to the Metropolitan Gas Company in Melbourne as an 0-4-0T, was in fact built by Couillet in Hainault, Belgium (B/No.861 of 1886). Placed out of use in the 1930s, it was eventually purchased by Ron Kain and rebuilt as a Yankee-style saddle tank.

Having disappeared around a small bluff, the loco is put into forward gear and full open regulator. With loud "W" class whistle blasts, the loco charges into sight hauling its one bogie open gondola, with a capacity of 28 seated people. Bringing the loco and wagon to a halt is done simply by reversing the gear. The cab is painted dark blue, with the boiler and saddle tank black, running board edged in red, and motion polished steel. The wagon has varnished bodywork, with varnished slatted seats. The brick-built station building is virtually complete, with the awning to be completed, and the toilet facilities and sales/ticket office to be finished.

Timbers are on hand for the rebuilding of the trestle bridge across the river near the loco depot and station, then work can commence on the rebuilding

of the line along the Thomson River valley for 2-1/2 miles on the old formation.

HOTHAM VALLEY RAILWAY

PINJARRA, W.A.

It seems to be the year for "Back to" celebrations in Western Australia for, following the success of the "Back to Yarloop" trip, the Society also participated in the "Back to Collie" celebrations in October by running a special train consisting of W class 4-8-2 No.945 *Banksiadale* (Beyer Peacock 7457 of 1951) and both Westrail and Society -owned stock to Collie on 6 October.

W945 hides
W920 and

curves
found on
the way to
Dwellingup
from Pinjarra
*Photo: L.
Watson*

Also in October, on the 28th, the Westrail Social Clubs chartered a train from Westrail and chose as their destination Dwellingup and requested the use of two W class between Pinjarra and Dwellingup - in this case W 903 *Marrinup* (Beyer Peacock 7380 of 1951) doubleheaded with W 945 and was the first occasion that a tour was run to Dwellingup without W 920 *Sir Ross McLarty* (Beyer Peacock 7397 of 1951).

Another first for the Society was the running on 21 October of two trains on the one day, with three locos in steam. On this occasion W 903 was officially named by Murray Shire Council Chairman, Sam Giles, and worked a VIP special to Dwellingup on this its first trip in service with the Society. The normal Sunday train from Perth followed the special worked by W 920 and W 945.

The Society recently and successfully tendered for the purchase of some of the ANR's Tasmanian coaches and these included SS class Nos.1, 4, 5, 8 and 9, SSS class No.1 and a DP railcar No.21. The steel coach underframes originally were fitted to wooden bodied cars supplied by the English Bristol Carriage Co. and entered service early this century. The existing light steel bodies on a light steel frame were constructed in 1955-56 in the case of SS class and 1964 for the SSS. Both types were used in loco hauled suburban service sets in Hobart until 1974. Some modification to the vehicles will be necessary to adapt them for service in WA. During the trip by Society members and consultants to Tasmania, the Society successfully arranged the swap of their SS 5 with the Kingsborough Council for their SSD class No.1 which is basically an SS type fitted with a guard's compartment at one end. Inspection of the railcar DP 21 revealed many shortcomings and it was therefore decided not to proceed with the purchase of this vehicle. After a journey by sea from Tasmania, courtesy of ANL (three vehicles free and the rest at reduced price), the vehicles all arrived at Pinjarra by special train on 24 November.

Restoration work continues on the locos and rolling stock. G 71 in maroon livery remains a favourite but problems are encountered in finding a suitable replacement boiler, and it will indeed be unfortunate if this historic 4-6-0 (Dubs 3495 of 1897) will not be able to run again.

For those with an interest in carriages, the running numbers of the recently leased AZ class sleeping cars from Westrail are 433, 434, 435, 436, 438, 439 and 440.

Pinjarra Steam Express 10-11/79, Here and There 11/79

KALGOORLIE - BOULDER LOOPLINE RAILWAY 1067 mm gauge

(See LRN 10 p.14)

This group has leased buffet car AYS 460 *Colgoola* from Westrail for

preservation at Boulder station. *Colgoola* was last used on the *Albany Progress* service and will find a renewed life as an exhibit and refreshment car at Boulder. 460 received its name when it was in use on express services to Kalgoorlie but in later years has not carried the name.

David Whiteford 11/79

LEONORA - GWALIA MUNICIPAL TRAM 1067 mm gauge

Leonora Municipal Tram No.1 is undergoing restoration at the Eastern Goldfields Technical College for eventual display at Leonora. This electric tram was first used in 1908 but ended service in 1915 when fire destroyed the tramway powerhouse. In 1958 the four-wheel bogie was scrapped and the body used as a backyard bedroom. Its owner, Mr Gordon Leaney, has donated the tram to the Leonora Tourist Committee.

DIRECTORY

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY

Margaret Street, Woodford Queensland

Secretary: David Mewes, P.O. Box 270, NORTH QUAY Qld 4000

Meetings: Fourth Thursday each month, January to November at Room 19, Archibald Court, 21 Adelaide Street, Brisbane, commencing 8.00 pm

Work parties: Every Sunday at Woodford

Open Days: First Sunday of month and public holidays.

Annual subscription: Not fixed for 1980, but tentatively \$8.00 Full and \$5.00 Junior. \$160.00 life.

Phone enquiries: (07) 273 2014 (David Mewes)

Aims: Preservation of equipment from narrow gauge railways (mainly 2 ft gauge) Development and operation of Durundur Railway at Woodford as an operating museum railway.

CASTLEMAINE & MALDON RAILWAY PRESERVATION SOCIETY

P.O. Box 246, CASTLEMAINE Vic 3450

Secretary: Vance Findlay (Address as above)

Annual subscription: \$5.00

Phone enquiries: (03) 29 2804

Aims: To operate steam-hauled tourist trains on the 5 ft 3 in gauge Castlemaine- Maldon Railway.

GEELONG STEAM PRESERVATION SOCIETY

Queenscliff railway station, Victoria

Secretary: Royce Jowett, P.O. Box 166, BELMONT Vic 3216

Work parties: every weekend based at Queenscliff station.

Trains run: Bellarine Peninsula Railway scheduled for reopening on regular

basis from November 1979. Weekends and public holidays.

Annual subscription: Adult \$8.00, Pensioners and children 14 and under 18 \$5 00

Phone enquiries: (03) 743 6770

Aims: Collection of 3 ft 6 in gauge locomotives carriages and railcars from throughout Australia. Operation of Bellarine Peninsula Railway as an operating museum railway. 16 km (10 miles) of track between Drysdale and Queenscliff. Line regauged from 5 ft 3 in following closure by Vic Rail.

HOTHAM VALLEY TOURIST RAILWAY W.A. INC

P.O.Box 197, Pinjarra WA 6208

Secretary: Colin Taylor (address as above)

Meetings: 8.00 pm, 1 February and 4 April at Scouts Hall, St.Kilda Road, Rivervale

Work parties: Every Sunday at Pinjarra.

Trains run: Second and fourth Sundays in May, June and July. Every Sunday in August, September and October,

Annual subscription: \$8.00

Phone enquiries: (09) 447 1412 (John Purcell)

Aims: To preserve and operate steam hauled trains on the scenic 24 km branch line from Pinjarra to Dwellingup.

HUNTER VALLEY STEAM RAILWAY AND MUSEUM

P.O. Box 125, Broadmeadow NSW 2292.

Secretary: Keith Jones (address as above)

Annual subscription: \$20.00

Phone enquiries: (049)53 2736 (6.00 to 10.00 pm)

Aims: To reopen Glenreagh to Dorrigo Railway, operate steam hauled museum trains, establish large static display of steam and railway items.

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY

Tongara Road (near Station Road), ALBION PARK RAIL NSW 2527

Secretary: Tony Madden, P.O. Box 1036, WOLLONGONG NSW 2500

Meetings: 7.45 pm, Monday 11 Feb. (tentative), A.I.S. Visitors Centre, Springhill Road, CONISTON (near Steelworks gate). All welcome.

Work parties: Every Saturday at Museum, mid-morning to dark and some weekdays/Sundays at museum..

Trains run: Second Sunday every month, 11.00 am to 5.00 pm. Admission free. Train and tram rides 20c, working steam engines, souvenirs, refreshments, children's swings, picnic barbecue area..

Annual subscription: Full \$8.00; Junior \$2.00

Phone enquiries: (042) 95 1776 (Operations manager)

Aims: Preservation of local and national items of light railway interest, and operation where possible on the Museum's 2 ft gauge railway.

LIGHT RAILWAY RESEARCH SOCIETY OF AUSTRALIA

Secretary: E.G. Stuckey, P.O. Box 21, SURREY HILLS Vic 3127

Meetings: 8.00 pm, Thursday 14 February at Ashburton Uniting Church Hall, Ashburn Grove, Ashburton

New South Wales Division: Secretary: R. Mason, P.O. Box 290, BURWOOD NSW 2134

Meetings: 7.30 pm Wednesday 27 February at Conference Room, Rechabite House, 85 Campbell Street, SURRY HILLS

Annual subscription: \$5.00 (*Light Railway News* extra \$4.80)

Phone enquiries: (03) 830 1640 (Frank Stamford), (02) 771 3929 (Paul Simpson)

Aims: Research into operating and closed light railways in Australia. Publication of quarterly historical journal *Light Railways*, publication of books, maps, drawings etc.

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC

P.O. Box 237, Cloverdale WA 6105

Secretary: David Whiteford (address as above)

Annual subscription: \$4.00 (\$1.00 joining fee)

Phone enquiries: (09)277 7249 (Secretary)

(09)274 1547 (Vice-chairman)

Special events: Annual dinner, April or May

Outings to centres of railway interest

Aims: Preservation and/or operation of light railway rolling stock and equipment, the preservation of archival material and research into light railways of Western Australia.

ZIG ZAG RAILWAY CO-OP LIMITED

Site of the Great Zig Zag, near Lithgow NSW

Postal: P.O. Box 196 HORNSBY NSW 2077

Secretary: Ian Thornton

Meetings: 7.30 pm at Transport Institute, Devonshire Street Central (Opposite Central station) on 22 January 1980.

Work parties: Every Saturday and Sunday, also Public Holidays.

Trains run: every Saturday, Sunday and Public Holidays,
Annual subscription: \$10.00
Phone enquiries: (063) 51 4826

Aims: To eventually extend the railway from Top Points to the Bell Road and on to Clarence. Restoration of locomotives and carriages is a continuous activity.

Mr J. Browning, P. O Box 111, INDOOROOPIILLY Qld 4068

EDITORIAL

In the August 1979 edition of LRN we stated that it was the intention to make LRN Australia's national railway preservation magazine. Ten preservation societies approached by us about this concept were enthusiastic about the need for such a magazine, but only one Society has made a serious attempt to sell the publication to its members. Over half the members of that Society have expressed a wish to subscribe to LRN.

Sales of LRN to other preservation societies have reached only about 2 - 3% of their membership

Support from preservation societies in the form of contributions for publication have been most encouraging, but without sales LRN is not viable. In the current financial year LRN has made a loss of approximately \$1200. With the expectation of a further loss of \$1000 next year the LRRSA Council has reluctantly decided that it must withdraw support for a national

Front cover and above: 2 ft gauge Haine St.Piere B/No. 461 of 1894 ex Peak Hill Gold Mine, at Meekatharra, WA, 1979. (See Peak Hill).

Photo: P. Bindon

preservation magazine, as losses of this magnitude threatened the Society's other activities.

Light Railway News will continue publication in the form of an eight page printed news letter, and will be available only to members of the LRRSA.

The Council recognizes the excellent work of the editor, John Browning; and Assistant Editor, Ray Ellis in producing a publication of such a high standard, against tight deadlines which they have always met. We hope that LRRSA members will continue to support them by submitting contributions to LRN.

(Frank Stamford, President, LRRSA)

GOULBURN STEAM MUSEUM 610 mm gauge

(see LRN 13 p.9)

The F.C.Hibberd 4wDM B/n 2380 of 1941, and bogie passenger carriage have been on *hire* from the former Colo Vale group. The loco was purchased by the Goulburn Steam Museum on 11 February 1980 but the bogie carriage remains

on hire for a further six months. The carriage is required for eventual use at Menangle later this year by the Sydney Light Railway Society (see LRN 11 p.5).

Paul Simpson 2/80

HUNTER VALLEY STEAM RAILWAY AND MUSEUM

P.O. Box 125, BROADMEADOW, NSW 2292

(see LRN 14)

The decision has been made to commence the movement of equipment to the Dorrigo-Glenreagh line. After some items have been moved by road to Dorrigo, the reconstruction train will go to Glenreagh to enable work to be done to reopen the line so that equipment can be moved in by rail from Newcastle to Dorrigo. Further weatherproofing work will be done to the stock to prevent further deterioration before the line is restored to good order and public services can commence.

The first steps in this programme were made during January when 0-4-0ST *Juno* (Andrew Barclay 1739 of 1923) was steamed at the Newcastle storage site to marshall vehicles into position to form the construction train. In addition, 2-8-0 5069 (Beyer Peacock 4374 of 1902) was positioned for boiler exam and mechanical repairs. This loco will be the one used on the reconstruction train. It was expected that the first loco at Dorrigo will be 0-4-0ST *Corby* (Peckett 2047 of 1943), which was due to be transported so as to be able to take part in the Dorrigo show on 25 and 26 January. She was receiving a full repaint during January in preparation for the journey.

0-4-0 Crane tank 1068 is to be purchased for the museum, being the 30th locomotive acquired. It was built by R. & W. Hawthorn, Leslie & Co. Ltd. in 1923, builder's number 3564. It is currently stored at the Cardiff Locomotive Workshops in Newcastle.

On 2 January, it was learned that a bogie tank wagon had been donated to the museum by Emoleum (Australia) Ltd. This is a most pleasing acquisition, as unlike most such vehicles it has not been modernised and retains plain bearings, riveted tank and frame and even spoked wheels. Formerly owned by Mobil Oil, its number is MOA142.

Early loads of equipment to arrive at Dorrigo during December were three water columns from Taree loco depot and 69 tons (!) of firebricks.

Keith Jones 1/80

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY

MUSEUM: Tongarra Road, Albion Park. (open 2nd Sunday, each month)

CORRESPONDENCE: P.O. Box 1036, Wollongong 2500

(see LRN 14)

Two recent major events at Albion Park were the Australia Day weekend visit on Sunday, 27 January, by delegates to the L.R.R.S.A. Annual Convention in Sydney, who were joined on their coach by a number of NSW Division members. The I.L.R.M.S. decided to make this day an additional public Open Day, in order to show the official guests the Museum in full operation, with the exception of the stationary boiler, the latter being due to a staff shortage. This day also saw the first steam hauled operations on the main line extension to "Yallah" station, completed only the previous day. This was also the first time for double headed working, using *Kiama* (Dav.0-4-0ST) and *Cairns* (H-C 0-6-0). On this occasion passengers were still loaded at the Tongarra Road terminus, trains only stopping at "Yallah" to reverse. As the Open Day had not been publicised as broadly as usual, it was gratifying that over 400 members of the visiting public were carried.

The second event of note was the Museum's second Charity Day held on Sunday, 10 February, when the guests and beneficiaries were the pupils of Tawara School, Shellharbour, who are handicapped. Courtesy of various manufacturers the Museum were able to provide refreshments as well as free rides for the children and a cash donation of \$100.00, presented on behalf of the Museum by two Councillors. A party of members of the Sydney Tramway Museum at Loftus, arriving in one of their restored double-decker buses, helped to make the day's attendance an all time record, and of course were particularly intrigued by ILRMS Treasurer, Richard Youl's 2-ft gauge half-scale Birney tramcar. Traffic arrangements were altered so that visitors could either ride the tram or walk to "Yallah" to board trains, which operated the "we" pattern begun the previous Open Day with the opening of the extended main line, but no longer loading at the entrance and stopping short of the entrance road crossing to reverse.

The Museum's second passenger carriage was completed to underframe stage free by Allied Constructions using ex-Ruoak Timber bogies purchased some time ago by the ILRMS, and Society made swivelling equipment, and was delivered to the site in early January, where it was rapidly painted and received the shell of the former 1918 International bus body, purchased several years ago for this purpose. The short body will form the centre saloon section for the intended "California car" tram-style body now being built on the new frame. In December, two additional wagons arrived from South Australia, a further covered "Explosives" van and an open wagon derived by removing the top half of a similar unit in times past. When restoration is completed these items will form a neat demonstration train of the type.

Tony Madden 2/80

LACHLAN VINTAGE VILLAGE, FORBES 610 and 1435 mm gauge

(see LRN 13 p.10)

An advertisement in the *Sydney Morning Herald* of 12 January 1980 called for tenders to operate this "\$1.5 million tourist complex", and lists "operational steam locomotives" amongst its various attractions (presumably referring to the 2 ft gauge system). Tenders closed on 31 January, and it will be interesting to see whether any individual or organisation can make a success of this ill-fated project.

Sydney Morning Herald 12/1/80 via Paul Simpson

LILYVALE MUSHROOMS, HELENSBURGH 610 mm gauge

On 28 January, the NSW Division of the L.R.R.S.A. paid a visit to the mushroom tramway located at Helensburgh, located 46 km south of Sydney. Mushrooms are grown in the old Helensburgh No.2 tunnel which was abandoned by the N.S.W.G.R. in 1914 when the South Coast Railway was deviated to easier gradients.

The tramway is used to transport bags of pasteurised straw and peat, in which the mushrooms grow, and boxes of picked mushrooms. Most of the tramway is laid on the old railway formation, the total length being about 1/2 km, the majority of which is in the tunnel. The trackwork consists basically of

portable mine track, that is short lengths of rail welded to 3 plate steel sleepers and this is set in concrete.

Diesel loco at Lilyvale Mushroom Farm, Helensburgh NSW

Photo: D.J. Mewes

Petrol loco at the same location

Photo: D.J. Mewes

Facilities at the terminus are as shown in the diagram. The line serving the pasteurising shed is laid above the old cutting and is reached by short sharp gradients at each end.

Motive power consists of two home made four wheel chain drive locos. One is a petrol loco, the other is powered by a Toyota diesel engine. Rolling stock consists of five four-wheeled extended wheelbase trolleys which carry the trays used in moving the bags of straw and peat and the boxes of mushrooms. Additionally there are three long wheelbase flat wagons and one derelict skip.

A shorter tramway exists at Lilyvale No.6 tunnel 4 km to the south, and a loco can be transferred by road to this tramway when required. A third tramway at Helensburgh No.3 tunnel is not currently in use.

David Allen 2/80

Looking along the Lilyvale Mushroom Farm tramway, from the north portal of the Helensburgh No 2 tunnel

SIMSMETAL, MASCOT 1435 mm gauge

(see LRN 13 p.15)

A site inspection here on 12 December revealed only two locos, the Yorkshire Engineering 0-6-0DE (2617 of 1957), and 83, Ruston & Hornsby 0-4-0DM (313393 of 1952 Type 165DS). Both locos were in the Simsmetal livery

of Orange roof, White body and Blue base, a colour scheme they have had for many years. Mr Barry Clarke of Simsmetal confirms that 82, Ruston & Hornsby 0-4-0DM 310085 of 1952 was cannibalised for parts for 83, and subsequently its remains were cut up in November 1979, together with the Tulloch 0-4-0DM of 1958, thus leaving only two locos to work the sidings.

Paul Simpson 2/80, David Allen 2/80

ZIG ZAG RAILWAY

P. O. Box 196, HORNSBY, NSW 2077

(see LRN 13)

The Zig Zag Railway is most fortunate in that its operations are not dictated to by Bush Fire Restrictions. As such, we operate on every weekend throughout the year, together with week day running during selected school holiday periods.

Since the Railway commenced operations during October 1975, the Society has carried in excess of 200,000 passengers. For the year following the inaugural trip, ex Queensland DD17 4-6-4 No.1046 provided the motive power until restoration work on sister engine 1047 was complete to allow this latter engine to take over. For a brief time, both engines were in service together, providing the unique spectacle of Double Heading DD17's. 1046 is currently completing a thorough overhaul thanks to the tireless devotion of several members. During February, engine 1047 received a complete repaint.

The Society is the proud owner of a Track Tamping Machine acquired from Western Australia, the use of which has enabled a very professional ballasting operation to have been undertaken, not only improving the look of our trackwork but providing better riding qualities for our patrons.

Restoration work on ex SAR Carriage No.390 is well advanced, all side panels having been replaced by aluminium sheathing and interior rebuilding well underway.

Although not Railway Activities, the Society, during June and July 1979, operated two "Aerial Adventures" to Central Australia using Qantas 747B Jumbo Jets, both of which were completely booked out. Success has inspired a desire for a similar trip to Cape York via the Whitsunday Passage during March or April 1980.

Plans are presently being formulated for the construction of a shed to provide cover for our locomotives and rolling stock to enable all year round restoration and protection from Lithgow's temperamental climate. An appeal has been started for funds to assist in the construction, and any enquiries or assistance should be directed to P.O. Box 187, Lithgow 2790.

Stephen Halgren 2/80

QUEENSLAND

THE AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY

Incorporated in Queensland as Non-Profit Company

P O Box 270, NORTH QUAY. 4000

(see LRN 14)

The summer heat has brought about a slowdown of work at Woodford, but progress has continued. Work has continued on the laying of storage tracks and, in addition, a 60 lb point has been laid out and partially prepared for laying as the link from the main line to the storage area.

Permission has now been received to begin regular public running and this will take place on the first Sunday of the month and on Public Holidays. A special running day was to be held on 2 March, and it was expected that guests from the Brisbane Tramway Museum Society, the A.R.H.S. Queensland Division, and the residents of the Caboolture War Veterans' Home would be present.

The Society has recently purchased two water tanks from the Moreton Central Mill, and it is hoped that they will be dismantled during the Easter period. One will be installed at Woodford. A recently-demolished railway bridge, being replaced in connection with the electrification programme in Brisbane, has been acquired, and has yielded bridge beams and timber decking suitable for use as sleepers.

During January, the regulator valve of the ex-Pleystowe Mill Bundaberg Foundry 5 of 1952 was removed for machining to correct a leak.

AUSTRALIAN RAILWAY HISTORICAL SOCIETY QUEENSLAND DIVISION, BEENLEIGH 1067 mm gauge

(GPO Box 682, Brisbane 4001) (see LRN 14 p.14)

The first steam locomotive for the museum project has been acquired. It is D17 855, a 4-6-4T built for suburban service at Ipswich Workshops in 1938 (B/n.155). It is currently displayed in a park at Murgon by the local Chamber of Commerce, but it is expected to be returning soon to a location rather closer to its former haunts. Meanwhile, work has been going on at Beenleigh. The Gardner motor of RM55 has been started and restoration is proceeding on its timberwork. Much restoration has been done also on the petrol locomotive *Tiny*.

Editor 2/80

THE HAUGHTON SUGAR COMPANY LTD, INVICTA MILL, GIRU 610 mm gauge

(see LRN 10 p. 9)

By mid-November, work was well advanced in the construction of the Steepy Banks-Dalbeg extension of the tramline, being built by the Upper Burdekin Co-operative Association Ltd. The existing line 40 km in length was built from the mill in 1964-5 to a high standard and includes a 120 metre 13-span concrete bridge over the Haughton River. The new line represents the first major positive reaction to the fuel crisis; the farmers around Millaroo and Dalbeg have found the cost of road transport to the railhead at Steepy Banks to be such that they have agreed to a levy for the construction of the \$4 million line.

From the existing railhead the line follows the Burdekin River for a few kilometres before entering an area of fairly rugged country. Here the magnitude of the construction task becomes readily apparent as very impressive earthworks have been necessary to protect the line from the big floods which regularly occur. Earthworks were still under construction at the time of the visit, but a 200 metre pre-stressed concrete bridge over a large creek was nearing completion. In other sections, tracklaying was virtually complete except for final ballasting.

Bob McKillop 1/80

MARIAN MILL CO-OPERATIVE SOCIETY LTD, MARIAN MILL 610 mm gauge

(see LRN 13 p. 19)

Further details are to hand about the Gemco-Funkey 4wDM loco obtained by the mill second-hand last year. It was indeed one of a number of 2 ft gauge diesels which worked at the Lake View and Star Mine, Kalgoorlie. Built in 1965, the loco has a Gardner 112 bhp engine coupled to epicyclic gearbox and chain transmission. Following closure of the mining operations on the Golden Mile in 1975, the Gemco-Funkey and a "Planet" were stored at Finniston until disposed of in 1979. The Planet has gone to the Kalgoorlie-Boulder Loopline Preservation Group (which see for further details).

Brian Smith 1/80, L.G.Watson 2/80

THE MILLAQUIN SUGAR CO. PTY LTD, QUNABA MILL 610 mm gauge

(see LRN 13, p. 20)

Official confirmation has been received that Qunaba will be dieselised in 1980. It is proposed to reorganise the loco fleets of the other mills in the Bundaberg Sugar group (Millaquin, Bingera, Fairymead), to make one loco available for Qunaba. In addition, a four wheel chain drive mining diesel is to be obtained from the Giru area, which will be refurbished for cane haulage work. (Could this be a loco used by the contractor on construction of the Steepy Banks Dalbeg tramline? Ed.) The three Bundaberg Fowler locos will be retained on standby for Millaquin and Qunaba, and have been receiving

attention in the shed. The remaining steam locos have been removed by crane to a short length of isolated track. Although Perry 0-6-2T *Flash* (6140.40.1 of 1940) had received a new boiler at the start of 1978, serious problems of leakage around the firebox door have meant that the loco had to be withdrawn along with the other Perrys.

An ABC News team visited the mill during October and spent a day filming operations, also paying a visit to Millaquin Mill. Their efforts have gone into a "Weekend Magazine" segment 9 minutes in length, which was completed by early February, but which had not yet gone to air in Queensland at least at the time of going to print.

Alan Robert 2/80, Editor

SUNCOAST PIONEER MUSEUM, MUDJIMBA BEACH 610 mm & 1067 mm gauge

A John Fowler 0-4-2T, until recently in open storage nearby, has been placed unrestored on display at this museum, where it presents rather a sorry sight. It is *Petrie*, Fowler 19930 of 1933, which was originally delivered to Babinda Mill, but was sold to Moreton Mill, Nambour in 1960. Formerly acquired for Cox's Museum, Maroochydore, about 10 years ago, this relatively modern locomotive has deteriorated markedly. Also on display at the museum, under cover, is a 3 ft 6 in gauge Rail Ambulance which is in quite fair condition. Previously on display at the Ebbw Vale Glideway service station at Ipswich, this vehicle worked at Charleville until the 1950s, dating back to about 1920.

Editor

Petrie, John Fowler 0-4-2T (B/No.19930 of 1933) on display at the Suncoast Pioneer Museum, Mudjimba Beach, December 1979.

VICTORIA

GEELONG STEAM PRESERVATION SOCIETY

REGISTERED NON-PROFIT ORGANISATION

Licensed by the Attorney General under Section 24 of the Companies Act, (Victoria).

P O Box 166, Belmont, Victoria 3216

(See LRN 14)

Regauging of the Bellarine Peninsula Railway was completed through to Drysdale in mid-November. The track gang which had been employed since August 1978 was laid off on 30 November 1979. Their last few weeks were spent completing the redogging and fettling of the track between Mannerim and Drysdale. Locomotive M6 worked a number of weekday ballast trains to keep the gang supplied with metal. Estimated time for construction work from Laker's Siding to Drysdale had been 42 weeks with no allowance for poor weather. The actual time taken was only 2 weeks longer.

On Sunday, 25 November, M6 operated a ballast train which members discharged near the Mannerim bridge. The empty wagons were then pushed through to Drysdale and M6 became the first Society locomotive to steam into Drysdale, just three years since the last train ran on 6.11.1976. The whistling of the locomotive as it approached the town drew quite a crowd to the station. The Shire of Bellarine had donated a 1,000 gallon steel tank which they loaded onto a flat wagon the previous Friday. The flat wagon and tank were hauled back to Queenscliff on the return journey to allow them to be prepared for use in weed spraying the track.

A major development was the granting by Vicrail of permission to operate between Queenscliff and Drysdale subject to the use of a flagman at level crossings. Attempts to amend existing Victorian legislation to enable the Society to operate the line have been continually delayed by public service lethargy. We now intend to draft separate new legislation to cover the long term operation of the line. The requirement to use a flagman at level crossings could have created a problem of both cost and an inability of Vicrail to supply one as frequently as we would require. Agreement was reached with Vicrail for Society crews to act as the flagman. This great continuing co-operation from Vicrail enabled arrangements to be quickly made for regular operations to commence

A test run was operated from Queenscliff to Drysdale on Saturday, 8 December 1979, conveying members and friends. The trip was an enjoyable reward for the great deal of work put into the project during the past three years. The following day, a train load of invited guests enjoyed the first 'official' trip through to Drysdale and return. The train on both days was hauled by M6

and created considerable interest during the journey and whilst at Drysdale.

Quite an amount of work remains to be carried out at Drysdale. Trackwork in the station yard is to be completed, the platform facing reinstated and a station building provided. Railway facilities will then be complete, leaving the development of a museum complex on the surrounding land to be undertaken during the next few years.

Re-opening of the 11.5 km (7 mile) section from Laker's Siding to Drysdale is planned for later this year. Meanwhile, regular train operations commenced on Saturday, 15 December 1979, on the 4.5 km (3 mile) Queenscliff to Laker's Siding section. Trains operate every Saturday, Sunday and Public Holiday, commencing at 12 noon on Saturdays and 10 am on Sundays and Public Holidays. The last train departs Queenscliff at 5 pm on each day.

During eleven running days in December, 4,235 passengers were carried. January 1980 saw 10,874 passengers travel on 16 running days, bringing a progressive total of 20,839 passenger journeys at 31 January 1980. Previous passengers travelled on trains run during the Centenary weekend in May 1979, and in September during the school holidays.

The Belmont Common Railway is yet to see its last locomotive in steam. *Klondyke* and No 6 still reside there (See p 5, LRN No 14, Feb. 1980). *Klondyke* (Perry 271 of 1927) has undergone a lengthy restoration spread between a number of other restoration and maintenance jobs over several years. For quite some time it consisted of little more than a frame with cylinders and boiler attached gathering dust in the shed at Belmont. During the latter part of 1979 a small dedicated team devoted themselves to the task of completing the restoration of *Klondyke*.

The result of their fine efforts was publicly aired when *Klondyke* was paraded through the streets of Geelong in steam as an exhibit in an annual street procession held every November. The loco looked immaculate, complete with polished brass dome and attracted special applause from the thousands of people lining the procession route. *Klondyke* returned to Belmont for some final finishing touches and safe undercover storage with No 6 until similar space is available for them on the Bellarine Peninsula Railway.

Michael Menzies 2/80

WESTERN AUSTRALIA

BRISBANE & WUNDERLICH LTD, BELMONT 610 mm gauge

(see LR 59, p.21)

The old tramway incline leading from the clay drying pits to the discharge

bins at this pipe works was removed during November/December, coinciding with the completion of an overhead conveyor belt over the new main road, Daly Street. The conveyor is the successor to a winch hauled tramway which ceased operations in 1975. Temporary transport arrangements for the clay since 1975 was in the form of a front end loader. The conveyor was constructed because of a reorganisation of main roads in the area of Belmont. Some of the old tramway rolling stock (standard triangular side tip hoppers) still lies in the company's yard.

David Whiteford 12/79

CARNARVON ROTARY CLUB 1067 mm gauge

Following the damage to the Busselton Jetty suffered as a result of Cyclone Alby in 1978, the Busselton Apex Club's "Jetty Lady" train (see LRN 3 p.11) could not be used. It has now been purchased by Carnarvon Rotary Club at a price of \$2,000. The train consists of a rail wheeled mini-moke and two coaches, and will presumably be used on Carnarvon Jetty. Track at the head of Carnarvon Jetty is intact (although exact condition is unknown), and the bridges from Babbage Island to the mainland are intact, although minus rails.

The West Australian (Country Edition) 13.2.80, David Whiteford 2/80, L.G.Watson 2/80

HAINAULT TOURIST MINE, KALGOORLIE 610 mm gauge

On display here is "Planet" 0-4-0DM F.C.Hibberd 2011 of 1937. Formerly used at the Lake View and Star Mine, Kalgoorlie, it was placed on display at the Hainault mine in the early 1970s.

L.G.Watson 2/80

HOTHAM VALLEY TOURIST RAILWAY W.A. INC.

P.O. Box 46, GREENWOOD 6024

(see LRN 14)

On Sunday 21 September Hotham Valley Railway's loco W903 was officially named *Marrinup* by the President of the Murray Shire Council, Sam Giles. Overhauled and repainted by H.V.K. volunteers, this locomotive was making its first visit to Dwellingup where the ceremony was performed. The occasion was notable for the presence of 3 locos in steam in that town for the first time since the tourist railway commenced operations. It was also the first time H.V.R. had operated 2 trains on one day. From Pinjarra W903 hauled sleeping cars AQZ420 and 424, also buffet/saloon AQL290, plus Westrail brake van Z221, as a VIP special, preceding the normal Sunday train from Perth which was handled by W920 (*Sir Ross McLarty*) and W945 (*Banksiadale*) beyond Pinjarra.

Marrinup is the name of the scenic brook running down the valley through

which the bushland railway climbs from Pinjarra to Dwellingup. It was also the name of a sawmilling town situated on the brook from 1910 until 1930.

John Purcell 2/80

KALGOORLIE - BOULDER LOOPLINE PRESERVATION GROUP

P O Box 24, BOULDER, W.A. 6432

(see LRN 14)

Since commencing operations on 18.11.78, and running Sundays and Public Holidays, there have been over 8,000 passengers carried. The trip takes about one hour commencing at Boulder City, running to Golden Gate, from where the train runs back through Boulder City to Kamballie, before returning to Boulder City, a total of 6 km.

The railway reserve is leased from Westrail for a trial period of 2 years, and up to now services have been handled by two Wickham fourwheeled rail cars. The motor car is Wickham 5135 of 1950 of Type 40, built by D. Wickham & Co. Ltd. Ware, U.K. It is powered by a Ford V8 Pilot motor and was purchased by W.A.G.R. on 6.7.1950. The trailer car is Wickham 3941 of 1946, Type 40. Originally powered with a Ford V8 Pilot motor, it was fitted with a Perkins 4-cylinder diesel by W.A.G.R. It was purchased by the Midland Railway of Western Australia on 1.11.46 passing into W.A.G.R. ownership in 1964. It is currently leased from Coolgardie Ghost Mining Town Tourist Bureau. It is hoped that the service using these vehicles may be operated on some weekdays soon.

Locomotive haulage is to be introduced in the future. With this in mind, a "Planet" 4wDM locomotive, recently donated by Kalgoorlie Mining Associates, is currently being regauged from 2 ft gauge by VickersKeogh in Kalgoorlie free of charge. This loco was built in 1962 by F.C.Hibberd & Co.. in England for Great Boulder Mines, where it was used on ore transfer duties. Later it was at Kalgoorlie Lake View as reserve for a Gemco-Funkey now at Marian Mill, Queensland. Builder's Number is not known at present. It is planned to convert three H wagons to excursion cars with a sun roof and back-to-back seating for loco haulage. In addition, track-recorder car AL88 has been leased from Westrail for use as covered accommodation.

Buffet car AY5460, leased from Westrail for use at Boulder was incorrectly named *Colgoola* in LRN14. Apparently the correct name was *Albany*. As the car *Boulder* was preserved by the Great Southern Steam Association at Albany, an exchange of names seemed logical, so a joint renaming ceremony was held recently.

Bryan Smith 1/80, David Whiteford 2/80, L.G.Watson 2/80

KUNUNURRA 1067 mm gauge

Observed in a park opposite the post office during 1979 was the 0-6-0 petrol locomotive formerly NW3, once known as *Kaiser*, which worked at Wyndham Jetty (see LR 59). Observed at Wyndham derelict in 1966, the loco had gone, presumably to its present location, by 1974. Of uncertain German manufacture (Deutz? Ed.), it was marketed as a "New Century" locomotive by Ironside, Son & Dyckerhoff, and dates back to 1912.

Peter Bindon (Asst.Curator of Archaeology, W.A.Museum) 2/80, Editor

Kaiser, 3 ft 6 in gauge 'New Century' petrol loco of 1912, preserved at Kununarra WA, 1979. This loco was first used at Broome, and subsequently at Wyndham. (see p.14).

Photo: P. Bindon

SHIRE OF MEEKATHARRA 610 mm gauge

Standing on a short length of track outside Meekatharra Power Station is a diminutive 0-4-0T locomotive. It is believed to have worked at the Peak Hill Gold Mine and was noted derelict there in 1965.

Although the cylinder and motion are missing from the right hand side, the loco appears to be in a fair condition, as one would expect in such a dry climate as is experienced in Meekatharra. The locomotive is believed to be Haine St Pierre 461 of 1894, but no further details are to hand at present.

Peter Bindon (Asst.Curator of Archaeology, W.A.Museum) 2/80, Editor

PILBARA HISTORICAL SOCIETY SEVEN MILE CAMP, DAMPIER 1067 mm and 1435 mm gauges

The most interesting and varied collection of exhibits may be seen here. There is one 3 ft 6 in gauge loco, PW22, a Motor Rail 4wDM "Simplex" (14033 of 1957) ex Port Sampson Jetty, which is exhibited with the toast rack passenger vehicle from the same location. In addition, there are three standard gauge locomotives. Pride of place must go to *Pendennis Castle*, the ex-Great Western Railway 4-6-0 obtained from England a few years ago. It was built at Swindon Works in 1924. There is also a General Motors Bo-Bo F7 diesel-electric ex Mount Newman 5450, and previously ex Western Pacific Railroad, while the final loco is an Alco Bo-Bo S2 diesel-electric switcher, formerly Hamersley Iron 007 *Mabel* and previously ex Spokane, Portland and Seattle Railroad.

L.G.Watson 2/80

MINIATURE RAILWAYS

COLEMAN & SON PTY LTD, HYDE PARK, SYDNEY 457 mm gauge

Interstate visitors to the L.R.R.S.A. Conference at the end of January were surprised to observe an 18 in gauge line operating in the middle of Sydney. This was here as a temporary attraction in connection with the Festival of Sydney. However, the line was quite lengthy, comprising several hundred yards of trackage, including two interconnecting loops and a sizeable shed in which were stabled ten cars and three locomotives. Semaphore and colour-light signals were an operational part of the system. Locomotives on show were a shrunk-down 38 class Pacific, powered by a motor mounted in the tender but powering the driving wheels, a freelance "4-4-0", which apparently is a rebuild of an earlier 2 ft gauge loco, and an 0-4-0T, of narrow gauge rather than main line proportions. All the locos had been built by the owners, and in addition, there are another two 38s available for use. All the locos are powered by petrol motors. The equipment is used widely in the Sydney area at shows and other events, and has been an attraction at the Sydney show for the last thirteen years.

HUME COLVILLE, Barham 610 mm gauge

In July 1979 the engineless four-wheel Malcolm Moore Petrol loco *Dutchy* was dispatched to its new owner. Mr Hume Colville of Barham NSW by Brian Peart of the Eureka Tramway, Clunes Victoria, who had obtained it from the Moreton Mill, Nambour Queensland in 1977. (see LRN 5., p.9)

Brian Peart. 3/80

LOCOMOTIVE AND MAN-RIDING CAR MANUFACTURERS

A number of previously little known manufacturers have been investigated recently. They have all produced 1067 mm gauge units for colliery work.

VERNIER ENGINEERING PTY LTD, Wollongong

Have built a number of 14 man personnel cars powered with Perkins 6/354 engines of 75 hp. The following have been delivered:

Australian Iron & Steel	Wongawilli Colliery	Nos 104-112
Queensland Coal Mining	Cook Colliery	Nos MC6 and MC7
Australian Iron & Steel	Nebo Colliery	Nos 113 - 115
Australian Iron & Steel	Kemira Colliery	Nos 116-117

NEIL MOXOM PTY LTD, Moss Vale

In 1967 they converted a Hunslet diesel from mechanical to hydrostatic drive for Coal Cliff Collieries. At the same time the loco was re-engined with a Perkins 6/354 engine. Shortly afterwards two Commonwealth Engineering 0-4-0 diesels of 15 tons (builder's Nos J1032 and J1033 of 1958) were regauged from 3 ft and flameproofed for Coal Cliff Collieries. These had been built for Thiess Brothers for Snowy Mountain Scheme tunnelling work and became Coal Cliff numbers 7 and 6 respectively.

Two 4wDH locos were designed and built in 1968 equipped with Rolls Royce C8NFL engines of 205 hp. They were to be Coal Cliff Nos 8 and 9, and weighed 25 tons. Later a 20 ton 4wDH was designed for Elcom Collieries Ltd, fitted with the Cummins N855C engines. Three were supplied in 1979 as D3, D4 and D5, and operate at Elcom's Newvale No.2. Newvale and Munmorah Collieries respectively. In addition three 15 ton battery locomotives have been built for Coal Cliff Collieries.

DOMINO INDUSTRIES GROUP PTY LTD, Charmhaven near Wyong

One Personnel car has been supplied to Coal & Allied Industries for Wallarah Colliery.

Keith McDonald 4/80

STEAM TRAINS PTY LTD. KURRAJONG 610 mm gauge

(see LRN 14. p13)

Work on the Ku-ring-gai Valley Railway's rolling stock is progressing well. The brasswork of *Sydney* (Hudswell Clarke 0-6-0 1838 of 1950) has been replaced, and this sets off the blue paintwork very well. The patched metal around the base of the smokebox has now been replaced and this has vastly improved the appearance of the engine. The tender bogies, which had been dismantled, have now had all the worn and broken parts replaced or reconditioned and are now ready for assembly.

The ex-Queensland rail-motor trailer PL121, the second to be restored, has now had major structural repairs carried out. The footings of the body frame

which were rusted out in some sections have been cut out and replaced by new steelwork welded in. Rotted sections of the wooden chassis sub-frame have also been replaced. The double doors area of the luggage section of the car has been remodelled, leaving single doors, as this car will be entirely made over to passenger accommodation, the guard's compartment being housed in car PL122 which has already been restored. The remodelling has also encompassed the sealing off of the inter-carriage connecting door at this end of the car (this being of no use) thus enabling a higher seating capacity.

David Allen 4/80

WYNDHAM ESTATE WINE CO, BRANXTON 610 mm gauge

(see LRN 13, p.17)

A locomotive and two carriages were observed on the newly constructed tramway here at the end of December. The locomotive is a steam outline "2-4-2T" with petrol engine, built in Sydney, and could well have been constructed by John Dunlop, who has built a number of other such machines, some of which have received mention in past issues of LRN. There are two carriages, each seating 24. and these are fairly substantial end-platform bogie carriages. (Perhaps someone can confirm the gauge of this line, for it has been suggested that it may not be exactly 2 ft. -Ed.)

Harry Wright 3/80

QUEENSLAND

AUSTRALIAN SUGAR INDUSTRY MUSEUM, MOURILYAN 610 mm gauge

(see LRN 8, p6)

Ex Victoria Mill Hudswell Clarke 0-6-0 *Townsville* (builder's No. 1099 of 1919) was noted adjacent to the Queensland Bridge at Mourilyan during November. The locomotive was stored there by Mourilyan Mill for the Australian Sugar Industry Museum (see LRN 8, p.11). *Townsville's* condition was poor with smashed glass and holes smashed through the thin sides of the tender. However the locomotive was noted in the early part of this year stored under cover adjacent to the museum, so it is to be hoped that it will eventually be restored and displayed.

C.J.Hart 4/80, I.L.Stokes 4/80

AUSTRALIAN NARROW GAUGE MUSEUM SOCIETY, Durundur Railway. Woodford 610 mm gauge

(see LRN 15. p.4)

During the Easter period, two water tanks purchased from Moreton Mill

were dismantled by Society volunteers. The water tanks were made up from cast iron square panels bolted together and despite the fact that they had been in position for many years, they were fairly easy to deal with. Transport to Woodford still has to be arranged, however.

Another useful task carried out by Society members has been the removal of several truckloads of timber from a dismantled road overbridge purchased from the QR. A large quantity of suitable timber for sleepers was recovered. The Society operated trains over the Easter period and it is planned to run over the Labour Day long weekend on May 4th and 5th. The Society will also be taking part in the AMRA Model Railway Show on this weekend, and the following weekend will see participation in the ARHS (Qld Div.) Field Day at Redbank. The Society will be displaying its newly restored four-wheel petrol engined Wickham trolley, builder's number 7084 of 1955. This vehicle has recently been restored by members Tom Hurley and Bob Gough, and after the Field Day it will be transported to Woodford.

The venue for Society monthly meetings held on the fourth Thursday of the month has been changed to the new ARHS rooms on the first floor of Desmond Chambers, 303-309 Adelaide Street, Brisbane. Visitors are welcome.

CSR Ltd, Macknade Mill 610 mm gauge

(see LRN 8, p.8)

Macknade Mill manufactured a poison spraying unit from an out of use molasses gin obtained from Victoria Mill. This was done during October 1979 and was observed to be in use by December. It has been painted purple with white lettering.

C.J.Hart 4/80

CSR Ltd, Victoria Mill, 610 mm gauge

(see LRN 9, p.13)

During the 1979 slack season modifications were carried out to the cab of *Moore* (0-4-0DH Malcolm Moore DH-112-GT-1 of 1956). Modifications were carried out to the cab windows, and eaves were fitted to the cab sides. The rear steps were modified, and front steps and handrails added. *Hobart* {E.M. Baldwin 0-6-0DH 4413-1-7-72 of 1972) was stationed at McKell's Depot for most of the 1979 crushing, but was replaced by *Canberra* (Clyde 0-6-0DH 65-433 of 1965) for the last few weeks.

A number of loco accidents took place during the seven day period in August. On 17 August *Brisbane* (E.M.Baldwin B-B DH 5423-1-9-74 of 1974) collided with a loaded haulout which drove into its path. The haulout tractor was destroyed but miraculously no one was killed. Because the rear bogie of

Brisbane became detached the loco had to be returned to the mill on a low loader. *Victoria* (Baguley-Drewry 0-6-0DM 2404 of 1953) retrieved the loco's brake wagon (BV2) when it had been rerailed. On 22 August Clyde 0-4-0DH *Canberra* collided with another haulout, this time on the Stone River line, and although the loco was derailed, damage was only superficial. Probably the most serious accident took place early on 24 August. With several hundred tons of sugar in tow *Wallaman* (E.M.Baldwin B-B DH 6400-3-4-76 of 1976) ran into facing points which had been mysteriously set to a midway position. The crew jumped clear, and the loco came to rest on its side. Again a bogie came adrift and the loco arrived back at the mill soon after 7 am on a low loader. *Townsville II* (E.M.Baldwin B-B DH 6400-2-4-76 of 1976) took over the sugar run to Lucinda until *Wallaman* returned to service on 31 August. Baguley-Drewry 0-6-0DMs *Seymour* and *Herbert* (2392 and 2394 of 1952), which had only been used intermittently during the crushing prior to the accidents were brought into service while the other units were under repair.

Preserved Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) was steamed on 13 September and made a run with the passenger carriage to the end of the Nyanza line. The passenger carriage had been brought to the mill from the Halifax Kindergarten on 22 August, and is now permanently at the mill on display with *Homebush*. In exchange the mill has made a very good replica which has been permanently given to the kindergarten to replace the original coach which had been placed at the kindergarten before the *Homebush* Preservation scheme had been implemented. On 14 September *Homebush* was used to take a rake of bins from the Cook's Lane horse line to the mill, and on the following day *Homebush* and the carriage were used to make short excursions from Herbert Street in Ingham, as part of Maruka week festivities. On 20 September local district school children were taken for an excursion run on a couple of the lines near the mill. During December a start was made on extending *Homebush's* shed at Victoria, to enable it to accommodate the carriage.

THE HAUGHTON SUGAR COMPANY LTD, Invicta Mill, Giru 610 mm gauge

(see LRN 15, p.12)

Work was completed on the Clare-Dalbegg Tramway on 10 March, and loan funds for the 46 km tramline totalling \$3.8 million were handed over to the Upper Burdekin Co-operative Association Ltd, which constructed the line, by the Queensland Government at the end of March. This represents three-quarters of the required funds, which will be paid for out of a levy on growers whose cane is transported over the line. The remaining finance was provided by the Haughton Sugar Co.

Among the major engineering works were two bridges which cross two large creeks just before they enter the Burdekin River. The Landers Creek Bridge (see back cover of LRN 15) has eleven 15 m spans, while the Expedition Pass Creek bridge has nine 15 m spans. Each is 13m above river bed level and are piled into the sand to a depth of up to 12m. The bridge beams are paired and were cast by Humes Ltd in Townsville and trucked to site before being bolted together. The deepest cutting is 15 m deep and the largest fill 15 m high. About 12 km of the line was constructed through difficult country, with the rest relatively flat on levee type soil adjacent to the Burdekin River.

An earth formation was built about 4 m wide. and on top of this went 15 mm of crushed metal ballast, with concrete sleepers laid out on top. The rail, second-hand, and of various weights, was taken to the mid-point of the line, welded to 65 m lengths, and transported on bogies 9 m apart to be laid onto the spaced sleepers. After laying every second joint on alternate sides was welded on site, and top ballast laid. Two second-hand E.M. Baldwin locomotives were used by the track laying contractors: Roberts Construction (Pacific) Pty Ltd (which see for further details). A tamping machine (the mill's? - Ed) packed the whole of the route, with ballast laid to cover sleepers and bridge deckings. 45 lb and 80 lb rail came from the QGR a few years ago. while 60 lb and 71.5 lb rail. rolled in 1916 and 1880 respectively was obtained in 1979 from Ardlethan to Narrandera in NSW. (Elsewhere on the mill's tramline is 42 lb rail from the Cooktown - Laura line).

Maximum grade is 0.5% against loaded trains, and 1% against empty ones. There are ten cane loading loops on the line. The tramway will be maintained and operated by the Invicta Mill.

*J.L.Wassmuth (Upper Burdekin Co-op Association Ltd) 3/80,
Queensland Country Life Canelander 3/4/80*

LEO PARK, TREBONNE, near Ingham 610 mm gauge

Ex Victoria Mill's John Fowler 8-1/2 in x 12 in 0-6-0TT *Perth* (builder's No.8766 of 1900) was moved from the Ingham Kindergarten on 1 September 1979, after a stay of 16 years. The loco was moved to Solari's Engineering on Townsville Road, Ingham. According to the *Herbert River Express* the locomotive will be placed in the proposed Leo Park at Trebonne after extensive refurbishing is carried out by members of the Lyons and Leo Clubs. By 25 November the tender had little or no work done on it. Some rusted side tank panels had been cut out, the roof panelling had been removed, and most of the paint had been chipped off the loco. *Perth* was still at Solari's in March.

C.J. Hart 4/80

MARIAN MILL CO-OPERATIVE SOCIETY. 610 mm gauge

(see LRN 15, p. 13)

Another second-hand diesel locomotive has been purchased. This is an E.M. Baldwin four-wheel diesel-hydraulic loco of Model DHC 15T. It is a fifteen tonne 150 hp loco fitted with a Caterpillar 333 engine, and was purchased from Roberts Construction (Pacific) Pty Ltd in March 1980. Formerly named *Marriott*, it was used for track laying on the Clare-Dalbeg tramline by Roberts Construction (which see for further details).

Simon J. LeBars (Roberts Construction (Pacific) P/L) 4/80

Len Heaton via D. J. Mewes 4/80

THE MILLAQUIN SUGAR CO. PTY LTD, Millaquin Mill, Bundaberg 610 mm gauge

(see LRN 12. p.11)

During a visit in April, a second-hand diesel tunnelling locomotive was seen being rebuilt in the Millaquin shed. This is an E.M. Baldwin four-wheel diesel-hydraulic loco of Model DHC 15T. A fifteen tonne loco fitted with a Caterpillar 333 engine, it was one of two recently sold by Roberts Construction (Pacific) Pty Ltd to sugar mills. Formerly named *McDonald*, it was used for track laying work on the recently completed Clare-Dalbeg tramline by Roberts Construction (which see for further details). The locomotive arrived in March, and it is believed that when rebuilding is complete it will be sent to Qunaba Mill.

Simon J. LeBars (Roberts Construction (Pacific) P/L) 4/80

Bob Gough 4/80

NORTH QUEENSLAND ROLLING STOCK TRANSFER

A rather unusual rolling stock transfer involving no less than four sugar mills took place during December 1979. The remaining cane bins from Mossman Mill, now entirely replaced by bogie "canetainers" had been sold to Babinda Mill. These 212 bins were transported by road to sidings at the northern extremity of CSR's Hambledon Mill tramline at Double Island, north of Cairns. From there they were hauled by a Hambledon loco via Redlynch, Brinsmead Gap and the mill to a temporary connection with the Mulgrave Mill tramline. From here they were transferred over Mulgrave metals by a Mulgrave diesel to Babinda territory, to be hauled for the rest of their journey by a Babinda loco. The total distance travelled was over 80 kilometres on the tramline.

Durundur Railway Bulletin, I.L.Stocks 4/80

ROBERTS CONSTRUCTION (PACIFIC) PTY LTD, Clare-Dalbeg 610 mm gauge

Roberts Construction were responsible for track construction on the Clare-Dalbeg tramline being built for the Upper Burdekin Co-operative Association Ltd as part of the tramline of the Haughton Sugar Company's Invicta Mill, Giru (which see for further details of the line).

Two locomotives were used by Roberts Construction for ballast trains and other construction duties. The locomotives were two out of four originally purchased by the Holland R.U.C. Joint Venture for construction of the Molonglo Tunnels, associated with a sewage treatment system in Canberra in 1973. These locomotives were built to 762 mm gauge (2 ft 6 in) and were E.M. Baldwin 4wDH Model 15T, builders numbers 4529-1-1-73, 4529-2-1-73, 4529-3-1-73 and 4529-4-1-73. After the completion of the Molonglo contract in 1974 they were stored at John Holland's yard in Sydney until June 1979. Two were then purchased from the Joint Venture by Roberts Construction (who had equity in the Joint Venture) and sent to E.M.Baldwin & Sons Pty Ltd, Castle Hill, for regauging to 610 mm (2 ft) gauge. Track laying was basically completed by the end of January, and the locomotives were removed from the site.

During March 1980, the two locomotives were disposed of to sugar mills. One, *Marriott*, was sold to the Marian Mill Co-operative Society, Marian Mill, and the second, *McDonald* was disposed of to the Millaquin Sugar Co. Pty Ltd. and is believed to be destined for use at Qunaba Mill (see LRN 15, p.13). It is not known which of the original batch of four were used by Roberts Construction, but it may be possible to discover the identities of the locos from engine numbers.

J.L.Wassmuth (Upper Burdekin Co-operative Association Ltd) 3/80

Simon J.Le Bars (Roberts Construction(Pacific) Pty Ltd) 4/80

TASMANIA

IDA BAY RAILWAY, LUNE RIVER 610 mm gauge

(see LRN 13, p.21)

The Ida Bay Railway did run last summer, the lease having been taken up by the Ida Bay Railway Pty Ltd. The two proprietors, R. Ludby and J. Mollinour, were on site in September 1979 and officially took over in November. These two gentlemen are not railway buffs as such but are consummately interested in developing the line into a successful well paying, on-going tourist attraction.

The railway was in a very run down condition when they took over but a lot of tidying up and improvements have been made already with a lot more intended to be done. The trackwork is in need of attention as reported in LRN 13 and \$16,000 of government funds are being sought towards track improvement. If the money is forthcoming, track maintenance will be undertaken in the slack season starting at the end of April and continuing as trade and weather permits through to the end of August. A huge question mark hangs over the future should this assistance fail to eventuate.

The diesel engined loco with extended superstructure is currently used for motive power but the loco is terribly out of balance, the engine and half the gearbox being forward of the leading axle, and this leads to "hobby horsing" if not driven carefully. The new lessees have welded a rack at the back of the loco and placed about one hundredweight of loco bearings on it to improve the balance. Both intact petrol engined locos are currently housed in the workshop and it is hoped to remotor one of these with a Perkins diesel in the near future, this to become the main loco. The Perkins motor will fit within the original superstructure and thus the outline will be retained as is. The passenger carriages are being repainted in brighter colours with one open carriage almost completed.

There are two railcars on site, one privately owned and the other belonging to the railway. The railway one is in the process of being rebuilt with a view to being used. It is believed that the privately owned railcar is also to be refurbished.

The timetable as it currently stands is thus:

	Weekdays			Weekends		
Dec 10-Mar 3	10.30	12.30	14.30	10.30	12.30	14.30 16.30
Mar 4-Jun 15	11.30	14.30		10.30	12.30	14.30
Jun 16-Aug 25	Tue, Thur	11.30*		11.30	14.30	
Aug 26-Sep 10	11.30	14.30		11.30	14.30	
Sep 11-Dec 9	Tue, Thur	11.30*		11.30	14.30	

*Bookings also every day

Stephen Cox 3/80

VICTORIA

JIM BAINES, YANGARDOOK TRAMWAY, HOGGS ROAD, TOOLERN VALE 610 mm gauge

(see LRN 4,, p.12)

Jim has recently purchased a bogie carriage for the tramway. Mounted

on two bogies from the Rubicon Tramway, it was constructed by Dennis Steinhauser of Leneva, near Albury, NSW. Dimensions are about 16 ft long, and 6 ft wide, and the vehicle is fitted with handbrake and verandah platform ends.

Brian Peart 3/80

LOU DE CLIFFORD, HALLS GAP 610 mm gauge

(see LRN 11. p.15)

The tramway being developed by Lou de Clifford around his extensive native gardens, was expected to be open during April. Over half a mile of track had been laid by March, with a combination engine shed/kiosk having been constructed. There are two four-wheel petrol locomotives built by Alwyn Zinn in Ipswich, Queensland, which were obtained from the Australian Narrow Gauge Museum Society. The larger of these, originally fitted with a V8 engine. has now been given a Fordson four cylinder diesel and will be "steam outlined" soon. Five four-wheel passenger carriages have been constructed on cane truck frames.

Brian Peart 3/80

BRIAN PEART, EUREKA TRAMWAY, Service Street, Clunes 610 mm gauge

(see LRN 5, p.9)

A 2 ft gauge steam outline locomotive is under construction for the tramway. It will be an 0-4-0T incorporating a pair of 6 in x 9 in cylinders from steam winches and a small boiler already on site. The machine will be fitted with slide valves and inside Stephenson link motion and is expected to weigh around five tons.

Two tons of 60 lb rail have been purchased for projected track extensions. It is planned to build a 16 metre long flat car on a pair of ex-Rubicon tramway bogies.

Brian Peart 3/80

OVERSEAS

PAPUA NEW GUINEA

BOUGAINVILLE COPPER, PANGUNA, North Solomons Province 900 mm gauge

(see LRN 14. p.20)

The tramline is confirmed to be of 900 mm gauge. There are three Gemco battery locos and two Com-Eng 4wDH believed to be builder's numbers

EC4585 of 1964 and HD51101 of 1967 ex Mount Isa Mines. Early in 1980 the tunnel being driven was 3288 metres to the face, and three locos were working inside. Just outside the tunnel mouth there is a large locomotive workshops, and there are yards on the bank of the Jaba River.

Michael R. Pearson 3/80

JAPANESE MILITARY RAILWAY REMAINS. BOUGAINVILLE 610 mm gauge

(see *Light Railways* 64, p.28)

Further investigations around Buin have led to the discovery of no less than seven derelict locos. Five are four-wheel diesel-mechanical built by Kato works. The other two drive on to only one axle, but it is unknown if they are diesel or petrol engined. Apart from the loco illustrated in *Light Railways* 64, almost all moveable parts have been removed from the locos. The line from Buin to Kara on which they apparently operated was about 12-13 km long. First constructed in 6 kg rails it was later upgraded to 12 kg to take locomotives. The line was constructed using Japanese labour, and security was tight in relation to it during the war. Reports have been received of another dump of Japanese locos at North Bougainville, but these are yet to be investigated.

LIGHT RAILWAY NEWS

Published by
The Light Railway Research Society of Australia

No. 17

August 1980

Hon. Editor: John Browning, P.O. Box 111, INDOOROOPIILLY, Qld. 4068

Hon. Secretary, LRRSA NSW Division: R. Mason, P.O. Box 290, BURWOOD, NSW 2134

Hon. Secretary, LRRSA Vic Division: A. Straffen, P.O. Box 21, SURREY HILLS, Vic 3127

Contributions for *Light Railway News* should be sent to the Editor, Mr John Browning, P.O. Box 111. Indooroopilly, Qld. 4068.

DEADLINE for next issue: 22 August, 1980.

A MESSAGE FROM THE PRESIDENT.

The Council has attracted some criticism because of its decision to revert to low-cost printing of *Light Railway News*.

This decision was not taken lightly. It was a matter of absolute necessity. During the 1979-80 financial year LRN incurred a loss of \$862. In that year only five issues were published in the fully printed format, and three of those ran to only sixteen pages. If all six issues had been fully printed this loss would have been around \$1500.

Sales of LRN to non-members were very disappointing, and actually declined with each issue. Only two preservation Societies (Australian Narrow Gauge Railway Museum Society, and Castlemaine & Maldon Railway Preservation Society) made a concerted effort to sell LRN to their members. In fact some of the larger preservation societies took only five or ten copies.

It was therefore obvious that a satisfactory market did not exist for LRN at the price which we had to charge, while the loss in 1980-81 was expected to be about \$1800.

Continued publication of LRN in its fully printed format would have bankrupted the Society. Because of its losses an acute cash shortage is being experienced by the Society at the present time.

With the publication of *Timber and Gold* and other forthcoming books it

is expected that the financial position of the Society will have returned to a satisfactory position by the end of this year.

CORRECTIONS.

LRN 13 p.24 and LRN 14, p.21

Correct title is Choisel Plantation Pty Ltd. The Hunslet locomotives are 3.5 tonne machines, not 12 tonne.

LRN 16 p. 2-3

Contributor is I.L.Stocks.

LRN 16 p.3-4.

Contributor is C . J. Hart . 4/80.

LRN 16 p.8.

Rather obviously, Brian is building a steam locomotive (not steam outline).

RESEARCH COLUMN.

Traction Engine Type Locomotives.

Mr B. Henderson of 28 Church Path, Merton Park, London SW19 is compiling a list of rail locos which used traction engines or steam wagons as the main components. Mr Henderson would like details of the Aveling & Porter loco of about 1866 supplied for 3 ft 6 in gauge in Queensland and any other such locos known to members. Mr Henderson offers assistance with Fowler, Ransomes, Marshall and Clayton & Shuttleworth works records.

NEW SOUTH WALES.

GOULBURN STEAM MUSEUM. 610 mm gauge.

(see LRN 15 p.10.)

As most LRN readers will be aware, Goulburn Steam Museum's sole steam locomotive, a 2 ft gauge Krauss (B/n. 3423 of 1896) named *Stella*, was withdrawn from service mid-way through last year for a general overhaul. This work is now well advanced, with the locomotive almost completely stripped as at May 1980. New tubes, sufficient to re-tube *Stella* and two museum agricultural steam appliances have been received and a start on

fitting the new tubes to the Krauss was expected to commence in late May. Wheels and axle boxes are receiving attention, whilst two new brasses will have to be made. The majority of the overhaul is being carried out in the open - the frame and side-tanks are currently jacked up at the western end of the museum compound, but with the discontinuance of the use of Marsden Weir as a source of Goulburn's water supply, the former pumping building is being used as a workshop. Certain machining jobs are being carried out by tradesmen in a local workshop, whilst a volunteer boilermaker is assisting the Museum Manager, Mr Alex Kryloff, with all work relating to the boiler, firebox and associated parts. No hold-ups have been experienced since work commenced in February last, and as the work is generally being carried out as a part time venture, it is obviously slow. Mr Kryloff, however, is anxious to have *Stella* returned to service at the Museum for Goulburn's "Lilac City Festival" during the October long-weekend.

Meanwhile, services over the one kilometre railway are being maintained with a Planet four-wheeled diesel unit which came originally under lease from the Highlands Light Railway group at Colo Vale in May 1979. Early this year, this unit was purchased outright by the museum. The Planet (F.C.Hibberd & Co. B/n. 2380) has now been provided with a cab-like structure, and, except for a spate of vandalism earlier this year when the radiator was holed by slug-gun enthusiasts, the unit has been performing very well in the light museum service.

L.Oberg, P.Neve, 5/80.

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD. 610 mm gauge.

(see LRN15)

Public attendance at the Museum Open Days continues at almost maximum train occupancy levels, except for the March Open Day which was a complete disaster due to pouring rain and a cold spell. Only about a dozen passengers were carried and it brought home to members the urgent need for completely weatherproof rolling stock and accommodation areas, particularly for winter operations which were very fortunately all held on dry days last year. In February, members were pleased to arrange a special weekday steaming of the Museum's two working locos and the tram, for the making of a short film by a visiting Melbourne crew, for inclusion in the *BHP Report Series*, and this is expected to be put to air in April or May.

Progress around the site has mainly been on ancillary items, although a very welcome load of 41 lb/yd point frogs and blades and a man-powered trike arrived from the V.D.L.R.S. in Tasmania, courtesy of ANL. The trike has been fully restored and until the novelty wears off provides a distraction from

work for our Junior Members.

The deliberately fire damaged "Yallah" station has finally been attacked and with new roof and wall framing, new roofing iron, and a good cleaning out, is now well on the way to full use again. Very fortunately most of the materials have been donated or supplied at a special price.

A screw type handbrake has at long last been made up from scratch and fitted to the Davenport, so no more charging off up the yard belching showers of hot water as soon as the reversing lever is moved after a long stand raising steam or on standby, when pressure is not quite up to holding her on the steam brake.

Restoration of the "adopted" saloon section for the second carriage steadily advances. Several new frame sections have been laminated and installed, weatherproof plywood sheet obtained for panelling replacement and turnbuckles and rodding for trussing the carriage work are in the making.

The tram line has been extended about 20 m past Yallah and passengers now leave the tram and cross the main line at the picnic area vehicle crossing, protected by a new lifting barrier and walk along a fenced path parallel to the line back to Yallah for steam trains, this system being safer than the previous changing arrangements across the tracks at Yallah.

MARITIME SERVICES BOARD OF N.S.W., COFF'S HARBOUR 1435 mm gauge

The Board has terminated its operations at Coffs Harbour, and has disposed of the two locomotives used to maintain harbour facilities. Number 1, a four-wheel diesel-mechanical of eight tons, and built by Motor Rail, Simplex Works, Bedford, England, builder's number 9021 of 1952, has been donated to the Hunter Valley Steam Railway & Museum, and will be moved to Dorrigo, together with 16 steel framed bogies and 21 wooden framed rail trucks. Number 3, an 18 ton four-wheel diesel-mechanical "Planet", built by F.C. Hibberd, Park Royal, London, England, builder's number 3715 of 1954, has been donated to the Richmond Vale Preservation Co-operative Society Ltd.

Keith Jones 5/80

QUEENSLAND

ANSETT TRANSPORT INDUSTRIES LTD, Hayman Island 610 mm gauge.

(see LRN 7, p.6)

During May, the resort's tramway was very busy. The tramline links the jetty, the helipad and the hotel and there are three locomotives. Passenger services

are handled by two Ruston & Hornsby 4wDMs which have recently received "facelifts" in the resort workshops. They have similar black and red bodywork, and could loosely be described as "steam outline" in appearance. Normally they work week and week about, but at the time of the visit, 179872 of 1936 was out of service with a defective horn, leaving 285339 of 1949 to work the passenger trains. There are five coaches and two baggage cars which can accommodate standing passengers. As many as 20 or even more return trips were operated each day, many fully loaded, for passengers connecting with scheduled boat and helicopter services and also to serve the resort's own sight seeing and fishing trips.

The third loco is built on the chassis of a Motor Rail "SIMPLEX" loco of unknown origin. It has recently been rebuilt into what might be best described as a "platform" loco, consisting mainly of a cab and flat deck, and has a petrol-engine. It is regularly used for service trains.

George Bond 5/80.

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford. 610 mm gauge.

(see LRN 16, p.3)

Some of the Society's steam locomotives have been stored at the Brisbane Tramway Museum Society's Ferny Grove site in Brisbane, and in preparation for the opening of the Tramway Museum in June, some of these were given a coat of paint to improve their appearance. The locos at Ferny Grove at present are:

<i>Pioneer</i>	0-6-0T	John Fowler	8047	1898
	4-4-2T	Borsig	6345	1907
	0-6-2T	Krauss	6854	1914
<i>Lily</i>	4-6-0T	Hunslet	1229	1916
<i>Alison</i>	0-6-2T	John Fowler	16194	1923
<i>Miallo</i>	0-6-2T	John Fowler	20276	1934

These will be moved to Woodford in due course. The Rugby engined rail car from Pleystowe Mill has been moved to private property at Woodford.

The ARHS (Qld Division) Field Day at Redbank was postponed because of bad weather until August, so until then Wickham 7084 is being stored in Brisbane. Two of the ex-Douglas Shire four-wheeled wagons are being sent out to Woodford Prison to be worked on by prisoners. Recently discovered during preparatory work for the new Brisbane Airport was a small wooden wagon of about 1 ft 10 in gauge, which has been donated to the Society.

Major efforts at Woodford have been put into track laying, with the points onto the main line being installed, and several lengths of 60 lb. rail being laid

to extend the running track. In addition, large amounts of siding trackage have been laid. The water tanks have been delivered from Nambour, and a fair quantity of the timber reclaimed recently has been cut up into sleepers.

R.Ellis, 5/80.

BUNDABERG & DISTRICT TOURIST TRAMWAY & PRESERVATION SOCIETY 610 mm gauge.

(P.O.Box 930, Bundaberg 4670.)

(see LRN 6 p.7)

The Society operated a display at the Bundaberg Agro-Trend field day on 1-2 May. John Fowler 0-6-2T 11277 of 1907 *Invicta* was loaned by the Qunaba Mill and Society members laid 70 metres of track for the loco to operate on hauling a cane truck. Although it was not possible to carry passengers, the display was an improvement on previous years when the loco was displayed on a low loader. *Invicta* was returned to Qunaba by road on 6 May.

The Society's loco *Felin-hen*, Baldwin Loco Works 0-6-2T 46828 of 1917, is stored on a member's property at Steindl Street.

Editor 5/80, Alan Robert 6/80.

BUNDABERG SUGAR CO. LTD, Fairymead Mill. 610 mm gauge.

(see LRN 13 p.18)

The new 26 tonne bogie Baldwin was expected to be delivered here at the end of May. It will probably be numbered 80, denoting its year of construction, in accordance with the Fairymead numbering scheme. It is to replace E.M. Baldwin 0-6-0DH 71, transferred earlier in the year to Bingera Mill (which see for further details).

Editor 5/80.

BURGOWAN COLLIERIES PTY. LTD, Burgowan No.13 Colliery, Torbanlea. 610 mm gauge.

(see LRN 2 p.6)

Only two Jenbach type locos now remain at this closed mine. Between September 1979 and May 1980, No.5, *Rusty*, Bundaberg Foundry 4wDH 19 of 1956, was removed, leaving only Jenbach 4wDM's 1 and 4 (1079 and 1077 of 1951).

Editor 5/80.

GIBSON & HOWES PTY LTD, Bingera Mill. 610 mm gauge.

(see LRN 13 p.18)

Com Eng 0-6-0DH *Burnett* has been transferred to Millaquin Mill (which see for further details), for eventual use at Qunaba. To replace it, a former Bingera

loco has been returned from Fairymead, where it had been since 1975. Still in Fairymead maroon and yellow livery and with Fairymead number, this is 71, E.M. Baldwin 0-6-0DH 3875-1-7-71 of 1971. From 1971 to 1975, it had been *Bingera's Oakwood*.

The main section of the Mcllwraith tramline, formerly laid in light rail and worked by Malcolm Moore locos, has been relaid in heavier rail to enable main line working locos to work through. However, some branches remain laid in light materials.

Editor 5/80.

THE HORNIBROOK GROUP Bulimba 1067 mm gauge.

A 3 ft 6 in gauge Motor Rail "Simplex" 4wDM, 11205 of 1965, is stored at the Hornibrook depot in Brisbane, between contracts. The loco is a cabless 5 ton machine, and is painted yellow with the name *Hornibrook*, on the engine covers. It is used on bridge contracts to haul pre-stressed concrete beams from the river bank to where required. It is believed that it will eventually be loaned to the Australian Railway Historical Society (Queensland Division), Beenleigh Railway Museum.

Editor 7/80.

ISIS CENTRAL SUGAR MILL CO. LTD, Isis Mill. 610 mm gauge

(see LRN 13 p.19)

Progress on the mill's new tramline was observed during May, by which time it extended from a junction south of Cordalba for about 7 km. About the first 3 km of track is laid on former QGR trackbed and runs through attractive country. Trackbed has been prepared for another 3 km beyond the railhead, extending to the Burnett Highway, about 1 km south of the Gregory River. The new line is well engineered with welded rail and gravel ballast. 60 lb and 80 lb rail was seen. The track is laid using fishplates but most of these are later removed and the joints are welded using a specially constructed mobile welding unit. On 9 May, two bogie ballast hoppers arrived at the mill from Spannsteel Engineering, Bundaberg. Not so massive as examples at some of the northern mills, these vehicles are painted yellow.

Loco 8 (Clyde 0-6-0DH 64-385 of 1964) was in the shed having a new soundproofed cab fitted onto it. After the successful multiple-unit operation of last year, the former number 7 (Clyde 0-6-0DH 61-220 of 1961) has had its cab removed completely to operate as a permanently-coupled slave to 8, and is now officially regarded as part of 8.

Editor 5/80

MARIAN MILL CO-OPERATIVE SOCIETY LTD, Marian Mill. 610 mm gauge.

(see LRN 16 p.5)

During May the position of a Railway Maintenance Engineer was advertised. Duties would involve the Maintenance of approximately 110 km of 2 ft gauge railway and the construction of a 30 km extension in the near future .

Weekend Australian 17-18.5.80.

THE MILLAQUIN SUGAR CO. PTY LTD, Millaquin Mill, Bundaberg. 610 mm gauge.

(see LRN 16 p.5)

Work has continued on the rebuilding of the ex-Roberts Construction Baldwin 4wDH. This work had not been finished in late June, but it was expected to be done in time for the start of crushing at Qunaba on 7 July. A second loco, apparently also destined for Qunaba, was seen in the Millaquin shed during May. This was *Burnett* (ComEng 0-6-0DH AH2967 of 1963) which was transferred from Bingera Mill earlier in the year, and had been overhauled and repainted at Millaquin.

Editor 5/80.

THE MILLAQUIN SUGAR CO. PTY LTD, Qunaba Mill. 610 mm gauge.

(see LRN 15, p.13)

It appears that only one steam loco may see occasional service in 1980. It is understood that No.4 *Jumbo*, (Bundaberg Foundry 0-6-2T 1 of 1952) will be on standby. In May, one Baldwin 4wDH, and the other *Burnett*, a ComEng 0-6-0DH from Bingera would be transferred from Millaquin (qv). All other Qunaba steam locos were stored on an isolated section of track. These were (in order);

No. 5	<i>Dobbin</i>	0-6-2T	Bundaberg Foundry	6	1952
No 6	<i>Nipper</i>	0-4-2T	Bundaberg Foundry	3	1952
No 3	<i>Flash</i>	0-6-2T	Perry	6160 48 1	1948
No 1	<i>Delta</i>	0-6-2T	Perry	7967 50 4	1950
No 2	<i>Skipper</i>	0-6-2T	Perry	1850 46 1	1946
	<i>Invicta</i>	0-6-2T	John Fowler	11277	1907

Invicta had been loaned to the Bundaberg & District Tourist Tramway & Preservation Society (qv) at the Agro-Trend Field Day at the beginning of May.

Major track work alterations were in progress around the mill. A balloon loop, which will encircle the loco shed was under construction. It is believed that the steam locos will be disposed of during the latter half of 1980. The

method of disposal has not yet been decided, but numerous enquiries and offers to purchase have been received. It is understood that advertisements will appear nationally, in due course.

Editor 5/80, Alan Robert 6/80.

MORETON CENTRAL SUGAR CO., Moreton Mill, Nambour. 610 mm gauge.

(see LRN 14 p.16)

In line with a general program of improvements, some of the locos have been repainted in a bright yellow with red buffer beams and connecting rods, and grey engine and radiator grilles.

As the mill tramway enters Nambour at the opposite end of the town from the mill, an operating headache has been the movement of cane over the tramway along the centre of Howard Street and across the Bruce Highway to the mill. Howard Street yard, where the tramway enters town, is the point to which cane is brought over the tramway initially. It is then brought up to the mill in a shuttle service up Howard Street. For the 1980 season, Locotrol will be used to operate the shuttle service, with *Bli Bli* (E.M. Baldwin 0-6-0DH 6-1257-6-7-65 of 1965) as the master loco and *Moreton* (Clyde 0-6-0DM 63-289 of 1963) as the slave. MORETON now carries prominently on the cab side the warning "DANGER Keep Clear. This locomotive is remotely controlled." In addition, the two smaller Baldwin locos have been permanently coupled back to back and will be operated in multiple, this being achieved by means of eleven air hoses. These locos are 0-4-0DHs *Valdora* (6-1258-5-6-65 of 1965) and the former *Maroochy* (6-1064-1-11-64 of 1964). It will be possible to drive from either cab. Although the start of the crush was only about a week away, the twin locos were not yet ready for use, for large sandboxes were still to be fitted to *Maroochy* and the engine of *Valdora* was still being installed after overhaul. The multiple-unit equipment was complete, however.

Meanwhile, track work was being done at Howard Street yard, with some relaying in progress. The vast amounts of wrecked bins and old trucks have almost completely been cleared away. Road vehicles bring loaded bins to Howard Street yard, and a newly-installed and possibly unique feature at the unloading point was a four way stub point!

Editor 5/80.

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION, North Eton Mill. 610 mm gauge.

(see LRN 12, p.13)

A ComEng diesel, a ballast tamper and four ballast wagons were

transported about 40 km by road from the mill to Septimus during April or May. Flood damage to the bridge across the Pioneer River at Mia Mia meant that equipment could not travel by rail to the site of the track upgrading in the Septimus area.

Brian Weber 5/80.

ROTARY CLUB, Blackwater. 610 mm gauge

Photographs have come to hand of a railway operated for the benefit of children at Blackwater. There appears to be one locomotive, kept with its train in a shed which doubles as a "tunnel". The loco appears to be a Jenbach mining loco, fitted with a canopy and a "funnel" and with the "Rotary International" symbol on the front. It is painted blue and yellow and the side carries the name *Rotarylander*. Two Jenbach locos are supposed to have gone to Blackwater for this project. Both of these are small 4wDM's, 1155 of 1953 from Burgowan No.13 Colliery, Torbanlea (closed 1976) and 1196 of 1953, from Golden Plateau Gold Mine, Cracow (closed 1976). The loco shown on the photo appears rather lighter in construction than the Burgowan loco, but this could be merely because all ballast weights have been removed. There is supposed to be a similar pleasure railway with a Jenbach at Moura, but no details have come into the Editor's hands.

Rodney Shaw 6/80, Editor.

TAMPER (AUST.) PTY LTD, Coopers Plains 610 mm gauge.

A 2 ft gauge ballast tamper is available for hire by sugar mills on a contract basis. Formerly a 3 ft 6 in gauge machine, this was used on the Bellarine Peninsular Railway early in 1979 before conversion in Melbourne. It has been hired for use at the Bundaberg mills, Isis Mill, Farleigh Mill, Inkerman Mill and for the Clare-Dalbeg tramway construction (see LRN 16, p.4-5), and was recently returned to Brisbane for overhaul. It is builder's number 4375678, type SVT-JWL. A new machine of type SVT-JWL has recently been supplied to South Johnston mill.

Tamper (Aust.) Pty Ltd

TASMANIA

IDA BAY RAILWAY PTY LTD, Lune River. 610 mm gauge.

(see LRN 16, p.6)

The above company, of which the two principals are Joseph Molyneux and Russell Ludbey, is the lessee of the railway, which is actually owned by the Tasmanian National Parks and Wildlife Service. Disaster struck the line

recently when the diesel engined Malcolm Moore (1052 of 1943) “blew up” when it shook its oil pressure pipes to pieces and seized. This necessitated the use of petrol engined 1017 of 1943, a very expensive proposition. The Company, which has taken a 50-year conditional lease from December 1979, is pressing the Tasmanian Government to fulfil its commitments by assisting in the upgrading of track and locomotives.

The Mercury 30.4.80, Jim Shugg 5/80.

VICTORIA

TRIPLE T-BONES LEECHES & VESTIGIAL REMAINS

- being a factual account of the recent LRRSA Thomson Valley Weekend.

During the long weekend of 8-10 March, some 34 active (??) members of the LRRSA explored the remains of some of the timber tramways of the Thomson Valley area, basing themselves at the MMBW camp near Erica.

We made our various ways to the camp on the Saturday morning and settled in to comfortable two-bed sleeping quarters. The afternoon was given over to a bus tour and foot inspection of works on the Thomson Valley dam site. Outlet tunnels were walked through, surge chambers examined and narrow gauge spoil railways closely investigated, although unfortunately rides thereon were not available. The site of the dam wall itself, with bedrock exposed and dotted lines painted on it to locate the dam was particularly interesting.

Saturday evening introduced us to the catering policy of the canteen, where, accustomed to catering for the hefty appetites of hefty construction workers, thick soups, multiple steaks, lashings of vegetables, sweets and incidentals are the order of the day. No distinction is made between he-men who hurl 50-ton bulldozers around the bush and delicate, sedentary railfans (many of whom displayed appetites out of all proportion to their physical bulk). The evening was devoted to films and slides of the MMBW and Thomson Valley tramways presented by Geoff Maynard and Mike McCarthy.... some of us managed to stay awake!

Sunday morning gave us the first of the tramway walks. The Forest Commission has been active in recent years in clearing a number of tramway formations and creating excellent, well-graded walking tracks. The mini buses carried us through Erica to the site of Collins Siding - the transfer point on the VR Moe Walhalla railway and the Forest Commission Tyers Valley tramway. During the four mile stroll we saw the occasional abandoned log bogie, ancient bridgework and a few sleepers in situ. Unfortunately the Climax

and Harman have long departed. Back on the buses we returned through Erica and headed north up the Thomson Valley to the Cascade Creeks. The tall trestle over the South Cascade is now nothing but an untidy heap of logs at the bottom of the gully, but North Cascade, a few miles further on is quite a different story. Mr. Baker, the Forest Commission officer for the area met us and guided us to the old Ezard's tramway formation above the road. Following this to the horseshoe bridge over the creek we were delighted to find much of it is still standing, and steel rails are in place on the decking.

A barbecue lunch gave us the energy to stroll a further mile or so up the road to the site of Sharps Number 1 mill and a set of totally unexpected cattle pens in the middle of the bush.

With drizzly rain setting in we returned to the camp and after another gargantuan meal, watched another excellent slide presentation. (Is it really fair, though, to refer to a photo of the Climax loco in an undignified inverted position following a derailment as something of an anti-climax?)

Monday dawned bright and sunny and following a typical construction worker's hearty breakfast we again headed north along the Thomson Valley to the site of Ezard's Number 1 mill. Little remains except a huge pile of sawdust and large bearer beams, so the walk along the tramway towards Erica was commenced. This time we had the services of Mr. Peter Darbaneze, the Ranger of the Baw Baw National Park, to assist us. This particular tramway is by far the most scenic of those seen during the weekend, being cut along the sides of steep hills and affording extensive prospects of panoramic vistas. Imagination worked overtime imagining log trains swinging around the numerous sharp curves and through small cuttings. There are several interesting bridges in a good state of preservation, extensively embellished with rusty, moss-covered dogspikes.

At Finns Road we re-embussed and went down to the Eastern Tyers River at the site of O'Shea and Bennett's mill for a cut lunch. The mill is located close by the diversion weir which provides the M.M.B.W. camp with its water supply. All in all it was a very pleasant setting in which to enjoy Val Maynard's excellent sandwiches.

Following lunch, about 30 of us together with probably double that number of friendly leeches, took part in a "bush bash" along what we thought was the tramline connecting this mill with The Narrows. The direction we took on this walk had several members puzzled and it was confirmed after, that we had, in fact, found a previously unknown tramway. This was probably the biggest mass (30 tramway nuts and 50,000 leeches) discovery of a tramway in the history of Sidorodromarcheology!

Following that walk, we de-leeches once again, and bussed back to the

M.M.B.W. camp arriving at 3.01 pm, one minute behind schedule! We then said our goodbyes and headed for home.

Overall, the weekend was a great success. It was pleasing to see so many of the members able to take advantage of the tour, and particularly gratifying that members from as far away as South Australia and Queensland should make the effort to participate. Mike McCarthy put an immense effort into planning the whole event while Geoff and Mrs Maynard co-ordinated activities at the site most efficiently. Mike and Geoff are also to be congratulated on their rapidly increasing ability to drive buses!

It was also pleasing that senior officers of the Forest Commission and National Parks should go out of their way to help us and take a real interest in our activities.

Finally, the leeches passed a vote of thanks for the unexpectedly lush lunch they enjoyed on the Monday. They suggested we make the tour an annual event.

WESTERN AUSTRALIA

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC. Mt.Helena. 610 mm gauge

(see LRN 7, p.13)

The last items of rolling stock from the old Brisbane & Wunderlich tramway at Belmont (see LRN 15, p.14) have been acquired by the Association. On 12-13 March, the two remaining side tipper wagons were taken to the Association's "depot" at Mont Helena. A total of four wagons from Belmont are now owned by W.A.L.R.P.A.

PHILATELY - NAURU

To commemorate the participation of the Republic of Nauru in the London International Stamp Exhibition at Earls Court from 6 to 14 May 1980, Nauru issued a set of postage stamps to mark the 10th Anniversary of the Nauru Phosphate Corporation on 6 May. The three stamps depict locomotives of the Nauru Phosphate Corporation, and its predecessor, the British Phosphate Commission. The stamps depict:

- 8c. Early steam locomotive (2 ft. gauge Orenstein & Koppel 0-4-0T)
- 32c. Electric locomotive of the 1930s
- 60c. Clyde diesel-hydraulic model DHI-71 No.4

The stamps were designed by Julian Vasarhelyi and are based on photographs of the locomotives. To commemorate the London 1980 International Philatelic Exhibition, the stamps were issued in a miniature sheet which features a map of Nauru with the route of the 3 ft. gauge phosphate railway. (see *Light Railways* 40)

Bob McKillop 7/80

LOCOMOTIVE AND ROLLING STOCK MANUFACTURERS

HANSENS MOTOR & ENGINEERING WORKS, Ingham, Qld.

This builder has supplied a number of 4wPM railcars for the use of navvies at sugar mills. Powered by a VW industrial motor, the cars are equipped with four gears in one direction and three in the other, and are capable of hauling

one or two wagons, and in addition can put on a fair turn of speed. Output to date has comprised the following :

12	1972/3	CSR Ltd, Victoria Mill (Trebbonne Depot)	V3
34	1972/3	CSR Ltd, Victoria Mill (McKell's Depot)	V4
56	1972/3	CSR Ltd, Victoria Mill	V2

NEW SOUTH WALES

BRUCE McDONALD, ex GOULBURN STEAM MUSEUM LOCOMOTIVES

The Australian for Thursday, 25 September, carried a notice of a liquidation sale to be held on 8 November, 1980. Equipment currently stored at the Old Brickworks site, Yarralumla, A.C.T., is to be auctioned on that date.

Included in the sale are "Railway Engines" currently owned by Bruce McDonald ex-Goulburn Museum.

They are:

- Hudswell Clarke 0-6-0 B/N 1098 of 1915.
- John Fowler 0-6-0T B/N 1185 of 1909.

The Krauss 0-4-0T *Jack*, also operated by Mr McDonald, will not be for sale as this locomotive is not owned by him but is held in trust.

The Auctioneers for the sale are P.O.Pickles, 655 Pacific Highway, Killara, 2071, and a colour catalogue for the auction is available from them at \$4.00.

Editor, per A.Winzenried.

HUNTER VALLEY STEAM RAILWAY & MUSEUM 1435 mm gauge

(see LRN 15 p.6)

Two more former industrial locomotives were moved into storage at Dorrigo during July. Andrew Barclay 0-4-0ST *Marian* (2224 of 1948) ex John Lysaght left Newcastle on 11 July and arrived at Dorrigo on 13 July. The "Simplex" 4wDM (Motor Rail 9021 of 1952) was then picked up from Coffs Harbour, and delivered at Dorrigo later the same day.

Negotiations are continuing with a view to obtaining the Dorrigo Glenreagh branch, and reopening and operating it as a working museum.

Keith Jones 7/80

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park. 610 mm gauge

(P.O.Box 1036, Wollongong 2500)

(see LRN 17, p.2)

The 0-6-0 Hudswell Clarke loco *Cairns* (1706 of 1939) was withdrawn from traffic on 11 May when a hot box developed in one of the tender axle boxes. Prior to entering traffic in July 1978, the loco underwent a thorough overhaul, but the tender was only subjected to routine inspection. Over the winter months the bogies have been removed from the tender, the frames and springs renovated, and the wheels sent to a local engineering firm where worn journals have been built up prior to returning. New bearing brasses for the tender are also being manufactured.

Opportunity has also been taken to overhaul the body of the tender. New footplate members have been fitted, the main frame, which was bent in some previous accident, straightened and the layers of paint stripped back. The original colour scheme was revealed during this project and detailed notes were made of the linework and the shaded initials "C.S.R. Coy Ltd" made in a style typical of the 1920s and 30s. Both this loco and the 0-4-0ST Davenport (1517/1595 of 1917) *Kiama* passed their boiler inspection during July, as did the vertical boiler which provides steam to the collection of stationary units.

The ability of several members to work at the museum during some weekdays has resulted in the restoration of many small items of rolling stock such as side tip wagons, mining skips and work vehicles. In addition our large stock of spares has been gradually sorted into separate store areas.

The restoration of the body of the c.1918 International bus is advancing. Waterproof plywood side panels have been fitted, new centre door and bulkheads constructed, the body frame has been trussed with turn buckles, new flooring fitted and work is now progressing on the construction of crown light window frames to replace the rotted original items. This saloon will form the centre section of a "California" style bogie carriage similar in style to the one which operated on the Goondah to Burrinjuck 2 ft gauge tramway in southern N.S.W. between 1908 and 1928.

Only a few minor items of carpentry need to be carried out on the restored "Yallah" station before external painting can take place. The interior has been lined, lighting and power point outlets provided, stoves placed in the main waiting room as well as the sales office, and vintage "Refreshment Rooms", "Booking Office" etc. signs fitted.

The main platform has been extended to a length of 30 metres, picket fences erected, seats provided and ornamental light standards have been

obtained to complete the scene. Work is progressing on the restoration of a penny weighing machine for the station complex.

On the electric tramway, a second terminal track at Tongarra Rd., as well as an ornamental centre bracket pole were completed in time for the August 10th open day. On that day a second 2 ft gauge electric tramcar entered traffic to assist the Birney car transporting visitors from the car park to the steam train station. The new tram is a cross bench, single truck, toastrack car which seats 21 adults on seven cross seats. This tram is expected to be the main item of interest at the Annual Wollongong Model Show on the weekend of 23-24 August when it carries visitors along a 200 metre length of track at Wollongong High School.

Last year approval was gained from the Minister for Planning and Environment for the rezoning of the museum site so that the current "permissive occupancy" arrangement could be converted to a lease. The Shellharbour Council has informed the museum that the legal arrangements have almost been finalised and a lease of the entire 40 acre site can be approved in the near future. This will enable the long planned track extensions to be made, hopefully, during 1981.

Ken McCarthy 8/80

QUEENSLAND

AMALGAMATED SUGAR MILLS PTY LTD, Pleystowe Mill 610 mm gauge

(see LRN 10, p .6)

All the mill's Clyde Model HG-3R 0-6-0DH locos have received new E . M. Baldwin cabs in the last two years. *Palmyra* and *Victoria Plains* (63-273 of 1963 and 66-490 of 1966) were fitted with theirs in 1979, while *Pleystowe* and *Palms* (64-321 of 1964 and 70-708 of 1970) received theirs earlier this year. In addition, all except *Palmyra* have been embellished with twin chrome exhausts! It is expected that the two Clyde Model DHI-71 locos will get their new cabs in 1981. This mill is one of those which still employs "prongers" at some locations on the tramway system, in particular on the steeply-graded crossing of the Pioneer River behind the mill. A "pronger" is a steel spike which is fixed to the coupling at the rear of the last bin in a rake, and which drags along between the rails. The idea is that in the event of a breakaway, the pronger will stick into the ground, and prevent the getaway bins from doing too much damage to themselves or to any third parties in the vicinity. Loads are strictly limited on the approaches to the Pioneer River crossing, which descends the river banks. The crossing itself is in fact two sharply curving

low-level bridges, which connect a small island to either bank.

D.J.Mewes & Editor 8/80

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford. 1067 mm & 610 mm gauge

(see LRN 17 p.4)

A 3 ft 6 in steam loco has been donated to the Society by Pioneer Sugar Mills Ltd, Pioneer Mill. This is Perry 0-4-0T *Kilrie* (Builder's number 265 of 1927). It was rebuilt as an oil-burner at the mill, at the same time receiving a trailing axle, and is believed to have last worked in 1975.

Wickham petrol rail car (7084 of 1955) was exhibited in the A.R.H.S. field day at Redbank on 23 August, and has since been moved to Woodford. Preparatory work has begun on Hudswell Clarke 0-6-0 *Melbourne* (1701 of 1938) with the intention of preparing it for boiler inspection.

Further lengths of track have been laid to extend the main line, and the remaining lengths of 601b rail have been stacked at the lineside for ease of handling in future. Two Douglas Shire Tramway engines have been sent to H.M.Prison, Woodford, for restoration work to be done on them by prisoners.

Editor 8/80

CSR LTD, Goondi Mill 610 mm gauge

(see LRN 8, p.7)

All the Clyde locomotives now have Baldwin soundproofed cabs. The last to receive one, earlier this year, was Clyde 0-6-0DH 56-90 of 1956. In the process, it lost the name, *Adelaide*, its former Victoria Mill identity, and will now be known as number 6. E.M. Baldwin 4wDH 8002-1-8-78 has been renumbered 7. A new 10-tonne 4wDH from E.M. Baldwin was expected at the end of August. No.4 *Simplex* a four ton Motor Rail 4wDM, which is believed to have come from Hambledon Mill in 1964, has been disposed of for scrap. A connection has been restored onto the South Johnstone Mill tramway at Wangan. This enables cane from Goondi to go over the South Johnstone line and on to Mourilyan Mill for crushing in times of bad weather or other unusual circumstances.

D.J.Mewes & Editor 8/80

CSR LTD, Hambledon Mill, Edmonton 610 mm gauge

(see LRN 14 p.16)

Three more locos were fitted with soundproofed cabs during the last slack season, and have appeared in the new green and yellow livery. Clyde HG-3R locos 8 and 9 (64-379 of 1964 and 65-435 of 1965) have been fitted with

low profile cabs by the mill to permit them to operate under the QR bridge at Redlynch, for which service they had previously been fitted with fold-down cabs. Clyde DHI-71 loco 5 (58:190 of 1958) also previously fitted with a fold-down cab, has received a conventional soundproofed cab of Hockey Engineering P/L design, fitted by Buchan Street Engineering of Cairns. This leaves 6, Clyde DHI-71 (56-96 of 1956), as the only main-line loco in the old grey and yellow livery, and it also has a fold-down cab, but this will be replaced with a conventional cab at the end of the season. The Clyde DHI-71 locos no longer work at Redlynch, and the out-depot there, where a DHI-71 used to be stationed, was closed from the end of the 1978 season. It is believed that steam loco Hudswell Clarke 0-6-0 1549 of 1925 will be removed from its position in the mill grounds for restoration and proper display.

D.J.Mewes & Editor 8/80

CSR LTD, Kalamia Mill 610 mm gauge

(see LRN 8, p.6)

The mill's remaining main line locos have received E.M. Baldwin soundproofed cabs. ComEng 0-6-0DM *Chiverton* (C1030 of 1958) was fitted with one in 1979, while spare loco ComEng 0-6-0DM *Kalamia* (A1409 of 1955) was fitted with one earlier this year.

D.J.Mewes & Editor 8/80

FAIRYMEAD SUGAR COMPANY PTY LTD 610 mm gauge

(see LRN 17 p .4)

The new E.M. Baldwin 26-tonne B-B DH arrived in June and carries builder's number 8988-1-6-80. It is number 80 in the mill's roster, and is finished in the normal Fairymead colours of Yellow and Maroon.

Editor 8/80

THE FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN12 p. 10)

Both the "Simplex" 4wDM diesels have been equipped with cabs and painted yellow. Motor Rail 7369 of 1939, previously used in the Victorian SEC's Kiewa scheme in the 1950s and before that in housing projects in Glasgow, Scotland, was purchased by the mill in 1959, and has become UNIT 26 SEAFORTH SIMPLEX. Motor Rail 21623 of 1957, which came new to the mill, has become UNIT 27 CALEN SIMPLEX. Calen and Seaforth are two depots on the mill's north coast line, where it is believed the locos are sometimes stationed in the slack season.

D.J.Mewes & Editor 8/80

GIBSON & HOWES PTY LTD, Bingera Mill 610 mm gauge

(see LRN 17, p.4)

E.M. Baldwin 0-6-0DH 3875-1-7-71, recently returned to Bingera after a five-year stint at Fairymead Mill, has been repainted in Yellow livery and has been given the name *Manoo*.

Editor 8/80

THE HAUGHTON SUGAR CO. LTD Invicta Mill, Giru 610 mm gauge

(see LRN 16, p.4)

The mill's Clare-Dalbeg extension is a fine work of engineering, and sets new standards for sugar mill tramways. In some ways, it is reminiscent of the new coal lines built in Queensland in recent years, with substantial earth works, fine bridges, heavy rail and ballasted track. The ten sidings on the line are only numbered as yet, but next year they will receive names following a competition to select them among local school students. Only two locomotives are scheduled to work over the line during the 1980 season. A ComEng 0-6-0DH (usually *Haughton*, AH3878 of 1964) is stationed at Clare, some 34 km from the mill, and works the 106 km round trip to Dalbeg and return in an 8-hour shift. Meanwhile, E.M. Baldwin B-B DH *Selkirk* (6750-1-8-76 of 1976) works from the mill as far as Millaroo and return, a distance of about 132 km in a shift. All the remaining locos work in the 40 km section between the mill and the old terminus at Steepy Banks. It appears that an expansion in the loco fleet would be needed to handle any significant increase in cane tonnages hauled.

D.J.Mewes & Editor 8/80

HOWARD SMITH INDUSTRIES PTY LTD Mourilyan Mill 610 mm gauge

(see LRN 8, p.11)

Com-Eng 0-6-0DM B1111 of 1956, formerly DL15 *Nerada* of the Innisfail Tramway, appeared in mill livery during 1979 as number 9. In an attempt to save some of the high capital costs of rolling stock (a four wheel cane bin now costs in excess of \$1,000), new bins are being built here with steel underframe but timber corner stanchions and bin framework, and wire mesh. It is hoped that these vehicles will require less maintenance than the all steel type.

D.J.Mewes & Editor 8/80

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 17, p.5)

Plans for major track extensions have been drawn up and will involve a programme of work lasting for years. The first stage will be a crossing of the

Pioneer River at Mirani over the Queensland Government Railway bridge, and lines to Mount Martin Plains and up the trackbed of the old QR branch towards Langdon.

Further development will take tramlines to Gargett and up the former Owens Creek branch to Pakula. Some of the new work will be in use next year, and in anticipation of this, two 32 tonne E.M. Baldwin B-B DHs have been ordered. These developments threaten the future of steam operation on the tramway.

0-6-2T Perry 2601-51-1 has been used in recent years for shunting the road cane depot at the mill, where cane from west of Mirani (45% of the cane crushed at the mill) has been delivered. The new plans envisage that as much of the road cane as possible be diverted to rail, and where this is impossible, the cane will be delivered by road vehicles to depots on the lines west of Mirani. This will eliminate the need for a loco to shunt the road cane at the mill. It is also likely that spare diesel power will be available to take over navy duties from 0-6-2T John Fowler 20277 of 1934. However, the mill intends to retain both steam locos in the foreseeable future for standby duties. Both locos have been active during the 1980 season.

The E.M. Baldwin 4wDH tunnelling loco obtained from Roberts Construction was seen in the loco shed during August, being rebuilt. This involves, among other things, being equipped with the cab removed recently from a Clyde HG-3R loco at Pleystowe Mill. The Baldwin carries E.M. Baldwin rebuild number 8860-1-8-79, dating from when it was regauged from 762 mm gauge for use on the Clare-Dalbeg tramway construction project.

D.J.Mewes & Editor 8/80

MILLAQUIN SUGAR COMPANY PTY LTD, Millaquin Mill. 610 mm gauge

(see LRN 17 p.5)

Bundaberg Foundry 0-6-2T builder's number 1 of 1952 has been transferred from Qunaba Mill to act as a standby in case of diesel breakdown at either mill. It was seen outside the loco shed in August, and still carries its Qunaba identity, 4 *Jumbo*.

Editor 8/80

MILLAQUIN SUGAR COMPANY PTY LTD, Qunaba Mill 610 mm gauge

(see LRN 17, p.5)

Apart from the six out-of-use steam locomotives listed in the last report, the mill's motive power is dieselised. Seen in the loco shed during a weekend in August was ComEng 0-6-0DH *Burnett* (AH2967 of 1963), transferred from Bingera via Millaquin Mill earlier in the year, carrying the number 21907.

Outside the shed, under repair, was the rebuilt E.M. Baldwin tunnelling loco. Given the Baldwin rebuild number 8860-2-8-79 when regauged from 2 ft 6 ins gauge for Roberts Construction, this has been equipped with cab, running boards and normal height hood with other accessories for cane haulage, such as headlights.

However, the very low position of the engine and radiator make it appear rather an unusual looking cane loco, and may have attributed to its having been given the name *Beetle*. It also carries a number, 21908.

Editor 8/80

MOSSMAN CENTRAL MILL CO. LTD 610 mm gauge

(see LRN 14, p. 17)

The mill's plans to return their steam loco to working order have met with a setback. *Ivy*, John Fowler 0-4-2T 15947 of 1922 had been stripped down for boiler inspection, but the boiler was unable to meet the requirements of the Department of Machinery & Scaffolding, and was condemned. The mill is now seeking a replacement boiler, and the locomotive remains dismantled.

Com-Eng 0-6-0DH *Cook* (builder's number AL3372 of 1964) has been fitted with a fully enclosed air conditioned cab at the mill. In addition, sister engine *Faugh-a-Ballough* (builder's number AL4190 of 1965) has received a raised and partly soundproofed cab after it was involved in a collision which necessitated cab repairs. There is now no cane brought to the mill in the old four-wheel bins. All cane is now conveyed in the bogie "canetainers".

D.J.Mewes & Editor 8/80

THE MULGRAVE CENTRAL MILL CO. LTD, Gordonvale 610 mm gauge

The Mill's former dark blue livery is to be modified as a safety measure. A horizontal yellow line at waist level was introduced a couple of years ago, and it has now been decided that the entire cab should be yellow. This policy has already been applied in the case of locos 8 and 9 (Com-Eng 0-6-0DM A1926 of 1958 and 0-6-0DH FC3473 of 1964 respectively). These have had their cabs raised twelve inches as a part of soundproofing. Details of the origins of the interesting 4wDM used by the navvies and referred to as "the Pie Cart" have been discovered. It was built at the mill in 1956 and was designed to be able to work on track covered by water to some depth. This was apparently with a particularly flood-prone branch on the Little Mulgrave line in mind. An old petrol-engined navvies' trolley was seen by the navvies' shed. This was one of the three stored here a few years ago. The other two have recently been sold to the local Apex Club, who have cannibalised one and use the other on portable track to give "train rides" at local events.

A tramway extension, about six kilometres long, has been built from Barbagallo Road, on the east bank of the Mulgrave River, to connect with Richardson's horse line at Deeral landing. Cane from this area was formerly delivered to Babinda Mill's tramline via the bridge across the river at Deeral landing, and was taken by Babinda loco to the connection with the Mulgrave line south of Fishery Falls for haulage to Mulgrave Mill.

D.J. Mewes & Editor 8/80

PIONEER SUGAR MILLS LTD, Inkerman Mill, Home Hill 610 mm gauge

(see LRN 8, p.9)

All the mill's mainline locos now run in a basically yellow colour scheme, although some have a red or a green trim added. A start has been made to fitting fully-enclosed soundproofed E.M. Baldwin cabs to the loco fleet. A height limitation is the Burdekin Bridge, which passes over the north-western end of the mill yard, and this has resulted in a pleasingly proportioned result in the loco so far dealt with, in contrast to the somewhat towering cabs fitted at some other mills. The loco concerned is ComEng 0-6-0DH *Osborne* (AH2866 of 1963), and it now resembles the later ComEng *Alma* (FE56110 of 1975) in general appearance.

D.J.Mewes & Editor 8/80

PLANE CREEK CENTRAL MILL CO. LTD 610 mm gauge

(see LRN 8, p. 10)

The mill has commenced a programme to install its own design of fully enclosed soundproofed cabs on its loco fleet. The first two received theirs this year, and have also had the prefix "D" added to their former numbers. They are:

D1	0-6-0DH	Clyde	56-101	1956
D8	0-6-0DH	ComEng	FC3777	1964

D.J.Mewes & Editor 8/80

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 8, p.10)

Expansion plans for the mill include a tramline extension which will service growers at Elaroo, 45 km south of the mill. This involves a mainline extension of over 20 km, with major crossings of the Andromache and O'Connell Rivers. Consulting Engineers for the project are Gutteridge, Haskins & Davey.

Further aspects of the expansion project as it affects the tramway will be a high speed tamping machine, the first to be supplied to the industry,

and soundproofing of loco cabs. Another item of equipment, which arrived recently, is a new type of line car. Built by ComEng Aresco Pty Ltd, of Adelaide, it carries serial number IC796 of 1980, and is painted yellow. It looks a low-slung, racey machine, and is fitted with a Holden engine. A turntable is built in, to enable the vehicle to be turned round for changing the direction of travel. The mill's Bundaberg Fowler 0-6-2T (8 of 1953) has been returned from Joe Hawkes, Airlie Beach. It has been stripped down completely for restoration to working order. Work on the boiler will include the fitting of a front tubeplate and retubing. In addition, a new smokebox will be required.

*Queensland Country Life Canelander 28-8-80,
D. J. Mewes & Editor 8/80*

THE RACECOURSE CO-OPERATIVE SUGAR ASSOCIATION LTD 610 mm gauge

(see LRN 14, p. 17)

Contrary to the report in LRN 14, inspection of the small E.M. Baldwin diesels *Leo* and *Road Runner* (6-2612-1-10-68 and 6-2612-2-11-68) revealed no evidence of their being converted from rear wheel drive only to four wheel drive. The mill's tamping machine (Tamber 4375515 of 1975) has had the name (?) *Tamber* added in large red letters on the bonnet sides.

D.J. Mewes & Editor 8/80

SOLARIS ENGINEERING PTY LTD, Ingham 610 mm gauge

Two locomotives formerly in parks in Ingham were seen in the yard of this company, adjacent to the Bruce Highway, during August. John Fowler 0-6-0TT *Perth* (8766 of 1900) seemed to have little work done on it since earlier in the year (see LRN 16, p.5). Adjacent to it was Hudswell Clarke 0-6-0, formerly Macknade number 1 (1653 of 1935), which had been until recently in a park at Yeldham Street, Ingham, and which was without its chimney. It is believed that this situation has been brought about by an accident involving a child climbing on the Hudswell Clarke loco, which has led to the Hinchinbrook Shire Council to question the advisability of having steam locomotives, or indeed any old machinery, in its parks. As a result, the future of these two locomotives must be in doubt.

C.J. Hart, D.J. Mewes, Editor 8/80

THE SOUTH JOHNSTONE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD, South Johnstone Mill 610 mm gauge

(see LRN 9, p. 14)

Malcolm Moore 4wDM number 17 has returned to service since 1978, and it is hoped that one of 12 or 13, presently out of use in the mill yard, will also

be reconditioned. The new ballast tamper is Tamper 1375739 of 1980.

D.J.Mewes & Editor 8/80

THE SUGAR BOARD, Lucinda Bulk Sugar Terminal 610 mm gauge

This installation, which boasts a 5.76 km long jetty, has two locomotives to handle the bulk sugar boxes hauled by CSR on its tramline from Victoria and Macknade Mills. The larger is an 0-6-0DH built by Commonwealth Engineering (G1023) in 1958, while the smaller is a Motor Rail "Simplex" dating from the 1920s, and with its original petrol engine having been replaced by a diesel. Close inspection of this machine, which was seen shunting test weight wagons over the weighbridge, revealed it to carry builder's number 2757. This loco is believed to have originated with CSR, who formerly operated their own port for sugar and molasses at Lucinda.

D.J.Mewes & Editor 8/80

SUNSHINE PLANTATION, Nambour

For the large number of you who are vitally concerned, we are told that the "Sunshine Plantation" at Nambour is up for sale.

This sale, however does not include the steam loco currently on static display at the plantation, as the loco is only on loan to the site.

Editor, per A.Winzenried.

TASMANIA

IDA BAY RAILWAY PTY LTD, Lune River 610 mm gauge

(see LRN 17, p.7)

The State Government, which leases the railway to the operating company has been told that the company would "walk out" if finance for improvements is not forthcoming. Legislative Councillor, Peter Hodgman has called upon the government to provide \$152,000 for work including upgrading locomotives, carriages and tracks, completion of accommodation huts and a recreation room, installation of security and safety lights, and the building of a servicing ramp. Mr. Hodgman stated that the line had become one of the state's major tourist attractions, and that it was ironic that its very success might lead to its demise and its equipment was being worn out.

The Mercury 13-8-80 via Ralph Proctor

SECOND RIVER TRAMWAY, Karoola 610 mm gauge

(c/- 12 Melbourne Street, Launceston 7250)

(see LRN 12 p. 11, 13)

The newly built guard's van body arrived at Karoola during June, and was mounted onto the ex-Zeehan & North East Dundas Tram bogies. These bogies had been completely stripped and rebuilt. The "Flats" on the wheels were very deep, and several weekends of work were needed to fill them with weld and to restore a good profile on the tyres. All welding was carried out with a Lincoln generator driven by a Marshall portable steam engine. Other recent work has included extending the trackwork by another nine lengths of 24 ft rail.

Both Krauss locos are giving good service, being steamed alternately on work days, which are held at least twice a month. They are:

1	0-4-0T	Krauss	5682	1907	boiler, workplates and other parts
			5800	1907	mainframes
2	0-4-0	Krauss	6067	1910	

Ralph Proctor 8/80

VICTORIA

CODELFA, Melbourne 1067 & 762 mm gauge

(see LRN 9, p.18)

These contractors are building a tunnel under Lonsdale Street in the city from the Australian Government Centre Exchange site to the Exchange in Queen Street on behalf of Telecom. Three E.M. Baldwin locomotives are being used to haul spoil, concrete and other materials in the tunnel. The locos arrived about September 1979, and were used from October. Loco 58 is builder's number 3937-7-6-71 of 1971, Model DH12M MkIV, a twelve tonne machine, while the others are numbered 116-209 and 116-210, and are believed to be 8-1/2 tonne locos. These are three of sixteen locos used by Atkinson-Holland on the Thomson River project which were auctioned in 1978 (see LRN 6, p.10), and purchased by a Sydney based scrap dealer. Codelfa purchased four of the 8-1/2 tonne locos, of which two have gone to Fiji, while it is believed that the remaining nine 12 tonne locos are stored at Warburton awaiting sale. This leaves two 8-1/2 tonne locos unaccounted for. Rolling stock used in the Telecom tunnel by Codelfa includes four skips built by Malcolm Moore, probably from the same source as the diesel hydraulic locos.

Codelfa has one of its locos from the 1067 mm gauge Melbourne Underground tunnelling work at Loy Yang, believed in use on the tunnel job.

Peter L. Charrett 8/80

D’VANZO BROS, Thomson Dam Gauge unknown

These contractors were at work during 1979 constructing a diversion tunnel under the dam site. At least two locomotives were in use, both E.M. Baldwin 4wDHs of Model DH12M Mk3, being 3568-1-9-70 and 3568-2-9-70 both of 1970. Both were sold late in 1979. They were supplied to Fluor Australia but the question of where they worked, and their subsequent history, seems obscure.

Mike McCarthy 8/80

MELBOURNE & METROPOLITAN BOARD OF WORKS 762 mm & 610 mm gauges

Outside the workshop at the Board’s East Malvern site in March 1979 were E.M. Baldwin 610 mm gauge 4wDHs of model DH4T Mk2. These were:

43	E.M. Baldwin	6008-3-7-75	1975
27-35-047	E.M. Baldwin	6700-2-4-76	1976

According to an employee at East Malvern, the only other tramways then operating were at Sugarloaf and Thomson River sites. At Bell’s Portal on the Thomson-Yarra tunnel, there were at least seven E.M. Baldwin diesels in use on 762 mm gauge in May, 1979. Five of these were 12 tonne locomotives of which four were delivered in 1970, and two more were 4 tonne machines rebuilt from 610 mm gauge. The Board is believed to own up to 40 locos in various states of repair, and of those known, ten are battery electric and twenty-two are diesel hydraulic.

Peter L. Charrett, Mike McCarthy 8/80

STOP PRESS NEWS.

"The Australian" for Thursday, 25 September, carried a notice of a liquidation sale to be held on 8 November, 1980. Equipment currently stored at the Old Brickworks site, Yarralumla, A.C.T., is to be auctioned on that date.

Included in the sale are "Railway Engines" currently owned by Bruce McDonald ex-Goulburn Museum. They are:-

Hudswell Clarke 0-6-0 B/N 1098 of 1915.

John Fowler 0-6-0T B/N 1185 of 1909.

The Krauss 0-4-0T JACK, also operated by Mr McDonald, will not be for sale as this locomotive is not owned by him but is held in trust.

The Auctioneers for the sale are P.O.Pickles, 655 Pacific Highway, Killara, 2071, and a color catalogue for the auction is available from them at \$4.00.

MORE SALE NEWS.

For the large number of you who are vitally concerned, we are told that the "Sunshine Plantation" at Nambour is up for sale.

This sale, however does not include the steam loco currently on static display at the plantation, as the loco is only on loan to the site.
both items, Editor, per A.Winzenried.

LIGHT RAILWAY NEWS

Hon. Secretary, LRRSA Victorian Division: E.Stuckey, P.O.Box 21, SURREY HILLS, Vic. 3127

Contributions for Light Railway News should be sent to the Editor, John Browning, P.O.Box 111, Indooroopilly, Qld., 4068.

Phone: (07) 378 8805

Deadline for the next issue will be 22 December, 1980.

EDITORIAL

As LRN enters its fourth year, I wish to thank those individuals and groups who have supported LRN with news as well as encouragement.

However, a continual worry is the amount of news being received of late. Only very few members take the trouble to write and yet there must be many of you who have something to offer in the way of news. Society members are interested in recent happenings of Light Railway interest. Please take the effort to let others know, and enjoy, the details of what is taking place. Don't worry about how literary your efforts might not be; just let me have the facts, and I will try to couch them in suitable prose. If writing is inconvenient, why not phone the information to me at (07) 378 8805.

In case there is doubt about what the editorial policy is for LRN since the reversion to the bulletin format, I will try to summarise this. I want to print news on any industrial railways (with the possible exception of the "main line" mineral haulers), or news of any preserved equipment from such railways, or news of any other railways of less than 3 ft 6 in gauge. The area of interest would be especially Australia, but also from other countries in our part of the world.

Remember, it's your society; be in it!

RESEARCH COLUMN

Michael R. Pearson of P.O.Box 71, Buka Passage, North Solomons Province, Papua New Guinea, is researching into tramways in Papua New Guinea, West Irian and the Solomon Islands. He would appreciate receiving information from members on tramways in any of these areas.

LOCOMOTIVE AND ROLLING STOCK MANUFACTURERS

E.M. BALDWIN & SONS PTY. LTD.. Castle Hill, Sydney.

(see LRN 16 p.1)

Early in February, the two diesels from the D'Vanzo Brothers contract at the Thomson Dam (see LRN 18, p.9) appeared at the Baldwin works and have remained there since. They are 1067 mm gauge.

A four wheel diesel hydraulic loco, believed to have been for CSR Ltd., Goondi Mill, was shipped from the works on 26 September. It is believed that an 18 tonne 0-6-0DH cane loco has been supplied to the Fiji Sugar Corporation during 1980.

A number of 4wDH man riding cars were seen at the works at various times during 1979 in addition to the two reported as going to Huntley Colliery (see LRN9, p.8). These were of serial 2368, built for Australian Iron and Steel in 1967-8. Those positively identified were:

- 28 (believed to be 2368-8-1-68 of 1968)
- 30 2368-9-1-68 of 1968
- 31 2368-10-1-68 of 1968

It is not known what happened to these units; perhaps some reader can help.

Craig Wilson 10/80, 11/80 "A.R.H.S.Bulletin Supplement"

SIMPLEX MECHANICAL HANDLING LTD. Bedford U.K.

Several trade magazines have recently carried advertisements offering the range of "SIMPLEX" diesel locos for sale. A photograph of a "U" Series 4wDH loco was shown (this type of loco has been supplied to the Fiji Sugar Corporation in recent years). Agents for the locos are Clyde-Carruthers Pty Ltd, of Sydney.

Bob Gough 10/80

NEW SOUTH WALES

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park. 610 mm gauge.

(see LRN 18 p.2)

The reprofiled wheels and journals for the tender of steam locomotive *Cairns* (0-6-0 1706 of 1939) returned from the Garnock Engineering plant of Port Kembla during late August. A full set of new bearing brasses arrived in early October and were being machined two weeks later. In the meantime the paint work of the locomotive and tender had been cut back to bare steel and by mid October primer and body filler were being applied prior to this unit re-entering traffic

On 13 September Ruston-Hornsby diesel loco (B/n 285298) returned to service. After receiving this locomotive from Leighton's in March 1978 it was soon found that the unit had an insatiable thirst for sump oil. This was due to a defective main front oil seal. The housing proved, on first trials, to be impossible to remove. In fact the previous owners had endeavoured to avoid the trouble by patching this housing with a poultice of fibre glass! Fortunately the father of a junior member, Mr Jim Tooley, offered to repair the fault. Mr Tooley had often worked on the diesel motors of Ruston products many years ago in England. The removal of the seal housing was prevented by a bent retaining sleeve, but by fabricating special tools the defective parts were eventually removed. The housing has been brazed and refaced, a new seal fitted and the locomotive fully restored to operating condition.

The main work force changed from removing paint from *Cairns* to further track construction during late September. The main line track is now reaching eastwards from "Yallah" station and by mid October half the main line circuit had reached completion. The first point in 50 lb plant has been constructed on this recent project. This item was received per favour of the Van Diemen Light Railway and forms the turnout for the main passing loop at "Yallah" station yard.

Track work at Albion Park now amounts to 670 metres of 2 ft. gauge steam line. This is made up of 350 metres of main line, 120 metres of branch line to Tongarra Rd and the loco compound, and 200 metres of sidings in the loco compound. In addition, standard gauge rolling stock stands on 40 metres of track and the electric tramway operates on an additional 200 metres of 2 ft. plant. A further 350 metres of track has to be constructed to complete the main line circuit.

On 11 October the c.1918 International bus body was transferred from

the large steel underframe mounted on former Ruook Timber Coy bogies from Alexandra (Vic) onto a shorter chassis mounted on bogies consisting of former army 2 ft gauge flat wagons. The ILRMS has recently been successful in negotiating for three suitable carriage bodies, one of which will neatly fit the steel underframe. Delivery details will appear in later reports in this journal. The bus body will now be restored as an end loading saloon, but when a further long underframe is constructed the end aprons and roof canopies will be used so that the bus body forms the centre saloon of a "California" car as outlined in the last issue of this magazine.

On 15 September Allied Constructions donated a two cylinder stationary steam engine to the Society. The maker's plate reveals that it was constructed by the Midland WAGR Workshops in 1942, but so far its original purpose can not be identified.

Due to valuable free publicity given to the museum by TV station WIN-4 during the week prior to the October open day, near record crowds visited the museum on Sunday 12 October. On that day also, the visitors were able to sample the luxury of wall-to-wall carpet recently laid in the sales and waiting rooms in the "Yallah" station building!

Ken McCarthy 10/80

SULPHIDE STREET RAILWAY & HISTORICAL MUSEUM, Broken Hill 1067 mm gauge

(see LRN 6, p.5)

Among the exhibits at this museum, unofficially opened in May, is an ex-industrial diesel shunter. Like the "main line" steam locos on show ex the Silverton Tramway Co., the diesel was originally built for the Zinc Corporation in 1953 by Andrew Barclay Sons & Co., at Kilmarnock, Scotland. An 0-6-0DM, the loco was allocated builder's No. 391 in Barclay's separate series for internal combustion locos. Acquired by the Silverton Tramway in 1958, the loco became redundant with standardisation in 1970. It carries number 26, and was known locally as *Sam*.

Catch Point No.22

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge

(see LRN 18, p.3)

Another locomotive has been donated to the Society. The Thuringowa Shire Council has donated an 0-4-2T built in France by Decauville, builder's number

247, in 1897. The locomotive arrived at the Mulgrave Mill, Gordonvale, in 1897, and worked there until 1955, as No.7. It came to Invicts Mill, Giru, in 1956 and worked until 1964. In 1965, it was steamed on temporary track into position in a park outside the mill, where it has remained until the present. It will be moved to Woodford in due course.

Four 7 ft. wide rail motor trailers were purchased by the Society in its early years from the Queensland Government Railways, and these have been stored at the Redbank Railway Workshops ever since. Following an approach from the Illawarra Light Railway Museum Society, it was decided to sell one of the trailers to this group, and to move the other three to Woodford. On 1 November P119 was loaded onto road transport at Redbank for its journey south to Albion Park. The seats from this vehicle had previously been removed by ANGRMS members as they were not required by the Illawarra group. On the same day, PL111 was winched aboard a low loader for the journey to Woodford, where it was placed on a length of dual-gauge track. The intention is to carry out superficial restoration work to this vehicle in the near future, with the aim of placing it on 2 ft. gauge bogies to hand, and placing it in service as soon as possible to replace the rather unsatisfactory "carriage" used at present (and known as the "animal cage"). The two remaining vehicles, PL118 and P101, will be taken to Woodford as convenient.

Moreton Mill at Nambour donated a set of catch points to the Society for use in the yard layout. These were lifted during October.

0-6-2T Bundaberg Fowler 5 of 1952 passed a boiler test in October, and a preliminary inspection of 0-6-0 Hudswell Clarke 1705 of 1938, *Melbourne*, has resulted in a recommendation for certain work to be carried out on it.

In addition to the normal first day Sunday of the month operating, it has been decided to have an extra Open Day on 28 December.

It was, of course, two Douglas Shire Tramway wagons which were sent to Woodford Prison for restoration, not locomotives, as stated in LRN 18.

Editor.

CSR LTD, Goondi Mill 610 mm gauge

(see LRN 18, p.3)

The new Baldwin 4wDH loco was observed here in October. Builder's number is 9109-1-9-80, and it is believed to be Model DH8.

Robin Pearman 10/80

DREAMWORLD DEVELOPMENT PTY LTD, Coomera 610 mm gauge

"Dreamworld", a Walt Disney-style tourist development north of the Gold Coast, has been under development for several years now. One of the earliest

attractions to be installed was a 2 ft. gauge steam railway, which has been operational since 1977. However, the overall project has not been completed, and it is anticipated that opening to the public will not be for up to another twelve months.

The locomotive, numbered 4, is a Yankee-style 4-6-0. Baldwin Locomotive Works originally built this as a 4-6-0T (B/n. 45215) in 1917, for use by the British Army on its light railways in France during the First World War. Later, it came to Racecourse Sugar Mill at Mackay, where it ran as number 5 until the mid 1950s. In 1972, it went to Goulburn Steam Museum, and in 1974 it was taken to Sydney, where it was rebuilt at a Rydalmere engineering works for Dreamworld, at some considerable expense. The side tanks were removed, and water and fuel is now carried in a tender built on the chassis of a tender from Isis Mill. The locomotive has been converted into an oil-burner, but some consideration is being given to its conversion to gas. The loco is finished in an attractive red and yellow livery, and is fitted with a "spark arrestor" chimney. It has been operated periodically since coming to Coomera.

There are three open coaches, each about 40 ft long and seating about 50 people. A circuit of track in excess of 2 kilometres has been laid. It is emphasised that at this stage, the site is *not* open to visitors. It is expected that the opening of Dreamworld will be accompanied by considerable publicity, and members will be kept informed.

Editor 11/80

THE FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 18, p.4)

Extensions were completed to the loco shed during the 1980 slack season so that the entire loco fleet can be accommodated. A hydraulic hoist for lifting locos was being installed in August. A separate navvy loco shed has also been constructed, incorporating an inspection pit on its connecting line, but this is not yet connected up to the tramline. This is because alterations to the empty side of the mill yard will be carried out during the next slack season which will take the empty bins around the existing loco shed instead of between it and the mill as at present.

Durundur Railway Bulletin No.10

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 18, p.5)

On 1 September, a serious mishap took place just north of the Pioneer River bridge when Clyde 0-6-0DH *Melba* (64-377 of 1964), pulling empties,

collided head on with the smaller Clyde 0-6-0DH *Nellie* (58-188 of 1958) travelling light engine. *Nellie* was pushed back about 50 feet by the impact, and was derailed. *Melba's* buffer beam had to be replaced, but the loco was back in service within five hours, at 1.30pm. However, the damage to *Nellie* was much more severe, and her engine had to be removed and stripped for repair to a cracked ball housing, returning to service four days later. In the meantime, the Gemco diesel replaced *Nellie* on cane haulage on the Mia Mia line, while the John Fowler 0-6-2T (20277 of 1934) replaced the Gemco on the Mirani line, in what might turn out to be the swansong of steam on main line cane haulage.

Arrangements had been made with Cattle Creek Mill to borrow their loco 1, a Com-Eng 0-6-0DH (B1724 of 1957), but this turned out to be unnecessary.

Durundur Railway Bulletin No. 10

MORETON CENTRAL SUGAR CO., Moreton Mill, Nambour 610 mm gauge

(see LRN 17, p.6)

Following mechanical problems with the mill's loco, Mourilyan Mill's loco 8 (0-6-0DM Com-Eng B1112 of 1956) was seen here on loan early in October, and was expected to be here for the rest of the season. Among the mechanical casualties had been Baldwin 0-4-0DH (6-1064-1-11-64 of 1964). Both these were back in service in November, the latter coupled to its "twin" *Valdora* (6-1258-5-6-65) once more. It is believed that another reason for the motive power crisis at the mill was industrial problems connected with the operation of the Locotrol system introduced this year. However, the Locotrol units were in operation during November. These are *Bli Bli* (E.M. Baldwin 0-6-0DH 6-1257-6-7-65) and *Moreton* (Clyde 0-6-0DH 63-289 of 1963).

Bob Gough 10/80, Editor

PIONEER SUGAR MILLS LTD, Pioneer mill. 1067 mm gauge

(see LRN 8, p.10)

A number of ex-QGRVJM hopper wagons and bodies were noticed around the mill yard in August. These have presumably been obtained for use by the navvies. Also reported in the mill yard was an ex-North Australia Railway guard's van, probably also acquired for navvy use.

Bob Deskins 8/80; Durundur Railway Bulletin Nos. 9 & 10

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (SA) INC. Gauges various

(see LRN 14, p.18)

Vintage Ruston & Hornsby loco 304 has been restored to pristine condition. This 2 ft. gauge loco, built in 1938 as builder's number 187078, Type 44/48 hp, has suffered a fair amount of corrosion in its many years work on the tracks of Waratah Gypsum in the Yorke Peninsula. The old cab has been completely replaced, and the loco has been repainted in mid-green with details picked out in red, blue and green.

Catch Point No.22

TASMANIA

WEE GEORGIE WOOD STEAM RAILWAY INC., Tullah 610 mm gauge

(see LRN 10, p.12)

Wee Georgie Wood's railway will be in service for the 1981 tourist season. The Fowler 0-4-0WT loco (believed to be builder's number 16203 of 1924) has been fully restored. Three kilometres of track has already been laid which will be extended to run besides Lake Rosebery, to be formed by the waters of the Pieman River held back by the Hydro Electric Commission's Bastyn Dam. The major part of the work done so far has been by voluntary effort, and \$3000 has been spent. The project has been given the support of State Parliament by its passage of the Wee Georgie Wood Railway Act in 1977. Wee Georgie Wood was originally the name given to the railway which connected the town of Tullah to the Emu Bay Railway's Farrell Siding, and which ran from 1907 to 1962, when the Murchison Highway was completed, the town's only access to the outside world. The Fowler locomotive, retired in 1963, was retained in the town, and now seems destined to become an important tourist attraction.

The Sunday Examiner Express 11.10.80. via Ralph Proctor.

WESTERN AUSTRALIA

KALGOORLIE-BOULDER LOOP LINE PRESERVATION GROUP, Boulder 1067 mm gauge

(see LRN 15 p.8)

The 4wDM "PLANET" loco built by F.C. Hibberd in the U.K. in 1962 has been returned to Boulder, having been converted from 2 ft. gauge by Vickers

Keogh in Kalgoorlie. This loco returned on 23 August, and it was expected that mechanical work and painting would be carried out before the loco was ready to enter service. The loco will be used mainly on Sundays to haul excursion type trains using open carriages converted from wagons, although closed accommodation will also be provided for inclement conditions.

Kalgoorlie-Boulder Loop Line Preservation Group Newsletter. 8/1980.

WUNDOWIE IRON & STEEL, Wundowie 1067 mm gauge

This works, producing ductile iron, was established under State Government control in the late 1940s, and since 1945 has been part of the Agnew Clough Group. Narrow gauge WAGR NW flat top wagons each carrying a loaded ore container are delivered to the works and are shunted by the locomotive there for unloading. The works shunter is a "SIMPLEX" four-wheel diesel-mechanical built by Motor Rail Ltd. in the U.K. Builder's number is 60s349 of about 1968. This loco replaced an earlier one supplied for the opening of the works, builder's number 10001 of 1946, which was scrapped as worn out when the replacement arrived.

The loco is fitted with a simple canopy to provide shade for the driver and propels the loaded container wagons into a tipping dock one by one, where they are tipped on one end, discharging through an end flap door.

Western Rails Vol.4 No.1, Editor.

ROSTER No.1 - COAL & ALLIED INDUSTRIES LTD 1067 mm gauge

The following roster has been provided for underground locomotives and man riding cars used at the Company's collieries: Aberdare East, Chain Valley, Aberdare North, Liddell, West Wallsend, Wallarah and Stockrington No.2.

Note: Personnel cars are transferred as necessary. This list shows the disposition of the units in February 1980.

RECOMMENDED READING ON QUEENSLAND.

For those with an interest in Queensland, The LRRSA can now offer, in addition to its new book, *The Beaudesert Shire Tramway*, the following works:

Lahey's Canungra Tramway. by R. K. Morgan. Price:- \$1.10 ea.

A history of this tramway along with the Company operating it and the communities it served. 24 pages. 22 photos. 4 maps. Scale drawing of the Climax.

Munro's Hampton Tramway. by R. K. Morgan. Price:- \$1.10 ea.

A history of the 2 ft 6 in gauge tramway operated in the Toowoomba area of Queensland. This line had two Shay locomotives on its motive power roster. 20 pages. 14 photos. Maps, plans and scale drawings.

Australian Sugar Tramways; The Challenge of the Eighties. by I. R. Crellin. Price:- \$2.65 ea.

A look at transport problems facing the modern Sugar Industry in northern New South Wales and Queensland. The author begins with the steam locomotives of the recent past, and looks at present operations and future trends. An interesting and informative account highly recommended to all those interested in the industry, its transport and tramways.

32 pages. 44 photos. Maps and drawings.

These, and other publications are available from:

LRRSA Sales PO Box 382, Mt Waverley, 3149. Vic.

and:

RESEARCH COLUMN

Information and photographs are urgently required for forthcoming articles to appear in *Light Railways* on W.W.Gunn's tramway at Crossover, and the tramways of the Toombullup district between Mansfield and Tatong in North Eastern Victoria. Mike McCarthy would appreciate hearing from any member able to assist in this matter. His address is M.J.McCarthy, 30 Miller Road, THE BASIN 3154. Phone: (03) 762 5847.

CORRECTIONS

LRN 19, p.8. Two last personnel cars should be designated as 4wBER (four wheel battery-electric railcar).

The Titan unit is Builders number EMT 1009. West Wallsend Colliery is strictly speaking West Wallsend No. 2 Colliery.

LRN 19, p.9. Hepburn Ltd & Hepburn No.2 Colliery should be Hebburn Ltd and Hebburn No.2 Colliery.

(Thanks to Anthony Weston)

BRITISH AND EUROPEAN RAILTOURS.

A brochure has been received from Johnson Tindall Associates (Travel) Ltd detailing Special Interest tours such as "Industrial Heritage" and "Railway Heritage" in Britain, and "Narrow Gauge Special" in Britain and Austria, and an Isle of Man and a Swiss railway tour. A discount of 10% is available for a booking of six or more, and other tours can be arranged. Prices for the tours listed range from \$US 335 to \$US 1795. Brochures can be obtained from 27 Cypress Close, Stafford ST17 0BB, Great Britain.

AUSTRALIAN CAPITAL TERRITORY.

OLD BRICKWORKS MUSEUM, Yarralumla. 610 mm gauge.

(see LRN 18, p.10)

The two locomotives advertised for sale at the auction here, and which belonged to Bruce McDonald, have been sold. The Hudswell Clarke 0-6-0, 1098 of 1915, was sold to a private buyer in Dampier, W.A. The John Fowler 0-6-0T, 11855 of 1909, has been purchased on behalf of the Alexandra & District Historical Society, Victoria (see LRN 11 p.12). It is believed that the prices paid were in the vicinity of \$6000.

Both locomotives worked in the Childers District of Queensland. The Hudswell Clarke was supplied for the Colonial Sugar Refining Co's Childers Mill, while the John Fowler went to the small Doolbi Mill at Childers. When the mills concerned were closed, both locos came under the ownership of the Isis Central Sugar Mill Co., until displaced by dieselisation. They were then sold to the Gin Gin Mill at Wallaville to be sold to Bruce McDonald in 1970 and 1972 respectively. They were displayed at Goulburn Steam Museum for a number of years before leaving the museum with him in 1978 and moving to Canberra.

G.Bond 11/80, K.McCarthy 12/80, Editor.

NEW SOUTH WALES.

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD Albion Park. 610 mm gauge.

(see LRN 19, p.2)

Steam locomotive *Cairns* (0-6-0 Hudswell Clarke 1706 of 1939) returned to service on Sunday 14 December. On 22 November the overhauled tender was lifted back onto the bogies. The tender wheels had been reprofiled, the

journals built up and turned, new bearing brasses fitted and an improved bearing lubrication system devised.

Opportunity had been taken to remove the many layers of accumulated paint on both the tender and the loco, and *Cairns* has returned to service in a maroon colour scheme, similar to its original livery of 1939. The original detailed linework and lettering, revealed as the layers of paint were removed, will soon be reapplied to this museum exhibit.

Queensland Railways rail motor trailer P119 arrived at Albion Park on Monday morning, 3 November and was lowered onto a prepared pair of 2 ft gauge bogies purchased some time ago from Ruook Ltd of Alexandra in Victoria. This trailer was built at Ipswich in 1936, and it has now been revealed that the 30 ft length and 7 ft width can negotiate the museum's clearances. Immediately after its arrival, the worn canvas was removed from the vehicle's roof and malthoid glued into place. By early December the Wollongong glass merchant, Ted Mant, had prepared and donated glass to replace the missing pieces, while one of the 3 ft 6 in gauge bogies was being dismantled for conversion to 2 ft gauge.

Suitable seats for this carriage have already been obtained and plywood has been purchased to enable the slightly water damaged ceilings to be replaced. The ILRMS members thank ANGRMS for making this valuable item available.

The museum has standardised on 45 lb/yd rail weight for its main line, a type never placed to a great amount of use in N.S.W. With the modernisation of Illawarra collieries in the 1940s-50s, and the introduction of 3 ft 6 in gauge underground systems, 45 lb rail was adopted as standard, so much of the museum's plant has been obtained from local colliery stock. Ten lengths were recently discovered as stacking material at the AI&S Port Kembla steel works. Although an offer was made to purchase the material, the AI&S company generously donated the rail to the museum, which Heggies quickly delivered to Albion Park.

A four wheel open mine "man car" and a steel skip, formerly from Excelsior Colliery, was recently donated to the museum. The "Man Car" has been overhauled and repainted and is now used on the electric tramway, hauled behind the Ruston diesel loco, on days when the electric trams are not available for traffic.

On 29 November the Ruston loco hauled bogie car No.1. along the new main line extension east of "Yallah" station on clearance trials and this track was incorporated in regular operational routine on Sunday 7 December when the museum worked for a special Christmas picnic booking.

Work has continued on the rebuilding of the c.1918 International bus body

as the saloon section for passenger car No.2. The last of the 14 in "crown light" window sashes were fitted on 29 November while the first 2 of 14 large window sashes were fastened in position on 14 December. Both sides have been lined out and scrolled in vivid yellow which is in harmony with the rich brown applied to the body.

By mid-December the survey of the museum site had been completed and with this legality concluded the way is now clear for the lease agreement with Shellharbour Council to be concluded. This will result in the museum area being doubled and the main line track circuit reaching completion.

The completion of the restoration of the tender of locomotive *Cairns* has enabled work to be again concentrated on 0-4-0ST *Burra* (Hawthorn Leslie 3574 of 1923). The chassis of this engine has been turned upside down, and on 13 December one of the driving wheel sets was removed to enable work to start on overhauling the bearings.

Ken McCarthy 12/80.

T.A. MELLEN PTY LTD, Sydney 610 mm gauge.

(see LRN 7, p.5)

This company is currently cutting a services tunnel for the Sydney City Council under Kent Street, in the centre of Sydney. To help carry materials and remove spoil, a 610 mm gauge railway has been laid as the excavation continues, approximately 20 ft below the surface. Track is made of battens around 235 cm (7 ft 8 in) long, rail 15-20 lb, welded to ties of channel steel. During December, a small battery electric loco, four wheeled, was seen above one of the shafts. It is believed to be of the Gemco "Trammer" type with outside coupling rods, and one motor between the frames. On a pedestal mount was a tram-type controller, and hand wheel; but no brake shoes were fitted. This could well be the loco observed working on a T.A.Mellen job in 1978 at Picnic Point. Several four-wheel wagons of nondescript type are in use, but it is not known at this stage if there are any other locos.

Len King 12/80

STEAM TRAINS PTY LTD, Kurrajong 610 mm gauge.

(see LRN 14, p.13)

Work has been continuing on the stock of the proposed Ku-ring-gai Valley Railway. *Sydney*, Hudswell Clarke 0-6-0 1838 of 1950 is resplendent in blue livery, with brass boiler bands etc., and the cab is nearly fully equipped again, with all gauges and controls refitted. The fire doors have yet to be fitted. Below the footplate, the running gear has yet to be stripped and cleaned. Earlier in 1980, the smokebox was tidied up with the cutting away of patched metal

below the door, and alongside the smokebox, above the running board. New sheet metal was curved and cut and flush welded to give a neat appearance. Work continues on the stripping of the tender chassis of rust and heavily corroded steel. Internal cross-bracing will be replaced in the front section, and some angle steel around the perimeter. The steel has been bought to replace that oxy-cut away plate from the front, bottom front, and coal space. The bogies will soon be re-assembled, new parts having been made, and reconditioning being completed on other components. The John Fowler 0-4-2T 17881 of 1929 had its outer cab roof and ashpan removed some months ago. Only the ash pan will be replaced. The tanks need extensive repairs, for the back sheets have corroded away, leaving little solid metal.

Last Christmas (1979), railmotor trailer PL121 was left alone, awaiting the fitting of floor, bogies, and the assembly of seats. PL122 was then started on, by the stripping of all body panels and the roof. This left the familiar steel framework exposed, and where it joins the solebar, extensive wasting was found, with heavy corrosion and rotten timbers. From that time to late October, all the solebar has been replaced, along with intermediate cross members and bracing. To add strength to the ends of the solebar, steel angle was fitted, welded to the framework and bolted through to the chassis. PL122 at some time in its working life was either in a collision or derailed, with some distortion to the chassis. Some angle steel was replaced, and the drawgear at one end was strengthened. While this work was undertaken, the complete steel chassis was cleaned back to bare metal, treated and painted. As with PL121, a steel roof is to be fitted, but of a slightly improved nature, in that the edges will be tidier. Neither carriage had good quality flooring, and timber wall studs were mostly eaten away with dry rot or insects. PL122 also needs new doors, the good ones from both carriages utilised in PL121. Alterations to the steel frame of PL122 give it only four side doors, whereas PL121 retains its guards only doors, as well as four passenger entrances, and two end exits. One end of PL122 will have a bench seat, to give passengers an observation area to watch the locos from. No glass will be fitted on the side windows, but the ends will be glazed.

Len King 12/80

QUEENSLAND

ALMA PARK ZOO, Kallangur 1067 mm gauge

(see LRN 14, p.14)

It is reported that the "Mohawk and Hudson River Railroad" train on display

here was sold at an auction held here during November, possibly to overseas interests, but further details are still required. The locomotive was a four-wheeled diesel-hydraulic built by Plymouth and possibly builder's number 6124 and had been given a "steam outline". There were also thirteen four-wheeled carriages built on wagon bogies.

Bob Gough 12/80

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford. 610 mm gauge

(see LRN 19, p.4)

The Society's tender for the purchase of its first "main line" diesel locomotive has been successful. The loco concerned is a John Fowler 0-6-0DM Goondi No.1, which has been purchased from CSR Ltd, Goondi Mill. Builder's number 18260 of 1929, it was originally fitted with a petrol engine and was supplied to CSR's Childers Mill. However, it didn't remain there long, for CSR closed this mill in 1932 and the Fowler was transferred to Goondi. It has a Gardner 5cyl. diesel engine and weighs 10 tons. It has been used by the mill until its replacement by a modern E.M. Baldwin unit a few months ago, and is the last of its type in industrial service in Australia.

The Society was invited to take part in the annual Brisbane Hobby Show, and this was followed up by a promotion the following week when it was invited to a display at a shopping centre at Springwood, on Brisbane's southern outskirts. It was decided that this could be an opportunity to transport another locomotive from Brisbane to Woodford at little cost to the Society, as the shopping centre was keen to have a locomotive on display. A suitable locomotive from those stored at Ferny Creek was selected. This was *Alison*, a John Fowler 0-6-2T (16194 of 1923), which had already been restored externally and only needed final coats of paint. A few members made a big effort to complete this task, and on 30 November, she was unloaded at Springwood resplendent in green and red livery. She was then taken direct to Woodford on 6 December when the display closed. Thanks are due to T.A.C.Hire Services and Aitken Transport as well as the Arndale Shopping Centre and local radio personality Warren Tapp who helped to organise the event.

A further piece of trackbed has been made available to the Society for its initial 1/2 mile of track. This has been formalised in an agreement between ANGRMS and the land's owners, APM Forests Pty Ltd.

As is recorded in more detail elsewhere in this issue, the 3 ft 6 in gauge steam loco *Kilrie* from Pioneer Mill has been placed on loan to the Queensland Pioneer Steam Railway Co-operative Ltd.

Durundur Railway Bulletin No.12.

CSR Ltd, Macknade Mill 610 mm gauge.

(see LRN 16, p.3)

Motor rail "SIMPLEX" four wheel diesel mechanical builder's number 10232 of 1951, numbered 1 on the Macknade roster is being re-engined. Its original Dorman 2-cylinder engine is being replaced with a Deutz 3-cylinder air-cooled motor.

C.J.Hart 12/80

CSR LTD, Victoria Mill 610 mm gauge

(see LRN16, p.4)

Preserved Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) was once again used this year to give rides at the annual Mooraka Festival on 13 September. It ran from Herbert Street to between Gilroy College and Milton's Loop with passengers riding in the Decauville carriage.

C.J.Hart 12/80

MARIAN MILL CO-OPERATIVE SOCIETY LTD, Marian Mill 610 mm gauge

(see LRN 18, p.5)

Tenders have been called for the construction of earthworks for the new Langdon tramway network in the Mirani area. Stage 1 of the project will require about 30 km of formation to be built. The two steam locomotives at Marian, John Fowler 0-6-2T 20277 of 1934 and Perry 0-6-2T 2601.51.1. of 1951, will be retained at the mill for the foreseeable future, and maintained for emergency use.

Durundur Railway Bulletin No.12, D.J.Mewes 12/80

A.J. MCRAE, Caltex Service Station, Torbanlea 610 mm gauge

The Bundaberg Foundry "Bundaberg Jenbach" loco, removed from the nearby Burgowan No.13 Colliery (see LRN 17, p.4) has been located here. The tiny 15 hp four-wheeled diesel-mechanical loco, Bundaberg Foundry 19 of 1956, still bearing its number, 5 and name *Rusty*, is behind the service station with about a dozen coal skips and some signals. There is no track laid at present .

Bob Gough 12/80

MORETON CENTRAL SUGAR CO., Moreton Mill, Nambour 610 mm gauge

(see LRN 19)

Crushing was still going on in the second week of December, with bad weather contributing toward the delay. Mechanical problems with locomotives have persisted. E.M. Baldwin 0-6-0DH *Bli Bli* (6-1257-6-7-65 of

1965) was out of use in the loco shed, with its gearbox lying nearby, its outer casing shattered into several pieces. The mill's largest loco, E.M. Baldwin B-B DH *Coolum* (5565-1-10-74 of 1974) had been relegated to navvy duties after having suffered persistent transmission problems. However on 11 December, it was seen in service hauling short rakes of cane while Mourilyan Mill's loco 8 (Com-Eng 0-6-ODM B1112 of 1956, formerly the Innisfail Tramway's *Johnstone*), on loan to Moreton, received attention to its gearbox. 8's normal duties would appear to have been shuttling cane from Howard Street yard to the mill, with whatever loco was available banking at the rear. With master loco *Bli Bli* out of use, the Locotrol 'slave' Clyde 0-6-ODH *Moreton* (63-289 of 1963) was being used as a conventional loco. 'Twin' E.M. Baldwin 0-4-ODH locos 6-1064-1-11-64 of 1964 and *Valdora* 6-1258-5-6-65 of 1965 were seen operating in multiple back-to-back. The cab roof and windows of these locos have been raised by means of inserting a new metal piece into the cab side at waist level.

Editor 12/80

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 18, p.7)

Tenders were called during September for a number of pre-stressed concrete tramway bridges which will form part of the mill's new Elaroo tramway. The size of the modern sugar mill tramway undertakings can be judged from such major civil engineering as these:

Andromache River	5 x 15 m spans;	3 x 24.5 m. spans.
O'Connell River (Lucas)	5 x 15 m spans;	3 x 24.5m. spans.
Plantation Creek	3 x 15 m . spans.	
O'Connell River (Forbes)	4 x 24.5 m spans.	

Durundur Railway Bulletin No.12.

QUEENSLAND PIONEER STEAM RAILWAY CO-OPERATIVE LTD 1067 mm gauge

(P.O.Box 378, DARRA 4076)

(see LRN 2 p.6)

This Society now runs trains on the first Sunday of each month on the Swanbank, Ipswich, line of the Queensland Electricity Generating Board with its former Queensland Railways PB15 class loco. Now it has acquired an industrial loco for restoration and operation. This has been loaned by the Australian Narrow Gauge Railway Museum Society and is Perry 0-4-2T *Kilrie* (builder's number 265 of 1927). It was placed on private land at Box Flat, near Swanbank, on 15 December. Like its sister engine *Klondyke* of the Geelong

Steam Preservation Society, it last worked at Pioneer Sugar Mill, Brandon.

Editor 12/80

SOLARIS ENGINEERING PTY LTD, Ingham 610 mm gauge.

(see LRN18, p.7)

John Fowler 0-6-0TT (8766 of 1900) and Hudswell Clarke 0-6-0 ex-Macknade 1 (1653 of 1935) were still in the yard here in December. It is reported that the Leo's club expects to have *Perth* in a park at Trebonne by early 1981 (see LRN 16 p. 5) .

C.J.Hart 12.80.

THE SUGAR BOARD, Lucinda Bulk Sugar Terminal 610 mm gauge.

(see LR 18, p.8)

Because of a breakdown of the sugar Terminal's Com-Eng 0-6-0DH (G1023 of 1958), a locomotive was on loan from CSR Ltd's Macknade Mill from 22 to 28 October. This was Macknade's normally spare loco, Clyde 0-6-0DH DHI.5 of 1954, number 18 on the Macknade roster.

C.J.Hart 12/80.

VICTORIA

GEE LONG STEAM PRESERVATION SOCIETY, Bellarine Peninsula Railway 1067 mm gauge.

(see LRN 15, p.4)

For many years the Society has been interested in acquiring the ex-Australian Cement, Fyansford, 0-6-0ST built by Vulcan Iron Works, USA, builder's number 2540 of 1916. This is the sister engine to the Society's No.6, Vulcan Iron Works 2539 or 2541 of 1916. No.5 was placed in a park at Ringwood in 1968, after the closure of the railway at Fyansford, and the Ringwood City Council has indicated that it would be agreeable to the loco going to Queenscliff subject to its being replaced with a suitable item of machinery. At the recent auction at the Yarralumla Brickworks in Canberra, a suitable traction engine was acquired on behalf of the G.S.P.S. and it is hoped that within the next few months, it will be restored externally and enough funds made available for the swap to be effected.

Monthly Notice No.14.

OVERSEAS - NEW ZEALAND

NEW ZEALAND RAILWAY & LOCOMOTIVE SOCIETY, Canterbury Branch Ferrymead Railway, Ferrymead Museum, Christchurch 1067 mm gauge.

A visit here on 10 November, saw only small patronage due to wet and windy conditions. A Manning Wardle 0-4-0T was in steam hauling a wagon, carriage, and van. This loco worked at the New Zealand Refrigerating Co's Imlay Works from 1914 to 1975 and bears builder's number 1841 of 1914. The railway at the historic complex is about 1/2 mile in length with station, signal box, crossing hut and signalling. There are full facilities for servicing locomotives, and undercover accommodation is provided for all the locos, which include a high proportion of industrial machines. Wagons and rolling stock stay in the open. Steam operates practically every Sunday, weather and patronage permitting.

Len King 12/80, Ray Ellis.

WEST COAST HISTORICAL & MECHANICAL SOCIETY, Shantytown Museum, near Greymouth. 1067 mm gauge

This site is a reconstruction of a gold mining town of the last century. Currently operating on an irregular basis is a Climax loco, built by Lima (sic)* in 1913 (builder's number 1203). Until 1960 it operated the Ongarue bush tramway of Ellis and Burnard along with another Climax and a Heisler. Bought in a dilapidated condition, it has taken six years to restore the loco to the original condition with sheet metal riveted cab. The boiler was practically rebuilt; the bogies needed extensive work, with the bevel gears needing remetalling and machining to reach the original profile. The safety valves are set at 120 lb; air brakes are fitted. The line is through thick bush, passing gold workings, and is built on the old formation, about a mile long. A small wooden station caters for the tourists, beside the town reconstruction, and a few hundred yards away is the workshop shed, which originally came from a coal mine on the West Coast. Now in pieces for overhaul is Sharp Stewart 0-6-0T *Kaitangata* (builder's number 4270 of 1897), which operated in the ownership of the Kaitangata Coal Co. until 1955 and then that of the State Mines Department. One carriage (built new at the site) caters for around 40 people a trip, but another ex-NZGR carriage is on the site, needing extensive overhaul.

Len King 12/80, Ray Ellis

ROSTER No.2 - ELCOM COLLIERIES PTY LTD

This Company, owned by the Electricity Commission of New South Wales, operates five collieries with underground rail systems; Wyee State Coal Mine, Munmorah State Coal Mine, Newvale No.1 Colliery, Newvale No.2 Colliery, and Awaba State Coal Mine.

Hon. Secretary, LRRSA Victorian Division: E.Stuckey, P.O.Box 21, SURREY HILLS, Vic. 3127

Deadline for next issue will be 22 April 1981.

EDITORIAL

With this edition of *Light Railway News*, members will be receiving a sample "News Report Form", and it is hoped that this will encourage everyone to contribute towards LRN whenever possible. Regular contributors, and those requesting further copies, will be sent a supply of forms to make reporting news more convenient and easy. Many members seem to enjoy receiving LRN, yet leave it to the few to send in the contributions. How about making the effort to enable LRN to record EVERY happening in the world of Light Railways? Thanks to all contributors who have helped in the past. Please continue to give your support.

RESEARCH COLUMN

The following members are researching a number of subjects with the aim of producing material for future editions of *Light Railways*. All would appreciate receiving information or photographs which could help them. Please write to them direct if you feel you can be of any assistance:

- tramways of the Solomon Islands.
- tramways of West Irian.

PHILATELY

CHRISTMAS ISLAND

The Christmas Island Philatelic Bureau released the third of its four part special stamp issue on the phosphate industry on 9 February 1981. These stamps feature the role of railways in the phosphate industry. The 22c stamp depicts the screening and stockpiling of phosphate and the 28c stamp shows the loading of railway wagons. The next stamp depicts a train hauled by Whitcomb diesel locomotives on the 4 ft 9 in gauge railway (see LR.29) and the 60c stamp shows the drying process. The stamps are available from Australian Philatelic Bureau outlets.

FIJI

On 22 December 1980 Fiji issued a new definitive series of stamps depicting local landmarks. The 18c stamp depicts Labasa sugar mill which was built in the early 1890s. The mill tramway yard is clearly depicted in the aerial view. Following recent expansion the mill is now capable of crushing over a million tons of sugar cane in a season.

EAST GERMANY

For the record, East Germany issued stamps featuring narrow gauge railways on 22 November 1980. The 20pf and 25pf stamps depict a locomotive and carriage of the Radebeul-Radeburg 750 mm gauge railway while 20pf and 35pf stamps feature a locomotive and carriage, respectively, of the 900 mm gauge Doberan-Kuehlungsborn railway.

Bob McKillop.

LOCOMOTIVE AND ROLLING STOCK MANUFACTURERS.

E.M. BALDWIN & SONS PTY LTD., Castle Hill, Sydney.

(see LRN 19, p.1)

On 31 January, a Fox four-wheel diesel man riding car was observed at Baldwin's works. Numbered 22P, it appeared to be in poor external condition, but otherwise operable. This vehicle is probably that shown in Keith McDonald's Coal & Allied Industries roster in LRN 19, in which case it would be Fox 354 of 1975, a 3 ft 6 ins gauge diesel-hydraulic from Chain Valley Colliery.

Craig Wilson 2/81, Editor.

EQUIPMENT IN TRANSIT

On 29 January, two narrow gauge bogie open wagons were observed on a South Australian registered semi-trailer heading west on the Great Western Highway between Katoomba and Lithgow, NSW.

It was not possible to obtain photographs, and the carrier's name was not observed, but enough details have been recorded to enable a good description to be given.

The wagons appeared to be brand new and had steel bodies of 4 or 5 panels with outside channel bracing. Both were bogie vehicles and were painted in a dark green "US Army" shade.

One had flat sides, while the other appeared to have taper sides and could have been a dump truck. Gauge was about 2 ft; length about 15 feet; width about 15 feet (sic); and height of body about 4 feet.

There was no lettering on the trucks, but one had a diamond shaped builder's plate with the word CHESS under a crown.

TYPE 1.
Rectangular Cross Section.

TYPE 2.
Taper Bottom.
Side layout similar to type 1.

End view
This type appears to be a
bit taller and could be a
dump car.

Builders Plate.

Not-to-scale.

G. Morris.

About two years ago, a little blue diesel with connecting rods was seen on this road on a truck heading west.

Can any reader supply further information?

Greg Morris 2/81.

AUSTRALIAN CAPITAL TERRITORY

IAN MORRISON

Ian Morrison, of Dampier, Western Australia, purchased the Hudswell Clarke 0-6-0 1098 of 1915 at the Old Brickworks Museum auction in November. However, unforeseen difficulties have prevented the shipping of the loco west, and it is now up for sale again.

Ian Bowering 2/81.

NEW SOUTH WALES

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD. Albion Park. 610 mm gauge

(see LRN 20, p.2)

On Saturday 14 February 1981, former Melbourne cable tram trailer No. 430 was delivered to Albion Park from Bairnsdale, Vic. This car and No. 300 were purchased c.1932 as camp huts for use at a logging camp near Mt. Taylor.

Although delivered on wheels, these were soon removed and during the early 1940s the two cars were towed to the nearby "Hazel Dell" property of the Lind family as outbuildings, on pole sleds fastened under the bodies.

The two tramcars were situated in a sheltered position in the intervening period and during 1980 became surplus to the needs of the property.

Although many offers were received to retrieve doors and other items from the cars, the Lind family were keen to see the vehicles restored to railbourne condition.

Mr. C. Coop of Melbourne took on the task of finding homes for the tramcars and, after an inspection in August 1980, the ILRMS purchased the two relics for a nominal cost. Although this Society would have liked to retain both cars, it was obvious that unless both could be restored at once, one would deteriorate beyond retrieval. As the ILRMS work force is already fully extended, one of the cars was offered to other N.S.W. kindred associations for restoration, providing that the conditions promised the Lind family could be guaranteed.

The groups contacted would not meet the conditions so No. 300 was given to the Canberra Tradesmen's Union Club in Dickson, A.C.T. The club organiser and a sub-committee of members are tram enthusiasts and have already restored Melbourne "W2" 447 and are at present working on Sydney "P" car 1729. This Canberra Committee shared the delivery costs with the ILRMS and it is their intention to restore car 300 to original condition and to later haul it by horses along a length of track. Although the original Melbourne horse cars were slightly shorter than the cable tram trailers, in later years standard cable trailers were hauled along the Sydney Rd. to Zoo tramway by horses.

On arrival at Albion Park, car 430 was lowered onto a steel underframe mounted on former Ruook Ltd. (Alexandra, Vic.) bogies, and members enjoyed a tour around Albion Park system in a vehicle which had been off the rails for almost 50 years!

The tramcar is in surprisingly good condition. The interior is complete except for seats (although seat backs are in position), while the end aprons will have to be rebuilt and defective window frames, louvre sun shades, and weathered side panels restored. The Society records their thanks to the Lind family and to Mr. C. Coop for their generosity in making these relics available for restoration.

Over the last two months the main efforts at Albion Park have been directed at the restoration of Queensland Rail Motor Trailer 119. By mid February the ceiling had been completely relined with new figured plywood, new wiring and lights installed, defective interior timber replaced and new windows and sliding tracks fitted. All external mouldings have been removed, cleaned and

primed while the initial external undercoat had been applied.

The wheels were removed from one of the 3 ft 6 in gauge railmotor trailer bogies and various 2 ft gauge wheel sets placed in position to ascertain the possibility of regauging the original QR bogies. As it was found that the floor level could not be lowered by this method, new rubbing plates and king pin bearings were fitted to the P119 underframe and the vehicle is now mounted on a pair of Ruook bogies. These bogies have resulted in a major lowering of the vehicle, but 3/4 in thick side plates are now being prepared for a set of new bogies for this vehicle which will use wheel and axle box sets obtained by the ILRMS from Bundaberg mills some years ago. In the meantime this large carriage can safely operate on the 2 ft gauge Alexandra Vic. bogies.

On 14 February the last lettering was completed on ex CSR 0-6-0 *Cairns* (Hudswell Clarke 1706 of 1939). This has been repainted in an attractive maroon scheme which was carried on delivery in 1939, together with yellow shaded lettering, which were revealed when the many layers of paint were cut back during 1980.

By mid February the lengthy task of fitting the new window frames to the saloon of the passenger car 2 (former c.1918 International bus body) was completed and a start made on fitting figured veneer ply panels to the interior.

During the Christmas - New Year period several additional steaming days were held for picnic groups. The regular open day of 11 January resulted in record crowds; a total of 825 tickets were sold for the steam train ride, while electric tram rides brought the total to well over 1,300.

Stair cases have now been fitted to standard gauge locos SOUTH BULLI No.2 (Hudswell Clarke 297 of 1888) and *Wallaby* ex AI&S (R.W. Hawthorn 2988 of 1913) which now give visitors easy access to the cabs. In addition, member Alan Watson has made good progress with repainting the ex Corrimall Coal Co. standard gauge, non air, coal hopper which forms part of the static coal train marshalled behind SOUTH BULLI No.2.

The lease property survey has been lodged with the Shellharbour Council solicitor and it is hoped that the extended lease will soon be finalised at Albion Park. This will enable the completion of the 1 km main line circuit and the development of more efficient operating procedures for the increased number of visitors which are now riding on the museum railway.

Ken McCarthy 2/81

TOD WATSON, Moama. 610 mm gauge.

Among a collection of privately-owned traction engines just across the River Murray from Echuca are two former Queensland cane locomotives.

One, a John Fowler 0-6-0T 7607 of 1896, was obtained from the Childers Kindergarten around 1974. This had started work at CSR's Childers Mill before being absorbed into the stock of the Isis Central Mill in 1932. The second loco is a Decauville 0-4-2T, 246 of 1897. It was purchased new by the old Invicta Mill in the Bundaberg District, and then passed to the Millaquin Sugar Co. in 1918. It latterly worked at Qunaba Mill, and was acquired by Tod Watson in 1969. This locomotive has been mounted on a set of road wheels under the firebox and in front of the forward buffer beam so that it can be towed around to traction engine shows etc.

Brian Peart 2/81, Editor

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610 mm gauge

(See LRN 20, p.4)

The Society's two latest acquisitions arrived at Woodford on 8 January. John Fowler 0-6-0DM 18260 of 1929, ex Goondi Mill No. 1, was loaded on 5 January, and Decauville 0-4-2T of 1897 the following day at Giru. Fortunately, the truck carrying them just managed to beat flooding in several places en route.

The Decauville was built in France in 1897, the maker's records describe it as going to the "Exposition of Brisbane". It was the first loco at the Mulgrave Mill at Gordonvale in North Queensland, where it became No.7, for reasons that are lost in antiquity. It also carried a nameplate *Lord Lamington* at one time. Weighing 9 tons in working order, this little engine worked at Mulgrave until 1956, when the mill became the first to dieselise. Like the mill's other steam locos, it was put up for sale, and unlike most of the others, it found a buyer, being purchased by the Haughton Sugar Company to work at its Invicta Mill, Giru. It worked here until 1963, when it was stored and afterwards placed in a playground near the State School, reportedly being steamed into position on portable track!

The Fowler was built as a petrol locomotive, having been ordered by CSR in December, 1928, and costing £2,002. Weighing 10 tons, it was delivered to the Company's Childers Mill, where it was the second large internal combustion loco (the first was 1928 Hudswell Clarke 0-6-0PM). In 1932, on the closure of the Childers, the loco was transferred to Goondi. In 1956, the original petrol motor was replaced with a Gardner 5LW, and in its latter years, it worked as a navy loco, as No.1, working up to the latter part of the 1980 season, when it was replaced by an E.M. Baldwin product. The locomotive was started up

on its arrival at Woodford, and although somewhat dilapidated externally, the only major mechanical work that it obviously required is attention to the starter motor.

On 7 January, a party of Rover scouts attending the 2nd Asian-Pacific moot came to Woodford to work at the Society's site. Jobs undertaken were the cutting of sleepers, laying out of track materials, ballasting of storage lines and a section of main line, and cleaning bogies removed from beneath the tender of the ex-Innisfail Tramway John Fowler 0-6-2 (17110 of 1926), for use beneath ex rail motor trailer PL111. On 8 January, the bogies were removed from beneath the trailer by the same crane which unloaded the locomotives which had arrived the same day.

Durundur Railway Bulletin No.13, Editor.

DINOS FUNPARK, Tanawha 610 mm gauge

This attraction near Nambour, formerly Tanawha World (see LRN 1 p.5) had a small rail line of portable track in a circuit. The main item of rolling stock was a "rail motor" with a Holden petrol engine built in by a Mr Drysdale of Woodridge. There was also a small passenger trailer. The railway does not seem to have been used much, and on a recent visit it was seen to be out of use, with some of the track torn up. An advertisement in the *Weekend Australian* on 28 February advertised the rail motor and other equipment for sale, under the heading "1916 Queensland Motor Rail".

The Weekend Australian 28.2-1.3.81, Editor.

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 20, p.5)

Construction work on the new tramline west of Mirani is continuing satisfactorily. The new tramline will involve crossing the Pioneer River on the Queensland Railway's high level bridge at Mirani. Track is already being laid near Mirani West, and the mill's rebuilt E.M. Baldwin tunnelling loco, recently out of shops, has been taken across to the area to work on construction duties. This 4wDH loco, one of four built in 1973 under serial number 4529, has been completely rebuilt with running boards, high bonnet and sound proofed cab. The new tramline has maximum grades of 1 in 100 against the load, and will be worked by one of the mill's Clyde Model HG-3R-0-6-0DH locos, fitted with a high speed gear box for the work. The two new 32 tonne E.M. Baldwin B-B DH locos will be used on hauling cane from the Mount Jukes and Hampden areas, where grades are much more difficult.

Len Heaton via David Mewes 2/81

MILLAQUIN SUGAR COMPANY PTY LTD, Millaquin Mill & Qunaba Mill. 610 mm gauge.

(see LRN18 p.5 [Millaquin] and 6 [Qunaba])

Offers were invited for the acquisition of the steam locomotives at these two mills in the national press during February.

The locos are as follows:

Millaquin Mill

4	<i>Jumbo</i>	0-6-2T	Bundaberg Fowler	1	1952.
9		0-4-2T	Perry	9737.45.1	1945.

Qunaba Mill.

1	<i>Delta</i>	0-6-2T	Perry	9767.50.1	1950.
2	<i>Skipper</i>	0-6-2T	Perry	1850.46.1	1946.
3	<i>Flash</i>	0-6-2T	Perry	6160.48.1	1948.
5	<i>Dobbin</i>	0-6-2T	Bundaberg Fowler	6	1952.
6	<i>Nipper</i>	0-4-2T	Bundaberg Fowler	8	1952.
	<i>Invicta</i>	0-6-2T	John Fowler	11277	1907.

Interested parties were asked to indicate proposals for preservation and/or restoration, and the use which is to be made of the locomotives. It was stated that the Company might reserve up to two locomotives for its own purposes, and that no offers might necessarily be accepted.

Offers closed on 13 March.

The Weekend Australian 7-8/2/81.

MORETON CENTRAL SUGAR CO., Moreton Mill, Nambour 610 mm gauge

(see LRN20, p.5)

A visit to the mill in February revealed that considerable earthworks had taken place to expand the capacity and ease of working of the full yard at the mill. However, track laying had not begun. Large amounts of construction materials including sleepers, rail and concrete pipes were observed at Howard Street yard, and to the east of the yard, more earthworks were in progress to relocate the route of the main tramline. The new route involves considerable work in cuttings and embankments and will take the tramline from the high ground on the outskirts of town at the entrance to Howard Street yard down to the flats of Petrie Creek. The new route will eliminate the curves of the old line, with its ascent of "Tennis Court Hill", a favourite spot for enthusiasts in steam days.

It is understood that Com-Eng 0-6-0DM B1112 of 1956, Mourilyan Mill's loco 8, would be returned north early in the year. However, it was observed in the mill yard on 21 February.

Editor 2/81

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 20, p .6)

Further contracts have been let for pre-stressed concrete bridges on the mill's new Elaroo Tramway as follows:

O'Connell River (Kinneers)	5 x 15m. spans
Horse Creek	5 x 15m. spans
Horse Creek Tributary	2 x 15m. spans
QR Underpass (Noorlah)	1 x 10m. span.

Durundur Railway Bulletin Vol.2 No. 1

TASMANIA

LUNE RIVER RAILWAY CO. LTD 610 mm gauge

(see LRN 18, p.6)

Safety problems, apparent disagreements with the State Government and a fire have led to the closure of the railway, temporarily at least.

In November, a carriage derailed on the line, and inspectors were brought in from the Department of Labour and Industry and ANR to investigate. This led to a report being made to the operators and the National Parks and Wildlife Service, which owns the line, requiring the repair of cracked frames, refurbishing of loose couplings, and the checking of wheel bearings among other things. The proprietors of the operating company claimed that the work required went far beyond the normal maintenance, and should be the responsibility of the government as "deferred maintenance" from earlier days. They were supported by Dan Wilson, a director of the Festiniog Railway Society on holiday in Tasmania, who suggested that the derailment was caused by the excessive wear on wheel tyres representing years of neglect. He also maintained that the point locking and stone ballasting which it is understood the National Parks and Wildlife Service was demanding was certainly capital expenditure.

The minister for National Parks and Wildlife, Mr Lohrey, stated that the operators were responsible for upgrading and maintaining the rolling stock, but that nevertheless, \$13,000 ex gratia payments had been made for improvements. Joe Molyneux and Russell Ludbey, the operators, however, claim to have spent almost \$50,000 since taking over the lease late in 1979, and that the government had spent \$109,800 to buy the land on which the railway had always run, while refusing to help any further with rolling stock repairs.

Further disaster struck on 2 February, when a deliberately-lit bushfire

damaged a section of track. Russell Ludbey had to take a locomotive and carriage to save the toilets, station and shelter sheds at Deep Hole, but about a kilometre of track suffered when the sleepers were burnt, and it took four hours for the train to traverse the damaged section on its return.

State Cabinet will now decide whether to make funds available to enable a resumption of operations on the railway. Unless help is forthcoming to repair the damaged track and improve rolling stock, it seems unlikely that the line will ever reopen.

VICTORIA

ALEXANDRA & DISTRICT HISTORICAL SOCIETY, Alexandra 1029 mm & 610 mm gauge

(see LRN 11, p.12)

2 ft gauge John Fowler 0-6-0T 11855 of 1909, purchased from the Old Brickworks Museum, Yarralumla, A.C.T. (see LRN 20, p.1) was unloaded at Alexandra on 30 January, having left Canberra the previous day. The loco shed at Alexandra had been doubled in size to hold the steam loco as well as the Kelly & Lewis 0-6-0DM (4271 of 1935) and the 3 ft 4 in gauge Day's 0-6-0PM. It has still proved impossible to free the engine of the Kelly & Lewis, but the Society's other 2 ft gauge loco, a Malcolm Moore 4wPM (1049 of 1943) has been restored and is ready for use. It is hoped to begin track laying in the vicinity of the old Alexandra station soon, so that hopefully, it may be possible to begin operating trains.

The historical museum at Alexandra station is open every day of the week except Monday, and the locomotives may be inspected by visitors at these times. Working bees take place every Saturday morning, and readers would be especially welcome then.

Ian Bowering 2/81

CODELFA-CODGEFAR, Loy Yang 1067 mm gauge

Further details are to hand of the operations at Loy Yang, involved in the construction of a 665-metre tunnel 4.4 metres in diameter which will house a pressure pipeline. This fire service pipeline will connect the fire service reservoir to the open cut for fire prevention purposes. The railway system used on this job was previously used in the construction of the Melbourne Underground (see LRN 9, p.18), and a newspaper photograph shows a Com-Eng four wheel diesel hydraulic loco with muck train at the tunnel mouth.

The loco may well be 26-3, Com-Eng EC4596 of 1965, judging by the details visible. The tunnel was bored by a Robbins shield-boring machine built in America and especially imported from New Zealand for the job at Loy Yang.

The Latrobe Valley Express 15/4/80 via John Peterson.

LOU DE CLIFFORD, Halls Gap 610 mm gauge

(see LRN 11, p.15)

It is believed that the railway around Mr de Clifford's native gardens is now operational, with power provided by one of the two locomotives built by Alwyn Zinn in Ipswich and purchased from the Australian Narrow Gauge Railway Museum Society in 1979. This had been rebuilt with a diesel motor. It is hoped that a member will provide a detailed report of this location, which is open to the public.

Brian Peart 2/81

GRAHAM HARDING 610 mm gauge

Stored at a remote location in the hills to Melbourne's north-east are two sugar mill locomotives from Proserpine Mill, which were obtained in the early 1970s. One is a Perry 0-6-2T, 8403 of 1939, while the other is an unusual 0-4-2ST built by the Leeds firm of T. Green in 1895 (builder's number 219).

Editor

WESTERN AUSTRALIA

WEST AUSTRALIAN HARBOUR & LIGHT DEPARTMENT, Point Samson 1067 mm gauge

The seaward end of the jetty was set alight on 26 November after a barbecue there. About 15 metres was burnt out and another 3 metres cut out as a fire break. The jetty has been closed to shipping since May 1976. In 1978, there were still two motor rail "SIMPLEX" four-wheel diesel mechanical locos here, P.W.23, (14034 of 1957) near the jetty, and P.W.24 (14035 of 1957) adjacent to the receiving shed. At that time, the Roebourne Town Council had the idea of retaining one of these as an exhibit.

RESEARCH COLUMN

NEUGUINEA KOMPANY TRAMWAYS, Astrolabe Bay, New Guinea

Bob McKillop of 10A The Bulwark, CASTLECRAIG, 2068 is researching the tramways of the Neuguinea Kompany in the Astrolabe Bay area of Papua New Guinea, and seeks the assistance of members for any information on the locomotive and rolling stock used there. It is speculated that the locomotive was a 2 ft. gauge Krauss product, probably built for the line in 1891. There have been reports that one of the 2 ft. locomotives on Nauru was a Krauss so it is likely that the loco went there after 1903. Nauru was administered from Rabaul as part of New Guinea from 1899.

TRACTION ENGINE LOCOMOTIVES

E. J. Tulloch of 11 MacKenzie Street, Homebush 2140, is conducting enquiries for British enthusiasts interested in traction engines for railway use, for publication in a forthcoming book. To date the following locomotives have been traced:

* Allchin ?/c. 1911	Steam wagon converted to 4-2-0 rail loco in 1918 for use in McDanniels sawmill at Yarraman, Qld. By 1927, owned by the Beaudesert Shire Council and employed on the Beaudesert Tramway. Sold for scrap in 1944. (See The Beaudesert Shire Tramway; LRRSA, 1980; for further details.)
Steam Wagon.	Converted to 4-2-0 loco and employed by Brown & Broad, sawmillers at Moore, Qld. By 1928, the loco was out of use but intact.
Buffalo Pitts.	Traction engine converted for use on a logging railway owned by Britton Bros., Adams Hill, Redpa, Tas.
Foden.	Steam wagon converted for use as a rail loco and used by the County Council of Sydney at their Bunnerong Power House, Botany Bay, N.S.W.
Marshall Portable.	Converted by John Dalziel, Vic., for Anderson Bros. who had a sawmill at Barkstead. The sawmill closed down about 1890 and the loco was abandoned, eventually being cut up for scrap in 1954.
Marshall.	Traction engine converted to rail loco and used on a logging railway owned by Britton Brothers., Adams Hill, Redpa, Tas.
Ransomes Sims & Jefferies	8 nhp single cylinder traction engine 18077 of 1905. Converted for rail use in 1921 by Adelaide Timber Co., W.A. Said to be preserved somewhere in Australia.
Ransomes Sims & Jefferies.	Overttype steam wagon built 1922-5. Converted to 0-4-0+0-4-0 rail loco by Russell Allport of Hobart to work on the 3 ft 6 in gauge Salmon River Tramway in North-Western Tasmania. Works number may be 34008.
Robey 2069/1871	Vertical boilered Thompson type road steamer converted to run on 3 ft 6 in gauge track at Jarrahdale, Jarrah, Forests & Railway Co., who operated a sawmill in Western Australia.
Sentinel Steam wagon	Converted to rail loco by John Kennedy for use on Chesterman tramway which ran from Snug Tiers near Hobart. Tramway closed about 1938 and loco abandoned on site; still there in 1973.
Single Cylinder traction engine built c.1880,	Possibly an Aveling Porter or Fowler. Converted for rail use about 1911 and used by Buckingham Bros., on their Collie Timber Tramway in Western Australia. Rumoured to have been preserved somewhere in Australia.
Steam Wagon.	Unknown make, converted for railway use in Tasmania. Named Harlot. No other details available.
Aveling & Porter "tram" loco	Probably 211 of 1866. Said to have been at a sugar plantation owned by George Raff, Caboolture, Qld.
Aveling & Porter "tram" loco	At R.Honey & Co., Lion Mill, near Chiplow's Wells, Perth, W.A. Here in 1895. Possibly 211 of 1866.

It is believed that LRRSA members have already contributed to the above list, and it is pleasing to see the progress to date. However, any further information about the above, or about any other conversions would be greatly appreciated. Full credit for information received will be given.

PHILATELY

Australia Post's latest series of pre-stamped postcards features a card showing sugar industry scenes. One of these scenes shows one of the C.S.R. Ltd. Hambledon Mill's Clyde HG3R 0-6-0DH locos with low profile roof for working under the QGR bridge at Redlynch.

Editor.

CORRECTIONS & ADDITIONS

LRN 20, p.8.

Omitted from the Elcom Collieries roster were the trolley wire locomotives at Awaba State Coal Mine:

T1	4wWE	Jeffrey	9002	20 ton	Purchased 1955.
T2	4wWE	Jeffrey	9003	20 ton	Purchased 1954.
T3	4wWE	Jeffrey	9037	20 ton	Purchased 1957.

In addition, the names of the collieries were omitted from the roster of man riding cars:

4wBER	E.M. Baldwin		1964		Newvale No.1
4wBER	E.M. Baldwin		1964		Newvale No.1.
4wBER	E.M. Baldwin	3734-1-6-71	1971	22 man	Newvale No.2
4wBER	E.M. Baldwin	3734-2-6-71	1971	22 man	Newvale No.2
4wBER	Fox		1969		Newvale No.2.
4wBER	Fox		1970		Newvale No.2.
4wBER	E.M. Baldwin	2130-5-10-67	1967	16 man	Newvale No.1*

* Purchased from Buchanan Colliery, 1974.

LRN 21, p.3. **Equipment in Transit.**

The width of the wagons was about 5 feet, not 15!!

LRN 21, p.5. **Tod Watson.**

The John Fowler locomotive originated at Childers Mill.

Thanks to Peter Neve & Tony Weston.

MEMBERS ADVERTISEMENT.

For Sale: Radiator and fuel tank from Motor Rail "Simplex" 4wDM loco builder's number 8539 of 1940 (ex Moreton Mill's SIMPLEX). Contact Brian Peart, Eureka Tramway, CLUNES 3370, Victoria.

LOCOMOTIVE & EQUIPMENT MANUFACTURERS.

E.M.Baldwin & Sons Pty. Ltd., Castle Hill, Sydney.

(see LRN 21, p.2)

The four wheel diesel-hydraulic loco seen under construction in December

1980 (see LRN 9, p.8) for Peko Wallsend, is believed to have been for Ellalong Colliery, operated by the Newcastle Wallsend Coal Pty Ltd, a subsidiary of Peko Wallsend.

Since mid-1980, the following orders have been noted:

Elcom Collieries Pty Ltd; One 25 ton 4wDH 1067 mm gauge.

Kandos Collieries Pty Ltd; Two 25 ton 6wDH 1067 mm gauge.

Marian Mill Co-operative Society Ltd; Two 32 ton B-B DH, 610 mm gauge.

Fiji Sugar Corporation; Two 18 ton 0-6-0DH, 610 mm gauge.

In addition, it is believed that a bogie diesel hydraulic is on order for the North Eton Co-operative Sugar Milling Association, and that there may also be other canefields diesels on order for the 1981 season.

A.R.H.S. Bulletin Supplement, D.J.Mewes.

NEW SOUTH WALES

GOULBURN STEAM MUSEUM 610 mm gauge

(See LRN 17, p.2)

The Museum's sole steam locomotive, Krauss 0-6-0 *Stella* (3423 of 1896), was returned to service on 1 June 1980, following an extensive overhaul.

The museum was recently offered a chance to purchase one of the locomotives which formerly ran there, Hudswell Clarke 0-6-0 1098 of 1915. This had been moved to the Old Brickworks Museum, Yarralumla, by its owner, the former curator at Goulburn, Mr Bruce McDonald, in 1975, when he took up an appointment there. At the 8 November auction, it had been purchased by a West Australian buyer, Ian Morrison (see LRN 21, p.4), who subsequently decided not to proceed with his plans, and so offered it for resale. The Goulburn Steam Museum launched an appeal to raise the purchase price of \$6000, but apparently unsuccessfully, as it is reported it has now gone to the Alexandra & District Historical Society (see this issue).

Two bogie passenger carriages are currently being constructed for the Goulburn Steam Museum by a local engineering firm, Barry Bright Engineering. The new cars are being built with end platforms and will be lined with plywood with steel sheathing providing the outer shell. The new stock will replace a worn out ex-Melbourne cable trailer which has been in use in the museum since 1972 and an ex-Sydney electric car which is to be returned to its Sydney owner. The narrow gauge bogies from these cars will be used under the new vehicles.

Leon Oberg & Peter Neve 2/81, Ken McCarthy 4/81.

HUNTER VALLEY STEAM RAILWAY & MUSEUM 1435 mm gauge.

(see LRN 18)

In recent months, large amounts of equipment have been moved to the Society's site at Dorrigo, much of it machinery for the workshop, and unglamorous items such as spare parts. Nevertheless, this represents a great commitment of time, effort and expense.

The major item of news on the industrial locomotive front is that the wheels of *Badger*, the 0-6-0ST built in 1943 by Australian Iron & Steel for its Port Kembla works, have been removed for retyring to enable the locomotive to be moved by rail at a later date. On 14 January, they were delivered to Commonwealth Steel Co. for the work to be carried out.

HVSR&M 1/81.

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park. 610 mm gauge

(see LRN 21, p.4)

During late March the Shellharbour Council approved the new lease which will more than double the area available to the museum. The leased property will now amount to 4.6 ha and will enable the main line circle to be completed providing an operating track of almost 1 km. Formalities still have to be completed but the route of the new track has been pegged and one of the local quarry firms has offered to supply the ballast and prepare the road bed at no cost to the museum.

In addition to the regular second Sunday of each month steaming day, extra open days were held on 29 March for Heritage Week and on Easter Saturday. Regular open days continue to produce riding figures of between 400 and 700 passengers on the steam railway with a similar patronage on the electric tramway. The special running days have also produced figures which have made the additional efforts worthwhile.

The museum's tender for material being disbursed by the Public Works Department was successful and in late April took delivery of two Briggs and Stratton 3 hp motors, 2 large platform scales, and 1 smaller counter parcels scales. In addition a small Gardiner twin horizontal steam pump was obtained in this lot.

Work is progressing on the construction of a large four wheel tank car. Its main role will be for fire emergencies along the museum's main line. In addition to the large tank, the vehicle will carry a power pump which will greatly increase the vehicle's bush fire fighting capabilities.

Further historical details concerning former Melbourne cable tram trailer

No.430, which arrived at Albion Park in February, have been unearthed. It would appear that the car was built in the Melbourne Tramway & Omnibus Coys workshops for the opening of the South Melbourne tramway in 1890. The car spent its last years of operation along Elizabeth St. Melbourne on the West Melbourne route and was withdrawn from traffic in 1935. The interior panels are at present being removed and 90 years of varnish is being stripped from the parts. The letters "430 SMO" were found chalked behind one panel which possibly means "Car 430 South Melbourne Order" which strengthens the above car history.

One new end platform roof canopy for passenger car No.2. (former c.1918 International Bus Body) was completed during early April and the construction of the second will soon be undertaken.

Queensland Rail Motor Trailer P 119 has advanced to the stage where it is almost ready to receive new seats. The museum has been fortunate in having enough tubular framed upholstered bus seats donated to enable this project to advance towards completion. The doors are being progressively repaired where frames have deteriorated while the door window winding mechanisms are being restored to working order.

The former Victoria Mill cane inspector's car is gradually being reassembled. (This was obtained with the four wheel "box car" meat wagon in February 1973.) In recent years this interesting vehicle has been completely dismantled, the very elderly petrol engine reconditioned and the bent main frame members straightened. In addition, bearings have been renewed and the main springs reset. At present the frame is being reassembled and the dual gear change rigging overhauled, rebushed and assembled. No builder's identification marks have been discovered on this item, but it is felt that it was constructed by the Drewry car company around the time of World War I.

Ken McCarthy 4/81.

LACHLAN VINTAGE VILLAGE, Forbes. 610 mm & 1435 mm gauge.

(see LRN 15, p.10)

The tender of Mr Terry Coyle was accepted for the lease of the Lachlan Vintage Village, the lease being for a period of 15 years, with the option for another 15 years. The lease was taken up in February 1980.

The Britannia Steam Railway has seen little use over the past few months because of the fire risk and boiler inspections. It is hoped that *Alice*, John Fowler 0-4-2T builder's number 16339 of 1925, painted green, will be in service during the Easter period. Bundaberg Fowler 0-6-2T *Ralf*, builder's number 4 of 1952, is out of service, while repairs are made to the boiler following dropping of the fusible plugs when the loco ran out of water (the

fire was not dropped, and the loco run back to the depot). Several thousand dollars worth of damage resulted. This loco is painted blue.

The third 2 ft gauge loco on site, derelict John Fowler 0-4-2T 16341 of 1925, will not be restored to service but may have a diesel motor fitted to drive it. Alternatively, a second-hand diesel loco could be obtained from a sugar mill. This would give flexibility of operation on the days of poorer attendance at the village or for the unexpected bus load that sometimes arrives. It would also ensure that the railway could be operated all year round.

An interesting bogie ballast wagon was seen here. It appears to have been built some time ago, and possibly not a conversion from another gauge. There is a bottom side discharge hopper under the wagon and the bogie at one end has a plough on it, while the other has rail wipers fitted to clear the head of the rail of ballast. The body is of timber construction mounted on steel solebars, on one side of which is attached an oval builder's plate, on which the names have rusted away, although the word "LEEDS" can be made out. Perhaps some reader can shed light on the origins of this vehicle.

The cable tram car that was here for mounting on 2 ft gauge bogies has been removed to an unknown location.

Standard gauge stock consisting of Garratt 6042, 4-6-4T 3112 and six coaches is to be removed from its present position on a long section of track, which will be relaid to 610 mm gauge to complete the circuit of the Britannia Steam Railway.

It is hoped that the new lessees can make a success of this venture and improve on the present run-down condition of some of the exhibits. A new shop is planned to house some old printing items including a treadle platen press to produce posters, etc. for sale.

Paul Simpson 3/81.

LUMLEY PARK MUSEUM OF PIONEER RELICS, Alstonville. 610 mm gauge

Here a collection of transport exhibits is displayed under the aegis of the Richmond River Historical Society and the Tintenbar Shire Council. A short length of light track is set in concrete in the open and upon this sits a small collection of sugar tramway rolling stock, painted grey. This consists of a steel cane truck, a wooden cane truck, and two line bogies mounted on unusually small wheels, upon which sit five lengths of portable track. This equipment fairly clearly originates from the CSR Company either from the Harwood Mill on the Clarence River, which had a short loco-worked tramline until 1974, or from Broadwater Mill on the Richmond River, which had no locos but apparently some lines connecting the canefields to the river wharves, again in 1974. The display at Alstonville is a reminder of the five-mile Rous Mill

tramline which ran to Alstonville from 1891 to 1901.

Editor 4/81.

MEGALONG VALLEY RAILWAY, Blackheath. 610 mm gauge.

(see LRN 14, p.13)

A visit here on 23 March revealed that the Malcolm Moore 4wPM formerly number 260/3 of the State Electricity Commission of Victoria, Yallourn, believed to be builder's number 1050 of 1943, has been moved here. Owned by Mr Bob Hague of Gympie, NSW, this unit had been used at the Illawarra Light Railway Museum Society's Albion Park site from 1974. It is being used at Blackheath for construction duties, and is housed in the shed with the two steam locos. Ex-North Eton Mill 7 (Perry 0-6-2T 6634-51-1 of 1951) is out of service awaiting the fitting of several new tubes. Ex-North Eton Mill 6 (Perry 0-6-2T 2382 of 1941) is steamed occasionally, the previous time having been on 22 March. A quantity of 60 lb rail has been delivered, with several tons coming from Victoria in 1980.

Paul Simpson 4/81.

N.S.W. STEAM TRAM PRESERVATION SOCIETY, Parramatta Park. 1435 mm gauge.

(see LRN 6, p.5).

On 17 March 1981 the Society's "KA" type end loading light railway car entered Chullora Railway Workshops for complete restoration by the railway apprentices. Four of these carriages were built by Hudson Bros of Clyde N.S.W. for the N.S.W.G.R. Nos. 84 and 85 in 1885 for the Campbelltown to Camden tramway and 140 and 141 during 1891 for the Yass Town tramway. Being lighter than the contemporary end loading cars and set out for ground level loading, these vehicles were officially known as "tram cars". In the unified renumbering scheme of 1892 these cars became, respectively, 443, 597, 778 and 777.

The number of the Parramatta car remained a mystery until the number "778" was discovered on a mortice lock by the apprentices.

Car 778 remained in passenger service until c.1920 when it was transferred to service stock. The vehicle was noted at Cootamundra as an office by 1929 (possibly still on bogies). By 1939 No. 778 had been removed from its bogies for use as an Ambulance room. The Steam Tram Society obtained the body ex Cootamundra and was received at Parramatta Park on 9 March 1972.

Ken McCarthy 4/81.

NEW SOUTH WALES SUGAR MILLING CO-OPERATIVE LTD, Harwood Mill. 610 mm gauge.

A few remnants of the mill's short tramway system, abandoned in 1974, can still be seen. Tram tracks still run across the weighbridge on the banks of the Clarence River, and five weighbridge test wagons are retained on the adjoining length of track. These are painted yellow, and three of them carry the weight in steel boxes, while the other two are mill roller trucks complete with obsolete rollers used as weights. Nearby, another short length of track is to be found to the rear of the mill, and on this were found five trucks for carrying mill rollers. Four, with rollers, were painted in red oxide, while the fifth, without a roller, was yellow. One yellow painted tool wagon was found in a shed near the old tramway formation and in the scrap area was found a solitary cut down cane truck with oil drums heaped upon it.

Editor 4/81.

P.G. PAK-POY AND ASSOCIATES, Condong. 610 mm gauge ?.

A tourist project based on the sugar industry has been approved in principle by the Tweed Shire Council following an approach by the above entrepreneurs. One feature of the project which is envisaged will be a "cane train", and there will also be a large colonial style plantation homestead selling souvenirs, a restaurant and food outlets.

Queensland Country Life Canelander, 16.4.81.

SYDNEY LIGHT RAILWAY SOCIETY 610 mm gauge.

(see LRN 7, p.5)

On 14 March the Hudswell Clarke 0-4-0WT 1423 of 1922, built for agents Robert Hudson, was removed from the Colo Vale property, where it had been previously operated, into private storage in Sydney. It is still intended to put it into eventual use at Campbelltown Steam Park, Menangle.

Paul Simpson 4/81.

UNION COAL MINING CO. PTY LTD, Nymboida 610 mm gauge.

(see LRN 13, p.17)

Following the closure of the mine in 1979, the mine site has largely been bulldozed and access to the mine tunnels blocked off. A sawmill is being erected on the site, and soon little will remain from coal mining days. The locomotives and coal skips have been disposed of with the exception of a few derelict skip bodies lying around. It is believed that the two working locomotives, Ruston & Hornsby 4wDM's 331246 of 1952 and 385901 of 1956, may have been preserved, while it is assumed that Ruston & Hornsby 331266

of 1952, of which only the cannibalised remains were left, has been disposed of for scrap.

Editor 4/81.

F.J. WALKER LTD., Byron Bay 1435 mm gauge.

(See LRN 12, p.6)

A visit to the meatworks on 22 April found the locomotive with engine running as part of its regular maintenance procedures. A new shed has been built for it as the old one was blown down by high winds last year. The four-wheel "Simplex" Motor Rail locomotive 2129, ex works in January 1923, is now painted brown and silver. A diesel engine from a David Brown tractor was fitted during 1980 after failure of the original 4-cylinder Dorman petrol engine. However, this engine has not proved very satisfactory, and the locomotive driver and mechanic intends to set the Dorman engine up in working order in the shed so that a replacement unit is available in case of any future breakdowns. In the shed were quite a number of spare parts for the locomotive, some of these having originated from a CSR Company sugar mill in Queensland around 1960. The locomotive is still used as required when meat traffic goes by rail, and is lovingly maintained.

Editor 4/81.

QUEENSLAND

THE AUSTRALIAN SOCIETY OF SUGAR CANE TECHNOLOGISTS

At the annual conference, to be held at Bundaberg early in May, the following papers relevant to sugar cane tramways were to be read:

- * Locomotive gearbox design for cane railways.
- * Computer aided design of railway track.
- * The Clare-Dalbeg tramway project.
- * Standards for cane tramway designs.

Queensland Country Life Canelander, 9/4/81.

AUSTRALIAN SUGAR PRODUCERS ASSOCIATION.

200 km., and possibly 400 km. of the Central Australian Railway will become part of Queensland's sugar cane tramway systems. A tender to purchase the section from Oodnadatta to the Northern Territory border has been successful, and another tender has been made for the section from the border to Alice Springs. The 10500 tonnes of rail will be lifted and hauled to Alice Springs for road transport to Queensland.

Courier-Mail 21/4/81.

BP SUGAR INN, Bruce Highway, Childers. 610 mm gauge.

(see LRN 4, p.9)

An open air canefields display has been set up adjacent to the B.P. Garage at the southern end of the Childers township, about 10 km from Isis Mill. Apart from various horse-drawn one and two axle wagons, the principle item on display is one of the former North-East Dundas Tramway steam locomotives last used at Isis Mill some twenty years ago, and for many years hidden under lantana bush near the mill. The locomotive, No.10 on the Isis roster, was built in 1897 by Sharp Stewart & Co., B/n.4432, as an 0-4-2 tank engine for the North East Dundas Tramway of Tasmania and was acquired by Isis Mill in the period 1929/1936 together with a sister locomotive (B/n. 4619 of 1900). Both were rebuilt as tender type locomotives as late as 1955, and No.10 worked until withdrawn during the 1962 cane season. The other, No.9 on the mill roster, was withdrawn the previous year. No.10 was initially stored under cover, but was later "put out to pasture" and gradually became covered with lantana. The two locomotives were advertised for sale in the *Sydney Morning Herald* of 30/10/1967 for the sum of \$2500, but there were no takers at the time. No.9 was subsequently acquired by a Sydney enthusiast and recently No.10 was placed on display at Childers township. Despite its years of neglect, No.10 is in surprisingly good condition. Boiler sheeting and lagging have been removed, as has all surface rust. The boiler, smokebox and lower part of the cab have been painted green, whilst the underframe, running board, cab floor and dome cover are red. Top portion of the cab is yellow. Connecting rods and pistons are missing, as is the tender. A plaque attached to one side of the cab states "Built in Scotland in 1900 for the Tasmanian Government. Purchased by Isis Mill in 1932 to haul cane until 1960." Two known dates incorrect, and possibly a third!

Peter Neve 3/81.

DINOS FUNPARK, Tanawha 305 mm gauge.

(see LRN 21, p.6)

A visit in March revealed that the 2 ft gauge railway here had been removed. In its place, construction was proceeding rapidly, on a new 12 in gauge line over the original formation, including a lengthy timber bridge. Just arrived was a 2-4-0 steam locomotive, complete with cowcatcher, and carrying the road number 1, together with several open passenger coaches.

Peter Neve 3/81.

MILLAQUIN SUGAR COMPANY PTY LTD, Millaquin Mill & Qunaba Mill 610 mm gauge.

(see LRN 21, p.7)

Details of the disposal of the steam locomotives from these mills were published in the *Bundaberg News-Mail* on 20 April, they are as follows:

Millaquin Mill

4	<i>Jumbo</i>	0-6-2T	Bundaberg	1	1952	Retained by	
9		0-4-2T	Fowler Perry	9737/45/1	1945	Company Essendon & Oil Preservation Society, Vic.	Steam Engine

Qunaba Mill

1	<i>Delta</i>	0-6-2T	Perry	9767/50/1	1950	Puffing Preservation Society, Vic.	Billy
2	<i>Skipper</i>	0-6-2T	Perry	1850/46/1	1946	Mile End Museum, S.A.	
3	<i>Flash</i>	0-6-2T	Perry	6160/48/1	1948	Qld. Museum, Bris.	
5	<i>Dobbin</i>	0-6-2T	Bundaberg	6	1952	Mossman Central Mill	
6	<i>Nipper</i>	0-4-2T	Fowler Bundaberg Fowler	8	1952	Bundaberg & Dist. Tourist Tramway & Preservation Soc.	
	<i>Invicta</i>	0-6-2T	Fowler	11277	1907	Apprentices' Steam Club, HMAS Nirbina, NSW.	

It was stated that 42 applications had been received to preserve the locomotives.

Bundaberg News-Mail 20/4/81 via Bob Gough

MORETON CENTRAL SUGAR CO., Nambour 610 mm gauge.

(see LRN 21 p.7)

John Fowler 0-6-0T locomotive *Eudlo* (builder's number 16207 of 1925) was noted on display in the park adjacent to the mill yard. The locomotive was stored in the mill yard since its withdrawal in about 1966, originally on "stand-by", and then later for stationary boiler purposes. It has now been repainted and is displayed alongside a four wheel petrol Malcolm Moore locomotive named *Sandy*. Examination of the loco's builder's plate shows it to carry the builder's number 1058, previously recorded as being carried by a Malcolm Moore of similar design but with a diesel engine replacing the original petrol unit, named *Jimpy* (It is believed that *Jimpy* - now Malcolm Moore 1051 and named *Jumpy* (!) - and *Sandy* swapped identities during the 1960s - Ed.) The small four wheel tender, previously attached to the 0-6-0T Krauss loco *Moreton* (builder's number 4679 of 1900), and latterly stored next to *Eudlo*

at the Mill, was nowhere to be seen. (It has in fact been united with *Moreton* once again - see LRN 6, p.7 - on display at the Brisbane Showgrounds - Ed.)

Late in April a visit to the mill showed most of the diesels undergoing slack season maintenance. It was learnt that the two small E.M. Baldwin 0-4-0DH locos 6-1064-1-11-64 of 1964 and *Valdora* 6-1258-5-6-65 of 1965, which were operated in multiple during 1980, are to have their Ford industrial diesels removed and replaced by Detroit Diesels. It is expected that the Ford diesels will then be fitted to the two Malcolm Moore 4wDM locos *Jumpy* and *Joe*.

It has been decided not to return Mourilyan Mill's loco 8, Com-Eng 0-6-ODM B1112 of 1956. This loco was "loaned" to Moreton during 1980, but it is now expected to be taken into the Moreton roster, and given a name. .

The new mill yard layout on the arrival side will incorporate four roads for full bins equipped with hydraulic pushers and two escape roads. Some of the rail being used here is 58 lb ex Western Australia. All trace of the former Mapleton line on the west side of the mill yard has been obliterated by dumping fill over the old trackbed.

The cut-off line from Howard Street-yard to the river flats was in use by the end of April.

Peter Neve 3/81, Trevor Bentley 4/81.

LIONS PARK, Nambour 610 mm gauge.

Valdora, the ex-Moreton Mill 0-4-0WT, built by Dick Kerr in Scotland, is still to be found under a tree in a park to the south of Nambour. Its condition had deteriorated markedly over the years, but recently pressure applied by enthusiasts persuaded the Maroochy Shire Council to make representations to the Lions Club to bring it into a more acceptable condition. Accordingly, the locomotive has been repainted in green and black, and looks in a reasonable state. However, the boiler barrel is rusted through and many parts have been removed.

Peter Neve 3/81, Editor.

MAROOCHY SHIRE CHILD CARE CENTRE, Nambour 610 mm gauge.

Preserved in a fenced enclosure opposite the mill is the ex-Moreton Mill's Shay locomotive, a small two-truck machine built by Lima Locomotive Company in the USA. Named *Shay*, the locomotive is basically Lima 2091 of 1908, formerly *Dulong*, which was rebuilt, incorporating parts of Lima 2800 of 1914, named *Mapleton*, after 1944. The locomotive is well cared for.

Peter Neve 3/81, Editor.

ALF MULLER PARK, Bli Bli 610 mm gauge.

Bli Bli, an ex-Moreton Mill John Fowler 0-4-2T, builder's number 14418 of 1915 was placed here in 1968 and has deteriorated badly, now being without its funnel. *Bli Bli* had been acquired from Babinda Mill for the 1960 season, and worked for only a few years before being replaced by dieselisation.

Peter Neve 3/81.

SUNCOAST PIONEER MUSEUM, Mudjimba Beach. 610 mm gauge.

(see LRN 15, p.13)

Located here are the remains of *Petrie*, another ex-Moreton Mill John Fowler 0-4-2T, builder's number 19930 of 1933. This locomotive was acquired by Moreton from Babinda in about 1959-60. *Petrie* is in what could best be described as extremely poor condition, with side tanks rusted through, tops of the tanks collapsed and cab floor rusted through. No preventative maintenance has been carried out on this locomotive, which one suspects will need to be scrapped in the near future as it would be now beyond economic restoration. Two four-wheel cane trucks are on display with the locomotive.

Peter Neve 3/81.

SUNSHINE PLANTATION, Forest Glen 610 mm gauge.

(see LRN 8, p.12)

Since 1974, this has been the home of ex-Moreton Mill *Coolum*, a John Fowler 0-6-0T, builder's number 16036 of 1924. Although on open display, this locomotive is still in reasonably good condition, being protected from vandalism.

Peter Neve 3/81.

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 21, p.8)

Planning for the new Elaroo tramline network to serve canegrowers in the southern part of the Proserpine mill area was completed in January. By March, contracts had already been called for the construction of seven bridges and a QGR underpass at Noorlah, 5 km north of Bloomsbury, while tenders were being called for earthworks and formation construction. It was expected that tenders would be called for tramline construction around the middle of the year. Pearson Bridge Pty Ltd had recently begun construction of a 150 m long 7-span, 16 m high bridge over the Andromache River. This was engineered to be 2 m higher than the once-in-100 years flood level.

The tramline network will be 28.8 km long including 10 sidings. It will extend

from the present O'Connell River terminus, 24 km south of the mill, and go to Elaroo, 52 km south of the mill, passing the township of Bloomsbury. On 1980 cost estimates the line will involve the expenditure of \$5m.

Track laying is expected to start in September across flat to undulating country which would involve some large cuttings to be made. The maximum grade against the load will be 5%, allowing trains of up to 130 bins to be handled by one locomotive. About 2200 tonnes of rail will be welded into 100 m lengths. 55000 locally cut sleepers will be used, as well as 23000 cu. m of stone ballast.

An order has been placed with Plasser (Australia) Pty Ltd for a KMX ballast tamping machine.

Queensland Country Life Canelander 26/3/81, ARHS Bulletin Supplement.

QUEENSLAND PIONEER STEAM RAILWAY CO-OPERATIVE LTD. 1067 mm gauge

(see LRN 20, p.6)

The Society has recently finished its 1980/1 season and will resume operations on the Queensland Electricity Generating Board's Swanbank line near Ipswich for the 1981/2 season in September, on the first weekend of each month until June 1982, from 10 am to 5 pm.

Work on the Perry 0-4-2T *Kilrie* (builder's number 265 of 1927) has involved the removal of cab roof, boiler lagging, side tanks, boiler fittings and valve gear, and the preparation of the locomotive for the removal of the boiler from the frames to allow external cleaning and painting and to allow internal inspection by the machinery department.

In April 1979, the QEGB donated to the Society a four wheel work trolley which was built in 1928. This was originally one of several ash disposal hoppers used at New Farm Powerhouse. When replaced by a conveyor system, the hopper was taken to Tennyson Powerhouse and converted to a flat top for use in spraying weedkiller on the powerhouse sidings. The trolley has been taken to Swanbank for use by the Society as a work vehicle.

Negotiations have reached a pleasing stage with the QGR regarding the Society's use of Bogside siding at Box Flat as part of the Society's proposed depot. Westfalen Colliery Pty Ltd have generously offered the Society the use of land adjacent to Bogside siding to erect a loco shed and associated facilities.

T. Olsson 4/81.

TOWNSVILLE HARBOUR BOARD 1067 mm gauge.

A second locomotive has been ordered to shunt the harbour facilities at

Townsville. This is a Type GL22C Co-Co DE to be built by Clyde Engineering, and will be similar to the QGR 2470 class. It will work alongside Com-Eng 0-6-0DH builder's number F1029 of 1958; the sole item of motive power up to now.

"A.R.H.S. Bulletin Supplement", Editor.

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (S.A.) INC. 610 mm gauge.

(see LRN 19, p.6)

The second Ruston & Hornsby locomotive has been given a facelift to improve its appearance. This 0-4-0DM, builder's number 393981, built in April 1956 for Waratah Gypsum Ltd, Stenhouse Bay, had suffered little corrosion, and so little work was required before it could be painted in mid-green to match its vintage comrade 187078 of 1938.

As recorded elsewhere in this issue, the Museum has been fortunate enough to acquire Perry 0-6-2T *Skipper*, builder's number 1850/46/1 of 1946, from Qunaba Mill in Queensland. This is particularly appropriate, as the locomotive was built at Mile End thirty-five years ago, and will be returning to the place of its manufacture.

Catch Point 24, Editor.

PARAMOUNT MACHINERY CO. PTY LTD, Cavan Road, Cavan. 1067 mm gauge

Advertised in the *Queensland Country Life Canelander* during March was a "Caterpillar Cane Hauler complete with final drive \$5500 ONO". Further enquiry led to the discovery that this unit had begun life in 1926 as a geared steam locomotive built by the Sentinel Wagon Works in England for the South Australian Gas Company. In 1948 it was converted to a diesel, and was out of use after 1968, in store. The photograph published as part of the advertisement showed this four wheeled loco to have lost none of its distinctive Sentinel characteristics in the frame and undergear, although the original superstructure has been completely replaced. The vendor stated that the loco had been used by the Gas Company to haul coal and coke at Brompton and Osmond.

*Queensland Country Life Canelander 5/3/81;
R. Prigent (Paramount Machinery Co.) 3/81.*

SIMSMETAL PTY. LTD., Wingfield Road, Wingfield. 1435 mm gauge

At this scrap dealer's yard has been located an interesting John Fowler

0-4-ODM, 22905 of 1943. This machine was imported from Britain for use at the defence establishment at Woomera, possibly during World War II. It is believed to have worked at Woomera until about a year ago, before being disposed of.

Robert H. Sanders 3/81, Keith McDonald.

SOUTH AUSTRALIAN DEPARTMENT OF MINES STATE BATTERY, Peterborough. 610 mm & 508 mm gauge.

A 2 ft gauge railway with some 20 in gauge dual gauge track was found around the area of a gold stamp battery which is still used today. The rail equipment appears to have been stored, and not to have seen much use in the past few years. It consists of:

- | | |
|-------------|---|
| 2 ft gauge | Two flat top cars, one hopper car & bin, side tipping, one hopper car underframe and one side tipping hopper car & bin built by Hudson of Leeds, England. |
| 20 in gauge | One hopper car & bin, side tipping. |

In addition, there is an odd spare hopper bin and eighteen six-metre lengths of track panel (approx. 24 lb).

(A sketch of the general site layout has been received, and copies may be obtained from the Editor on receipt of a S.A.E.)

Rob. H. Sanders 4/81.

TASMANIA

LUNE RIVER RAILWAY CO. LTD. 610 mm gauge.

(see LRN 21, p.8)

Notwithstanding the gloomy outlook in LRN 21, the railway is seeing at least occasional use. On 19 March, the operators had one locomotive and two passenger vehicles serviceable and were carrying out minor re-sleepering along the burnt-out section of track near the jetty terminus.

The disused section of the former limestone railway from the quarry to the depot near the main road crossing is being dismantled, and the rails removed for scrap. Many of the small four wheel limestone wagons which were stored on this section of the line have been overturned and left abandoned at the foot of the embankment.

K.J. Milbourne 3/81.

VICTORIA

ALEXANDRA & DISTRICT HISTORICAL SOCIETY, Alexandra 1029 mm & 610 mm gauge.

(see LRN 21, p.9)

It is reported that Hudswell Clarke 2 ft gauge 0-6-0 1098 of 1915 has been acquired for the Society from Ian Morrison, who purchased it at the Yarralumla Old Brickworks Auction (see LRN 21, p.4). Apparently, the Melbourne main line group "Steam Tours" paid the cost of the loco, which will be swapped for the Society's ex-VR loco J512, which has been on display at Alexandra since 1975.

Ken McCarthy 4/81.

BRUNSWICK PLASTER MILLS, Nowingi. 1600 mm gauge.

This firm, a subsidiary of CSR Holdings, has operated some 16 miles of the never-completed VR South Millewa Branch junctioning from the Mildura line at Nowingi, with a variety of "Heath Robinson"-like rail tractors, and more recently, a diesel locomotive constructed on the underframe and wheels of former Y-class 0-6-0 No.108 (originally 413). This part hauls and propels VR open wagons over unbelievably bad track between Nowingi and the Company's gypsum workings in the Raak area in the Sunset Country west of the Mildura line. To augment production and transport, the company recently bought VR 150 hp diesel workshops shunter M232, an 0-6-0DH built around the engine and transmission of a General Grant World War II tank. It is believed that sister unit M231 has also been purchased.

J.L. Buckland 4/81.

LOU DE CLIFFORD, Telopea Gardens, Halls Gap. 610 mm gauge

(see LRN 21, p.10)

As indicated in a previous report, the narrow gauge railway at this attraction is now functional. The second locomotive built by Alwyn Zinn in Ipswich in Queensland in 1972 has been rebuilt with a diesel engine and "steam outline" bodywork. It runs on a kilometre circuit of track hauling five passenger cars which are built on the chassis of cane trucks and seat eight each. The railway station doubles as a tea rooms and also a gallery for local artists, and in the few months since the native gardens opened, considerable interest has been shown in the project by visiting tourists.

Ballarat Courier Supplement March 1981 via K.C. Vanstan, Brian Peart.

CHARLIE McCLELLAND 610 mm gauge.

At an undisclosed location to Melbourne's south-east is preserved a first World War veteran. This is a Hunslet 4-6-0T which served the British army in France as War Department Light Railways No.306, and is builder's number 1218 of 1916. It came to Australia in 1924 and was used at Gin Gin Central Mill, Wallaville, Queensland, finally being sold to a Brisbane scrap dealer. However, it was not cut up immediately and was purchased by the present owner in 1970. The loco is painted green and still carries its WDLR number. It is steamed occasionally and has about 200 yards of track to run on. Also present is a beautiful wooden bogie coach, fully enclosed and with clerestory roof, which was built by the owner.

C. McClelland.

VICTORIAN RAILWAYS, Newport Workshops. 1600 mm gauge.

Restoration of the first locomotive built at VR's Newport Workshops as Z-class 0-6-0T Passenger Motor locomotive No.526 in 1893 is in progress. For the past 66 years, this has been in industrial (?) service as No.3 Crane loco *Polly*.

The crane and its appurtenances have been removed and a facsimile cab constructed. The side tanks, cab, boiler, etc., have been painted light green with dark green panel edging. The funnel has been given a flared copper top and the boiler bands are polished brass. The headstocks are painted bright red; the connecting and coupling rods polished, and the wheels and underframes are black.

The restored Z526 is to be handed over to the Science Museum for display in a glass case beside No.1 Cable Tram fronting Russell Street, Melbourne.

J.L. Buckland 4/81.

WESTERN AUSTRALIA

ADVENTUREWORLD, Bibra Lake

Work has already begun on this \$14 million fun park, being built by entrepreneur Mr Michael Edgley 16 km south of Perth. This "Disneyland" type project will feature "trains, trams, and vintage buses". The first stage is expected to be open in December.

The Australian 15/4/81.

CODELFA, Wungong 762 mm gauge.

Two 762 mm gauge railways are being used in the construction of a

water supply tunnel under the Darling Range from the new Wungong Dam. The contractors for the work are Clough, Codelfa Joint Venture and, after preliminary work, the first railway was operating in October 1980.

The 3.7 km long tunnel, which is being driven from both ends, should reach the breakthrough point by April 1982. As at March 1981, the main drive had penetrated 0.7 km under the hills. The main drive commences from the Dam (East) end of the tunnel. Two 4wDH E.M. Baldwin underground locomotives, No.1 *Jane* and No.2 *Tarzan* are in use. One operates the shuttle train and the other the drill unit and explosives wagon.

At the west end of the tunnel is a smaller rail system, because this drive will continue for only about 300 metres. One E.M. Baldwin 4wDH loco, *Wungong Cannonball*, is used here. The locomotives are owned by Codelfa and possibly came from the Thomson River project in Victoria (see LRN 18, p.9), while the new rolling stock is owned by the joint venture.

A short article on the railways will appear in a forthcoming issue of *Light Railways*.

David Whiteford 3/81 via Bob McKillop.

Notice Board

SUBSCRIPTIONS.

OVERSEAS MEMBERS PLEASE NOTE.....

..The \$12.00 rate quoted on the subscription renewal notice referred to Overseas Surface Mail Only. If you would prefer to have your magazines forwarded by air mail, the following rates apply:

Asia/N.Z./PNG \$18.50 (Aust)

U.K./U.S.A./Africa \$21.50 (Aust)

These rates apply from the commencement of the 1981/1982 subscription year.

PUBLICATIONS.

TALL TIMBER AND TRAMLINES Vol. 2.

Approval was given at the April Council meeting for the early preparation work to commence on a second volume of the highly successful but now out-of-print *Tall Timber and Tramlines*. Depending on the availability of finance this should be available towards the end of the year. (A members' pre-publication offer will be available when production allows).

LIGHT RAILWAYS.

No.73 - Being typeset at present. Includes the following:

- Geelong Harbour Trust Tramways.
- an Introduction to Timber Tramways in W.A.
- No.74 - Being prepared. Includes:
- Tunnel Railways in W.A.
- Bootless Bay (PNG) revisited.

MEETINGS

SYDNEY. A.G.M. Plus “Bring & Buy” Night.

The June meeting will be the Annual General Meeting of the New South Wales Division and this will be followed by a “bring and buy” night. Members are requested to bring along their unwanted photographs and books for a fund raising drive. The Society will accept 10% of each sale.

The New South Wales Division are calling for nomination for the office bearers and any offers from interested members would be gratefully received by them. So far nominations have been received for the positions of President and Treasurer only, so, if you feel that you may be able to help, please come along to the June meeting and make yourself available.

Location :- Government Transport Club, Regent St., Sydney. Parking available in Regent St. and Botany Rd.

Date :- Wednesday 24 June Time :- 7.30 pm.

MELBOURNE. Narrow Gauge in U.S.A.

Geoff Maynard has only just returned from a trip through the western States of the U.S.A. and has brought back with him a large number of slides and plenty of news to provide an interesting evening’s entertainment devoted to the Narrow Gauge Railroads he visited on his trip. As usual the sales department will have a wide selection of items on sale and supper will be provided.

Location :- Ashburton Uniting Church Hall, Ashburn Gve., Ashburton.

Date :- Thursday 11 June. Time :- 7.30 pm.

Future Meetings :- **August** - A.G.M. Plus...

The Broken Hill - Tarrawingee Tramway.

October - Auction Night.

RESEARCH COLUMN

J. C. Munro of 23 Seaview St. Mt Waverley, 3149, is seeking assistance in his researches into the David Mitchell Estate standard gauge firewood line from Mount Evelyn to Cave Hill (Lilydale), Victoria. He would also like information on Orenstein and Koppel locomotives which came to Australia.

FIELD REPORTS

EXCELLS STONE QUARRY, Adelaide, South Australia 1067 mm gauge.

An interesting and little known light railway was recently rediscovered by a group of members of the Mile End Railway Museum, after being tipped off by a friend of one of them.

Situated in the old stone quarry, just west of the Old Belair Road, (Adelaide, S.A.) this railway was most probably of 3 ft 6 in gauge and ran for a length of approximately 2 km along the quarry floor. Three other road beds of different levels along the quarry sides have been discovered in what appears to be a zig-zag formation.

On early visits to the quarry we visited only the upper level, and here, coming out from one of the rock faces, is a track of metre gauge. This track seems to have only been used for transferring the rock from the work face to the main railway, which eventually took the rock down to the crushing plant at the northern end of the quarry. The track ends in mid-air now, but remains of the stone embankment can still clearly be seen, supporting the above supposition.

The partly buried remains of what was a hopper under-frame was also inspected. This was constructed of massive "C" channel, with sprung axle boxes, and is about 1 metre wide, and 2.5 metres long. A coupler was found on one end only, being of the hook and 3 link chain type, also sprung. The fact that the coupler is missing from the other end strongly suggests that this vehicle was a runaway.

Later visits turned up several embankments with dry stone walling, varying in length from only 2 metres up to about 10 metres, and both 1.5 metres high. Possibly the most interesting discovery was that of an old bridge spanning the creek bed in the quarry floor. This had leading up to it, a wall of dry stone construction at least 10 metres in length, and at the highest point, almost 3 metres high and in a very good state of preservation. The bridge itself had been about 6 metres in length from embankment to embankment, and was also over 3 metres in height in the middle. All that remains of the actual bridge are two wooden cross frame supports, constructed in part from old broad gauge sleepers.

It was decided at the time to continue to follow the old road bed and after forcing our way through very heavy undergrowth lengths of cable were found, proving almost certain, that this railway had used the gravity haulage method. As if to prove this and only a few metres further up the old road bed, a piece of what had been one of the cable guide wheels was found. It was in this area that the first sleepers were discovered, and dog spikes were acquired by several members of the party for private collections. Finally we came to the end, and here, surrounded by the quarry's steep sides, was what had once been the winding house, now only a jumble of massive timbers and a length of approximately 25 lb flat bottom rail stuck upright in the ground.

As we climbed out of the valley floor towards the highest level of the track, another discovery was made. Massive sheets of cast steel, measuring at least 2 metres x 2.5 metres, had been laid down the sides of the quarry. The only suggestion which came up was that these had once been used as a slide. Stone was mined at the top, and pushed over the side down to the floor area of the quarry, where it was loaded into the hoppers for transfer back to the crushing and washing plants.

Unfortunately, very little seems to be known or recorded on this private railway. Anyone who might know more about the line should contact the writer, Robert Sanders, 8 Wattlebury Rd, Lower Mitcham, South Australia, 5062.

AUSTRALIAN NEWSPRINT MILLS, Styx River Spur, Upper Derwent Valley, Tasmania. 1067 mm gauge.

For the greater part of its length, the old formation of this logging line has been made into a good metal road, although it is closed to public access. At Karanja Junction (TGR Derwent Valley line), much of the siding is still intact with rails still in place and two built-up platforms still stand. The high trestle bridge at the 6.75 mile has been destroyed by fire. A large vertical boiler and the remains of the logging settlement are still evident at the 9-1/2 mile. At the terminus, a high dead tree used for "skylining" logs into that point is still standing and bears unmistakable signs of wire rope scars near its peak. The operation of "skylining" must surely have been an impressive spectacle. A.N.M. have cleared the bush along much of the route and re-sown it with radiata pine.

The writer would very much appreciate information regarding this line and in particular, would be interested in any photos of the sky-lining operation and the high trestle bridge.

K.J.Milbourne, 190 Main Rd., Austins Ferry, Tasmania.

LOCOMOTIVE & EQUIPMENT MANUFACTURERS

E.M. Baldwin & Sons Pty Ltd, Castle Hill, Sydney.

(see LRN 22, p.5)

The following observations were made on a visit on 19 April:

* 2368-5-1-68 & 2368-10-1-68 of 1968 (1067 mm gauge) : four-wheel diesel-hydraulic man-riding cars, formerly Australian Iron & Steel 26 and 31: behind the works, cannibalised.

* 3568-1-9-70 & 3568-2-9-70 of 1970 (1067 mm gauge) : four-wheel diesel-hydraulic locomotives. Purchased by EMB from a contractor.

* 3652-6-4-71 of 1971 (1067 mm gauge) : four-wheel diesel-hydraulic man-riding car, South Bulli Colliery 17, awaiting repairs in the yard.

* 9077-1-12-80 & 9077-2-3-81 of 1980 & 1981 (1067 mm gauge) : new four-wheel diesel-hydraulic man-riding cars, Model 16DH, Australian Iron & Steel 122 & 123, awaiting dispatch. (Despatched 7 May 81).

* 9344-1-4-81 and (presumed) 9344-2-4-81 (1067 mm gauge) : new six-wheel diesel-hydraulic locomotives for Kandos Collieries Pty Ltd., Model DH25.3. The latter locomotive was still under construction, and they were both delivered in the week following the visit.

* The frame and cab for an 0-6-0DH 18 tonne locomotive (610 mm gauge) for the Fiji Sugar Corporation under construction was noted. A similar locomotive had been despatched on 16 April to Fiji.

It is believed that an order for a 610 mm gauge 32 tonne B-B diesel-hydraulic locomotive has been placed by Farleigh Mill.

Craig Wilson 6/81, Len Heaton via David Mewes 5/81, Editor.

FOX MANUFACTURING CO. - CLYDE INDUSTRIES LTD.

Placer Exploration Ltd. will sell its Fox Manufacturing division to Clyde Industries Ltd. over the next three years for about \$18.5 million. Fox is Australia's largest manufacturer of underground coal mining equipment, and has manufactured 1067 mm gauge locomotives and man-riding cars for colliery use in N.S.W. and Queensland. Clyde has been responsible for the building of many industrial diesel locomotives for use in Australia, as well as main-line locomotives. Placer, which is controlled by Canadian interests, will retain 66.6% ownership of Fox in the first 18 months of the agreement before handing over to Clyde.

The Australian 1/6/81.

NEW SOUTH WALES

APPRENTICES STEAM CLUB, H M A.S. NIRIMBA Quakers Hill 610 mm gauge.

Qunaba Mill's *Invicta* (John Fowler 0-6-2T 11277 of 1907) was handed over in Bundaberg on 23 June, and then left in an impressive convoy for its new home. An RAAF low loader was sent to collect the loco, together with two Navy escort vehicles and a Navy bus with 21 apprentices aboard. Overnight stops were planned at Nambour, Ballina and Taree, and the convoy was sighted in Southport on 24 June. The locomotive will be restored by naval apprentices.

Courier-Mail 24/6/81, Bob Gough.

HUNTER VALLEY STEAM RAILWAY & MUSEUM 1435 mm gauge.

(see LRN 22, p.6)

Andrew Barclay 0-4-ST *Juno* (1739 of 1923) passed its boiler exam in April. This locomotive, which formerly worked for Commonwealth Steel at Waratah

has been kept in working order at the Society's Newcastle storage site for shunting duties as required. It will be kept at this work preparing trains to be sent to Glenreagh when the time comes for the stock to be transferred over State Rail Authority metals.

The appeal for the purchase of Andrew Barclay 0-4-ST *Marian* (2224 of 1948) closed on 30 April with a total of \$2235 collected. This locomotive worked at John Lysaght's Cringila Works until placed in a playground in 1964, and subsequently rescued in 1978 by the HVSR&M.

HVSR&M 4/81, 5/81.

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD Albion Park N.S.W. 610 mm gauge.

(see LRN 22, p 6)

As a result of information received from Mr Rodney Weaver in England through the Editor of LRN the identification of the former Victoria Mill Cane Inspector's Railcar has further advanced towards solution. The identification numbers "R1-231" have been found on the crank case casting of this item being currently restored at Albion Park. These numbers had been noticed earlier but as they were cast in raised figures the conclusion was reached that they indicated a part serial number rather than a builder's number. It now seems certain that the railcar was constructed by Baguley Cars Ltd for the Drewry company. The exact construction date has not been ascertained as yet but as similar vehicles bearing the number batch commencing with "R1-337" were released during 1924, it would seem that the "World War 1 Vintage" supposition would be close to the mark.

By mid June the single cylinder petrol engine and clutch mechanism had been fitted to the reassembled chassis of the Victoria Mill Railcar. The two brass threaded plugs located in the cylinder head, over the side valves, were frozen in position and had to be drilled into small pieces for removal. By mid May new plugs had been manufactured and the valves and seatings reground allowing major restoration progress to be made.

During early June work commenced on repainting the standard gauge 0-6-0T loco "South Bulli No.2" (Hudswell Clarke 297 of 1888). This engine is owned by the ARHS and was last painted by ILRMS members in 1977.

By mid June work was nearing completion on the construction of the four wheel fire fighting 2 ft gauge tank car. The vehicle has been fitted with side lever operated mechanical brakes and the standard ILRMS centre buffer-hook-chain couplers, while a side ladder is affixed to give access to the top filling hole. The boiler of Perry 0-6-2T loco Tully 6 (7967/49/1 of 1949) was expected to leave the museum for the Australian Iron and Steel plant boiler

shop at Port Kembla prior to the end of June. This engine's boiler suffered from cracks around the internal fire box rivets and commercial quotations revealed that the required major overhaul would amount to \$32,000. The AI&S expressed interest in the project, as it would enable apprentices to gain experience in fire tube boiler construction, and quoted \$11,000 for the job. The Museum members decided to accept the offer which will result in a fully reconditioned boiler with a new firebox being available for the restoration of this loco. The underframe and running gear of this Perry engine has been fully restored and reassembled so the work being undertaken at the Port Kembla Steelworks will give the Society an engine which will confidently steam into the 21st century!

Several ILRMS members are underwriting the major part of this expenditure and it is hoped that a government grant can be obtained towards the project. Any readers interested in assisting the Society should send donations to the Hon. Secretary, ILRMS, PO Box 1036 Wollongong N.S.W. 2500. Donations over \$2 are tax deductible.

Work is also progressing on the restoration of the former 2 ft gauge Corrimall Coal Coy. loco *Burra*. (Hawthorn Leslie 3574 of 1923). The frame of the dismantled engine has been cleaned back to bare metal and prime coated, while the crosshead slippers and slide rods are receiving attention.

Former Queensland Railmotor Trailer P 119 received the last of the new glass in the end bulkhead windows during June while work was being conducted at that period on fitting new wheels to the sliding mechanisms of the end inter-car doors. Some uneven flooring boards were receiving attention prior to the fitting of malthoid. Although this car is stable and mobile on the former 2 ft gauge Ruook bogies from Alexandra, Victoria, the Garnock Engineering Plant of Port Kembla are constructing bogie side plates to the design of the society for this vehicle. These will be of a much longer wheel base than the present bogies and will enable P119 to be further lowered.

Considerable progress has been made on the initial preparation of the interior of former Melbourne Tramway & Omnibus Coy. cable tram trailer No.430. The tedious task of stripping varnish from the ceiling and roof ribs continues, while all the end saloon panels and seat backs have been removed and cleaned back to bare boards. One end roof platform canopy was fitted to saloon car 2 (ex International c.1918 bus body) on 14 June together with pipe uprights which will form the corner frames of the end apron. The second canopy was completed by early June and will be in place by the time this report appears in print.

The Society's collection of labour saving equipment is rapidly expanding. During May a large "Ward" turret lathe complete with screw cutting gear

box, accessories and motor was received for a nominal cost while during the following month the State Electricity Commission donated a vintage (floor) drilling machine from the original PWD Port Kembla powerhouse.

Ken McCarthy 6/81.

(Tony Weston points out an exhibit at Albion Park which has not been featured on these pages. It is a 3 ft 6 in gauge four-wheel battery electric man-riding car, E. M. Baldwin 801/1/5/64 of 1964 ex Huntley Colliery.)

KU-RING-GAI VALLEY RAILWAY, Kurrajong and St.Ives 610 mm gauge

(see LRN 20, p.3).

Ku-ring-gai Valley Railway is the official operating name of Steam Trains Pty Ltd, decided upon recently by a meeting of the Belbin family and other members of the planning and rebuilding group.

Submissions are being prepared after final drafting of the numerous aspects necessary to get a brand new railway under way. The first year's lease has been paid. All plans for buildings, facilities and the line have been drawn up, costs updated, and a manager selected for the overseeing of the construction.

At the restoration site at Kurrajong, work continues apace. The steel framework of ex-Rail motor Trailer PL122 has been enamelled with black paint to protect against the severity of the winter, and all timber sections creosoted. PL121's roof has been attended to, to make sure it remains in good condition. The steel roof, now in place for 3-1/2 years, shows no sign of leaking. The body work has stood the test of time well although the brown paint is rather patchy on the lower sections. The Fowler 0-4-2T (17881 of 1929) had paint applied to the smokebox, chimney and firebox recently.

The Hudswell Clarke 0-6-0 *Sydney* (1838 of 1950) is steadily being fitted with all the necessary parts. Bruce Belbin has made new firebox doors after reconditioning the top and bottom guides. Repositioning of the pipework and gauges in the cab has made for a neater appearance, and new piping is in place for the mechanical lubricator, to be fitted near the smokebox on the left hand running plate. The tender underside has been replaced with 5/16 in plate. Once this was tacked in place, the tender was lowered onto timber placed beside the chassis; from this position it will be moved sideways once all steel plating has been welded up and the chassis is finished. The forward section of the coal space will retain an access hatch to enable access to the interior when necessary. Difficulty was experienced in buying steel bar to replace the rear coal rails on the tender, but this is now to hand. Although slightly bent, the side coal rails are in good order. Grinding back side panels has revealed up to six coats of different colours ranging from bright green to

blue and grey. The chassis has been painted black; on the rear buffing plate a box will be welded to bring the coupling into line with the carriages. This will also be done at the front of the loco.

Stored at the Belbin's home in St.Ives the chassis of Forney Baldwin 0-4-2T (10533 of 1889) has been wet sand blasted, primed and painted. This is merely for protection, as restoration will not be undertaken until the Ku-ring-gai Valley project is well under way.

Len King 6/81

MINEWORKERS MEMORIAL MUSIC SHELL AND MUSEUM, Freemans Waterholes.

(see LRN 9, p.11)

The two locomotives from Nymboida Colliery (see LRN 22, p.11) have been placed on display with other locomotives and rolling stock here. The 2 ft gauge exhibits comprise Ruston & Hornsby four-wheel diesel-mechanical locomotives 331246 of 1952 and 385901 of 1956 and six skips from Nymboida Colliery. The locos were originally delivered to Queensland, to various collieries owned by W.R. Black. Black also owned Nymboida Colliery, and the locomotives were sent there in the late 1960s. When the Nymboida Colliery closed in 1975 it was taken over and re-opened by the Miners' Federation. Final closure came in 1979, with the closure of the coal-fired powerhouse in Grafton supplied by the colliery.

It is planned to remove the locomotives in due course to Richmond Main Colliery, which is being restored as a mining and steam locomotive museum (see LRN 13, p.15).

Mick Frame 6/81, W.M. Henderson 6/81, Editor.

TIMBERTOWN, Wauchope 610 mm gauge.

(see LRN 10, p.6)

Two sets of lower quadrant signals have been installed at Timbertown Railway Station. They are operated from a two lever frame located on the main platform. Fitted with the original wooden arms, the signals are believed to be more than 100 years old and were obtained from Queensland, it is believed from the Gatton area. Children are encouraged to operate the signals when the train is ready to depart.

Timbertown's railway has now been operating for 4-1/2 years, and probably 13,000 departures have taken place from the station.

Timbertown, Wauchope. 5/81.

QUEENSLAND

ALMA PARK ZOO, Kallangur. 1067 mm gauge

(see LRN 20, p.4)

Although reported as sold, the locomotive and train displayed here had still not been removed by May. The loco is a four-wheeled diesel-hydraulic believed to be Plymouth 6124, given a steam outline at Alma Park. There are also thirteen carriages built on single wagon bogies.

W.W. Henderson 5/81.

ANTIQUE MACHINERY RESTORATION SOCIETY, Brisbane. 1067 mm gauge

Recently come to light is a relic of the Rockhampton Steam Trams, the steam engine component from one of the motor units. These remains were discovered at the Ipswich ply mill of Hancock Brothers, and have been removed to the Kenmore home of Geoff Smethurst. It appears that a steam tram motor from Rockhampton - built in Bordeaux, France, by Purrey - was purchased by Hancock Brothers around 1939-40. It is believed that it may have been used for shunting the private siding at Hancock's for a short time, but later seems to have been completely dismantled and the majority of it scrapped.

Geoff Smethurst 5/81

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM, Durundur Railway, Woodford 610 mm gauge

(see LRN 21, p.6)

Work has been proceeding on the restoration of the ex-Rail Motor Trailer PL111. New roofing canvas has been fitted and covered with several coats of sealing paint. The interior is being progressively cleaned and repainted. Much work has to be done restoring the timber surrounds of the windows. The doors are being progressively overhauled and rebuilt. The bogies have been removed, and the vehicle is sitting on sleepers pending the preparation of bogies. It is hoped to deliver a second of these vehicles to Woodford prison soon. Here a full rebuilding job can be undertaken by prisoners under the supervision of tradesmen.

Woodford prison have completed the rebuilding of two ex-Port Douglas four-wheel wagons as flat wagons for PW use. Currently a pair of line bogies are being overhauled.

A very successful working party was held on 20 June when eight prisoners joined ten Society members on site. Work performed included ballasting,

drainage work, sorting of track materials and rolling stock restoration. It is hoped to make such work parties a regular feature.

The connecting link from the main line to the storage compound area was completed recently and tested by the steam locomotive. This will ease the movement of materials around the site and means the satisfaction of having one railway "system" and not two disconnected sections of track. The compound is complete with the exception of the construction and fitting of suitable gates.

Editor 6/81.

BUNDABERG TOURIST TRAMWAY PRESERVATION SOCIETY 610 mm gauge.

(see LRN 17, p.4)

The Society was given approval to display Qunaba Mill's *Invicta* (John Fowler 0-6-2T 11277 of 1907) at the Bundaberg Agro-Trend Field Days on 7-8 May. The locomotive was prepared, inspected and ticketed before Easter and was given a steam test over the Easter break when mishap struck in the form of a suspected fracture to the main internal steam pipe.

During the Easter period, the disposal details of the steam locomotives had been announced. The Society was allocated 6 *Nipper* (Bundaberg Fowler 0-4-2T 8 of 1952). However, it was felt impractical to attempt to prepare *Nipper* for display at the Field Days because of the large amount of work which would be necessary. The only possibility was to display 5 *Dobbin* (Bundaberg Fowler 0-6-2T 6 of 1952), which had been allocated to Mossman Mill. Mossman kindly agreed to this suggestion, so a frantic round of preparation, inspection and ticketing was followed by a successful steam testing. This would not have been possible without the co-operation of the boiler inspector and the Bundaberg Sugar Company, who did their best to be of assistance.

The Company delivered 80 metres of prefabricated track to the site and Society members bolted it up and levelled it in preparation for the arrival of *Dobbin*, which was delivered on the Bingera Mill low loader. The loco was a good attraction as part of a display of pioneer machinery and implements. It had previously been displayed here in 1978.

Nipper was to be towed to a convenient point on the Millaquin Mill system on 23 May. From there it was to be moved by means of jump points and portable track to a shed on private property for restoration. Here it will be side-by-side with privately owned 0-6-2T Bundaberg Fowler 2, formerly Mossman Mill's *Bundy*, which was moved here from Melbourne in 1977.

Alan Robert 5/81, Australian Canegrower 6/81 via David Mewes.

DAVANZO BROS, Corinda 610 mm gauge.

(see LRN 18, p.9)

This Victorian-based company is building a sewerage tunnel to connect the Brisbane City Council's Oxley Creek Treatment Plant with the Brisbane River. Part of the tunnel has been built by the "cut and cover" method, but a length of 1.3 km at the river end is being driven from a series of shafts. About 30 lengths of portable track was seen in the depot area, and additional lengths were also seen at a number of the shafts. Also at the depot were seven four-wheel trolleys and two Atlas Copco muck cars powered by compressed air - one of them upside down. It is believed that the tunnel is about half completed and that hand tramming is being used underground.

Keith McDonald & David Mewes 5/81, W.W.Henderson 5/81, Editor.

DREAMWORLD DEVELOPMENT PTY LTD, Coomera. 610 mm gauge.

(see LRN 19, p.5)

It is expected that this tourist project will be open to the public at the end of the year. A major attraction will be the 3 km train ride behind Baldwin 4-6-0 45215 of 1917, rebuilt from a first world war 4-6-0T from Racecourse Mill.

The Australian 22/5/81, Editor.

W.H.HECK & SONS PTY LTD, Rocky Point Mill, Woongoolba 610 mm gauge. (see LRN 14)

Late in 1979, Hudswell Clarke 0-4-2T *Maroochy* (1078 of 1914) was moved here from Gilltrap's Auto Museum at Kirra Beach for restoration. The locomotive was partially dismantled, and there was talk of rebuilding it as a tender locomotive. However, not much work if any has been carried out on it for the last twelve months, following the departure from the mill of Tom Hurley, who had intended to do the job. The loco stands rather derelict in the mill yard, along with a partially built petrol locomotive which was begun as a motorised tender for the mill's John Fowler 0-4-0WT (16249 of 1923). This loco was restored by Tom Hurley for the Mill's centenary celebrations in 1979, but was afterwards returned to Gilltrap's. A surprising development this year is that the Fowler has been re-acquired by Rocky Point Mill and is now on display near the mill. The tramway system is restricted entirely to the mill yard, and has no locomotives. However, most of the cane delivered to the mill comes in conventional cane tramway bins on road transport and delivered to the mill yard. More than 800 bins were counted, most apparently built on steel cane trucks and acquired from other mills who have re-equipped with purpose-built bins.

Editor 6/81.

MILLAQUIN SUGAR COMPANY PTY. LTD., Millaquin Mill & Qunaba Mill 610 mm gauge.

(see LRN 22, p.13)

It is understood that the Qunaba Mill steam locomotives were placed on the main line track by crane and towed to Millaquin Mill by a diesel locomotive in the last week in April. It is expected that all the locomotives disposed of for preservation will have been removed by now (see elsewhere this issue). This leaves one steam loco at Millaquin, which is to be retained by the Company. This is 4 *Jumbo*, Bundaberg Fowler 1 of 1952, an 0-6-2T.

Bob Gough 5/81. Alan Robert 5/81

ISIS CENTRAL SUGAR MILL CO. LTD, Isis Mill 610 mm gauge.

(see LRN 17, p.5)

A new colour scheme has been adopted for the mill's locomotives. The former colours of cream and grey are being replaced by cream and bright yellow. On a visit in April a small four-wheeled chemical powder spray vehicle was seen being unloaded from a car trailer and prepared for hauling behind a locomotive. A small petrol engine and compressor was fitted for spraying the powder. Presumably this vehicle is owned by an outside contractor.

A new line has been built from Childers towards the mill for a distance of about 8 km. along the old government railway formation. This cuts out a longer twisting section with a number of crossings of the old highway which was an operational problem for many years. The old CSR mill site at Huxley, in more recent years a depot, has been completely bypassed by the new line.

Bob Gough 4/81, Sunshine Express 4/81 via Ray Ellis

QUEENSLAND COAL MINING CO. LTD, Cook Colliery, Blackwater 1067 mm gauge.

(see LRN 3, p.6)

A most unfortunate accident took place here on 5 May. A man riding car containing eleven men was returning to the bottom of the drift at the end of a shift when it was derailed. One miner lost a leg in this accident. The man riding car would have been one of those supplied to the Colliery by Fox Manufacturing.

ABC news 6/5/81, Editor.

QUEENSLAND MUSEUM, Brisbane 610 mm gauge.

The locomotive allocated to the museum from Qunaba Mill was unloaded at the museum's New Farm storage depot on 15 May. Details of the loco are 3 *Flash* 0-6-2T Perry 6160.48.1 of 1948. It is not at present available for

public inspection.

Dan Robinson 5/81.

MOSSMAN CENTRAL MILL CO. LTD. 610 mm gauge.

(see LRN 18, p.6)

The mill company is now pressing ahead with its plans to operate a tourist tramway venture following its acquisition of one of the locomotives from Qunaba Mill. The loco 5 *Dobbin* (Bundaberg Fowler 0-6-2T 6 of 1952) was transported to Mossman direct from the site of the Bundaberg Agro-Trend Field Day, where it had been on display on May 7th-8th (see elsewhere this issue). The locomotive was soon receiving attention in the shops at Mossman. Meanwhile, three carriages, to hold a total of 100 passengers, are under construction in Port Douglas, complete with balustrading and panelling.

The steam tourist train is expected to begin operation around mid-July. To be named "The Ballyhooley Steam Express", it will depart twice daily and passengers will also be taken on a tour of the mill. The name "Ballyhooley" is that of a settlement once located at the southern end of the Mossman Mill's tramline, which was the railhead for travellers to the Palmer goldfields. The old mill kitchen is being renovated and converted for use as the station for the venture.

Passengers will be able to ride "The Ballyhooley Steam Express" Monday to Friday at a cost of Adults \$4, children and pensioners \$1, and family tickets \$10.

*Cairns Post, Australian Sugar Journal 6/81,
Australian Canegrower 6/81 via David Mewes,
Durundur Railway Bulletin No.18, Alan Robert 5/81.*

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge.

(see LRN 21, p.7)

A decision has been taken to renumber the main line diesel locomotives. The names previously carried will be removed, but will be continued to be used for identification over the two-way radio system. Details will be as follows (former numbers in brackets).

9	(<i>Gemco</i>)	4wDH	Gemco-Funkey		1965
10	(<i>Baldwin</i>)	4wDH	E.M. Baldwin	4529-	1973
			reb.E.M. Baldwin	?-1-73	1979
			reb.Marian	8860-1-8-	1980
				79	
11	(<i>Marian</i>)	0-6-0DH	Clyde	56-104	1956 (9)
12	(<i>Nellie</i>)	0-6-0DH	Clyde	58-188	1958 (3)
13	(<i>Devereaux</i>)	0-6-0DH	Clyde	67-568	1967 (5)
14	(<i>Hampden</i>)	0-6-0DH	Clyde	61-235	1961(4)

15	(Melba)	0-6-0DH	Clyde	64-377	1964 (2)
16	(Charlton)	B-B DH	E.M. Baldwin		1981
17	(Langdon)	B-B DH	E.M. Baldwin		1981

Locos 9 and 10 never carried their names. Locos 16 and 17 had yet to be delivered in May. Locos 11 and 14 were being fitted with new sound proofed cabs by the mill during the slack season, and so were to have been the first locomotives to have their old names removed. The other Clyde locomotives may retain their old identities until they too receive new cabs in the next few years.

During May, the two steam locomotives Perry 0-6-2T 2601.51.1. of 1951 and Fowler 0-6-2T 20277 of 1934 were being prepared for their annual boiler inspections.

As reported previously, the two new E.M. Baldwin locomotives will be put to work on the hilly Mount Jukes and Narpi Tramlines Accordingly, they have been built to pass under the QGR at Pirapi. However, the new soundproofed cabs being fitted to the mill's older Clyde locomotives will prevent them from working under this bridge.

The first section of the tramline to Langdon is expected to be opened towards the end of June. It involves the gauntletting of 2 ft gauge mill track between the 3 ft 6 in gauge QGR for a distance of almost 2 km between Mirani and Mirani West, and across the Pioneer River bridge.

Len Heaton via David Mewes, Durundur Railway Bulletin No.18.

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (S.A.) INC Gauges various.

(see LRN 22, p.18)

The museum has opened an appeal to pay for the purchase and transport of its 2 ft gauge Perry 0-6-2T *Skipper* (1850.46.1 of 1947) from Qunaba Mill, Queensland. All deductions of \$2 or more are tax-deductable and can be sent to the museum at P.O.Box 61, Roseworthy 5371. The loco is not in operational condition, with 27 tubes blocked off. However, new tanks were fitted in 1978, and the motion and running gear is in good condition. It was due in Adelaide on 26 May.

The museum has been given permission to remove a 3 ft 6 in gauge hopper bin and underframe from old Excell's Stone Quarry (see p.1). This was expected to be in the museum by the end of May.

Restoration of the 2 ft gauge Ruston & Hornsby 0-4-0DM 393981 has been

completed with the re-upholstering of the driver's seat and the painting of the cab interior.

Catch Point No. 25, Rob Sanders 5/81.

TASMANIA

IDA BAY RAILWAY 610 mm gauge.

(see LRN 22, p.20)

Following unsuccessful negotiations with the Tasmanian Government aimed at having extensive repairs and upgrading of track and rolling stock carried out or financed by the government, the contract between the Lune River Railway Co. Ltd and the National Parks and Wildlife Department was terminated. A number of improvements were removed by the Company.

The government is now trying to attract a long term lessee to upgrade and operate this tourist attraction. A period of 45 years was mentioned in advertisements in the Tasmanian Press of 30 May. Potential operators were asked to furnish details of any special skills related to maintenance and operation of a light railway. Applications were to close on 19 June, and press reports suggest there are several parties interested.

Ralph Proctor 6/81. K.J.Milbourne 6/81.

SECOND RIVER TRAMWAY, Karoola 610 mm gauge.

(see LRN 18 p.8)

During June, members dismantled some disused sidings of the ANR north eastern line, and subsequently purchased approximately 10 tons of 50 lb. rail for future extensions to the Second River Tramway.

Ralph Proctor 6/81.

VICTORIA

TOURIST RAILWAYS

The Minister of Transport in Victoria has been considering submissions from various bodies interested in operating Tourist Railways on lines closed by VicRail. Before taking a recommendation to Cabinet, the minister directed that an opportunity be given to any organisation which has not yet registered interest to be able to do so. Information required was to include the line in which the organisation is interested, advice as to where the capital required to finance the venture will be obtained, and what rolling stock to be used.

Organisations shown as already having registered interest were:

- Alexandra Timber Tramway & Museum, and the Shire of Alexandra
- Bellarine Peninsula Railway
- Castlemaine and Maldon Railway Preservation Committee
- Daylesford Carlsruhe Railway Preservation Society
- Tallarook Yea Tourist Preservation Committee
- Tallangatta Valley Steam Preservation Society
- Walhalla Tourist Railway

Replies were to be received by 22 June.

Melbourne Sun 9/6/81 via Steve Martin.

ESSENDON STEAM & OIL ENGINE PRESERVATION SOCIETY 610 mm gauge

The Millaquin Mill locomotive allocated to this group left Bundaberg before mid-May (quite possibly in company with the Puffing Billy Museum locomotive). A Perry 0-4-2T (9737.45.1. of 1945), it was numbered 9 at Millaquin, and has not been used since at least 1975. The Editor would very much like to hear more about this group and its plans for this locomotive. Perhaps a Victorian member may be connected with this group and could provide some information.

Alan Robert 5/81, Editor

GEE LONG STEAM PRESERVATION SOCIETY 1067 mm gauge.

Bellarine Peninsular Railway. (see LRN 20 p.6)

Approval in principle has been given for the ex-Fyansford Cement Works 0-6-ST (Vulcan Iron Works 2540 of 1916) to be moved to the Wantirna site of the Melbourne Steam Traction Engine Club for restoration by an "Eastern Suburbs Group" of the Society to be formed for the purpose. This loco is due to be swapped for a traction engine recently acquired by GSPS.

During March, the roof, horn and lights were fitted to the 1946 Malcolm Moore four-wheeled petrol/kerosene locomotive.

Monthly Notice 6/81, A.Gunsser 6/81.

PUFFING BILLY PRESERVATION SOCIETY, Museum, Menzies Creek. Gauges various.

(see LRN 11, p.14)

The Qunaba Mill 2 ft gauge steam locomotive allocated to the museum, 1 *Delta* (Perry 0-6-2T 9767/45/1 of 1950) arrived on Friday the 8 May. It was unloaded from the road transport using a mobile crane and positioned in the rear of the shed into which the museum's 2 ft gauge track runs. Both of the other sugar mill locomotives were in steam for the occasion. These are

Pleystowe Mill 4 (Hudswell Clarke 0-4-ST 1559 of 1925) and Macknade Mill 9 (Hudswell Clarke 0-6-0 1863 of 1952).

Meanwhile, work has been going on in the restoration of the Melbourne Gas Works 2 ft 6 in gauge 0-4-0ST (Peckett 1711 of 1926).

The boiler has been removed for attention to several stays and wash out plug holes. It is expected that a hydrostatic test will be undertaken soon.

R. Emerson, A.Winzenried 5/81.

PUFFING BILLY PRESERVATION SOCIETY / EMERALD TOURIST RAILWAY BOARD. 762 mm gauge.

(see LRN 14, p.18)

A proposal to restore the Climax (1694 of 1928) from the Tyers Valley Tramway, has been prepared by a group of interested society volunteers. The work will be done as a volunteer project following the completion of NA class 2-6-2T 8A. It is proposed that the Climax may be used for occasional special workings on the line. If this proposal is implemented and is successful, the volunteer group may make the restoration of the A-class Shay (Lima 2550 of 1912) their next project. No doubt many readers will be very pleased and excited at the prospect of seeing such machines as these in steam once again! (Incidentally, additional volunteers would make the proposal more likely to become a reality.)

Monthly News 7/81, A.Winzenried 7/81.

WESTERN AUSTRALIA

BRISTILE PTY LTD, Maylands 610 mm, 762 mm & 407 mm gauges.

This works is still in operation producing bricks. It was previously owned by Metropolitan Brickworks and earlier by Lloyds. Three rail systems were previously in use here: the Clay Pit line of 2 ft gauge, Drying Shed transfer tracks of 2 ft 6 in gauge (still in use), and brick car tracks of 1 ft 4 in gauge.

The clay pit line had formerly extended from a tipping dock at the rear of the works, down an incline and then in a south-westerly direction through a worked out pit travelling under a road, to a larger pit approximately 1/2 mile from the works. Light rail on wooden sleepers remained for a short distance at a worked-out face in the old pit, and at the tunnel under the road where an extant spur to a side tunnel paralleled the main line. This tunnel was bricked up at one end and had a steel door possibly indicating its use as a loco shed. Track also remained on the main incline alongside the conveyor now used to carry clay from the stock pile to the works, which may indicate that there was a limited rail use after the main pit line had closed. An overgrown spur from

the line crossed a small wooden bridge and via a wagon turntable ran to the workshop.

It appears that the line had already been out of use for some time when lifted by an Armadale scrap firm at the end of 1980, as the route was clear as a rough road, the original pit being filled.

V-skip bodies were dumped alongside the incline with one skip chassis with a pair of wheels but lacking identification. Twelve bodies were seen numbered -/21/15/3/14/7/12/17/-/11/22. One short (7 m.) section of track was in use with one end-tipping skip for removing clay waste from under the conveyor hopper.

The clay pit line closed in October 1980 and followed the successful introduction of a replacement truck and conveyor system, and rail equipment was displaced in early 1981. There were three four-wheel petrol engined locomotives, built in the 1960s at Maylands to replace F.C. Hibberd "Planet" locomotives with Ford 10 motors. The new locomotives (plainly built on the chassis of "Planet" locomotives -Ed.) had Holden 6-cylinder engines with automatic transmission and drive on one axle. Painted predominantly green, they hauled trains of eight skips from the pit to the incline, where they were hauled up into the works two at a time. One of the locomotives has been donated to the West Australian Light Railway Preservation Association. The remaining two locos, skips and track was purchased by a private company for possible future operation. This equipment was reported as having been removed early in April.

The brickworks was originally approximately double the present size, but one kiln has now been demolished and the associated brick production areas and incline are derelict. However, the drying sheds are still in use and linked by two parallel transfer tracks. Each has two petrol powered transfer cars of 2 ft 6 in gauge capable of carrying the brick cars of approximately 1 ft 4 in gauge. There was also observed one derelict transfer car. The eight brick cars are of an unusual design. These carry a wood pallet loaded with "green" bricks which are lifted into position on the drying platform by a ratchet and worm arrangement on the brick cars. As a result only 8 cars are able to deal with the entire production. No identification was seen except for SKF roller bearing axle boxes.

The brick yard tracks were not in use and were covered by stacks. There was originally also rail in the kilns (1 ft 4 in gauge) but now fork lift trucks are used.

Rob Pearman 4/81, Western Rails Vol 4 No 3, via David Whiteford.

COLLIE HISTORICAL SOCIETY Collie. 1067 mm & 610 mm (?) gauge.

On display outside a compound housing ex-Government locos and stock is a traction engine converted to operate on 3 ft 6 in gauge tracks. Reputedly used on the Buckingham timber tramway near Muja, and converted to rail operation as a 2-2-0WT about 1916, it is named *Polly*. Built in England, probably by Aveling & Porter in Kent.

In the grounds of the museum on the opposite side of the road are a variety of rail trolleys (hand and self-propelled) and rolling stock from the local coal mines. These include wagons and man riders, some of which have flangeless wheels. There is also one four-wheel battery loco with battery box showing the name "Gemco" (although George Moss have not supplied any locos here since 1946). All the stock has not been restored and is slowly deteriorating under the action of the elements.

Rob Pearman 4/81.

COSSACK PROJECT COMMITTEE, Cossack-Roebourne Tramway. 1067 mm gauge.

A 15 km reconstruction of the old 2 ft gauge Cossack-Roebourne Tramway has been commenced. About 0.4 km of standard gauge track panels has been laid out on site at Cossack and will be altered to gauge later. The track is 119 1b Yawata rail ex Hamersley Iron, and assistance has also been given by the Cliffe Robe River Company. The formation for a balloon loop to be laid along the old alignment is under construction.

It is planned to use at least one "Simplex" four-wheel diesel locomotive from Point Samson on the line. The locomotives which might be available are:

PW22	4wDM	Motor Rail	14033	1957	at Pilbara Historical Society Museum near Karratha (see LRN 15, p.15)
PW23	4wDM	Motor Rail	14034	1957	P.W.D., Port Samson.
PW24	4wDM	Motor Rail	14045	1958	preserved at Roebourne.

All these worked at Port Samson at one time or another.

*West Australian News of the North 30/4/81 via David Whiteford,
David Whiteford 5/81, Editor.*

METROPOLITAN REGION PLANNING AUTHORITY, Whiteman Park, near Caversham 610 mm gauge.

(see LRN 6 p.14)

The large park is probably a reclaimed brickworks site, but has been grassed, planted and provided with surfaced roads as a recreation area. It has also been dotted with restored machinery and equipment, mostly relating

to agricultural and logging industries. Included are a rail mounted excavator (Bucyrus-Erie) and a John Fowler traction engine. There is also a collection of about 30 farm tractors fenced off in a compound protected by a goat! Near the entrance to this compound is a machinery dump containing two of the rustiest and most dilapidated locomotive relics ever seen by the reporter.

In splendid isolation on the north-east side of the road is a small 0-4-0WT completely devoid of paint and motion. Corrosion is at an advanced stage and the most substantial items appear to be the two lengths of wood upon which it is positioned. Presumed to be Krauss 2181 of 1889, the wheels are stamped A. Krupp 1900. It is still fitted with the remains of a cab but with the main sand box dumped on the frame.

On the opposite side of the road is the 0-4-4-0T Orenstein & Koppel Mallet 2609 of 1907. There are traces of yellow and blue paint on it but most loose fixtures and fittings have gone and the tanks rusted through. That such a rare piece of machinery should have been allowed to reach this stage is both tragic and deplorable. This loco is still on a short section of track but surrounded by decaying stationary engines and the target of graffiti. The future of both locomotives must be extremely insecure.

Rob Pearman 4/81.

NEWMAN VINTAGE & ANTIQUE PRESERVATION SOCIETY, Mount Newman.

Plans have been put forward to develop a railway as part of a recreation area to be sited between the nursery and new racecourse. It is possible that the line will be built to 2 ft gauge, using equipment from Queensland sugar mills.

Mount Newman Chronicle 2/81 via David Whiteford.

ROTARY CLUB OF CARNARVON. Carnarvon Jetty. 1067 mm gauge.

(see LRN 15, p.14)

The official opening of the "Carnarvon Express" was performed on 9 May by the Minister for Tourism, Mr. Ian Laurance, following which the first "official" run over the mile-long jetty took place.

The train, consisting of an adapted mini-moke and two carriages, was acquired from Busselton Apex Club after Cyclone Alby partially demolished the Busselton Jetty in 1978. Major work to be carried out to bring the project to fruition was the construction of a shed for the rolling stock, and some track laying. Rail was made available by the Public Works Department, and permission for the operation of the train had to be obtained from the P.W.D. and the Harbour and Lights Department.

At the opening, Ian Laurance mentioned that at the local library there was a photograph dating back to around 1907, which shows a trolley fitted up with a sail for use on the jetty.

Trial running commenced over the Easter weekend and took place each weekend up to the official opening day. The journey takes about five minutes from the shore to the jetty end. Only one coach was in use on 26 April, with the other in the shed. The fare is \$1 for adults and 50c. for children.

via David Whiteford, David Whiteford 5/81.*

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC., Mount Helena. Gauges Various.

(see LRN 17)

The Society has been donated its second locomotive. This is a four-wheeled petrol locomotive from the Maylands Brickworks of Bristle. It has a Holden six-cylinder engine and automatic transmission, driving onto one axle. It was apparently built on the chassis of an earlier F.C. Hibberd "Planet" locomotive by staff at Maylands during the 1960s. This 2 ft gauge locomotive was accompanied by three side-tipping skips, and now operates on a small section of track at the Society's depot on a farm near Mundaring in the Darling Ranges. Here it has joined a larger locomotive, a 70 hp 0-4-0DM built by F.C Hibberd in 1938 (builder's number 2150). The Society has also secured a number of items of rolling stock of 2 ft, 18 inch and 15 inch gauge

Tunnel Railways of W.A.

Light Railways No.75 - on schedule.

MEETINGS - SYDNEY

The August Meeting will feature movies and slides of the Goulburn Steam Museum and members are also invited to bring along their own slides for viewing as well.

The June meeting was the A.G.M. and the following people were elected;

Paul Simpson - President.

Craig Wilson - Secretary.

David Laidley - Treasurer.

Len King & Jeff Moonie - Committeemen.

The meeting, though lively, was poorly attended, the bring and buy night netting only \$5 for the Society.

All entertainment nights are of an informal nature. Members are reminded that the snack bar at the Transport Club is open before meetings for inexpensive hot meals. Meetings are held on the second floor, and a door donation of 20 cents per head is being reintroduced to cover hire of the room. The meetings usually finish around 9.30 to 10.00 pm.

Location:- Government & Transport Club, Regent St., Sydney. Parking available in Regent St., and Botany Rd.

Date:- Wednesday 26 August. **Time:-** 7.30 pm.

MELBOURNE

The August meeting will be the A.G.M. and members wishing to nominate for position should do so either prior to or at the meeting on the form included in the April mailout.

Following the A.G.M. Cyril Henshaw will present a talk on the Broken Hill - Tarrawingee Tramway.

Location:- Ashburton Uniting Church Hall, Ashburn Gve., Ashburton.

Date:- Thursday 13th August.

Time:- 8.00pm.

Future Meetings:- October - Auction Night.
 December - Film Night.

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

GEORGE MOSS PTY LTD, Osborne Park.

This Company produces a range of mining equipment, locomotives, and rail maintenance items under the name "Gemco". About three years ago the Company moved its operations from Leederville to Osborne Park. Some diesels have been manufactured under licence from C.H. Funkey & Co. (Pty) Ltd. of South Africa, under the name "Gemco-Funkey", but it is believed that the last such locomotive was built about fifteen years ago. No diesel powered machines have been built for about five years. Total production may be approaching 1000 units, with the majority being battery electric locomotives, but trolley wire electric locos are also produced.

Most customers for locomotives appear to be mining companies in Australia, the Phillipines and Indonesia. However, it is believed that orders have also been supplied for diesels for the Zambian copper industry and for trolley locos for South Africa.

Two 25 ton battery locos have recently been supplied to Elcom Collieries in NSW, and it is believed that two more are on order.

Rob Pearman 7/81.

NEW SOUTH WALES.

APPRENTICES STEAM CLUB, H.M.A.S. NIRIMBA, Quakers Hill, 610 mm gauge.

(see LRN 23, p.5)

Invicta (John Fowler 0-6-2T 11277 of 1907) arrived at HMAS Nirimba on 26 June, having been handed over by the Millaquin Sugar Co. at a ceremony involving a naval detachment including two officers, two petty officers and 21 naval apprentices. On 27 June, she was given a thorough survey and it was discovered that her internal steam pipe was badly holed and pitted at the tube plate end.

Work commenced on the removal and replacement of the internal steam pipe on Monday 29 June and as a consequence of this work, the loco was successfully steamed for the first time on Friday 10 July.

Further work in progress is the repacking of all glands, removing and cleaning of all lubrication lines, restoring to operation the turbo-generator, rewiring, cleaning and painting the side tanks internally and rebuilding the coal bunkers. *Invicta* will remain in Qunaba Mill colours and, apart from the removal of the battery box, her appearance will not be altered. At present only 40 yards of track have been laid, although there are plans to increase this substantially during the next six months. Eventually it is hoped to lay 5 km. of track around the establishment.

Invicta joins a 1923 Foden steam truck and Garratt and Marshall portable steam engines, all fully restored. In addition, a Buffalo Pitts traction engine and a turn of the century steam pinnacle are currently undergoing restoration.

Lieutenant David Twiss. OIC Steam Club 7/81.

AUSTRALIAN IRON & STEEL PTY LTD, Old Bulli Colliery. 1067 mm gauge.

The following rolling stock was observed on the surface on a visit on 15 August:

Battery electric loco: number 67.

Diesel man riding cars: numbers 73, 74, 76, 77 & 79.

Malcolm Moore 0-6-0DM locos: numbers 7 & 8 in service; numbers 9 & 4 in the workings.

Ken McCarthy 8/81.

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park N.S.W. 610 mm gauge.

(See LRN 23, p.5)

The boiler of 0-6-2T Perry loco Tully 6 (7967/49/1 of 1949) was delivered to

the AI&S boiler shop at the Port Kembla Steel Works on 24 June for a major overhaul, mainly concentrated on the firebox.

On Saturday 8 August the former Fairymead Mill petrol/kerosene four wheel locomotive fired into life. This c.1930s unit was purchased for \$50 during 1977 and it arrived at Albion Park on 25 February 1978. During 1979 the local workshop of Cleary Bros. offered to overhaul the Fordson engine, a generous gesture which was readily accepted. The overhauled engine was refitted to the restored chassis during early August and the running trials took place soon after. The ILRMS would like to hear from readers about this unit's identity. The radiator carried the "Fordson-Major" emblem, while the gearbox carried the Day's of Melbourne plate. The outline of a diamond builders plate could be just detected on the side of the chassis when the loco arrived at Albion Park but that plate had been removed some time before leaving Queensland. The shape of this plate suggests that the assembly could have been undertaken by Malcolm Moore.

Further work on the restoration of Queensland RM trailer P 119 has resulted in the refitting of all internal cover strips and the rebuilding of side door frames. At the same time new door window guide felts have been fitted throughout the vehicle. At the close of July the 20 mm thick plate frames for the new 2 ft gauge bogies for P 119 were received from the Garnock Engineering plant at Port Kembla.

On 27 June the second end platform canopy was fitted to the saloon car No. 2. (former International c.1918 bus body). Since then replanking of the saloon floor has been completed and work is now progressing on the removal of paint from the ceiling together with the restoration and reglazing of the clerestory windows.

The new lease, which will expand the Society's site to 4.6 ha was finalised in late July, and work will soon commence in closing the gap between the main line rail heads to form a running circle of almost 1 km. Although a considerable quantity of 45 lb. rail is stock piled, this would not be adequate to complete the project. Several sources have been pursued and the museum is now having enough plant delivered over the next few months to enable the main line to be completed and the 30 lb rail in the compound and delivery track to be replaced later with the heavy stock.

A truck load of 45 lb rail and point components was received on Saturday 15 August from Old Bulli Colliery. The Collieries Section of Australian Iron and Steel Ltd as well as Mr Jim Costigan are thanked for their generous donation of this material.

Ken McCarthy 8/81.

MARTIN BRIGHT STEEL PTY LTD, Bessemer Road, Blacktown. 610 mm gauge.

This firm produces coated rod and bar steel by a series of pickling and treatment processes. In connection with these activities, narrow gauge transport is employed. This consists of approximately 20 parallel tracks within the main buildings. Each track containing one, rigid wheelbased, roller bearing equipped, six wheeled bolster type wagon. These are used for the carriage of steel between the various processing tanks. Motive power is part manual and part tractor. In addition, a few special wagons are used for providing mobile machinery mounts.

Rob Pearman. 5/81.

THEISS BROTHERS PTY LTD, Sydney. 1067 mm gauge.

Two Gemco Funkey locomotives advertised in the press at the start of August were still unsold at the end of the month. The two locos, identified as Serial No. 4521-868 Model No. L609-67 & Serial No. 4521-689 Model No. L610-97, weigh 12 tons and are powered by Deutz diesel engines giving a drawbar pull of 72,000 lb at 12 mph. The locomotives are believed to have been purchased by Theiss Brothers from Mount Isa Mines, who are suspected to have purchased them new. The locos were intended for underground use on the construction of the Dartmouth Dam in Victoria. However, the dam was completed before they could be placed in service.

Weekend Australian 1-2/8/81, David Allen 8/81.

QUEENSLAND.

CSR LTD, Macknade Mill 610 mm gauge.

(see LRN 20, p.4)

6-ton Motor Rail "Simplex" 4wDM 10232 of 1950 returned to service with the navvies on 20 August after an extensive rebuilding. The only original parts left are the frame, weights, wheelsets, gearbox and chain drive. An aircooled 3-cylinder Deutz diesel motor, and centrifugal clutch have been fitted. A modern cab has been built, with tinted windows. Also fitted are headlights, draught lights, radio, cabin light, electric starter, beacon, and a full set of instruments. This Simplex was numbered 1 and has returned to service as number 4 with a number sticker made in the same style and colour as the main line locomotive number plates. It has also been painted the full loco colours with the exception of white dazzle stripes. Simplex number 2 Motor Rail 4wDM (builders number uncertain but dating from the 1920s) is to

become number 5. This renumbering brings the Simplex numbers into series with the Hansen line cars numbers 1 and 2, and also another older inspection car (built by Clyde Engineering in 1968), which will become number 3.

C.J.Hart 8/81.

DINOS FUNPARK, Tanawah 610 mm & 305 mm gauge.

(see LRN 22, p.13)

The 2 ft gauge rail motor remains unsold and is parked adjacent to the station area with its trailer. The 12 in line is longer than the former 2 ft gauge line, and its locomotive, a 2-4-0 tender engine carries a boiler inspection plate stamped with the date 1974, indicating that it may have come here second-hand.

Editor 8/81.

INDEX INDUSTRIAL BROKERS c/o Herons Moorings Aquarium Avenue, Hammant. 1067 mm gauge.

A four-wheel diesel-hydraulic locomotive is stored at this Brisbane boatyard awaiting a buyer. Built by Plymouth in the USA (6125 of 1958), it is of Model DD and weighs 12 tons. It carries the numbering 19143 R. but also LOD 102 with the "UBR" logo of Utah Brown and Root Sudamericana indicating that it was operated by the consortium of these companies in Snowy Mountains Scheme contracts. It is believed to have been built to 2 ft 6 in gauge and was altered to the wider gauge after 1961. After finishing work in the Snowy Mountains about 1966, it is understood to have been used in a New South Wales colliery.

Editor 8/81, W.W.Henderson.

MARIAN MILL CO-OPERATIVE SOCIETY LTD. 610 mm gauge.

(see LRN 23, p.15)

The first stage of the new Langdon Tramline was inaugurated on 1 September. John Fowler 0-6-2T 20277 of 1934 and a new E.M. Baldwin bogie diesel crossed the Queensland Railways bridge at Mirani and returned with 20 bins of the first revenue-earning trip. As yet, the line is only in operation to Mirani West, and serves five sidings.

A new livery to replace the old yellow and grey is being adopted by the mill and four locomotives are running in the new colours of red and green this year. These are the two new Baldwin bogie diesels, numbered 16 and 17, and the two Clyde 0-6-0DHs which have new cabs this year, 11 (Model DHI-71 56-104 of 1956) and 14 (Model HG-3r 61-235 of 1961).

Some initial problems were experienced with the new Baldwin locos

because of coupling overhang and sharp curves, which led to a serious derailment on the Pioneer River bridge. This problem has been overcome with the fitting of a different type of coupling arrangement.

Len Heaton via David Mewes 9/81.

MINATOME AUSTRALIA PTY LTD, Ben Lomond. 455 mm gauge.

Members may have seen narrow gauge rails on TV reports of this Company's uranium prospect near Townsville. Enquiries have elicited the information that a 1 ft 6 in gauge track is used and that rolling stock consists of one 1-tonne capacity truck worked by hand.

W.W.Henderson 7/81.

MORETON CENTRAL SUGAR CO., Moreton Mill, Nambour. 610 mm gauge.

(see LRN 22, p.14)

An extensive programme to upgrade the mill's locomotive fleet has been embarked upon. E.M. Baldwin bogie loco *Coolum* (5565-1-10-74 of 1974) has had attention to its bogies and been weighted up at the front end and is now back at work hauling cane after a period of unreliability last year. *Moreton* (Clyde 0-6-0DH 63-289) has had a thorough engine overhaul. E.M. Baldwin 0-6-0DH locos *Bli Bli* (6-1257-6-7-65 of 1965) and *Petrie* (6-2300-1-6-68 of 1968) have received new turbo-chargers and final drives. E.M. Baldwin 0-4-0DH's *Maroochy* (6-1064-1-11-64 of 1964) and *Valdora* (6-1258-5-6-65 of 1965) have been fitted with new 120 hp GM engines. In addition, *Valdora* has been fitted with larger cab windows. These two locomotives remain fitted up with multiple unit connections so as to be capable of being used as one unit when necessary. Similarly, it is believed that *Moreton* and *Bli Bli* remain fitted up for radio remote control operation, but this was not seen in use when a visit was made in August. Com-Eng 0-6-0DM 8 (B1112 of 1956) has still not been returned to Mourilyan Mill, although it retains its Mourilyan number and livery. It has been fitted with the Gardner engine from *Kalbo* (Com-Eng 0-6-0DM H1022 of 1958). *Kalbo* was completely dismantled in August for overhaul, and it is understood that there has been considerable thought given to possible modifications to this loco.

The mill yard alterations begun in the slack season have not been completed. A visit at the start of July saw a feverish level of activity to complete the bare essentials of the full yard layout, and much work remains to be done, particularly at the entrance to the yard, where a house has been demolished and earthworks completed, but a considerable amount of track realignment and new construction will have to be done.

Complaints about the amount of dust caused by the tramway in Howard

Street have led to the mill taking steps to dampen down the problem. A large tank has been mounted on a bin frame and a petrol motor drives a pump to force high pressure water into the flange grooves on this section of street tramway. Other jets clean the concrete road surface into which the rails are set. This operation is carried out several times a day as required and makes an interesting working for whatever locomotive happens to be available at the time.

Editor 7/81, 8/81.

MOSSMAN CENTRAL MILL CO LTD. 610 mm gauge

(see LRN 23, p.14)

"The Ballyhooley Steam Express" was expected to have begun operations from the mill on 24 August. The locomotive, named *Ballyhooley*, is Bundaberg Foundry 0-6-2T 6 of 1952, and was recently acquired from the Millaquin Sugar Co. It has been overhauled and repainted as well as being converted to run on LP Gas. Is this a world first? The loco will be driven by Col Antrobus, formerly of Bundaberg, a well known figure at Qunaba Mill in steam days.

Three passenger carriages have been constructed by Mr J.Lewry of Port Douglas and will run on bogies similar to those used under the mill's vehicles. The carriages are of open construction in "period style" and have slatted wooden seats.

The station building has been completed and incorporates a souvenir shop and lecture theatre and is adorned with tropical plants and hanging ferns which are attended by fireman Geoff Lee and Station Mistress Jeni Watson. The area surrounding the station will become the showplace for a large number of historical old pieces of horse drawn agricultural equipment and historical tractors donated by local farmers.

There will be two tours daily Monday to Friday, at 10 am and 2 pm, and include a train ride through the canefields, an introduction to the agricultural side of the industry and a factory tour.

Mossman Central Mill Co Ltd 6/81, 8/81, Simon Fraser 8/81.

PGH CERAMICS QUEENSLAND, Strathpine. 1700 & 2000 mm gauge.

This modern brickworks operates transfer tracks at each end of its main works building which contains brick kilns. The transfer cars work on a 1700mm gauge track and are electrically powered through a trolley wire. Transmission on these cars is hydraulic, and only one of the two axles is powered. The cars are used for traversing 2000 mm gauge loaded brick cars between the parallel tracks within the main building. One transfer car operates at each end of the building. One was built by W.D.T. (Engineers) Pty. Ltd. of Acacia Ridge and the

other by Parkers Hannifin (Australia) Pty. Ltd. of Mount Gravatt.

Editor 7/81.

SOUTH AUSTRALIA

? , Angaston. 508 mm gauge.

A small side-tipping hopper wagon is on private property approximately 100 yards from Angaston Railway Station. It was purchased by the present owner from Monier Besser after the company had thrown it on the local tip. An approach from the Mile End Railway Museum for it to be displayed at the museum has been rejected.

Rob Sanders 5/81.

TASMANIA

IDA BAY RAILWAY 610 mm gauge.

(see LRN 23, p.16)

Mr Michael Williams, a boilermaker formerly working with the Department of Main Roads, has been selected as the new operator of the railway. A 40-year lease was to be signed with the Tasmanian Government, and major work to be carried out would include the overhauling of rolling stock and restoration of trackwork. It is hoped that the railway will recommence operation on 1 December. Mr Williams planned to have one locomotive in use immediately and to rebuild another as time permits. These locomotives are Malcolm Moore 4wPM originally built in 1943 for the Australian Army and formerly used by Commonwealth Carbide on the railway until its closure in 1975.

Hobart Mercury 11/7/81 via Ralph Proctor, Editor.

VICTORIA

GEE LONG STEAM PRESERVATION SOCIETY, Bellarine Peninsular Railway 1067 mm gauge.

(see LRN 23, p.18)

Work is continuing at Belmont on Perry 0-4-2T *Klondyke* (271 of 1927) in preparation for its being moved to Queenscliff. Currently a Westinghouse brake is being fitted, and the side rods and valve gear are being overhauled. This loco was originally built for the Victorian State Rivers and Water Supply Commission's Hume Reservoir works as an 0-4-0T. It was purchased by Mount Morgan Mines in Queensland about 1940 and later went to the Pioneer Sugar

Mill near Ayr, where it was converted to an 0-4-2T. In 1962 it was converted to oil firing. Withdrawn from service in 1966 with the introduction of diesels on the mill system, it was donated to the GSPS for its then Belmont Common Railway, arriving in Geelong in October 1971. It is in working condition, having been restored by Society members.

Restoration of Vulcan Iron Works 0-6-0ST (2540 of 1916) has commenced with a thorough inspection of the mechanical parts of the loco. The loco has been in a park at Ringwood since late 1968 and will be removed to Wantirna for restoration by Melbourne Society members.

Ian Gunsser 7/81, 8/81.

WESTERN AUSTRALIA

METROPOLITAN BRICK, Helena Vale.

This works, believed to have once had a 2 ft gauge rail system worked by "Planet" locomotives is reported by staff at the Maylands Brickworks to have closed about three years ago. This site is presumed to be that east of Midland, south of the Great Western Highway. All buildings except for one house have been demolished, and the pit is flooded.

Rob Pearman 4/81.

L. WHITEMAN, Middle Swan Brickworks.

This works, believed to have had a locomotive worked 2 ft gauge rail system at one time, is still in operation just east of the Swan River at Middle Swan. Clay is delivered by truck here, and no pit operation was observed. Although an old works, a variety of bricks is produced with fork lift and tractor operation. Old lengths of rail were observed, approximately 30 lbs/yard, but there was no rail equipment except for one heavy skip chassis plus bucket welded to a skid frame. Three lighter skip bodies used for ash removal from the kilns are thought to be probably not of rail origin.

Rob Pearman 4/81.

OVERSEAS

PAPUA NEW GUINEA

CHOISEL PLANTATION PTY LTD, Soraken, North Solomons Province 610 mm gauge.

(see LRN 14, p.21)

On a visit in June, Hunslet 4wDM 7531 of 1977 was in the workshop undergoing overhaul as a result of breakdown. In addition, a small Lister 4wDM loco was under repair. Another Lister which arrived from Lindenhafen Plantation in West New Britain in May 1980 has not yet been repaired but is being cannibalised for spare parts. With the two working locomotives out of use, trucks were being hand pushed to the nearest road crossing, a distance of up to 900 m. with loads of bags of copra and cocoa weighing up to a total of about half a ton.

Michael R. Pearson 7/81.

PAPUA NEW GUINEA NATIONAL MUSEUM & ART GALLERY

The Aviation, War & Maritime Section of the museum has recently acquired its first railway relic, a 2 ft gauge wheelset from the Port Moresby area.

Ron Aubrey 5/81 via David Mewes.

FIJI SUGAR CORPORATION 610 mm gauge.

The Fijian Government commissioned report on cane transportation made by Booker Agriculture International Ltd has recommended that about \$7m. should be spent on improvements to the tramways serving Fiji's four sugar mills.

Since CSR left Fiji in 1973, cane growing has expanded in geographical extent, but only one minor tramway extension has been made. This has

meant a great increase in road transport, a trend accelerated by a lack of rail maintenance in some areas, and the dissatisfaction with the rail transport service. Increased road transport is inefficient and has brought about increased road traffic hazards as well as congestion at the mill weighbridges.

The consultants have proposed a greater use of portable line in flat areas and the construction of about seventeen transfer stations where cane can be placed onto rail from infield motor transport and road vehicles from isolated or hilly areas.

The consultants pointed out that any sugar industry having an established railway system is extremely fortunate. It has the lowest cost and the lowest fuel consumption for each tonne of cane delivered and therefore must be utilised to the full.

The main problems farmers have with the rail system were stated to be erratic delivery and collection of rail trucks, and the lack of portable line, having to wait long periods to hand over weight tickets to loco drivers, and the danger of not getting their cane harvested at the end of the season.

The Fiji Times 4/7/81 via Bob McKillop.

ROSTER No.3 - MELBOURNE & METROPOLITAN BOARD OF WORKS

This roster is not necessarily complete.

Some confusion exists over the numbering of these locos. Plant records do not always correspond with the numbers actually carried, and the numbers sometimes have extra letters and/or figures added.

SALES DEPARTMENT NEWS

Light Railways Reprints now include Nos 21 & 22

Our plan to reprint in limited quantity, early numbers of *Light Railways* makes progress with the addition of numbers 21 & 22 to those already available.

We can now offer a complete set of reprints of numbers 13 to 22 inclusive.

Further, a combined reprint of Volume 3 (Nos 9 to 12), is in preparation and will be followed, in due course by Volume 1 (Nos 1 to 4) and Volume 2 (Nos 5 to 8).

Cost of LR 21 and LR 22; a measelly \$1.80 each, posted, or \$1.60 each for those able to buy them at Melbourne meetings.

NOTICE BOARD.....

Sydney Field Trip

To all Sydney members, a unique opportunity has arisen for us to inspect the light railway remains at BANTRY BAY.

You have never heard of it! Well quite a few others have not either. So if you wish to participate in our first field trip ever, to take place in November 1981, enquire now to:- FIELD TRIP, 1981, P.O.Box 290 Burwood, 2134 or come to our next meeting on 28 October.

This previously unrecorded 2 ft gauge light railway served a munitions depot in Bantry Bay and has been listed by the National Trust.

We plan to make this the subject of a combined research effort, the result of which will be published in a future issue of *Light Railways*.

PUBLICATIONS

STEEL and RAILS - Newcastle.

A new book, first of a pair. (the other dealing with Whyalla) A4 format, full page rail network plans, scale rolling stock

Don't delay your order, particularly if you wish a hard cover privilege copy.

STEEL and RAILS - Newcastle; plans Book.

Due to the demand already obvious, it is planned to release a lay-flat HO scale version of the excellent rolling stock drawings prepared by Keith McDonald for the Newcastle book. Running to around 60 pages, plus notes, all in horizontal layflat format. Keep your eye on the sales list for this one!

LR 21 & 22 now on Sale! Only \$1.80 ea.

MEETINGS

SYDNEY

The October Meeting will feature selected movies and can include further movies that members might bring along.

All entertainment nights are of an informal nature. Members are reminded that the snack bar at the Transport Club is open before meetings for inexpensive hot meals. Meetings are held on the second floor, and a door donation of 20 cents per head is applicable. The meetings usually finish around 9.30 to 10.00pm.

Location:- Government & Transport Club, Regent St., Sydney. Parking available in Regent St., and Botany Rd.

Date:- Wednesday 28 October.

Time:- 7.30pm.

MELBOURNE

The October meeting will feature our Annual Auction Night. No doubt one of the highlights of the year, this is the night you get the opportunity

to bring along the junk you bought last year and swap it for a new lot! These occasions are always a lot of fun so if you have a few spare photos, maps, locomotives, etc, bring them along (and your wallet) and take part in what will be an enjoyable evening.

Location:- Ashburton Uniting Church Hall, Ashburn Gve., Ashburton.

Date:- Thursday 8 October.

Time:- 8.00 pm.

Future Meetings:- December - Film Night.

February - The Tramways of Darnum.

RESEARCH COLUMN

Craig Wilson of 22 Jackson Crescent, Pennant Hills 2120 is researching Nepean Sand & Gravel Co., operators of both standard and narrow gauge railways at their Yarramundi Quarry, and would appreciate any photographs or information, especially the impressions of any reader who visited the site up to 1955.

CORRECTION

In LRN 24, p.2, it was stated that Malcolm Moore locos 9 & 4 were seen in the workings at Old Bulli Colliery. This should have read "in the workshop". Apologies to Ken McCarthy.

INDUSTRIES ASSISTANCE COMMISSION REPORT ON RAILWAY & TRAMWAY LOCOMOTIVES, ROLLING STOCK, ETC.

This report, published on 13 July 1981, sheds light on a number of aspects of the Locomotive and Rolling stock manufacturing industry. The Commission's recommendation was that the present rates of duty, 15% on battery electric locomotives and 30% on other items, should be altered to 20%. Manufacturers listed in the report include E.M. Baldwin, Clyde Engineering, Commonwealth Engineering, A.Goninan & Co., Fox Manufacturing, George

Moss, Plasser (Australia) and Tamper (Australia) among the better known firms. Others, less well known, included R. & W. Hannaford Pty Ltd of Sydney (diesel and battery electric locos), Kembla Coal & Coke Pty Ltd of Moss Vale (battery locos), Moxon Engineering Pty Ltd of Moss Vale (underground locos) and Pacific Construction Equipment Pty Ltd of Sydney (inspection vehicles).

It is interesting to note that some rail equipment is still being imported. In the period 1967-80, this included 5 battery locos from Britain and West Germany, 4 electric locos from West Germany, 8 diesels from Britain and West Germany, and 15 self-propelled vehicles from Switzerland and the USA. Some at least of these must be operating on mining tramways in Australia.

Editor 10/81

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

E.M. BALDWIN & SONS PTY LTD, Castle Hill, Sydney.

(see LRN 23, p.4)

Marian Mill's two 32 tonne bogie locomotives were delivered during June. A 25 tonne 4-wheel diesel-hydraulic mining loco (1067 mm gauge) was delivered on 10 August, and it is believed that a 32 tonne B-B DH loco for a sugar mill was delivered on 1 October.

Craig Wilson 10/81

NEW SOUTH WALES

GOULBURN STEAM MUSEUM 610 mm gauge

(see LRN 22, p.5)

Krauss 0-6-0T *Stella* (3423 of 1896) was seen working at the museum on 6 September. Trains to the gates seemed to be running at a frequency of about one hour. An end loading steel saloon car is now in service, of similar dimensions to the former Melbourne cable tram trailer in use here in the past. Although the windows are of identical spacing to the tram trailer, only six openings on each side are glazed, with the remaining two end panels sheeted over. The vehicle has a clerestory roof ribbed with curved square tube section steel to resemble the bent wooden ribs of the cable car. The car appears to be mounted on former Condong Mill bogies. The former NSWGT California car "D" 117, which began running at Goulburn in early 1976 on two 2 ft gauge bogies, has now returned to its owner, and it is believed remounted on its original standard gauge Brill 21 E truck.

Ken McCarthy 10/81

HUNTLY COLLIERY PTY LTD, Dapto 1067 mm gauge

Under the heading "Supply of Diesel Locomotive", an advertisement calling for tenders for the supply of a 25 tonne diesel or electric loco for underground use was published early in October.

The Weekend Australian 3-4/10/81

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park NSW 610 mm gauge

(see LRN 24, p.3)

The four wheel fire fighting tank car was completed in time for the 11 October operating day. A removable petrol motor-pump unit is fitted to the chassis and this provides a high pressure water flow from the nozzle of the hose to extinguish any grass fires which could be caused by sparks from the steam locos. This is a new item of rolling stock manufactured by ILRMS secretary Tony Madden.

On 26 September the Queensland Railways rail motor trailer P 119 and saloon car No.2. (former c.1918 International bus body) were hauled around the museum railway by the diesel Ruston loco on clearance trials. This marked the completion of the restoration of the body of P 119. During July and August the interior walls were painted brown and cream, green carpet fitted to the floor, and upholstered seating provided for 39 passengers. These are former bus seats fixed in traverse, face to face positions with green leatherette covering to match the carpet. A rich brown gloss livery relieved with two cream bands, similar to the original Queensland scheme, has been used on the outside.

P 119 is now available for limited service but regular operation will not be entertained until the lower design bogies and a continuous air braking system are fitted. The restoration of this car was carried out under the direction of Arthur Moore.

The restoration of the clerestory windows for car No.2, as well as the painting of the ceiling, was completed by early October. This brought to a conclusion the fitting of 38 glass panes as well as the construction of 28 new window frames for this vehicle. Two major tasks remain to bring to a conclusion the restoration of this vehicle which has occupied almost two years; the fitting of the sheet steel end platform aprons and the construction of two longitudinal polished wooden benches to provide seating for 10 passengers.

During late September the ILRMS secretary visited Queensland to supervise the loading of 10 tons of 42-1/2 lb rail made available by the Queensland Railways. Successful negotiations by the ILRMS resulted in 30 tons of this rail

being made available, lifted and stacked, on the Millmerran branch. As 10 tons will provide enough plant for 240 metres of track, more than enough to complete the ILRMS main line, the balance was transferred to ANGRMS for their Woodford museum railway.

The QR was able to transport the rail to Brambles Brisbane depot for a competitive price and by early October the delivery was awaited at Albion Park.

While in Brisbane, Tony Madden took the opportunity to collect relevant drawings for P 119 and to arrange the purchase of surplus equipment which will enable the refitting of air brakes to this vehicle. The ILRMS Museum Committee is grateful for the co-operation and hospitality extended to the secretary by QR engineering and per way staff as well as by ANGRMS members.

By late September the Albion Park lease was still awaited from being notated and registered. In the meantime member Bob Morgan, who has recently moved into the district from Melbourne, has been pressing on with the extension of the station siding track. This will eventually form the main passing and holding loop on the main line. This work was far enough advanced by 11 October to enable the Ruston diesel loco and the fire fighting car to stand at the station clear of the main line. The ILRMS is fortunate in being situated in a coal mining area. The management of Yellow Rock Colliery, only 5 km from the museum, has offered the museum a free supply of unscreened lump coal and the first load of this generous donation was received in September. In addition, a fairly regular supply of hardwood offcuts is also available as a fuel supply as the nearby pallet manufacturer otherwise makes several trips to the tip each week to dispose of that material.

December 15th, 1981 marks the tenth anniversary of the first public meeting held to establish the ILRMS. Although one never completes the task of preservation, the Society has been able to initiate all its aims and objectives in its first decade, and 1982 will see the start of the second decade which will be one of consolidation.

Ken McCarthy 10/81

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge

(see LRN 23, p.10)

Work carried out in the last few months included the extension of the

station platform at Woodford by 30 ft. Two ex-CSR line bogies have been overhauled at Woodford prison and returned to site. Two steel cane trucks and a pair of tender bogies have now been sent to the prison for overhaul. Restoration of the ex-rail motor trailer has been continuing.

During October, the Society's Bundaberg Foundry 0-6-2T (5 of 1952) passed a boiler examination, and on the same day, two members were passed as diesel locomotive drivers.

Through the good offices of the Illawarra Light Railway Museum Society, 20 tonnes of 421b rail was recently offered to the Society, and will prove very useful in the development of the project. A number of sets of points have been donated by a northern sugar mill, which will also prove of great value.

Fairymead Mill has donated a bogie flat wagon to the Society. It was supplied originally for the construction of the Burrinjuck Dam in NSW before the first world war and was later purchased by Fairymead, as one of about 15 similar vehicles, for the conveyance of bagged sugar from the mill to the wharf. The wagon was delivered to Woodford in September and although the woodwork is in poor condition, the bogies appear to be in good order. The wagon is about 27 ft long and 5 ft 3 in wide.

Durundur Railway Bulletin, J.Mewes 10/81, Editor.

BARCLAY BROTHERS PTY LTD, Moorooka, Brisbane 610 mm gauge

(see LRN 24, p.11)

In 1977, this company purchased four English Electric 7 ton 76 hp electric locos from Mount Isa Mines Ltd. These had been converted from wire electric to battery at Mount Isa by the addition of battery trucks. These locos were:

- | | | |
|----|------------------------|------|
| 2 | English Electric 71741 | 1930 |
| 4 | English Electric 71743 | 1930 |
| 9 | English Electric 1958 | 1951 |
| 10 | English Electric 1959 | 1951 |

At Moorooka they were overhauled and renumbered 150 001, 150 004, 150 003 and 150 002 respectively for use on a tunnelling job in Canberra. After the completion of this job, three were sent to Gosford for another similar job, while the fourth was sold or scrapped. At Gosford, one loco was cannibalised and finally scrapped. About April 1981, the remaining two locos, Mt. Isa 2 and 10, were returned to the plant yard at Brisbane, and were still there in October, together with a number of spare wheelsets. Two battery trucks were seen in another part of the yard, one with four wheels and the other mounted on bogies. Also seen were two concrete transporter cars mounted on bogies and two without wheels as well as a quantity of rail.

A 1-1/2 ton battery loco, thought not to have been built by Gemco, was

also used at Canberra, and is now believed to be in Fiji for the Monasavu job. It, and a number of 3 ton battery locos, thought to have been purchased from the NSW Metropolitan Water, Sewerage & Drainage Board are thought to have passed through Brisbane for overhaul en route for Fiji.

Three 3 ft 6 ins gauge 8 ton battery electric locos were purchased from Mount Isa Mines Ltd in March 1978. These were built to be convertible to 2 ft gauge, and may indeed have been converted. These too, may be in Fiji.

Details:

54	4wBE	Gemco	52144P-35P/56	1967
55	4wBE	Gemco	6B/5691-6B/6101/66	1968
56	4wBE	Gemco	3B/5691-5B/5691/65	1968

These Gemco battery electric serial numbers contain the numbers of the two motors fitted to the loco in question, and the serial number of the loco in the particular class.

BUNDABERG TOURIST TRAMWAY PRESERVATION SOCIETY 610 mm gauge

(see LRN 23, p.11)

Work has proceeded on the restoration of Bundaberg Foundry 0-4-2T 8 of 1952. By the end of September, the tanks, cab and boiler lagging had been removed, together with the spark arrester and sand boxes. The tanks will be rebuilt with new materials, and corroded cab panels will be replaced. The spark arrester will also be rebuilt. Meanwhile, Alan Robert's 0-6-2T *Bundy* (Bundaberg Foundry 2 of 1952) has had welding done on a spot of corrosion on the boiler barrel, and a tube has been withdrawn for the boiler inspector to carry out an examination.

The Society has been donated two bogie wagons from Fairymead Mill. These are in poor condition but might form the basis of passenger cars. They had not been removed from the mill at the start of October.

The Society has not been successful in its approach to the Millaquin Company to use a section of tramline for tourist operations at weekends. Other options are now being investigated, and moves are being made to acquire some 30 lb rail from the Childers district.

BTTPS Newsletter 8/81, Alan Robert 9/81

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 24, p.5)

As part of a rationalisation scheme for the Herbert Valley mills (Victoria and Macknade), a proposal has been made to build a 20 km long extension to the

Macknade Mill's Hawkins Creek line through fairly rough country, involving a number of bridges, so as to enable the tapping of the Abergowrie area, presently a part of the Victoria Mill's assignments. It is felt that at this stage the proposal would be uneconomic, but in the future, this "strategic" line might become a reality.

Australian Sugar Journal 9/81 via David Mewes

(Note to CD-ROM edition - The following item was originally incorrectly published under the heading CSR Ltd, Victoria Mill. The correction was noted in LRN 27).

A mill worker suffered severe injuries when hit by a cane bin derailed as a result of a collision at the tramway crossing of the Queensland Government's line at Bemerside. The loaded cane train had mostly crossed when it was hit by the locomotive of a north bound goods train, which had run through the protecting signal. Several bins of cane were dislodged, injuring the cane locomotive's "fireman", who was operating the catch points at the time. (these protect the QGR from the cane trains but not vice versa - Ed.)

Australian Sugar Journal 10/81 via David Mewes

DREAMWORLD DEVELOPMENT PTY LTD, Coomera 610 mm gauge

(see LRN 23, p.12)

The first stage of this project, including a 3 km long steam hauled railway, will be opened to the public on 15 December.

Time Off 23/10/81

FAIRYMEAD SUGAR CO. PTY LTD 610 mm gauge

(see LRN 18, p.4)

A number of interesting items of rolling stock were observed in September. Two tool box wagons have been constructed on old cane bins painted yellow. One of the mill's four wheel ballast wagons was seen placed transversely on a transporter wagon constructed from a bin frame. One of the old Burrinjuck Tramway bogie flats has been converted into a ballast plough.

Contract tamping was carried out by Tamper (Australia) during the slack season. Consideration is being given to the purchase of a ballast tamper and possibly an additional bogie Baldwin locomotive in 1982.

A head-on collision is understood to have occurred in late September. Nothing more than radiator damage is believed to have been suffered however.

Editor 9-10/81.

GIBSON & HOWES PTY LTD, Bingera Mill 610 mm gauge

(see LRN 18, p.4)

Locos allocated to Wallaville in the 1981 season are:-

<i>Thistle</i>	0-6-0DM	Com-Eng	A1207	1956
<i>Sharon</i>	0-6-0DM	Com-Eng	A1935	1959
	4wDH	Malcolm Moore, rebuilt Bingera		1943

The Malcolm Moore loco, which works as a yard shunter at Wallaville, is known officially as *Hydrostat*, although this name is not carried. At Wallaville, near the old Gin Gin Mill, trains are made up for dispatch to Bingera, with the bulk of the haulage done by E.M. Baldwin B-B DH locos *Oakwood* and *Givelda* (5900-1-5-75 and 5800-2-6-75 of 1975). *Givelda* is remotely controlled from the lead loco, *Oakwood*, on this work, and a typical train is *Oakwood*, 56 bins, *Givelda*, 40 bins. Sister loco *Delan* (5800-3-7-75) is also fitted up for "slave" operation, but normally works separately, as does *Givelda* on the night shift.

A Malcolm Moore 4wDM is still stationed at Mcllwraith to work the remaining light lines in the area. A crew is sent out by road from Wallaville for this task, and in September, the Malcolm Moore was seen working bins, four at a time, to the junction with the heavier track. This whole operation is a remarkable sight, with the outstanding feature possibly that of a gate across the track at one point. The "fireman" dismounts from the Malcolm Moore to open this gate with the load, but when returning to the farmer's siding, the spring loaded gate was opened by the locomotive's buffer beam.

The crossing of the Burnett River at Givelda is another sight worth seeing. Here, the tramway descends the north bank of the river by means of a switchback. A train crosses here at about 10 am and returns about an hour later.

The Bundaberg Sugar Group Mills (Bingera, Fairymead, Millaquin & Qunaba) do not have a single spare locomotive between them in case of breakdowns. (many mills now consider it important to always have one loco on standby) Bingera's *St.Kilda* 0-6-0DH (rebuilt by E.M. Baldwin in 1967 from a Ruston & Hornsby loco from the Snowy Mountain Scheme), normally used as a yard shunter is used as spare loco for the group. On the morning of 30 September, *St.Kilda* was seen being loaded onto a company truck for transfer to Millaquin as a result of a breakdown there. Within 24 hours, the loco had failed at Millaquin, and was seen there with its torque converter out.

Editor 9-10/81

INDEX INDUSTRIAL BROKERS, c/o Herons Moorings, Hemmant 1067 mm gauge

(see LRN 24, p.5)

Plymouth 4wDH 6125 of 1958 stored here, was previously used at Bellbird Colliery, near Cessnock, NSW, where it was seen stored out of use in October 1977.

D.J.Mewes 9/81, Craig Wilson 10/81

ISIS CENTRAL SUGAR MILL CO. LTD 610 mm gauge

(see LRN 23, p.13)

The newly relocated line from Childers takes a spectacular route across country and much in the way of earthworks would have been necessary to restore the old government-railway formation. A service road had been built along the trackbed. The new line is as heavily graded as the old, but cuts out many curves and road crossings as well as shortening the route considerably. The track is laid in long welded lengths, and some problems have been experienced with rail expansion and buckling. Meanwhile, the old rail from the old line had mostly been removed by September. The new route north of the Gregory River is also completed, extending nine kilometres beyond last season's terminus at the Bruce Highway, making a total of about 19 km. from Cordalba.

Three locomotives have been fitted with soundproofed cabs since last season and are sporting the new colours of yellow and a rather greenish cream, with green numbers and trim. These are all Clyde Model DHI-71 0-6-0DH locos:

4	56-113	1956
5	58-191	1958
6	59-204	1959

Sister locos 61-220 of 1961 and 64-385 of 1964 are running in multiple as number 8. The first of the two, formerly number 7, has had its cab removed and controls covered by a steel plate. However, its cab is stored by the loco shed for placement on the loco in the event of the failure of its "twin".

John Fowler 0-6-0DM 1 (20776 of 1935) is no longer used on regular cane haulage, but is on ballast hauling duties as required. A new Tamper ballast tamper was seen in the loco shed. It was delivered in 1981 but its serial number is unknown at this stage.

Editor 9-10/81

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 24, p.6)

The first stage of Marian Mill's tramline extension to the west of Mirani, opened on 1 September, runs to Mount Martin, a distance of 22 km, and cost \$2,202,000. Work has already begun on the next stage, which will run 12 km

to Mount Castor.

New bogie Baldwin 16 was ex E.M. Baldwin's works on 11 June, with 17 ex works on 26 June. Both are turned out in the new livery of red bogies and wheels, yellow running boards with red and white dazzle stripes at front and rear, and the body bisected with a horizontal red stripe with yellow above and green below. The radiator grille is green with a yellow surround. The flashing warning light is fitted above the engine, no doubt due to clearance problems above the cab roof.

Australian Sugar Journal 10/81 via D.J.Mewes; Craig Wilson 10/81

MILLAQUIN SUGAR CO. PTY LTD, Millaquin Mill 610 mm gauge

(see LRN 23, p.13)

Locomotive breakdowns appeared to be the order of the day here in September, with repair work being carried out on a different E.M. Baldwin bogie locomotive on three successive days at one stage. These failures were annoying and disruptive to traffic working, but worse was to follow on 29 September, when loco 3 (Baldwin B-B DH 6456-1-11-75 of 1975) failed with broken crown wheel and pinion on the front bogie. The next day help arrived from Bingera Mill in the shape of *St Kilda* (0-6-0DH E.M. Baldwin rebuild 6-2179-1-6-67 of 1967 of a Ruston & Hornsby machine). Normally used on yard work at Bingera, the loco was put into service on cane haulage after coupler modification to suit Millaquin stock. After working the day and evening shift, *St Kilda* failed on the night shift with a converter failure. Qunaba Mill's *Beetle* was borrowed for the evening and night shift of October 1-2, with the bogie Baldwin due to return to service next day.

Bundaberg Foundry 0-6-2T loco 4 *Jumbo* (1 of 1952), retained by the Company for preservation, was seen parked in the loco shed with no work having been done on it. Next to it was a tiny self-propelled track jack with a diesel engine driving onto one axle only. Built by Gemco, it has serial number 241380085201.R80680, and was delivered in 1980. It is apparently transferred between mill systems in the Bundaberg Group as required.

The line car usually used by the mill navvies, a four-wheel diesel-hydraulic built at the mill about 1969 was undergoing an overhaul, and the navvies were using two of the three petrol-hydraulic cars with drive onto one axle in tandem with a wagon between them. These machines, apparently built up from a cane truck chassis by the mill, have now been numbered 1, 2 & 3. Some contract tamping was done on the mill's system over the slack season by Tamper (Australia) (see LRN 17, p.7).

Editor 9-10/81

MILLAQUIN SUGAR CO. PTY LTD, Qunaba Mill 610 mm gauge

(see LRN 23, p.13)

In spite of the gloomy predictions of loco crews, chain driven E.M. Baldwin 4wDH *Beetle* (rebuilt by Millaquin Mill 1980 from E.M. Baldwin 4529 rebuilt 8860-2-8-79 of 1979) is performing adequately in service, even if giving a rough ride. Com-Eng 0-6-0DH *Burnett* (FC3473 of 1964) did break down earlier in the season however, and *St Kilda*, E.M. Baldwin's 0-6-0DH rebuild (6-2179-1-6-67 of 1967) of a Ruston & Hornsby machine, was sent from Bingera Mill to assist. This expired immediately so another machine was sent from Fairymead Mill, in the shape of their loco 7, yet another rebuild, this time by Fairymead in 1971 of a Com-Eng 4wDH (GA1148 of 1961). This small loco was not really much help with its very limited haulage capacity, but had to suffice until *Burnett* returned to service.

Beetle was collected by a Millaquin crew at 7 pm on 1 October to cover for a loco failure, but was expected to be returned the next day.

Editor 9-10/81

MORETON CENTRAL SUGAR CO., Nambour 610 mm gauge

(see LRN 24, p.7)

A serious boiler failure caused the closure of the mill from 1 to 22 September. This and other problems mean that crushing will extend late into the year at least, if weather permits.

The cessation in production meant time was available in the loco shed, and three locomotives were repainted. *Coolum* (E.M. Baldwin B-B 5565-1-10-74 of 1974) and *Petrie* (E.M. Baldwin 0-6-0DH 6-2300-1-6-68 of 1968) appeared in a new colour scheme of yellow and green. *Coolum* was also adorned with the slogan NAMBOUR CAPITAL OF THE SUNSHINE COAST and suitable cartoons of CANE & MABLE in the shape of cane stalks on the cab side, when seen on 20 September. This was presumably in connection with the Cane Festival which was held a week or so earlier. By the beginning of October, these adornments had been removed, and the loco looked rather more dignified. Baldwin 0-4-0DH 6-1064-1-11-64 of 1964, known as *Maroochy*, but not carrying the name at present, had been repainted in all-over yellow.

Kalbo (Com-Eng 0-6-0DM H1022 of 1958) is due to receive a Detroit 6-cylinder diesel with Torquematic converter. It appears that Mourilyan Mill's loco 8 (Com-Eng 0-6-0DM B1112 of 1956) may remain at Moreton until the end of the season at least. The wagon repair shop took the opportunity offered by the mill breakdown to give attention to some of the mill's four-wheel wooden ballast wagons.

Editor 9-10/81

MOSSMAN CENTRAL MILL CO. LTD 610 mm gauge

(see LRN 24, p.8)

"The Ballyhooley Steam Express" was inaugurated as planned on 24 August, and demand from the public has meant the running of two services on Saturday in addition to Monday and Friday.

The locomotive *Ballyhooley* (Bundaberg Foundry 0-6-2T 6 of 1952) is turned out in maroon livery lined out with yellow, and carries its new name on a large oval plate on the cab side. The train runs not in the direction of Ballyhooley (south of Mossman) but to the north, where there is more in the way of scenic attractions.

In September, the historic display under development near the mill station contained two locomotives, Baguley 0-6-0DM *Mowbray* (3378 of 1954) and Malcolm Moore 4wDM 007 (1042 of 1943), which was apparently being described to tourists as "Sandy the cane train". It is not known if these locos have been withdrawn from service or are only displayed when not required for other duties. The latter possibility seems the more likely.

A number of the mill's Com-Eng 0-6-0DH locos have been fitted with sound proofed cabs since the 1980 season. These include *Ivy* (AL4181 of 1965) and, it is believed *Douglas* (AL2562 of 1963). It appears that these two locomotives have been fitted for back-to-back- multiple unit operation.

The Townsville Daily Bulletin 27/8/81 via G. Ahern,
R.J. Webber 9/81, *Australian Sugar Journal* 10/81 via D.J.Mewes.

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 22, p.16)

Work is well underway in the construction of the 30 km Elaroo tramline extension. It will extend from existing track at the O'Connell River to serve 24 growers with a peak of approximately 100,000 tonnes of cane. At present, cane is hauled by road to Lethebrook, 20 km from the mill, but the cost of this operation, borne by all suppliers, has become unacceptably high, with road transport costs having risen 337% since 1973 while tramway haulage and maintenance costs have increased by 81%. In dollar terms, the cost of shifting 115,000 tonnes from Elaroo during the 1980 season was 31% more than that of shifting the 835,000 tonnes from the remainder of the mill area. An additional E.M. Baldwin 24 tonne bogie loco is being purchased for the line as well as two brake wagons. Rail from Central Australia is being laid by the mill.

Further tramline extensions are contemplated into the Conway and Gungaharra areas to serve small pockets of growers.

Australian Sugar Journal 8/81 & 10/81 via D. Mewes.

QUEENSLAND SALT PTY LTD, Bowen 610 mm gauge

(see LRN 10, p.11)

A numbering scheme has been introduced here with Ruston & Hornsby Model 30DLU 4wDM locos 285343 and 285340 of 1949 carrying freshly painted numbers No.1 and No.2 respectively in September. It is possible that the two other locos, Ruston & Hornsby Model 27/32 hp 4wDM 174142 of 1935, and 20 hp Motor Rail "Simplex" 4wDM 8653 of 1941 will also be numbered. The 1935 Ruston came here from Proserpine Mill in 1973 and carries a small brass plate showing that it passed through the hands of dealer J. Berghouse of Sydney at one time. The other two Rustons were built for the State Rivers & Water Supply Commission of Victoria, and the works manager at Bowen stated that they had both come via Mount Morgan Mines from the Bajool Salt Works in Central Queensland. As the gauge of the tramway at Bajool as well as Mount Morgan was 2 ft 6 ins (locomotives were transferred between the two), it remains unclear if the locomotives could have been used at Bajool. Both arrived at Bowen after 1963.

The original loco at the works was a Malcolm Moore 4wPM loco, believed to have had a Fordson engine, and carrying builder's number 33. This would have dated from before 1939 and was present there in 1946. In 1963, it was still there with a similar loco, a T.A.C.L. with Fordson engine which had arrived after 1946, but was probably older than the Malcolm Moore. The Simplex was also present by 1963. No trace of the two petrol-engined machines remains at Bowen today, so they were probably replaced by the two Rustons from Bajool.

W.W.Henderson.

TULLY CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

A new tramway marshalling yard is under construction at the mill at a cost of some \$2.5m. Planned to be in use for the 1983 season, it will mean significantly fewer shunting movements across Butler Street, which links Tully with the Bruce Highway. The new yard will take up a large part of the former Tully Mill Golf Course, and has necessitated the diversion of Pong Creek. The civil engineering work is being done by local contractors.

Australian Sugar Journal 10/81 via D.Mewes

SOUTH AUSTRALIA

WHEAL MUNTA MINING MUSEUM, Moonta 610 mm gauge

One of the petrol locomotives from the Maylands works of Bristle in Perth (see LRN 23, p.19) has been purchased for use on a museum railway to be developed here. It has a Holden 186 engine and an automatic transmission with chain drive to one axle only. It is believed to have been built at the Maylands works and weighs 2-1/2 tons.

*South Australian Preserved Locomotives (Railmac Publications)
via R.F. Ellis and David Whitford, 9/81*

TASMANIA

WEE GEORGIE WOOD STEAM RAILWAY INC., Tullah 610 mm gauge

(see LRN 19, p.6)

Although not in service yet, reports from Tullah indicate that the 2 km track is almost completed, including what is described as "a 180 degree loop at the southern end". A small passenger carriage is being restored, believed to have been obtained from a backyard in Queenstown. No definite date for opening is available, but it is thought that this may be sometime in 1982. The line will run near Lake Rosebery when it is formed with completion of hydro-electric work in the area. The line will be operated by John Fowler 0-4-0WT *Wee Georgie Wood* (believed to be 16203 of 1924).

Ralph Proctor 9/81

VICTORIA

GEE LONG STEAM PRESERVATION SOCIETY, 1067 mm gauge

Bellarine Peninsular Railway (see LRN 24, p.9)

6 *Wesley B McCann*, Hudswell Clarke 0-4-2ST 646 of 1903, is still at Belmont Common and is used occasionally in track dismantling operations or in moving equipment to be transferred by road to the Bellarine Peninsular Railway. The loco was supplied new to the Wallaroo & Moonta Mining & Smelting Co. Ltd. It was sold to the Australian Portland Cement Co. at Fyansford, Victoria in 1924, and worked here until December 1966, when the Fyansford line was closed. It had been overhauled and fitted with larger driving wheels in 1955. After being used for demolition work at Fyansford, it was donated to the Geelong Sub-division of the A.R.H.S. in August 1968, and became the first loco on the Belmont Common Railway. It was fitted with the name plates

from the Fyansford Clyde Bo-Bo DE D1 (51-107 of 1956), which was sold by the company to Victorian Railways, who have renumbered it T413 and regauged it. It was used on the first public operations at Belmont Common on 15 February 1969 and handled the major part of the work for the first few years. In due course it will be transferred to Queenscliff.

Ian Gunsser 10/81

WESTERN AUSTRALIA

ROUNDUP OF TIMBER TRAMWAY LOCOMOTIVES 1067 mm gauge

The following locomotives which worked on West Australian timber tramways were observed in August 1981.

<i>Ballarat</i>	0-4-0W	T J.Hunt, Ballarat	1870	at park, Busselton.
No.7	4-6-0	Dubs	3495 1895	at Hotham Valley Tourist Railway, Pinjarra.
Y71	2-6-0	Beyer Peacock	2762 1886	at ARHS Museum, Bassendean.
Yx86	2-6-0	Beyer Peacock	2913 1888	at ARHS Museum, Bassendean.
<i>Kate</i>	0-4-0WT	T.Green	132 1889	at Rotary Park, Margaret River.

H.J.Wright 9/81

CODELFA, Wungong 762 mm gauge

(see LRN 22, p.22)

By the end of June, the tunnel from Wungong Dam was about one third finished with about one kilometre of tunnel dug, leaving more than 20,000 cubic metres of granite still to be removed. A newspaper report shows E.M. Baldwin loco No.1 *Jane* emerging from the tunnel entrance.

Daily News (Perth) 22/6/81 via David Whitford.

KALGOORLIE-BOULDER LOOP LINE PRESERVATION GROUP, Boulder 1067 mm gauge

(see LRN 19, p.7)

F.C. Hibberd "Planet" 4wDM 3966 of 1962 has not yet entered service after being converted from 2 ft gauge last year. Major repairs will be required to the engine before it can be operated. It was purchased new by the Great Boulder Mines and was sold to Lake View & Star in 1972. It worked for this company until 1975, after which it was stored out of use until acquired by the Boulder group in 1979.

Lindsay Watson 10/81

MURCHISON MINE, Kalbarri

Mr Cliff Ross has constructed this replica mine tunnel adjacent to his home

as a way of displaying his gemstone collection. The tourist attraction includes a short tramway with ore trucks.

Daily News (Perth) 10/6/81 via David Whitford.

ROTARY CLUB OF CARNARVON, Carnarvon Jetty 610 mm gauge

(see LRN 23, p.22)

The "Carnarvon Express" which plies the 1.5 km length of Carnarvon Jetty has been successful in raising over \$400 per week for disadvantaged children. It operates seven days a week and is well patronised by tourists and fishermen. Motive power is provided by a mini-moke on railway wheels with an extra axle mounted on the front end.

West Australian 4/9/81 via David Whitford.

SONS OF GWALIA MINE, Gwalia 508 mm gauge

(see LR 50)

This gold mine north of Kalgoorlie, now abandoned, was working until 1963. There is one preserved steam locomotive here, a 1 ft 8 in gauge 0-6-2T which was built by the WAGR Midland Junction Workshops in 1934. It carries the name *Ken*, its original name, which was later changed to *Midland*. With *Ken* is a bogie tender and two four wheel vehicles, a wood truck and a crew van. These were used on the firewood tramways which ran to the west and south of Gwalia.

A fair proportion of the buildings remain at the mine site, including the headframe, winder house and mine office. There is an excellent display in the mine office, including photos and information on the firewood tramways as well as the street tramway which connected the twin towns of Gwalia and Leonora. Still intact in the winder house is the large steam winding engine for the incline shaft, which reached a depth of about 3500 feet.

Anthony Weston 10/81.

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC., Mount Helena Gauges various

(see LRN 23, p.23)

The loco recently acquired by the Association from Bristile's Maylands works was definitely *not* built on the chassis of the F.C. Hibberd "Planet" locos which worked on the 2 ft gauge line there. The complete loco was built at the Maylands workshops. The frame of one of the original "Planets" was acquired by WALRPA at the same time as the other equipment from Maylands. It was recovered from a semi-buried condition on site and is currently stored at a member's home. A plate on the frame bears the following::

F.C. Hibberd & Co. Ltd
Chassis No. 1993
Made in England 1951.

The buffer beam casting at the rear end of the chassis is cracked from top to bottom.

Lindsay Watson 10/81

OVERSEAS

FIJI

FIJI SUGAR CORPORATION 610 mm gauge

(see LRN 24, p.12)

Bob McKillop and Rob Pearman have both visited Fiji recently and have returned with much detailed information. It is hoped that much of this can appear in future issues of LRN, and that Fiji will also appear in an issue of *Light Railways* next year. As a taste of what is to come, a few details are set out below.

LAUTOKA MILL

Mainline 157 km; branches 82 km. Total 239 km. Livery Grey and Yellow.

Has 17 0-6-0DH locos, 14 by Clyde, one Baguley-Drewry, and two Baldwins. A Hunslet B-B DH is being built in the UK at present for this mill. There are also nine Simplex locomotives, five of them large 95 hp machines. One Hudswell Clarke 0-6-0 is out of use as well as at least two derelict others. Hudswell Clarke 0-4-0ST 1056 of 1914 is preserved in the mill grounds.

RARAWAI MILL

Mainline 90 km. Total 181 km. Livery yellow with orange stripe.

This mill's tramway is connected with that of Lautoka. Has two four-wheel diesel-hydraulics with cab and exhaust from Hudswell Clarke petrol locos; these are said to have come from a sulphur/sulphide mine in New Zealand, and are possibly built by Plymouth. There are nine Clyde 0-6-0DH locos, and one built by Baldwin, one Baldwin 0-4-0DH, and a B-B DH by the same builder. There are also at least three Simplex locos, and as many as three Fowler steam locos out of use.

PENANG MILL

Mainline 48 km; branches 7 km. Total 55 km. Livery Grey with red lining. There are six small locos here, four being Simplexes with one Baldwin and a Drewry. Preserved at the mill is Hudswell Clarke 0-6-0 1658 of 1935

LAMBASA MILL

Mainline 99 km; branches 21 km. Total 120 km. Livery Grey with red lining. Has one Baldwin B-B DH, three Clyde and two Baldwin 0-6-0DHs, two Drewry 0-4-0DMs and two four-wheel diesel hydraulics, rebuilt from E.M. Baldwin tunnelling locos at the mill in 1980. These are probably the two locos brought to Fiji by Codelfa (see LRN 18, p.9). There are three 0-6-2T locos by Fowler out of use here, one of which has a tender built on the chassis of an 1882 Fowler.

The most obvious difference from Queensland cane tramways is the fact that whole stick cane is hauled on cane trucks, whereas in Queensland all cane is chopped by harvester. In Fiji all cane is hand cut. Passenger trains (official ones) are a thing of the past in Fiji. The Corporation is reported to have been making enquiries in Australia for the supply of a rail-mounted hydraulic breakdown crane.

Bob McKillop 9/81, 10/81, Rob Pearman 10/81

(It is hoped that a full list of steam locos preserved in Fiji will appear in the next issue of LRN. Also planned is a special issue of *Light Railways*, possibly No.77, dealing with Fiji and its tramways)

PAPUA NEW GUINEA

BOUGANVILLE COPPER LTD, Panguna, North Solomons Province, Papua New Guinea 900 mm gauge

(see LRN 16 p.8)

An additional two locomotives are now working here. They are 15 tonne diesel-hydraulics, said to be by E.M. Baldwin. This is in addition to the two Com-Eng 4wDH locos ex Mount Isa Mines, which were previously described as EC4585 of 1964 and HD51101 of 1967. Evidence now to hand suggests that the second loco should be HD51102 of 1967, or that indeed all three locos may be present. There are also three Gemco 8 ton battery electric locos. The locomotives are now painted with blue and white diagonal stripes rather than the previous livery of yellow.

The tunnel is 3m wide and 4m high at its narrowest. Where the rock strata is suitable, lay-by areas have been constructed. Three of these are single sidings capable of holding a train of one loco and several Haggulators. The tunnel is now 5127m in length.

Michael R. Pearson 8/81

PHILIPPINES

CDCP MINING CO., Negros Island, Philippines 915 mm gauge

Six locomotives, purchased by Index Industrial Brokers Pty Ltd in 1977

and 1978 from Mount Isa Mines Ltd, have been resold to this company. The locomotives were regauged from 3 ft 6 in to 3 ft gauge for the customer. Details (showing Mt Isa numbers) are as follows:-

44	4wBE	Gemco	97743N-44N/15	1963
48	4wBE	Gemco	97740N-42N/22	1964
67	4wBE	Gemco	1492-93/86	1970.
2796	4wBE	Com-Eng	KB53103	1968
2797	4wBE	Com-Eng	KB53104	1968
2798	4wBE	Com-Eng	KB53105	1968

John Middleton; W.W.Henderson 10/81

Notice Board

SUBSCRIPTIONS.

OVERSEAS MEMBERS PLEASE NOTE

...The \$12.50 rate quoted on the subscription renewal notice referred to Overseas Surface Mail Only. If you would prefer to have your magazines forwarded by air mail, the following rates apply:

Asia/N.Z./PNG \$18.50 (Aust)

U.K./U.S.A./Africa \$21.50 (Aust)

These rates apply from the commencement of the 1981/1982 subscription year.

SPECIAL NOTE...

Please note that the pre-publication notices for Steam's last Decade, enclosed with this mailout show an expiry date of 30 November 1981. As a benefit to our members, the ARHS are extending the offer to 31 December, 1981. So, please correct the printed date accordingly, if it is not already done.

PUBLICATIONS

LIGHT RAILWAYS

No.75 - Being typeset at present. Our Special 25th Anniversary issue!

No.76 - Being prepared.

Other Publications

Steel and Rails - Newcastle

Stocks are due from the printer early in December. Despite several minor delays, it appears that the book will appear on time.

Steel and Rails - Newcastle; Plans Book

See note in LRN 24, p. 15. These books will go to press after the release of the main book has given us an idea of print run numbers.

The Powelltown Railway

After 25 years in the making (no kidding!!), we seem to have our monumental book on the Powelltown Railway (or Tramway, if you prefer) almost ready for publication. A pencil date for publication is July 1982. So, keep reading this wonderful publication for details.

More Light Railways reprints

Following the reprinting of No. 21 and 22, we are now able to offer No. 23 and 24. A glance at your copy of Index No. 2 (also available) will show that No.24 contains the article "Climax Locomotives in Australia".

Lots of other goodies too. Only \$1.80 each posted.

SALES DEPARTMENT NEWS

Light Railways Reprints now include Nos 23&24

Our plan to reprint in limited quantity, early numbers of Light Railways makes progress with the addition of numbers 23 & 24-to those already available.

We can now offer a complete set of reprints of numbers 13 to 24 inclusive.

Further, a combined reprint of Volume 3 (Nos 9 to 12), is in preparation and will be followed in due course by Volume 1 (Nos 1 to 4) and Volume 2 (Nos 5 to 8).

Cost of LR 23 and LR 24; a measly \$ 1.80 each, posted, or \$1.60 each for those able to buy them at Melbourne meetings.

Fill in photo is reprinted from LR 46 which contains an excellent article on

the G class locos. Available from our Sales Department.

G class No.1 derailed on the North East Dundas Tramway. Note these water tanks between the frames.

Photograph - Winter's Studio, Burnie, Tasmania.

Sydney Field Trip

To all Sydney members, a unique opportunity has arisen for us to inspect the light railway remains at BANTRY BAY.

You have never heard of it! Well quite a few others have not either. So if you wish to participate in our first field trip ever, to take place in November 1981, enquire now to:- FIELD TRIP, 1981, P.O.Box 290 Burwood, 2134 or come to our next meeting on 28 October.

This previously unrecorded 2 ft gauge light railway served a munitions depot in Bantry Bay and has been listed by the National Trust.

We plan to make this the subject of a combined research effort, the result of which will be published in a future issue of *Light Railways*.

MEETINGS

SYDNEY

The December Entertainment meeting has been cancelled and replaced by the tour to the Bantry Bay Munitions complex on 28 November. The next meeting to be held at the Government & Transport Club will be held on 24 February 1982.

The October meeting was well attended. The entertainment including films of the Sandy River & Ranglely Lakes Railroad, Cass Scenic Railroad and Shanty Town (NZ).

Usual Meeting Location :-

Government Transport Club, Regent St., Sydney.

Parking available in Regent St. and Botany Rd.

Date :- (next meeting at GTC) Wednesday 24 Feb. 1982.

Time :- 7.30 pm.

MELBOURNE

The Great Railway Video show.

Video movies, etc depicting tramways throughout Victoria and Light Railways from around the world will be featured by Messrs Winzenried and Stamford, videoists extraordinaire, at our next meeting on 10 December.

As usual the sales department will have a wide selection of items on sale and supper will be provided.

The auction night in October was very successful and to ensure a repeat on

an even more lavish scale (0 Gauge??), members are asked to consider putting aside suitable items in readiness. Next Auction night will be 1 October 1982!

Location :- Ashburton Uniting Church Hall, Ashburn Gve., Ashburton.

Date:- Thursday 10 December. Time :- 7.30 pm.

Future Meetings :- February - The Tramways of Darnum.

April - B Y O slide night.

LR 21 & 22 now on Sale! Only \$1.80 ea.

LR 23 & 24 now on Sale! Only \$1.80

LIGHT RAILWAY NEWS

Published by

The Light Railway Research Society of Australia

No. 26

February 1982

Hon. Editor: John Browning, P.O.Box 111, INDOOROOPIILLY, Qld. 4068

Hon. Secretary, LRRSA NSW Division: R.Mason, P.O.Box 290, BURWOOD, NSW 2134

Hon. Secretary, LRRSA Victorian Division: E.Stuckey, P.O.Box 21, SURREY HILLS, 3127

Deadline for next issue is:- 20 February 1982.

VISIT REPORT

BANTRY BAY MAGAZINE COMPLEX

The LRRSA NSW Division's visit to this site took place on 11 November, and was attended by eleven members. The complex was built between 1907 and 1915 and was transferred from the Colonial Treasurer's Department to the Mines Department in 1923. After closure during the 1970s, the site was transferred to the Davidson Park Trust as a part of a State Recreation Area.

A 2 ft gauge tramway linked the wharves with the various storage buildings located in rock cuttings. Large amounts of explosives passed through the magazine which was set up to serve the public, and which, with a similar magazine at Newcastle, provided the bulk of explosives used in NSW.

More than six million pounds of explosives were issued during 1946, for example, all imported through the port of Sydney.

The tramway has a total length of about half a mile, about half of this is "main line" and the rest, the connecting spurs to wharves and buildings. The rails on shore were set in concrete and were steel except on the initial wharf sections and in the magazines where wood or brass was used to minimise the danger of sparks. Small trolleys were used to transfer the explosives around the site. One discovery made during the visit was a brick building constructed around the body of a van which had at some time been set up on piers as a small storehouse.

Craig Wilson, who provided the notes on the complex, hopes to write up a history for *Light Railways* in due course.

RESEARCH COLUMN

NSW TIMBER TRAMWAYS

Ian Barnes of 23 May Street, Kyogle, NSW suggests the following amendments to the list of timber tramways published by the Society recently:

3. Substitute "Roseberry" for "Unumgar", "608" for "540", and "N" for "E", to read "Location:- Levers Plateau Roseberry S.F.608. 60 km. N of Casino."

11. Delete altogether. Even though the quoted gauges are different, this seems to refer to No.3.

13. Substitute "20 km north of Kyogle" for "75 km west of Mullumbimby".

TRACTION ENGINE LOCOMOTIVES

(see LRN 22, p.1)

B.Henderson of 28 Church Path, Merton Park, London SW14 provides an update on his researches into Traction Engine type locomotives used in Australia.

The converted steam wagon used by Brown & Broad at Moore, Qld. was almost identical to the one at Yarraman (and later Beaudesert), so it seems likely also to have been an Allchin.

The Marshall conversion used by Britton Brothers in Tasmania was works number 41624 of 1905, 7hp.

The Tasmanian Salmon River Tramway Ransomes, Sims and Jefferies wagon conversion is the same as *Harlot*, so the latter entry should be deleted. It was a 4w+4w loco, not an 0-4-0+0-4-0, as the bogie wheels are not coupled (unlike those on the Chestermans Tramway Sentinel).

The preservation of the ex-Buckingham Bros. conversion at Collie (see LRN 23 p.20) has been noted.

Additional new locos are the traction engine conversion mentioned in LR 67 p.8 at Higgs Mill, Whittlesea, and an alleged Tuxford portable engine converted to rail use at Ipswich, Queensland.

If any member can assist in obtaining prints of the photos in LR Autumn 1971, p.15 and LR 62 p.7, both credited to Winters Studio, Burnie, Tasmania, would he please contact Mr Henderson. Similarly, if anyone can supply photos of the two conversions preserved in Western Australia, their help would be much appreciated.

The small book recently published in England on traction engine locos

by Mr Henderson's co-author, Ian Hutchinson, was published due to a misunderstanding. It had been intended to publish this as a series of articles. The definitive work is still expected to be published in due course.

In addition to the extensive use of *Light Railways*, Mr Henderson wishes to acknowledge the assistance of George Bond, Ian Crellin, Arthur Winzenried, Ted Stuckey, Ralph Proctor and Dave Mickle, and would welcome any further information on this topic from LRRSA members. *

(Reprinted from: - *Light Railways* OCTOBER, 1978):

Western Tasmania probably had more of light railway interest per square mile than any other part of Australia. There were numerous 2 ft gauge and 3 ft 6 in gauge railways serving mines and mining townships, and a large number of timber tramways in the north. A rack railway, the world's first garratt locomotives, Shay locomotives, Mallets and a Hagan's patent locomotive were just some of the delights to be found in this rugged and spectacular area.

A steam road lorry converted by Russell Allport. Engineers of Hobart to work on the 3 ft 6 in gauge Salmon River Tramway in north-west Tasmania. The eight tramway-profile wheels were all driven by cardan shafts which can be seen in the photograph

Photo Winters Studio Burnie

AUSTRALIAN LOCOMOTIVE BUILDERS

Peter Medlin, of 115 Mountain View Parade, Rosanna 3084, is seeking to collect information on locomotives built in Australia, which is initially for private use, but may be published eventually. Information for each builder is

being sought under the following headings:

- a) Serial and Builder's number.
- b) Date built.
- c) Type or Model.
- d) Job number (if given).
- e) Customer (whom the loco was built for)
- f) Customer's classification (class, number name, etc)
- g) Date in Service (on customer's railway)

Information is particularly sought for the following:

1. Australian Gaslight Co., Sydney.
2. Fox Manufacturing.
3. Tulloch & Co., Rhodes, NSW. (001-003, 021, 033-035, 064 on)
4. Bundaberg Foundry, Queensland.
5. James Martin & Co., Gawler, SA. (19,56,125,133)
6. Perry Engineering, Gawler & Mile End. (248-264; Victorian Public Works locos, locos built after 1951).
7. Tasmania - all locos.
8. Day & Sons.
9. Western Australia - all locos including W.A.G.R.

So far, the names of over 40 different builders have been gathered together, which built over 6500 locomotives in all.

PERRY LOCO Skipper

The Mile End Railway Museum is seeking photographs of this locomotive in service for inclusion in the Museum's archives. The 2 ft gauge 0-6-2T (1850.46.1 of 1946) worked at Millaquin Mill from 1946 to 1965, and then at Qunaba Mill until 1978 when it was acquired by the museum for preservation in Adelaide. Any member who can help is asked to write to R. H. Sanders, 8 Wattlebury Road, Lower Mitcham 5062.

CORRECTION

The rail gauge at Bajool Salt Works and on Mount Morgan's narrow gauge lines (see LRN 25 p.14) was 2 ft 2 in (26 in) not 2 ft 6 in.

Richard Horne has supplied more information on the history of John Fowler 0-4-0DM 22905 of 1943. It was built to the order of the British Ministry of Supply for the War Office for Shell Refining & Marketing Co., Stanlow, Cheshire. (Industrial Railway Society Handbook G gives the loco as being War Department 229, to Stanlow about 1944 - Ed.) It went to Shell Refining Co.,

Clyde, N.S.W. by about 1951. It came into the hands of the Commonwealth Government at Woomera at an unknown date. A photograph of it being unloaded from a ship, possibly at Port Augusta, is in the South Australian Archives. A letter from Woomera to John Fowler dated 7/3/67 stated that the loco was "now retired". (see LRN 22 p.19)

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

E.M.BALDWIN & SONS PTY LTD, Castle Hill, Sydney

(see LRN 25 p.2)

The following locomotives were on order for sugar mills in mid-1981.

Type	Weight	Power	Customer
B-B DH	32 tonne	400kw.	North Eton Co-operative Sugar Milling Assn.
B-B DH	32 tonne	400kw.	Farleigh Co-operative Sugar Milling Assn. Ltd
B-B DH	32 tonne	400kw.	Isis Central Sugar Mill Co. Ltd
B-B DH	28 tonne	320kw.	Fairymead Sugar Co. Pty Ltd
B-B DH	26 tonne	260kw.	Proserpine Co-operative Sugar Milling Assn.

ARHS Bulletin via David Mewes.

AUSTRALIAN CAPITAL TERRITORY

CANBERRY HOLDINGS PTY LTD 610 mm gauge

Canberry Fair, a \$3.4 million reproduction of an early Australian village on the Federal Highway on the northern edge of Canberra, opened on 13 December. The project includes a one-kilometre railway. A press photograph shows a Decauville 0-4-2T hauling one bogie carriage. The locomotive, stated to be a rejuvenated Queensland cane train obtained from a private owner in Victoria, would appear to be Decauville 246 of 1897. This was built for the Invicta Mill near Bundaberg, and about 1918, when Invicta Mill closed, it was purchased by the Millaquin Sugar Company for use at its Millaquin Mill. Later transferred to the Company's Qunaba Mill, where it was known as *Frenchy*, it was out of use by 1963 and sold to Tod Watson, Moama, NSW about 1970. It was seen here in 1975, mounted on road wheels for towing. Later, it was said to be stored in Bendigo.

The Canberra Times 14/12/81 via Stephen Cox, Editor.

NORTHERN TERRITORY

DRAVO AUSTRALIA, Darwin. 610 mm gauge

Some rather stale, but nevertheless interesting, news has recently come to light. In September 1973, a large quantity of earth moving and construction equipment was offered for sale including "one only GEMCO tunnel Loco complete with battery charger, 24 in gauge" and "one only ATLAS Copco LM36 Tunnel Mucker, 24 in gauge". The equipment was located in Darwin. Can readers supply any further details?

Melbourne Herald 15/9/73 via Steve Martin

BULLENS AFRICAN LION SAFARI & ZOO Yatala 610 mm gauge

(see LRN 13 p.18)

The railway here does not seem to have seen much use in the last two years. On a number of occasions, the locomotive has been seen parked out

on the track and an uncompleted carriage has been used as a makeshift gate on the perimeter of the site. The locomotive is a large "4-4-4T" with a petrol engine, possibly built by John Dunlop in Sydney.

Editor 12/81

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 25 p.7)

Since its return to service after rebuilding on 20 August, Motor Rail "Simplex" 4wDM 10232 of 1950 has not seen much work. After a few days, it broke a chain, and on 9 September it failed with a cracked gearbox. The gearbox from derelict "Simplex" 4wDM 3 (Motor Rail 3710 of 1925) was removed the next day for fitting into number 4, but as it was of a different pattern, modifications to the mountings had to be made, so that the return to service was not until 22 October. However, the unit was back in the shed throughout November and was still there in mid-December, having its worn out centrifugal clutch replaced with a clutch of conventional design.

"Simplex" 4wDM 2 (to be renumbered 5), dating from the 1920s, is also being rebuilt with a new cab and engine covers although retaining the Dorman engine presently fitted. The cab will not be as sophisticated as the one fitted to number 4. "Simplex" 3 has also provided parts for this job. After the removal of the rear buffer and ballast weight, to replace broken ones on number 2, and front sandbox, it was returned to the scrapyard on 29 October.

C.J.Hart 10/81, 12/81

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 25 p.8)

A number of locomotives have had painted nameplates fitted this season.

These include:

Albany	0-4-0DH	E.M.Baldwin	6-1792-2-11-66	1966
Dalrymple	0-6-0DM	Baguley/Drewry	2391	1951
Leichhardt	0-6-0DM	Baguley/Drewry	2393	1952

The two Baguley-built Drewry locos previously had names painted directly on the cabside, while the Baldwin has not carried its name before.

Experiments have been taking place with a modified bulk sugar box this season. The bogies have been removed and replaced by two wheel sets, making it a rigid vehicle. The wheels fitted are of a larger diameter than those fitted to the bogies. The experimental vehicle, number 227, was first noted in use in the consist of Victoria's sugar train on 12 October. Painted yellow and silver and filled with sand for the experiment, it has been in use since that date, and whether part of a train of empties or fulls, always coupled to the

loco *Wallaman* (B-B DH E.M.Baldwin 6400-3-4-76 of 1976).

Preserved Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) and passenger carriage were used to give rides to the public between Herbert Street and the edge of Ingham in conjunction with the annual Maraka Festival on Saturday 12 September.

C.J.Hart 10/81. 12/81

DREAMWORLD DEVELOPMENT PTY LTD, Coomera 610 mm gauge

(see LRN 25 p.8)

This Disneyland-style attraction was opened by Premier Joh Bjelke-Petersen on 12 December, and opened to the public on 15 December. A major feature is the 3 km. long railway which describes a dumb-bell shaped circuit of the site. The main station is called Central Park, and there is also a station at Rocky Hollow. The line crosses a fake suspension bridge and includes a stiff climbing section. The track is laid in 40 lb. rail laid on 3 ft 6 in gauge sleepers cut in half and is well ballasted. There is a short sharply curving siding into a "sawmill" at Rocky Hollow and another siding which leads to a large two-road shed which houses the entire train.

The locomotive, 4 *Reg. Colter*, is a 4-6-0 tender engine, rebuilt in 1976 at a Rydalemere (NSW) engineering works from the remains of a Baldwin 4-6-0T (45215 of 1917) built for the British Army and obtained from Racecourse Mill via Bruce Macdonald. The bogie tender is built on the chassis of a tender obtained from Isis Mill, and previously used with one of that mill's 0-4-2 Sharp Stewart rebuilds. The old tender tank has been removed and can still be seen on the site, in good condition. The loco has a wooden, American-style cab and is painted red with brass boiler bands and grey smokebox and spark-arrester chimney. On the cab side is painted "CANNONBALL EXPRESS" and on the tender "DREAMWORLD GOLD COAST RAILWAYS". The loco is fitted for oil firing and runs on diesel fuel. Some experiments to fit the loco for L.P. gas firing shortly before the opening of Dreamworld were unsuccessful. A dummy load of wood fuel is carried on the tender. There are three substantially-constructed bogie coaches, with open sides and a miniature American-style "clerestory" roof. These are of "toast rack" design and seat 50 passengers each. Presently mounted on bogies made up from ex-Condong Mill line bogies, there are plans to mount them on purpose-built bogies. They are numbered 401, 402 and 403.

There are a variety of maintenance bogies mostly ex-Condong Mill line bogies modified in various ways. Most interesting of these is a self-propelled ballast hopper mounted on two line bogies, one of which has a small Honda

petrol engine mounted on it, driving onto the end axle through a chain drive.

Editor 12/81.

ISIS CENTRAL SUGAR MILL CO. LTD 610 mm gauge

(see LRN 25 p.10)

Advertisements appeared in the national press during November inviting applications for the position of tramline engineer. The advertisement stated that a large programme of reconstruction and development was being undertaken with modern tramline equipment servicing some 140 km of existing track. A 32-tonne bogie diesel locomotive is believed to be on order from E.M.Baldwin.

The Weekend Australian 28-29/11/81, ARHS Bulletin via D.J.Mewes

MORETON CENTRAL SUGAR CO., Nambour 610 mm gauge

(see LRN 25 p.12)

E.M.Baldwin 0-4-0DH locos *Maroochy* (6-1064-1-11-64 of 1964) and *Valdora* (6-1258-5-6-65 of 1965) both without names and both painted in identical allover yellow livery, were seen working in multiple on lines around the River Depot in December. Malcolm Moore 4wDM *Joe* was seen on a navy train in new colours of red and yellow. The rebuilding of Com-Eng 0-6-0DM *Kalbo* (H1022 of 1958) as a diesel-hydraulic was continuing in the loco shed. The Locotrol equipment fitted to enable 0-6-0DH *Moreton* (Clyde 63-289 of 1963) to be controlled from the cab of 0-6-0DH *Bli Bli* (E.M.Baldwin 6-1257-6-7-65 of 1965) is working satisfactorily, enabling these two locos to bring loads of 100 4-tonne capacity bins to the mill from the River Depot over the infamous Bli Bli Hill without having to split the rake, enabling much smarter and more efficient operation of the tramway system.

Editor 12/81

MOSSMAN CENTRAL MILL CO. LTD 610 mm gauge

(see LRN 25 p.13)

"The Ballyhooley Steam Express" was in operation on a visit on 5 September *Ballyhooley* (Bundaberg Foundry 0-6-2T 6 of 1952) hauls three open sided bogie passenger carriages. The loco is painted brown with yellow lining, rods, cylinder covers and buffer beams. A flashing orange beacon is fitted on the cab roof. The cylinders for the L.P. gas are fitted in the coal bunker. The burner unit has been fitted to the fire hole in place of the door with the burners protruding into the firebox through it. According to the driver, the gas can raise steam quickly, but is barely capable of keeping up the supply of steam once under way. The gas cylinders are refilled daily.

The train runs from the mill, through Mossman township and onto the main line to Miallo as far as the Newell branch junction, a distance of about 5 kilometres.

In the scrapyards was the boiler and frames of J. Fowler 0-4-2T /vy (15947 of 1922).

C.J.Hart 10/81.

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 25 p.14)

Theiss Brothers Pty Ltd are confident of finishing their contract to construct the formation of the 30 km Elaroo tramline before the onset of the wet season. Some of the terrain crossed is extremely rugged and there are large excavations near the Noorlah underpass where the line will cross the Queensland Railways main line.

The contract for sleepers was let to local contractor Jackson Brothers, who moved their mill to Proserpine Station to supply the 57 700 sleepers required, the majority being Ironbark but some of Bloodwood.

The successful tenderer for track laying was Wesweb Hire Services Pty Ltd of Port Kembla, who are experienced in doing track work for BHP. Track jointing will be by a relatively new process in Australia, huck bolting. This process will save \$286 000 over welded track joints. 2300 tonnes of 60 lb rail from the old Ghan line are being used, and the mill has also acquired 700 tonnes for use on other lines. All turnouts are being built for the line by the Mackay Foundry. The line will be ballasted to the highest railway standards used in Australia today. Track laying had commenced by mid-November and is expected to be completed in April 1982.

A Plasser Automatic Tamping Machine has been purchased which can lift, line and tamp at a rate of 500 metres per hour with results described as perfect. The new loco expected from E.M.Baldwin is a 26-tonne 260kw bogie machine.

Proserpine Co-op. S. M. Assoc., Kevin Howell 11/81

SUGAR BOARD, TOWNSVILLE 1067 mm gauge

(see LRN 22 p.18)

The new loco built in Brisbane by Clyde Engineering was noted at the QGR Mayne depot on 12 December and was thought to be due to have running-in trials before being sent to Townsville a few days later. The loco is a CoCo DE similar to the QGR 2470 type and is painted yellow and green with black frame. It was carrying the number ST5, indicating that it is a part of the sugar

terminal installation, and appears to be numbered in a series with the Sugar Board's other four locomotives at Mourilyan, Lucinda, Townsville and Mackay. Thus it is not owned by the Townsville Harbour Board, as recorded earlier.

Murray Barker 12/81

SOUTH AUSTRALIA

BEACHPORT COUNCIL 610 mm gauge?

A small flat car was observed at the back of the Beachport Council Depot during November. Construction appeared to be similar to that of larger 3 ft 6 in gauge jetty trucks, but this example was only about 6 ft x 3 ft and seemed to be of 2 ft gauge. Its connection with Beachport, or its former use remain a mystery.

R.H.Sanders 11/81.

TASMANIA

IDA BAY RAILWAY 610 mm gauge

(see LRN 24 p.9)

The Ida Bay Railway was due to be re-opened by the Minister for National Parks and Wildlife, Mr Adams, on 12 December. The new operators, Mr & Mrs Michael Williams had refurbished the permanent way and rolling stock. \$11 500 had been contributed by the Government for the cost of new sleepers and ballast to reinstate the 7 km of line. Government assistance had also been forthcoming for the purchase of improvements and amenities left by the previous operators. The rolling stock had been overhauled and another of the Malcolm Moore 4wPM locos built in 1943 had had a diesel motor fitted. The Government was now stated to be ready to proclaim a state reserve for the railway and to negotiate a 40-year lease agreement with the operators.

The Mercury 12/12/81 via Ralph Proctor

VAN DIEMEN LIGHT RAILWAY SOCIETY INC., Don River Tramway 1067 mm gauge

(see LRN 13 p.22)

John Fowler 0-6-0T 5265 of 1885 has been moved from Burnie to Don and work is continuing on its restoration. Hopes are high that it will become the second working steam locomotive on the railway, and this will be a major achievement considering that the loco was last steamed in 1912! This loco was originally supplied to the Kiama Town Council in NSW and saw contracting

service in Queensland and Tasmania.

0-4-ODM U2, hired from the ANR for use on the railway was offered for tender during the 1980-1 year, but because of mechanical problems with the unit, the Society did not tender. It is hoped that a similar unit will be acquired. This loco was originally built to 3 ft gauge by Malcolm Moore in about 1950 for use in the Victorian State Electricity Commission's abortive Kiewa Scheme. In 1956 it was taken to Tasmania for use by Utah, and in 1958 was purchased by the TGR for rebuilding at Launceston for shunting service.

VDLRS Annual Report 1980-1, Editor

VICTORIA

GEELONG STEAM PRESERVATION SOCIETY, Bellarine Peninsular Railway 1067 mm gauge (see LRN 25 p.16)

The 1946 Malcolm Moore four-wheeled petrol/kerosene loco has been upgraded to become a very valuable unit. Chopper couplings have been fitted and the exhaust line extended and modified. The battery is now located within the frame under lock and key. The electrics have been overhauled and pushbutton starting fitted. The chain adjustment linkages have been freed up and all brake rods stripped down and cleaned.

Vulcan Iron Works 0-6-OST 4, built in 1916, is in need of a complete rebuild. A new smokebox is required and the central casting has to come out of the frame to be repaired. Axle boxes are in poor condition and a new saddle tank will have to be constructed.

The low-loader vehicle from Fyansford Cement Works is in use on the railway for work trains. It was built at Fyansford in November 1948 to carry steam shovels from the quarry to the Fyansford works and to carry bulldozers. It is recorded that the vehicle took just one weekend to build! It is 38 ft long and 8 ft 6 in wide and has a platform 18 ft long 18 in above rail level. The bogies are from Australian Standard Garratt G34 that was never built. In 1968, the low-loader came to the Belmont Common Railway and was fitted with six rows of seats for use as a passenger vehicle. Here it probably ran more miles than it did at Fyansford and after ten years it was delivered to Drysdale and first ran on the Bellarine Peninsular Railway (now as a work vehicle) on 31 May 1980.

Narrowminded No.6, Ian Gunsser 10/81

WESTERN AUSTRALIA

HAINAULT TOURIST MINE Kalgoorlie Gauges various

(see LRN 15 p.14)

This site is set up round an old shaft on the Golden Mile, with underground tours and preserved mining machinery on the surface. Of particular interest to railfans is the ex-Lake View & Star "Planet" F.C.Hibberd 0-4-0DM 2011 of 1937, which is fitted with an Atlantic diesel engine. This is sitting on a short length of 2 ft gauge track with two gable trucks.

Inside a shed is a small four-wheeled battery-electric of about 18inch gauge, built by General Electric (12206 of 1938). There are other rail items round the mine including small underground box trucks, air operated rocker shovels, a van from the firewood line, and what appears to be the body of an ex-Kalgoorlie single truck saloon tram.

Anthony Weston 12/81

OVERSEAS

FIJI

GOLD MINES LTD, Vatukoula, Viti Levu 610 mm gauge?

A brief visit revealed a small surface system around the main shaft. In the workshops, the frames of two Wingrove & Rogers four-wheel battery-electric locomotives were being repaired and in the nearby charging shed was one Goodman 4wBE loco and the frame of another. Two new "Eimco" rock shovels had just been delivered and another older unit was out of use on a short spur.

It was reported that the Wingrove & Rogers units were part of a batch of 15 supplied about 20 years ago, the remainder being underground. Three additional small Goodman locos had been delivered several years ago and were underground with two large units from the same manufacturer supplied in 1980.

Rob Pearman 10/81

STEAM LOCOMOTIVES IN FIJI

The following is a list of steam locomotives still extant in Fiji. Identification in a number of cases has proved difficult and this is indicated.

FOR SALE

Paul Simpson has advertised his 2 ft gauge Perry 0-6-2T locomotive (B/N5643-51-1 of 1951). It is in full working order with a current boiler ticket. Asking price is \$16 000. Paul's address is PO Box 105 Panania.

Weekend Australian 16-17/1/82.

NOTICE BOARD..... PUBLICATIONS

Arsenic and Molasses - a history of the Powelltown Tramway.

This fabulous production, 25 years in the making, is on its way. Members pre-publication offers are being prepared, and should be in the next mailout or the one after. This looks like being our largest work yet to date. So - keep it in mind. Print run will be limited and members will need to get in quickly to secure their copy.

STEEL and RAILS - Newcastle.

Our new book, the first of a pair (the other dealing with Whyalla) A4 format, full rail network plans, scale rolling stock plans (most in N scale), even colour plates! Approx 130 pages and more than 70 photographs. PLUS... Around

40 pages of drawings and plans. This book is now available from the Sales Department at \$14.50 (postage included).

STEEL and RAILS - Newcastle; plans Book.

Due to the demand already obvious, it is planned to release a lay-flat HO scale version of the excellent rolling stock drawings prepared by Keith McDonald for the Newcastle book. Running to around 60 pages, plus notes, all in horizontal layflat format. Keep your eye on the sales list for this one!

CONTRIBUTE TO LRN.

MEETINGS

SYDNEY

Interested in doing some research? If so, then you will find David Laidley's talk at the February meeting of considerable value. Although he will be discussing many aspects of research work, particular emphasis will be given to maps and the information that can be gleaned from them.

David's talk will be illustrated by slides depicting abandoned railways he has come across as a result of his own research.

So, even if you are not into trudging through the scrub yourself, you will find the evening to be an interesting one.

Location: Government & Transport Club, Regent St., Sydney. Parking available in Regent St., and Botany Rd.

Date:- Wednesday 25 February.

Time:- 7.30pm.

MELBOURNE

The opening of the Gippsland railway in the 1870s led to the clearing of a vast corridor through what had been the southern edge of a forest stretching north to the Great Divide. The clearing was carried out by settlers intent on establishing farms around the newly formed townships along the railway. This was an expensive business, but many could offset the cost by selling their standing timber to sawmillers who sold the timber to the newly formed townships and also to a booming Melbourne, where timber was in great demand.

Many mills were established to cut this timber and many miles of tramway were constructed to bring logs to the mills and take the timber to the railway stations.

Following previous talks on Longwarry, Drouin, Warrigal and Yarragon, Mike McCarthy will speak on mills and tramways around Pakenham, Nar-nar-go, Tynong, etc., to the west of the Bunyip river, and then finish with

a description of the Darnum tramways including the well known Cropley's tramline.

Location:- Ashburton Uniting Church Hall, Ashburn Gve., Ashburton.

Date: Thursday, 11 February

Time: 8.00 pm

APOLOGIES

.... as you may have noticed, this LRN is a little late. The production team apologises for this and hastens to assure readers that it was through no fault on the part of the Editor that this occurred. The problem was a fault in the computer system used to typeset LRN.

JOHN FOWLER DIESEL LOCOMOTIVE AT WOOMERA

Considerable confusion appears to exist about the identity of this loco. Arnold Lockyer agrees that the Woomera loco. had builder's number 22905 of 1943, but believes that this 0-4-0DM was numbered W.D. 230. He understands that the loco. arrived in Port Adelaide in 1947 and thus could not have been at the Shell Clyde oil refinery in Sydney in 1951. The Industrial Railway Society Handbook G gives the loco. as W.D. 229 to Woomera at an unknown date, while Richard Horne has it as W.D. 229 at Clyde, all with the same builder's number (22905). Are we talking about two locos. or one? Can any member clear up the confusion?

UNIVERSITY OF MELBOURNE ARCHIVES AND BHP RECREATION REVIEW

While searching, unsuccessfully, for photographs of Tarrawingee or the

Tarrawingee Tram along material held at the University Archives, an interesting article was found in the *BHP Recreation Review* Vol. 8 No. 1, December 1930 about the Whyalla Railways showing photos attributed to W.B. Mebberson of locomotive *Kilmarnock*, No. 4 and No. 7. In the same copy are scenes of the construction of the line to Iron Baron. In Vol. 9 No. 1 of December 1931 is the first of a series on "Sydney's Transport System".

These items were included in a box containing correspondence and memorabilia of J.S. Reid, one-time director of BHP and the Tarrawingee Company and with a finger in many other pies. (File No. 3/1/1)

Welcome assistance was received from David Brand, who expressed interest in the aims of societies such as ours and who is happy to see the Archives materials being used by genuine researchers. He can be contacted on 341 6848 or 341 6849 to arrange a suitable time and provide directions on the location of the archives.

The main public libraries in each state may have complete sets of *BHP Recreation Review* which should repay research for possible railway content. BHP Head Office has a full set and branches and affiliates have some, such as Australian Iron and Steel (Engineering) at Port Kembla whose copies go back to 1938.

Cyril H. Henshaw. 2/82

CLIMAX CLASS A SURVIVOR

The A class Climax locomotive was thought to have become extinct in early 1971 when the two locomotives of this model which had been stored at Welcome Swamp in north-western Tasmania for many years, were cut up by scrap metal merchants (Ref: LR 24 page 9, LR 27 Page 22, LR 34 page 31). Now comes news from the U.S.A. that a 3 ft gauge fifteen ton A class in virtually original condition and still complete has been discovered and rescued from Council (near Nome), Alaska.

Apparently Climax builders number 313 built in 1902 for the Seward Peninsula Railway (Nome) and later operated by Alaska Northern, it was previously unlisted in surviving Climax Manufacturing Company records.

The locomotive is now owned by a rail enthusiast in Anchorage, Alaska who is carrying out a thorough restoration of it. He has found it to be in remarkable condition after years of neglect and hopes to steam it in a year or two.

The October 1979 issue of *Pacific News* carried a news item and a photograph of the locomotive enroute by sea from Nome to Anchorage via Seattle, Washington, while the September 1980 issue carries a photo of it

under restoration.

E.R. Godwin. 2/82

RAILWAY PARCELS STAMPS

Max Hayes, Box 1517N, GPO., Melbourne 3001 is interested in contacting any members interested in exchanging railways parcels stamps of Australia with him.

CORIO MODEL RAILWAY CLUB

The Corio Model Railway Club have two partially built 2 ft. gauge passenger cars for sale. The cars are four-wheeled and are 14 ft. long by 5 ft. wide. For further details contact Mr. Alan Curtis on 03 749 3564 or P.O. Box 77, Corio, Victoria 3214.

CORRECTIONS

LRN 25, p.8

Due to an error on the part of the editor, the item at the top of this page was incorrectly headed CSR Ltd, Victoria Mill, when in fact it should have been included in the item on MacKnade Mill on the previous page. Thanks to Chris Hart for pointing out this mistake, and for sending further details, which are included in the news section.

LRN 25, p.14

Information on the locomotives at Queensland Salt Pty Ltd, should have been ascribed to the Engineer-in-Charge. Thanks to W.W. Henderson.

LRN 25, p.16

Geelong Steam Preservation Society's *Wesley B. McCann* is of course, an 0-4-2ST. not an 0-4-0ST. Thanks to Ian Gunsser.

E.M. BALDWIN & SONS PTY LTD, CASTLE HILL, N.S.W.

(see LRN 26, p.6)

The following units were on order at the end of 1981.

A.R.H.S. Bulletin Supplement 2/82

NEW SOUTH WALES

BHP LTD Newcastle Steelworks 1435 mm gauge

Delivery was expected during January of two 450kw (600hp) standard gauge 75-tonne centre cab diesel-electric locos. Constructed by A. Goninan & Co. Ltd of Broadmeadow, Sydney,(sic) these were to be builder's numbers 057 and 058 and, coincidentally, were to carry road numbers 57 and 58.

Peter Medlin 1/82.

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD 610 mm gauge

Albion Park N.S.W. (see LRN 25 p 3)

By mid February, work was progressing on the northern 400 metres of main line track needed to complete the 1 km. circuit on the newly leased land. On 19 November, the Shellharbour Council Engineer and Cleary Bros. Works Manager conferred on the road bed construction for this new track and reached design agreement on culvert construction. Cleary Bros., Quarrymasters and Earth Moving Contractors have been most generous to the ILRMS in the supply of road base and graded metal and their generous offer to not only supply road bed material, but to also grade the right of way, was gratefully accepted by the Museum.

On 24 November, Cleary's equipment arrived on the work site, but became bogged due to the high water table following spring rains. Ground conditions did not enable further work until 6 February when a sub-contractor excavated and then constructed a set of pipe culverts to enable the NW portion of the main line to proceed over a flood water channel.

Railway operation took place every Sunday from 27 December to 31 January, during the summer tourist season. In spite of some wet weather occasions approximately 2,500 visitors took steam train rides on the six operating days. The passing loop track in the Yallah station yard was brought into use on 27 December, in time for the tourist season, while the NE rail head

was extended almost 30 metres on 23 January.

During the first week in February, the large standard gauge steam Brown Hoist works crane, was cut up for scrap at the Australian Iron and Steel plant at Port Kembla. The ILRMS has been fortunate in obtaining the turbo generator, injectors, head lamps, lubricators, steam brake parts, other accessories, as well as the large vertical boiler. This boiler will replace the present smaller one in the stationary machinery compound.

Although weekly operation during the summer season strained the Museum's human resources to the limit, other progress occurred on preservation and restoration. A new ceiling was fitted to the main section of the Yallah Station building, lining boards completed under the northern eaves and the entire building repainted both inside and out.

During late September, the external repainting of 0-6-0T standard gauge loco. "South Bulli No. 2" (Hudswell Clarke 297 of 1888) was completed, while on 9 January, the former Corrimall Coal Coy. standard gauge hopper was lettered. At the same time, major maintenance which will lead up to repainting, commenced on the standard gauge AI & S "CHG" type brake van. This was last painted during 1977.

Work is fast reaching a conclusion on the saloon car No. 2 (former International c 1918 bus body). During recent months metal end platform aprons have been fitted to this vehicle while interior longitudinal slatted wooden seats have been constructed in the saloon.

The load of 42-1/2 lb. rail made available by the Queensland Railways from the Millmerran branch, arrived at Albion Park on 15 October. This plant is being used on the current main line extensions.

The Museum has received a large shaper machine, a welcome addition to the growing range of heavy duty machinery. The vintage floor pedestal drill obtained from the PWD last year, has been overhauled and is now giving useful service in the rolling stock restoration programme.

Ken McCarthy 2/82

ROTARY CLUB, LITHGOW.

A new preservation site has been established on the road, linking Lithgow with the main western highway. Repainted in yellow livery and preserved on a short section of track is a Hunslet 0-6-0DM mines loco. complete with Gardner 6LW engine. Cabless, it is reported to have come from a local mine. (This is probably Lithgow Valley Colliery and the loco. Hunslet 4059 of 1950 - Ed.) It is adjacent to a picnic area developed as a project by the local Rotary Club.

Rob Pearman 2/82.

NORTHERN TERRITORY

ROBERTS CONSTRUCTION LTD, Central Australia Railway Demolition 1067 mm gauge

These Contractors are engaged in lifting rail between Oodnadatta and Macdonnell using four NSU class AIA-AIA diesel-electrics built by the Birmingham Railway Carriage and Wagon Ltd, and formerly of ANR. Following repeated failures with NSU 59, NSU 53 was delivered by rail to Alice Springs for transfer to 3 ft 6 in gauge metals at the site of the former Todd Junction. It is believed that NSU 59 will be retained for spare parts to keep its sister locos. in service for the remainder of the track lifting contract. Thirty flat wagons are being used for rail transport and problems have been experienced with derailments at various locations.

ARHS Bulletin Supplement 11/81, 1/82, 2/82.

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge.

(see LRN 25 p 5)

Restoration work on ex-QGR rail motor PL 111 has progressed well, with the body overhauled and repainted internally and externally. The glazing in all windows has been repaired and the floor sheeted in masonite. The seats are being remounted in a higher position than in the original design. The bogies for this vehicle will initially be those from the tender of ex-Innisfail Tramway B9-1/2 No.11 (John Fowler 0-6-2 17110 of 1926). These bogies are at Woodford Prison, where their overhaul is almost complete. It is hoped that they will be placed underneath the carriage body before long.

Durundur Railway Bulletin 24

CSR LTD, MACKNADE MILL 610 mm gauge

(see LRN 26 p 8)

Further information is on hand partially correcting the account which appeared on p 8 of LRN 25, under the incorrect heading of Victoria Mill. The cane train struck by a QGR train was headed by Macknade Mill 19 (E.M. Baldwin B-B DH 707-3-4-77 of 1977) and consisted of 163 four-tonne full cane bins. The collision struck the cane train somewhere between the 50th and 60th bin at 8.40 p.m. on Wednesday, September 9, at Bemerside, QGR milepost 906. The loco. continued to the mill with 53 bins of its rake, leaving-

the remainder scattered around the scene or still on the rails on the Hawkins Creek side of the crossing

C.J. Hart 12/81.

CSR LTD VICTORIA MILL

(see LRN 26 p. 8)

The following locomotive should be added to the list of those which received painted nameplates during 1981:

Victoria 0-6-ODM Baguley/Drewry 2404 1953

It is believed that an order has been placed with Plasser Australia for the supply of a KMX-12T production tamping machine.

C.J. Hart 12/81, K. Harley 3/82.

FAIRYMEAD SUGAR CO. PTY LTD, 610 mm gauge

(see LRN 25 p.8)

Definite orders have been placed for a 28-tonne B-B diesel hydraulic loco. from E.M. Baldwin and a KMX-12T production ballast tamper from Plasser Australia. Delivery of the bogie diesel will probably mean some further reorganisation of the Bundaberg Sugar Company's loco. fleets at Fairymead, Bingera, Millaquin and Qunaba. The ballast tamper is being purchased for the use of the four mills and means that Bundaberg Sugar is going straight to the second generation of ballast tamping machines on sugar tramways, the company not having purchased one of the earlier machines. A fleet of new bins for Fairymead is being constructed at Millaquin Mill, which is expected to receive the bins to be replaced at Fairymead.

*Sunshine Express 1/82, ARHS Bulletin Supplement 2/82,
K. Harley 2/R*

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 19 p 5)

New rail equipment on order for Farleigh Mill includes a 32 tonne B-B diesel hydraulic loco. from E.M. Baldwin, and a KMX-12T production ballast tamper and PBR 201 ballast regulator from Plasser Australia.

ARHS Bulletin Supplement 2/82.

LA BELLA VISTA, Brisbane Valley Highway, Wanora. 610 mm & 495 mm gauge.

Garry Lynch, who operates this nursery garden near Fernvale has plans to develop a 2 ft. gauge railway as an additional attraction. He has been purchasing a variety of equipment for use on this line. Initially he purchased

two Ruston & Hornsby 4wDM locos. which had been at an amusement park, Adventureland, near Samford until 1976, after which they came into the ownership of Les Stewart of Eight Mile Plains in Brisbane. One is 2 ft. gauge 183064 of 1937, a 44/48hp machine, which was originally supplied to the Sydney Metropolitan Water Board (later Metropolitan Water, Sewerage and Drainage Board). In 1967, it was at machinery merchants, Collinsons in Brisbane for overhaul and went to Adventureland in 1968. Here it was converted to a "Choo choo" type steam outline, complete with face.

The second Ruston & Hornsby is a more modern type, 387822 of 1955, Type LBU, which worked on the 1 ft. 7-1/2 in tramway at Haighmore Extended Colliery until going to Adventureland in 1969. It has yet to be regauged to 2 ft gauge and is in virtually original condition.

Garry has also purchased the 2 ft gauge rail motor and trailer from Dino's Funpark on the Sunshine Coast (see LRN 24 p 5). The railmotor was built by Drysdale of Woodridge in 1977 and has a 4-2-0 wheel arrangement with a Holden petrol engine.

W.W. Henderson 1/82. Editor.

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 25 p 11)

New tramline construction in the area west of the Pioneer River at Mirani has been forging ahead. The line to the Mount Martin Plains area is complete, and the line to Langdon (on the abandoned QGR Kungurri branch) has been completed to a point about one kilometre south of the old Mount Martin railway station, where the railhead is being established for the present time. Meanwhile a line up the old Owens Creek branch line to Mount Castor is expected to be completed by the end of June next. Road depots will be established at Mount Castor and at a point about one kilometre south of the old Lumburra Siding. Road feeder services will deliver cane from Gargett to Lumburra and from Owens Creek and Pakula to Mount Castor. These developments will mean that 80% of cane will arrive at the mill by rail in the 1982 season, a marked contrast to the 55% of a few years ago. Rail for the tramline extensions is still being delivered from the Kalgoorlie area of Western Australia.

Len Heaton 2/82 via David Mewes.

MILLAQUIN SUGAR CO. PTY LTD Qunaba Mill 610 mm gauge

(see LRN 25 p 12)

A short visit on Christmas Eve revealed a Millaquin Mill E.M. Baldwin B-B DH in attendance shunting bins and a ballast wagon standing by the empty

shed. The two Qunaba Mill diesels had returned to Millaquin Mill at the end of the crush a couple of days earlier, as all overhaul work is carried out there.

Bob Gough 1/82

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

The new B-B diesel hydraulic loco. is believed to have been delivered by E.M. Baldwin during the third quarter of 1981. It is thought that this loco. will be numbered D8. A large number of new bins are being constructed by the mill.

Sunshine Express 1/82 Editor.

PLANE CREEK CENTRAL MILL CO. LTD Sarina 610 mm gauge

(see LRN 18 p 7)

Work has been going on to construct a tramway deviation to bring cane trains from the south into the mill without having to use the present line which curves right around the town through 270 degrees. The deviation will mean a saving in distance as well as lessening the traffic which at present crosses the main highway twice. Use of the 32 tonne E.M. Baldwin diesel hydraulic D8 (6890-1-10-76 of 1976) on the southern line has led to problems with spreading of the track. This apparently was the cause of a derailment at Oonooie on 18 November 18.

Sunshine Express 1/82

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 26 p 11)

New E.M. Baldwin B-B DH loco. number 10 arrived in November and is builder's number 9816-1-10-81, model DH26B Mk5. It is fitted with a GM Detroit V12 engine of 320 hp (261kw) and is capable of a top speed of 32 kph.'

The high speed tamping machine supplied by Plasser Australia in April 1981 is model KMX-12T, a 12-tonne bogie-mounted machine which in fact, incorporates the same tamping unit used on standard gauge Plasser machines. A GM 3/53 water-cooled diesel engine is fitted with a power of 71 hp and hydraulic drive powers the front bogie and the tamping unit. The tamping machine is capable of a speed of 40 km/h in either direction while travelling to the work site. At present, the machine is being used to upgrade existing track, by lifting and lining once the time-consuming task of establishing levels and alignments is done. In about two years when

it is anticipated this task will be completed, the machine will be used on maintenance on a continuing basis. Meanwhile, the mill's four wheel tamping machine supplied by Tamper (Aust.) in 1975 (Serial number 4375535) is being used for construction work on existing track and for repairing damage done by smashes, as well as for spot lifting as required.

One of the mill's 18 ton Clyde 0-6-0DH locos. has been hired out to contractors Wesweb Hire Services Pty Ltd for construction work on the Elaroo tramline extension (see elsewhere this issue)

The project for apprentices to restore Bundaberg Fowler 0-6-2T (8 of 1953) has continued but heavy boiler repairs will be necessary, possibly including a new firebox. No decision as to financing the repairs had been made in mid-November.

Kevin Howell (Proserpine Co-operative Sugar Milling Association) 2/82, Sunshine Express 1/82.

TOWNSVILLE HARBOUR BOARD/SUGAR BOARD/C.S.R. LTD Townsville, Bulk Sugar Terminal. 1067 mm gauge

(see LRN 26, p 11)

Considerable confusion appears to exist as to the ownership of the locomotives used here, and so also of those used at the installations at Lucinda, Mourilyan and Mackay.

What is clear is that the new locomotive for Townsville, ST5 was ordered and paid for by the Townsville Harbour Board. It appears that the Sugar Board who are responsible for controlling managing, operating and maintaining the bulk sugar terminals have appointed CSR Ltd as their managing agents. CSR are believed to have provided the finance for the new locomotive at Townsville.

The new loco at Townsville, a Co-Co diesel-electric (builder's number 81-999) was fitted with cabside aluminium plates bearing the words "The Sugar Industry" before leaving Brisbane on 11 January on the *Sunlander* working, and was handed over to its new operators the following day. The loco had run some 2,500 km in the Brisbane area, and the number ST5 had apparently been given at QR request, as they wished the loco. to have some form of identification while running on QR metals.

The loco. has a radio-controlled safety circuit to allow the unloading station operator at the Terminal to ensure that the loco is not moved while a sugar wagon is attached to the unloading device. This circuit applies the loco independent brakes while interrupting the operation of the throttle circuit.

W.W. Henderson 1/82, D.G. Bailey 2/82.

WESWEB HIRE SERVICES PTY LTD Elaroo Tramline Construction 610 mm gauge

Favourable progress is being made in track laying on this 30 km extension being constructed for Proserpine Mill (see LRN 26, p 11). The contractors are working as follows. A modified scraper lays out a bed of ballast approximately 80-100 mm thick and 1.5 m (sic) wide on the formation. Sleepers, predrilled by hand are dropped into position from the back of a truck running along the ballast bed. Rail laying then proceeds using a special track laying train. In front, is a rail mounted crane, model RTW built by Tamper (Australia) Pty Ltd (Canron Rail Group), which is self propelled with a hydraulic drive powered by a Holden motor. The crane has a special "grab" which lifts a rail from a pair of loaded rail bogies attached behind it. The crane swings around and lays the rail on the sleepers in front.

A gang of men then attach the fishplates and huck bolt the rail to the preceding one. The rail is then spiked in about three places by hand. The other rail is similarly laid and spiked up. The crane then moves forward to lay the next pair of rails and so on. A self propelled spike driver also fitted with hydraulic drive and a Holden engine and supplied by Tamper (Australia) then moves up and spikes the rails completely.

Behind the spike driver comes a ballast regulator. This is a former 3 ft 6 in gauge machine supplied by Tamper and formerly used by them for contract work (Model BE17). This lays and spreads out extra ballast. It had been hoped to use this regulator for hauling ballast and rails but it was not very successful on longer hauls, so Wesweb have hired an 18 tonne Clyde 0-6-0DH from the mill for heavier haulage work. The present rate of tracklaying is about 400 m per day.

Final lining and levelling of the track is being done under contract by the Canron Rail Group using their contract ballast tamper Type SVT-JWL 4375678 (see LRN 17, p 7)

Kevin Howell (Proserpine Co-operative Sugar Milling Assn.) 2/82.

K. Harley, Tamper (Australia) Pty Ltd 2/82.

SOUTH AUSTRALIA

SOUTH AUSTRALIA ENGINEERS & WATER SUPPLY DEPARTMENT, Goolwa, Barrage. 610 mm gauge & 7 gauge

A visit in February revealed that the tramway is being used regularly to transport replacement stoplogs onto the barrage. The tramway runs across the barrage (632.5 m) and continues for about another 100 m. to a maintenance

and storage shed. Two “hand” trucks are in use which are normally hauled by a diesel operated gantry crane operating on a much wider gauge. The crane is used to handle the stoplogs and other parts as required. A swing bridge is included in the lock to enable the crane and tramway trucks to pass.

It is understood that similar arrangements with diesel operated gantry cranes are used on the Mundoo (792.5 m), Boundary Creek (243.8 m), Ewe Island 2270.7m), and Tauwitschere (3658m) Barrages.

Bob McKillop 2/82.

VICTORIA

ALEXANDRA & DISTRICT HISTORICAL SOCIETY. Alexandra. 610 mm gauge & 1029 mm gauge.

(see LRN 22, p 20)

About 500 ft of 2 ft. gauge track has been laid in the station area at Alexandra. The Hudswell Clarke 0-6-0 1098 of 1915 was steamed around the start of the year, but requires some work, especially the overhaul of injectors. The John Fowler 0-6-0T 11855 of 1909 is not yet operational and requires repair including the replacement of steam pipes. Malcolm Moore 4wPM 1049 of 1943 is in working order but is at present still stored at the Alexandra Hospital. It is hoped to establish a tourist railway from Alexandra and rolling stock for passenger use will be constructed utilising bogies from the local sawmill which once operated the Rubicon Tramway. The group hopes that the tourist line may be established on the trackbed of the old Alexandra branch line, possibly for a distance of about 7 km out of Alexandra, but negotiations are still proceeding in this regard.

Ian Bowering 1/82.

EMERALD TOURIST RAILWAY BOARD - PUFFING BILLING PRESERVATION SOCIETY. Puffing Billy Railway 762 mm gauge

(see LRN -14, p.18)

Redevelopment work at Belgrave has meant that trains now depart from a completely new platform considerably lower than the old station.

It is only now that the infamous gradient of the “old” station can be really appreciated. However, contrary to previous plans, it is now proposed that the old station building will be removed to the new platform (by rail of course) and restored and improved in its new position. Further earthworks will be carried out in the station area, but it is proposed that most of the “old” trackwork will be retained, including the transfer connection to the broad gauge station.

Inside the workshop at Belgrave, the rebuilt 2-6-2T 8A is nearing completion, while outside the frame of 3A has been laid out for some preliminary work. This does not imply that 3A is the next loco. to be rebuilt. It is likely that another NA, possibly 12A, as well as Garratt G42 will be dealt with before 3A is fully restored. On that note, it may be of interest to learn that investigations are being carried out to ascertain the cost of converting at least two South African Railways NG G16 Garratt locos to 2 ft 6 in gauge

On 1 February, trains were being handled by NA class 2-6-2Ts 6A in black, 7A in maroon and 14A in green. Black 12A was adjacent to the workshops. It is understood that double heading has been a regular feature of heavy afternoon trains in the tourist season recently.

PBPS Monthly News 2/82, 3/82 via A. Winzenreid, Editor.

PUFFING BILLY MUSEUM, Menzies Creek. Gauges various

(see LRN 23 p 18)

Early in January, Peckett 0-4-0ST 1711 of 1926 ventured out onto the main line and hauled a special train of one carriage to Emerald. Since arriving at the museum in 1974, in pieces, this little loco has been completely restored and is now painted in a lined out green livery. It has been fitted with a standard knuckle coupler at the rear to enable it to haul main line 2 ft 6 ins. gauge stock, but retains its central buffer at the front.

Restoration work has begun on 2 ft gauge Perry 0-6-2T *Delta* (9767.45.1 of 1945) Work will include the replacement of many stays and restoration is likely to last some time.

Another interesting item at the museum is the body of a 2 ft gauge personnel carrier believed to have been a four-wheeled diesel-hydraulic unit which had been constructed for The Cementation Co. (Australia) Ltd for a tunnelling contract at Bacchus Marsh. The personnel car is believed to have been constructed by a local builder but in addition two E.M. Baldwin four-wheel diesel-hydraulic locos were used on the contract. These were 8-tonne machines, builder's numbers 4660-1-8-72 and 4660-2-8-72 of 1972, second hand from Pearson Bridge Pty Ltd. It is believed that a Hudson-Hunslet diesel was also used on this job, but no other details are available. Three long wheelbase four-wheeled flat cars at the museum were also obtained from the Cementation contract at Bacchus Marsh.

A 2 ft gauge diesel loco, possibly from Queensland, is expected to arrive at the museum in the near future.

Peter Newett. 2/82, Editor.

GEELONG STEAM PRESERVATION SOCIETY, Bellarine Peninsula Railway 1067 mm gauge

(see LRN 26, p 13)

Vulcan Iron Works 0-6-0ST 4, built in 1916 (B/n. 2539 or 2541) was withdrawn from service for major repairs in March 1980. The main bearing on the back axle is completely worn out and will have to be replaced, and new steam pipes from the header in the smokebox will also need replacing. In addition, a new smokebox and saddle tank is required. Work has begun with the replacement of seven tubes. The loco. was used in Western Australia at the Henderson Naval Base before being sold to the Australian Portland Cement Co. in 1925. It was then hauled to Kalgoorlie, where it was transferred to a flat top wagon for delivery to Fyansford, where it was to work at the cement works. After being donated for preservation in 1968, it was used on the Belmont Common Railway from December 1971 until 1978, when it was transferred to Queenscliff in November, and worked there until 1980.

Meanwhile, sister engine number 5 (Vulcan 2540 of 1916) was due to be dismantled at Jubilee Park, Ringwood on the weekend of 6 - 7 February, in preparation for its move to Wantirna for restoration on 10 February. A steam weekend will be held at Wantirna on the Labour Day long weekend and the Society will be fund raising there to help in the restoration of number 5. The history of this loco. is similar to that of number 4 up to the closure of the rail system at Fyansford, when it was placed in the park at Ringwood.

*B.P.R. Monthly Notice 2/82. Narrowminded 6
Ian Gunsser 12/81.*

LONG TUNNEL EXTENDED MINE, Walhalla. 610 mm or 762 mm gauge

A tourist development is believed to be under way here using ex-Melbourne- & Metropolitan Board of Works locomotive and side tipping muck wagons. The rolling stock is being used in the re-excavation of the underground machinery chamber. The mine is open for inspection every Saturday and Sunday afternoons.

Geoff Maynard 1/82

MURRAY McEWAN, Devon Meadows.

A major and exciting restoration project is under way to rebuild a Shay locomotive. The remains including boiler, bunker and frames are of Lima 2576 of 1912 which worked on the Powelltown Tramway. Delivered new to the Lloyd Copper Co. of Burruga, NSW, it was sold to G.C. Hoskins of Lithgow about 1920 and went to Powelltown in 1926. After the closure of the Powelltown line, the loco. was sold by Cameron and Sutherland to a timber

mill at Omeo for stationary use, and the remains were salvaged from their final resting place in Croydon.

The original frames are too corroded to be of much use, and replacement frames are under construction. Restoration work on the boiler is proceeding satisfactorily. A search is now underway to locate suitable bogies for the loco. and these may be obtained from overseas. The final gauge of the loco. as restored will depend on what bogies are acquired. At Powelltown, the loco. ran on 3 ft gauge rails.

Steam loco. 6, out of use at Labasa Mill is 0-6-0TT John Fowler 9462, of 1902. This loco was ex Lautoka Mill number 3 between 1961 and 1967.

Lautoka Mill

Lautoka 11 (Clyde HG-3R 0-6-0DH 65-432) was ordered for Labasa Mill but was probably delivered direct to Lautoka Mill, in March 1965.

Rarawai Mill:

Add 1 0-6-0DM Hudswell Clarke D609 1938 ex Labasa 1979.

Labasa Mill:

Add Ballast tamper Plasser 63 of 1974 Model KMX-06.

Bob McKillop 1/82, D.G. Bailey 2/82.

PAPUA NEW GUINEA

BOUGAINVILLE COPPER LTD Panguna, North Solomons Province, 900 mm gauge

(see LRN 25, p 20)

Further details of the locomotives being used on the drainage tunnel project have been received. The battery-electric locos. are four-wheeled machines built by George Moss and are described as being 10-tonne units. They are numbered U01, U02 and U03 and arrived at the site in June 1977 from Mount Lyell in Tasmania. Builder's numbers are said to be 899, 972 and 2265/6/171/77.

The Commonwealth Engineering four-wheel diesels would appear to be definitely EC4585 of 1964 and HD51102 of 1967. They arrived in August 1978 from Mount Isa Mines and are numbered U05 and U06. Com-Eng HD51102 seen in Brisbane in February 1979 could not have been coming to Panguna (see LRN 9, p. 14) but may have been going to some other project in Papua, New Guinea, such as Ok Tedi perhaps. The two diesels which did come were converted from 1067 mm gauge at the mine to match the ex-Mount Lyell equipment. Engine numbers are 7N1537 and 44V16933.

The two E.M. Baldwin locos. arrived in August 1980 from John Holland, Sydney and previously belonged to the Holland R.U.C. Joint Venture for use in the Molonglo Tunnels project (see LRN 16, p.6). Built in 1973 to 762 mm gauge, they were part of a batch of four given builder's numbers 4529-1-1-73 to 4529-4-1-73. Two were later used on the construction of the Clare-Dalbeg Tramline in-Queensland and were subsequently sold for use at Marian and Qunaba Sugar Mills. Like the Com-Eng locos. the Baldwins are four-wheeled diesel-hydraulics and are numbered U07 and U08; they were also converted to 900 mm gauge at the mine. U08 has engine number 23C562. (The Qunaba loco has engine 23C607 and the Marian loco. 23C603).

When the drainage tunnel at the mine is completed, it is likely that rail operations will cease.

Bougainville Copper Ltd 12/81.

NOTICE BOARD - Publications

STEEL and RAILS - Newcastle Plans Book.

Preparation of this book has had to be postponed in order to concentrate effort on the production of our Powelltown book. At this stage it is impossible to predict when we can proceed with this item.

POWELLTOWN book.

This work is now reaching its final preparation stages. Prepublication offers should be available in the very near future.

Prepublication Offer for ML2.

Included with this mailout is a pre-publication offer for the new book *The ML2 Story*. Members are reminded that the closing date for Australian orders is 28 June. Orders received after that date may not be honoured.

New Sales Stock.

This includes *Light Railways* reprints No.27 & No.28. Our sold out print run of *Wooden Rails to Kinglake and Flowerdale* has now been reprinted. This time we have reprinted it without the LR headings so as to be able to market it as a book in its own right. Also available is the first in an intended series of Research Reports. This first report deals with Climax Locomotives in Australia.

MEETINGS

SYDNEY

28 APRIL at 7.30 p.m.

MAYERS POINT TRAMWAY.

Between 1913 and 1944, an 18 mile long tramway was operated north of Myall Lake by Allen Taylor and Co., to bring logs to a sawmill on the waterfront at Mayers Point. Four locomotives were used on this line, two A Class Climaxes, an Andrew Barclay 0-6-0ST, and a Clyde Engineering Co. 2-6-2.

At the April Meeting, Harry Wright will be giving an account of the history of this most interesting line.

Special Note:- The NSW address included on the LRN header should show C. Wilson as Hon. Secretary of the branch rather than R. Mason.

MELBOURNE

DON'T FORGET TO PUT ASIDE YOUR SPARE BITS AND PIECES FOR THE OCTOBER AUCTION.

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

E.M. BALDWIN & SONS PTY LTD, Castle Hill, Sydney

(see LRN 27 p.4)

A substantial amount of work was in progress or in prospect during April. Orders include the large number of man riding cars, three mining locos and four cane tramway bogie locos shown in LRN 27. In addition, there were several units in for repair or modification, partly as a result of tougher NSW Mines Department requirements. Bogie locomotives under construction were one each for Farleigh Mill and the Haughton Sugar Company's Invicta Mill. Also under construction was a brake wagon for Isis Mill. An additional order has been received for a bogie loco from Tully Mill, their first unit of this type.

In the workshop was AIS loco 19 and man riding car 122. B-B diesel-hydraulic 19 (7744-1-9-78 of 1978) was in for modification and repair after having got out of control when being lowered down the drift at Corrimall Colliery. Remarkably little damage had been done, but dump brakes were being fitted in an attempt to prevent a recurrence of the incident. Man riding car 122 and 123 which was out in the yard were in for modification. They are 9077-1-1-80 and 9077-2-1-80 respectively. Also in the yard was 25 tonne four-wheel diesel hydraulic 9389-1-5-81, believed to be from an Elcom Colliery. Lastly, near the gate were two second hand four-wheel diesel-hydraulic 1067 mm gauge locos, 3568-1-9-70 and 3568-2-9-70.

Editor 4/82.

AUSTRALIAN CAPITAL TERRITORY.

CANBERRY HOLDINGS PTY LTD, Canberra Fair 610 mm gauge

(see LRN 26, p.6)

A visit here in April revealed the railway in full swing. Motive power was provided in the shape of 0-4-2T Decauville 426 of 1897. This loco has been leased from owner Tod Watson and was overhauled before being put into service. It is painted brown and carries a brass builder's plate on one side. Three bogie carriages were being hauled around the circuit of track. These vehicles have been built by Dennis Steinhauser near Wodonga and carry "Kiewa Works" plates. The carriages will run in a plum and green livery, but two had not been finished off at the time of the visit.

The train leaves Possum Gulley Station and goes twice around the circuit of track which is laid in 42 lb rail and includes a timber bridge across a gully.

Restoration of Krauss 0-4-0T *Jack* (5945 of 1907) was hoped to be done for the Canberra Fair railway, but the boiler of this loco needs extensive repair or replacement, so, regrettably, the work was not proceeded with. *Jack* is stored on private property in Canberra.

There are two Ruston & Hornsby diesels on site. The working loco is 354040 of 1935, a Type 20DLU four-wheel diesel-mechanical. Formerly of Haighmore Extended Colliery, Ipswich, and the Haughton Sugar Company's Invicta Mill, Giru, it disappeared from a Brisbane scrapyard after 1973 (see LRN 5, p.3). It was purchased for Canberra Fair from a gentleman in Adaminaby, in the Snowy Mountains.

The second Ruston & Hornsby is also a four-wheel diesel-mechanical, Type 20DL and is ex-Melbourne & Metropolitan Board of Works No.13. It was purchased from Tasmania and is probably 235657 or 235677. These were part of a batch of locos built for the British Ministry of Supply in 1945 but were returned to Ruston & Hornsby. In 1946-7, five were sent to Australia for the MMBW. After being disposed of by the MMBW, it was owned by the Cornwall Coal Co. in Tasmania and was later used on a sewerage tunnel job near the quarry gorge in Launceston. It was then purchased in 1972 by two members of the Van Diemen Light Railway Society, and was recently sold to Canberra Fair.

Any further information about either of these two diesels would be appreciated.

Ian Hall 4/82, Peter Neve 5/82, Editor.

NEW SOUTH WALES

AUSTRALIAN IRON & STEEL PTY LTD, Bulli Colliery 1067 mm gauge

(see LRN 24, p.2)

A large amount of rolling stock was observed on the surface at the end of the Easter holiday. This included diesel man riding cars built by Fox Manufacturing and numbered 72 to 81 inclusively. These are Fox 336 of 1973 and 337 to 345 of 1974 respectively. These vehicles incorporate extensive use of fibreglass in the body construction.

At least six four-wheel battery-electric locos were seen in the workshops, including numbers 55, 57 and 60. They are among a large number of 10 ton locos of Jeffery design built by BHP at the Newcastle Steelworks in 1947-9. The three locomotives noted above were the 94th, 96th and 99th delivered of the batch, in 1948 (no builder's numbers were allocated).

Lastly, behind the workshops were seen four massive Malcolm Moore 0-6-0DM locos (see LR 72 p.16-17 & LR 75 p.76-77). Like other units they were painted yellow, but in this case, traces of green paint were also visible. These 25-ton locos are numbered 4, 7, 8 & 9. Loco 8 had on the cabside a plate reading:

MALCOLM MOORE PTY.LTD.

Gardner

DIESEL

LOCOMOTIVE

DREWRY CAR CO. LTD

Inside the cabs, builder's plates were found showing them as Model 26204. No. 4, 7, 8 & 9, corresponding with their running numbers. Drewry Car Co. numbers were allocated to the power plants imported from England and full details are shown below.

4 Malcolm Moore 26-204 No.4 1948 / Drewry 2214 1947

7 Malcolm Moore 26-204 No.7 1951 / Drewry 2336 1950

8 Malcolm Moore 26-204 No.8 1951 / Drewry 2337 1950

9 Malcolm Moore 26-204 No.9 1951 / Drewry 2338 1950

It is believed that other locos of this type are to be found at Wongawilli, Nebo and Kemira Collieries.

K.McDonald 5/82, Editor.

AUSTRALIAN IRON & STEEL PTY LTD, Port Kembla 1435m gauge

Seen behind the loco shed during April was a four-wheel Ruston & Hornsby diesel mechanical believed to be 326064 of 1952, Model 88DS, ex-Metropolitan Colliery, Helensburgh. This locomotive was offered for sale in December 1977 (see LRN 6, p.4). It has not been painted in the steelworks orange livery, and is painted yellow.

Seen operating among the large fleet of diesel locomotives at the works were a number of "Trackmobile" shunting units. These are believed to have been supplied by Aresco and are rail/road vehicles. There are two types, one small and box-like and unsuitable for really heavy work. The larger design however is fitted with a diesel engine of around 250 hp and capable of many shunting tasks. Change from rail to road function is rapid and takes only seconds. However, the road function is not used in other than exceptional circumstances. These units are painted yellow in contrast to the orange locomotives.

Editor 4/82.

THE BELLAMBI COAL CO. LTD, South Bulli Colliery 1067 mm gauge

This Colliery has six battery-electric locos, three diesel locos and about 20-30 personnel carriers for transporting men and materials. Coal comes out of the mine by conveyor. The following locos and man riding cars were seen on a visit in April:

D	4wBE	Jeffrey			Surface Shunter. Battery box 1.
C	4wBE	Jeffrey			Battery box 2. In workshop.
D2	4wDH	E.M. Baldwin	2047-2-10-68	1968	Under repair in workshop.
D3	4wDH	E.M. Baldwin		1978	
10	4wDHR	Fox	4MRL 227		Dismantled.
14	4wDHR	E.M. Baldwin	3652-2-12-70	1970	Model IIDH.
14A	4wDHR	Fox			
16	4wDHR	E.M. Baldwin	3652-4-2-71	1971	Model IIDH.
17	4wDHR	E.M. Baldwin	3652-6-4-71	1971	Model IIDH.
18	4wDHR	E.M. Baldwin	3652-5-3-71	1971	Model IIDH.
19	4wDHR	E.M. Baldwin	3652-7-4-71	1971	Model IIDH.
	4wDHR	Fox	4MRL 240		Safety Car/Ambulance.

The battery locos are about 30 years old. Four were supplied through A.E.Goodwin and were assembled at the colliery. Loco C carries a Goodwin plate. Two further locos were purchased second hand from a Newcastle area colliery. Loco D, which works on the surface only has been fitted with a canopy. The main line of the colliery extends about 13-14 km. Coal comes out at South Bulli, but men are put down a shaft inland.

Editor 4/82.

CENTRAL PARK, Forresters Beach 610 mm gauge.

(see LRN 14, p.12)

Rail operations seemed to have ceased here, but there is still a large amount of equipment on site. The track is thoroughly overgrown for most of its length, with abandoned rolling stock among the vegetation. However, the station area seems well cared for, although a half-completed steel footbridge does little to improve the appearance of the place. In front of a line of four-wheel carriages built on steel cane trucks were seen two four-wheel diesel mechanicals, Motor Rail 11023 of 1955 and Ruston & Hornsby 304457 of 1951. In the other station platform was a line up of three more identical Ruston diesels, 304460, 304453 & 304455 all built in 1951. These three differ from the first in having had removed their exhaust conditioners, which are on the station platform. The Rustons are in a yellow livery, with the "Simplex" loco green. Lastly, there is the John Fowler 0-6-0DM 16830 of 1925, which is standing just outside the station area in yellow paint. This loco has not seen use at Forresters Beach, but remains in quite good external condition especially considering its age.

Editor 4/82.

THE COAL CLIFF COLLIERIES PTY LTD, Coal Cliff 1067 mm gauge.

A number of items of rolling stock were observed on the surface during a visit in April. At the top of the drift was a train attached to the winch rope for lowering down the haulage. It consisted of three yellow man riding cars (unpowered) and at the upper end a white vehicle numbered 1. This appeared to be an auxiliary braking vehicle which seemed to obtain power from a trolley wire mounted alongside the tunnel wall. Another brake vehicle, this time numbered 6 and diesel-powered was in the colliery yard, along with a large number of unpowered man riding cars.

Outside the workshops was a four-wheel battery-electric locomotive with a rectangular "Vale" plate on the frame, built by Vale Engineering of Moss Vale, like the colliery company, a subsidiary of Kembla Coal & Coke. Inside the workshops was another battery locomotive, partially dismantled, Jeffrey 8274. Another battery loco nearby and completely dismantled appeared similar to the Jeffrey, but had "Vale" painted on the frame. These two locos were numbered 15 & 4 respectively.

Also in the workshop were three diesel locomotives built by Moxon Engineering Pty Ltd of Moss Vale. Numbers 6 and 7 were 0-4-0DH locos while number 9 appeared to be a four-wheeled diesel-hydraulic with builder's number L102 12.11.70.

There were also two powered man riding cars in the workshop, one numbered 6, possibly by Fox, and the other, C3, apparently a Vale design dismantled. There was another similar Vale man riding car out of use in the yard, numbered C 14.

Editor 4/82.

THE ELECTROLYTIC REFINING AND SMELTING COMPANY OF AUSTRALIA LTD . Port Kembla. 610 mm gauge.

(see LRN 4, p.7)

A visit on 13 April revealed that full operations were not under way following the Easter break. Although rail operations were not in progress, it was possible to view the variety of rolling stock and the four diesel locomotives.

Rolling stock includes four-wheel steel vehicles used for transporting scrap, blister copper and other materials, and bogie vehicles fitted with frames to carry copper anodes to the tank house for electrolytic refining. Also seen was a rather unexpected sight - timber bogies loaded with logs which are used for reducing molten metal at the furnaces.

Two Hudson-Hunslet locomotives built by the Hunslet Engine Co. in 1955 were seen around the furnace area. These were four-wheel diesel-mechanicals builder's numbers 4580 & 4582, carrying numbers 3 & 4 respectively. In the workshop area the other two locos were seen, numbered 1 & 2, 4577 & 4578 of 1953. All are of a similar type and are painted with yellow and black stripes over the bodywork and buffer beams, although traces of the green and red paint in which the locomotives were originally supplied were visible. A steel plate has been fitted at the front to protect the radiator from damage. The two earlier locos were fitted with manual gear-change when supplied, but the later locomotives were fitted with automatic transmission, which proved unpopular in service and has been replaced by manual. There were two other similar locos supplied, Hunslet 4581 of 1955 and 5278 of 1957. These have now been scrapped, but many parts were removed for spares and were seen around the workshop.

It is believed that before dieselisation, the 2 ft gauge line was operated with electric locomotives and that there was formerly also a standard gauge line with electric and steam traction.

Editor 4/82, Anthony Weston.

GOULBURN STEAM MUSEUM 610 mm gauge.

(see LRN 25, p.3)

On 12 April the railway was operating, but considering that this was during an important holiday weekend, patronage of the museum was

disappointing. Krauss 0-6-0T *Stella* (3423 of 1896) was working trains. The loco has been fitted with a rebuilt cab which is slightly different in design to the original, incorporating a cab roof overhang at the front. It was hauling the steel tramcar-type carriage built locally. In the museum area was the old Melbourne cable tram body, the bogie carriage ex the former Highlands Light Railway at Colo Vale, an open car built on a heavy frame, a wooden wagon with railed sides, a pair of Zeehan & NE Dundas bogies, and the "Planet" diesel. The diesel has been painted blue and red and has a canopy. It carries F.C.Hibberd plate 2380. This loco was supposedly built in 1941, but on the frame there is another plate reading "Chassis 1348 1954". It is a four-wheel diesel-mechanical of the "Simplex" type.

Editor 4/82.

METROPOLITAN WATER SEWERAGE & DRAINAGE BOARD, Cataract Dam 610 mm gauge

A remnant of the tramway system used here many years ago can still be seen. A section of track about 100 metres in length runs below the dam wall along the valley side, and track enters a shed by means of a wagon turntable. A vehicle was seen at the other end of the track which is at the foot of a haulage up the valley side. This haulage has been bulldozed about two-thirds of the way up the valley side to make way for a road.

Editor 4/82.

TIMBERTOWN WAUCHOPE 610 mm gauge.

(see LRN 23, p.9)

A visit in April saw trains being hauled by Hudswell Clarke 0-6-0 1862 of 1953 (ex Macknade Mill 6). Some track relaying has been going on to overcome problems with this loco, with the trestle bridge having been relaid in 60 lb rail and rail laid out alongside the track in preparation for the replacement of more 30 lb rail. Three carriages built at Timbertown and mounted on ex-Condong bogies were in use. Wood fuel is used, not surprisingly.

John Fowler 0-6-0T *The Green Hornet* (12271 of 1910) has been under repair including the fitting of a new smokebox and was parked in the works area adjacent to Broken Bargo Station. Also by the station was Motor Rail "Simplex" four-wheel diesel-mechanical 4214 of 1929. This has lost its bonnet covers and looks rather uncared for.

Adjacent to Timbertown Station, there is a shed and a siding running through it. In the shed was what appeared to be an ex NSWGR tricycle converted to 2 ft gauge. At the end of the siding was a timber tramway exhibit consisting of logs sitting on timber bogies, which appear to have

been constructed at Timbertown.

Timbertown opens at 10 am, and the first train of the day makes a stop at the shingle splitter's camp, making for additional photographic opportunities at this location. All other trains run non-stop.

Editor 4/82.

QUEENSLAND

JIM BAILEY, Bundaberg 661 mm gauge.

Recently donated by Dillingham Mining for preservation in the place of its origin is a 2 ft 2 in gauge "Bundaberg Jenbach" four-wheel diesel-mechanical built by the Bundaberg Foundry as builder's number 14 of 1954. This loco worked at the Dawson Valley Colliery, Baralaba, which was previously owned by Mount Morgan Mines.

J.Bailey 4/82.

LA BELLA VISTA, Wanora 610 mm gauge.

(see LRN 27, p.8)

A visit to this site, adjacent to the main Ipswich-Esk Road, showed that the "rail motor" and trailer from Dino's Funpark on the Sunshine Park had been delivered and were sitting out in the open in front of the main building. There was no sign of the two Ruston & Hornsby locomotives believed to have been acquired for here, and no track materials were visible either.

Editor 4/82.

MORETON CENTRAL SUGAR CO., Nambour 610 mm gauge.

(see LRN 26, p.10)

With about eight weeks to go to the start of the crushing season, work was at full pace in the new mill yard at the start of May. A completely new layout is being constructed, and it appears that this will allow for a more efficient operation in future.

Work is still continuing on the rebuild of Com-Eng *Kalbo* (H1022 of 1958) from mechanical to hydraulic transmission. Similar loco, Mourilyan Mill 8 (Com-Eng 0-6-0DM B1112 of 1956), which has been "temporarily on loan" since 1980, remains at Moreton, although still in Mourilyan livery and with its Mourilyan number.

Editor 5/82

QUEENSLAND COAL MINING CO. LTD, Cook Colliery, Blackwater. 1067 mm gauge.

(see LRN 3, p.6)

It is understood that this colliery has had to be closed down following problems associated with geological difficulties. It is assumed that the rail equipment from the mine has been transferred to the neighbouring Leichhardt Colliery.

W.W.Henderson 4/82.

SOUTH AUSTRALIA

THE BROKEN HILL PROPRIETARY COMPANY LIMITED, Whyalla 1435 mm gauge.

A recent press advertisement of surplus material & machinery for sale included "No.1 Coke Quenching Car Locomotive". This is a 20-tonne G.E.C. DC electric power drive loco, and has an air brake hydraulic power-pack for tow car. It is not currently in working order.

The Weekend Australian 24-25/4/82.

TASMANIA

ELECTROLYTIC ZINC COMPANY OF AUSTRALIA LTD, Rosebery 1067 mm gauge.

Ruston & Hornsby Type 88DS four-wheel diesel-mechanical 284836 of 1950 is in store at Rosebery in working condition on standby for the mineral traffic between Primrose and the mines. Its limited power and lack of braking capacity make it unsuitable for regular use on these duties. It is believed to have first worked at EZ's Risdon plant.

The regular loco on the transfer traffic is Emu Bay Railway No.22, a 1953 Drewry Car Company 0-6-0DM (built by Robert Stephenson & Hawthorn?). This loco was originally supplied to the Mount Lyell Mining & Railway Co., but was sold to the EBR in 1963 on the closure of the Mount Lyell Railway. Electrolytic Zinc own the Emu Bay Railway.

Ian Hall 4/82, Editor.

VICTORIA

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge.

(see LRN 27 p.14)

The old station building at Belgrave has been successfully moved to its new position on the new platform. Further earthworks are now being proceeded with in the station area.

A major repair bill will have to be paid for the overhaul of the Trestle Bridge. The cost estimate is \$145,000. The repairs will take two working weeks of total occupation, possibly during February 1983. It is possible that trains will be operated from Menzies Creek while this work is being done.

There is as yet no positive date for the appearance of 2-6-2T 8A from the workshop following its rebuild. Painting (in unrelieved black) and final pipe work are among the final works now being completed. Sister engines 6A and 14A were to receive some attention before the start of the school holidays.

PBPS Monthly News 3/82 via A.Winzenried.

GEE LONG STEAM PRESERVATION SOCIETY, Bellarine Peninsular Railway 1067 mm gauge

(see LRN 27 p.16)

Vulcan 0-6-0ST 2540 of 1916 was removed from Jubilee Park, Ringwood as planned on 10 February, and transported to the premises of the Melbourne Steam Traction Engine Club beside Burwood and Mountain Highways, Wantirna.

Restoration to working order is programmed to take two years. The cab will have to be replaced, and the central casting of the locomotive engine will have to be removed for the repair of a crack. Otherwise, the loco appears to be in a promising condition. On completion of the restoration work, the loco will be named *City of Ringwood* and will be put into service on the Bellarine Peninsular Railway.

The Society would like to hear from any Melbourne people interested in assisting with the restoration work. For further information ring Brian Sneddon on 88 6943 (home) or 630 6339 (work).

GSPS 2/82, Narrowminded 3/82, J.L.Buckland 4/82.

OVERSEAS

PAPUA NEW GUINEA

BOUGAINVILLE COPPER LTD, Panguna, North Solomons Province 900 mm gauge

(see LRN 27, p.18)

The accompanying photo shows the "Shot-crete" train used for mixing and spraying concrete on the soft wall areas of the drainage tunnel. The train is headed by a E.M. Baldwin diesel and consists of a cement mixer, sprayer and flat car.

It appears that the tramline equipment will not be required on the completion of the tunnel project, which is in its last stages. There are seven kilometres of track and seven locomotives involved, but it will be difficult to remove them from the Jaba River Valley. The equipment associated with a previous 2 ft gauge tramway used in exploratory mining was mostly dumped in the river.

BCL

Newsletter Vol 8 No.2 via M.R.Pearson 3/82

Tunnel in its final stages

This picture shows three tunnel miners at the portal working on the shot-crete machine used for mixing and spraying concrete on the soft wall areas of the tunnel. The men are from left, Lapi Pauiori, Tony Giowen and Amos Kaut.

NOTICE BOARD

From the LRRSA ARCHIVIST

As we are primarily a research and publishing group, the value of having our own repository for basic research material will be appreciated. For some time the Society has had the nucleus of an archives section comprising a number of maps, photos and other documents. These have mostly been acquired through donations. It has been apparent that no real use is being made of this material probably because the existence of such a section has not been realised.

LRN will be used to keep members informed as to the latest acquisitions and any other news of interest. When sufficient material becomes available on any particular subject, it is intended to compile folders of relevant material, including references where these are known, and as a benefit to members these will be available for perusal.

To enable this project to get off the ground we would be pleased to accept donations of any paper material relating to light railways etc. members may care to provide either as a gift or loan for photocopying purposes.

Although our archives are currently only small we do welcome any enquiries you might have. Any correspondence on this matter can be addressed to:- LRRSA Archives, c/o P.O.Box 21, Surrey Hills 3127.

CONTRIBUTE TO LRN.

PUBLICATIONS

ARSENIC and MOLASSES - a history of the Powelltown Tramway.

This fabulous production, 25 years in the making, is on its way. Members pre-publication offers are being prepared, and should be in the next mailout or the one after. This looks like being our largest work yet to date. So - keep it in mind. Print run will be limited and members will need to get in quickly to secure their copy.

STEEL and RAILS - Newcastle.

Our new book, the first of a pair (the other dealing with Whyalla) A4 format, full rail network plans, scale rolling stock plans (most in N scale), even colour plates! Approx 130 pages and more than 70 photographs. PLUS... Around 40 pages of drawings and plans. This book is now available from the Sales Department at \$14.50 (postage included).

STEEL and RAILS - Newcastle; plans Book.

Due to the demand already obvious, it is planned to release a lay-flat H0 scale version of the excellent rolling stock drawings prepared by Keith

McDonald for the Newcastle book. Running to around 60 pages, plus notes, all in horizontal lay-flat format . Keep your eye on the sales list for this one !

SALES DEPARTMENT STOCKTAKING SALE.....

Limited stocks of *Beaudesert Tramway* are available. Hard cover \$5.50 ea, soft cover \$3.95 ea. *Corrimal Coal* (LR #60) \$1.00 and any of LR #57, #58, #59, #62 or #63 are \$2.00 for 5 or 50 cents each.

Get your order in now. Sale ends 30 June 1982 (a little later for overseas members). All prices include postage.

MAILING LIST.

Following the introduction of computer listing of the LRRSA mailing list, there have been a number of complaints from members who are not receiving material. If you are one of those missing LR or LRN could you please write down details and mail them to:

LRRSA mailing list

P.O. Box 21

Surrey Hills 3127

We will then do our best to correct the problem.

LRRSA Sales Department.

The LRRSA Council has a new Sales Officer. He is Mr L.G. Maynard. As soon as details of address are known members will be notified. The current team of Steve Martin and Arthur Winzenried will continue to operate during a settling in period. P.O.Box 382 Mt Waverley will remain current for some time yet.

New Stock lines.

These include our first Research report #1 on *Climax Locomotives in Australia* @ \$2.50. *Barongarook* by N.Houghton @ \$2.50; and *Proserpine Co-Op. Mill Story* @7.50. All prices include postage.

In preparation are Research Report #2 *Millars' Timber & Trading Co. Ltd* with information initially concentrating on their Western Australian operations. Volunteers willing to edit reports are required as is material for inclusion in such "progress reports". Please address correspondence on these to P.O.Box 360 Belgrave 3160.

MEETINGS

SYDNEY

Special Note:- The NSW address included on the LRN header should show C. Wilson as Hon. Secretary of the branch rather than R. Mason.

The June meeting will see (business commitments permitting) *Light*

Railways Editor, Bob McKillop talking on Lautoka Mill, Fiji, where he recently spent three months gathering material for an article on the Centenary of the Sugar Industry in Fiji.

Location:- Government & Transport Club, Regent St., Sydney. Parking available in Regent St. and Botany Rd.

Date:- Wednesday 23 June. Time:- 7.30pm.

MELBOURNE

Presenting the inimitable Arthur Straffen and his masterful presentation of skilled cinematography (or whatever). In his capacity of traveller extraordinary, Arthur is offering film of recent rail action in one of Victoria's lesser known satellite states - the World! (Provided we can all hand them round fast enough, there may even be some "movies".)

Location:- Ashburton Uniting Church Hall, Ashburn Gve., Ashburton.

Date:- Thursday 10 June. Time:- 8.00pm.

Future Meetings:- August - A.G.M.and W.A.Tramlines. October - Auction. December - Murrindindi Tramways.

NSW Mr C. Wilson P.O.Box 290 Burwood NSW 2134

Vic. Mr E. Stuckey P.O.Box 21 Surrey Hills Vic. 3127

Deadline for the next issue:- 20 August 1982.

EDITORIAL

Another smaller than usual LRN means a shortage of news.

Just a small group of interested people have been contributing. The majority of members seem to want to read what other people have seen and done but are not prepared to make any efforts themselves to share their news. Many of you out there must have visited places of Light Railway interest during the last few months. It doesn't matter if there already has been a report - people are interested to hear about your observations. If you can't be bothered to write, then why not phone 07 378 8805 after 5 pm. It is not up to the Editor to fill large parts of each issue with items he has researched himself. Do you care? Prove that you do by sending your news to me at P.O. Box 111, Indooroopilly, 4068, Queensland. Without your help, LRN may cease to exist. .

John Browning.

RESEARCH COLUMN.

Rob Pearman of 11/53 Goulburn Street, Liverpool would like to hear from anyone who can help him obtain a photograph of the New South Wales Government Railways Motor Rail "Simplex" locomotive. This petrol-engined machine was delivered in 1920 and was initially numbered L044, being renumbered 1065 in 1924. It was involved in an accident at Clyde in 1958 and was subsequently scrapped. The only photographs Rob has found so far show the machine after the accident and he would like to obtain a shot taken earlier. All costs will, of course, be covered.

NSW NORTH COAST TRAMWAY REMAINS

Remnants of the Great Northern Timber Company's bush tramway which ran for several years during World War 1 can still be found near Woolgoolga today. Some bridge piles remain in Woolgoolga Creek between Sunset Caravan Park and Sunset Avenue.

The formation can easily be followed for about 3/4 km. just north of Woolgoolga on the left hand side of the Pacific Highway heading northwards (opposite the High School and Cemetery turnoff). This section contains several embankments and cuttings. It is planned to convert this area to a golf course at some stage in the future.

Further remains can be found at Bloodwood Mill and Embankment Road to the north. At the former place, some sleepers remain and even a dogspike was found.

A Climax loco ran on the line, which was laid with steel rails and wooden sleepers. When it closed, the whole line was pulled up and together with the Climax loco was sent to Fraser Island off the coast of Queensland.

John Kramer.

ADELAIDE: SLEEPS HILL QUARRY

Early in the century there were very large railway sidings and loading bins at Sleeps Hill to serve a stone quarry. Recent discoveries indicate that a 2 ft gauge system was utilised within the quarry. The Mitcham State Emergency Service alerted the Mile End Railway Museum to this fact after finding some hoppers while looking for a missing person.

An initial exploration found the remains of a small trestle and one length of rail. Two hoppers were also found. They were of steel construction, with a square bin approximately 2 metres square mounted to the underframe along a central pivot point so the bins could be tipped sideways. Remains of a roadbed could also be seen in the area. More detailed examination of the site will follow.

Catchpoint 6/82

WEST AUSTRALIAN WANDERINGS

Gwalia

(see LRN 25 p.17)

The Sons of Gwalia Mine which closed in about 1963 had extensive underground workings and a variety of motive power on the underground mine tramways. Originally horses were used and later, in the life of the

mine, battery locomotives. However, a former fitter at the mine states that compressed air locomotives were also used, initially in the form of a locally built machine and later on, one or more Eimco machines. These are the only compressed air locomotives that the writer had heard of in Australia. If anyone can provide any information about these or any other compressed locomotives in Australia, please could they contact Anthony Weston at P.O. Box 19, Leinster, Western Australia. 6437.

Lawlers

This is an old gold mining settlement about 400 km north by road from Kalgoorlie and about 30 km from the new mining town of Leinster. There is very little left, only one building, some ruins and the remains of a gold mine and treatment plant. There are also the remains of small side tipping wagons (probably 2 ft gauge) and some small rail equipment of about 1 ft 6 in gauge. Steel sleepers in the vicinity are of 2 ft gauge.

The trackbed of a narrow gauge tramway runs towards the site of the town to an old shaft. Halfway along there is a triangle and the trackbed runs north for about 10 km to an abandoned mine near the Agnew Hotel.

A List of Orenstein and Koppel locomotives delivered to Australia shows 731 of 1901, a 610 mm gauge 0-4-2T, working at Lawlers.

Anthony Weston

CORRECTION

Central Park Railway, Forresters Beach

(See LRN 28 p.5)

Bruce Belbin has kindly pointed out an error made by the Editor in relation to the John Fowler diesel here (0-6-0DM 16830 of 1925). It did in fact see use in 1976-7.

Following the commencement of regular services (with the Simplex loco) in September 1976, a concerted effort was made to restore the Fowler diesel to running order. This was achieved two months later and included complete rewiring, plus repainting in a slightly brighter yellow than that carried before. The Fowler saw extensive use on regular trains during December in an attempt to "settle" the track prior to the introduction of steam-hauled services on the 28th of that month. Following this, the loco although officially on "standby", saw little use. The last time that Bruce can recall seeing it in service was on the LRRSA visit on 24 July 1977.

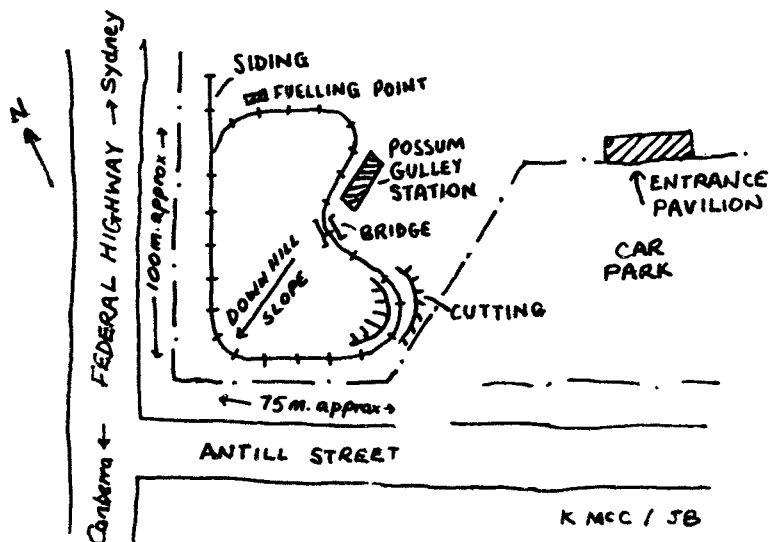

AUSTRALIAN CAPITAL TERRITORY

CANBERRY HOLDINGS PTY LTD, Canberra Fair, Dickson 610 mm gauge

(see LRN 28, p.2)

A visit in May showed that the normal loading for 0-4-2T Decauville 426 of 1897 is two of the three end-loading clerestory cars. One of the cars has side windows but the other two are open above the window sill line.

A sketch plan of the layout is shown below.

NEW SOUTH WALES

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD 610 mm gauge

Albion Park N.S.W. (See LRN 27 p.5)

Track Extensions.

By 27 February the north western rail head has been extended across a creek culvert and the main aerodrome east-west fire trail. During the week ended 26 March the roadbed of blue metal has been laid and graded for the northern section of the main line circuit. The only road bed work remaining is the crossing of a 25 m swamp on the north eastern part of the circle.

Further track laying on the new road bed could not start immediately as

the only access for the delivery of top ballast by road vehicles was along the right of way. Following the delivery of most of this gravel during the second week in May, track laying recommenced on 15 May. The museum is hopeful that the remaining 350 m of main line track will be completed in time to allow the circle to be used during the coming summer.

Tenth Anniversary.

On Saturday 27 February the museum held a special running and members day to mark the 10th anniversary of the founding on the society. From noon until 3 pm free rides were provided for the public. After this operation, rides were provided for members and their families with "run pasts" of rolling stock items rarely in use.

During the previous week couplings and foot boards had been refitted to the former Queensland Rail Motor Trailer P 119 and this large vehicle made its first passenger carrying trip during the afternoon. Saloon car No. 2 (former c 1916 International Bus body) also made several trips loaded to capacity with approximately 20 passengers.

During the evening approximately 100 members, their families and invited guests celebrated our first decade over a barbecue meal, the museum committee and the invited guests used P 119 as a restaurant car on this occasion.

Rolling Stock.

At present P 119 is mounted on a pair of bogies from the former Rubicon Tramway in Victoria. Work is nearing completion on a pair of long wheel base, drop centre, bogies for this car which will enable it to be lowered further. One of these new bogies was assembled on 15 May while the other was expected to be completed on the following weekend. Brake hangers and rigging for these bogies are being fabricated and the ILRMS is searching for a small Westinghouse steam air compressor for one locomotive which will enable the air brakes to be reconnected on P 119. The society has large compressors from former AI&S steel works locos but these are much too large for our needs.

The restoration of saloon car 2 was completed on 15 May with the final polish coats on the interior seats. This completes the coachwork construction. This vehicle is only available for limited use at present as it is mounted on two temporary bogies and a wooden underframe. With the completion of the bogies for P 119 work will proceed on the construction of a steel underframe, brake rigging and the overhaul of permanent bogies for this vehicle.

Waterproof ply has been ordered so that a start can be made on the restoration of former Melbourne cable tram trailer No. 430 of 1890. Although

relatively complete, except for end metal aprons and interior seat bottoms, the side timber panels are badly split and these will be entirely replaced with new materials. In addition, 45 years of out in the open have taken toll on the window frames, and many of these will have to be replaced. This restoration task is expected to take about three years.

Around the museum grounds.

The simple, "custom made" semaphore signal which stood on the standard gauge crossing of the Corrimal Coal Company railway and the Princes Highway until 1972, has been overhauled and re-erected at Albion Park. This project was completed in late April and work is progressing on the restoration of many signal components collected over the last ten years.

The repainting of Yallah Station was completed in time for the anniversary day on 27 February.

Shay No. 2 (Lima 2097 of 1908) was repainted black and brown during May. Weather exposure had been severe on the brown paintwork over the last 2 1/2 years since this item was last repainted.

Souvenir items.

Two further items have recently been added to the souvenir shop at Albion Park: A tea spoon with the society's badge and a coloured wall poster featuring 0-6-0 Hudswell Clark locomotive *Cairns* hauling the passenger car through the bush section of the museum railway.

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge.

(see LRN 27 p.7)

Work has been progressing on the overhaul of Hudswell Clark 0-6-0 *Melbourne* (1701 of 1938) in recent months. The boiler lagging was first removed followed by the cab top and running boards. It was necessary to raise the boiler 30 cm above its normal position to enable the boiler inspector to make a thorough appraisal and problems were encountered when it was discovered that the smokebox floor would not part company with the rest of the smokebox. Eventually, the smokebox floor was detached from the main frame and it will have to be removed later. This enabled the boiler to be raised the necessary amount. Cleaning and priming of the boiler shell then proceeded and other cleaning and painting work was done on the left hand side motion, left hand cab side, and removal of the ash pan assembly. Meanwhile the dirty and cramped job of cleaning between the

frames including removing the hardened grease and dirt around the springs and brake hangers has been tackled. It is anticipated that work will continue with the removal of the chimney and inspection of axle boxes.

Another member has been working on the Fowler 0-6-0DM ex Goondi Mill (18260 of 1929). Repairs have been necessary to the starter motor and it may be necessary for the pinion teeth on the motor to be filed to ensure a positive mesh with the flywheel during starting. There is also a fault associated with the clutch assembly which will require attention.

Work on the ex-QGR rail motor trailer PL111 has neared completion. A great amount of work on this vehicle is now showing results and the effect is most pleasing, both internally and externally. A new roof covering has been refitted, restoration of body panels has been done, all doors rebuilt, all windows restored, modification and installation of inside and partition and door, installation of parcels shelf done, and a complete paint job inside and outside completed. New floor covering has been fitted and all the seats have been removed, repaired, repainted and reinstalled. The bogies were recently received from Woodford Prison and were successfully placed under the coach on 14 June. Initial tests have shown that the car rides well and is stable. It is hoped that it will enter regular service before long.

Work has also been done on the formation through "Freeman's Cutting" to prepare for track extension. Initially, drains have been cleaned out and preparations made for grading the track bed. With grading now completed and clearance work having been done along of overhanging tree branches, more track can be laid as time and labour permits.

Durundur Railway Bulletin 4/82, 5/82.

PIONEER SUGAR MILLS LTD, Pioneer Mill. 1067 mm gauge

(see LRN 19 p.6)

\$130,000 is being spent on a 2.2 km extension to the tramway to service farms in the Mona Park - Airdale area adjacent to Clare Road. Earthworks were completed in March and it was anticipated that the mill would have track in position before the start of May. A further extension of 2 km as far as The Rocks is expected to be built after the 1982 season.

Durundur Railway Bulletin 6/82.

TASMANIA

VAN DIEMEN LIGHT RAILWAY SOCIETY INC., Don River Tramway. 1067 mm gauge (see LRN 26, p.12)

Restoration of John Fowler 0-6-0T 5265 of 1885 is progressing satisfactorily.

More tubes have been replaced so that the boiler now holds pressure and arrangements for boiler inspection are proceeding. A quantity of original Fowler drawings have been purchased from England which should greatly assist in restoration.

Ruston & Hornsby 40DL four-wheel diesel-mechanical 279571 of 1949 is in operational condition but requires overhaul. This work will include gearbox overhaul, building up and machining of wheels, brake adjustments, and attention to engine and bodywork. This loco is fitted with the cab from a Malcolm Moore 0-4-0DM which was removed when rebuilt by TGR as U class. It should have a well-deserved rest, when the recently acquired U class loco enters service. It was originally supplied to the Marine Board of Burnie and was later owned by the Cornwall Coal Company before being acquired by the VDLRS in 1976.

Ruston & Hornsby four-wheel diesel-mechanical 187072 of 1937 is awaiting restoration to operating condition. This 44/48hp machine was originally owned by the Mount Lyell Mining & Railway Co. until 1963. It was later modified by Dillingham Constructions for use underground by having its cab removed and being fitted with an exhaust scrubber. After being acquired by VDLRS in 1976, it was restored and rebuilt by the Tioxide Company, and received a new cab.

Recently purchased from ANR is 0-4-0DM U6. This loco replaces U2, previously on hire from ANR. It was freighted from Deloraine to Devonport on 19 March on board a KKC rail wagon. Before it enters service, it will receive attention to motion bushes, fuel pumps and governor, and steps will be taken to remedy "chattering" of engine heads on blocks. Originally built to 3 ft gauge by Malcolm Moore for the Victorian SEC's Kiewa Scheme, this loco is believed to have come to Tasmania in 1959, when it was regauged and re-engined at Launceston Workshops as the sixth and final member of its U class to enter service.

*Supplement to "Steam Echoes of the Don River Tramway"
March 1982, P.S. Mangels via J.D. Kerr, K. McDonald, Editor.*

WESTERN AUSTRALIA

COLLIE HISTORICAL SOCIETY, Collie Gauges various

(see LRN 23 p.20)

Traction engine *Polly* is still on display outside the compound containing ex-WAGR locos. Protected by fresh paint and reasonably complete, it appears to be converted from an Aveling & Porter traction engine for rail use on 3 ft

6 in gauge track.

Inside the museum yard, some additional underground mines equipment appears to have arrived, mainly man-riders and wagons. The battery loco, possibly 3 ft 6 in gauge, remains in its previous position by the rear gate. The battery box marked "Gemco" appears to be too small for this unit, and could be from a 2 ft gauge loco, unless it had been used to permit access to the top of the loco frame in tunnels with restricted clearance.

Rob Pearman 6/82

HOTHAM VALLEY TOURIST RAILWAY W.A. INC., Pinjarra 1067 mm gauge

(see LRN 15 p.6)

A request has been received from the Yarloop Workshop Restoration Committee that the ex-Millars loco G71 *Menzies* be returned to Yarloop. This loco, a 4-6-0 built in 1895 by Dubbs (3595) was acquired in November 1977, and has been restored externally. At a HVR meeting in February, the matter was discussed and reports on mechanical aspects of the loco, repair difficulties, and possible future operational areas for the loco were considered. Eventually, the meeting came to a unanimous decision that consideration of the Yarloop request be deferred for one year. This recommendation was accepted by the HVR Council.

The Yarloop Workshop Restoration Committee plan to establish a historical precinct at Yarloop with the support of Millars and see *Menzies* as a vital part of their project.

Pinjarra Steam Express 4/82

PUBLIC WORKS DEPARTMENT, Northern Region 1067 mm gauge

The following list includes all locos "on the books" on 1 July 1967, when they were transferred from the PWD NW region to the northern region.

PW21	4wDM	Motor Rail	9096	1955	On Hire to Harbour & Rivers Department, Carnarvon.
PW22	4wDM	Motor Rail	14033	1958	Donated to Pilbara Railway Historical Society 6/76.
PW23	4wDM	Motor Rail	14034	1958	At Point Samson. Donated to the Cossack Project Committee, P.O. Box 7 Karratha, but not removed by 12/81.
PW24	4wDM	Motor Rail	14045	1959	Donated to Roeburne Shire, 6/76.
PW25	4wDH	Com-Eng	GB1045	1960	On hire to Harbour & Lights Department, Wyndham.
PW26	4wDM	Com-Eng	GB1046	1960	On hire to Harbour & Lights Department, Wyndham.
PW27	4wDM	Gemco-Funkey		1964	On hire to Harbour & Lights Department, Wyndham.
PW28	4wDH	Motor Rail	9040	1952	On hire to Harbour & Lights Department, Wyndham.

PW29	4wDM	Motor Rail	9097	1955	Sold to Crosse Hull 8/81. *
PW30	4wDM	Motor Rail	9095	1955	Scrapped. Frame reported used as source of steel at Port Hedland.
PW31	0-4-0DM	A. Barclay	320	1928	Donated to Ashbourne Shire.
PW32	4wDM	Motor Rail	9008	1948	Sold to Crosse Hull, 8/81.

The above position refers to the situation in April 1982. Note that the details of Motor Rail "Simplex" locos given are based on Motor Rail records and may differ from previously-published information.

Rob Pearman 6/82.

ASHBOURNE SHIRE, Onslow 1067 mm gauge

(see LR 51)

A quick visit to Onslow during June showed the Andrew Barclay 0-4-0DM (formerly 0-4-0PM) 320 of 1928 preserved in the main street with an open wagon and a van. This equipment formerly operated on the Harbour & Lights Department tramway and was owned by the Public Works Department.

Anthony Weston 6/82, Editor

COSSACK PROJECT COMMITTEE, Point Samson 1067 mm gauge

(see LRN 23 p.21)

Motor Rail "Simplex" four-wheel diesel-mechanical loco PW23 (14034 of 1958) was donated to this group by the Public Works Department in May 1981, but had not been removed by December. The loco was left at Point Samson in November 1976 for possible use in demolition operations. Since then, spare parts have been removed for fitting to PW21 at Carnarvon in addition, other parts from the loco have been stolen.

Rob Pearman 6/81.

HARBOURS & RIVERS DEPARTMENT, Carnarvon 1067 mm gauge

Public Works Department loco PW21 (4wDM Motor Rail 9096 of 1955) reported as still being in "regular" use at the oil jetty, but it is now considered "old and unreliable". As a result, arrangements were being made in April to transfer a replacement loco from Wyndham.

Rob Pearman 6/82.

HARBOURS & RIVERS DEPARTMENT, Onslow 1067 mm gauge

(see LR 51)

A number of wagons from the now-closed tramway were seen in the depot area during June. Part of the jetty is still standing. A small quarry was noted adjacent to the Fisherman's Wharf in Beadon Creek at the other end of town. This may be the quarry shown as "Ashburton Hill" shown in the map on p.12

of LR51, which was served by the tramway. There were no signs of any railway materials or trackbed here. However, there was a road following the creek towards a short breakwater and a small rock embankment.

Anthony Weston 6/82

HARBOURS & RIVERS DEPARTMENT, Wyndham 1067 mm gauge

(see LRN 9, p.21)

There are still four Public Works Department locos stationed here. PW25 and PW26 are Commonwealth Engineering four-wheel diesel-hydraulics built in 1960 (GB1045 & GB1046). They are described as "fast and light" but are not used if it can be avoided. PW27 is a Gemco-Funky four-wheel diesel-mechanical built in 1964 by George Moss in Perth under licence from C.H.Funkey of South Africa. The fourth loco is a Motor Rail "Simplex" four-wheel diesel which was converted from mechanical transmission to hydraulic in 1976, when the PWD East Perth workshops fitted a Perkins engine and Allison torque converter. From about 1973 to 1977 it was under the ownership of the Port Hedland Port Authority. This loco will most likely be transferred to Carnarvon in the near future and carries number PW28.

Most of the traffic at Wyndham is "on rubbers" (i.e. handled by road transport) and the locos are rarely used here.

Rob Pearman 6/82

OVERSEAS NEWS

FIJI SUGAR CORPORATION 610 mm gauge

(see LRN 27, p.18)

Clyde HG-3R 0-6-0DH 65-384 of 1965 - Rarawai 10 - which was burnt out by fire in September 1981 has been sent to the firm of A.G. Price in New Zealand for repairs. The new Hunslet B-B DH loco for Lautoka Mill was expected in the near future at the start of May. The presence of a ballast tamper at Rarawai Mill has been confirmed. This machine is believed to be Plasser 63 of 1974, Model KMX-06. As there is also believed to be a ballast tamper at Labasa Mill in addition to the one at Lautoka (Plasser 64 of 1975), it is probably one supplied over the past few years. The Plasser at Rarawai is reported to be out of use and unlikely to work again.

Rob Pearman 5/82

NOTICE BOARD

RESEARCH REPORTS

New Sales items are in preparation following the popular support for our first Research Report, *The Climax Locomotive in Australia* (now increased to 16 pages at \$2.50 each). Several members are now editing material from our archives in preparation for release as research reports. Subjects currently under way are:

Tramways of the Australian Dependencies (or ex-Dependencies) eg Nauru, Christmas Is.

Millars of W.A.

Warburton Timber Tramway Co. Victoria.

E.M.Baldwin; Locomotive Builders.

Sorrento Tramway, Vic.

These will be released as they are completed and as quickly as Society finances permit. Editors for this type of project are required so if you have suitable material or the time to edit the contact the Project Manager, Arthur Winzenried, P.O. Box 360 Belgrave 3160.

NEW SALES DEPARTMENT ARRANGEMENTS

With this fantastic edition of LRN, the usual sales sheet bears the new Sales Department Address. We ask all members to refer ALL sales matters to that address from now on. P.O.Box 32 Mornington 3931. Our new sales officer is Mr Lawrence Maynard who is assisted by his son Geoff. Any comments or suggestions regarding sales matters can be made direct to them or via the Society's main box, P.O. Box 21 Surrey Hills 3127.

MEETINGS

SYDNEY

The June A.G.M of the Division saw a new President elected. Jeff Mooney takes over from the Division's retiring inaugural President, Paul Simpson. Paul's assistance on the committee however will not be lost as by unanimous demand Paul filled the vacant committeeman position. The Divisional Officers for 1982/83 are:

President Jeff Mooney

Secretary Craig Wilson

Treasurer David Laidley

Committeemen Paul Simpson and Len King

For those braving the Division's A.G.M. the rewards were great with Bob

McKillop and Rob Pearman presenting a wealth of material on Fiji sugar trams past and present, including many slides on Bob's two favourites, the kitbashed Baldwins of the Labasa Mill.

The Division's topic for August will be similarly distant with Jeff Mooney showing the results of 3 weeks of on site investigation into the tramways of Tasmania's west coast.

And don't forget your order for the division's book *Nasmith Wilson & Co*. It lists and details every locomotive built by the company in nearly a century of operation. Send \$7.50 with your name and address to the NSW Division, P.O. 290, Burwood, 2134, N.S.W. Orders have now been placed with the publisher but it. not too late to obtain a copy.

Location:- Government & Transport Club, Regent St., Sydney. Parking available in Regent St., and Botany Rd.

Date:- Wednesday 28 October. Time:- 7.30 pm.

MELBOURNE

With the discovery of gold during the 1890s and the arrival of the railways in 1897 the gold mining industry boomed. The large numbers of mines working in the district soon stripped the nearby bush of all useable timber for pit props and firewood, forcing the mines to look further afield for their fuel. Three companies were formed in the early 1900s to supply firewood to the mines and all three constructed 3 ft 6 in gauge light railways to carry the wood to the mines.

Adrian Gunzberg will be speaking on the Kalgoorlie firewood tramways at the August meeting which, incidentally, is also the A.G.M. See you there.

Location:- Ashburton Uniting Church Hall, Ashburton Gve., Ashburton.
Date:- Thursday 12 August. Time:- 8.00 pm.

LIGHT RAILWAY NEWS

Published by
The Light Railway Research Society of Australia

No. 30

October 1982

Hon. Editor. J.Browning, P.O.Box 111 Indooroopilly, Qld. 4068.

Hon. Secretary, LRRSA:

NSW Mr C. Wilson, P.O.Box 290 Burwood NSW 2134

Vic. Mr G. Maynard P.O. Box 21 Surrey Hills Vic. 3127

Deadline for next issue: - 20 October 1982.

EDITORIAL

Apologies for the late arrival of LRN 29, which was caused by the delays experienced with *Light Railways* 77. This delay has meant the putting back of the deadline of this issue, for which a healthy amount of material is on hand.

Held over for future issues Rosters of BHP Whyalla and AIS collieries; listing of tramways in New Guinea (possibly to be published as a supplement); and news of *Light Railways* in North Sumatra (courtesy of Bob McKillop).

PHILATELY

On 11 October, the Republic of Nauru will issue four stamps, a miniature sheet and a set of six pre-stamped postcards to commemorate the 75th Anniversary of the first movement of Phosphates. At least one stamp, and possibly more, has a light railway theme. The 30c stamp shows a Clyde DHI-71 diesel-hydraulic loco of the type that runs on the 3 ft gauge phosphate lines in Nauru.

APEX CLUB, Lithgow 1067 mm gauge

(see LRN 27, p.6)

It appears that the Rotary club was wrongly given the credit for placing the Hunslet 0-6-0DM loco adjacent to a picnic area here. (The loco is believed to be 4059 of 1950, but this has yet to be confirmed). It has been joined by a large coal tub painted yellow. The back of the tub has been cut out and seats have been inserted.

Rob Pearman 6/82

BLUE CIRCLE SOUTHERN, Portland 1435 mm gauge

(see LRN 5, p.5)

Ex-NSWGR 2605, Dubs 2-6-2ST 2794 of 1892 was noted in steam in the works yard on 23 June. It was also seen in steam earlier in the year, so possibly both Andrew Barclay 0-6-0T locos 3 (1234 of 1911) and 5 (1470 of 1916) are out of use at the moment. Unfortunately visitors wishing to view the locomotives are not welcome here. Previously a lunchtime trip to the main line sidings at Portland provided an opportunity for photographs, but it appears that this trip has been deleted from the normal operations.

Rob Pearman 6/82

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD 610 mm gauge

Albion Park NSW (see LRN 29 p.5)

On 8 August the northern part of the main line circuit was brought into use. On that day over 500 rides were made by visitors and the new track which enabled a total ride of 1.8 km to be provided on the "U" shaped route. ;

With the exception of the track over the swamp situated in the north-east corner of the leased area, all but 80 metres of the main line circuit is now available for use. On 3 July work commenced on the construction of points at the north-east corner which will enable a loco reversing triangle to be laid in

The firm of Cleary Bros. are at present making good use of the extremely dry weather to complete contract work on local subdivision roads. When these contracts have been completed the swamp culvert will be constructed by that firm and the main line circuit completed.

During May the former Rubicon tramway bogies were removed from under restored Queensland rail motor trailer P 119 and the first of the pair of newly constructed low slung 2 ft gauge bogies was placed under the vehicle. By early August the work of fitting brake shoes and rigging to the second bogie was nearing completion and this will soon be fitted to P 119. It is intended to

fit air brakes to the vehicle and the passenger locos will have to be fitted with Westinghouse steam-pumps.

Work commenced during July on the restoration of the saloon body of former Melbourne cable tram trailer No. 430. Considerable work has already been carried out in stripping 90 years of varnish from the ceiling ribs while six louvre shades have been restored.

By early August the metal fittings and cracked side cedar panels had been removed from one side of the car. The few rotting body frame members were replaced by new timber and a start made in fitting marine ply side panels and restored windows to this 92 year old vehicle.

Sufficient marine ply to repanel the entire car was donated to the museum during June by Hanbro Plywoods Pty Ltd, a gesture which was appreciated by all members.

The restoration of No. 430 has been assisted by the donation of spare parts by the Canberra Tradesmen's Union Club. Melbourne cars 300 and 430 stood side by side at Bairnsdale, Vic. until February 1981 when 300 was delivered to Canberra and 430 to Albion Park. As the body framework of 300 was found to be in an advanced stage of decay, the Canberra Club obtained trailer No.589 from Fairfield, Vic. and reconstructed this latter tramcar using a considerable amount of spare parts from car 300. On 4 July the remaining tramcar parts from the Canberra restoration were brought to Albion Park and work has already commenced on the restoration of windows and louvre shades from this source.

During February 1979 the Society received a spare Davenport loco boiler and three 18 in gauge tip wagons from the Cleary property at Douglas Park NSW. These wagons were constructed by Hodgkinson of Newtown, NSW and the hopper frame enabled the body to revolve and tip either side or end ways. During July 1982 one of these trucks was converted to 2 ft gauge and has since been used in ballasting the main line extensions. On 31st July a second ballast wagon was available for service. This is a former SEC (of Victoria) "Jubilee" type unit which has been rebuilt with the hopper in a transverse position. Three trap doors have been fitted to the base of the hopper and this enables a controlled flow of ballast to be deposited either between or outside of the running rails.

On 31 July headlights and marker lamps were fitted to the four-wheel diesel-mechanical Ruston loco (B/n 285298). The marker lamps clearly indicate by colour lens. the direction in which the vehicle is operating when used on-regular maintenance work.

K. McCarthy 8/82.

STEAM TRAM AND RAILWAY PRESERVATION CO-OPERATIVE SOCIETY LTD, Parramatta Park 1435 mm gauge

(See LRN 6, p.5)

During July, a four wheel standard gauge petrol engined loco built by Purcell of Auburn (NSW) during the 1920s was received. This loco was used by the Metropolitan Water, Sewerage and Drainage Board at the Ryde pumping station but stood derelict in the yard at Carlingford since the 1950s. The loco incorporated an idea to increase traction which involved a pair of flat tread rubber tyred wheels which could be lowered onto the track between the flanged steel wheels. It is said that this did not work very well as the tendency was for the flanged wheels to be lifted from the rails when the rubber tyred wheels were lowered. As the Purcell could only lift one truck of coal from the NSWGR siding to the pumping station, it was held in reserve to the Manning Wardle steam locomotive which could haul two or three times that number.

Consideration is being given to fitting a spare steam tram motor body to the remains of the Purcell locomotive to produce a petrol-engined tram motor (possibly numbered 133A) which can be used at short notice for special parties of visitors.

K. McCarthy 8/82.

TIMBERTOWN WAUCHOPE 610 mm gauge

(see LRN 28, p.8)

The last report incorrectly stated that 60 lb rail was being used for track upgrading. The correct weight is in fact 80 lb.

John Fowler 0-6-0T THE GREEN HORNET (12271 of 1910) has returned to service after receiving a \$7,000 overhaul. It has been repainted with black boiler, brown underframe and green side tanks. It is reported that it had travelled 11,500 kilometres at Timbertown over the previous five years.

Hudswell Clarke 0-6-0 1862 of 1953 has been fitted with one positive injector as a safety measure. It is reported that an additional steam loco is being sought.

Peter Neve 7/82, Port Macquarie News 18.8.82 via E.Ryan.

QUEENSLAND

BUDERIM ZOO & KOALA PARK, Tanawha - 610 mm gauge

(see LRN 14, p.15)

Krauss 0-6-0T 5869 of 1908 has been sold to Greg Morris, for restoration (see elsewhere in this issue). Hudswell Clarke 0-6-0ST 853 of 1908 is reported to have been up for sale also. This loco was built as an 0-4-0ST but was rebuilt

to 0-6-0ST at North Eton Mill. Its saddle tank was removed and scrapped some years ago. It is not known if the petrol loco on site is also up for disposal. This is an 0-4-0PM loco built by Purcell of Auburn, NSW in 1922. Builder's number is believed to be 222A. It was used at Moreton Mill.

Greg Morris 9/82, Editor.

BUNDABERG TOURIST TRAMWAY PRESERVATION SOCIETY 610 mm

(see LRN 25, p.7)

Member Alan Robert's 0-6-2T loco BUNDY (Bundaberg Foundry 2 of 1952) passed boiler inspection in August and was issued with a ticket for 180 lbs p.s.i. After all fittings have been replaced on the boiler following the hydrostatic test, and the feed lines from the injectors have been replaced, it is hoped to have the loco steamed later this year.

The Society's 0-4-2T (Bundaberg Foundry 3 of 1952) is presently having the boiler reclad after sandblasting and material is on hand to construct new side tanks.

Alan Robert 9/82.

CATTLE CREEK CO-Operative SUGAR MILLING ASSOCIATION LTD, Finch Hatton 610 mm gauge

(see LRN 10, p.9)

This was the only Mackay district mill not to have started crushing by the end of the first week of July. Com-Eng B-B diesel-hydraulic number 4 (NA59112 of 1977) was seen in the mill yard on blocks with the bogies out for attention. A new self-propelled track jack was nearby This is Plasser 253 of 1982, model HGR-230, gross weight 1.5 tonnes, which has a diesel engine and drive to the rear axle only. New bins have been under construction at the mill this year, and a number were seen in the mill yard, brand new and painted yellow.

Editor 7/82.

CLAIRVIEW SAWMILL 610 mm gauge

A most interesting relic has been discovered at this sawmill south of Carmila, which is no longer operational. It is a John Fowler four-wheeled diesel-mechanical builder's number 21914 of 1936. Originally at Plane Creek Mill, where it ran as number 15J and later 6, it was sold in 1973 to a sawmiller who used it at a mill at Flagggy Rock. The gearbox was removed and the engine was used to power the sawbench by means of a belt passing through a hole cut in the side of the cab. At a later stage, the sawmill was moved south to Clairview and the loco was moved with it. It is still sitting on a length of track which was used to position it inside the mill building.

Editor 6/82

CSR LTD, Macnade Mill 610 mm gauge

(see LRN 27, p.7)

"Simplex" four-wheel diesel-mechanical number 4 (Motor Rail 10232 of 1950) returned to service with the navvies sometime during the slack season having received a new clutch.

"Simplex" four-wheel diesel-mechanical number 2 (dating from the 1920s) also returned to service in the slack after a complete rebuild. Its superstructure was rebuilt and it received headlights, clearance lights, and radio, but unlike number 4, no glass was fitted to the cab windows. The number 5 was not applied as originally planned, but stickers with the number 2 have been fitted to the sides of the engine covers, similar to number 4.

The Clyde (Qld.) built line car is to be set aside after it was found that the engine had seized. The hydraulic drive equipment has been salvaged, however. This unit was built in 1968.

The two bogie Baldwin locos and their attendant brake wagons exchanged roles this season. Loco 19 (7070-3-4-77) and brake wagon BV1 (7065-5-6-77) were put on the sugar run to Lucinda while loco 20 (7070-4-4-77) and brake wagon BV2 (7065-3-6-77) were allocated to cane haulage. This was an effort to make 19's motor last until the end of the season when an overhaul could be undertaken. The sugar run is only two shifts per day compared to three shifts on the cane run. However, the move was to no avail as on 20 July, 19 with about 60 full sugar boxes stalled in the cutting on the climb up from the south side of the Herbert river bridge at the mill, and had to receive banking assistance from Clyde HG-3R 0-6-0DH 12 (65-434 of 1965).

19 was taken out of service the next day for overhaul of the motor, and returned to service on 2 August. The spare loco, Clyde DHI 0-6-0DH 18 (DHI.5 of 1954) took over the sugar run in the absence of the regular loco. Although slow, 18 was hauling loads of 60 boxes (approx. 650 tons) to Lucinda. These loads were not split to cross the Herbert River bridge. In all a commendable performance was put in by number 18 while deputising for a unit of twice its power.

C.J.Hart 8/82.

CSR LTD, Pleystowe Mill 610 mm gauge

(see LRN 18 p.3)

All the mill's locomotives now run with fully enclosed soundproofed cabs, the two Clyde model DHI-71 0-6-0DHs *Te Kowai* (56-103 of 1956) and *Habana* (60-215 of 1960) having been fitted with theirs in 1981.

This mill has purchased a small self-propelled track jack from Plasser

Australia. It carries builder's number 256 of 1982 and is of Model HGR-230, having a gross weight of 1.5 tonnes.

Editor 7/82

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 27, p.8)

Experimental four-wheeled sugar bin number 227 is in the consist of the Victoria Mill sugar train again this season. It is still filled with sand and is always coupled behind the sugar loco *Wallaman* (E.M. Baldwin B-B DH 6400-3-4-76 of 1976).

The new production tamping machine arrived from Plasser Australia recently. No further details are available at present.

C.J.Hart 8/82

DREAMWORLD PRODUCTIONS PTY LTD, Coomera 610 mm gauge

(see LRN 26 p.9)

Perry 0-6-2T 5643.51.1 of 1951 was sold by Paul Simpson to the above company on 18 August using two cranes with spreader bars, and was due to leave for Queensland the next day. On 29 August it was seen at Dreamworld parked behind the loco shed.

The loco is finished in brown with black frames and red rods and valve gear. The cab interior is light green. It is believed that the new owners intend to fit cowcatchers, modify the cab, add more brassware and do a repaint. It is not known whether the fuel system will be altered to oil burning or not. When noted at Dreamworld, the rear buffer beam was seen to be bent, possibly because of some difficulties that were experienced when unloading.

Paul Simpson 8/82, Editor

FAIRYMEAD SUGAR CO. LTD 610 mm gauge

(see LRN 27 p.8)

July 26th was a bad day for accidents on the Fairymead tramlines. Dennis Mills of Bundaberg was taken to hospital with chest and abdominal injuries following an accident near Back Gooburru Road. A loco on which he was fireman crashed off a bridge at about 10.30 am. His injuries were caused as he jumped clear of the loco.

Thomas Fox of Bundaberg received a severe laceration to the right leg when he was hit by a cane bin buffer at the mill at about 7am. Bradley Scott of Bundaberg received a severe laceration to the left leg when he was caught between two cane bins at Tegege Siding at about 11.20 am.

Bundaberg News-Mail 27.7.82 via George Bond

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 27 p.8)

A new E.M.Baldwin B-B diesel-hydraulic locomotive has been delivered this year. It is named *Inverness* and carries builder's number 10123-1-5-82, Model 32B. Three locos have been fitted with Hockey Engineering soundproofed cabs built by Buchan Street Engineering, Cairns. It is believed that Clyde HG-3R 0-6-0DH locos *St. Helens* (61-234 of 1961) and *Bassett* (67-596 of 1967) received new cabs in 1981 and sister loco *Lacy* (65-439 of 1965) in 1982.

Avonside 0-4-0T 1909 of 1922 which has been "preserved" in the mill playground for many years has been removed to the navy area of the mill yard in an unsafe condition. Nearby were two of the latest examples of modern maintenance equipment. One was the new Plasser Model PBR-201 ballast regulator, Plasser 247 of 1982, weighing 15 tonnes. Next to it was a Plasser KMX-12T production ballast tamper. This 18 tonne machine is capable of running to the work site at a speed of 40 km/h. It runs on two four-wheel bogies. Only the rear axle of the front bogie appeared to be powered.

To facilitate the servicing of locomotives, a new sanding gantry has been erected near the loco shed. Sand is automatically fed from the sand drying shed by screw conveyor to two sand hoppers. The gantry straddles one track and is fed by gravity leading from the hoppers so that loco sandboxes can be filled easily.

The construction of cane bins was proceeding at the mill during July. The bins are constructed in batches on a production line type basis in the mill yard.

Editor 7/82

ISIS CENTRAL SUGAR MILL CO. LTD 610 mm gauge

(see LRN 26 p. 10)

A visit on 29 June revealed that two new items had recently arrived from E.M. Baldwin. A Model 24BV brake wagon had arrived about three weeks before, and carries builder's number 10278-1-5-82. On 28 June, the same day that the crush began, the new locomotive arrived. This is a bogie diesel-hydraulic numbered 11 and is builder's number 10130-1-6-82, Model DH28B. This locomotive is painted in the new yellow and cream livery. It was in the shed undergoing its delivery check-over prior to entering service. It had been seen on a low loader in Henry Lawson Drive, George's Hall, Sydney on 26 June.

Rob Pearman, Editor 6/82

MACKAY HARBOUR BOARD 1067 mm gauge

On 2 July the Board's locomotive *Alex S. Hamilton*, an 0-6-0DH built by Commonwealth Engineering (Qld.) in 1957 (builder's number F1018) was seen in the bulk sugar terminal yard. The loco is painted orange and is used to shunt the bulk sugar wagons which are delivered to the harbour by the Queensland Railways.

Editor 7/82

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 27 p.9)

One further loco was fitted out with a new cab and repainted in the new mill colours of green, yellow and red. This is Clyde Model DHI-71 0-6-0DH 58-188 of 1958, now numbered 12, and formerly 3 *Nellie*.

The E.M. Baldwin four-wheeled diesel-hydraulic loco. rebuilt by the mill in 1980 (Baldwin 4529-?-1-73 reb.8860-1-8-79) is running in a yellow and green livery. Although officially number 10, no number is carried.

The two steam locomotives, Perry 0-6-2T 2601.51.1 of 1951 and John Fowler 0-6-2T 20277 of 1934 were in the mill yard in July, out of use. It has been decided by the mill that they will be loaned to two local farmers who will store them under cover and maintain them in operating condition.

Control over two foot gauge train movements across the Mirani QGR bridge is in the hands of station staff at Mirani, linked to the mill by two-way radio. 2 ft gauge track is interlaced with the 3 ft 6 in gauge from Mirani Station to Mirani West, a distance of about one kilometre. The new mill line runs immediately to the north of the QGR from near Yeolands to Mirani West and from Mirani to Boldon, where it joins an older mill tramline. The network of lines across the Pioneer River extends to Berriwerri, south of Mount Castor; Lumburra, near Gargett; a point about a kilometre short of Mount Martin; Mount Martin School, and a number of cane loading points north of Mirani West. The section from Lumburra to Berriwerri was being used early in July despite the complete absence of ballast.

E.M. Baldwin B-B diesel-hydraulic locos 16 and 17 (9562-1-6-81 and 9562-2-6-81 of 1981) normally work the hilly lines to Mount Jukes and Narpi, but following a mill breakdown, 17 was sent out to the Gargett area on 8 July and brought in 182 bins without trouble.

To assist with the major program of track construction, Marian has been loaned a ballast Tamper (Plasser 90 of 1975) and a number of bogie ballast hoppers from Farleigh Mill. At least four Farleigh ballast wagons were seen in the yard at Marian in early July.

Also seen in the yard was Marian's Motor Rail "Simplex" four-wheel diesel-mechanical 21512 of 1955, which has been repainted in the new yellow and green colours. Nearby was a small self-propelled track jack, Plasser 226 of 1980, Model HGR-230, which weighs 1.5 tonnes. Also present were numbers of ballast wagons from among Marian's varied collection, Marian's own ballast tamper (Plasser 101 of 1975), and "Planet" four-wheel diesel-mechanical built by F.C.Hibberd (2566 of 1942).

Editor 7/82.

MORETON CENTRAL SUGAR CO., Nambour 610 mm gauge

(see LRN 28 p.9)

At the end of June, Com-Eng 0-6-0 diesel *Kalbo* (H1022 of 1958) was still in the shed awaiting delivery of a new torque converter to enable it to be fitted with hydraulic transmission.

The enlarged "full" yard of six tracks was brought into operation with the start of crushing on 8 July. This expansion of trackage at the mill necessitated some considerable amount of excavation work to be done and in addition, the removal of a house.

The locos have been fitted with flashing clearance lights to give warning when proceeding around the mill yard and in Howard Street. E.M. Baldwin 0-6-0DH *Petrie* (6-2300-1-6-68 of 1968) has been fitted with large new sandboxes on either side of the front bonnet.

Considerable variations have been seen in operations up Howard Street to the mill this season. Early in the season it appears that *Moreton* (Clyde 0-6-0DH 63-289 of 1963) was used to bank trains up the street, although at night trains were seen proceeding to the mill without a banker in the rear. During August, it was noted that E.M. Baldwin B-B diesel-hydraulic *Coolum* (5565-1-10-74 of 1974) had been relegated to duties around the mill, including the task of banking loads up from Howard Street yard.

Howard Street yard is no longer used as a navvy depot. The navvies have been moved further out from the mill to "the Quarry" and Howard Street yard is to be used for cane only. Besides the main line there are five long loops in the yard as well as six fairly short loops for bins piggybacked in by road.

It is believed that Com-Eng 0-6-0DM number 8 ex Mourilyan Mill (B112 of 1956) will be staying at Moreton.

Peter Neve 7/82, John Armstrong 7/82, D.J.Mewes 8/82, Editor.

GREG MORRIS, Nambour area. 610 mm gauge

Greg has purchased the ex-Burrinjuck Tramway Krauss loco from the Buderim Zoo & Koala Park, Tanawha. This loco is Krauss 5869 of 1908, and was originally named *Dulcie*. It went to North Eton Mill in 1929 and was there

converted from 0-4-0T to 0-6-0T. The loco is to be moved to a property a short distance away where it is hoped that it can be restored to working order. This move was due to take place about 15 September.

Greg Morris 9/82.

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 27, p.10)

New E.M.Baldwin B-B diesel-hydraulic loco 9815-1-10-81 of 1981 was seen delivering bins to sidings, preparatory to the start of the crush, on 1 July. Delivered in October, it had clocked up 3720 km. As yet unnumbered, it is due to become D8. It is a Model DH28B Mk2.

"Bundaberg Jenbach" D2 (6wDM built by the Bundaberg Foundry as their number 13 in 1954) was seen hauling the grass cutter. It has had the discarded cab from a Com-Eng 0-6-0DH fitted to it. Sister loco D1 (Bundaberg Foundry 10 of 1953) has been dismantled to the frame for overhaul.

Two Com-Eng 0-6-0DH locos have been fitted with Hockey Engineering cabs built by Buchan Street Engineering, Cairns. It is believed that D6 (FB4383 of 1965) was fitted with a new cab in 1981 and D5 (FB3170 of 1963) in 1982.

Motor Rail "Simplex" four-wheel diesel-mechanical 21503 of 1953 has had its engine removed and is dumped out in the mill yard under a tree.

Editor 7/82.

PLANE CREEK CENTRAL MILL CO. LTD, Sarina 610 mm gauge

(see LRN 27, p.10)

A programme of fitting new sound-proofed cabs has been progressing. A total of six locos have now been given new cabs by mill workshop staff. Com-Eng 0-6-0DH locos 4 (FA1037 of 1960) and 7 (FC3776 of 1964) were fitted with new cabs in 1981 and Com-Eng 0-6-0DH 3 (FA1036 of 1959) and Clyde Queensland 0-6-0DH 11 (70-709 of 1970) received new cabs in 1982.

0-6-0DH loco 9, an E.M.Baldwin rebuild (6-825-1-5-64 of 1964) of a Ruston & Hornsby 0-6-0DM has been repainted in the mill's standard colours of yellow and grey, which replaces a plain yellow livery.

F.C.Hibberd "Planet" four-wheel diesel-mechanical 2333 of 1940 was involved in a serious collision with a Clyde diesel at Koumala earlier in the year, which resulted in serious damage to the frame. The loco is now stored at the back of the navvy shed at the mill pending a decision about its future. Its place as navvy loco at Koumala has been taken by number 6, Ruston & Hornsby four-wheel mechanical 371381 of 1951, which has been repainted in mill colours of grey and yellow.

Editor 7/82.

PROSERPINE CO-OPERATIVE MILLING ASSOCIATION 610 mm gauge

(see LRN 27, p.10)

The 30 km long Elaroo line was in use in early July, being worked by the mill's new E.M.Baldwin B-B diesel-hydraulic number 10 (9816-1-10-81). An unusual feature of the new line is that turning angles are provided at a number of points, so enabling locos to travel out from the mill nose first with empty bins as well as returning nose first with the load.

The new line is very impressive with the large concrete bridges and easy grades. Just north of the underpass below the QGR at Noorlah, there is a very high embankment, adjacent to the Bruce Highway. The huck bolting used on the track is used instead of conventional rail joints using nuts and bolts. Fishplates are used but the nuts and bolts are replaced by what could be best described as giant pop rivets. These are virtually maintenance free and so are a more economical way of eliminating conventional joints than welding the rails together.

At a point on the Airlie Beach road, near the junction of the Strathdickie line, road improvements have led to the construction of a new high level road bridge and the relocation of the tramline. In fact, the tramline now uses the basis of the old road bridge alongside the new bridge for its crossing of Brandy Creek at this point.

Clyde 0-6-0DH loco number 3 (58-195 of 1958) was fitted with a new Hockey Engineering cab built by Buchan Street Engineering, Cairns, in 1981. Number 8 (Clyde 0-6-0DH 65-443 of 1965) was fitted with a similar cab in 1982.

Two E.M.Baldwin brake wagons were delivered for use with the mill's two bogie diesels last year. They are Model BV24. Builder's numbers 9817-1-12-81 and 9817-2-12-81, they are numbered 10 and 9 respectively. Some suspension problems were experienced with these units initially.

No further work appears to have been done on the Bundaberg Fowler 0-6-2T (Bundaberg Foundry 8 of 1953). It remains in the yard in a dismantled condition.

Editor 7/82.

WESWEB HIRE SERVICES PTY LTD, Elaroo Tramline Construction 610 mm gauge

(see LRN 27, p. 12)

Although the Elaroo tramline was open throughout, work was still going on to complete finishing touches to the line in early July. Operations were centred on Wesweb's depot at Bloomsbury. At a siding just south of the depot, the ballast regulator was stabled with a number of four-wheeled

ballast wagons. The ballast regulator carries Tamper number 1770882 (Model BE12). Nearby was Proserpine Mill's production ballast tamper which was on hire from the mill. This machine is Plasser 227 of 1981, Model KMX-12, which weighs 15 tonnes and can reach a speed of 40 kph travelling to the work site. Near the Wesweb depot, work was going on clearing the trackbed of odd lengths of rail. Wesweb's self-propelled spike-driver, supplied by Tamper Australia was hauling a pair of rail bogies loaded with rail. Behind came the self-propelled rail crane supplied by Tamper which was being used to pick up lengths of rail from the ground and place them on the rail bogies. Both the items of equipment appeared to be based on models used on wider gauges, and possibly were rebuilt from machines used on the 3 ft 6 in gauge (as was the ballast regulator). However, no builder's numbers were found on them. To complete the "big railway construction" picture was the fact that the Wesweb ganger was a large Thursday Islander.

Editor 7/82.

QUEENSLAND COAL MINING CO. LTD, Cook Colliery & Leichhardt Colliery 1067 mm gauge

(see LRN 28, p.9)

Unfortunately, an error was made in LRN 28, where it was stated that Cook Colliery had closed. In fact, it was Leichhardt Colliery which had to be closed because of geological problems. However, on 1 September, BHP announced that Cook Colliery too would be closing, this time because long-term coal contracts had not been forthcoming. It is believed that the colliery will close in mid-1983, at a capital cost of some \$20 million. It is reasonable to assume that the rolling stock from these mines will be sent to BHP collieries in New South Wales.

W.W.Henderson 7/82, ABC News 1/9/82, 4/9/82.

RACECOURSE CO OPERATIVE SUGAR ASSOCIATION LTD, Mackay 610 mm

(see LRN 18, p.17)

The mill has fitted a number of locos with new soundproofed cabs to its own design. Unlike the designs adopted by many mills, these new cabs do little to alter the overall profile of the locomotives concerned, which are all Clyde 0-6-0DHs. In 1981, new cabs were fitted to *Homebush* (55-58 of 1955) and *Rosella* (64-317 of 1964). These cabs have mansard roofs, instead of the rounded profile of the originals. In 1982, *Racecourse* (65-440 of 1965) and *Broadsound* (Clyde Queensland 70-710 of 1970) received the new cabs. This time, the roof profiles correspond to the originals fitted, with the cab of *Racecourse* having a rounded profile, and that of *Broadsound*, mansard.

The mill has purchased a self-propelled track jack which was seen in the shed with an axle out. This unit was built by Plasser and carries builder's number 229 of 1981. It is Model HGR-230 and has a gross weight of 2.3 tonnes. It has a diesel engine and hydraulic drive to the rear axle only.

Ruston & Hornsby 4wDM *Old Smokey* (392120 of 1955) was under overhaul in the shed with the engine dismantled.

Work has already begun for the relocation of the weighbridge, tippler and complete mill yard to the opposite side of the main road upon which the mill stands. Cane will be brought into the mill via an overhead conveyor, as at Marian. It is suggested that all tramway facilities will be transferred across the road, including the modern loco shed.

Editor 7/82.

RUSSELL SAVAGE, Mount Timberwah, Cooroy 610 mm gauge

A light railway is under construction here to serve a private property. The line is being built to gain access to the top of Mt. Timberwah where it is hoped that a house may eventually be built.

Construction began in November 1980 and has been continued during holiday periods. At this stage, track runs for approximately 300 metres, but when completed the line will be about 1400 metres long. This will include a two stage zig zag and will be achieved with a maximum gradient of 1 in 12.

Track materials have been obtained from Moreton Mill, Nambour, in the shape of light rail (16 lb per yard) much of it in portable sections. There is a varied collection of rolling stock. One four-wheel petrol rail tractor and a motorised ballast carrier have been constructed on site using ex-VR components. In addition there is one ex-VR track inspection trolley (outrigger type) converted to 2 ft gauge. Two ex-VR K type inspection trolleys remain to be converted. Another four-wheeled petrol-mechanical trolley will be commenced shortly. There are three cane trucks, ex Moreton Mill, one flat wagon and one construction wagon. Lastly, there is Jenbach 4wDM 2316 of 1958 which has been purchased from Paul Simpson of Panania, NSW. This loco is ex-Excelsior Colliery and Lilyvale Mushrooms. This loco is not yet fully restored and track upgrading will have to be done before it can be used successfully.

It is hoped to build a diesel locomotive using the principles of a Shay locomotive for use on the line. Work is expected to commence on this in the next twelve months.

Russell Savage 7/82, 9/82.

SOUTH JOHNSTONE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 18, p.8)

A new design of cane train brake wagon has been recently delivered to South Johnstone Mill. The unit has been built by Cairns-based Hockey Engineering and incorporates a number of innovations. Unlike previous types, the three axles are coupled in order to reduce the possibility of wheel lock-up. In addition, the mass of the wagon has been concentrated as nearly as possible in the centre of the vehicle. The chevron suspension mountings used in the unit have been specially imported from the U.K.

Australian Sugar Journal 8/82.

TULLY CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 25, p. 15)

A collision took place in fog at Feluga on 7 July between a QGR freight and a cane train. Eight bins were derailed but the mill crane was able to clear the tracks. There was no damage to either locomotive and no casualties.

ABC News 7/7/82.

SOUTH AUSTRALIA

VINCENT PLAYGROUND, Barmara 610 mm gauge

Bagnall 0-4-0ST 1801 of 1906 was observed to be still here in January. The loco has Walschaert's valve gear and is painted dark blue with red framing and motion. No builder's plate is carried.

Fred Taylor 8/82.

VICTORIA

BARRY BECKERLEY, Swan Hill 610 mm gauge

An unspecified tourist project has started operations using a diesel locomotive hired from Brian Peart of Clunes who has terminated his own railway operations (see below). The locomotive is *Rusty*, a Ruston & Hornsby 4wDM (223725 of 1944), Model 40DL. Reports indicate that two women actually built the track, but this requires confirmation. Further details would be welcomed.

Jim Baines 9/82.

BRIAN PEART, Eureka Tramway, Service Street, Clunes 610 mm gauge

(see LRN 16, p.8)

Brian Peart has moved away from Clunes and has wound up his railway. The rail has been sold to a local farmer for fence posts and the loco hired out to Barry Beckerley at Swan Hill (see elsewhere). Other equipment is believed to have been moved to Jim Baynes' Yangardook Tramway at Toolern Vale (see below).

Jim Baynes 9/82.

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway, 762 mm gauge

(see LRN 28, p.10)

2-6-2T 8A in gleaming black livery with polished brass fittings, number and builder's plates was run under its own steam at Belgrave on 4 June, following its rebuild. Some initial problems had to be sorted out following this test steaming, including the springing arrangements. The loco is now in regular use.

It has been decided to complete the evaluation of the condition of Beyer-Garratt G42 (2-6-0+0-6-2) Beyer Peacock 6268 of 1926. Accordingly, the boiler unit is to be lifted and the engine units will go into the workshops for a detailed examination. This will enable an early decision to be made as to when the full restoration of this loco can be commenced.

Meanwhile, some work has been done on the restoration of 2-6-2T 3A, and the frames of this loco have been stripped and cleaned.

Repairs to the Belgrave trestle are now expected to take place next February, during which time trains will operate between Menzies Creek and Lakeside only. After February, total track occupation will be needed between each weekend up until Easter.

PBPS Monthly News 7/82 via A. Winzenried.

GUAVA STREET RECREATION GROUND, Redcliffs 610 mm gauge

Kerr Stuart 0-4-2T 742 of 1901 was observed here in January. The loco has inside Stephenson valve gear and is attached to a small four wheel tender. It is painted light blue and black. There are no builder's plates, but the builder's number is stamped on the side rods.

Fred Taylor 8/82.

JIM BAYNES, Yangardook Tramway, Toolern Vale 610 mm gauge

(see LRN 16, p.7)

The Motor Rail "Simplex" four-wheel diesel-mechanical ex Racecourse Mill

(9979 of 1953) was placed in service last October and a shed has now been built to house it. The Malcolm Moore four-wheel petrol-mechanical (1090 of 1943) is now awaiting overhaul and is presently out of service. A short extension has been made to the branch line, making a total of 1380 yards of track. Clearance work has been done along the main line to enable the bogie carriage to be worked all the way through to Endofline. A large number of trees had to be cut back to make this possible. Visitors are welcome on the Yangardook Tramway but should write in advance to Jim at Lot 78F Chapmans Road, Toolern Vale 3337.

Jim Baynes 9/82.

RAY MACKINNON, Daylesford 610 mm gauge

Mr Mackinnon purchased a petrol-engined steam outline locomotive, two open carriages and a guard's van and one kilometre of track at an auction at the former Bullen's Lion Park at Rockbank recently. He plans to operate the train along the shores of Lake Daylesford. If approved by the Daylesford-Glenlyon Shire Council, the line will have loops near the boatshed and the former baths. A second stage could see an extension across an old bridge in the baths to nearby Central Springs. The railway will be part of a tourist complex being developed by Mr Mackinnon and local Tourist Information Centre manager Mr Derek Appleby. The six-cylinder petrol-engined loco appears to be an "O-4-OT" and is said to have been built in Sydney in 1977. Its appearance suggests that it was built by John Dunlop.

The Courier (Ballarat) 18.6.82 via K.C.Vanstan.

WESTERN AUSTRALIA

BUNNING BROTHERS, Balcatta, 1067 mm gauge

Late in May, a steam locomotive formerly used on timber tramways in Western Australia was moved from Bunning's Manjimup works to the new complex at Balcatta where it is to be displayed to the public as a tribute to the old days of log transport.

The locomotive, a 2-6-0 built by James Martin (178 of 1898) formerly ran as South Australian Railways number 176 (Y class) before being sold to Bunnings in August 1937. It is believed to have been used at Dunolly River and Northcliffe before being stored at Manjimup. In 1956 it had been fitted with a Yx type boiler. About \$8000 has been spent on the restoration of the loco, which was moved to Perth by road transport.

*Daily News 28.5.82, Warren-Blackwood Times 2.6.82,
via David Whiteford; Ray Ellis.*

ROTARY CLUB OF CARNARVON 1067 mm gauge

(see LRN 25 p.17)

See HARBOURS & RIVERS DEPARTMENT, Carnarvon

HARBOURS & RIVERS DEPARTMENT, Carnarvon

(see LRN 29 p.11)

On 14 May a trawler belonging to the North-West Whaling Company smashed into Carnarvon Jetty, doing damage estimated at about \$25,000. The railway track on the jetty was bent and one of the piles dislodged. The jetty was stated to be "extremely unsafe" after the accident by a Public Works Department engineer. It was believed that the jetty would be closed for about two months.

West Australian 15.5.82 via David Whiteford.

NOTICE BOARD

Publications.

Our Research Report project is well under way with the offering of three new reports this month. Currently available or well under way are:

No. 1. Climax Locomotives of Australia.

No. 2. Herman's Warburton Tramways. (in preparation)

No. 3. The Sorrento Tramway.

No. 4. Millar's in Western Australia.

No. 5. The Magnet Tramway, Tasmania. (in preparation).

No. 6. Richard's Tramways, Warburton. (in preparation).

No. 7. Shay Locomotives in Australia.

Reports #1 (2nd revision, Oct. 1982), #3, #4 and #7 are now available from the Sales Department at the price of \$2.50 each plus .50 cents postage.

STOP PRESS #5 now available; \$2.50 plus post .

Comments, additions and corrections to report material, as well as research reports for possible presentation in this form should be sent to:- LRRSA Research Reports, P.O. Box 360 Belgrave 3160.

LATE NOTES

Last of the Hudswells

This book has been delayed for approximately four weeks due to improvements being made by the author. Delivery is expected late in October. Advance page proofs are excellent, showing a super book in the making. LRRSA Sales Dept. should have stock late October, RRP is \$9.95 plus \$1.00 postage .

New LRRSA Sales stock.

As a companion volume to the Rails to Walhalla books, Stephen Watson has now released a pictorial featuring V.R. Narrow Gauge . Titled *A Tribute to VR Narrow Gauge*, we now have supplies at \$5. 95, plus 80c postage .

As mentioned elsewhere (p.20-1), the LRRSA is now offering five of the initial seven research reports planned so far. They are #1, #3, #4, #5 and #7. All are priced at \$2.50 plus 50c postage per report. #1 has been substantially revised following responses to the first edition.

Material for future reports is required along with donations of duplicate notes and photos for the Society Archives. Articles of a reasonable complete nature, containing considerable original material are best sent first to the Editor of *Light Railways*; in case they can best be incorporated in the Magazine

Report material and corrections should be forwarded to Research Reports, PO Box 360 Belgrave 3160.

Archive material should be sent to LRRSA Archives. 7 Talaskia Rd ., Upper Ferntree Gully 3156.

MEETINGS

SYDNEY

The late arrival of LRN (with its meeting notice) caused the deferral of Jeff Moonie's talk on Tasmania till October. So, on 27 October, at the usual venue Jeff will tell us something of the tramway activities along the West Coast of Tasmania and the remains that are still to be seen. Also for the October meeting, it is hoped to have details available of the Division's 2nd annual tour.

Please note that the December meeting has been cancelled.

Location:- Government & Transport Club, Regent St., Sydney. Parking available in Regent St., and Botany Rd.

Date:- 27 October, 1982. Time:- 7.30 pm.

MELBOURNE.

Got any spare photos, maps, Krauss 0-4-0's???? Well bring them along to the October meeting, turn them into cash and help the Society at the same time. Our Annual Auction Night is a little different this year as you will be able to keep the proceeds from the sale of your junk (with only a mere 10% going to the Society). Of course, if you wish to donate the full proceeds of the sale of your items to the Society, we would be only too pleased to accept. However the aim is to give every participating member something in return for the sale of his whatever (But I like my whatever!! AW.). Come along, bring

your spare magazines, photos, wallets, etc. and take part in what will be an enjoyable evening.

Location:- Ashburton Uniting Church Hall, Ashburn Gve., Ashburton.

Date:- Thursday 14 October, 1982. Time:- 8.00 pm.

LIGHT RAILWAY NEWS

The Light Railway Research Society of Australia

No. 31

December 1982

Hon. Editor. J.Browning, P.O.Box 111 Indooroopilly, Qld. 4068.

Hon. Secretary, LRRSA;

NSW Mr C. Wilson P.O.Box 290 Burwood NSW 2134

Vic. Mr G. Maynard P.O. Box 21 Surrey Hills Vic. 3127

Deadline for next issue:- 20 December, 1982.

PROPOSED SOUTH AUSTRALIAN DIVISION OF L.R.R.S.A.

It would surely be a good idea if South Australian members of the Society could get together from time to time. To enable this to happen, Arnold Lockyer is hoping to form a South Australian Division which could hold regular meetings. If you are interested, why not contact him and let him know of nights when you would find meetings suitable. Please write to Arnold Lockyer, 6 Dunedin Street, Dover Gardens 5048.

CLIMAX LOCOMOTIVE RESTORATION.

Restoration of Climax Geared Locomotive B/N 1694 of 1928 (ex Forests Commission of Victoria), was commenced by a volunteer group of Puffing Billy Preservation Society Members at the Emerald Tourist Railway Board - Belgrave Locomotive workshops on Sunday, 24 October 1982.

The restoration aim is twofold. Firstly, to restore the Climax to a reliable operating condition for return to traffic at an early date for the introduction of special trips and secondly, to restore the Climax to a condition as authentic as possible to when it was outshopped from the VR Newport Workshops in September 1928.

Accordingly, a cordial invitation is extended to all LRRSA members to participate in this unique restoration project. As the Climax is the Society's "logo", here is an excellent opportunity for members to make a positive contribution in returning what is believed to be the last geared locomotive constructed by Climax, to working order.

Assistance is required in several specific areas:

1. Plans and/or Construction Drawings; to assist rebuilding.
2. Photographs; required of locomotive when running to provide detailed information such as cab layout, drivers and firemans seat arrangement, rear sand boxes, front tool box, etc.
3. Original Parts and Fittings. As a period of over 30 years have lapsed since the Climax last ran, numerous parts and fittings were removed from the locomotive by enthusiasts for their safekeeping to avoid possible loss.

We are now anxious to locate and obtain any part or fitting so that they can be replaced in order to achieve ultimate authenticity. Fittings returned to date include:

Whistle.
Safety Valves.
Boiler Check Valve.
Locomotive Bell.
Axle Box Covers.
Various Lubrication fittings.

Parts urgently required:

Steam Brake Valve.
Headlights, front and rear.
Smokebox Builders Plate.
Boiler Backhead and Cab fittings, pressure Gauge, Water Gauge Mounts, etc.

4. Assistance with restoration. For members within the range of Belgrave Locomotive Workshops, assistance with actual restoration of the Climax is available by joining in with the volunteer group on any of the organized workshop work days. These work days are held on the first and second Saturdays and third and fourth Sundays of each month. Two weekends per month will also be introduced commencing December 1982.
5. For members who are unable to take an active role with the Climax restoration, assistance by means of material and/or financial donation towards the project is offered as an alternative method to contribute to this worthwhile restoration project.

Further information and/or assistance with any of the required details outlined, please contact:- Mr J. C. Munro, 23 Seaview St. Mount Waverley 3149. Phone: (03) 288 3823.

RESEARCH COLUMN

AUSTRALIAN WAR MEMORIAL LIBRARY, Canberra

Recently transferred by the Defence Department is a large collection of

photographs and records dealing with naval history. Two items may be of special interest to readers.

Henderson Naval Base photographs: This is a large album of maps and photographs of the construction of the base including a considerable number of good views of the locomotives, rolling stock and track layouts.

Laying boom defence net in Darwin Harbour, 1941: This includes a number of photographs of the 1067 mm railway layout associated with the project.

Jim Stokes 9/82

SAILOR SALT COMPANY

In the 1920s a light railway operated from Linga Siding (on the VR) to Pink Lakes, some 12 miles in length. The line was built for carrying salt from the lakes and was built for and operated by the Sailor Salt Co. It is believed that an internal combustion locomotive built by the Purcell Company of Sydney and a converted Fordson tractor were the motive power. The line closed in 1924. Information is sought of the line in operation, the locos, or any other details.

Please write to Paul Simpson, P.O. Box 105, Panania 2213.

SOUTH PERTH ZOO TRAIN

It is believed that the "South Perth Zoo Train" railway was dismantled and sold in 1973 to a person in Geraldton, W.A. Information is requested on the gauge of the line, and on the locomotives and rolling stock etc. including photographs, to complete the known information on this line.

Please write to Paul Simpson, P.O. Box 105, Panania 2213.

EQUIPMENT IN TRANSIT

In LRN 21, a sighting of two bogie wagons heading west on a truck on the Great Western Highway in the Blue Mountains was reported. The rectangular section truck would probably be a Granby and appears similar to trucks used on the 3 ft (914mm) gauge at New Broken Hill Consolidated Ltd, Broken Hill. "Chess" would be Chess Engineering of Sydney.

Tony Weston 11/82

FIELD REPORTS

IRVINEBANK/STANNARY HILLS 610 mm gauge

Several visits have been made to various parts of the Stannary Hills and Irvinemank Tramways in recent years. The countryside is even today very wild and remote so visits need to be well planned and prepared. Irvinebank is a very interesting real ghost town. Many old buildings, including the tramway station still exist. The State Treatment Works are still in use although rather run down and antiquated. Small narrow gauge hoppers are pushed around the works for ore transport. John Moffat's house is now used as the Treatment Works office.

When Stannary Hills was found after navigating the maze of miners' tracks hereabouts, it was easy to pick out the tramway station. With the aid of the photo published in *Light Railways* No.32 p.4, the loco shed was located and several relics such as fire bars and brake shoes were found. The bridge over Eureka Creek was still standing with an old Arthur Koppel hopper below it. Several large pieces of Krauss 0-4-0T (believed to be 5530 of 1906) have been found around this area so it was probably scrapped here. Some open cut mining has been taking place in the creek and it is understood that the whole area has now been mined, completely obliterating the station area.

At Boonmoo itself no sign of the tramway was found although it is reported that for many years some tramway equipment including a loco tender from the Borsig 4-4-2 (6345 of 1907) remained here.

Simon Fraser 9/82

SOUTH MELBOURNE GAS WORKS 762 mm gauge

The rails of the above tramway which ran from Town Pier to South Melbourne Gas Works were relaid in concrete in 1931, but the relaid lines were never used as road transport was substituted. In 1967 during road reconstruction some of the lines were removed and in other streets the lines were covered with bitumen, obliterating all trace of the former tramway. Recently it has been noticed that some of the bitumen has worn away, uncovering some of the track at the corner of Esplanade East and Rouse Street, Port Melbourne. Slabs of concrete with the rails and steel sleepers still embedded in them can also be seen on the beach front between Nott Street and Stokes Street, Port Melbourne, where they have been dumped in an effort to reclaim part of the beach.

L.I.Richardson 9/82

AUSTRALIAN CAPITAL TERRITORY

CANBERRY HOLDINGS PTY.LTD Canberra Fair, Dickson 610 mm gauge

(see LRN 29, p.4)

Late in October, 0-4-2T Decauville 426 of 1897 failed a boiler test and was withdrawn from service. Management stated that the boiler might have to be sent to Port Kembla or Sydney for repair. Ruston & Hornsby 4wDM 354040 of 1953 took over passenger haulage and was seen hauling two carriages. The third carriage was noted in the siding and nearby was a pile of wagons and the second Ruston & Hornsby 4wDM 235657 or 235677 of 1945 completely dismantled.

The Canberra Times 25/10/82 via Stephen G. Cox; Rob Pearman 11/82

NEW SOUTH WALES

NORTH RICHMOND

Seen in a compound on the north side of the Kurrajong Road at North Richmond since June are two steam locomotives, presumably 2 ft gauge, one red and one green, with apparently a spare boiler. One suggestion is that they may belong to the Belbin family (Steam Trains Pty Ltd - see LRN 23 p.8). However, another indication is that they may be associated with the project at Megalong Valley (see LRN 14 p.13). Further information to positively identify these locos would be gratefully received.

Rob Pearman 6/82, Editor.

AUSTRALIAN IRON & STEEL PTY LTD, Cringila 1435mm gauge.

(see LRN 28 p.4)

Included in a large quantity of material for sale by auction on 23 to 26 November is a substantial amount of rail equipment. The main items are six diesel-electric locomotives and one small diesel-mechanical as follows:

D9	B-B DE	English Electric Australia	A005	1956	
D11	B-B DE	English Electric Australia	A009	1956	
D12	B-B DE	English Electric Australia	A010	1956	
D13	B-B DE	English Electric Australia	A013	1957	
D14	B-B DE	English Electric Australia	A014	1957	
D15	B-B DE	English Electric Australia	A016	1957	
4wDM		Ruston & Hornsby	326064	1951	Model 88DS

The bogie locos were built at Rocklea, Queensland, and are unusual in having the bogie wheels coupled with connecting rods. Weight is 63 tons and tractive effort is 400 hp. D9 was withdrawn on 4 August and D11 to D15 on 20 October.

The Ruston & Hornsby arrived at Cringila from the Metropolitan Colliery, Helensburgh, in June 1978.

Also for sale at the auction is a Plasser ballast tamper, builder's number 69, Model UT 06 275.

*J.L.N.Southern 11/82, Associated Auctioneers Pty Ltd via J.L.N.Southern;
Robb Pearman.*

BLUE CIRCLE SOUTHERN, Portland 1435mm gauge

(see LRN 30 p.2)

Steam haulage on a regular basis at least would seem to have ceased here. On 9 August Australian Iron & Steel's D10 was despatched from Cringila and has since been placed in service at Portland. This loco was built by English Electric Co. of Australia Pty Ltd, Rocklea, Queensland in 1956 and is builder's number A007. Wheel arrangement is B-B DE (driving axles on each bogie are connected by coupling rods), and rated horsepower is 400. It is understood that the loco is on hire from AIS.

Rob Pearman 10/82, J.L.N.Southern 11/82

GOULBURN STEAM MUSEUM 610 mm gauge

(see LRN 28 p.7)

A careful perusal of records has shown that the F.C.Hibberd "Planet" 4wDM at Goulburn Steam Museum is not builder's number 2380 (as per the plate carried) but in fact is 2388. Both locos were built in 1941 for the British War Department and were used by the NSW Public Works Department during the construction of the Spit Bridge in Sydney. While in service with the PWD, it was recorded that the loco with builder's plate 2380 had chassis number 1340-? and engine number 54-722. The loco with plate 2388 had chassis 1348-1954 and engine 54-734. The latter machine is the one at Goulburn, having at some point exchanged engine covers (and plate) with the other. The engine fitted to these locos was a 2-cylinder Type 2D built by the National Gas and Oil Engine Company.

Paul Simpson 9/82

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD Albion Park N.S.W 610 mm gauge .

(See LRN30)

Trackwork.

The local firm of quarrymasters, Cleary Brothers, were forced to postpone the construction of the main line culvert over the NE swamp on 30 September due to a period of heavy rainfall. The completion of the civil engineering project is all that stands in the way of the last link in the main

line circuit at Albion Park.

When an attempt was made earlier this year to carry out culvert construction under similar weather conditions the earth moving equipment was bogged for a considerable period!

By early October work was well advanced on the construction of the main line points in the NE segment of the property which will form part of the loco turning triangle. Although the museum has a considerable quantity of 45 lb main line point frogs there is a shortage of mating long point blades. Chairman Brian Holmes has overcome this problem by machining blades as required on the local technical college planing machine.

Rollingstock.

The second of a pair of long wheelbase drop centre bogies was fitted to former rail motor trailer P119 on 4 September. After several adjustments were performed, this vehicle was able to make clearance tests on the main line on 25 September.

Although the bogie had been structurally completed for some months, the fabrication and fitting of brake rigging prevented the early testing of P119.

This former Queensland rail motor trailer has been lowered to a degree where only one side step is required at each door for ground level loading.

By early October one side of former Melbourne cable tram trailer No.430 had been restored externally and painted with the initial coats of brown and white. At the same time work was proceeding on the two end bulkheads while 14 of the 20 window frames had been restored and refitted to this 92 year old vehicle. Over the next few months the split side panels will be replaced by marine ply on the remaining side and the rotten window sill piece removed and new members fitted.

Locomotives.

Combination Davenport loco (1517/1596 of 1914/1917) did not perform with its usual efficiency during the September steaming day. The society is fortunate in recently having a retired marine engineer join the museum so this loco is at present receiving a major professional "tone up".

Valve surfaces are being lapped in, valve spindle rods and gland boxes overhauled and steam cocks reseated. The loco's performance should soon be comparable with that of the 1920s when it worked on the Cordeaux Dam construction west of Wollongong.

Boiler certificates were renewed in July during the annual ticket inspection and the inspector was also able to give approval to the condition of the barrel and tube plates of the boiler of "Burra", the 0-4-0ST 2 ft gauge loco (R&W Hawthorn Leslie No.3574 of 1923) once used at Corrimall Colliery.

Steaming Days.

The ILRMS again plans to hold steaming days each Sunday and on most public holidays between Christmas and Australia Day 1982/3. Visitors can obtain further details by phoning 95.1776, 71.3707 or 32.2488 (all STD 042).

Ken McCarthy 10/82

LACHLAN VINTAGE VILLAGE, Forbes 610 mm gauge

(see LRN 22 p.8)

The Forbes Shire Council has placed the entire village tourist complex up for sale by tender. This includes the 2 ft gauge railway and three locomotives as well as some standard gauge ex-NSWGR locomotives and carriages.

The narrow gauge locos are:

2	0-6-2T	Bundaberg Foundry	4	1952	Requires boiler repair
Alice	0-4-2T	John Fowler	16339	1925	Believed to require repair
	0-4-2T	John Fowler	16341	1925	Derelict

There is an assortment of 2 ft gauge rolling stock including two four-wheeled passenger carriages.

The Shire Council are hopeful that the Vintage Village should continue as a major tourist attraction in Forbes, but previous patronage has been disappointing. It is believed that the Council has previously rebuffed an approach from a group from the Waringah Shire that showed interest in purchasing some or all of the complex for relocation elsewhere.

The Weekend Australian 6-7/11/82; Peter Neve 11/82

QUEENSLAND

CSR LTD, Goondi Mill 610 mm gauge

(see LRN 19 p.4)

On 30 September, 7 E.M. Baldwin 4wDH 8002-1-8-78 was seen shunting full bins while 1 Motor Rail 4wDM 10219 of 1950 was being used by the navvies to shunt during sleeper loading operations.

Graeme R. Prideaux 11/82

CSR LTD, Hambledon Mill, Edmonton. 610 mm gauge

(see LRN 18 p.4)

During the last week in October, while on the Green Hills line to the east of the mill, a fire broke out on Clyde 0-6-0DH number 5 (58-190 of 1958), apparently as a result of a transmission oil leak. The fire brigade soon arrived at the scene but were unable to be of much assistance. The loco is reported to have burned for 50 minutes. Serious damage took place to the cab, wiring, brake fittings and fuel tank, although the engine escaped serious

damage. The locomotive was soon back in the loco shed for rebuilding and it is hoped that it will be back on the road by the end of November.

As a result of the motive power shortage at Hambledon, a locomotive was sent from Victoria Mill. This was Baguley/Drewry 0-6-0DM *Seymour* (2392 of 1952).

David G. Bailey 11/82.

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 30 p.8)

Hudswell Clarke 0-6-0 plus tender *Homebush* (1067 of 1914) provided passenger service again during Ingham's annual Maraka Festival when on Saturday 11 September the Decauville coach was operated between the median strip of the main street to the loop past Gilroy College.

Graeme R. Prideaux 11/82

FAIRYMEAD SUGAR CO. LTD 610 mm gauge

(see LRN 30 p.8)

Fairymead's new bogie diesel loco was observed during September. Numbered 82, it is a model DH28B B-B DH and carries builder's number 10048-1-6-82 of 1982. Painted in the Fairymead livery of Maroon and Yellow, it differs from the usual bogie Baldwin design in having front and rear cab windows which slope outwards.

A small track jack was delivered last year. This is a self propelled Gemco product, builder's number R814-2037-81.

E.M.Baldwin 0-6-0DH 70 (3406-1-7-70 of 1970) is believed to have been derailed several times this year, at least once ending up upside down in a creek (possibly the accident referred to in the last issue). In September it was running around without engine compartment doors from one side, which were being repaired in the loco shed following accident damage.

D.J.Mewes 9/82

THE HAUGHTON SUGAR CO.LTD Invicta Mill Giru 610 mm gauge

(see LRN 18 p.4)

A new bogie Baldwin diesel-hydraulic has been delivered this year and is named *Burdekin*. Builder's number is unknown at present. This loco is larger than the older E.M.Baldwin B-B DH *Selkirk* (6750-1-8-76) and was paced at 35 kph. The bogie locos were noted hauling up to 197 bins. There have been recent problems with derailments and many damaged bins were noted at the mill and on the scrubland stretch of line between Clare and Dalbeg. One suggestion is that in spite of the excellent track standards, the derailments may have been caused by the speed of the new loco.

Bins in use have roller bearings and Willison auto couplers. Other items of rolling stock seen were a 5.5 tonne weighbridge test vehicle, a six-wheel poison tank car and a six-wheeled brake wagon not previously recorded.

The former Woodstock line has been closed beyond Shirbourne for some time and a six-road transfer yard has been laid at Shirbourne for road trucks. Semi-trailers are used to bring cane from the Palm Creek area direct to the mill from "dump" sidings.

J.Armstrong 9/82 via G.Bond

CSR LTD, Kalamia Mill 610 mm gauge

(see LRN 18 p.4)

During September, the former *Seaforth* (Baguley/Drewry 0-6-0DM 2514 of 1954) was noted out of use. It has now lost its engine. Com-Eng 0-6-0DM

Kalamia (A1409 of 1955) is retained as spare loco. E.M.Baldwin B-B DH locos *Norham* (5383-1-7-74 of 1974) and *Seaforth* (7280-1-9-77 of 1977) are referred to as the sugar locos and are fitted to haul the large 1067 mm gauge VSO and VAKS bulk sugar wagons on the dual gauge track between the transfer yard at Brandon and the mill. This track has been reconditioned for the 63 tonne gross wagons. 1067 mm gauge match trucks are used with the QGR bulk sugar wagons. There are two of these, the frames of C17 type loco tenders.

Bins have roller bearing axleboxes but retain the old hook and ring type couplings. Cast steel rings have been introduced to lessen distortion.

J.Armstrong 9/82 via G.Bond

LIONS CLUB OF INGHAM 610 mm gauge

(see LRN 20 p.6)

The John Fowler 0-6-0TT (8766 of 1900) which has been stored at Solari & Sons Engineering Works for some time has been offered for sale. Formerly Victoria Mill's *Perth*, the loco was placed in the Ingham Kindergarten in 1964 after withdrawal as Macknade Mill number 2. In 1979, it was removed to Solari's for renovation and placement at a park in Trebonne.

The loco is described as capable of restoration but requiring repairs to be returned to working condition. Tenders should be lodged with the Secretary, PO Box 217, Ingham, by Friday 10 December 1982.

Weekend Australian 13-14/11/82

LIONS PARK, Brandon 1067 mm gauge

(see LRN 8 p.8)

Avonside 0-6-0T 2043 of 1930, formerly *Airdale* of Pioneer Mill is still to be found in this park adjacent to the Bruce Highway. It is painted green with

red siderods, handrails, running board edges and buffer beams.

J.Armstrong 9/82 via G.Bond.

MOSSMAN CENTRAL MILL CO. LTD 610 mm gauge

(see LRN 26 p.10)

The delights of the "Ballyhooley Steam Express" were sampled in early November. Interest was sustained by the commentary which is given via a public address system in the carriages and by the crossing of a loaded cane train headed by *Mossman* 0-6-0DH Com-Eng B1719 of 1957.

Two trips per day are run and the loco is not overtaxed by the three coaches that are hauled. *Ballyhooley* Bundaberg Foundry 0-6-2T 6 of 1952 is fitted with natural gas firing and the roar of the gas burner is sufficiently loud to prevent much conversation in the carriage behind the locomotive as well as preventing the sound of any exhaust beat being heard.

The train was quite well loaded, but it was perhaps unfortunate that the authentic Ballyhooley Steam Express travels in a completely opposite direction to Ballyhooley.

Day coach tours from Cairns feature the Ballyhooley as part of the trip, but perhaps better value is to hire a car in Cairns enabling "motorcading" of the train and/or viewing other cane tramway operations around Mossman and Cairns.

Graeme R. Prideaux 11/82.

MULGRAVE CENTRAL MILL CO.LTD, Gordonvale 610 mm gauge.

(see LRN 18 p.6)

On a visit on 30 September, 0-6-0DM 1 (Baguley 3377 of 1953) was noted on its usual job of shunting while on shed were ComEng 0-6-0DM 5 (A1005 of 1955) and 0-6-0DH (FC3473 of 1964).

Graeme R. Prideaux 11/82.

PIONEER SUGAR MILLS LTD, Inkerman Mill, Home Hill 610 mm gauge

(see LRN 18 p.6)

Baguley 0-6-0DM 3354 of 1951 and Malcolm Moore 4wDM 1013 of 1943 still stand out of use at the south of the loco shed. E.M.Baldwin B-B DH *Iyah* (6558-1-6-76 of 1976) was noted working painted yellow with green lining and with white zebra striped buffer beams.

At least three types of bin are now in use. Roller or needle bearings are fitted but a few bins may still have plain bearings. One type of bin is fitted with fully sheeted sides.

A notable feature of the Osborne line is the large number of short loop sidings to farms. In a time where most mill centralize on fewer larger exchange

points, this area still reflects the days when each farm had its own siding.

3 ft 6 in gauge Hunslet 0-6-0T *Inkerman* No.1 (1119 of 1915) is preserved on the mill property and appears in good condition painted yellow with green lining and a silver painted steam dome.

J. Armstrong 9/82 via G. Bond.

PIONEER SUGAR MILLS LTD, Pioneer Mill 1067 mm gauge

(see LRN 29 p.8)

All locomotives were seen in service during September. *Airdale* Clyde 0-6-0DH 64-318 of 1963 has a new diesel engine and has been fitted with a soundproof cab. The ex-Aramac Tramway 0-6-0DH Walkers 583 of 1968 is still apparently used only as yard shunter.

Although much higher on a 3 ft 6 in gauge frame and wheelsets, the bins are not much larger than those seen on the 2 ft gauge. Most are still hook and ring coupling fitted with removable bins, but there are some new ones with Willison auto couplers. Other rolling stock includes three camp wagons, one primitive with rudimentary shelter and canvas blinds, on four wheels, another four wheeler of more recent construction, with a metal enclosed body and louvered vents, and thirdly a bogie vehicle with a steel body incorporating genuine windows, side and end doors, painted silver and about 40 feet long. This vehicle is possibly built on an NF underframe, and there were two other ex-ANR NF flat bogie wagons in a siding at the mill.

With the exception of the connection with the QR on which 63 tonne bulk sugar wagons are hauled, tracks are generally of light "tramway" standard.

J. Armstrong 9/82 via G. Bond.

HOWARD SMITH INDUSTRIES PTY LTD, Mourilyan Mill 610 mm gauge

(see LRN 18 p.5)

At the end of September, a Com-Eng 0-6-0DM was noted in the loco shed with cab and engine removed. The loco shed is a new one, and at the end of October, Com-Eng 0-6-0DM No.6 (AA1543 of 1960) was inside on blocks. The small F.C.Hibberd "Planet" 4wPM locomotive (3570), a Malcolm Moore 4wDM and a grass cutter are still stored in a shed in the mill grounds out of use.

The former QGR Innisfail Tramway H wagon frames in use for the haulage of bulk sugar from the mill are being painted dark grey following overhaul at the mill workshops. The running numbers (e.g. 78) are being stencilled in white on the left side of the timber panel near the headstock.

Graeme R. Prideaux 10/82.

SOUTH JOHNSTONE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD, South Johnstone Mill 610 mm gauge

(see LRN 30 p.17)

A new E.M.Baldwin B-B DH was seen on 30 September hauling empties at Gibson Road. Although builder's number is not known, the loco was noted as carrying the name *Liverpool*. This is a new departure for South Johnstone, as previously locos have been numbered only (although the former Innisfail Tramway locos have kept their names on the cab rear). Veteran 0-6-0DM locomotives 9 (Baguley/Drewry 2395 of 1952), 10 (Baguley 3390 of 1954) and 15 (Baguley/Drewry 2520 of 1954) all appear to be still in service, although 14 (Baguley/Drewry 2396 of 1952) was engineless in the shed.

The new bogie Baldwin loco is probably the one which was observed on a truck heading north at Cardwell on 6 August. Although the loco was covered by a tarpaulin, it could be seen to have black bogies with yellow lower body panels.

Graeme R. Prideaux 11/82.

TOWNSVILLE HARBOUR BOARD. 1067 mm gauge

(see LRN 27 p.11)

Both the new unit ST5 Clyde Model GL22C-2 Co-Co DE 81-999 of 1981, and the Com-Eng 0-6-0DH F1029 of 1958 were noted at work on 17 July, following the commissioning of the new terminal arrangements. ST5 rests on a short siding beside the tippler when not working and looks quite attractive in its green and yellow livery.

Graeme R. Prideaux 11/82.

TULLY CO-OPERATIVE SUGAR MILLING ASSOCIATION, Tully Mill. 610 mm gauge

(see LRN 30 p.17)

All locomotives were noted at various locations during June. Locos are parked in the open at the mill and there is an outdepot at El Arish, where at least one loco is usually stabled.

The mill has three E.M.Baldwin 0-4-0DH locos used mainly for navvy and permanent way work. These, No.1, No.2 and No.3 are builder's numbers 6-1064-4-2-65, 6-1064-3-2-65 & 6-1064-2-2-65 respectively. However, it appears that there may have been some exchange of numbers or components, as No.1 & No.2 appeared to have interchanged builder's plates when noted this year. No.2 was seen without its engine in July, while No.1 differs from the others in having its identification in bright red on the cabside.

All the main line locomotives seem to have had some kind of overhaul and repaint during the slack season with the exception of No.9, a Clyde 0-6-0DH (DHL4 of 1954), which is the standby unit, although it is used on navvy trains. Also used on navvy trains occasionally as well as main line duties, is No.8, a John Fowler 0-6-0DM (21912 of 1937) rebuilt by E.M.Baldwin (590-9-63) in 1963. All the remaining locos are Com-Eng 0-6-0DHs.

A new E.M.Baldwin B-B DH loco is expected to be delivered before the start of the 1983 season. It is anticipated that it will be used on express duties from El Arish and other areas to the mill. Some loco drivers have expressed doubts as to the use of such a large unit on the Tully system given the large number of light sidings. However, its haulage power will be useful in the El Arish area where two Com-Eng diesels were seen lifting a long train from the outdepot loop, one at each end of the train, during September.

New track has been laid at the southern throat of the yard. A connection to the new yard on the site of the former Golf Course has been installed and spiked. It is believed that the new yard will be in use for the 1983 season.

Graeme R. Prideaux 11/82.

SOUTH AUSTRALIA

AUSTRALIAN NATIONAL RAILWAYS, Port Augusta. 1067 mm gauge

Sandfly, Baldwin 0-4-0ST 7860 of 1886, preserved on the station platform here since 1959, has been removed from here for return to Darwin. The loco had been on the North Australia Railway from construction days in 1887 to withdrawal in 1950, first being used by contractors C.& E.Millar.

Leon Oberg 11/82.

NATIONAL TRUST MOONTA BRANCH, Wheal Munta Mining Museum, Moonta. 1600 mm, 610 mm & 457mm gauge

(PO Box 23 Moonta 5558)

(see LRN 25 p.15)

By September 1979, a comprehensive folk collection had been established in the large brick school building which had housed up to 1100 pupils at one time during the period 1878 to 1968. At this time about 50 metres of dual 2 ft/l ft 6 in track had been constructed adjacent to the former school building together with pithead and associated gear to demonstrate some aspects of surface transport in the Moonta copper mining field between 1861 and 1923. In addition depot shed and 5ft 3in gauge track were ready to receive the restored double deck horse tram which had worked on the East Moonta & Hamely Flat to Moonta Town & Moonta Bay tramway until 1931.

Recent contact reveals that the narrow gauge mining light railway at "Wheal Munta" (Cornish for Moonta Mines) has been considerably extended and, since March 1982, visitors have been able to ride in modified rail tubs and tip wagons on this railway behind an internal combustion loco (ex Bristle, Maylands, Perth - Ed.)

The horse tram has been transferred from the covered area in the former school playground and is now housed in the new depot shed beside the narrow gauge railway. Long term plans still envisage relaying a portion of the former street tramway, which passed the school boundary, to enable the horse tram to work a limited tourist service.

Ken McCarthy & Tony Madden via K.McC 10/82.

PICHI RICHI RAILWAY PRESERVATION SOCIETY, Quorn 1067 mm gauge

(see LRN 13 p.21)

Clyde 0-6-0DH NC2 has been moved from Port Augusta to Quorn. This loco was one of two built in 1956 as Model DHI-110 for the Lakewood Firewood Co. in Western Australia. When their line closed, the locos were purchased by Commonwealth Railways. NC2 has been out of use for some time and on completion of external restoration it will be sent to Port Lincoln and exchanged for 2-6-0 Yx 141, which will be going to Quorn.

Leon Oberg 11/82.

TASMANIA

THE EMU BAY RAILWAY CO. 1067 mm gauge

This interesting line operates between Burnie and Melba Flat on the west coast of Tasmania and was visited in March 1982. Eleven diesel locomotives are operated and there are over 135 kilometres of track running through extremely tortuous country. About 80 staff are employed of which 30 are fettlers. There are four train crews as opposed to twelve in steam days.

Traffic is predominantly minerals with one train per day serving the zinc mines of Rosebery 114 kilometres south of Burnie. One train per week caters for copper concentrate delivered by road from Mount Lyell at Queenstown to Melba Flat, the southern terminus of the railway. In addition, a freight/mixed train operates twice a week terminating at Primrose, the railhead for Rosebery. Mineral trains are regularly made up to 1200 tonnes hauled by four Walkers diesels (11 class), although 1500 tonnes and five locos has been recorded.

Mineral trains depart Burnie about 5am weekdays returning about 3pm, a journey time of about 10 hours. Mixed trains run on Mondays and Thursdays departing Burnie at 12.30pm and Primrose at 4.30pm, arriving back at Burnie

at about 8.30pm. Maximum speed on the line is 28mph (speedo readings on the locos are imperial) with an average speed of 10 to 15 mph.

The Company has had an interesting history, once incorporating a branch to the tin mines at Waratah as well as boasting a connection with the government railway to Strahan at the once flourishing town of Zeehan. There was once a large fleet of steam locos including a total of five Australian Standard Garratts. In the last days of steam, a colourful train called the West Coaster was operated. This consisted of three ex-Government coaches painted bright two-tone blue (perpetuated on the present-day diesel fleet) complete with two matching Dubs 2-8-0 (sic) steam locos. This oddlooking ensemble carried motor vehicles, including tourist coaches, through the then, roadless west coast. When the roads came in 1961 the service was removed, and effective dieselisation took place in 1963.

In recent years the line has seen major changes. In 1964, the line beyond Rosebery was closed, only to be reopened in 1972 to cater for the expanding mining that was occurring. The line was taken over at this time by the EZ group of industries which has upgraded the operation over the last few years. The famous Pieman River bridge has now been abandoned in favour of a new one downstream of the Pieman Hydro-electric scheme. The original Rosebery railway station, a once busy yard, has also been abandoned in favour of Primrose, just to the north.

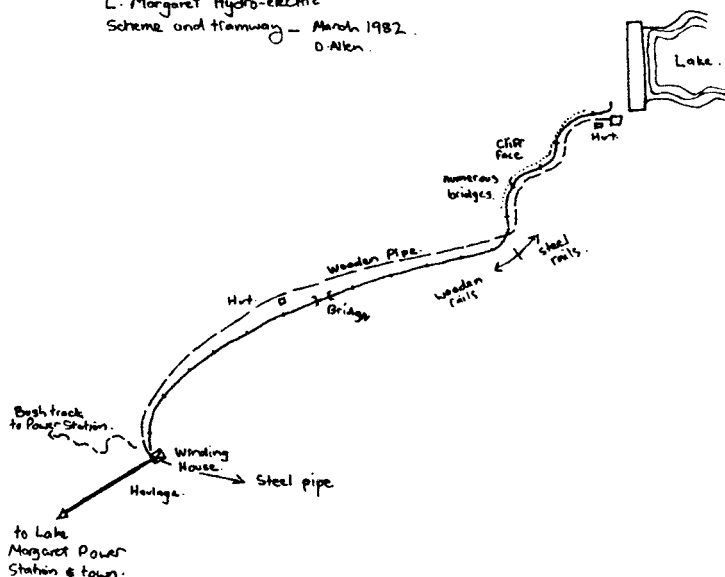

David Allen 9/82.

MOUNT LYELL MINING & RAILWAY CO. PTY LTD, Lake Margaret. 610 mm gauge

Lake Margaret was the site of the first hydro-electric development in Tasmania. (sic) The scheme was instigated by the Mount Lyell Company to supply power to their mining and smelting activities in nearby Queenstown, with generation commencing in November 1914. The facilities at Lake Margaret have remained largely unchanged although, over the years, generating capacity has been increased. Until 1964, the township had no road access, all transport being catered for by a 2 ft gauge tramway from Queenstown. This was the last passenger carrying tramway in the district, closing in 1964 with the new access road actually being built along the trackbed.

In March 1982, the area was visited and the only section of tramway still existing, from Lake Margaret township to the lake itself was walked. To reach the lake, it is necessary to ascend a steep mountain range, down which are laid pressure pipes from the lake. Today, one large pipe descends the range to the power station, a maintenance tram actually straddling the pipe. Once, several smaller pipes descended the range and a 2 ft gauge tramline climbed the range to the left of the pipes.

L. Margaret Hydro-electric
Scheme and tramway - March 1982.
D. Allen.

At the crest of the climb, the original tramline is found and this follows the pipeline to the lake. Here the pipeline reverts to the original wooden pipe built in 1914. Terminal facilities on the tramway consist of a small wooden turntable. Along this section the rails are wooden with the centre of the track planked to form what is now a rather rotten pathway. Tramline and pipe wind around a gently sloping valley with magnificent views of Basin Lake and Mount Geikie. At several points on sharp curves there were steel rails instead of wooden ones. About a kilometre from the haulage a small motorized chain-drive trolley was found and near it a rubber-tired two-wheeled push trolley - a rather odd looking device - adjacent to a shelter hut.

At approximately two kilometres from the haulage, the line which had been following the pipe on the right swung sharply under the pipe, giving little headroom and commenced to follow the pipe on the opposite side. From this point on, steel rails replaced the wooden ones, no doubt due to the increasingly rugged terrain. Up to this point only one small bridge had been crossed but now the route traversed a cliff edge and numerous high bridges and hairpin bends were encountered, all protected with handrails.

The line terminated at the lake at a distance of about three kilometres from the haulage, with the rails simply terminating after sweeping up a rock face to a lofty angle. Overall the tramway is in reasonable condition although the wooden rails are largely rotten with numerous missing sections. The tramway would appear to be seldom if ever used.

David Allen 9/82.

VICTORIA

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway. 762 mm gauge

(see LRN 30 p.18)

As mentioned at the start of this issue of LRN, work has commenced on the restoration to working order of Climax geared locomotive 1694 of 1928. The loco has been acquired from the Forests Commission of Victoria for a nominal sum. It was to be transferred to Belgrave on 23 October and a boiler examination has revealed that only a few minor repairs will be necessary. Refurbishing of the boiler for steam test early in 1983 will be followed by reconditioning of components and rebuilding of cab and tank.

A feasibility study is to be made of the operation of the 0-4-0ST Peckett (1711 of 1926) on a passenger shuttle within Lakeside yard limits. This operation would utilise the new track extension, which could be extended further towards Wright. The Peckett loco may also take part in next year's Moomba procession in Melbourne. Refurbishing of 2-6-2T 12A (Newport, 1910) is under way. It will incorporate new "front end" arrangements as fitted to 8A (Newport, 1908). However, the tapered chimney will be disguised inside the normal stack with flanged cap.

Final track work has been completed in the new Belgrave terminal, while preparations for the reconstruction of Belgrave trestle are proceeding. Carriage shops work currently involves the restoration of bogie guards van 2NC, painting of excursion carriage 1ONBH and a special project, the rebuilding of bogie cattle wagon 13NM, the last of its kind.

PBPS Monthly News 11/82, via P. Medlin; John Munro 10/82.

JIM BAINES, Yangardook Tramway, Toolern Vale 610 mm gauge

(see LRN 30 p.19).

Although built by an enthusiast for carrying friends and tourists, the tramway also has an important other use - the transport of firewood.

In addition to the locomotives, Motor Rail 4wDM 9979 of 1953 and Malcolm Moore 4wPM 1090 of 1943, there is a varied collection of rolling stock including one four-wheeled passenger coach, one bogie coach, a diminutive guards van, skips from the Wonthaggi mines, sugar cane trucks and other work vehicles.

Roger Dethridge 9/82.

RAY McKINNON, Daylesford 610 mm gauge

(see LRN 30 p.19)

Plans to build and operate a pleasure line along the shores of Lake Daylesford have not proved to be practicable. Instead the railway will be located at the rear of the hotel being restored as a tourist attraction which includes a chamber of horrors, old car collection, and possibly mini-golf. The proposed track will comprise a small oval with sharp curves of about 27ft radius. The 0-4-0PM steam outline loco has a Holden engine, automatic gearbox and chain drive. The two existing bogie carriages with seating capacity for 32 people each are considered too long for the curves and will be halved. The bogie wheels are car stub axles, hubs and wheels with a rail tyre fitted. Track laying is expected to start soon using track from Queensland with steel sleepers in straight sections and timber sleepers in curves. Earth works are completed and the opening ceremony is expected before Christmas.

Keith Vanstan 10/82.

WOMBAT-GULLY TRAMWAY, Leneva 457mm gauge

(see LRN 13 p.22)

Steam is alive and well at this site near Wodonga owned by a group of six local enthusiasts. The tramway consists of a 400 metre oval as well as Ways & Works shed, Turntable, Carriage Shed, Engine Shed, Goods Shed, Station and Water Tank.

Two locomotives have been built for use on the line and a third is under construction. *Anna* is an 0-4-0T Geared, and is equipped with a Marshall boiler (1874) and powered by a Ruston steam engine of 1920 vintage obtained from a steam shovel along with a steam pump from a logging operation in the Otway Forest near Colac. It weighs 3 tons and is rated at 10 hp, being geared down to 1 in 5 to climb a steep section of line rising at 1 in 14.

Wombat is a 2 ton petrol loco powered by a Ford Prefect motor and is geared down to move 12 tons. This is a four-wheeled loco. Under construction is No.3, a steam loco with a 2-4-4 wheel arrangement powered by a Robey boiler and steam stoker engine.

A display of twelve assorted goods vehicles are to be seen. Trains are run with *Anna*, two homebuilt carriages with ex-VR fittings and a brake van made from a converted horse-drawn bread van.

The railway is open on the last Sunday of the month from 1pm to 5pm. In addition, the Border Oil and Steam Club conducts its annual rally at which many old steam and oil engines are shown operating, at the Tramway site on Easter Sunday. The tramway operates on Easter Saturday and Sunday from 10am to 5pm with two trains operating on the Sunday to cater for the large number of visitors.

David Jehan 10/82.

WESTERN AUSTRALIA

PILBARA RAILWAY PRESERVATION SOCIETY, Seven Mile Camp, Dampier. Gauges various.

(see LRN 15 p.15)

Latest addition to the collection is ex-Hammersley Iron standard gauge Alco Bo-Bo DE C-415 number 1000. This loco was built in the USA in 1966 and was used as a demonstrator before being shipped to Dampier via A.E. Goodwin in Sydney in 1968. It is preserved in operating condition.

Leon Oberg 11/82.

OVERSEAS

INDONESIA

Estate Railways of North Sumatra.

Bob McKillop recently visited the Bah Bolon River delta some 100 km south of Medan in connection with a new irrigation and flood control project. Many extensive tramway systems operate in the large estates in the area. Most likely gauge is 700 mm although some lines may be 601 mm or 600 mm. There are also some 1067 mm gauge operations.

Adolina PTPM, Pergaungan is an oil palm factory beside the main southern highway. Strict security is enforced and special permission is required to enter the yard and take photographs. Most fruit comes to the factory by road and is transferred to rail in the yard, but there is at least one line serving estate areas. Four diesels were noted in the factory yard on 9 August.

SOCFIDO, Rampat. This factory is also adjacent to the main southern highway and a diesel hauled train was noted heading to the factory with oil palm fruit bunches.

Just to the south of the Bah Bolon project area runs the Limahpuluh to P. Siantar Road which runs through a number of oil palm estates which still operate steam power. Colleagues photographed No.4 of the G. BAYU estate which is a well cared for tender/tank loco possibly by Orenstein & Koppel.

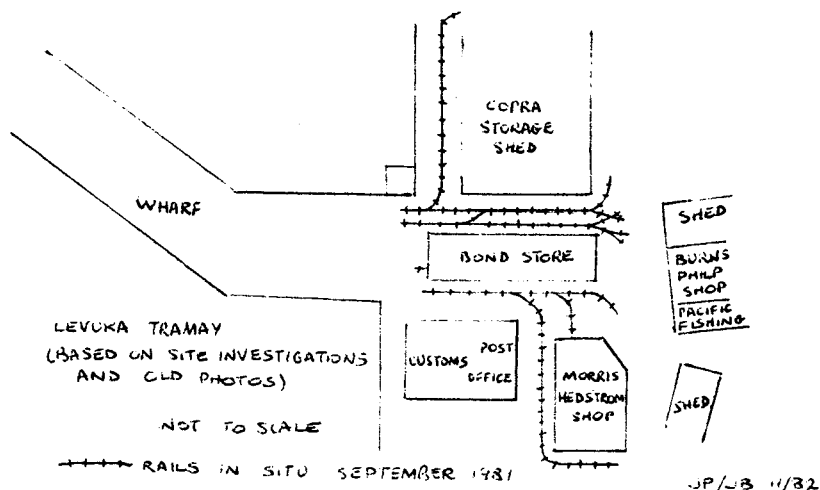

Uniroyal, Kisaran is a 24000 ha rubber estate with a 95 km tramway system. There are six main branches each served by a daily train of up to 15 tank cars which collect latex and bring it into the central factory. There are 15 diesel locos in service, two of which operate the 1067 mm gauge spur lines from the PJKA, while others are of narrower gauge. Most are Ruston & Hornsby 4wDMs, but other locos noted were No.11, Brookville 2582, a four ton unit on 1067 mm gauge, and No.15, Schottler 4140 of 1978, an 8-ton 80 hp unit. There are 115 tank cars in service and the system is backed by a well equipped workshop. Unfortunately, 16.5km of the tramline has deteriorated through lack of maintenance and faces closure. The boiler and frame of an 0-6-0 steam loco supposedly from a Java sugar estate is in the workshop.

Bob McKillop 9/82

FIJI

LEVUKA TRAMWAY

A manually powered jetty tramway has been used at Levuka, the former capital of Fiji. The rail is still in situ and when last examined in September

1981, a museum contained in the old Morris-Hedstrom shop near the wharf was about to be opened. Outside one of the wooden-framed trolleys used on the line was anything else of railway interest.

John Peterson 9/82.

MEETINGS

SYDNEY

There will not be a December Meeting in view of the November Tour. The February Meeting will feature a slide show on the Erica District in Victoria together with an informed commentary from Mike McCarthy. Location:- Government & Transport Club, Regent St. Sydney. Parking available in Regent St and Botany Rd.

Date:- 27 January 1983.

Time:- 7.30pm.

MELBOURNE

Norm Houghton has been busy over the past couple of years researching the tramways and sawmills of the Murrundidi District of Victoria between Yea and Mansfield. Norm will be speaking on his findings at the December Meeting.

Location:- Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

Date:- 9 December 1982.

Time:- 8.00pm.

Deadline for next issue: 20 February 1983.

NEW ADDRESS FOR LRN

Please note that from now on, all correspondence relating to Light Railway News should be addressed to: John Browning P.O. Box 105 Mackay 4740 Queensland

Congratulations To The Light Railway Research Society Of Australia On Its Twenty-First Birthday In February 1983!

footnote -

Actually the Society's 21st anniversary occurred in February 1982.

TYERS VALLEY CLIMAX RESTORATION

The project to restore this locomotive by a group of Puffing Billy Preservation Society members has been given the full support of the LRRSA Council. As the locomotive has been used as the official logo of the Society for many years, an attachment to it will be felt by many Society members. Accordingly, an appeal has been launched by Council to raise money for restoration costs. Donations can be sent to The Secretary, LRRSA, PO Box 21, Surrey Hills, Victoria 3127.

The Council has voted the sum of \$100 to begin this appeal.

RESEARCH COLUMN

LAKE HART SALT WORKS

This works was situated 120 miles north-west of Port Augusta, beside the

Trans-Australia Railway. It operated from 1917 to 1933. Would any members who have any information about the operation or any photographs of it please contact M.J.Wright, 11 Swaffer Street, Port Lincoln 5606, South Australia.

SAILOR SALT CO., Linga.

(see LRN 31 p.3)

Paul Simpson's comments on this company prompted me to delve into some notes extracted from a most unlikely source, namely the local newspaper at Yea, a town sixty miles north of Melbourne.

The Managing Director of Sailor Salt Ltd, 59 William Street, Melbourne, was Mr. Fred Purcell of Yea, a local businessman. In July-August 1923, the Company advertised tenders for the supply of 23,000 red gum sleepers to use on the Linga tramway, plus timber for the buildings to be erected at Pink Lakes. The tender was widely advertised, and the contract was awarded to the Molesworth Red Gum Sawmill, just down the road from Yea. This mill supplied a certain number of sleepers, 4 ft long by 6 in x 4 in over the next year or so before certain financial skulduggery came to light.

In the meantime, Fred Purcell was enthusiastically pushing the interests of the Company, and in October 1924 exhibited in his shop window numerous enlarged photographic views by Kodak Ltd depicting the Lake, salt stacks, the tram line and other workings. (Where are these photographs now?)

Construction of the tramline continued throughout 1924 until late in October 1924, when all work ceased, due, so the press stated, "to a great deception over the sleeper contract." The Company did not receive all the sleepers contracted for, and had to beg the Victorian Railways for sufficient sleepers to complete the line. The VR was loath to entertain the sale of their sleepers to the Company but finally consented to the deal after several conferences.

The Yea press fell silent on the sleeper scandal after this, and all this writer knows of the Company's subsequent history is that one of the Mount Lyell concerns bought the business.

Norman Houghton (Archivist, Geelong Historical Records Centre)

FIELD REPORT - Tasmania

LOONGANNA AND BLACK BLUFF.

The remains of two wooden-railed bush tramways were recently inspected in an area about 50 km south of Ulverstone.

The tramway at Loonganna appears to have been dual gauge, with the

wider gauge being 48 inches. It has been traced for about one kilometre up the southern side of the Leven River. A forestry vehicular track now occupies most of the old track bed. Lengths of old rail with spikes can be seen at the side of this track where they have been pushed out of the way. The line crossed the Leven River near its lower end and proceeded downstream for about 200 metres to what appears to have been an unloading bank. Possibly the logs were transferred onto a road vehicle, possibly horse or bullock drawn, for transport down the main Loonganna road to a sawmill about 10 km away. No sign remains of the bridge, which in addition to crossing the Leven River would also have crossed about 50 m of low-lying swamp on the southern side. The rails protrude over a 2 m high bank on the northern side. Earthworks exist in the form of approaches where it crossed Tor Creek, that being the limit of exploration so far.

The tramline at the north-east foot of Black Bluff terminates at an old sawmill where among the remains are a few wheelsets, the gauge being 36 inches. This line has only been followed for about half a kilometre to where it passed over a creek. The spanning logs are still in good shape and in place. About 25 m further on the trackbed is obliterated by a bulldozer track.

C.W Goodwin 12/82.

NEW SOUTH WALES

BLUE CIRCLE SOUTHERN PTY LTD, Portland. 1435 mm gauge

(see LRN 31 p.7)

With rail traffic now reported to be down to three trips per week, excessive manning levels for the steam locomotives and expected non-renewal of boiler certificates are given as reasons for the replacement of steam by a leased AIS B-B diesel-electric loco. (BHP are a minority shareholder in Blue Circle).

On 20 October, D10 (English Electric Australia A007 of 1956), in orange livery, was seen outside the shed. Adjacent on a spare line was a rather dilapidated black-painted 2-6-2ST 2605 (Dubs 2794 of 1892) minus the top half of its chimney. This is officially the spare loco.

Half inside the dry single road shed was 0-6-0T 3 (Andrew Barclay 1234 of 1911), still usable. At the rear of the shed on blocks and with wheels removed, was 0-6-0T 5 (Andrew Barclay 1470 of 1916). This loco is reported to have been in a similar state for the last five years. Tracks extend around the old works, but most are disused. The quarry is worked by trucks. Some old steel 4-wheel hopper wagons are out of use around the works.

The line to Portland NSWGR leaves the works on a gradient and climbs

through a deep cutting passing under the Mudgee road before descending and crossing on the level, a road to the station. It passes around the back of some houses before entering the station yard opposite the platform.

R.J. Pearman 11/82.

BOB HAGUE and BRIAN PINE, North Richmond. 610 mm gauge

(see LRN 31, p.6)

The equipment observed in a compound at North Richmond is believed to belong to these two gentlemen. The locomotives are believed to be 0-4-2 Sharp Stewart 4619 of 1900 ex Isis Mill number 9 (see LRN 8, p.3) and the remains of 0-4-2T John Fowler 20284 of 1930 ex Qunaba Mill, stored at the Albion Park site of the Illawarra Light Railway Museum Society for several years.

Bruce Belbin 12/82.

DORRIGO STEAM RAILWAY & MUSEUM 1435 mm gauge

(see LRN 18, p.2)

Andrew Barclay 0-4-0ST *Juno* (1739 of 1923) passed its annual boiler examination again this year without any repairs being necessary. Consideration is being given to putting forward other locomotives for boiler certification including the ex R.O.D. 2-8-0 locomotive 24 (Great Central Railway, 1918) formerly operated by J & A Brown and Avonside 0-8-2T 14 (1559 of 1908) ex Peko-Wallsend.

Dorrigo Steam Railway & Museum Newsletter 11/82.

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD Albion Park, NSW. 610 mm gauge

(see LRN 31, p.8)

Trackwork.

The local quarry firm of Cleary Brothers carried out the culvert and earthworks across the swamp at the north-eastern corner of the leased museum property on 26 and 27 October. The culvert and approaches extend to 40 metres and required around 200 tonnes of gravel in its construction as well as 600 mm and 450 mm diameter pipes for the water courses and flood channels.

Tracklaying on this section commenced on 30 October and the mainline circle was joined at 5.30pm on 27 November. Over the following two Saturdays the new track was aligned and ballasted which enabled steam trains to work around the circle on the December steaming day of Sunday 12th. With an end to "pushpull" working, two cars can now be hauled in passenger service by the steam locomotives.

disturb the original appearance and construction.

Locomotives.

Hudswell Clarke (1706 of 1939) 0-6-0 locomotive *Cairns* was turned by a mobile crane on 23 November. After operating in the one direction since 1979, this action was taken to equalise wheel wear. The boiler of Perry 0-6-2T (7967/49/1 of 1949) ex Tully 6 was taken into the Port Kembla boiler shop of Australian Iron & Steel during early December. This was delivered to the steel plant in June 1981 for the construction and fitting of a new firebox, but the boiler had stood in the boiler shop yard since that date.

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford. 610 mm gauge

(see LRN 29 p.7)

The Society's annual Christmas barbecue at Woodford was marked by the operation of a "mixed train" hauled by 0-6-2T Bundaberg Foundry 5 of 1952. The cab interior of this loco has recently been repainted. Vehicles hauled consisted of three ex-Douglas Shire Council four-wheel wagons and ex-QGR rail motor trailer PL111, which has been operating successfully in service for several months now.

On the same day, four-wheeled petrol loco DL3, built by Alwyn Zinn of Ipswich in 1974, arrived at the site. It had been stored at a member's home in Brisbane for a number of years.

An appeal has been launched to raise funds to purchase land recently used as the storage compound site. Most of the remainder of the site currently used by the Society will be made available under a Council lease and the owner will allow an easement over the remaining portion of the trackbed currently occupied as part of a development "package" worked out between the owner, Society and Caboolture Shire Council.

Editor 12/82

CSR LTD, Kalamia Mill 610 mm gauge

(see LRN 31 p.12)

ATC 50 track inspection vehicle is on order for the mill from Plasser Australia.

ARHS Bulletin Supplement 11/82 via G.Bond.

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 31 p.10)

Victoria's new tamper is a Plasser Australia KMX 12T with builder's number 255 of 1982. It is mounted on two four-wheel bogies, weighs 16 tonnes, and has a top speed of 40 km/h. As with the old machine (Plasser 10 of 1970) this one is referred to as "PACKER".

The loco stationed at the McKell's Depot for most of the crushing season has been Clyde HG-3R 0-6-0DH *Canberra* (65-433 of 1965) plus one of the four Clyde brake wagons.

C.J.Hart 11/82.

J. W. SHOESMITH, Corinda 610 mm gauge

Recently discovered at a suburban location is a garden railway with a small diesel locomotive. The U-shaped line was built for materials handling in connection with a palm-growing business, Sherwood Forests Pty Ltd, but revenue-earning service has been infrequent of late. The locomotive is Bundaberg Foundry 11 of 1953 a "Bundaberg Jenbach" 4wDM, fitted with a single cylinder Jenbach engine. Basically a mining locomotive type, this example was built with a cab for the Haughton Sugar Company, Invicta Mill, Giru. After being out of use for some years, it was sold for scrap and arrived at the Simsmetal Yard at Northgate Brisbane in 1973, after which time it disappeared. It has been fitted with a new cab and a replacement front grill. A number of CSR-type steel cane truck flats comprise the rolling stock, and the line boasts a stub point to serve a siding at the bottom of the garden. Editor 12/82.

MORETON CENTRAL SUGAR CO., Nambour 610 mm gauge

(see LRN 30 p.11)

Late in the 1982 crushing season, Commonwealth Engineering diesel *Kalbo* (H1022 of 1958) returned to service as an 0-6-0DH. Fitted with a 235hp engine, this locomotive is now the equal of any on the mill's roster. There has been little alteration to the overall appearance of the loco with the exception of the new radiator grille.

New tyres will be fitted to those main-line locos which did not receive them last slack. Malcolm Moore 4wDM 1058 of 1943 was sitting in the dirt in the mill yard minus wheels. This loco, named *Jimpy*, was carrying the name *Jumpy* for a couple of years recently, but has reverted to its former name.

In the wagon repair shops, a timber body was being built on a bogie flat car. Presumably the new vehicle will be used by the navvies, and will be a pleasing contrast to the "tin shed on wheels" pattern adopted by a number of mills in recent years.

Editor 12/82.

SOUTH JOHNSTONE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 31 p.15)

The Hockey Engineering brake wagon supplied new this year was noted in the mill yard in mid-November, on blocks with the wheels removed. It seems to be narrower than the other brake wagons.

C.J.Hart 11/82.

THE SUGAR BOARD, Lucinda Bulk Sugar Terminal 610 mm gauge

(see LRN 18 p.8)

During the 1981-2 slack season, the cab of the Commonwealth Engineering 0-6-0DH (G1023 of 1958) used here for shunting was raised.

C.J.Hart 11/82.

SUNCOAST PIONEER MUSEUM, Mudjimba Beach 610 mm gauge

(see LRN 22 p.16)

John Fowler 0-4-2T *Petrie* (19930 of 1933) has been removed to an area behind the museum building. No restoration work has been carried out on this locomotive.

Editor 12/82.

SUNSHINE PLANTATION, Forest Glen. 610 mm gauge

(see LRN 22 p.16)

When visited early in December, steam outline 4wDH SUGAR CANE TRAIN No.5 (Ruston & Hornsby 398072 of 1957 rebuilt E.M.Baldwin 8350-1-12-78) was handling a train of twelve four-wheeled cars with ease around the sharply-graded circuit. Spare engine with a train of four cars at the loco shed was unidentified Ruston & Hornsby 4wDM SUGAR CANE TRAIN No.3, while under overhaul in the shed in preparation for the Christmas tourist rush was 4wDH SUGAR CANE TRAIN No.4 (Ruston & Hornsby 379072 of 1954 rebuilt E.M.Baldwin 7807-1-11-77). The remaining five passenger cars were stabled behind this loco. A fourth loco, Ruston & Hornsby 4wDM 371385 of 1954 is on display beside the track with a cane bin as part of a sugar industry exhibit. The chassis of Ruston & Hornsby 4wDM 285338 or 285341 of 1949 is retained on site as a possible source of spare parts, but is not accessible to the public.

John Fowler 0-6-0T *Coolum* (16036 of 1924) on display here, has received a repaint recently and looks to be in good condition.

Editor 12/82.

SOUTH AUSTRALIA

HERMITAGE CHILDRENS PLAYGROUND, Port Lincoln 1067 mm gauge

On 11 November ex Lakewood Firewood Co. and Commonwealth Railways Clyde Model DHI-110 0-6-0DH NC2 was placed in this playground beside New West Road by the Pichi Richi Railway Preservation Society. The diesel, painted dark green and light yellow, replaces 2-6-0 Yx 141, which was removed the same day for restoration at Quorn.

M.J.Wright 11/82.

VICTORIA

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 31 p.21)

In stripping down 2-6-2T 12A (Newport, 1910), some severe local pitting has been found on the outside of the boiler shell at the firebox end. A D.L.I. examination will be necessary before action can be determined. Restoration work on the Climax geared loco 1694 of 1928 has been progressing with the manufacture and donation of new footplates which run either side of the boiler. The water tank has been stripped and lifted off for cleaning and inspection. This will enable repairs to be carried out to the timber flooring. The boiler has been stripped of fittings and has been needle gunned ready for priming. The eighteen condemned boiler tubes have been removed.

Remember the LRRSA appeal to raise money for the Climax restoration (see p.1 of this LRN).

PBPS Monthly News per A.Winzenried.

STATE ELECTRICITY COMMISSION OF VICTORIA, Morwell 900 mm gauge

(see LRN 14 p.19)

Some rationalisation of this system is expected in the near future. Currently coal is removed from No.12 and No.8 coal dredges by rail, and also conveyed from the Yallourn loading station to the Morwell ditch bunker. However, the rail system serving No.12 dredge is due to be replaced by conveyors in the 1982/3 financial year, and No.8 will similarly be replaced in the following year. In addition, a change in the working face will necessitate removal of part of the main line at Yallourn to a new site and it will certainly extend the distance to Morwell.

Main line trains comprise one loco and 13 to 15 coal hoppers dependent on type. In addition to coal hoppers, there are also approximately ten ballast wagons, several large bogie flats and three track shifters. Most of the original equipment was of German origin, and this trend has continued as similar mining of brown coal is still carried out in Germany.

With the planned reduction in rail operations, rail equipment is now on a breakdown maintenance basis and a further reduction in rolling stock and motive power is expected.

Operational locomotives are all based at the No.2 loco shed with the exception of the two workshops diesel shunters.

Loco stock and its disposition as at 20/8/82 was as follows:

8	0-4-0DM	Malcolm Moore	36	1949	Workshops shunter.
12	0-6-0DM	J.Fowler	4210049	1951	Workshops shunter.
13	0-6-0DM	J.Fowler	4210050	1951	Dismantled by Yallourn "E" power station.
14	0-6-0DM	J.Fowler	4210051	1951	P.W. loco, under repair, at workshops.
27	Bo-BoWE	Borsig/Siemens		1927	Dumped near No2 loco shed.

124	Bo-BoWE	Hitachi	101	1967	Under repair in workshops.
125	Bo-BoWE	Hitachi	?102	1967	On coal train in cut.

Locomotives numbered between 21 and 44 were 46 tons, while locos on the 100 series are 62 tons.

According to SECV records, the 42 ton locos were withdrawn from coal service as follows:

15/4/70: : 22,26,28,29,30,31,32,33,35,36,38,43.

25/6/70: : 21,23,24,25,27,34,37,39,40,41,42,44.

Locos 27,37,40 & 41 were retained for shunting and track shifting.

A KMX 12T ballast tamper is reported to be on order from Plasser Australia.

R.J.Pearman 11/82; ARHS Bulletin Supplement 11/82 via G.Bond.

WESTERN AUSTRALIA

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC., Mount Helena Gauges various

(see LRN 25 p.18)

A 3 ft 6 in gauge petrol locomotive has been donated to the Society by Bunning Brothers. This is a four-wheeled Fordsonengined unit probably built by Malcolm Moore.

OVERSEAS

FIJI SUGAR CORPORATION.

After doubling sugar production during 1973-80 to 4 million tons, Fiji in its Development Plan 8 is planning to consolidate this gain by 600,000 tons by 1985. This is to be achieved by expanding the mill capacity of the Lautoka, Rarawai and Penang Mills and the development of new cane fields on Vanau Levu to bring the Labasa Mill up to capacity. Additions are planned to the transport fleet and upgrading work will be done on transport facilities.

Fiji Sugar 3/82 via John Peterson.

PHILIPPINES

CENTRAL AZUCAREDO DON PEDRO (CADP), Nasugbu 610 mm gauge

The CADP mill at Nasugbu, Baatangas Province is the most accessible sugar mill tramway system from Manila, being some 2-3 hours drive from the capital. Unlike other Filipino mills, CADP operates a 2 ft gauge tramway system which is currently some 125 km in length.

The system is operated by a fleet of 16 diesel locomotives. On a visit to the mill on 21 November 1982, three 18-ton Plymouth locos, numbers 14, 17 and 18, were noted near the control office, together with a smaller Plymouth numbered 3. Two steam locomotives are "preserved" at the mill - No.1, a large and impressive 0-8-0TT built by Henschel (22082 of 1931) which is fitted with a large bogie tender, and a diminutive 0-6-0T (No.8), obviously of German design although builder's plates are missing. It is reported that a sister locomotive to No.8 is on display at Fort Santiago in Manila.

The sugar industry in the Philippines is generally in a depressed state and the CADP tramway system at Nasugbu symbolises that depression. The system is very run down and many lines have been abandoned. Only about 25% of cane is now hauled by tramway. CADP officials are concerned about the high cost of lorry transport and there are suggestions that the rail system should be rehabilitated. However, major problems are being encountered with maintaining "right of way" and unless negotiations resolve the conflict in the coming season, the remainder of the tramway system will probably be abandoned.

Bob McKillop 12/82.

ROSTER

BHP LTD, South Australia.

DE	01	Bo-BoDE	Clyde	56-109	1956	Standard gauge	Was shunter at Whyalla but not seen for some time. Worked Lime-Sand trains between Port Lincoln and Coffin Bay (37km).
DE	02	Bo-BoDE	Clyde	56-111	1956	Standard gauge	

The above locos are EMD Series 567C with V8 engine of 875 hp.

* Five standard gauge; one 3 ft 6 in. Narrow gauge loco works between pellet plant and blast furnace. Std. gauge locos work steelworks plus coke traffic to ANR yard. Two Cummins V8-903 engines totalling 550hp.

Fred Taylor.

MEETINGS

SYDNEY

Our February Meeting will feature a slide program and commentary prepared by member Mike McCarthy. Mike has spent several years researching the tramways around Erica, Victoria, and presents a report on these for our enjoyment.

Location:- Government & Transport Club, Regent St. Sydney. Parking available in Regent St. & Botany Rd.

Date:- 27 February 1983. Time:- 7.30pm.

MELBOURNE

Mike McCarthy will be presenting his latest findings on the tramways of the Port Albert District. He will be including material on Goodwood's line at Port Albert as well as data on Mason's line out of Port Welshpool, along with other tramway history in the area. Mike has collected together slides, photos and maps to illustrate his talk. Location:- Ashburton Uniting Church Hall, Ashburn Grove,

Ashburton.

Date:- 10 February 1983. Time:- 8.00pm.

CHRONOLOGY OF TRAMWAYS IN PAPUA NEW GUINEA & THE SOLOMONS ISLANDS

Michael R. Pearson

This is a chronological listing of tramways which are definitely known to have existed. Any additional information on these lines or on any additional tramways would be much appreciated and should be forwarded to the author at P.O. Box 263, BUKA PASSAGE, N.S.P., Papua New Guinea.

Notes on format

The listing is organised in columns giving:

- (a) Operator/owner
- (b) Location
- (c) Province (for abbreviations, see below)
- (d) Dates of operation. (Earliest known date shown in brackets if date of commencement unknown).
- (e) Gauge if known. Gauge shown in brackets is surmise based on available evidence.
- (f) Use and other comments

Province abbreviations

With the exception of the Solomon Islands, all locations are shown as belonging to a province of Papua New Guinea. These were districts before 1975.

C	Central Province, Papua
EH	Eastern Highlands Province, New Guinea
ENB	East New Britain Province, New Guinea
ES	East Sepik Province, New Guinea
G	Gulf Province, Papua
Madang	Madang Province, New Guinea
Manus	Manus Province, New Guinea
Morobe	Morobe Province, New Guinea
MB	Milne Bay Province, Papua
N	Northern Province, Papua
NI	New Ireland Province, New Guinea
NS	North Solomons Province, New Guinea (formerly Bougainville District)
WP	Western Province, Papua
WNB	West New Britain Province, New Guinea
WSP	West Sepik Province, New Guinea

Historical note

In 1884, the Germans took control of North Eastern New Guinea, and the British Papua. Following Federation in 1901, British New Guinea became a responsibility of the Australian Government in 1906. German rule in New Guinea came to an end shortly after the outbreak of the Great War in 1914. Following the Versailles peace conference, the former German area was mandated to Australia in 1921. During 1942 the Japanese took control of almost all Papua New Guinea, but with the ending of the war in 1945, Australian rule was restored. Papua New Guinea gained independence in 1975.

The Solomon Islands was formerly the British Solomon Islands Protectorate, from 1893 until independence in 1978.

A. Pre 1914

Nieu Guinea Kompagnie	Mole Island	Manus	1888	?	Phosphate. First tramway in NG.
Deutsche Handels-und Plantagengesellschaft (Catholic Mission)	Moiko Island	ENB	(1891) - Present ?	(700 mm)	Wharf to store
	Port Leon, Yule Island	C	(1891)	(3 ft 6 in)	Wharf to store
Nieu Guinea Kompagnie	Herbertshöhe	ENB	1892- 1942 ?	(600 mm)	Wharf to store. 1000 m
Nieu Guinea Kompagnie	Erimahafen- Stephansort	Madang	1893-1942	600 mm	Tobacco plantation. 16 km
Queen Emma *	Ralum	ENB	?	?	Wharf to store.
Burns Philp	Port Moresby	C	1895-1910	3 ft 6 in	Wharf to store. 200 m.
Nieu Guinea Kompagnie	Modilon, Madang (Friedrich Wilhelmshafen)	Madang	1895- 1942?	600 mm	Store and produce. 4.5 km
Nieu Guinea Kompagnie	Raniolo Plantation	ENB	1898	(600 mm)	Funicular railway
Queen Emma *	Kabakaul	ENB	?	2 ft	Wharf to store, and copra weighbridge.
Various mining companies	Woodlark Island	MB	1901- 1942?	2 ft	Wharf to store (1.6 km), and in adits. An accident here caused six deaths.
Administration & Burns Philp	Samarai Island	MB	1901-1942	2 ft	Cargo and coal to and from ships.

Catholic mission	Toriu River	ENB	1902-1917	(700 mm)	Timber/logging. Moved to Kuriendel
Administration	Port Moresby	C	1904-1918	2 ft	Wharf to store, 200 m
Societas Verbi Divini - Catholic Mission	Alexishafen	Madang	1905- ?	(700 mm)	Sawmill. 4 km. Haulage by donkeys and buffaloes.
Norddeutscher Lloyd; Administration; Nieu Guinea Kompagnie; Herrsheim & Co.	Rabaul Town	ENB	?1905 - 1942	(600 mm)	Rabaul tramway network : wharves to various stores and Administration Departments. Interconnected. 1 km.
?	Buna - Yodda	N	1910	?	Portable tramline to transport machinery to goldfield. 1 mile continuously relaid.
Administration	Port Moresby - Rona	C	1914	2 ft	Begun but never completed. Railway ordnancy.

Note: All holdings by German nationals were expropriated and sold to Australian Companies, particularly Carpenters (Nieu Guinea Kompagnie) and Burns Philp, after 1920.

* "Queen Emma" or Emma Forsayth/Kolbe ni Coe was the proprietor of a large trading empire.

B. 1914-1942

?	Dirimu Plantation	W	?	(2ft)	Copra store to Wharf. 200 m.
Administration & British New Guinea Trading	Daru Tramway	W	1917? - 1963	2 ft	Wharf to Government Store, Post Office & BNG Trading sore. 500 m.

Phone:- 058 21 8873

If you know of anyone who would like to join the LRRSA, contact the above for a membership application form.

The 1982/83 membership year concludes on 31/5/83. The 83/84 subscription remains unchanged at \$14.50 with a \$1.00 discount for early renewals. See the enclosed renewal form for full details.

If you change your address or have any other membership problem, please WRITE DIRECTLY to the above address.

CONTRIBUTE TO LRN!

All around Australia, interest in Light Railways is increasing while the level of Light Railway activity is reaching ever greater heights. You too can contribute to our store of knowledge by contributing to LRN. Simply send your news to the Editor at P.O. Box 105, Mackay 4740. The following report (actually received by your Editor) will give you an idea of the kind of thing you could send in

Puffing Billy Railway.

Our destination for the day was the station at Lakeside, but with George in the back seat we detoured for Emerald at breakneck speed. Careering in through the OUT entrance (!) and stopping next to the workshop, George was already out and opening the kiosk there for the day, when ZING ! - I noticed something supremely exciting!

Here was my chance to send a contribution to the fabulous, world famous, LRN. For there standing outside the shops was a QG ballast hopper wagon, number three, previously from Tasmania. The colour - a dirty brown. After conducting detailed inquiries I discovered that it's going to be used as a ballast wagon for Puffing Billy when fitted with 2 ft 6 in bogies.

So, feeling happy, excited, elated, enthralled, enthused, and even pleased, I leaped back into the car and we continued our journey to Lakeside where we would be selling coffee, tea, pasties, icecreams and souvenirs etc. to the adoring millions who patronise our famous PUFFING BILLY railway.

Jillienne Winzenried, January 83.

CORRECTIONS AND COMMENTS

John Buckland has a few comments on the SECV lines at Yallourn (see LRN 32 p.11). John feels that the three locos 37, 40 and 41 should be recorded as built by SECV Yallourn. Kelly & Lewis built the carbodies and Australian General Electric Co. (not AEG) the electrical equipment, motors etc. According to his notes, the locos are B/Nos 3 of 1942, 6 of 1946 and 7 of 1952 respectively (they are part of a batch of ten built at Yallourn).

Although the SECV records agree with the published list of Henschel locos, John cannot understand why the 1949 series (28583-6) should have lower builders numbers than the 1950-1 series (25539-46).

Although all classed as 46 tonners, John believes that the original (pre-war) German locos (of which only number 27 survives) in fact weighed 44 tonnes.

As far as John knows, in spite of the title, there was never any "shed" at the so called No.2 Loco Shed.

John has recently completed a definitive article on the Yallourn lines, which it is hoped may appear in *Light Railways* in the near future.

WHEAL MUNTA MUSEUM, Moonta, S.A.

Editorial staff of *Western Rails* would like to obtain photographs of ex Maylands Brickworks (W.A) locomotive at Moonta. Acknowledgment and copy of magazine assured. Photographs (B&W or colour) returned at request only. Write to:- "Western Rails" P.O. Box 237, CLOVERDALE 6105.

RESEARCH COLUMN

Port Fairy

Ian Stanley sends a copy of a press cutting from the *Herald* of 31 March 1980 which makes interesting reading. It tells of a find made by crew members of HMAS Attack while cleaning up around the old fort, a tramway laid in the late 1860s to move explosives and rock from a powder magazine to guns at the mouth of the Moyne River. After construction work was finished, trams carried the shells to the guns. The Navy took over the fort in 1912 and it was closed in 1920.

FIELD REPORT.

MORE WEST AUSTRALIAN WANDERINGS FROM TONY WESTON

Wiluna

This town is about 550 km north by road from Kalgoorlie. There is now only a small population with a hotel and general store.

About 4 km south is the abandoned mine and treatment plant of Wiluna Gold Mines Ltd. This large scale gold/arsenic mine produced 9.5 million tons of ore from 1931 to 1947. The main shaft and treatment plant was served by a 2 ft gauge railway system. While only a small amount of the track remains, roadbeds around the plant indicate a fairly extensive system.

John Browning's list of Ruston & Hornsby locos in Australia shows the first R&H loco in Australia, No. 174172 of 1935, at Wiluna Gold Mines from 1938 to 1949. It was originally delivered to Marvel Loch, W.A. Descriptions of the plant in the early 1930s mention a fuel-oil locomotive, which would have predated the R&H; this may have been the "Planet" loco listed at the Moonlight mine (see below). There are some short lengths of track connected by wagon turntables remaining in the plant area. These may have been worked by handtrucking. In 1933 underground haulage of ore was on 2 ft gauge track, with 2 ton capacity bottom dump cars and 4 ton battery locomotives. Keith McDonald lists 3 English Electric 4wBE locos - 752 of 1927, 888 of 1933 and 923 of 1936. There is another abandoned mine about 2 km south of the town. This is Moonlight Wiluna Gold Mines Ltd underground gold/antimony mine which produced 850,000 tons of ore from 1934 to 1945. There is very little machinery left at this site, but a trackbed leads south across some impressive embankments and a dismantled bridge towards the Wiluna Gold Mines plant. I was told that ore from the Moonlight mine was treated at the Wiluna Gold Mines plant. There is also the trackbed of a 1 km branchline to another

shaft east of the Moonlight mine. Keith McDonald notes a 2 ft gauge 4wDM "Planet" loco at the Moonlight Mine.

LOCOMOTIVE & EQUIPMENT MANUFACTURERS

FOX MANUFACTURING CO. PTY LTD, Smithfield

A new model of locomotive, named "Tyrant" has been developed.

Its main attraction is a vertical clearance requirement of only 1500 mm. The loco is a four-wheel diesel hydraulic, available in weights from 15 tonnes to more than 20 tonnes and incorporates a Cummins diesel engine and Allison transmission. An example of this type was recently exhibited at AIMEX '83 in Sydney (see elsewhere this issue).

The Miner via Rob Pearman.

AUSTRALIAS INTERNATIONAL MINING & EXPLORATION EXHIBITION, Sydney.

An interesting range of items were on display at AIMEX 83, held at the Sydney Showground from 7 to 12 February.

E.M.Baldwin & Sons displayed two personnel carriers on 3 ft 6 in gauge: 4wBER EMB 9981-4-2-83 1983 Model 17BE 20 man.

BHP DT 9 4wDHR EMB 10229-6-2-83 1983 Model 18DH 14 man.

The first appears to be one of a batch of battery-electric cars for Newcom Colliery Pty Ltd, Lidsdale Colliery, while the second is one of a batch of diesel-hydraulic cars for BHP Collieries.

Klockner Becorit (W.Germany?) displayed a full-size non-working model of a Beco Road Railer unit (650 mm gauge).

Fox Manufacturing displayed a four-wheel diesel-hydraulic "Tyrant" loco of 3 ft 6 in gauge.

George Moss (Gemco) displayed two units on 3 ft 6 in gauge:

4wBE Gemco 2809-10-209-83 1983 18 tonnes.

4wBER Gemco 1983? Series 2640.

This loco was equipped with two 41 hp motors, but no further information

is available on the personnel carrier.

Titan Manufacturing Co displayed a "Road-Railer car" (a rubber tyred/rail wheel flat car).

Vale Engineering Pty Ltd displayed a 4wBE loco, single ended. This loco is to be Coal Cliff Colliery number 28 (3 ft 6 in gauge). Schweizerische Industrie Gesellschaft, Neuhausen am Rheinfall, Switzerland displayed a single-ended battery electric loco on 750 mm gauge:

4wBE SIG 802-103 1982 Type B07ME-PSIH Series B06.

This unit weighed 7 tonnes and operated on a length of track some 60-80 feet in length. Agents for SIG are Swiss Industrial Co. of Botany. Mercedes-Benz (Australia) Pty Ltd exhibited a 4wDM Unimog 1200 road/rail unit on standard gauge.

A number of stands also featured photographs of locos and rolling stock.

Paul Simpson 2/83.

NEW SOUTH WALES

AUSTRALIAN IRON & STEEL PTY LTD, Cringila 1435 mm gauge

(see LRN 31 p.6)

It is understood that none of the diesel locomotives listed for auction in late November were sold at the auction sale. It is not known if any have been sold subsequently, or what their fate is likely to be.

Rob Pearman 12/83.

DORRIGO STEAM RAILWAY & MUSEUM 1435 mm gauge

(see LRN 32 p.5)

There are only three locos at Dorrigo, as observed on a visit early in January. They are all stored at a property opposite Dorrigo station on individual short sections of track:

Corby 0-4-0ST Peckett 2047 1943.

Marian 0-4-0ST Barclay 2224 1947.

4wPM Motor Rail 9021 1952.

Various other pieces of rail equipment are also present.

Rob Pearman 1/83.

DICK FRENCH 610 mm gauge

It is reported that John Dunlop has sold Motor Rail "Simplex" 4wDM 11035 of 1955 to the above. This loco, originally ex Condong Mill, worked for some time at Waratah Park, Terrey Hills, where John Dunlop is believed to have had the concession to operate the railway.

Bruce Belbin 12/82, Editor.

NEW ENGLAND ANTIMONY MINES LTD, Hillgrove

Although closed and locked up for the holidays at the time of a visit in early January, it would appear that the plants at Elenora and Smiths mine would be worth a visit when operating. Both are apparently still in use and have used a variety of light railway equipment in the past.

Rob Pearman 1/83.

F.J.WALKER LTD, Byron Bay 1435 mm gauge

(see LRN 22, p.11)

"Simplex" Motor Rail 4wDM 2129 of 1923 (ex petrol) sees only irregular use now as most traffic is now "on the hoof" or road transport. It appears that only one other item of rail equipment is possessed by the company, an ex-NSWGR flat.

Rob Pearman 1/83.

QUEENSLAND

CSR LTD, Kalamia Mill 610 mm gauge

(see LRN 32 p.8)

It is reported that the mill plans to use the chassis of Baguley/Drewry 0-6-0DM 2514 of 1954 (formerly named *Seaforth*) in the construction of a brake wagon.

Bruce Belbin 1/83

GIBSON & HOWES PTY LTD, Bingera Mill 610 mm gauge

(see LRN 25 p.9)

Two Com-Eng 0-6-0DH locos have been modified with the addition of cab side window and door to achieve a fully enclosed cab.

These locos are:

<i>Wattle</i>	0-6-0DH	Com-Eng	FD4789	1965.
<i>Tegege</i>	0-6-0DH	Com-Eng	FD4799	1966.

Two Malcolm Moore locos which have been rebuilt by the mill many times were seen dismantled in January, possibly for yet another rebuilding. One was the 4wDH which normally is stationed at Wallaville, while the other was the 4wDM with tractor canopy which is normally stationed at McIlwraith.

The Bundaberg Sugar Group's new ballast tamper was in the shed at Bingera. It is a Plasser Model KMX12T high-speed bogie production machine which weighs 15 tonnes and has a top speed of 40 kph when travelling to the work site. It carries builder's number 249 of 1982.

Editor 1/83.

W.HECK & SONS PTY LTD, Rocky Point Mill, Woongoolba 610 mm gauge

(see LRN 23 p.12)

The only loco seen here on a visit in early January was John Fowler 0-4-0WT 16249 of 1923 on display. There was no sign of the remains of Hudswell Clarke 0-4-2T 1078 of 1914 which had been lying at the mill dismantled for about three years, and its fate is unknown.

Rob Pearman 1/83.

ISIS CENTRAL SUGAR MILL CO. LTD 610 mm gauge

(see LRN 30 p.9)

All the mill's locomotives have now been painted in the new livery of cream and yellow with the exception of the two Fowler 0-6-0DM's, 1, 202776 of 1935, and 2, 4110019 of 1950. Number 1 has apparently been retired from service, and was seen parked behind the mill. Number 2 is still in service. It is understood that the mill is considering fitting its three six wheeled brake wagons with connecting rods to improve efficiency. All three were seen in the mill yard without wheels in January.

Editor 1/83.

CATTLE CREEK CO-OPERATIVE SUGAR MILLING ASSOCIATION/ MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 30 p.6 & 10)

Canegrowers from these two Mackay district mills will vote on 24 March on whether they want the mills to merge. A 75% majority is required at both mill meetings. The merger has been recommended by both boards, and will result in a new body, the Central Co-operative Sugar Association, if it goes ahead. The merger proposal follows the construction in recent years of several "strategic" tram lines by Marion on the Cattle Creek (west) side of the Pioneer River.

Mackay Mercury 4/3/83, Editor.

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 30 p.10)

Both steam locos owned by the mill have been placed on loan to local farmers with a view to their being maintained in operating condition. These locos, both 0-6-2T's, are John Fowler 20277 of 1934, and Perry 2601.51.1 of 1951. The Fowler is already under cover at one property, while the Perry is on a farm near Kuttabul.

Len Heaton 2/83.

MILLAQUIN SUGAR CO. PTY LTD, Millaquin Mill 610 mm gauge

(see LRN 25 p.11)

Bundaberg Foundry "Bundaberg Fowler" 0-6-2T 1 of 1952, retained for preservation, was noted inside the loco shed in January. No restoration work appears to have been carried out at this stage. The Millaquin Mill built 4wDHR navvies line car has been overhauled and fitted with an overall canopy. Qunaba Mill's 0-6-0DH Com-Eng FC3473 of 1964 has lost its former name, *Burnett*, and now carries no identification. It was undergoing maintenance work in the shed at Millaquin. A substantial ballast plough mounted on four wheels has been constructed and was also seen in the loco shed.

Editor 1/83.

EVAN MORRIS, Kin Kin 610 mm gauge

(see LRN 30 p.12)

Krauss 0-6-0T 5869 of 1908 (rebuilt from 0-4-0T by North Eton Mill) has been undergoing preliminary restoration work at this private location. Dismantling of the loco has shown the vital parts to be in surprisingly good condition. Early in January, work was proceeding to separate axleboxes from the frame, not an easy task after years of open storage. It is hoped to restore the loco to something reminiscent of the original Krauss outline, while retaining the 0-6-0T wheel arrangement, and plans are proceeding to establish a tourist railway upon which the loco will work.

Editor 1/83.

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 30 p.12)

Both of the mill's unusual 6wDM Bundaberg Foundry "Bundaberg Jenbach" locos were seen dismantled at the mill in January. D1 (10 of 1953) has had work done on the frame as a first step towards rebuilding. D2 (13 of 1954) was stripped to the frame and was without wheels. It is reported to have suffered serious transmission problems.

Editor 1/83.

OAKLEIGH COLLIERY, Rosewood 508 mm gauge

(see LRN 5 p.7)

Dismantled on the surface here was Bundaberg Foundry "Bundaberg Jenbach" 4wDM 18 of 1956 Model BJ15 Flameproof Type B. There were said to be another three Jenbach locos underground. Although coal is lifted from the mine by conveyor, the tramline is still used to convey men and materials and

a number of interesting items of rolling stock were seen, including a rake of 8 man riding cars (converted tubs), a large bogie flat for moving machinery, and timber bogies for moving pit props. Access to the mine for rail vehicles is by a cable-worked drift tunnel. The extensive timber pit-head structure is the last of many which were to be seen all over the Rosewood district. Now only derelict waste tips and rotting timbers remain at most mine sites.

Editor 12/82.

PLANE CREEK CENTRAL MILL CO. LTD, Sarina 610 mm gauge

(see LRN 30 p.13)

F.C.Hibberd "Planet" 4wDM 2333 of 1940, which was seriously damaged in an accident last year was seen dismantled in the loco shed in January, presumably with a view to its repair. Among interesting service

vehicles in the mill yard were a heavy ballast plough mounted on four wheels and a bogie low loader wagon of quite large proportions.

Editor 1/83.

RACECOURSE CO-OPERATIVE SUGAR ASSOCIATION LTD, Mackay 610 mm gauge

(see LRN 30 p.18)

The present downturn in the sugar industry has meant that plans to relocate the weighbridge, tippler and mill yard to the south of the Peak Downs Highway will be implemented over a longer time frame than originally intended. However, a road bridge has already been constructed to service mill vehicles.

Editor 2/83.

TIMBEERWAH MOUNTAIN TRAMWAY, Arcadia, Cooroy 610 mm gauge

(see LRN 30 p.16)

This spectacular line was further extended during the annual "construction season" late in 1982. The line commences near farm outbuildings before running along the edge of a paddock and curving sharply to arrive at the track depot and loco shed. From here, the line runs through a wooded area to the foot of Mount Timbeerwah which it commences to climb in most outrageous style, with sharp curves, switchback gradients and with the line clinging to rock ledges in places. Some sections cross concreted trackbed where watercourses are encountered, all this amongst thick bush and rocky outcrops on the mountain side. The line has now almost reached the site for the first reverse on the planned zig zag.

Rolling stock has mostly been constructed for the line using ex VR materials

and some items carry replica VR numberplates. The loco will soon be pensioned off after some years service. It is numbered R707 and is a 4wPM. The motorised ballast wagon has a four-wheel petrol-mechanical bogie at one end (4+4wPM) and is numbered G42. The rail trolley is a 4wPMR rebuilt from a VR KS gangers trolley. A flat brake wagon is numbered J521 and there are also some items ex Moreton Mill, namely 3 cut down cane trucks and two ex-Ministry of Supply flats, one braked. The replacement loco is currently under construction in Mildura by Russell Savage and is based on a former VR luggage platform tow tractor to give a weight of about one ton. Awaiting restoration is 4wDM Jenbach 2216 of 1958, which is stored on blocks with the wheels out.

This site is private property and cannot be visited without prior appointment. Intending visitors should phone 071 47 6580 to ascertain a suitable date and time.

R. Savage 1/83, Editor.

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM 610 mm gauge

(see LRN 27 p.14)

Repco of Dandenong have offered to attempt to un-seize the Dorman diesel engine fitted to the historic Kelly & Lewis 0-6-0DM 4271 of 1935. Some 600 feet of track has been laid and ballasted and three sets of points constructed. Four complete side-tipping skips, three skip chassis without bodies, and four ex-Rubicon Tramway bogies are stored on the track near Alexandra station, and the two steam locomotives, Hudswell Clarke 0-6-0 1098 of 1915 and John Fowler 0-6-0T 11855 of 1909, are stabled outside the loco shed. A passenger carriage built by Dennis Steinhauser of Kiewa has been delivered. It is an end platform design with closed ends, of all timber construction and mounted on ex Rubicon bogies. It has been painted green since arrival at Alexandra and was paid for by the Apex Club of Alexandra. Access to the ex VR line from Alexandra to Koriella for conversion to 2 ft gauge has not yet been achieved.

A.T.T. & M., Editor 1/83.

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway. 762 mm gauge

(see LRN 32 p.11)

Operations from Menzies Creek while "heavy engineering works are in progress between Belgrave and Menzies Creek" were due to take place from 10 February and 5 May. During this period, one loco was stationed at Menzies

Creek in the Museum Compound.

Ruston & Hornsby 4wDM 296058 of 1949 is nearing the end of a major rebuild at Emerald Car Shops. The loco was acquired from the Melbourne & Metropolitan Board of Works some years ago. An additional outside frame has been built some 7 ft 6 in wide and 12 ft long incorporating new buffer beams. A cab obtained off a Clyde diesel ex a Queensland sugar mill has been fitted. Auto couplers and an air compressor with reservoirs has also been fitted. The loco will be outshopped in Brunswick green with red buffer beams and will be named *William Collis*.

Around November, ex-TGR four-wheeled ballast wagon QG3 was delivered to Emerald Car Shops. This vehicle drops ballast outside the rails rather than between them and furthermore, it all works automatically using the well known principle of gravity, thus obviating the need for shovelling. This wagon will be fitted with a pair of Fox type bogies and will be a welcome addition to the rolling stock.

Work on the Climax restoration project is proceeding with the boiler primed in preparation for the refitting of timber lagging. Replacement boiler tubes are cut and ready for fitting. The valve gear and gearbox have been dismantled for inspection and overhaul and timber for a new cab floor is ready. Some sections of the cab that are badly corroded are being cut out and will be replaced with new sections.

Because of the disastrous bushfires, Puffing Billy operations were entirely halted on 19 and 20 February. There was no physical damage suffered by the railway itself in the fires.

Monthly News 2/83, 3/83 via APW, A&J Winzenried 1/83.

ESSENDON STEAM & OIL ENGINE PRESERVATION SOCIETY 610 mm gauge

(see LRN 23 p.17)

Since arriving at its preservation site in Thompson Reserve, Keilor Road, Essendon, Perry 0-4-2T 9737.45.1 of 1945 (ex Millaquin Mill number 9) has been thoroughly inspected to determine its mechanical condition. Condition is thought to be fair, and work is proceeding to remove the boiler lagging and the badly corroded boiler tubes as the first steps towards restoring the loco in operating condition. A set of original drawings has been obtained from Perry Engineering to assist with the project. The task is considered a long term one, and will depend on the availability of finance to allow certain work to be done professionally.

Neil White 2/83.

GEELONG STEAM PRESERVATION SOCIETY, Bellarine Peninsular Railway 1067 mm gauge

(see LRN 28 p.11)

Work is being done to prepare Vulcan 0-6-0ST number 4 (2539 or 2541 of 1916) for limited use. Work to be done immediately is the replacement of some tubes, and repairs to the smokebox and saddle as well as to the springs, hangers and pins.

The old Belmont Common site has to be cleared to make way for the Country Roads Board and so the remaining stock there has to be removed as soon as possible.

Narrowminded 12/82, Monthly Notice 1/83, 2/83.

SHIRE OF KERANG 1600 mm gauge

Colville Engineering Works (Barham, NSW) is to build a replica Sentinel steam loco (non-working) for display at Koondrook by the Shire of Kerang in memory of the Kerang-Koondrook Tramway, which did have a real Sentinel loco.

A.R.H.S Bulletin.

MELBOURNE & METROPOLITAN BOARD OF WORKS, Thomson River 762 mm gauge

The railway work at the dam site is almost finished with the tunnel nearing completion. Four E.M.Baldwin locomotives were noted on a visit on 31 January organised by Mike McCarthy. Numbers 027 and 030 were parked in the transfer yard with a number of bogie cement carriers. These numbers are actually a shortening of a full plant number which is also carried: 3277 027 and 3277 030 respectively. At the workshops, two more locos were noted, numbers 28 and 29. Only one builders plate was decipherable, that of 030, but the builder's details of the locos are believed to be:

027	4wDH	E.M.Baldwin	3225-1-2-70	1970
28	4wDH	E.M.Baldwin	3225-3-2-70	1970
29	4wDH	E.M.Baldwin	3225-2-2-70	1970
030	4wDH	E.M.Baldwin	3225-4-2-70	1970

Craig Wilson 2/83.

STATE ELECTRICITY COMMISSION OF Victoria, Rubicon-Royston, 610 mm gauge

(see LRN 9 p.19)

Access to the area at the top of the haulage incline at Rubicon has been closed off by the SEC, so this part of the rail system can now only be viewed

with special authorisation. Access to the Royston power station is still available to those choosing to ignore a “road suitable for four wheel drive vehicles only” sign seemingly erected to deter the rail enthusiast or the curious. Another change to be seen is the restumping and rebuilding of the loco shed at Royston which is now kept locked. Inside this shed is Malcolm Moore 4wPM numbered 26C/4 (believed to be builder’s number 1003 of 1903) and two ex Rubicon Tramway bogies.

Editor 1/83.

WESTERN AUSTRALIA

ENDEAVOUR RESOURCES LTD, Ingliston Mine, Meekatharra, 610 mm & 457 mm gauge

A small underground gold mine 2 km from Meekatharra. Ore is hand trucked in 2 ft gauge side tippers. Some 18 in gauge track is used for the transport of materials.

Tony Weston 12/82.

ENDEAVOUR RESOURCES LTD, Nannine Mine Nannine. 610 mm & 457 mm gauge

Another small underground gold mine, 35 km south of Meekatharra. Transport of ore underground is in 2 ft gauge side tipping trucks pushed by hand. All 18 in gauge track is abandoned.

Tony Weston 12/82.

HOTHAM VALLEY TOURIST RAILWAY W.A. INC. 1067 mm gauge

(see LRN 29 p.9)

The Yarloop Workshop Restoration Committee has renewed its request that the ex Millars loco G41 *Menzies* (4-6-0 Dubs 3595 of 1895) be returned to Yarloop for restoration. This request was considered in 1982, and the decision then taken by HVTR members was to defer a decision on its future for twelve months.

Pinjarra Steam Express 2/83.

METROPOLITAN REGIONAL PLANNING AUTHORITY, Whiteman Park, Mussel Pool, Caversham 1067 mm gauge

(see LRN 23 p.21)

Apart from the two 2 ft gauge steam locos reported previously, - a 3 ft 6 in gauge Malcolm Moore 4wPM rail tractor is on display here in unrestored condition. It is a classic Malcolm Moore type with a tractor engine mounted in

a heavy rail chassis. It is thought that this loco may have worked at the Cardiff brickworks, south of Armadale. (Hopefully with the projected development of a Light Railway Depot here by W.A.L.R.P.A. - see elsewhere in this issue - the interesting rail equipment at Mussel Pool will come under their care and its future assured. - Ed.)

Lindsay Watson 1/83

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION 1067 & 610 mm gauge

(see LRN 25 p.18)

Negotiations are proceeding with a view to establishing a Light Railway Depot at Whiteman Park, Caversham (approx. 8 km north of Guildford). Once approval is granted by the Metropolitan Regional Planning Authority, movement of rolling stock will begin, hopefully during 1983.

The immediate plan is to lay a few hundred metres of 2 ft gauge track and operate passenger trains to generate income to develop the project.

Much work has gone into the preparation of rolling stock and passenger cars for the new line. The operating loco will be the 4wPM built by Metropolitan Brick for their Maylands Brickworks, and this is in the process of being thoroughly checked over. Three ex-Maylands hoppers have been rebuilt into small 6-seater passenger "wagons" for use in the train.

It is hoped to begin the construction of a small loco shed to house the loco in the near future. The track will be laid in 451b/yard rail and sleepers will be from approximately 350 2 ft 6 in gauge ones which were collected by members from the former Wungong Dam tramway during September and October.

The 3 ft 6 in gauge 4wPM rail tractor mentioned in the last issue was donated by Bunnings and formerly worked at their Welshpool plant. It is possibly built by Malcolm Moore and is currently stored on private property.

Rusty Rails 12/82, Lindsay Watson 1/83

OVERSEAS

PAPUA NEW GUINEA

BOUGAINVILLE COPPER LTD, Panguna, North Solomons Province 900 mm gauge

(see LRN 28 p.11)

The 7 km long drainage tunnel from the open cut at Panguna to Kawerong is now completed and with it the need for the rail system. The tunnel took

five years to build and drains the open cut, thus obviating the need for the expensive and not always reliable pumps that were formerly used to drain the pit.

Panguna Raunabaut Vol 2 No.5, Sept 1982 via M.Pearson.

MICHAEL PEARSON, Buka Passage, North Solomons Province 610 mm gauge

With the approval of the National Cultural Council, LRRSA member Michael has begun the task of collecting a representative selection of light railway relics. Already a number of side tipping skips of Japanese origin have been collected and there are also two flat cars and one trolley with a cocoa box mounted on it.

Michael R.Pearson 1/83

MEETINGS

SYDNEY

Bruce Belbin (of Kurrajong and Forester's Beach fame) will present a talk on his current researches into narrow gauge locomotives and rolling stock throughout Australia. This should be a highly informative and enjoyable program.

Location:- Government & Transport Club, Regent St., Sydney. Parking available in Regent St. & Botany Rd.

Date:- 27 April 1983. Time:- 7.30pm.

MELBOURNE

Frank Stamford and Mike McCarthy will give a brief description of some interesting discoveries found to the East of Powelltown in the wake of the recent bushfires. This will be followed by movies of American Steam action to be presented by Arthur Straffen.

Location:- Ashburton Uniting Church Hall, Ashburn Gve., Ashburton.

Date:- 14 April 1983. Time:- 8.00pm.

Vic. Mr G. Maynard P.O. Box 21 Surrey Hills Vic. 3127

BOOK REVIEW

In Their Own Hands by K.W. Manning, published by Farleigh Co-operative Sugar Milling Association, Farleigh, Queensland 4741. 328 pages.

This book has been published to coincide with the centenary of Farleigh Mill. It contains historical details of the many plantations which were the ancestors of the present Farleigh Mill, and of Farleigh itself. It provides a comprehensive coverage of all aspects of the industry over a period of 118 years.

The outstanding aspect of this book is the way in which the author has handled the mass of material to write an account which, while being detailed and scholarly, is also eminently readable.

Tramways receive due mention. Although one or two myths are perpetuated, the overall treatment is sound and there is a good selection of photographs. Also included is a map of the present tramway system listing the 75 sidings where cane is delivered.

This is a really excellent book and is available from the publisher at a price of \$10.95 plus postage.

J.B.

CORRECTION

LRN 33, p.7

Bruce Belbin points out that Motor Rail "Simplex" 11035 of 1955 was purchased by Dick French direct from Condong Mill, never having been owned by John Dunlop. The owner worked for John Dunlop at the Waratah Park Railway and the "Simplex" was standby loco there. (see LRN 2, p.4)

RESEARCH COLUMN

Ooldea Woodline, Nullarbor Plain, SA

Mr C.B. Morris of PO Box 362, Kalgoorlie 6430, would like to hear from anyone who has any information on the Ooldea Woodline. Mr Morris has closely examined the formation of this line and also advises that some of the track remains in a sand-covered stack. The line extended at least 5 miles out of Ooldea.

AUSTRALIAN CAPITAL TERRITORY

CANBERRY HOLDINGS PTY LTD, Canberry Fair, Dickson 610 mm gauge

(see LRN 31 p.5)

At around the start of April, the railway here was found to be completely out of action. The 0-4-2T Decauville 426 of 1897 was marooned on a short length of track at the end of the station platform, while Ruston & Hornsby 4wDM 354040 of 1953 was parked about 100 m south of the station, attached to two carriages, with the engine pulled apart.

It is reported that steam power is due to return here in the shape of Hudswell Clarke 0-4-2T 1559 of 1925, which is reported as being due to arrive here on six month's loan from the Puffing Billy Preservation Society.

B.Belbin 3-4/83.

NEW SOUTH WALES

BURRINJUCK DAM.

The *Sydney Morning Herald* of 18 March featured a story on the appearance of trestle structures and 2 ft gauge railway tracks below the Burrinjuck Dam wall. The drought had caused the water storage level to drop to 3.5% of full capacity, revealing these archaeological treasures in a remarkable state of preservation.

These items are believed to be part of the construction railway built in 1908 to transport sand for the dam wall project, over which John Fowler 0-6-0T 8767 of 1901, named *Kate*, operated. (Note the builder's number is not 8762 as often stated. The loco was ordered by the Colonial Sugar Refining Co., but it is unknown if it was ever delivered. Fowler records show it to be in the hands of the NSW PWD at Cataract Dam by 1904.)

Water Resources Commission officer Len Colbert found various relics as the

water level dropped. These included old jubilee skips, wheelsets, etc.

The rainfall of 19 to 21 March caused the water level to rise rapidly to cover the tracks and trestles just when researcher Peter Neve was about to visit the damsite and search for *Kate* which is reputed to have been abandoned in the river bed!

Ken McCarthy 4/83; additional notes Richard Horne.

PRIVATE PRESERVATION, Sydney 610 mm gauge

John Fowler 0-6-0TT *Perth* (8766 of 1900) was purchased by a private preservationist and moved south during February. It had been stored at Solari's Engineering Works, Ingham (see elsewhere in this issue) since being removed from the local park.

The chimney was knocked off on the journey, and some trouble has been experienced refitting it. The side tanks need to be replaced completely, and it was found that many parts of the motion as well as the firebox and smokebox door, reversing lever and handbrake had been spot welded to prevent movement.

Many boiler mountings have been removed and metal plates substituted. The boiler appears to be in excellent condition, including tubes and internal plumbing. The motion is also good, and there is every indication that a major overhaul was carried out shortly before withdrawal. Preliminary restoration work has commenced with all parts freed, a superficial repainting job done, and some parts removed for overhaul/replacement.

"8766" 4/83

AUSTRALIAN IRON & STEEL PTY LTD, Cringila 1435 mm gauge

(see LRN 33 p.6)

It seems that the former Metropolitan Colliery, Helensburgh, standard gauge Ruston & Hornsby 4wDM locomotive (326064 of 1952) was sold at, or soon after, the November sale. In recent years this unit has been located at the AIS diesel loco shop for general shunting of bogies, etc.

It is believed that after-sale movement resulted in a transmission "lock" and the unit has appeared in the yard of Elders Metals, Unanderra, on an isolated piece of track until the problem can be rectified.

After being delivered here by road, it has been observed since January sharing the yard space with former Sydney and Adelaide buses on the west side of the F6 freeway near the Berkeley Road overbridge.

K. McCarthy 4/83.

DORRIGO STEAM RAILWAY & MUSEUM 1435 mm gauge

(see LRN 33 p.6)

A mistake of identification took place when the correspondent in LRN 33 visited Dorrigo. *Corby* 0-4-0ST Peckett 2047 of 1943 is at Dorrigo, but on private property away from the station area. The loco mistakenly identified as being *Corby* would have been ex J.& A. Brown number 27, Avonside 0-4-0ST 1415 of 1900. (Also present but in a partly dismantled condition is ex NSWGR crane 1075.) The locos are all on private property not open to the public, but any member wishing to assist the project by working on the reopening of the Dorrigo - Glenreagh branch can contact John Wilson at Dorrigo (phone 066 57 2176.)

Meanwhile, it is reported that Commonwealth Steel have fitted new tyres to the wheels of *Badger*, the 0-6-0ST built by Australian Iron & Steel in 1943.

D.S.R. & M. Newsletters 2/83, 3/83; Keith Jones 4/83.

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD Albion Park, NSW 610 mm gauge

(see LRN 32 p.5)

Trackwork.

After the hectic operating schedules throughout the January tourist season, time was available during February and March for routine track maintenance. Repacking is a continual chore, especially in the section over the swamp embankment, which has shown slight settlement as the foundations consolidate.

During February a level road crossing was constructed over the track on the north eastern section of the property to give fire tenders access to that portion of the lease. A large volume of water flowed through the creeks on the museum property during the heavy rain of 21 March, but no major problems were experienced at the various track crossings and culverts.

A display track was constructed behind the station building during March on which is now displayed various restored skips, side tip wagons and other specialised 2 ft gauge items which were hidden in the past in the back roads of the rolling stock compound.

Operations.

The Gemco electric locomotive has operated on the tramway section of the museum since the 13 March open day. This locomotive, obtained for preservation from Mittagong in December 1973, hauls passengers in a colliery "man car" and collects power from the overhead wire through a trolley pole rather than through the conventional battery box.

Machinery Shed - Workshop.

During January the Society took delivery of a centre lathe and shaper machine from the former Kaiser Refractories plant at Port Kembla. Plans are now being prepared for the construction of a concrete floored machine shop to cover an area of approximately 13m x 6m to house the impressive number of machines now owned by the museum.

By mid-April three of the seven roof trusses purchased in March 1974 had been cleaned and painted for this major workshop project.

Rolling Stock.

In addition to the lathe and shaper, four 2 ft gauge brick carrying kiln wagons as well as a traverser (transfer table) car were obtained from the Kaiser plant.

During the first three months of 1983 the structural restoration of the body of former Melbourne cable trailer car 430 was completed with the replacement of all windows, fitting of new marine ply side panels and the fixing of new side letter boards. Restoration efforts have now moved on to the restoration, painting and refitting of the end canopies. One new canopy rib arch had to be fabricated to replace a badly rotted member.

Although the body is now relatively weather-tight, it is the museum's intention to construct entirely new window frames for car 430 when the restoration project is completed.

Member Paul Simpson provided the museum with a suitable Westinghouse air brake pump during February and this will eventually be fitted to the locomotive *Cairns* to enable continuous brakes to be fitted to the passenger vehicles.

Ken McCarthy 4/83

MEGALONG VALLEY TOURIST RAILWAY 610 mm gauge

(see LRN 22, p.9)

A recent inspection of this project discloses restoration work in progress on number 7 Perry 0-6-2T 66.52.1 of 1952, including partial retubing. Number 6 Perry 0-6-2T 2382 of 1942, although in operational condition, is steamed infrequently as available resources are allocated to other activities. The "main line" now extends for about a kilometre using heavy (60 lb plus) rail, the last half being at right angles to the road and heading towards the valley walls. The next section to be constructed will include trackage through rough territory, necessitating steep grades and sharp curves. Work trains are normally operated using 4wPM Malcolm Moore 1050 of 1043. Track extension work is currently being hampered by the difficulty in obtaining suitable rail.

"8766" 4/83.

NSW STEAM PRESERVATION CO-OP SOCIETY LTD 610 mm gauge

(see LRN 22 p.11)

The Sydney Light Railway Society's railway is being constructed at the Menangle Park museum site. Construction work commenced in December last, using a steam traction engine hauling a road grader to form a right-of-way. Motive power will be the Robert Hudson 0-4-0WT (built by Hudswell Clarke, B/n. 1423 of 1923) formerly used at the now defunct Colo Vale Southern Highlands Transport Museum. Also to be used is an ex Maritime Services Board 4wDM "Simplex" loco (Motor Rail 20560 of 1955). Passengers will be conveyed in two specially constructed bogie carriages. It is planned to have enough railway constructed and completed by the next "rally" on the site, scheduled to be held in November, to allow steam operation to commence.

"8766" 4/83.

STEAM TRAINS PTY LTD, Heritage Park Project, Terrey Hills. 610 mm gauge

(see LRN 23 p.8)

Steam Trains Pty Ltd, which had for long hoped to establish an operating railway at the St Ives Showgrounds has been invited to participate in the development of a "Heritage Park" project as operating company of the projected railway to serve the project. It is expected that members of the associated Ku-ring-gai Railway Society will also be involved. The Heritage Park will be sited a little further north on the Mona Vale Road than the St Ives Showgrounds, and is an ambitious scheme, for which stage one, projected to be constructed from late 1983 to an opening date of Easter 1985, is projected to cost \$37 million.

The park project aims to be of a high standard with all features having visitor participation and/or revenue earning potential, a theory seen in practice at the highly successful "Sovereign Hill" in Victoria. Stage One incorporates a number of developments representing the period around 1840 (Turong Springs) through the 1860s (Goldmine) and 1880s (Gulgong) to the close of the Great War (Main Street). It is intended that the railway will represent "shire tramway" practice of the early 1900s, as far as locos and rolling stock go, and "main line" practice of the same period for station buildings, signalling, etc. Being the main transport mode, it will certainly be a good deal busier than any shire tramways of the past.

The map shows the layout planned at present. Minimum radius of curves on the main line is 60 m with a minimum "yard" radius of 43.5 m. The ruling grade at the preliminary stage looks as if it will be as high as 3%, but the final

survey may show that this can be eased.

The proposed main station is based on the old (2nd) Sydney station of 1872 with four roads (3 through and one dock), whilst the depot consists of a 9.2m turntable, seven stall roundhouse, three road workshop, and two road carriage shed. The large station near Main Street is based on the double storey building at Bowning (NSW), and would feature an upstairs restaurant with panoramic views of the Pacific Ocean. The design of the remaining stations is still a matter for discussion.

It is planned to operate three trains simultaneously on weekends and holidays (one of them extending into the evening) and two during weekdays, with all trains steam hauled.

Rolling stock will consist of twelve 9.2m bogie carriages of both toastrack and saloon types, divided into four 3-car sets. Three cars would be a normal train, but sets could be built up to four or five cars if necessary. Other rolling stock would consist of service vehicles, a motorised trolley for the PW Engineer, and two 9.2m open wagons to carry wood fuel from the sawmill to the loco depot (these could be easily converted to open passenger cars if necessary). Locos and rolling stock will be equipped with Westinghouse automatic air brakes and Willison couplers, with locos burning a combination of wood and coal.

All trains would have a uniformed guard and all stations a uniformed station master, the main station also having a signalman. Around twenty full-time staff would be employed on the railway. Two-way radio, suitably hidden, would be the main safe-working device, with the single line sections operating under the staff and ticket system as well.

At least five locos in working order (or at least four working and one very close) would be required to commence services. At present the following locomotives are owned:

0-4-2T Baldwin 10533 1899 Dismantled; ex Fairymead Mill.

0-4-2T Fowler 17881 1929 ex South Johnstone.

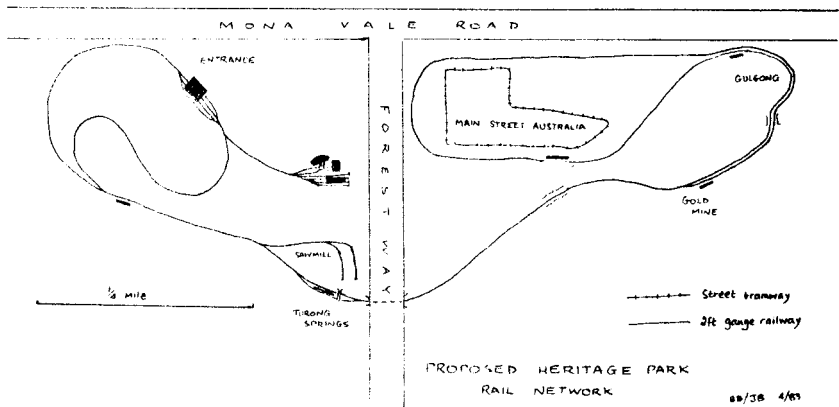

Sydney 0-6-0 Hudswell Clarke 1838 1950 ex Victoria Mill.

0-4-2T Perry 2714.51.1 1951 ex Mourilyan Mill.

These are stored at a number of sites in the Sydney area. Also there are two saloon carriages rebuilt from ex QGR Rail Motor trailers already restored.

A diesel loco would also be a welcome addition, but only to be used for maintenance work outside opening hours or for moving a failed steam loco in an emergency. The preferred operating plan will involve a standby loco to be kept in "light steam" in order to be available quickly in an emergency.

Discussions have been held with the Forbes Council in the hope that they may be prepared to allow some or all of the Lachlan Vintage Village (including

railway) to be acquired.

Detailed plans for the park are not yet finalised, although there is likely to be little change in the track plans shown. Many of the names are "working titles" only and subject to alteration. Meanwhile discussions regarding the financing of the project are at an advanced stage.

Bruce Belbin 4/83.

QUEENSLAND

AUSTRALIAN SOCIETY OF SUGAR CANE TECHNOLOGISTS

At its 1983 Mackay Conference, a number of developments which may herald future changes to cane tramways were discussed. These include the use of steel sleepers on cane tramway track (trials have been held at Racecourse and Pleystowe Mills with designs of sleepers by Osmark Australia Ltd and the Titan Manufacturing Co. Pty Ltd); the automatic reading of bin numbers at the weighbridge (using "bar codes" - this was trialled at Pleystowe) and the possible introduction of a four wheeled cane bin of up to 20 tonnes weight loaded. This last development is clearly in the thinking of some engineers as studies of track designs and of steel sleepers took the theoretical 20 tonne cane bin as an example to be considered. Interestingly enough, the work on track design showed that on the basis of a theoretical model at least, the damage done by a 24 tonne 0-6-0DH loco (axle load 8 tonnes) is far in excess of that which would be done by the 20 tonne cane bin (axle load 10 tonnes).

A.S.S.C.T. Proceedings via E. Shepherd.

CATTLE CREEK CO-OPERATIVE SUGAR MILLING ASSOCIATION/ MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 33, p.8)

The proposed merger between the two mills will not take place at this stage. At meetings on 24 March, although Marian growers were heavily in favour of the proposal, Cattle Creek growers were split approximately evenly on the issue, so failing to provide the 75% majority though this was against the advice of their own elected Board of Directors. Many observers in the district, however, feel that the virtual absorption of the Cattle Creek Mill by its larger neighbour is inevitable in the longer term.

Mackay Daily Mercury 25/3/83, Editor.

CATTLE CREEK CO-OPERATIVE SUGAR MILLING ASSOCIATION, Finch Hatton. 610 mm gauge

(see LRN 33, p.8)

Recent visits have seen the locomotive fleet under overhaul in the mill yard, all painted in a bright yellow livery with red buffer beams and radiator grills. A number of four-wheel ballast hoppers have been constructed and were seen opposite the mill in late April, painted yellow.

Editor 4/83.

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 33 p.8)

Some interesting signalling developments are taking place at the Mirani rail bridge, where 2 ft and QGR 3 ft 6 in gauge rail tracks are interlaced. The previous method of working involved the station master at Mirani being in radio contact with the Control at the Mill and instructions being relayed to loco crews by radio, as well as the use of catch points and signalling appropriate to a mill tramway/QGR crossing. At some later stage, a small semaphore signal was provided at the Marian side of Mirani Station, presumably to indicate to mill loco crews if the catch points were against them in the station itself. Now full colour-light signalling is being provided for the mill line at each end of the joint section, and this is obviously to be interconnected with the QGR signalling.

Editor 4/83

CSR LTD., Goondi Mill 610 mm gauge

(see LRN 31 p.10)

In early November 1982, E.M.Baldwin 4wDH 9109.1.9.80 of 1980 was noted shunting the full bins. This loco has still not been numbered. Unnumbered Motor Rail "Simplex" 4wDM (thought to be B/n. 2117 of 1923 - Ed.) was seen arriving in the yard hauling a navvy train. This loco was formerly No.3.

Graeme R. Prideaux 3/83.

CSR LTD, Hambledon Mill, Edmonton. 1067 mm & 610 mm gauge

(see LRN 31, p.10)

The mill's recently introduced green and yellow livery has been applied to a number of the "Simplex" locos at the mill as well as the "main line" locos. The 3 ft 6 in gauge shunter, a Motor Rail 4wDM probably originating from the first world war, has red and white safety stripes and is painted green and yellow. It is fitted with an overall canopy to protect its driver from the weather.

Another Motor Rail "Simplex", this time a 2 ft gauge machine with conventional cab and body, but again in the green and yellow livery was seen heading east towards Edmonton on 19 November 1982 hauling a train of loaded rail bogies.

Graeme R. Prideaux 3/83.

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 30 p.7)

In April, number 11, Clyde Model HG-3R 0-6-0DH 65-383 was seen dismantled in the shed undergoing a major overhaul, the first complete strip down it has had since it was delivered in 1965. This must be a tribute to the design and to the maintenance staff at Macknade. Hansen's four-wheeled petrol line car (90 of 1973) has been renumbered from M1 to TROL 1, and was noted in the shed. The Clyde (Qld) petrol line car has been laid aside. Absent from the mill and in use by the navvies were number 17, E.M.Baldwin 0-4-0DH B/n. 6-1446-1-9-65 of 1965 and 1, Motor Rail "Simplex" 4wDM B/n. 10232 of 1951.

Editor 4/83.

CSR LTD, Pleystowe Mill 610 mm gauge

(see LRN 30 p.7)

Recent maintenance work at the mill has included the overhauling of one of the mill's two grass cutters. Noted outside the premises of Statewide Industries in Connors Road, Mackay, at the end of March was the mill's self-propelled rail jack (Plasser 256 of 1982) on a special trailer built by Statewide to enable the unit to be transferred to the work site by road. It was noted that the mill has added a simple brake to the rear axle of the rail jack.

Editor 3-4/83.

CSR LTD, Victoria Mill, Ingham 610 mm gauge

(see LRN 32, p.8)

On a visit in April, E.M.Baldwin 0-4-DH *Albany* (6-1792-2-11-66 of 1966) was seen shunting bins in the mill yard. Experimental four-wheel sugar

wagon number 227 is parked behind the Decauville carriage preserved with Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) in the display area of the mill grounds during the slack season.

Two "main line" locos appear to be allocated to the navvies during the slack. Baguley/Drewry 0-6-0DM *Herbert* (2394 of 1952) was noted parked near the navvies shed, while sister loco *Victoria* (2404 of 1953) was absent and assumed to be out on a job somewhere.

Also noted near the navy shed was a rather outlandish piece of rolling stock. This is a very long and heavy vehicle designed to be used in the reconstruction of bridges. It has a long jib overhanging one end from which can be slung bridge girders. The vehicle would be propelled to a position where the bridge beam can be lowered into position. The frame of the vehicle is about 50 ft long and has two sets of wheels, one at each end, with a 16 ft gap in between. Each set of wheels consists of four axles, two feet apart. The astounding thing is that the entire vehicle has a rigid wheelbase! It was stated that the vehicle was presently unfinished while "a few problems" were being sorted out. When further questioned, the informant admitted that the vehicle did tend to fall off the track on curves! The kind of thing that has to be seen to be believed!

Editor 4/83.

DAMPIER COAL MINING CO., Leichhardt Colliery, 1067 mm gauge

(see LRN 30 p.15)

This expensively-developed mine, owned by BHP, has been closed due to geological problems and lack of profitability. A small quantity of rolling stock remains on the surface, including one loco. This is a four-wheel battery-electric built by BHP at Newcastle under licence from Jeffery in 1948. BHP's 112th battery loco in order of construction, it was transferred from the AIS colliery at Wongawilli in 1976. The loco appears to be disused. It is unknown what happened to the other locomotives and man riding cars from Leichhardt, although it appears that some equipment was transferred to the nearby Cook Colliery.

Editor 4/83.

DAMPIER COAL MINING CO., Cook Colliery 1067 mm gauge

(see LRN 30, p.15)

In contrast to nearby Leichhardt Colliery, BHP has developed this mine far less generously in terms of surface installations at least, but with much more success in terms of coal production. However, closure also hangs over Cook Colliery, with the only chance of a reprieve early in April being a purchase bid

by another company. Failing this, closure was expected at very short notice.

Many items of rolling stock were seen on the surface, including air-operated hoppers and various types of wagons for materials handling. A train of materials was seen being shunted by a fork lift truck and was then hitched up for lowering down the drift. This operation is controlled by a specially-designed control car, incorporating a braking system, which is connected to the winding cable. The one at Cook (correct terminology "dolly car") is based on the design of that at Coal Cliff Colliery in NSW (see LRN 28 p.6). A man riding car is attached to the dolly car, and vehicles for lowering into the mine are attached to this.

It is believed that a total of three locomotives and 6 diesel personnel cars are at the mine. By the workshop was a derelict 4wDH Fox diesel loco, numbered 5 (B/n. 005 of 1/76, Model FL 34000). Also by the workshop were two personnel cars, one built by Vernier (B/n. MDA No.932) was numbered MC6, while the other, built by Fox (B/n. 346 of 11/74), was numbered 4. This unit is believed to have been transferred from the AIS Appin Colliery, where it was numbered 83. There were also two derelict Fox personnel carriers in the yard. These were numbered 2 (B/n. 324) and what had been number 5 (B/n. 322). These cars appeared to have been used for spare parts, and were probably built about 1973. The remaining locomotives are Fox units while the other two personnel cars are by Vernier.

Editor 4/83; K. McDonald

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSN. LTD 610 mm gauge

(see LRN 30, p.9)

Mill management intend to have Avonside 0-4-0T 1909 of 1922 restored and placed outside the mill offices. It had previously been displayed in the playground nearby, but its condition had deteriorated to a dangerous level. The downturn in the sugar industry means that the elimination of the 25% of the bin fleet not of the standard 4-tonne type has had to be deferred. 250 four-tonne bins were built for the start of the 1982 season. The new Plasser ballast packer and ballast regulator are both now functioning well, leading to a higher standard of track.

B.Sheedy 3/83, Mackay Daily Mercury 11/4/83.

HAUGHTON SUGAR CO. LTD, Invicta Mill, Giru 610 mm gauge

(see LRN 31 p.11)

Four of the mill's locos have been fitted with new Hockey Engineering sound-proofed cabs as follows:

Haughton	0-6-0DH	Com-Eng	AH3876	1964
Northcote	0-6-0DH	Com-Eng	AH4091	1965
Barratta	0-6-0DH	Com-Eng	AH4098	1965
Scott	0-6-0DH	Com-Eng	C1015	1957

In addition, *Scott* has been fitted with a small motor and air compressor mounted behind the cab to enable it to be used as a remotely-controlled brake wagon. Even more radical surgery has befallen the other Com-Eng 0-6-0DH loco in the mill's fleet. This has ceased to exist as a loco and has instead been converted to a six coupled brake wagon by the mill, retaining the painted name *Clare*. The loco was built in 1964 as Com-Eng AH4080. Outwardly, it appears to be a conventional brake wagon, with the only obvious clue to its ancestry being the coupled wheels.

The new E.M.Baldwin B-B DH loco, *Burdekin*, is B/n. 10215-1-7-82 of 1982, Model DH32B. It was seen behind the mill without its bogies, with engine running for maintenance checks. The other E.M.Baldwin loco, *Selkirk* (6750-1-8-76 of 1976) appears to have suffered some accident damage during the 1982 season, for brand new side bonnet covers were being fitted to the loco during April.

The remaining loco, the unique Com-Eng 0-4-0DH *Invicta* (CA1040 of 1960) was reportedly stationed at the Clare depot for use by the mill navvies.

Editor 4/83.

MULGRAVE CENTRAL MILL CO. LTD, Gordonvale 610 mm gauge

(see LRN 31, p.13)

Frequent problems have arisen in the past because of simple derailments on the descent to the Mulgrave River bridge which may lead to major and costly smashes when the derailed bin fouls the bridge. To provide warning to loco drivers of such derailments before running onto the bridge, a detector unit was installed by the mill at the start of the 1982 season. When a derailment is detected, a flashing warning light is triggered in clear view of the driver on the approach to the bridge. The new unit proved its worth shortly before the end of the season when a broken axle on a bin was detected and the train halted before the bin reached the bridge.

"Proceedings of the Australian Society of Sugar Cane Technologists 1983 Mackay Conference".

PIONEER SUGAR MILLS LTD, Inkerman Mill, Home Hill 610 mm gauge

(see LRN 31 p.13)

Soundproofed cabs have been fitted to two more of the mill's loco fleet.

These are:

Keebah	0-6-0DM	Com-Eng	C2231	1958
Koolkuna	0-6-0DH	Com-Eng	AM4993	1965

In addition,

Alma 0-6-0DH Com-Eng FE56110 1975 was having its cab raised up to improve its sound insulation when the mill was visited in April.

There was no sign of: *Li'l Toot* 0-6-0DM Baguley 3354 1951 and

4wDM M. Moore 1013 1943 which went south to the Puffing Billy Museum at Menzies Creek, Victoria sometime since last September.

Editor 4/83.

ROTARY CLUB OF BLACKWATER, Mackenzie St, Blackwater 610 mm gauge

(see LRN 17 p.6)

An inspection of the railway here early in April showed it to consist of a circuit of heavy track totalling almost 500m. The loco and train are housed in a corrugated iron shed which doubles as a "Tunnel" when the line is in use. There are ten four-wheeled cars converted from mining cars and the loco is lightweight Jenbach 4wDM 1196 of 1953. Both loco and rolling stock came from the Golden Plateau Gold Mine at Cracow, closed in 1976. There has only been the one loco, which leaves the fate of a similar but heavier Jenbach, 1155 of 1953, alleged to have been sold to someone in Blackwater by the Burgowan Coal Co.. Torbanlea, questionable. The line operates occasionally, the main problems facing operations being a lack of volunteer helpers, and vandalism. Contact person is Alf Tonkin, local QRX manager.

Editor 4/83.

ROYLEN ENTERPRISES PTY LTD Brampton Island 762 mm gauge

(see LRN 8, p.6)

A 1.5km rail line links the wharf with the resort area. The train meets the daily boat service from Mackay, and is always marshalled so that the loco is at the head of the passenger-carrying trains (apparently empty stock trains are propelled). Both locos have reverted to a mid-blue livery and are F.C.Hibberd "Planet" 4wDMs. In mid April when the island was visited, 3476 of 1950 was the working loco with 3475 of 1950 in the service area. Six four-wheel coaches and four flat cars made up the train, and another flat car and coach were seen in the service area. There is also a special flat car with removable ends which is used to convey beverages to the bar, served by a short spur. Lastly, a four-wheel battery-electric rail trolley was seen placed off the track near the

station. This incorporates drive to one axle only and is powered by eight car batteries. The rail line could have been extended to serve the airfield which lies on the other side of the resort from the wharf. However, it is served by a minibus service.

Editor 4/83.

SOLARI & SONS ENGINEERING WORKS, Ingham 610 mm gauge

(see LRN 31 p.12)

The John Fowler 0-6-0T *Perth* (8766 of 1900) has been sold by the Lions Club, and left Ingham in February for private preservation in the Sydney area (see elsewhere in this issue).

This leaves at Solari's yard Hudswell Clarke 0-6-0 1653 of 1935. The loco is reported as being possibly for sale, and interested parties should contact Mr Edi Solari.

Editor 4/83.

SOUTH JOHNSTONE CO-OPERATIVE SUGAR MILLING ASSN. 610 mm gauge

(see LRN 32 p.9)

Seen at the mill in November 1982 apparently out of use were Clyde (Qld) brake van BV1 (built 1972) and number 17, a Malcolm Moore 4wDM (1060 of 1943). Number 13 Malcolm Moore 4wDM (built 1943) had been lifted off the track and was among a pile of scrap in long grass. Controls and engine had been removed, so it is possible that this unit will shortly disappear, although it is not unknown for such far gone machines to be resurrected in the past.

Seen shunting in the yard was number 10, Baguley 0-6-0DM 2396 of 1952, which has now been repainted in full South Johnstone livery and shows no sign of once having been DL12 *Mourilyan* of the QGR Innisfail Tramway.

At the site of the former Innisfail Tramway Kalbo Junction, E.M.Baldwin B-B DH number 4 (5744-1-8-74 of 1974) was seen standing with a load of full bins, the last seven of which were off the rails.

Graeme R. Prideaux 3/83.

TULLY CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 31 p.15)

On 19 November 1982, locomotives were employed transporting bins to various storage areas on the tramline system following the ending of the crush three days before. Sufficient siding space is not available so many bins are parked at various points on the main lines during the slack season. Another important task for the slack season is the control of weeds and Com-Eng 0-6-

ODH No.10 (AD1341 of 1960) was noted at Bookal Bookal Creek Bridge with the weed spraying unit. The section of line in this area parallels the old Bruce Highway which has recently been deviated to a new formation paralleling the North Coast Railway via Feluga, between Tully and Djarawong. The level of the highway is above that of the railway and an interesting feature of the new route is a level crossing with the tramway which has required extensive earthworks to lift the tramway to the level of the highway following its crossing of the QGR.

Graeme R. Prideaux 3/83.

VICTORIA

GEELONG STEAM PRESERVATION SOCIETY, Bellarine Peninsula Railway, 1067 mm gauge

(see LRN33, p.13)

Around the start of March, the last two locos remaining at the old Belmont Common site were removed by road to Drysdale, thus ending the Society's connection with its former site. The two locos are now at Queenscliff and are:

<i>Wesley B. McCann</i>	0-4-2ST	Hudswell Clarke	646	1903	ex Fyansford
<i>Klondyke</i>	0-4-2T	Perry	271	1927	ex Pioneer Mill. <i>Monthly Notice No.40.</i>

LONG TUNNEL EXTENDED TOURIST GOLD MINE, Walhalla 610 mm gauge

(see LRN 27, p.16)

Excavation work has at present ceased with the removal of spoil from the access tunnel to the mine for 1000 ft as far as the machinery chamber, where originally four Cornish boilers were housed for pumping water from the shaft which descended 2,000 ft (about 800 ft below sea level). The machinery chamber was the start of a 500 ft ventilation shaft cut at a 60 degree angle to the surface of the mountain top. It is planned to restore the machinery chamber to as near original condition as possible, funds permitting. The locomotive used for excavation works is a former Melbourne & Metropolitan Board of Works E.M.Baldwin 4wDH (B/n.6008-1-7-75).

Peter Medlin 4/83.

PUFFING BILLY PRESERVATION SOCIETY MUSEUM, Menzies Creek gauges various

(see LRN27, p.15)

A number of changes have taken place in recent months, some in connection with the temporary service from Menzies Creek to Lakeside while "heavy engineering works" are in progress near Belgrave. Sometime between September and February a 2 ft gauge 0-6-0DM arrived from Inkerman Mill, Queensland. This is Baguley 3354 of 1951, named *Li'l Toot* at the mill. It is thought to have been accompanied by a 4wDM Malcolm Moore (1013 of 1943). In addition some rolling stock from the closed Walhalla & Thomson Steam Tramway arrived at the museum in February.

Hudswell Clarke 0-4-2T 1559 of 1925 is reported to be going on six months loan to Cranberry Fair in Canberra, and is reported to have been undergoing preparatory work for the move in late March.

The accompanying diagram shows the disposition of the stock at the museum on 27 February. (See next Issue)

Bruce Belbin 4/83; Peter Medlin 4/83.

WALHALLA AND THOMSON STEAM TRAMWAY, Walhalla 762 mm gauge

(see LRN 14, p.19)

Operations at this location (the former VR Walhalla yard) have completely ceased. All of the track has been pulled up and the refreshment room built by the W&TST has been demolished. The station building appeared to be going the same way with half the roof removed by mid-April. During February, some of the rolling stock appeared at the Puffing Billy Museum at Menzies Creek, these being the former NM wagon and the open wagon which had been used for carrying passengers from one end of the Walhalla yard to the other. There was no sign of the two locos. One is an 0-4-2ST built by Couillet (B/n. 861 of 1886) for Decauville (B/n. 43 of 1886) rebuilt from an 0-4-0T. The second loco is believed to be a 3 ft gauge Fowler from Queensland. The removal of the project may open the way for a revival of the proposed Rail Link Attractions Co. to rebuild the line from Erica to Walhalla and establish a Motel complex at Erica. It has been suggested by some that the W&TST will be relocated to either the former Wonthaggi line or to an area below the Westgate Bridge in Melbourne.

Peter Medlin 4/83.

WESTERN AUSTRALIA

HOTHAM VALLEY TOURIST RAILWAY W.A. INC. 1067 mm gauge

(see LRN 33 p.15)

A decision has been taken not to return the ex Millars loco *Menzies*, Dubs 4-6-0 3595 of 1895 to Yarloop. Instead, an immediate start is to be made to appraise the loco's condition and start a programme of restoration. Accordingly, in early March, a start was due to be made to remove the cab and boiler cladding of the loco so that the condition of the boiler may be ascertained.

Pinjarra Steam Express 3/83.

PUBLIC WORKS DEPARTMENT, Broome 1067 mm gauge

(see LRN 29 p.10)

(Note to CD-ROM edition: See correction in LRN35, these locos were actually at Kununurra, not Broome).

Two Motor Rail "Simplex" 4wDM locos were observed out of use and dumped in the PWD yard at Broome in November 1982. These were PW32 (Motor Rail 9008 of 1948) and the former PW29 (9097 of 1955), which according to PWD records are listed as having been sold to "Crosse Hull" in August 1981.

Doug Elford (WA Museum), via Peter Bindon 4/83.

NOTICE BOARD

MAILOUTS

You may have wondered from time to time why it is that the occasional issue of *Light Railways* arrives a month or two after the specified date of the magazine. The reason for this is quite simple. The production of both our magazines involves a considerable amount of effort from our two editors and, in the case of LRN, other members involved in the setting up, printing, folding and stapling of the magazine. In both cases we are very seldom late as far as the work that is done by us is concerned. However, in the case of LR we must also fit into the print schedule of the printer. Although we get good service from our printer, we may find on the odd occasion the magazine arriving a week or two later than expected. The question then arises, do we hold up the mailout to get LR out, do we have a special mailout for LR or do we hold the magazine over till the next mailout. The current policy of the Council is to adopt the third alternative and there are a number of reasons for this. In the first instance, because of its very nature, it is desirable to get LRN

(in effect our “newspaper”) out to members as soon as possible. Secondly, the cost of a special mailout is prohibitive and given the small size of the Society would have an effect on our subscription rates. Finally, the mailouts are currently handled by a small group of members who are often battling to find time for the six mailouts we now have without imposing any additional workload on them.

So, if you have been annoyed at some time over the past couple of years by the absence of LR when you expected it, spare a thought for the people in its production and mailing. More often than not there is a very good reason why the magazine is a month or two behind. Also, if a cry for help with mailouts or any other Society task is heard why not lend a hand?

SALES

New Items this month include:

Trestle Bridges and Tramways, the booklet version of LR 79, with a special cover and end papers. See sales list for details.

APW Research Reports

6 Richards’ Warburton Tramway,

8 Scoresby Tramways and

9 Russells’ Gembrook Tramway are all now available.

3 Sorrento Tramway is now in a new Edition (increased by 30%).

All \$2.50 posted.

Further, *Tram to Warburton* is back in print at the old price, \$2.75 posted.

Also from APW, *Victorian Tramway Register*. 2nd Edition. Over 240 entries currently. Lists tramway, gauge, motive power, etc. \$5.00 posted.

SPECIAL NOTE

Could the gentleman who kindly offered to provide the Climax cab fittings at our Melbourne Meeting last September please contact the Puffing Billy Workshop Foreman on 754 6522. These parts are urgently required to complete the restoration of the locomotive.

MEETINGS

SYDNEY

The June meeting is the Division’s A.G.M. but formalities will be kept to a minimum as an interesting talk has been arranged on Climax locomotives by Ian Seers. Ian, as well as presenting a number of his own slides, has a number of slides copied from member John Kramer’s photographic discoveries on the north coast.

Those attending the April meeting had the opportunity to hear from Bruce Belbin on the background of his involvement with what will be, if it proceeds, one of Australia's largest tourist railway operations, as well as the chance to buy at discounted prices at the Division's meeting sales desk. Yes, its returned after an absence of some four years. So why not come early this month and browse through our selection.

Location:- Government & Transport Club, Regent St. Sydney. Parking available in Regent St. & Botany Rd.

Date:- 28 June. Time:- 7.30pm.

MELBOURNE

Yes, its that time of year again!! Our ever popular annual slide night will be held at the June meeting. We ask as many members as possible to bring along a handful of slides of railway interest (preferably but not necessarily of the "light" variety). A feature of this night in the past has been the variety of subjects exhibited and we are sure it will be the same again this year. Slides featuring the current light rail scene are just as welcome as views of bygone eras, our only stipulation is that we are limiting the number of slides from any individual to 20. The Sales Department will be in action as usual and you can enjoy a chat over a cuppa afterwards as well. See you there.

Location:- Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.
Date:- Thursday 9 June.

Time:- 8.00pm.

Deadline for next issue:- 20 August 1983.

NOTES, CORRECTIONS & COMMENTS.

PIONEER SUGAR MILL - 100 YEARS

This 20 page booklet has been published to coincide with the centenary of Pioneer Sugar Mill. It is attractively presented and contains general company information about Pioneer Sugar Mills and its subsidiary companies. Two tramway photos are included amongst a number of historical interest. The booklet can be obtained free of charge from Pioneer Sugar Mills Ltd, PO Box 316, Paddington, Qld 4064, or from other Pioneer offices.

CORRECTION

PUBLIC WORKS DEPARTMENT, W.A.

(see LRN 34 p.18)

Peter Bindon of the West Australian Museum writes to say that the Motor Rail locos reported in the PWD yard in LRN 34 are in fact situated at Kununurra and not at Broome.

AUSTRALIAS INTERNATIONAL MINING & EXPLORATION EXHIBITION

Paul Simpson has pointed out that he was not the contributor of this item which appeared in LRN 33. Although your Editor is prepared to hazard a further guess as to the identity of the anonymous contributor concerned, this will not be done in public again. So thank you, whoever you are!

NEW ENGLAND ANTIMONY MINES N.L., Hillgrove

(see LRN 33 p.7)

During a visit in May 1976, the following operations were observed:

Concentrator

This was treating antimony ore from two mines. In a storage yard were two used 0-4-0BE "Gemco" locos with numbers 60 & 61 and lot numbers 17 & 18 respectively on the battery boxes. Gauge was not measured, but looked like 2 ft There were also skip bodies and frames.

Freehold Mine

A shaft mine about 1 km east of the treatment plant. Ore was handtrucked in 0.33 or 0.5 ton box trucks, raised in the cage and then dumped on the surface for transport to the concentrator. Track gauge was 18 inches.

Smiths Mine

This is just beyond the Freehold Mine and on the edge of the Swamp Creek Gorge. Access was by an incline down the gorge, and by a winding dirt track. Gauge of the incline was about 3 ft Towards the bottom end of the incline, the trucks went underground into an inclined (underlay) shaft.

Two levels were observed. One had 18 inch gauge track emerging from an adit and curving round a narrow gorge to an ore dump where the incline went underground. A lower level had an adit further down the gorge and connected with the underlay shaft. Track there was 2 ft gauge. A 4wBE of about 3 tonnes was noted outside the adit. Further along the adit was a decline extension of the 2 ft gauge tracks running to two stubs under ore bins. These were served by another adit with track of an unknown gauge.

Running on the incline up the side of the gorge was a single skip, dumping into a headframe and bins at the top. Ore was transported to the concentrator by road. The scenery was spectacular, with a vertical drop into the gorge of at least 250 m and made more interesting by the mine workings and tramways.

Garibaldi Mine

This, a shaft mine on the plateau near the concentrator, was being reopened.

Eleanora Mine

This old shaft mine was connected to the Bakers Creek Gorge on the eastern side of Hillgrove with an adit worked by battery loco in the early 1970s. It was not working at the time of the 1976 visit.

In its heyday, about 1900, Hillgrove had quite a number of gold mines operating many with inclines to the bottom of Bakers Creek Gorge. The steam

winder for the Bakers Creek mine tramway is still located in a shed near the antimony concentrator.

Some references on Hillgrove mining history include:

Andrews, E.C.; *Report on the Hillgrove Gold Field*. Mineral Resources Geological Survey, NSW No.8, 1900.

Pitman E.F.- *The Mineral Resources of NSW*. Geological Survey Sydney, 1901.

McClatchie.L & Griffin, D.K. *The Mineral Industry of NSW., No.2. Antimony*. Geological Survey, NSW. July 1970. (pp. 19-28, 41)

Anthony Weston. 6/83

FIELD REPORT.

Ben Bullen NSW.

The earthworks of the abandoned 3 ft gauge tramway which ran 4 km west from the railway station to a limestone quarry are still quite visible through hilly country. Near the main quarry there are two branches. A short high-level spur leads to a small "cutting" or quarry and a brick structure. Here there are the remains of a 2 ft gauge incline equipped with bridge rail. The lower branch leads to the quarry proper, which is abandoned.

Anthony Weston 3/83.

Cullen Bullen, NSW.

The remains of the old Invincible Colliery, abandoned since the 1950s, can be seen behind the village of Cullen Bullen. In an old workshop, there is both 2 ft and 3 ft 6 in gauge track set into concrete.

Anthony Weston 3/83.

Iluka, NSW.

There is not much to see of the remains of the standard gauge railway which ran from the wharf to the breakwater. There are one or two rails lying at odd angles on the breakwater itself,

Anthony Weston 3/83.

Yamba, NSW.

There are not many remains of the standard gauge breakwater railway, but south of the town, at Angourie Point, some relics can be seen. Maps in the Department of Public Works annual reports of the period (c.1900) show a railway from Yamba to Angourie Point. At Angourie Point are two quarries now filled with water. There are rails lying in the water and sticking out of the sand. Two cuttings lead north from the quarries. There is also a dirt road

which runs through shallow cuttings skirting a small hill before it rejoins the main road into Yamba.

Anthony Weston 3/83.

Nymboida Colliery, NSW

(see LRN 22, p. 11)

All surface trackwork has now been removed and the tunnel entries sealed. Some buildings remain, a new sawmill has been built adjacent to the mine yard. The old coal loading bins are still standing

Anthony Weston ~/83.

Euccla W.A.

(see LR 52)

This was the site of a telegraph station. There are the remains of a Jetty about 100 m long and an embankment with some sleepers which leads about 300 m inland to what appears to be the site of a stores depot. Dogspikes on the Jetty show a gauge of 3 ft 6 ins. The distance from the possible stores depot to the telegraph station is about 500 m.

Anthony Weston 2/83.

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

E.M.BALDWIN & SONS PTY LTD Castle Hill NSW.

The following units were observed during May and June

20	4wDHR	10454-1-3-83
21	4wDHR	10454-2-3-83

These were both model 11DH Mk4 for Bellambi Coal Co. Ltd, South Bulli Colliery 1067 mm gauge.

BHP DT14	4wDHR	10229-11-4-83
BHP DT15	4wDHR	10229-12-4-83

These units are part of an order of 16 units for BHP Collieries to be numbered BHP DT4 to BHP DT 19. Four bodies for later units in this order were seen early in May while by the end of the month BHP DT17 had been completed. Model 18DH; 1067 mm gauge.

Four bodies for 4wBERs for Newcom Collieries were noted. This is part of an order for ten units (order number 9981). Some have already been delivered, and by early June, two more were completed. They are believed to be destined for the new mines at Myuna and Cooranbong. Model 17BE. 1067 mm gauge.

A 32-tonne B-B DH for Tully Co-operative Sugar Milling Association was despatched on 20 May. It will be Tully No.7. 610 mm gauge.

Work was in progress on one 6wDH loco for Coal & Allied Operations during May, while the frames of two more were on site.

The following units from E.M.Baldwin have not been recorded in past issues of LRN:

7750-1-3-78	1978	1067 mm	4wDH	Bellambi Coal Co., South Bulli Colliery D3
8170-1-12-78	1978	1067 mm	4wDHR	Coal & Allied Operations, Wallarah Colliery 36.
8290-1-4-79	1979	610 mm	B-B DH	Fiji Sugar Corp., Rarawai Mill 12.
9879-1-3-79	1979	1067 mm	4wDH	Newcastle Wallsend Coal Co Pty Ltd, Ellalong Colliery.

Craig Wilson 6/83; Keith McDonald 6/83

AUSTRALIAN CAPITAL TERRITORY

CANBERRY HOLDINGS PTY LTD, Canberra Fair, Dickson 610 mm gauge

(see LRN 34 p.2)

The breakdown of Ruston & Hornsby 4wDM 354040 of 1953 was caused by a broken crankshaft which occurred early in April. As a result of this, another Ruston & Hornsby 4wDM was acquired on loan/hire from Kevin Ruby of Forresters Beach . A cab has been fitted and the exhaust scrubber removed. When seen early in May, the loco was still in a yellow livery, but was due to be repainted. The loco is a Model 20DLU, and although it does not carry a builder's plate, the engine number (317120) indicates that it is in fact B/N 304457 of 1951.

Decauville 0-4-2T *Frenchy* 246 of 1897 (not 426 as shown in LRN 34) is now located on a piece of track near to the station. The chimney on the loco is that off Krauss 0-4-0T *Jack* (5945 of 1907) and this will be removed and returned to Bruce McDonald . A new straight chimney is envisaged to be fitted to *Frenchy*, similar to the one it originally carried. Repairs to the boiler barrel could cost from \$6000 to \$10000, and although this will not be done immediately, it is programmed to be carried out.

Early in May one of the end loading carriages was out of service to permit attention to axle bearings and wheel flanges. The bogies are those built by Kelly & Lewis for the Rubicon Tramway as ordered by Clark & Pearce (later Ruook Timbers) at Alexandra, Vic.

Hudswell Clarke 0-4-2T 1559 of 1925 will not now be coming to Canberra on hire from the Puffing Billy Preservation Society. This is believed to be because of the high rental charges which were to be levied.

Rob Pearman 2/83; Paul Simpson 5/83.

NEW SOUTH WALES

T. ALFONZI, Triple Chance Mine, Broken Hill 432 mm gauge

This is an out of use beryl/felspar quarry south west of Broken Hill. An abandoned side tipping truck of 17 in gauge was noted.

Anthony Weston 3/83

BLUE CIRCLE SOUTHERN PTY LTD, Portland 1435 mm gauge

(see LRN 32, p.4)

Rail traffic here seems to have ceased and the track is becoming overgrown. English Electric Australia B-B DE numbered D10 (B/N A007 of 1956) departed in January. The steam locos, Andrew Barclay 0-6-0Ts 3 and 5 (1234 of 1911 and 1470 of 1916) and Dubs 2-6-2ST 2605 (2794 of 1892), remain out of use around the works complex and do not appear to have moved since October last.

Rob Pearman 3/83.

BHP COLLIERIES PTY LTD, Burwood Colliery, Whitebridge 1067 mm gauge

(see LRN 9 p.9)

The last eight locomotives from this colliery (closed January 1979) were hauled to the surface on 8 January 1983. Two were Jeffery four-wheel battery electrics numbered 3 & 7. There were also six BHP built four-wheel battery electrics, numbered 3E, 5E, 8E, 16E, 18E & 19E *Jim's Rocket*.

These locos had been used for demolition work at Burwood. The other locos removed earlier have been transferred to the new Macquarie Colliery or to other BHP mines. It is likely that the locomotives recently removed from Burwood will be overhauled and then also sent to other pits with the exception of Jeffery 3, which has been laid aside for scrap.

Keith McDonald 6/83.

COAL AND ALLIED OPERATIONS LTD West Wallsend No.2 Colliery, Killingworth 1067 mm gauge

E.M. Baldwin 4wDH 3550-1-11-71 of 1971 has been noted at Wallsend Engineering, apparently having been there for overhaul following the closure of West Wallsend No.2 Colliery. The loco was reportedly numbered 4, but at the moment it carries number 82-279. It is thought that following overhaul it will be sent to another Coal & Allied colliery.

Keith McDonald 5/83.

DORRIGO STEAM RAILWAY & MUSEUM 1435 mm gauge

(see LRN 34 p.4)

The three wheel and axle sets from *Badger*, the 1943 built 0-6-0ST constructed by Australian Iron & Steel for their own use, were recently delivered to the Rhondda Storage site. The wheelsets had been sent away to Commonwealth Steel for the fitting of brand new tyres. This is possibly the first such job to be carried out as part of a preservation effort in Australia.

DSR&M Newsletter 5/83.

GOULBURN STEAM MUSEUM 610 mm gauge

(see LRN 31, p.7)

A visit on 7 May saw Krauss 0-6-0T *Stella* (3423 of 1896) in steam and hauling the steel bogied bogie passenger car. The caretaker states that several tubes in the boiler are leaking and will need to be replaced after only three years of service. Bad water is blamed for the deterioration of the tubes. The old tram car body (located at the end of the track) mounted on timbers has developed a lean of some thirty degrees from the vertical.

It is rumoured that an approach is to be made to the Goulburn City Council for a takeover of the operation of the Steam Museum by an American based Syndicate.

Paul Simpson 5/83.

KANDOS COLLIERIES PTY LTD Kandos No.3 Colliery, Kandos 1067 mm gauge

This is an underground coal mine about 2 km east of Kandos, supplying coal to the cement works. A 3 ft 6 in gauge railway system transports the coal, men and materials. Coal is brought out in 6-car sets of 12 tonne capacity bogie mine cars, hauled by two E.M.Baldwin diesel locos. A battery loco shunts each set through a rotary tippler.

There is an interesting selection of locomotives. Number 3 is a 4wBE reportedly built by Gibson Battle. It is similar to old number 4, of which only the frame remains. New number 4 is a 4wBE/WE (equipped for battery or trolley wire use) with Jeffery axle boxes. Number 6 is a 6wBE/WE again with Jeffery axle boxes. Numbers 9 & 10 are E.M.Baldwin 6wDH locos (9344-1-4-81 and 9344-2-4-81 of 1981 respectively). Model is shown as DH25.3 and DH25.M (probably meant to be DH25M Mk3. DH stands for diesel hydraulic, 25 stands for 25 tonnes weight, M is a mining (flameproofed) type, and Mk3. stands for Mark 3 - the type variant - Ed.) Like number 6, these are particularly noteworthy for their three axle design. Number 11 is a new 4wBE, loco built by "Gemco" (George Moss) B/N 2811-12-208-82 of 1982, weighing in at 23

tonnes. Reportedly there are two Fox diesel locos (out of use) and a battery loco underground.

Trolley wire haulage is not used now, although the two wire overhead is still in place running underground from just within the adit. A slipper ran along the top of the two wires beside the tracks and was connected to the locos by cables and clips. This is not as sophisticated as the twin wire system at Stockrington No.2 Colliery. A similar two wire system was apparently also used at Collie, WA, in the past.

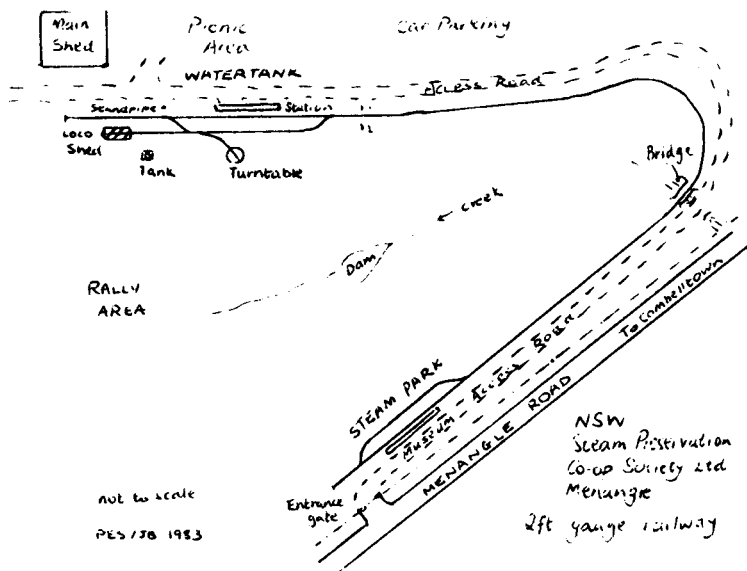

Also observed were the remains of 5-tonne capacity four wheel mine cars and two standard gauge cement hoppers.

Anthony Weston 3/83.

N.S.W. STEAM PRESERVATION SOCIETY CO-OP LTD, Menangle Steam Park 610 mm gauge (see LRN 34 p. 6)

The Sydney Light Railway Society has now ceased to exist, with all its members joining the NSW Steam Preservation Society Co-op.

The open days of the Society's steam rally on 9 and 10 April saw a section of the "Hoot, Toot & Whistle" railway opened to the public. The track available was 300 metres or so long and the mode of travel was by mechanical push-pull quadricycle (a converted ex-standard gauge tricycle). On a fine weekend, the number of riders on the "quad" exceeded 700, and everyone seemed to enjoy their ride, with adults doing their own "pushing and pulling".

Paul Simpson 4/83.

More track is being laid on a regular basis and hopefully for the next rally on 12 and 13 November, the Robert Hudson 0-4-0WT (Hudswell Clarke 1423 of 1923) will be steamed and will haul the bogie carriage, presently on loan to the Goulburn Steam Museum, which will be returned shortly.

{bmc d:\lrrsa\lrrn\graphics\lrrn035a.bmp}

The line will run from the entrance of the complex, "Steampark", to "Watertank" near the main exhibit shed. Enough material is on hand to construct the first 600 ft of the line from Watertank to the site of a bridge which will be built to cross a creek.

Paul Simpson 4/83.

DEPARTMENT OF PUBLIC WORKS Coffs Harbour 1435 mm gauge

The southern breakwater still has some standard gauge tracks laid, at the shore end, running from a storage site for concrete blocks. The rails at the outer end of the breakwater have been removed but sleepers with outer dogspikes are still in place. There is quite an amount of rail stored in the adjacent quarry. There are six four-wheel trucks at the storage site. The large steam crane (Cowans Sheldon & Co Ltd 3230 of 1913) which was at the site in 1978 has been removed.

It is still possible to see signs of the standard gauge track on the northern breakwater, although individual sleepers have been covered with concrete. A date in the concrete surrounding the sleepers is 1929.

Anthony Weston 3/83.

THE MARITIME SERVICES BOARD OF NSW Coffs Harbour 1435 mm gauge (see LRN 17 p.3)

All rails have been removed from the deck of the jetty although there are still some tracks on shore.

Anthony Weston 3/83.

DEPARTMENT OF PUBLIC WORKS, Woodford Island 1435 mm gauge

There is a large out-of-use quarry, fenced compound and shed on the river west of Maclean. Stored in the compound is a large quantity of rail and four-wheel trucks .

Anthony Weston 3/83.

PENROSE PARK TRUST, Penrose Park, Silverton 1067 mm & 1016 mm gauge

Preserved in the park is ex-Silverton Tramway Co. Y11, Beyer Peacock 2-6-0 3535 of 1893. There is also an amusement railway on a tight circle of 40 in gauge track.

Anthony Weston 3/83.

ROTARY PICNIC AREA, Lithgow 1067 mm gauge

(see LRN 30, p.2)

The Hunslet 0-6-0DM and converted mine tub remain on display here. The loco has now had a Rotary sign placed on it (thus indicating the group responsible for its preservation was not Apex, as incorrectly reported previously). The loco, believed to be Hunslet 4059 of 1050(sic), has lost most of its engine covers.

Rob Pearman 3/83.

SOUTH MAITLAND RAILWAYS PTY LTD 1435 mm gauge

It is reported that this well-known steam railway closed on 10 June 1983 and trains are now worked by the State Rail Authority of NSW, which has taken over the line. This is believed not to effect the associated Richmond Vale Railway.

Keith McDonald 6/83.

WATER RESOURCES COMMISSION, Burrinjuck Depot Burrinjuck 914 mm gauge

A small petrol locomotive is on display at the visitor's carpark. It is a 3 ft gauge 0-4-0PM fitted with an engine from a Fordson tractor which drives to the rear axle of the plate frame chassis. Braking is provided to all four wheels, which are linked by coupling rods. According to Water Resources Commission records, this loco, No. IC946, was transferred from Wyangala Dam in 1937/8 "for use at Upper Burrinjuck - hauling spalls to the crusher". It was sold by the Water Conservation & Irrigation Commission to the Electricity Commission of NSW in 1957 for use on the tramway from the dam wall to the No.1 Power Station. This tramway has now been lifted.

In front of the spillway wall are the signs of trackwork of about 3 ft gauge. This was said to have been used during the reconstruction of the dam to convey cement from the batching plant to the cableway. It is not known if locomotives were used.

In the village near the dam wall is a sidetipping skip body with "hungry boards" welded on top, and a nearby storage area contained a set of points.

Rob Pearman 1/83; Anthony Weston 3/83.

PARKS & WILDLIFE SERVICES, 914 mm gauge

Burrinjuck Site Recreation Area.

At this recreation area upstream from the Burrinjuck Dam is a four wheel, 3 ft gauge side dump truck. Although labelled as one of the "original trucks used in the construction of the Burrinjuck Dam", a plate is carried stating that

it was manufactured by Walsh Island Dockyard, Newcastle NSW, AD 1929 which postdates the original dam construction. The truck may possibly be ex Wyangala Dam like the locomotive displayed in the visitors' carpark.

The recreation area is opposite the site office, which has a number of interesting photos of the old Burrinjuck Tramway.

The road to Burrinjuck from the Hume Highway parallels the old tramway route for part of its length.

Rob Pearman 1/83; Anthony Weston 3/83.

THE SULPHIDE STREET RAILWAY & HISTORICAL MUSEUM, Broken Hill. 1067 mm gauge

(see LRN 19 p.3)

Now established at the old Silverton Tramway Co. Sulphide Street Station, this museum displays a number of locos, carriages and goods vehicles from the Silverton Tramway. Locos are:

1	2-6-0	Beyer Peacock	2971	1888.
24	4-8-2	Beyer Peacock	7553	1951.
26	0-6-0DM	Andrew Barclay	391	1953.

There is an excellent collection of papers, plans and photographs in the station building. One interesting item in the special trains Fare Book was the "Virgins Moonlight Picnic"

Anthony Weston 3/83

WYNDHAM ESTATE WINE CO., Branxton approx 610 mm gauge

(see LRN 16 p. 2)

This tourist railway reported in earlier editions of LRN has been removed. All that remains is the station building and platform at "Wyndham Junction", the right of way and several sleepers. A check of dogspike measurements could not confirm if the railway was 610 mm gauge or not, but it was rumoured that the track as originally laid was gauged to 610 mm on the outer edge of the rails, and that the rolling stock had to be adapted to suit.

The reason given by one of the employees for the demise of the line was that the loco was most unreliable in service. It is not known to whom the loco, carriages and track was sold, although it is understood that enquiries were received from Western Australia and South Australia.

Paul Simpson 4/83.

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford. 610 mm gauge

(see LRN 32 p.6)

The past few months have seen further progress on the Durundur Railway operating museum project. Early in January some 20 tonnes of 421b rail was delivered to site having been purchased some years ago through the co-operation of the Illawarra Light Railway Museum Society. This was collected from Millmerran together with a quantity of fishplates and fishbolt. Late in February, further track materials in the form of 77 sleepers were delivered on site having been purchased second hand from the QGR by a member. Meanwhile, during January, ten lengths of track were laid over two weekends to extend the railhead. Work has continued with some of the sleepers ex QGR being cut to size for further track extensions. A quantity of 801b rail has been donated to the Society by the Main Roads

Department, and consideration is being given to using it in the main line in the future, while 42 lb rail will be used initially to replace 20 lb rail in the yard area.

The State Forestry Department has granted an Occupation Permit on the section of the former Kilcoy branch line to the south of Woodford. In due course, it is expected to be replaced by a Special Lease. Enough land should be available to construct a compound area for navvying equipment and to store certain locomotives "awaiting restoration". This would enable the Margaret Street site in Woodford to be further developed as a museum site.

The overhaul of Hudswell Clarke 0-6-0 *Melbourne* (1701 of 1938). The frames have now been thoroughly repainted with primer, and the sides of the footplate and rear head stock have been needle-gunned and painted. Running repairs have also been carried out on the passenger carriage. The five steam locomotives still stored at the Brisbane Tramway Museum Society's Ferny Grove site are due to be moved to Woodford within the next few months. The locos were moved there in January 1974, and the assistance of the BTMS has been of great value to ANGRMS over the intervening years.

Durundur Railway Bulletin 1,2,3,4/83

BARALABA 661 mm gauge

It is thought that the 2 ft 2 in gauge E.M.Baldwin 4wDH 6-2445~1-3-68 of 1968 is preserved in the town of Baralaba. This loco formerly worked at the local Dawson Valley Colliery, but only for a short time, for operations at the

mine, owned by Mount Morgan Ltd, are believed to have ceased in 1969, and the mine was finally closed completely in 1975.

Keith McDonald 6/83.

DAMPIER COAL MINING CO., Cook Colliery 1067 mm gauge

(see LRN 34 p.12)

This underground coal mine near Blackwater has been saved from closure by approval being given for its purchase by a joint venture consisting of McIlwraith McEachern Ltd (60%), an Australian company, and Korean enterprises Pohang Iron & Steel Corporation Ltd and Ssangong Corporation (20% each). Production capacity will be increased from 600,000 tonnes per year to 800,000 tonnes, and the Korean partners will guarantee to buy 600,000 tonnes a year for at least the next five years.

Keith McDonald has pointed out that Vernier Engineering vehicles are not allotted builder's numbers, and that the number carried by car MC6 (MDA No.932) refers to the NSW Mines Department approval number for the machine.

Mackay Daily Mercury 6/5/83; Keith McDonald 6/83.

DREAMWORLD PRODUCTIONS PTY LTD, Coomera 610 mm gauge

(see LRN 30 p.8)

From *The Road Ahead* (RACQ) 6-7/83 .

{bmc d:\lrrsa\lrn\graphics\lrn035b.bmp}

Ned Kelly prepares to bail up the passengers aboard Dreamworld's Cannonball Express.

Perry 0-6-2T 5643.51.1 of 1951 was seen inside the loco/carriage shed late in April. A start had been made on the rebuilding of the loco. The side tanks have been removed and are located outside the shed, whilst the chimney, steam dome cap, smokebox door, cylinder lagging and front buffer beam have also been removed. It is reported that an experienced engineer is to start working on railway maintenance and will also rebuild the Perry loco within six months.

The train crew appear to have excellent working conditions. On the day in question it was noted that lunch was 12 to 12.45pm and afternoon teabreak 3 to 3.30pm, and during these times the railway did not operate.

Dreamworld is open only five days a week normally (closed Thursdays and Fridays) except during school holiday times in Queensland, Victoria and New South Wales, when it opens seven days.

Paul Simpson 4/83.

ISIS CENTRAL SUGAR MILL CO LTD 610 mm gauge

(see LRN 33, p.8)

A project to try and eliminate the problem of brake lock-up in brake wagons is being implemented by the mill in association with the Sugar Research Institute. One of the brake wagons is being fitted with coupling rods, while another is being fitted with an anti lock-up device of the type which is widely used in freight vehicles in Europe. Results of these two experimental approaches will be compared with a view to developing a satisfactory solution to a problem which has caused excessive wheel wear and a loss of efficiency with these vehicles.

Robert James 6/83.

ROD LEONARD, Trinity Beach 610 mm gauge

Mr Leonard has recently acquired two locomotives for preservation and restoration. Hudswell Clarke 0-6-0 1653 of 1935, formerly Macknade Mill number 1, has been acquired from an Ingham service club. It had been stored in the yard of Solari's Engineering Works at Ingham for some time (see LRN 34 p.15). F.C.Hibberd 4wPM "Planet" 3570 of 1952 has been acquired from Mourilyan Mill. This small loco has languished out of use in a shed at the mill for many years.

Len Heaton 6/83.

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge (see LRN 33 p.10)

A complete report on the mill's tramline system has foreshadowed a number of improvements which should be carried out over a number of

years to achieve a more productive and cost effective system. A new high level crossing of the Pioneer River at Mia Mia, to cost about \$1 million would eliminate the present low level crossing which involves unfavourable grades and is prone to flood damage. An extension to Rolleston's Corner from the north branch of Sandy Creek would cost \$585,000, this figure to include sidings, and a crossing of Sandy Creek which would cost \$135,000. Lastly, a new marshalling yard should be constructed.

Mackay Daily Mercury 5/5/83.

OAKLEIGH COLLIERY, Rosewood 508 mm gauge

(see LRN 33 p.10)

On a visit in May, two 15hp Jenbach 4wDM locos were said to be working underground.

In the workshops, under repair, was a yellow painted 20hp Jenbach 4wDM. Also noted on the surface was a 15hp "Bundaberg Jenbach" Bundaberg Foundry 18 of 1956, painted grey, and derelict. This loco is used for spare parts. The Jenbach builders numbers are not known at present. Also used for spare parts are a number of similar locos owned by Oakleigh, but out of use at the nearby Normanton Colliery site. Two were stated to be there for this purpose, although in 1978, two 15 hp Jenbach or "Bundaberg Jenbach" 4wDM locos were noted derelict and a further one dismantled.

Rob Pearman 5/83; Editor.

RACECOURSE CO-OPERATIVE SUGAR ASSOCIATION LTD, Mackay 610 mm gauge

(see LRN 33 p.11)

Ruston & Hornsby 4wDM *Old Smokey* (392120 of 1955) is reported to have been sold to a cane farmer at Nambour towards the end of last year. Any information as to its present whereabouts would be welcome.

During 1983, new cabs have been fitted to Clyde 0-6-0DH loco *Sunnyside* (57-160) and *Munbura* (67-570), leaving only sister loco *Chelona* (59-201) to be dealt with. Four of the new cabs fitted to Racecourse locos in recent years were constructed using discarded cabs from Pleystowe Mill as a basis.

E.M.Baldwin 4wDM *Leo* (6-2612-1-10-68) was converted to four-wheel drive when it was fitted with new wheels a few years ago. Sister loco *Road Runner* (6-2512-2-11-68) retains drive to rear axle only, but will also be fitted with a chain connection between the axles when it becomes due for new wheels soon.

Editor 6/83.

TIMBEERWAH MOUNTAIN TRAMWAY, Arcadia, Cooroy 610 mm gauge

(see LRN 33 p.11)

Due to recent construction, the track has been extended by 133 yards back to the farm workshop to facilitate maintenance. A shed has been erected at the farm terminus for the "Casey" gangers trolley.

A quantity of rail, some points and a wagon turntable were recently acquired from the Australian Narrow Gauge Railway Museum Society, and should be of great benefit for future construction up Mount Timbeerwah. The loco constructed by Russell Savage in Mildura (Vic) has entered service this year. Numbered H220 it is an 0-4-0PM fitted with vacuum brakes. The loco is a "two seater" and features a canopy over the cab. The main colour is bright yellow with black/yellow dazzle stripes at the front.

Russell Savage 5/83.

SOUTH AUSTRALIA

CEDUNA JETTY 1067 mm gauge

There is a 3 ft 6 in gauge tramway on the town jetty with a four-wheeled truck. At the town end, a point ends under bitumen, and at the seaward end are the remains of a siding (now lifted).

Anthony Weston 2/83.

PORT BROUGHTON JETTY 1067 mm gauge

(see LR 64)

A 3 ft 6 in gauge tramway runs out along the jetty, with three trolleys which appear to see use. The seaward end of the jetty was not inspected.

Anthony Weston 3/83.

THE BROKEN HILL PROPRIETARY CO LTD, Iron Knob. 1067 mm gauge

Although rail operations within the iron ore quarries ceased in the late 1960s, there are some interesting relics preserved around town. In the centre of the town is Bo-Bo WE number E7 (built by Perry in 1954 - Ed.), coupled to a sturdy four-wheel side dump truck.

At the BHP visitors' centre are older relics. These are crude four-wheel end tipping box trucks (mostly timber) and a four-wheel steel bottom dump truck. All are 3 ft 6 in gauge. Within the visitors centre is a selection of photographs showing various types of rail transport used in the quarries.

Anthony Weston 3/83.

IMPERIAL CHEMICAL INDUSTRIES PTY LTD, Osborne . 1600 mm gauge

The yard shunter here still appears to see regular use. It is an 0-4-0DM painted in orange livery and was built by Ruston & Hornsby at Lincoln, England. Builder's number is 304475 of 1951, Model 165DS. The loco had the distinction of having been exhibited at the Festival of Britain by its makers before being shipped to Australia.

Rob Pearman 3/83.

NATIONAL TRUST MOONTA BRANCH, Wheal Munta Mining Museum, Moonta Gauges various.

(see LRN 31 p.17)

In addition to the museum collection of photographs, maps and relics there is a 2 ft gauge railway in the form of an 800 m circle of track. A 4wPM loco (ex Maylands Brickworks, WA) hauls a train of four-wheel open passenger cars. There is quite a collection of small skips, and in the shed a 4wBE loco "from Broken Hill".

Anthony Weston 3/83.

STEETLEY INDUSTRIES LTD, Bunker Hill Mine, Oraparinna 610 mm gauge

There is an underground barytes (barium sulphate) mine in the Flinders Ranges 80 km north of Hawker. There is a 2 ft gauge tramway running into an adit, on the No. 3 level though this is not now used. Most production comes from below No. 3 level by rubber tyred equipment down a decline. Round the hill is another adit which is worked as required and contains a battery loco on 2 ft gauge. Two battery locos were noted, number 2, a 4wBE Mancha out of use at the No.3 level adit, and an 0-4-0BE similar to a standard "Gemco" trammer.

Anthony Weston 3/83

VICTORIA

AUSTRALIAN PAPER MANUFACTURERS LTD, Maryvale. 1600 mm gauge

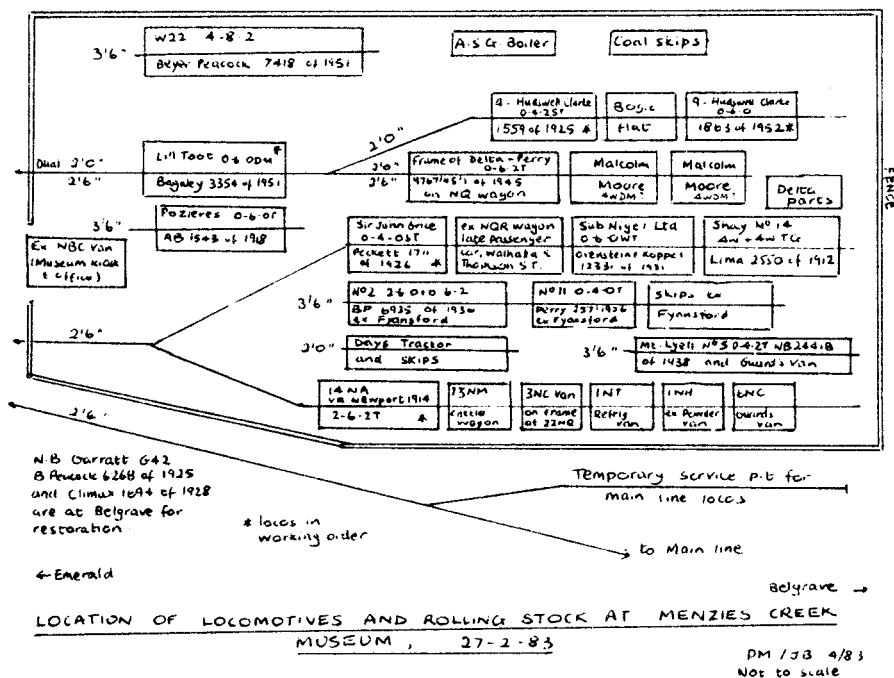

Two B-B DE locomotives are used to haul traffic from Maryvale Sidings to the mill. On Saturday 7 May, loco number 2 made two return trips during the morning. This unit was built in the USA by the Whitcomb Locomotive Co. and carries builder's number 61109. Sister loco, number 1, was undergoing overhaul. It is builder's number 61108. Both locos,

Model 50DE70, are painted yellow with dazzle stripes on the cab sides, and have coupling rods connecting the wheels on each bogie.

Darryl Grant 5/83.

PUFFING BILLY PRESERVATION SOCIETY MUSEUM.

See diagram showing location of rolling stock in the museum, below.

STATE ELECTRICITY COMMISSION OF VICTORIA, Yallourn 900 mm gauge

(see LRN 32 p.11)

On 7 May Bo-Bo Wire Electric locos 108, 111 and 112 (Henschel/Siemens 25543/5209 of 1950, 25547/5213 of 1951/1950 and 25545/5211 of 1951/1950) were noted on coal trains. Locos 101, 107, 122 (Henschel/Siemens 28586/5139 of 1949, 25541/5207 of 1950 and 29859/6109 of 1962) and 125 (Hitachi 102 of 1967) were under repair in the workshops. 8, Malcolm Moore 0-4-0DM 36 of 1949 and 12, John Fowler 0-6-0DM 4210049 of 1951 were parked outside the workshops. Most of the other locos were parked around the loco sheds, with the exception of 121 Henschel/Siemens 29858/6108 of 1962, which was seen parked near the derelict 13, John Fowler 0-6-0DM 4210050 of 1951.

Numbers 124 (Hitachi 101 of 1967) and 125 were supplied with Faiveley pantographs but now carry one Faiveley and one conventional pantograph. The new tamping machine has been delivered by Plasser (Australia) and was seen in the Yallourn open cut. As a result of the programmed changes to the

railway system, work has started on new engine sheds at a new site outside the open cut. Work on the deviation of the main line is expected to start soon.

Darryl Grant 5/83.

WESTERN AUSTRALIA

BROOME PEARLING SETTLEMENT 610 mm gauge?

At the pearling settlement in Broome there is a jetty opposite the Streeter & Male Store in Short Street. Running the full length of the Jetty (about 70 m) there is a tramway of about 2 ft gauge with a four-wheel trolley.

Anthony Weston 5/83.

BEDFORD PARK, Broome 1067 mm gauge

A passenger car is preserved here. It has longitudinal seating, similar to one which has been photographed at Port Samson, and appears to postdate PWD tramway operations at Broome. Otherwise, there are very few remains of the tramway.

Anthony Weston 5/83.

COLLIE HISTORICAL SOCIETY, Collie 1067 mm gauge

(see LRN 29, p.9)

The 4wBE loco inside the museum yard is of 3 ft 6 in gauge. The unit appears to be a standard "Gemco" design built by George Moss stretched from 2 ft to 3 ft 6 in gauge but with a normal (2 ft gauge) size battery box.

Anthony Weston 2/83.

GOLDEN MINE LOOP LINE RAILWAY SOCIETY 1067 mm (& 610 mm?) gauge

(see LRN 27 p.17)

F.C.Hibberd "Planet" 4wDM 3966 of 1962 has still not been put into service. Following the repair of the engine, it was discovered that a number of small but important parts would have to be ordered from England to complete restoration. The Planet will be joined at Boulder by a Drewry 0-6-0DM Z class loco recently purchased from WAGR. Another acquisition of interest is an underground mines loco, two tip trucks and a flat top, donated by Kalgoorlie Mining Associates. Further details of this equipment are awaited for publication in LRN.

Golden Mile Loop Line Railway Society Newsletter No.10.

WHITEMANS BRICK PTY LTD, Middle Swan. 610 mm gauge

Three petrol locomotives have recently been discovered at this claypit, together with several items of rolling stock, by members of the Western Australian Light Railway Preservation Association.

Rail operations ceased at this brickworks in about 1976. It had originally been a horse worked operation, but loco haulage was introduced with the importation of a 4wPM F.C.Hibberd "Planet" loco from the UK. This loco was found in the scrap area and carries the name *Yellow Rose*. Unfortunately, it does not carry any identification plates. A replacement engine is fitted to this machine.

At another part of the claypit, two home built locos were discovered. They carry plates reading RIDLEY No.1 and RIDLEY No.2. Harold Ridley, their designer was the former Manager/Engineer at Whitemans. RIDLEY No.1 has two axles and is fitted with a Vanguard petrol engine. RIDLEY No.2 also has a Vanguard engine, but it has three axles, one rigid, and two on a bogle at the cab end of the loco.

RIDLEY No.1 is to be retained at the brickworks to be set up as an historic exhibit in company with a four wheel clay hopper. The remaining locos together with a spare Vanguard engine, two heavy duty hoppers, one light hopper frame, two 45 lb turnouts complete and several lengths of rail were donated to the Western Australian Light Railway Preservation Association, and were moved to its Whiteman Park depot in March, together with sundry track materials also recovered from the brickworks.

L.G.Watson 5/83.

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC, Whiteman Park, Caversham 610 mm gauge.

(see LRN 33 p.16)

A \$20,000 grant has been made to the Association from the State Instant Lottery Culture Fund, to enable a shed/workshops to be constructed at Whiteman Park. The shed has now been completed and measures 12m x 24m with a height of 4.2m. Three roller doors give access to three tracks in the shed. Cladding is in weathered copper colour bonded corrugated iron to give an antique appearance, in line with Metropolitan Regional Planning Authority requirements, and the design is based on the old Kalgoorlie Tram Barn. Track is being laid in the depot area.

Two locos have been donated to the Association by Whiteman Brick Pty Ltd, after having been "discovered" by Association members (see previous item). One is a 4wPM "Planet" built by F.C.Hibberd in the UK and is named

Yellow Rose while the other is an unusual six-wheel petrol engined loco, RIDLEY No.2, built by Whitemans. Also donated by Whitemans were one Vanguard petrol engine, two heavy duty hoppers (with sealed bearings and two independent helical springs to each axle), one light hopper chassis, one complete turnout, several lengths of rail and a quantity of fishplates, fishbolts and dogspikes. This material was moved to Whiteman Park in March.

On 19 May, four more ex Lake View & Star gable bottom ore wagons built by Malcolm Moore were purchased from SimsMetal at Bayswater and transferred to Whiteman Park. Three more of these wagons are in store at Hazelmere.

Track and turnout components have been purchased from WAGR recently. One of the crossings, switches and cheeseknobs is ex PWD, coming from the Busselton Jetty's yard area which was evidently lifted recently.

L.C.Watson 5/83.

OVERSEAS - FIJI

BARCLAY BROTHERS PTY LTD, Mona Savu 610 mm gauge

(see LRN 24, p.11)

With the completion of the hydro-electric scheme, Barclay Brothers recently advertised some rail equipment for sale. Rail equipment includes battery locos of 3 ton, 8 ton and 10 ton types, complete with batteries and chargers, rail mounted drill jumbo, loaders and shuttle cars. No mention was made of Hunslet 4wDM 8824 of 1978. Possibly this has been sold to the Fiji Sugar Corporation for use on its cane tramways.

Sydney Morning Herald unknown date via Rob Pearman.

TOUR REPORT - Powelltown

A LRRSA tour of the burnt Powelltown area was organised following the disastrous bush fires of Ash Wednesday and was held on 24 April. About 70 people attended in thirty or so cars and assembled at "Wombattia", Yarra Junction, for a preview of the days activities and a slide show.

After an express run to Powelltown, the site of the "big bridge" and several formations in the vicinity were inspected before lunch. After lunch, the participants set off for the Bump five miles distant in half of the cars. The original incline formation can be seen near Big Creek Road about fifty yards from the end of the bitumen and is now quite clear. Walking from here to the Noojee Road, several interesting relics to be seen included the winch foundations, a fairly substantial cutting and a couple of pieces of corroded

rail not far from the Noojee Road. The party then walked back along the "new" (1925) line towards the tunnel. It is very clear and open due to the all-consuming fires. The mill site at Nayook West was inspected and here there are plenty of bricks strewn about, a heavily rusted mill boiler and the sawdust heap. After retrieving the cars from the Bump, most of the party drove out along the Noojee Road inspecting some of the remains of the Goodwood Tramway near Savins Creek and also near where the burnt area finishes about two miles further on .

Steve Martin.

SALES DEPARTMENT.

LRRSA has released two new items available which will be of special interest to researchers.

*** Member Keith McDonald has put together a roster of all locomotives and personnel cars operated by AIS Collieries. John Browning and J.L.N.Southern have helped complete the listing which is very comprehensive.

10 pg . 1 map . A4 size . Only \$1.50 postage included.

*** Two other members, Steve Martin and Arthur Winzenried have completed an index for LRN covering issues 1 to 10. Two listings give subject and locomotive references. 28 pages. Cost is only \$1.95 posted.

Still selling well are:

The Waratah Story, South Gippsland Historical Society, at \$2.50 ea posted .

Victorian Tramway Register. More than 50 pages listing known tramways and their locomotives. Still only \$4.50 posted.

Russells Gembrook Tramway . No .9 in the APW Research Report series \$2.50 posted .

Mount Morgan a new book by John Kerr at \$9.95 posted.

MEETINGS

SYDNEY

For our next meeting, Ken McCarthy will speak on his current research project, the tramways of the Silver City - Broken Hill area. There has been a lot of historical interest in Broken Hill with its centenary this year and Ken has spent some weeks there researching the tramways.

Date:- Wednesday 24 August 1983. Time:- 7.30pm.

Location:- Government & Transport Club, Regent St. Sydney.

Parking available in Regent St. & Botany Rd.

MELBOURNE

A positive feature of the recent bushfires (and probably about the only

good thing about them) was the rediscovery of a host of tramway remains, many of which have been hidden by bush for in excess of thirty years. Several of our members have been out exploring these relics and fortunately have recorded the scenes on slides. So far we have slides of remains in the Powelltown, Noojee, Warburton and Mount Disappointment Districts but we hope to cover other areas by the meeting. The August meeting will be a slide night devoted to relics uncovered by the bushfires so if you have some slides bring them along.

Incidentally it is also our AGM (we will keep it short!) so it should be an interesting night all round. See you there!

Date:- Thursday 11 August 1983. Time:- 8.00pm.

Location:- Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

LIGHT RAILWAY NEWS

The Light Railway Research Society of Australia

No. 36

October 1983

Hon. Editor Mr. J. Browning, P.O.Box 105, Mackay, Qld. 4068 (079 51 1337)
Hon. Secretary LRRSA NSW Mr. C. Wilson, P.O.Box 290, Burwood, NSW 2134
Hon. Secretary LRRSA Vic Mr. G. Maynard, P.O. Box 21, Surrey Hills Vic. 3127
Deadline for next issue: 20 October 1983.

EDITOR'S NOTE

Apologies for any lateness experienced with this issue of LRN. Due to personal

circumstances, the Editor was unable to post the copy off to Melbourne until a fortnight after the normal date.

Apologies to any member who received a copy of LRN 34 instead of LRN 35 in the last mailing. Please contact the Secretary, Victorian Division, to receive your correct copy.

CORRECTION

Puffing Billy Railway (see LRN 33 p.12). Chris Hart writes to say that the cab fitted to Ruston & Hornsby loco *William H. Collis* was originally fitted to Macknade Mill number 14 an E.M. Baldwin product, not a Clyde locomotive.

RESEARCH COLUMN

Craig Wilson sends this press cutting, of interest especially to our Queensland readers.

Tenders called: April 6, 1929. Redcliffe Qld., Town Council, purchase of

(1) 20 tons (approximately) of 30 lb steel rails, 30 ft lengths, including two 2 ft 6 in gauge crossings.

(2) Four table top trolleys, 2 ft 6 in gauge.

L. J. Lucas, Town Clerk, Redcliffe.

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

E.M. BALDWIN & SONS PTY LTD, Castle Hill, NSW

(see LRN 35 p.3)

The last five units of an order for ten 4wBER personnel carriers for Newcom Collieries were delivered ex Baldwin's works on 29 August, after having been completed for several weeks. These units are order number 9981 and are 1067 mm gauge.

Craig Wilson 8/83

AUSTRALIAN CAPITAL TERRITORY

CANBERRY HOLDINGS PTY LTD, Canberry Fair, Dickson. 610 mm gauge

(see LRN 35 p.4)

Ruston & Hornsby 4wDM 304457 of 1951 has been repainted in a maroon livery. Other locos remained on site, but there was no evidence of any activity when a visit was made in July.

R. J. Pearman 7/83

NEW SOUTH WALES

Equipment in transit

On 9 July, a concrete carry wagon was seen on the back of a semitrailer heading south through Hornsby, and later in Baulkham Hills. the vehicle was a large one, possibly 40 ft long, and appeared to be about 2 ft 6 in gauge. Can any reader suggest its origin or destination?

Craig Wilson 8/83

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(See LRN 34 p.4)

Operating days.

The June operation day coincided with the Sunday of the Queen's Birthday weekend. All records were broken when over 860 steam train rides were made while 500 passengers were carried on the miners' tram hauled behind the Gemco 4w electric loco (ex battery electric) on the track fitted with overhead wiring.

This record was again broken on Sunday 10 July when over 1000 passengers were carried on the steam trains. On this occasion the two regular

passenger cars P119 (ex QGR) and semi-open saloon car No.1, which seat 39 and 22 respectively, had most seats occupied on every journey with standing passengers on many trips. July 10th was the first open day on which the new multi-ride tickets were on issue.

Motive Power.

The crank handle mechanism on the kerosine powered Fordson-Days-Malcolm Moore 4w tractor has been converted to direct motion in place of the awkward side crank through bevel gears. This 2 ft gauge rail tractor, built about 1935, was obtained from Fairymead Mill in Queensland in 1978, where it carried number 123. Major overhaul and restoration at Albion Park was completed in August 1981.

ILRMS recently advertised for Fordson tractor spare parts for this unit in the local press. The response was most encouraging. Mr W Arnold of West Dapto donated a complete Fordson Major tractor of about 1956 vintage to the museum. This unit is in such good condition that it is being restored to its original state and will relieve the work pressure on the Fiat 411 tractor which has served the museum for so many years.

DORRIGO STEAM RAILWAY & MUSEUM 1435mm gauge

(see LRN 35 p.5)

Andrew Barclay 0-4-0ST *Juno* (1739 of 1923) has been stripped down for its annual boiler examination, due in July. Recently despatched to Dorrigo has been the solid steel buffer beam from Porter 0-4-0T 4 (5685 of 1915) which weighs in at around 6 tons (the buffer beam that is!)

DSR&M Newsletter 7/83

GREATER CESSNOCK CITY COUNCIL, Richmond Main Colliery Site, near Cessnock Gauges various

(see LRN 13 p.15)

The former colliery site complete with buildings is being restored as a museum. Progress appears slow but standard gauge tracks have been repaired around the rear of the site and restoration of some of the buildings is in progress.

Under repair in the loco shed was an 0-4-0ST reported to be *Marjorie* (Clyde 462 of 1938) ex John Lysaght (Australia) Ltd, Newcastle. Stored near the shed were two ex J.& A.Brown Kitson 2-8-2T locos, 9 (4567 of 1908) and 10 (4798 of 1911), together with two steam cranes.

Other standard gauge stock was stored in the sidings, including F.C.Hibberd 4wDM 3715 of 1954 ex Maritime Services Board, Coffs Harbour. Rolling stock present included ex-NSWGR departmental wagons, non-air coal hoppers

and ex Maritime Services Board stone bogies. Dumped near the entrance was a large quantity of mine tubs of various sizes and gauges, tippers, cages and two small locos. These were Ruston & Hornsby 4wDM locos 331246 of 1952 and 385901 of 1956 both ex Nymboida Colliery. Stored nearby were other items of mining machinery and an ex-Melbourne tram car. Some of the original surface skipways are intact around the site although all the shafts have been capped.

R. J. Pearman 6/83

H.M.A. NAVAL DOCKYARD, Garden Island, Sydney 1435mm gauge

Normal rail traffic ceased here years ago, but traces still remain of the system. Track was mostly set in concrete but has now been largely lifted or covered. However, sections of track remain at locations throughout the site including the wharves, beside Captain Cook dock, along West Road and via a short radius curve around North Road and past the ferry wharf.

Two sections of track approximately 30 metres long remain in use crossing Cook Road and entering the machine shop building. Rolling stock appears to be limited to two wooden framed flat wagons on each line, used for machinery handling.

It is reported that horses were used originally, as motive power, but latterly steam cranes were utilised.

R. J. Pearman 7/83

MINEWORKERS MEMORIAL MUSIC SHELL & MUSEUM, Freemans Waterholes Gauges various

(see LRN 23 p.9)

The museum contains largely dioramas of mining operations from the earlier workings at Nobby's to the present day. The central display includes a mine tub and photographs of underground workings including battery loco operation at Elrington Colliery.

Ex J.& A. Brown R.O.D. 2-8-0 number 23 (Great Central Railway, 1918) is displayed with hoppers and a brake van (standard gauge). There is also a small battery loco on display. This is an Atlas built machine from Elrington Colliery (3 ft 6 in gauge). Other mine equipment is also strewn around the area. The 2 ft gauge locos and rolling stock from Nymboida Colliery have been removed to Richmond Main (see elsewhere this issue).

R.J. Pearman 6/83

SOUTH MAITLAND RAILWAYS PTY LTD 1435mm gauge

Discussions involving the Greater Cessnock City Council, the State Rail

Authority, Australian Railways Union, National Trust and various preservation groups have been held concerning the possible use of the railway for steam hauled tourist trains. All the steam locos have been retained with the exception of number 19, which is to go for display to Port Waratah Coal services. In addition, the normal interchange of locos for use on the Richmond Vale Railway has continued.

R. J. Pearman 9/83

SULPHIDE STREET RAILWAY & HISTORICAL MUSEUM, Broken Hill 1067 mm gauge

(see LRN 35 p.8)

In addition to the locomotives mentioned in the last issue of LRN, a selection of rolling stock items are awaiting restoration and transfer to Sulphide Street from storage on a length of track on the eastern boundary of the West End Plaza shopping centre car park. These vehicles are (north to south): wagons GX600; GX707; GX719; four wheel flat truck 777; side dump 697; GX605; GX762; four wheel works van; bogie wagons ON874; ON950; ON560 & ON930. The works van is the interesting vehicle which appeared on p.21 of Light Railways 49. The original layout consisted of one first class compartment, two second class compartments, and one guard's compartment. The axle boxes bear the information "Martin & Coy Engineers Gawler - 1895". It is hoped that restoration of this particular vehicle can soon be undertaken as it is in an advanced state of decay and very little remains of one side. There is also an assortment of interesting goods vehicles at Sulphide Street with the locos, and bogie petrol tank car NT 0254 still stands a block south of the Sulphide Street station yard at the site of the former Shell Oil siding.

The exhibited room of the Sulphide Street Station is a railway historian's paradise. Various archive items and registers of the Silverton Tramway Company are on display and available for perusal while detailed track maps and gradient incline drawings etc are stored. These are not only relevant to the STC, but also the Tarrawingee Tramway, the isolated NSWGR railway to Menindee and the Broken Hill town tramways. The nearby Charles Rasp library also contains many railway and tramway items.

Ken McCarthy 8/83

NORTHERN TERRITORY

AUSTRALIAN NATIONAL RAILWAYS, Darwin 1067 mm gauge

The transfer of *Sandfly* (Baldwin 0-4-0ST 7860 of 1886) back to Darwin, predicted in LRN 31 (p. 16) has apparently not yet taken place. This is reportedly

due to a dispute over ownership involving various parties interested in the locomotive's future. However, the current political uncertainties surrounding the prospected Alice Springs - Darwin railway may also have made ANR wary about putting the loco on display in Darwin at the present time.

R.J.Pearman 7/83; Editor.

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Woodford 610 mm gauge

(see LRN 35 p.9)

Considerable changes are currently being carried out at Woodford as part of the long term plan for the development of the site. The main work involves the moving of the station, relaying of the line into the station and realignment works associated with this work, and earthworks in the compound area aiming at a reduction of grade in the storage area, and increasing storage tracks from two to three. All 20 lb rail is being eliminated from the station area and will be replaced with 42 lb materials. Apart from upgrading the running facilities, this work will enable a larger car park to be provided and generally enable the amenity of the site to be improved as development continue;.

On 15 August, the long awaited move of locomotives from Ferny Grove to Woodford took place. Five steam locomotives had been stored at the Brisbane Tramway Museum Society's site since January 1974. It was indeed fortunate for the Society to have had this assistance from the BTMS over the years. Also fortunate was the fact that transport of the locos was provided free of charge by QRX Transport. The five locomotives were:

<i>Pioneer</i>	0-6-0T	John Fowler	8047	1898	ex Mossman Mill
3	4-4-2T	Borsig	6345	1907	ex Cattle Creek Mill (rebuilt from 4-4-2)
	0-6-2T	Krauss	6854	1914	ex Bingera Mill (formerly 2 ft 6 in gauge)
2	4-6-0T	Hunslet	1229	1916	ex Cattle Creek Mill (ex W.D.L.R.)
<i>Miallo</i>	0-4-2T	John Fowler	20276	1954	ex Mossman Mill

Rain hampered unloading operations, but all was carried out successfully.

Work has continued with the overhaul of *Melbourne* (Hudswell Clarke 0-6-0 1701 of 1938) The ash pan has been repaired and painting is continuing as time (and the weather) permits. Restoration work has also been started on the ex-Douglas Shire Council Grover's bogie wagon. This wagon has two one-axle bogies linked together with connecting bars. It is planned to equip this vehicle as an open passenger car.

Running days are progressing well with minor interruptions due to bad

weather and engineering works. More than 2,300 passengers had been carried on the line from January until the end of July.

A grant of \$1750 was recently received from the Queensland Travel & Tourist Commission. This is a continuation of the former grants received in the past, where \$1 is refunded for every \$3 spent by the Society on its museum project.

The 3 ft 6 in gauge 4wPM loco which has been on loan to the ARHS (Queensland Division) since 1979 has recently been donated to that Society. It was built in the 1920s for use at Foote's Sawmill and Joinery Works in Ipswich and will be restored for use as part of a museum project planned by the ARHS.

Marian Mill has recently announced the donation of a Planet 4wPM loco to ANGRMS. Built as a diesel loco in 1942 by F.C. Hibberd (B/n.2566), it was rebuilt with a petrol engine at Marian after arriving from the U.K. in 1957. It is currently awaiting collection at the mill.

Durundur Railway Bulletin 5/83, 6/83. 7/83, 8/85; Editor

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 34 p.10)

E.M. Baldwin B-B DH locos 19 & 20 have exchanged duties this season. 19 (7070-3-4-77 of 1977) is back on cane hauling cane, while 20 (7070-4-4-77 of 1977) is back on the sugar run hauling raw sugar in bogie sugar boxes to Lucinda.

C.J. Hart 7/83

CSR LTD, Pleystowe Mill 610 mm gauge

(see LRN 34 p.11)

A large road "dump" is operated at Mandurana, about six kilometres north of the mill. Road vehicles bring cane here from the mill's north coast assignments, up to 45 kilometres away. A fleet of heavy semi-trailers carries out this work, picking up empty bins at Mandurana and returning with loaded ones. The remaining distance to the mill is

travelled on the rails. To unload three 6-tonne capacity bins from a semi-trailer and reload with empties takes about 3-1/2 minutes, using the winch fitted to the prime mover.

Editor 7/83

CSR LTD Victoria Mill 610 mm gauge

(see LRN 34 p.11)

Preserved Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) had some stays

replaced during July in preparation for its annual "outing" for the Maraka Festival held in Ingham in early September.

C. J. Hart 7/83

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 34 p.10)

Loco 5 *Devereaux* (Clyde 0-6-0DH 67-568 of 1957) was rebuilt over the slack season and emerged in the new livery and with a new soundproofed cab as number 13. This leaves only 2 *Melba* (Clyde 0-6-0DH 64-377 of 1964) unrebuilt and in the old grey and yellow livery. It has been decided to maintain this state of affairs for the time being, for apart from the two E.M. Baldwin bogie diesels, only *Melba* can fit under the bridge at Parapi on the Mount Jukes line. Thus if a breakdown occurs, a smaller loco is available to handle the Mount Jukes run. In the future, the clearance at the Parapi bridge will be increased, enabling any of the mill locos to pass underneath (the new cabs on the rebuilt locos are too high at present). Loco 14 (Clyde 0-6-0DH 61-255 of 1961) has been fitted with a high speed gearbox and can now handle the long run from Mirani with ease.

The petrol line car at the mill was scrapped in 1982, but the wheelsets and axle boxes were saved and have been donated to the Australian Narrow Gauge Railway Museum Society. Also donated to ANGRMS has been F.C.Hibberd "Planet" 4wPM 2566 of 1942. This loco was built as a diesel for the British War Department and came to Marian in 1957, where it was rebuilt with the petrol engine from a David Brown tractor. It is currently awaiting collection at the mill.

Editor 7/83

MORETON CENTRAL SUGAR CO., Nambour 610 mm gauge

(see LRN 32 p.9)

A "flying visit" in late August showed that E.M. Baldwin 0-6-0DH *Bli Bli* (6-1257-6-7-65 of 1965) and Clyde 0-6-0DH 63-289 of 1963 have been repainted in the yellow and green livery recently applied to some of the other locos. The Clyde, however, seems to have lost its name *Moreton* in the process. Also with no name was the former *Kalbo* (Com-Eng 0-6-0DH H1022 of 1958) which has been repainted in an all-over yellow livery.

Editor 8/83

MOUNT ISA MINES PTY LTD 1067 mm gauge

(see LRN 9 p.14)

Seen shunting the exchange sidings during a visit in July was B-B DH

Walkers 682 of 1971. The loco was painted in a faded yellow livery and carried the number 5820. Another shunting loco, possibly a Drewry 0-6-0DM (Drewry 2488/Vulcan Foundry D213 of 1953 - Ed) was parked outside the Transport Department. A further unit, apparently a Com-Eng, was shunting the Mica Creek Power Station coal sidings. (Either O-6-0DM E1017 of 1956 or 0-6-0DH JA2482 of 1965).

Underground operation is now reported to be limited to the 19th level.

R.J. Pearman 7/83

NEW HOPE COLLIERIES GROUP, Ipswich area Narrow gauge

Channel 7 News on 23 July showed a Fox cable-hauled man riding car being lowered down a rail incline tunnel at "New Hope Colliery", as part of a rescue exercise. According to the phone book, there are three New Hope Collieries, numbers 4A, 7 & 21.

Editor 7/83

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION. 610 mm gauge (see LRN 35 p. 10)

A shed has been constructed at Mia Mia to house the loco normally stationed out there in the season. The depot is sited just on the river side of the former Base Camp depot, where the loco used to stand out in the weather. The shed has two roads and a pit.

All the locos have had the triangular "North Eton Mill" logo fitted to the cab side or rear panel of the hood in the case of the bogie diesels. A number of locos have also received painted aluminium number plates. D8 (E.M. Baldwin B-B DH 9815-1-10-81 of 1981) received its number at last on 5 July.

D1 (Bundaberg Foundry 6wDM 10 of 1953) still being rebuilt in August, has received a Com-Eng cab, like sister engine D2.

Editor 7,8/83

OAKLEIGH COLLIERY, Rosewood 508mm gauge

(see LRN 35 p.10)

A 350m access tunnel has been driven at the Oakleigh Colliery which can take rubber-tyred vehicles, including a personnel carrier vehicle. This probably means that there will be much less use for the cable-worked rail incline in the old access tunnel.

R. J. Pearman 7/83; Editor

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 33 p.10)

F.C.Hibberd "Planet" 4wDM 2333 of 1940, which met with a serious accident

last year, has been repaired and returned to service. Loco 6, Ruston & Hornsby 4wDM 371381 of 1951 was seen off the track behind the loco shed in June, apparently for urgently needed brake repairs.

Editor 6/83

PROSERPINE CO_OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 30 p.13)

Two traffic accidents involving cane trains were reported in the local press recently. On 29 June, a car was hit by a train at Faletti's Crossing, seven kilometres north of Proserpine at 5am. The car had to be towed away. On 10 August, a loco hauling empty bins clipped the back of a loaded cane trailer being towed behind a truck on a property at Lethebrook. The truck tipped over and the trailer went into a ditch. Six cane bins were damaged.

Mackay Daily Mercury 30/6/83, 11/8/83

RACECOURSE CO-OPERATIVE SUGAR ASSOCIATION LTD 610 mm gauge

(see LRN 35 p.11)

An interesting selection of vehicles owned by Sugar Research has been stored in the mill yard at Racecourse Mill for some months now. A yellow four-wheel car equipped with air-conditioning carries computer and other electronic equipment enables the research staff to ride in relative comfort. A four-wheel power car coupled to it provides electrical power. The generator unit has been removed at present for safe keeping. A 38ft long bogie vehicle mounted on Innisfail Tramway bogies "on loan" from Mourilyan Mill carries a mill roller on rails which can be shifted to alter load characteristics. This vehicle is fitted with an extra axle when in use, instrumented to enable readings to be taken of the stresses set up in wheelsets on 2 ft gauge track. This extra axle has large diameter wheels and is currently at Sugar Research. Nearby was Another vehicle which may belong to Sugar Research, a large bin frame fitted with concrete weights.

SUGAR RESEARCH LTD 610 mm gauge

See RACECOURSE CO-OPERATIVE SUGAR ASSOCIATION

THIESS DAMPIER MITSUI COAL PTY LTD, Moura 610 mm gauge

Jenbach 4wDM 1194 of 1954 was purchased from the Burgowan Coal Co., Torbanlea, by Thiess Dampier Mitsui Coal Pty Ltd for use by the Moura Mine Workers' Picnic Committee, along with a number of mine skips, about 1976.

This loco was new at Caledonian Colliery Walloon. (see LRN 2 p.6)

W.W. Henderson 8/83

THIESS HOLDINGS LTD, South Blackwater 610 mm gauge

Jenbach 4wDM 1155 of 1953 was purchased in 1976 from the Burgowan Coal Co., Torbanlea, by Thiess Bros Pty Ltd for use at the annual Christmas Party at the South Blackwater Mine. This loco was delivered new to Willaroo Colliery. It is thought that a number of mine skips were also sold with the loco by Burgowan Coal. (see LRN 2 p.6)

W.W. Henderson 8/83.

VICTORIA

MR. WEATHERALL, Wodonga 610 mm gauge

This gentleman is the owner of the Orrenstein & Koppel 0-6-0; (4241 of 1910) ex Goulburn Steam Museum (see LRN 3 p.4). It is part of a quite large collection of old machinery which has been gathered together over the years.

L.G. Watson 8/83

WESTERN AUSTRALIA

CARNARVON CHILD CARE CENTRE 1067 mm gauge

Photographed in May, 1978 was a "mystery" item of rolling stock. The upper portion had been modified by an imaginative carpenter, but the lower portion appeared to be from a loco of some kind. The wheels, set far apart, seemed possibly to have been taken from a steam loco. It would appear that the unit is the remains of that illustrated on the top photograph shown on page 15 of *Light Railways* 56. This was a petrol locomotive apparently built by the Harbour & Lights Department for use on the jetty at Carnarvon.

Lindsay Watson 7/83, Editor.

COSSACK PROJECT COMMITTEE, Cossack Gauges various

(see LRN 23 p.21)

This group is involved in the preservation and restoration of the old Port of Cossack. Part of the project has been the proposal to relay the former Cossack to Roebourne tramway although not on the original track bed.

At Roebourne, rails have been positioned on a loop, north of the main road, but may have to be moved now due to road works. Much of the rail appeared to be heavy section.

Near Cossack approximately 200 metres of standard gauge track panels

were in position with rail marked "Yasaka Iron Works 1965" indicating probable Hamersley Iron origin. A short section has been adjusted to 3 ft 6 in gauge and some ex PWD Point Samson stock is displayed on it. This comprises 2 bolster wagons, 2 wagons with two-plank sides (each without ends), one small four-wheel crane and the remains of 4wDM loco PW23 (Motor Rail 14034 of 1957). This was dismantled after the closure of the Point Samson line to provide spares for other PWD locos and now consists of only cab, chassis and gearbox.

Near the Court House in Cossack 2 ft gauge wheel sets were in evidence, together with V skip bodies and one complete wagon.

R.J.Pearman 7/83

HEDLAND LIGHT RAILWAY GROUP, Sports field Port Hedland 1435mm gauge

The remains of the ex Mount Newman F7 Bo-Bo DE loco number 5451 are on display here. In the future, it may be used as a club room. The engine has been removed and sent to the Pilbara Railway Historical Society with the other F7.

There is also 5 in and 12 in gauge track here with a homebuilt diesel running on the 12 in gauge track. The wheels on this loco are reported to have come from the Whim Well Tramway west of Port Hedland.

R.J. Pearman 7/83

PILBARA RAILWAY HISTORICAL SOCIETY, Seven Mile Camp, Karratha 1067 & 1435mm gauges

(see LRN 15 p.15)

This site is a compound just north of the Hamersley Iron Workshops. Displayed near the main entrance is a selection of ex-PWD Point Samson stock, consisting of PWD 22 Motor Rail "Simplex" 4wDM 14033 of 1957, one two-plank wagon with five-plank ends, and the passenger coach. The loco has been restored to working order but having only 9 metres of track limits operations somewhat!

Seen under restoration were ex Mount Newman Bo-Bo DE 5450 (General Motors Electromotive Division Type F7 B/n. 8970) and ex Cliffs Robe River A1A-A1A DE (Montreal Locomotive Works Type RSC-3 B/n. 77753 of 1951 ex NSWGR)

Also on site were the ex British Great Western Railway PENDENNIS CASTLE, ex-Hamersley Iron Bo-Bo DE 007 MABEL (Alco Type S2 B/n. 69214 of 1940) and ex-Hamersley Iron Bo-Bo DE 1000 (Alco Type C-415 B/n. 3449-01 of 1966 - a former Alco demonstrator). The remains of a "trackmobile" were noted. This

is presumably the original Whiting unit from Hamersley Iron.

R. J. Pearman 7/83

PORT HEDLAND 1067 mm gauge

To the east of the main road leading into Port Hedland is dumped a collection of old machinery including trucks, excavators and railway equipment. This is reputedly part of a museum display, but no restoration appears to have been carried out although some items are located on plinths of earth.

The railway equipment comprises one 6 wheel crane plated "Cowans Sheldon 2075/1896 Carlisle, England", and one centre-drop door, four wheel wagon marked "G15". Both of these appear to be ex-WAGR and may have come from a PWD harbour site.

R. J. Pearman 7/83

PUBLIC WORKS DEPARTMENT OF WESTERN AUSTRALIA, Point Samson Depot. 1067 mm gauge

(see LRN 21 p. 10)

PWD vehicles were seen in this yard although normal operations may be through the Harbour & Lights Department.

The buildings are still used for storage and the track is extant, largely unchanged from the report in *Light Railways* 52.

Rolling stock is still in evidence and over 50 wagons were noted including one small four-wheel trolley of heavy construction not previously reported. None of these is in use and the loco shed is now empty. The jetty is padlocked to prevent vehicular access, but is still in use by pedestrians. The end of the Jetty has been removed approximately level with the crossover shown on the track plan in LR 52. Presumably this was as a result of the fire in November 1980.

R. J. Pearman 7/83

SHIRE OF ROEBOURNE, Sports Field, Roebourne 1067 mm gauge

A train of ex-PWD Port Samson stock is displayed on a short section of track at this site. The train comprises 2 wagons with two-plank sides and five-plank ends, 2 bolster wagons and an ancient tank wagon. Much of this stock appears to be ex-WAGR, although some axle boxes are marked "CSR Stapleford Co 1896". The locomotive is PW24, a Motor Rail "Simplex" 4wDM (14045 of 1959). It is fitted with a welded cover over the bonnets and radiator, presumably to prevent excessive vandalism. This loco was in the series of 48/63 hp diesels supplied in post-war years to the Public Works Department of Western Australia by Motor Rail.

R. J. Pearman 7/83

STATE ENERGY COMMISSION OF WESTERN AUSTRALIA, Bunbury 1067 mm gauge

The Bunbury Power Station shunter, a green painted Commonwealth Engineering 0-6-0DM (E1120 of 1957) was seen shunting the exchange sidings. This 26 ton, 204hp unit appeared to be in excellent condition and is believed to have been delivered here new for the power station's construction.

R. J. Pearman 7/83

MEETINGS

SYDNEY

TOUR

The Division's annual tour is to Joadja on Sunday 20 November 1983. Joadja is a site where several days could be spent wandering around the ruins of the shale mining and refining industry with its associated tramways, the site occupying the whole of a most beautiful valley. We will meet at Mittagong R S and leave for Joadja at 9.30 am. Apart from the entry fee to the valley the day is free.

MEETING

Paul Simpson will speak on south coast tramways and some of the interesting discoveries (including locomotives) that he has made in his researches.

Location: Government & Transport Club, Regent Street, Sydney.

Date: Wednesday 26 October 1983. 7.30 pm.

MELBOURNE

FILMS

Long time member Norm Wadeson will be showing part of his extensive collection of railway and tramway movies. Some of the subjects to be covered will be sawmills, tramways and VR narrow gauge. This is a rare opportunity to view films which very few of our members have seen before. Come along and enjoy what will be a most interesting evening.

Location: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton Date: Thursday 13 October 1983. 8.00 pm.

ADELAIDE

NOTICE TO SOUTH AUSTRALIAN MEMBERS

The final meeting for 1983 will be held at the Mile End Railway Museum, Railway Terrace, Keswick on Thursday 3 November at 7.30 pm.

At this meeting a decision will be made regarding whether or not we continue our meetings in 1984, what form they will take, venue, frequency, etc.

The topic for discussion at the meeting will be 'South Australian Jetty Tramways' and members attending are asked to bring any photographs or slides they may have of these light railways. Members who are unable to attend are invited to forward their comments regarding future meetings to Arnold Lockyer, 6 Dunedin Street, Dover Gardens 5048, before the meeting together with a list of Jetty tramway photographs or slides, that they have in their collections.

Deadline for next issue: 20 December 1983.

NOTES, CORRECTIONS AND COMMENTS

BOOK REVIEW

Southern Sugar Saga by John Kerr, published by Bundaberg Sugar Co. Ltd, 160 pages

The establishment of the Millaquin Refinery in 1882 set the sugar industry in the Bundaberg district on a prosperous course. It was in the same year that the Young family produced the first cane at Fairymead. Thus the publication of this book marks the beginning of the second century of two of the major components of what is today Bundaberg Sugar.

The book is well written, well illustrated, and covers the many facets of the development of the sugar industry in the district. This of course includes the many tramways which made possible the transportation of the cane to the big mills which alone were efficient enough to survive. This book is an invaluable reference to the historian of the sugar industry and is a very carefully put together production with colour covers, good index and plenty of photographs.

It is a pity that the book has only been published privately, and is not on sale to the general public. However, copies surplus to the Company's requirements are expected to become available on a limited basis. Any member wishing to enquire as to the availability of copies is asked to write to the author at 105 Highland Terrace, ST. LUCIA, Q. 4067.

JB

MARYSVILLE

The Mountains of Melbourne Leisure Guide (Summer Edition 1982/3) shows a number of walks in the Marysville area associated with timber tramways. These include the "trestle track" off the Michaeldene track north east of the town, where there are trestle bridge and other tramway remains visible, and a track marked as "Anderson's Tramway" off Paradise Plains Road to the south of the town.

Ian Stanley, 10/83

CORRECTIONS AND ADDITIONS

A couple of errors crept into the report about Coal & Allied Operations Ltd, West Wallsend No. 2 Colliery, Killingworth in LRN 35 (p. 5). The locomotive sent from there for overhaul was noted at Hexham Engineering, (not Wallsend Engineering). Furthermore, West Wallsend No.2 Colliery is still very much in operation. Apologies to Keith McDonald.

Tony Weston points out that the reference to underground operations at Mount Isa being "limited to the 19th level" (LRN 36, p.8) probably only applies to ore haulage, and not to the extensive manriding and materials supply operations on both 1067 mm and 610 mm gauges. Haulage of copper ore south of the main R62 shaft has been centralised on 19 level for some time. Previously, there was also copper haulage on 17 and 15 levels. Lead ore haulage north of R62 shaft on 19 level was commissioned in the last two years.

Order 10597 is for three 25-tonne locos for Coal & Allied Operations. Order 11367 is for modification to Sperry Rail Services Car for road-rail use on 1067 mm or 1435 mm gauge. No other orders for railway stock of any type were held in early October.

Keith McDonald 10/83

NEW SOUTH WALES

BLUE CIRCLE SOUTHERN PTY LTD, Portland 1435 mm gauge

(see LRN 35 p. 4)

The steam locos, Andrew Barclay 0-6-0Ts 3 & 5 (1234 of 1911 and 1470 of 1916) and Dubs 2-6-2T 2605 (2794 of 1892) remain out of use and have not been moved since the last report. They are reported to be for sale. It is claimed that the ex Australian Iron & Steel English Electric Australia B-B DE D10 (A007 of 1956) never saw regular service during its short stay here.

Approximately 300 yards east of the works, opposite the school, are dumped items of rail equipment including light rail (approximately 15 lb/ yd.) and one point with three skips without wheels and two buckets. These are presumed to be 2 ft gauge and ex-Blue Circle. Can anyone confirm this?

R. J. Pearman 9/83

ELDERS-IXL PTY LTD, Byron Bay. (formerly F.J.Walker) 1435 mm gauge

(see LRN 33 p. 7)

It is understood that the Byron Bay meatworks is to close, and with it its unique railway operation powered by Motor Rail "Simplex" 4wDM (ex PM) 2129 of 1923.

ABC News 21.10.83.

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY, Albion Park 610 mm gauge

(see LRN 36 p.2)

Motive Power

The 2 ft gauge four-wheeled Mancha battery-electric locomotive which was received from Ivanhoe Colliery, Portland, NSW on 21 February 1976, was fitted with permanent batteries on 17 September 1983 and after a short preliminary charge performed running tests during late afternoon on that date. This loco's restoration was completed on 16 April 1977 but prior to September only operated on special occasions with borrowed batteries.

The batteries were obtained from the Sydney Tramway Museum from tramway ballast motor No.42U. This unit operated as an overhead wire battery driven maintenance car on the Sydney city underground railway from 1926 and was later renumbered L707 in the NSWGR roster. This tram was delivered to the new Loftus museum depot on 29th July 1981, and as it will operate in future on 600v drawn from overhead wires, the traction batteries were made available to the ILRMS.

Between the running days of 14 August and 11 September, a new top plate segment was fitted to the smokebox barrel of Hudswell Clarke 0-6-0 *Cairns* (1706 of 1939) at the base of the smoke stack. During late September, the valve gear on the right hand side of the loco was overhauled and adjusted.

During August and September Davenport 0-4-0ST *Kiama* was repainted black with red trim in place of the previous maroon scheme. This unit now looks most attractive with yellow linework.

On 30 August, the four wheel petrol rail tractor powered by a two-cylinder Lloyd Hartnett engine was fitted with a new fuel tank. This unit was constructed for the rail lifting task at Corrimall in September 1972 and hauled army flat trucks fitted with open cross seats on 12 April 1975 when the first open day was held at Albion Park.

Rolling stock

The restoration of one of the former Dry Creek (S.A.) explosives box wagons

was completed during September with the refitting of brake gear and horse driver's seats.

A pair of end aprons from former Melbourne cable tram trailers were received in Wollongong on 19 September through the generosity of the Tramway Museum Society of Victoria. The first unit was restored and fitted to cable trailer 430 at Albion Park on 8th October while it was expected that the other would be fitted to the tramcar by the end of that month. Prior to the 1920s, these cable trailers had the end aprons and letter boards painted in striking primary colours to indicate routes on which each operated. The ILRMS car has been painted bright red as a "route" colour. Yellow line work was painted on the sides of this vehicle during September.

Shay locos

During 1974 the ILRMS took delivery of the parts of Lima Shay locos 906 of 1904 and 2097 of 1908 which had been used on the Munro Timber Tramway in Southern Queensland until about 1935. Between June 1977 and December 1979, 2097 was assembled to make up one static Shay locomotive. Most of the items of the power bogies of these two locos were also retrieved and delivered to ILRMS but the reassembly and regauging to 2 ft gauge from 2 ft 6 in had been deferred and loco No. 2 (2097) has stood on 2 ft gauge shop trucks since 1979.

On 5 October 1983, ILRMS was pleased to receive two 2 ft gauge Shay bogies from ANGRMS in Queensland. These bogies were a pair which had once run under one of the two Shay locos operated on the Maroochy Shire's Mapleton Tramway (2091 of 1908 & 2800 of 1914). When the tramway was cut back and sold to Moreton Sugar Mill at the end of 1944, 2091 was rebuilt by the mill using components from both locos, and a spare set of bogies were retained. {Loco 2091 still remains preserved at Nambour.} ILRMS now intends to restore the 2 ft gauge bogies and then construct an entirely new chassis from RSJ and channel members to the Munro loco dimensions for mounting on the restored trucks. The best items from the two Shays will then be fitted to the new frame and a mobile unit, on which all the "works" will revolve when hauled along the track, will result.

Open days

High patronage figures continued on the August and September open days when in excess of 700 passengers travelled on the ILRMS steam trains each day. With the warmer weather of October, the next open day saw a decline to about 500 riders, still a most satisfactory figure for this time of the year.

Lineside

During October, the water mains were being extended to serve a 500 gallon

tank donated by Garnock Engineering. This will be installed at the western end of "Yallah" station and will enable locomotives to be serviced while standing at the platform rather than having to steam into the compound area.

Thanks

ILRMS would like to record thanks to the following organisations for making available items mentioned in this report : The Australian Narrow Gauge Railway Museum Society; The Tramway Museum Society of Victoria; The Australian Electric Tramway Museum (St. Kilda S.A. for organising the Dry Creek explosives vehicles); and the Sydney Tramway Museum. Thanks are also due to Brambles for transporting the cable car aprons from Melbourne and the Shay bogies from Brisbane.

Ken McCarthy 10/83

METROPOLITAN WATER SEWERAGE AND DRAINAGE BOARD, Hornsby Heights Gauge unknown

A light railway has been used in connection with sewerage construction works in the area for about the last 18 months. The line runs from a treatment works located in a deep valley between Mt.Colah and Hornsby Heights. Road access to the site is from Hornsby Heights but a view of the railway may be had from the end of a bush track leading off Amaroo Avenue, Mt.Colah. This track terminates at the top of a cliff overlooking the treatment works. From this point the rails can be seen leading out of a tunnel mouth and junctioning into two short branches one of which goes into a shed (the loco shed?). The gauge appears to be wider than 2 ft, possibly 2 ft 6 in or even 3 ft. The only vehicle noted so far is a small yellow 4-wheel loco which has been seen on two occasions. In March it was seen entering the tunnel, and appears to be powered by an internal-combustion engine rather than by batteries. No items of rolling stock have been noted.

If any member would like to view this railway from the Mt.Colah side, Wal Lane would be happy to guide them to the cliff top look-out. He can be contacted on Sydney 219-1344 up to 4.15pm weekdays.

Wal Lane 9/83

BRIAN PINE, North Richmond 610 mm gauge

(see LRN 32, p.4)

Brian has done extensive restoration work on the frames of 0-4-2 Sharp Stewart 4619 of 1900, (ex Isis Mill 9) apparently hoping to fit to it a spare boiler built by Perry Engineering which he is believed to own.

Bob Redding 8/83

STEAM TRAM & RAILWAY PRESERVATION CO-OPERATIVE SOCIETY LTD, Parramatta Park 1435 mm gauge

(see LRN 30, p.4)

During September, the 4wPM Purcell loco acquired last year from the Metropolitan Water Sewerage & Drainage Board was being rebuilt with a steam tram outline. This unit is fitted with engine and gearbox from a Bedford truck. Trackwork was in progress in preparation for the delivery of an ex-NSWGR suburban coach. Plans for track extensions have not yet been approved by the local council.

R.J.Pearman 9/83

SIMSMETAL Mascot. 1435 mm gauge

(see LRN 15, p.12)

Ruston & Hornsby 0-4-0DM 313393 of 1952 is still on site stored out of use in the reception sidings. The operational loco is now ex-Australian Iron & Steel D11, a B-B DE built by English Electric Australia (A009 of 1956). This unit is still in A.I.S. orange livery. It is not known if Yorkshire Engineering 0-6-0DE 2617 of 1957 is still present.

R. J. Pearman 10/83

SYDNEY 610 mm gauge

John Fowler 0-6-0T 7607 of 1896, ex Isis Central Mill in Queensland, is reported to have been sold by Tod Watson, Moama, N.S.W. (see LRN 21 p.5) to an unknown buyer in the Sydney area recently.

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge

(see LRN 36, p.6)

Work has continued to re-organise the running lines in the station area. In particular, this work has concentrated on the relocation of track and the laying of 42 lb rails on new formation into the new station itself. By mid September, the running line had reached the new station site and the loco was able to reach the watering point once again.

It has been decided to fit three extra seats into the carriage, ex-QGR rail motor trailer PL111. The guard's compartment has been empty floor space up to now, and the extra seats will provide much-needed passenger accommodation in busy periods. Bundaberg Foundry 0-6-2T 5 of 1952 was

being prepared for its annual boiler inspection in early October.

The Society's one-man line car obtained from Pleystowe Mill many years ago has been completely restored by member Gordon Bartlett. This vehicle is powered by a motor cycle engine which drives onto the rear axle. Following its restoration, it was put on display at the annual Railway Fair at the Redbank Railway Museum on October 2nd and attracted favourable notice there.

The Society's newly acquired F.C.Hibberd "Planet" 4wPM loco (2566 of 1942) arrived in Brisbane from Marian Mill during October. It is stored in Brisbane pending removal to Woodford. A pair of 2 ft gauge Shay bogies, originally from Nambour, were sent to Wollongong recently for use by the Illawarra Light Railway Museum Society in the restoration of one of their Shay locos (see elsewhere this issue)

Durundur Railway Bulletin 9/83, 10/83; Bob Gough 10/83

BABINDA CO-OPERATIVE CENTRAL MILL SOCIETY LTD 610 mm gauge

This mill operates five Com-Eng 0-6-0DH locos, two Com-Eng 0-6-0DMs and a Baguley/RMP 0-6-0DM in its main line loco fleet. The locos used to be painted a variety of bright colours, but in recent years, all the Com-Eng locos have been painted in various shades of yellow or cream, with only Baguley/RMP 0-6-0DM 3387 of 1954, named *Fishery* remaining in a pale shade of orange. Com-Eng 0-6-0DM *Josephine* (A1821 of 1957) was fitted with a Hockey Engineering cab a couple of years ago. The loco is painted cream but paint peeling off the cab shows yellow paint underneath. This loco is used as yard shunter.

Five old "jiggers" (navvy line cars) were seen out of use in the navvy area. One of these is derelict with no engine, but the other four do have engines fitted, although they have obviously not been used for a number of years.

Editor 9-10/83

BUDDHA GOLD MINES N.L., Dittmer 457mm gauge

Gold mining seems to have been going on in this area about 20 km west of Proserpine for many years, but this company seems to have come on the scene fairly recently. A drift of about 500m is served by a narrow gauge tramway with two George Moss battery electric locos, both apparently of the "Gemco" 1.5 ton "trammer" type. one a 4wBE carries builder's number 12700/166/70 of 1970, The other is an 0-4-0BE; in other words it has coupling rods) and carries no builder's plate. However, on the frame is a small plate which records that the loco once worked for the Metropolitan Water Sewerage & Drainage Board (Sydney}, where its plant number ended in 3 (possibly 53, 63, 83 or 93).

At least 30 small mine cars and two flat cars were noted on the change of

shift at 3 p.m., when the battery on one of the locos was exchanged. The two locos are painted yellow and both were in use at the time of the visit.

Editor 9/83

BUNDABERG TOURIST TRAMWAY PRESERVATION SOCIETY 610 mm gauge

(see LRN 30 p.5)

New tanks and chimney have been manufactured for the Society's Bundaberg Foundry 0-4-2T (3 of 1952). The motion has been overhauled and a preliminary boiler examination has been satisfactory.

The Society has been investigating the chances of being involved in a recreational park development in the Bundaberg district.

Baldwin Locomotive Works 0-6-2T *Felin-Hen* (46828 of 1917) has been taken from open storage and has been placed in the hands of the local Technical & Further Education College for holding restoration work.

Andrew Burnham, Alan Robert 9/83

CSR LTD Hambledon Mill, Edmonton. 1067 & 610 mm gauge

(see LRN 34 p.10)

The new green and yellow livery has begun to fade quite badly on those locos which were the first to receive it. The F.C. Hibberd "Planet" 4wDM number 7 (3280 of 1948) which normally works as yard shunter was being overhauled in the loco shed late in September. Its duties in the yard had been taken over by Motor Rail "Simplex" 4wDM 10450 of 1954, in the new livery.

The 3 ft 6 in gauge "Simplex" was standing by the bulk sugar bin, but sugar transport has been transferred to road vehicles, so its future must be in doubt. It appears that the Clyde Qld. petrol line car, out of use for many years, has been scrapped.

The preserved Hudswell Clarke 0-6-0 1549 of 1925 has been repainted in the new yellow and green livery. A shelter shed has been erected over it and a board carries details of the loco's history. It still carries the number 4.

Editor 9/83

CSR LTD, Kalamia Mill 610 mm gauge

(see LRN 33 p.7)

All the main line locos were seen at the mill at the end of September, but there was no sign of the Motor Rail "Simplex" 4wDM (21543 of 1956) nor of the new line car which was supposed to have been delivered this year.

Sugar Research's track evaluation vehicles were seen stored adjacent to a mill building. These vehicles consist of a single-axled measuring vehicle

towed by a loco and attached to it a four-wheeled vehicle which provides recording facilities and electrical power. When in operation, a spray gun can be used to mark the track in areas where gauge and twist are found to be outside certain set limits.

Editor 9/83

CSR LTD, Macknade Mill. 610 mm gauge

(see LRN 36 p.7)

The remains of Motor Rail "Simplex" 4wDM 3 (3710 of 1925) disappeared from the scrap yard sometime during the slack season. The line car built by Clyde Qld. is still in storage at the mill. On 10 September the bogie tamping machine delivered to Victoria Mill last year (Plasser 255 of 1982) was seen by the navvy shed at Macknade. This unit is in fact shared by the two mills.

Editor 9/83; Chris Hart 10/83

CSR LTD, Pleystowe Mill 610 mm gauge

(see LRN 36 p.7)

Towards the end of September, a start had been made to repaint Hunslet 0-4-2T *Seaforth* (1026 of 1910) preserved outside the mill.

Editor 9/83

CSR LTD, Victoria Mill, Ingham 610 mm gauge

(see LRN 36 p.7)

The Clyde Qld. line car is in storage in the scrapyard. The old Plasser tamping machine (10 of 1970) is in storage in the navvies' compound and does not appear to have been used since the new one {Plasser 255 of 1982} arrived.

Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) was used to give free train rides in the Decauville carriage from Herbert Street, Ingham, to a point about a kilometre to the west on the morning of Saturday 10 September.

This service, in conjunction with the annual Maraka Festival, was run as a "push-pull" operation until the last trip, when the loco ran round the car in order to haul it back to the mill.

Editor 9/83; Chris Hart 10/83

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 34 p.13)

The mill's Plasser ballast regulator met with an accident around the start of September. The machine was travelling along the line when it hit a low joint at a speed stated to be 5 m.p.h.(!) and rolled down an embankment to end up adjacent to a road at the bottom. The upper part of the cab was severely

damaged but the driver escaped serious injury because the substantial mountings for hydraulic equipment on either side prevented more serious crushing of the cab. The machine, Plasser 247 of 1982 (Model PBR-201) weighs 15 tonnes, and has a long wheelbase with only four axles. It was loaded onto a semi-trailer by crane, and was transported back to the mill where it was left near the navy depot to await a decision on its future.

Andrew Burnham, Editor 9/83

ROD LEONARD, Trinity Beach. 610 mm gauge

(see LRN 35 p.10)

F.C. Hibberd "Planet" 4wPM 3570 of 1952 has been very nicely restored in yellow and green livery and is in working condition. Rod purchased a grass cutter from Mourilyan Mill along with this loco, and this is awaiting attention. Hudswell Clarke 0-6-0 1653 of 1935 has been stripped down for a preliminary boiler examination. These locos are stored on private property and any member wishing to view them should write to P.O.Box 1634, Cairns 4870 to arrange an appointment.

Rod Leonard 9/83

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 36 p.7)

A spectacular accident took place on the Devereaux Creek line at about 6 p.m. on 23 September, when a train of full bins ran away down a steep gradient for about a kilometre. The crew jumped clear of the loco, Clyde Model HG-3R 0-6-0DH *Melba* 2 (64-377 of 1964), which became derailed and ended up down the side of an embankment, although still upright. A section of track was totally ripped up but all the bins remained upright, although 21 were derailed, and all couplings held. It was fortunate that the accident took place on a Friday evening. Two mobile cranes were brought into the site the next morning to clear up the mess, and it was expected that there would be plenty of overtime work for the navvies that weekend!

The F.C.Hibberd "Planet" 4wPM locos (2566 of 1942) donated to the Australian Narrow Gauge Railway Museum Society, left Marian for Brisbane during October.

Len Heaton, Editor 9/83; Bob Gough 10/83

MOSSMAN CENTRAL MILL CO. LTD 610 mm gauge

(see LRN 31 p.13)

The "Ballyhooley Steam Express" operates out of a station near the entrance to the mill scrapyard. The station building is a restored barracks and it contains

a most interesting display of historical photographs. The loco *Bally Hoolley* (Bundaberg Foundry 0-6-2T 6 of 1952) appears to be in excellent condition. Although the gas burner is noisy, the exhaust can be heard, probably because of blast pipe and/or stack modification.

The journey aboard the "Ballyhooley" involves a reverse from the station and then forward through a mill building adjacent to the carrier and past the loco shed onto the main line up Mill Street. On the way up to the Golf Club loop near the Newell Beach road turnoff, the train stops on a bridge over the Mossman River. At the loop the loco runs round the train for the return to the mill, with the total journey time about an hour in all. The four coaches are mounted on canetainer bogies and ride well. Station mistress and guide Jennifer Watson qualified as a steam loco driver at the end of 1982, but is not the regular driver.

The dismantled remains of *Ivy*, John Fowler 0-4-2T 15947 of 1922, are neatly stacked in the scrap area. On display by the station are an ex-Douglas Shire Tramway steel wagon, a bin, a cane truck and the remains of a small line car.

All the diesel locos except *Mowbray* (Baguley/RMP 0-6-0DM 3378 of 1954) and Malcolm Moore 4wDM 007 (1042 of 1943) are in the new lemon and blue livery. Com-Eng 0-6-0DH locos *Ivy* (AL4181 of 1965) and *Douglas* (AL2562 of 1963) are permanently coupled back-to-back and a walkway has been constructed to facilitate access between them by loco crew. These two locos have been seen in recent sugar industry promotional advertisements on TV. It appears that the numbering system for locos is being phased out, with most locos having the mill logo where the numbers used to be.

Melbourne Herald 13/12/82 via Ian Stanley; Editor 9/83

MULGRAVE CENTRAL MILL CO. LTD, Gordonvale 610 mm gauge

(see LRN 34 p.14)

All the Com-Eng diesels have had their cabs raised by 12 inches now with the exception of loco 3 (A1003 of 1955), and following this have been painted in the new predominantly yellow livery. In addition, loco 6 (A1006 of 1955) has been fitted with a torque converter, making it into a diesel-hydraulic.

Com-Eng 2 (A1001 of 1955) was seen approaching the mill with a rake of full bins, propelling a yellow four-wheeled "pronger". This is a vehicle designed to be hauled at the end of a rake to prevent any runaway in the event of a broken coupling. A pair of steel prongs trails along between the rails so as to dig into the ground in the event of any reversal of direction, so halting the rake. This particular vehicle appeared to be a steel cane truck chassis weighted up. The prongs can be raised or lowered into position using a hand winch attachment.

Motor Rail "Simplex" 4wDM 4207 of 1929 was seen out of use behind the navy shed under a tarpaulin.

Editor 9-10/83

PIONEER SHIRE COUNCIL PARK, Seaforth. 610 mm gauge

Ex Marian Mill number 3, a Dick Kerr 0-4-2T built in about 1910, has been "preserved" here for a number of years. Its condition had deteriorated over the years, so a local group is to carry out restoration work.

D.Anderson 9/83.

HOWARD SMITH INDUSTRIES PTY LTD, Mourilyan Mill. 610 mm gauge

(see LRN 31, p.14)

The F.C.Hibberd "Planet" 4wPM loco (3570 of 1952) which had lain out of use in an old shed near the mill for many years was sold to Rod Leonard of Trinity Beach early in the year together with the mill's old grass cutter which was also stored in the old shed. Now all that remains in this shed is a 1943 built Malcolm Moore converted to 4wDM, which has been retained for spare parts. The operational Malcolm Moore 4wDM has been painted in mill colours and numbered 10.

The old loco shed has been removed and the mill building extended to provide a workshop and bin repair area as well as a loco stabling facility. Five roads run into this area, and each has a pit.

Editor 9/83

SOUTH JOHNSTONE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 34, p.15)

The new E.M.Baldwin Model DH32B B-B DH delivered last year is named *Liverpool* and is builder's number 10385-1-8-82. Unlike all previous locos, it has no number; it is stated to be able to bring 110 full bins up the range from Japoonvale. This loco is paired with the Hockey Engineering brake wagon which appears to have been rebuilt at the mill. Brake wagon 3, E.M.Baldwin 6572-1-7&, has also been rebuilt by the mill and carries no number either. Brake wagon 1 (Clyde Qld., 1972) was seen in the shed with its wheels removed.

1943 built Malcolm Moore 4wDM locos 12 and 13 appear to have been scrapped. The mill's Drewry 0-6-0DM locos seem to see little use. Loco 14 (Baguley/Drewry 2396 of 1952) is disused with rods removed. 9 (Baguley/Drewry 2395 of 1952) and 15 (Baguley/Drewry 2520 of 1954) are "spare".

The mill's ballast tamper is Tamper 4375739 of 1980, not 1375739 as

previously recorded.

This mill's tramline system has a number of impressive bridges. There is a large through girder bridge over the South Johnstone River near the mill, while at Silkwood is a steel cantilever bridge more than 100 metres long with a main span of about 45 metres. Massive concrete piers carry the spans 14 metres above normal water height.

Editor 9/83

TULLY CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 34 p. 16)

The mill's new loco is TULLY No. 7, E. M. Baldwin B-B DH Model DH32B 10684-1-4-83 of 1983. Identification is on an oval aluminium plate on the cabside and livery is red below waist level and yellow above. The cab windows slope outwards at the front and rear of the cab and there is an additional pair of windows in the lower part of the cab rear panel.

Two Com-Eng 0-6-0DH locos are stationed at El Arish to work tramlines in the area, and to work cane over the Tam O'Shanter range, where diesel locomotive haulage was introduced to Queensland in 1937. One loco is allowed to take 50 full bins over the range, but with a loco front and rear, 100 bins is the maximum load. This line passes through dense rain forest and there are a number of large timber bridges as well as an overbridge across the QR. This line is easily accessible from the old Bruce Highway.

TULLY No. 9, Clyde 0-6-0DH DHI.4 of 1954 was seen parked in the navy area at the mill, looking very dilapidated. The new mill yard to the south of the mill has been partially laid out with track using concrete sleepers, but it has not yet been connected up.

On Saturday, 1 October, a number of wrecked full bins were seen in the neck area at the north of the mill yard, and the navvies were working to replace a set of points at this vital location.

Editor 9-10/83

SOUTH AUSTRALIA

ELECTRICITY TRUST OF SOUTH AUSTRALIA, Thomas Playford Power Station, Port Augusta 1435 mm gauge

Coal will cease to be railed here next year when the new "merry-go-round" unloading facility at the adjacent new Northern Power Station becomes operational. Playford Station will then be supplied by conveyor from the stockpiles at Northern.

Existing arrangements at Playford consist of two wagon tipplers capable of

emptying only one wagon each per operation. Recently, only one tippler has been in use, and a locomotive is required to propel the coal wagons.

Loco stock comprises two Clyde HG-6R 6wDH locos. No. 1 (61-237 of 1967) is the operational loco, while *F.J. Shea*, No.2 (58-192 of 1958) was noted out of use on the head shunt. No. 2 was originally an A.N.R. loco and still retains its A.N.R. nameplate.

R.J. Pearman 10/83

TASMANIA

QUEENSTOWN 1067 mm gauge

Twenty years after the closure of the Mount Lyell Railway, 0-4~2T Abt rack loco 3 (Dubs 3730 of 1898) has been restored as part of an exhibit set up in Queenstown to illustrate the line upon which the town depended for so much of its history. This loco had been "preserved" in the town centre but had been suffering badly from neglect and the weather. Included in the exhibit is a section of rack railway and a huon pine "bridge".

"A.B.C. Weekend Magazine" 30/10/83

VICTORIA

CARIBBEAN GARDENS. Scoresby 610 mm gauge

(see LR 59 p.24)

There is a quite extensive pleasure line here with an impressive steel bridge carrying the rail s across part of a big lagoon used for cruise boats. There are two complete trains, each with a loco hauling eleven four-wheeled carriages.

One loco is roughly "beetle shaped", sloping down at the front and rear, with a fibreglass body painted red and white. This loco appears to be one which operated at Pleasure Island and Surfer's Paradise Gardens on Queensland's Gold Coast in the 1960s. Examination of the frame shows it was originally a 2.5 ton "bow-frame" Motor Rail "Simplex" 4wPM, which means that it cannot be Motor Rail 4160 as previously suspected. It probably came originally from a CSR mill in North Queensland. The loco is now fitted with a Ford diesel engine.

The second loco is a Malcolm Moore 4wPM 1092 of 1943, painted red. It came in a crate from the Defence Department many years ago. All the 22 carriages have identical fibreglass bodies. Nine of them appear to be built on cane truck frames.

W.W. Henderson 6/83, Editor

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway, Belgrave - Emerald Lake 762 mm gauge

(see LRN 33 p.12)

During a visit to Puffing Billy on Friday 16 September, *Sir John Grice* (Peckett 0-4-OST 1711 of 1926) was in steam outside the Belgrave Workshops, coupled to a new diesel locomotive, numbered NRT1, which appears to be an extensive rebuild of Ruston & Hornsby 4wDM 296058 of 1951, donated to the P.B.P.S. in 1978 by the Melbourne & Metropolitan Board of Works.

Darryl Grant 9/83

ESSENDON STEAM & OIL ENGINES PRESERVATION SOCIETY, Thomson Reserve, Keilor Road, Essendon. 610 mm gauge

(see LRN 33 p.13)

Two new members with extensive steam experience have contributed towards substantial progress in the restoration of Perry 0-4-OT 9737.45.1 of 1945 (ex Millaquin Mill 9). The Society is now fully committed to the complete restoration of the loco and a recent grant will ensure that the project is completed.

All the boiler tubes have been removed, as well as the front tube plate, which had been condemned by the boiler inspector. The boiler shell is in quite good condition inside but is rather scaly outside. The external scale has proved easy to remove, and the outside of the barrel is currently being painted. All the asbestos boiler cladding will be disposed of. All valves and fittings have been removed for overhaul and for the manufacture of replacement parts where required.

Items requiring major attention or complete replacement include internal parts of the safety valves, the complete smokebox, boiler tubes and front tubeplate, cylinder drain cocks, sight feed lubricator for brake valve, firebox doors, cab floor, bunker walls, smoke box internal fittings, and all internal steam pipes. The list seems to grow week by week.

The Society is interested in obtaining photos of the loco at work at the mill, and any members able to help with photos or any other information about the loco is asked to contact the Society at 41 Lauricella Avenue, KEILOR EAST 3033. Although Society membership is still small (only 12), the money, resources and ever increasing experience is available to ensure that the loco will one day be steaming on its own track around the park.

Neil White 9/83

GEELONG STEAM PRESERVATION SOCIETY, Bellarine Peninsula Railway 1067 mm gauge

(see LRN 34 p.16)

Repairs to Vulcan 0-6-OST number 4 (2539 or 2541 of 1916) have reached the stage where steam trials can be carried out.

Restoration of sister loco Vulcan 0-6-OST number 5 (2540 of 1916) at Wantirna is progressing well. The engine has been stripped down and work was about to commence on removing the stubborn front casting, which needs repairs. A new bottom half of the smokebox will have to be fitted, but the tubes seem to be in fair order. Two new injectors have been purchased and repairs will be undertaken to the saddle tank. The cab is to be completely rebuilt.

Narrowminded 9/83

WESTERN AUSTRALIA

GOLDEN MILE LOOP LINE RAILWAY SOCIETY, Boulder 1067 mm gauge

(see LRN 35 p.14)

F.C.Hibberd "Planet" 4wDM 3966 of 1962 had its radiator refitted on 15 October, following problems with overheating while on trials. The donated rail equipment ex Kalgoorlie Mining Associates has not yet arrived in site. Trains run from Boulder City Station at 11.00 am Monday to Saturday and on Sundays and Public holidays hourly from 1.00 pm to 4.00 pm. During holiday periods, an extra train may run at 9.00 am Monday to Saturday. A full historical commentary is given en route and fares are \$3-00 for adults and \$1-50 for children.

Anthony Weston 10/83, Paul Enever

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC, Whiteman Park, Caversham. 610 mm gauge

(see LRN 35, p. 14)

The equipment formerly stored at the Mount Helena site was removed to Caversham in August. The equipment stored at Hazelmere still has to be shifted however. The ex-Lake View & Star F.C.Hibberd "Planet" 0-4-ODM (2150 of 1938) is now under cover so no time has been lost in removing the cab to enable paint removal to commence.

The Maylands built 4wPM loco has been in use most weekends, but late in July an electrical fault struck. However, a local auto electrical firm, Deerings of Midlands stepped in and renewed the wiring free of charge. Minor juvenile

offenders have been brought out by the Department of Community Welfare to undertake restoration work on the Ridley 6wPM loco, which is believed to have been built in 1969 as a B-B PM. This loco has been painted in grey primer and a replacement Vanguard 4-cylinder car engine has been donated by Whitemans Brick. Wheel profiles are a worry with this loco but a set of patterns has been obtained, and new wheels may be cast. Other relevant patterns, for the Metropolitan Brick stock, have been obtained from Vickers Hadwa.

Lindsay Watson 10/83; Keith McDonald.

MINIATURE RAILWAYS

Information about a number of miniature railways has been received recently so brief details are shown below: A 7.25" gauge line has been laid at Werribee Park, east of Melbourne. Normal loco is a diesel, but occasional steam days are planned. A miniature railway is being developed at Elgar Park in Melbourne by the Box Hill Miniature Steam Railway Society, with 7.25" and 5" gauge track. Cockington Green, a tourist attraction in Canberra, operates miniature steam railway rides as well as a 1/12th scale model of the "Inter-City 125" of British Railways.

Norm Houghton 10/83

OVERSEAS

FIJI

BARCLAY BROTHERS PTY LTD, Monasavu 610 mm gauge

(see LRN 35 p.15)

A preliminary and provisional auction notice was published in September regarding the equipment from the hydro-electric scheme at this site. Tunnelling plant and equipment included Gemco 10, 8, 3 and 1.5 ton battery-electric locos, shuttle cars, concrete transporters and air loaders, as well as general tunnelling equipment. The auction was due to be held on 15 and 16 November.

Island Business 9/83 via Bob McKillop.

THAILAND

Bob McKillop sends news of a problem that does not seem to have existed on Australian timber tramways. In the north of Thailand, illegal lumberjacks have been loading their logs aboard hi-jacked government railway trains and forcing the train crews to transport them at gunpoint!

MEETINGS

MELBOURNE

VIDEO NIGHT

Frank Stamford will be bringing along a wide selection of Video recordings on railway and tramway topics. The choice of what we see will be up to those present. There will be plenty to interest everyone so come along, meet a few of your mates and enjoy Frank's films.

February meeting - South Gippsland Tramways.

Location: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton. Date: Thursday, 8 December 1983

Time: 8.00 pm

SYDNEY

No meeting this month. Next issue will contain details of the February meet.

NOTES, CORRECTIONS AND COMMENTS

BOOK REVIEW

Forest History Museums of the World- by Kathryn A. Fahl. Published by Forest History Society, 109 Coral St, Santa Cruz, California, 1983. Price \$US7.50

The Forest History Society in the USA has published a directory to museums concerned with forest history. The directory contains entries for 311 museums in 35 countries. Of these, 193 are in the US and Canada, reflecting the great interest in forest history in these countries. There are three entries for Australia: the Gympie Forestry Museum in Queensland, the Manjimup Timber Museum in Western Australia, and Timbertown Wauchope in New South Wales.

The collections vary widely from operating mills, such as the sawmill at Timbertown or an 18th century paper mill at Basel, to static displays of tools and equipment or collections of wood samples and products. Railroad and tramway materials feature in many of the collections.

The directory is excellently produced and would be well worth consulting before making an overseas trip.

John Dargavel

PORT HEDLAND

(see LRN 36 p. 11)

Grant Pendergrast indicates that when he saw the crane and wagon displayed at Port Hedland, together with a tender, in 1973, the crane carried a sign to say that the items were from the Port Hedland to Marble Bar Railway.

CORRECTIONS

Apologies to Keith McDonald and thanks to Craig Wilson for pointing out some errors that occurred in the report on E.M. Baldwin & Sons in LRN 37 (p.2).

Units 9838-1-11-81, 9838-2-11-81 and 9838-3-11-81 are man riding cars and should have been shown as 4wDHR Model 15DH Mk4.

Units 9931 should have been shown as 9981. Craig points out that at least two of these man riding cars have different dates on their builder's plates than those quoted by Keith, i.e. 9981-2-11-82 and 9981-4-2-83. (Keith may well have quoted delivery dates, which are normally used by Baldwins on their builder's plates Ed.)

Order 10229 was quoted fairly widely as for 16 units, yet it appears that 17 units were delivered. Craig certainly saw at a distance a personnel carrier at Baldwin with a number that appeared to be DT20, so was this order increased or what?

RESEARCH COLUMN

REDCLIFFE TRAMWAYS

(see LRN 36 p.1)

John Knowles and Greg Stephenson both write on the subject of Redcliffe tramways.

The tramways were laid on jetties at Redcliffe and Woody Point, originally built in 1885. For many years, steamer was the preferred method of travel to the Redcliffe Peninsula because the road from Petrie was neither tide nor weather proof. Steamers ran from the Brisbane Customs House to Bribie Island via Redcliffe (Brisbane Tug and Steamship Co.), and smaller boats ran from Sandgate to Woody Point .

New jetties, also with tramways, were built at Woody Point in 1921 and Radcliffe in 1922.

John Knowles has old family photographs which show Moreton Bay steamers Koopa and Doomba at Redcliffe, showing the 2 ft 6 in gauge tramway on the pier head and a layout which required at least one point,

and also the trolleys, which were about 5-6 ft long. Greg Stephenson's uncle remembers the trolley on Woody Point jetty which was hand pushed although a makeshift sail could sometimes be rigged up.

Spike holes at 2 ft 6 in gauge were until recently still visible on the Redcliffe jetty.

Twenty tons of 30 lb rails allows for 746 yards of track, which could account for at least the length of both jetties, so it would appear that the advertisement dates the removal of both jetty tramways - presumably when the road from Petrie had been improved sufficiently.

Further references are Redcliffe's 160 Years by L. E. Slaughter, 1959; and A Tale of Two Bridges (Houghton Highway opening souvenir, 1979).

Any other information would be of great interest to these two gentlemen.

NEW ENGLAND ANTIMONY MINES N.L., Hillgrove, N.S.W.

(see LRN 35 p.1)

Bill Henderson writes that four 1.5 ton 4 hp Gemco "Trammer" locos were sold to New England Antimony by Golden Plateau N.L., Cracow, Qld., in about 1976. These were 11986/96/62 of 1962, 12328/122/65 of 1965, 12426/142/66 of 1966 and 12567/150/68 of 1968.

FIELD REPORTS

BOXWOOD HILLS TRAMWAY Victoria

Boxwood Hill is located half way between Dookie and Devenish in north-eastern Victoria. A tramway was used here earlier this century to haul calcite from an open cut mine to a series of hoppers from which it was fed into kilns to make lime.

It is difficult to determine exactly how extensive the tramway was, but there were at least several hundred metres from the mine to the hoppers where the right of way can still be traced with a few sleepers still in situ. It is also possible that it ran approximately 0.5 km to the nearest road, but this is unconfirmed. Motive power is unknown but it was probably man and/or horse. The remains of one truck can be seen at the entrance to the mine.

Any further information about this tramway would be appreciated.

Andrew Hennel 11/83

SLEEPS HILL QUARRY, South Australia

(see LRN 29 p.2)

The Sleeps Hill stone quarry situated approximately 100 m before Sleeps

Hill tunnel on the main Adelaide - Melbourne line was once served by a broad gauge connection to the stone crusher in the quarry area. What is less well known is that the quarry itself was served by a 2 ft gauge rail system, used to bring stone to the crushing plant.

The quarry is laid out on an east-west axis with remains found along both the north and south walls and the crushing plant located on the south side. Along the north wall, remains of rail still spiked to the sleepers was found in one area confirming that the gauge was 2 ft. In other areas on this side, other pieces of rail, sleepers, and even some cement foundations, purpose unknown, were found. The remains of two side tipping skips were also found. These were approximately 2 m x 1.5 m with a flat-based bin with pivot points in the centre. On one side had originally been a door which opened as the bin tipped. One skip was complete except for wheels, having locking mechanism to stop the bin tipping, and brake shoe hangers still in place. The second consisted of bin only. These skips were found high up on the side of the quarry. The bins were of all steel riveted construction and the underframe was wood and steel. Also discovered was a piece of steel cable, so perhaps a haulage using gravity had been utilised.

On the south side were a couple of old road beds and supports for the crushing plant. also there was more flat bottom rail all approximately 25-30 lb. It is not clear how stone was brought from the north side to the crusher on the south side. Any further information on this quarry would be much appreciated.

R. H. Saunders 11/83

PAPUA NEW GUINEA

Chabai, North Solomons Province

The site of the tramway used by the Japanese to build Chabai airstrip was visited in August. The tramline was at least half a mile long, its path shown by bomb damaged and bullet-holed skip hoppers. Later, three hopper frames were found in the undergrowth.

Teopasino Plantation North Solomons Province

The tramway remains at the old Burns Philp Plantation were inspected in November. The formation was followed north to the seashore where rock had been collected to build the formation. The method used to follow the formation was to walk through the long grass and use a bush knife to feel out the ground ahead. Where the knife clicked on the rocks, the formation was being followed. Running south from the starting point at the middle of the

tramline, a 150 m embankment crossed a swamp and then paralleled a road to where it emerged with the road which was built over the formation at this point. Some investigations have still to be carried out here.

Michael Pearson 11/83

NEW SOUTH WALES

APPRENTICES STEAM CLUB, H.M.A.S. NIRIMBA, Quakers Hill 610 mm gauge

(see LRN 24 p.2)

Fowler 0-6-2T Invicta (11277 of 1907) is preserved here, about 40 km west of Sydney, and features in occasional open days with various stationary engines, a Foden steam lorry and miniature live steam railways . The Fowler loco is workable, but needs a repaint. It is still in its last Qunaba livery complete with Bundaberg Rum slogan - highly appropriate for a naval establishment! Interested visitors may view by arrangement. The loco is sometimes informally steamed on Wednesday afternoons, but has only about 100 m of track. Intending visitors can contact Lt. Steve Good on 626 4111.

Andrew Burnham 11/83

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY,. Albion Park 610 mm gauge

(see LRN 37 p. 3)

Special Steaming Day

A party of Australian Railway Historical Society members, with families and friends, visited the ILRMS museum on Saturday 19 November on their annual family outing.

Operations for the day were arranged so that all vehicles which could move were assembled into trains and operated around the main line circuit. The two steam locomotives, Hudswell Clarke 0-6-0 Cairns (1706 of 1939) and Davenport 0-4-0ST Kiama were mainly occupied working the three car passenger train. Former Melbourne cable tram trailer No. 430 entered passenger service for the first time on this occasion coupled with semi open car No. 1 and Queensland railmotor trailer P119. Car 430 had been almost completely externally restored by that date but the interior had not been treated since arrival at Albion Park.

A triple headed goods train consisting of jubilee tip trucks, flat wagons, coal skips, Balls Head hopper cars and the Victoria Mill meat van was hauled by the Ruston four-wheel diesel (285298), Fordson (Malcolm Moore) four-wheel

kerosene, and four-wheel petrol Leyland-Krauss unit. The Mancha four-wheel battery-electric locomotive hauled the Dry Creek (South Australia) explosives cars on several circuits on the main line uncomfortably filled with passengers!

The Gemco four-wheel electric tunnel loco hauled colliery man cars under overhead wires on the tramway section of the museum while the Leyland-Krauss made several trips along the original Croome Road north-south track, coupled to saloon car No.2 (former International bus body).

Rolling stock

A NSWGR "HG" type four-wheel guard's van number L1295 was delivered to the museum on 18 October from Wollongong Yard. Over the following two weeks, the running gear was removed and the body lowered onto two 2 ft gauge bogies. The van was towed along the narrow gauge track to the main station area on 10 November from where it was lifted onto foundation blocks. The body is being externally restored and it will serve as a book and souvenir shop at "Yallah" station.

During early December, the first of several loads of material from South Clifton Colliery was delivered to Albion Park. Although of 1067 mm gauge the selected pieces of rolling stock will eventually be altered to 610 mm to enable operation on the museum tracks.

Around the museum

By late October, the 500 gallon water tank was available for servicing the steam locos at the western end of the main station platform.

Throughout November and December, the per way section progressed with the construction of a platform "back road". From this track, a variety of specialised points and track components will lead to various sidings. The main siding has been constructed with 41.5 lb rail but the other branches will be laid in a variety of rail to form a practical display of the various per way items collected over the years by the Society.

Motive power

During the second week in December the very versatile Mancha four-wheel battery-electric loco was repainted.

During October and November, Hudswell Clarke 0-6-0 Cairns (1706 of 1939) received a major overhaul to the left hand side valve gear. The Mancha locomotive has proved very useful in the timing adjustment to the steam engine running gear. The heavy electric unit is able to inch the steam locomotive along the track when the stroke extremes etc. are plotted.

Workshop machinery.

The Kiama Council donated a large radial drilling machine to the museum during November. although this had stood disused in the council yard for

many years the museum members had overhauled this unit ready for work by mid-December .

Ken McCarthy 12/83

QUEENSLAND

ANSETT TRANSPORT INDUSTRIES LTD, Hayman Island 610 mm gauge

(see LRN 17 p.3)

As usual, the tramway linking jetty with resort was very busy in late December. Ruston & Hornsby 179872 of 1936 was working passenger trains. This loco has been painted blue and red which matches the new carriage livery of blue and red. Five cars were being hauled by the loco, two open, two enclosed and one baggage car. Two or four flat cars were also marshalled in the train at various times during the day, attached to the front of the loco. The second passenger loco, Ruston & Hornsby 285339 of 1949, was parked in the siding at the Heliport. It is fitted with a Lombardi 4-cylinder engine. The third loco, a much rebuilt Motor Rail "Simplex" 4wPM, was in use delivering the resort laundry to the wharf in the morning. This loco is now thought to be Motor Rail 4199 of 1927, shipped to Cairns. It corresponds to the Hayman loco which was supplied new to Arthur Moody of Eubenangee near Babinda and was used on his "horse tramway " until about 1950 when his farm was sold. The loco, known as Biddy, was sold to Hayman Island and a photograph exists of it there in original condition.

Other rolling stock on the island consists of two carriages in the old black and red livery, seven additional flat cars (some are fitted with ends), and a timber framed tank car.

A programme of expansion on the island resort is affecting the tramway. It has been relocated away from the shoreline between the heliport and main station to make way for luxury unit development. Its present alignment along this stretch appears to be a temporary one. Construction has begun of a marina and boat harbour which it appears will replace the old jetty. It appears that the tramline will be relocated to serve the new marina when it is completed and that the old jetty will be demolished. A new main station is to be built also, further away from the beach than the present one.

Editor 12/83

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge (see LRN 37 p. 6)

F.C.Hibberd 4wPM loco 2566 of 1942, recently donated to the Society by Marian Mill, was moved onto site at Woodford on 10 December.

Work has commenced on repairs to John Fowler 0-6-0DM 18260 of 1929. The locomotive has to be parted between the first and second axles to obtain access to the clutch which needs attention to make the loco operational. The aim is not a full restoration but rather to enable the loco to carry out duties around the site.

A large amount of 60 lb rail from the Tennyson Powerhouse sidings in Brisbane has been donated to the Society by the Queensland Electricity Generating Board. This rail will be lifted by the Society and transported to Woodford for mainline track extensions. An air compressor has recently been purchased from the Main Roads Department .

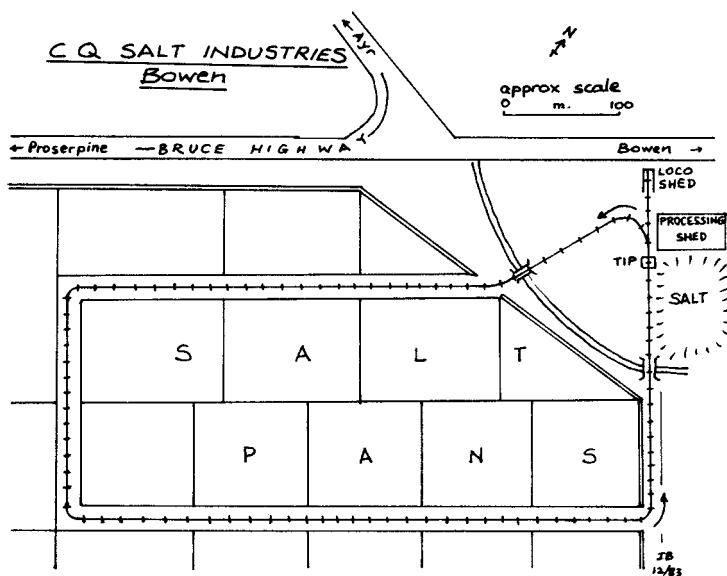

Durundur Railway Bulletin 11/83; Mike Swift 12/83

CQ SALT INDUSTRIES, Bowen 610 mm gauge

(see LRN 25 p.14)

This saltworks, a division of Cheetham Salt Ltd produces around 12,000 tonnes per year through the evaporation of sea water. A narrow gauge tramway is used to convey salt from the harvester to the tipping dock at the works during the "harvest" which lasts for perhaps 8-10 weeks around Christmas time. The harvest was in full swing when the works was visited on 23 December. A 1.5 km line makes a circuit to serve the pans used for crystallising the salt, and the harvester loads directly into the V-skips hauled by the locos.

At the unloading dock, the skip bodies are tipped using an overhead crane,

and righted by a ramped bar. Just ahead of here are the points leading to the left back to the salt pans or straight ahead to the loco shed where the track has been removed from the pit.

There are 4 four-wheel diesel loco, three built by Ruston & Hornsby and one a Motor Rail "Simplex". The first loco is Ruston 174142 of 1935 and is the first Ruston & Hornsby known to have been supplied to Australia.. It was supplied through W.Sandover to the Marvel Loch Gold Development Co of Western Australia, and in 1938 it went to Wiluna Gold Mines Ltd It is believed to have come to Proserpine Mill in Queensland in 1949 and was purchased by Bowen Saltworks in 1973. It was not in service at the time of the visit as its Lister 3JP engine had been removed for repairs. However it normally sees regular service as it approaches its half century.

There are two other Ruston locos, of Model 30DLU . One carries builder's plate 285343 while the other is claimed to be 285340 and carries number 2; both were built in 1949. It is not clear where these locos came from. Both were originally with the State Rivers & Water Supply Commission in Victoria, and it is claimed that they worked at Bajool Saltworks (2'2" gauge) but Ruston 285340 did work at Proserpine Mill until about 1972. These locus were hauling trains of 13 and 10 V-skips respectively.

The fourth loco is Motor Rail 8653. It was built for the U.K. War Office in 1941. Normally spare loco at Bowen, it was limited to hauling 7 V-skips of salt at the time of the visit.

23 skips, liberally coated with bitumen to minimise corrosion, were seen on site and there were also a number of spare frames and wheel sets in evidence. One loaded skip had come to grief and was lying on its side just off the track at the bottom of the line so that trains had to ease past it cautiously. In addition, one flat wagon was seen in the loco shed.

Editor 12/83

CSR LTD, Goondi Mill, Innisfail 610 mm gauge

(see LRN 34 p. 10)

Between 27 September and 1 October, Clyde Model DHI-71 0-6-0DH 56-90 of 1956 and E.M. Baldwin Model DH8 4DH 9109-1-9-80 of 1980 were numbered 6 and 1 respectively. The Clyde had been named ADELAIDE when it arrived from Victoria Mill in 1976, and kept this name until it was fitted with a new cab in 1980 after which it was numberless. The Baldwin had never carried a number.

Editor 9-10/83

CSR LTD, Hambledon Mill, Edmonton 610 mm gauge

(see LRN 37 p.8)

It is reported that a Hambledon Mill loco was involved in a serious accident towards the end of the season when it fell from a bridge having become derailed. No further details are known at present, but there was a suspicion of sabotage in connection with the incident.

Mike Gray via David Mewes 12/83

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 37 p. 8)

Plasser ballast tamper 255 of 1982 was seen under repair early in November with one of its bogies removed.

Hudswell Clarke 0-6-0 Homebush (1067 of 1914) was used to give children's rides on 17 December, on the occasion of the annual Christmas party. It appears that this preserved loco is steamed on average, four times each year.

Bob Gough 11/83; Mike Swift 12/83

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 37 p.13)

A visit early in November showed that ballast regulator Plasser 247 of 1982 had been repaired and had a new cab fitted. This unit had been damaged when it rolled off the track about eight weeks before.

Editor 11/83

GIBSON & HOWES PTY LTD . Bingera Mill. 610 mm gauge

(see LRN33, p.7)

Ruston & Hornsby 4wDM 339211 of 1953 was seen at Bingera early in November. This unit is normally stationed at Fairymead Mill.

(Note to CD-ROM edition, this report was incorrect, the loco was actually seen at Millaquin Mill, - see correction in LRN39)

David Mewes 11/83

ISIS CENTRAL SUGAR MILL CO.LTD 610 mm gauge

(see LRN 35 p. 10)

All Clyde 0-6-0DH locos here have now been fitted with soundproofed cabs with the exception of 3 (55-66 of 1955). There is some thought that this loco may be converted into a "slave" to work in multiple with loco 6 (59-204 of 1959). John Fowler 0-6-0DM 2 (4110019 of 1950) is still in working order but John Fowler 0-6-0DM 1 20776 of 1935) has had its engine removed and is out

of use behind the mill.

David Mewes 11/84

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 38, p. 9)

John Fowler 0-6-2T 20277 of 1934 has been placed on loan with a mill supplier and appears to be in good hands. A substantial shed has been erected at a siding at Boldon on the old Mirani branchline. The loco was seen inside this shed late in December with side tanks and chimney removed. It is believed that this is preparatory to a boiler test being made.

Editor 12/83

MARYBOROUGH INDUSTRIAL MUSEUM SOCIETY 610 mm gauge

Early in 1983, John Fowler 0-6-0T 11165 of 1907 was removed from a children's playground in Queen Street to storage at Parkinson's Wrecking Yard. It had been placed in the park in 1960 after being withdrawn from service at Isis Mill. It is projected that it will be restored by the above Society for eventual display as part of an industrial museum.

Mike Swift 11/83; L.J. Wells 12/83

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 36, p. 8)

Tenders have been called for the construction of a new tramway bridge over Bustard Creek on the Pinevale branch. The bridge will be of reinforced concrete on piles with prestressed concrete decking. Total bridge length is 60 metres.

Mackay Daily Mercury 19/11/83

PIONEER SHIRE COUNCIL PARK, Seaforth 610 mm gauge

(see LRN 37 p. 11)

In December the ex-Marian Mill Dick Kerr 0-4-2T had been repainted in a green and red livery. Although the loco has been stripped of boiler lagging, tanks and much of its cab for many years, the condition of running gear and the exterior of the boiler appears quite good, probably as a result .

Editor 12/83

SOUTH JOHNSTONE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge (see LRN 37, p .11)

A derailment is reported to have taken place when a loco was crossing a bridge at this mill in the latter part of the season. The accident is reported

to have taken place on a bridge on the No.6 Branch, near Silkwood, but no further details are known at present.

Mike Gray via David Mewes 12/83

TULLY CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 37, p. 12)

TULLY No.9, Clyde 0-6-0DH DHI.4 of 1954, had its engine removed during the first week of November and was observed in a dilapidated state in the navy yard during December. Consideration is being given to using it to construct a brake wagon.

Around mid-November a serious accident occurred when new E.M.Baldwin B-B DH TULLY No.7 (10684-1-4-83) was derailed while crossing a major bridge in descending the range near Diarawong and fell into the creek bed below, in the process rolling right over and landing on its wheels! Amazingly, only superficial damage was done to the locomotive, and no serious injury was suffered by the crew.

Bob Gough 11/83; Steve Baker 11/83; Mike Swift 12/83;

Mike Gray via David Mewes 12/83.

VICTORIA

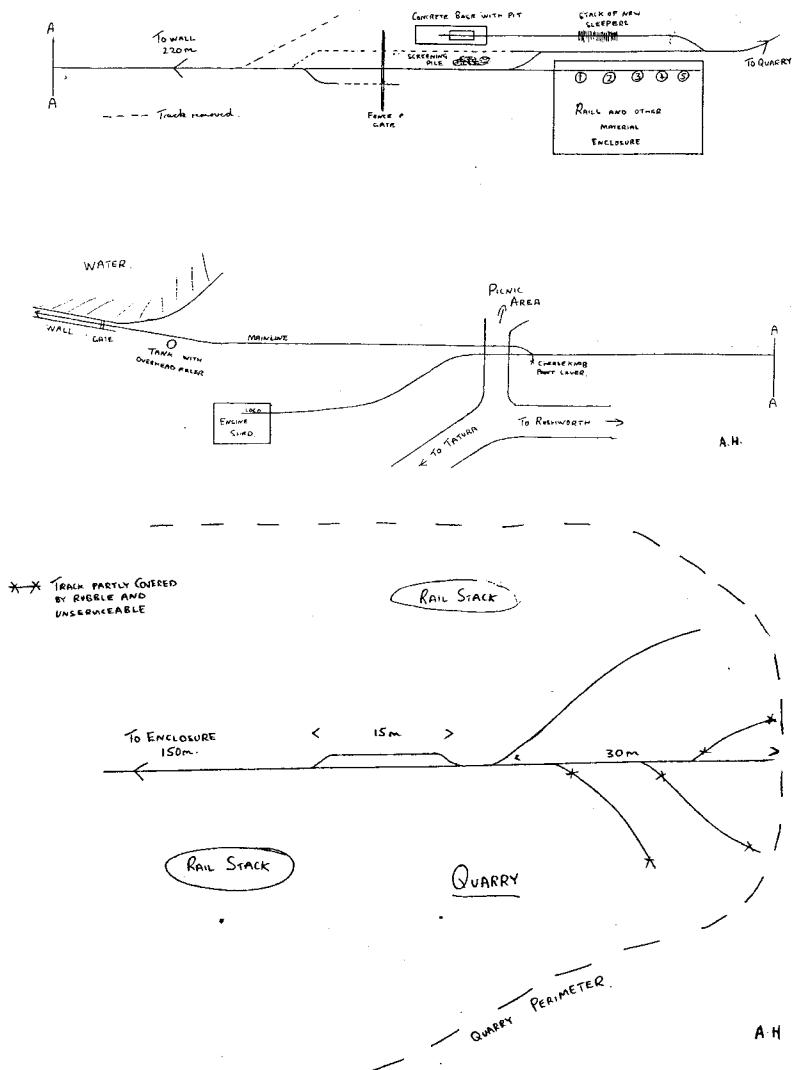

STATE RIVERS & WATER SUPPLY COMMISSION OF VICTORIA, Waranga Basin 610 mm gauge

(see LR 49 p. 23)

Waranga Basin is a storage reservoir situated between the towns of Rushworth and Tatura in central Victoria. It forms part of the extensive irrigation system of central and northern Victoria. It is located in fairly flat terrain and consequently a very long wall (total length approx. 7.5 km) was necessary to contain a sufficiently large volume of water. The basin fills from both natural drainage of the surrounding area but also by feeder channels from natural river systems such as the Goulburn River.

To assist with maintenance of the wall, a 2 ft gauge tramway is used along much of its length. The inside face of the wall is a rough mixture of small boulders and concrete surmounted by a protective covering of loose rocks on its crest. The SR&WSC maintenance depot is situated at the public picnic ground at the western end of the wall adjacent to the Tatura - Rushworth road. The tramway facilities here consist of an equipment shed which houses the locomotive and other non-tramway material, a locked enclosure containing the rolling stock, and a disused quarry.

Although the tramway sees only occasional use when work on the dam

wall is required, it is maintained in good condition with new re-sleeping evident in several locations. At the present time, the tramway extends approx. 6 km along the wall to a point where the rails abruptly finish. However, the remaining 1.5 km of the wall shows evidence that the tramway at one stage went right to the eastern end. This length has been graded and is suitable for use by motor vehicles. Despite this, some sleepers can be found and there are many lengths of rail used as fence supports, cattle grids etc.

The tramway in most parts is laid directly on the ground without ballast.

The sleeper spacing is very irregular, with spacings of up to 1.4 m not being uncommon. Joints are made with two-bolt fishplates and small standard dogspikes are used throughout. Rails are very light but two different sections are in use.

The outer extremity of the tramway is extremely overgrown by grasses, but nonetheless useable. There are no runaround facilities at the outer end. There is one four-wheel diesel locomotive. (Believed to have been built in 1959 by C.F.Sewel of West Footscray. It was originally fitted with a petrol engine - Ed.) There are also five trucks, all of which are normally located within the enclosure (see track diagram):

- (1) 4-wheel flat with screenings box (unsprung)
- (2) 4-wheel flat with water drums (unsprung)
- (3) 4-wheel flat with makeshift roof and cement mixer (springs)
- (4) & (5) both 4 wheel hoppers (unsprung)

Several of the trucks have oval builder plates with the following wording:

**ENGINEER AND MACHINIST
C. F. SEWEL
MAKER
GROSE ST. WEST FOOTSCRAY**

Andrew Hennel 11/83

OVERSEAS

FIJI

FIJI SUGAR CORPORATION, Labasa Mill 610 mm gauge

(see LRN 32 p. 14)

A snapped rail joint caused Baldwin 0-6-0DH 7 (9442-1-4-B1) to end up on its side in the sea at Vavalagi about 20 km from Labasa on 1 September. The driver and helper escaped injury. The locomotive was towing 109 empties on its way to Wainikoro. About 15 empty trucks were also derailed. The loco was almost completely covered at high tide. The area was inaccessible to heavy-duty vehicles, so the one metre high bank was excavated to enable the engine to be pulled back on its wheels by a front-end loader working a series of pulleys. Workers then used a jack and wooden blocks to raise the loco to the level of the railway line. By late the next day, it was; ready to be hauled back to Labasa mill for overhaul .

Fiji Times via John Peterson

PAPUA NEW GUINEA

OSCAR BOND, Boui Plantation, North Solomons Province 610 mm gauge

This gentleman has purchased the plantation from Burns Philp and hopes to continue the use of . the 4 km long hand-pushed tramline there. The tramline may even be extended.

Michael Pearson 11/83

CHOISEL PLANTATION PTY.LTD . Soraken & Kunua Plantations, North Solomons Province, 610 mm gauge

(see LRN 24 p . 11)

It is reported that some tramlines on these plantations are being removed and used for bridge construction . It is not yet known if this represents the demise of these tramways, the last substantial loco hauled lines in Papua New Guinea.

- (a) Placed in children's playground at mill in t964. Removed as unsafe in 1982 and dumped in mill yard derelict.
- (b) New to Glasgow Corporation Housing Department, Scotland . To James N. Connell Ltd ., Coatbridge , Scotland, 1949. To State Electricity Commission of Victoria, Kiewa Scheme, about 1950. To Farleigh, 1959.
- (c) Built for Ministry of Supply, U.K., but returned to Ruston & Hornsby. Despatched to Australia, 1947. To Department of Supply, St.Mary's, N. S. W. To E. A.. Marr & Sons Pty Ltd, Machinery Merchants, Sydney . To Farleigh, 1960. (d) Fitted with Hockey Engineering soundproofed cab, 1981.
- (e) Fitted with Hockey Engineering soundproofed cab, 1982.
- (f) Built under licence from Fairmont Railway motors Inc., Fairmont, Minnesota, U. S. A. Fairmont No. 240119, Model 19Z 24.

MEETINGS

MELBOURNE

South Gippsland

Following on from his presentation last year dealing with the Goodwood and Hodgkinson mills and tramways, Mike McCarthy will describe more of the results of his research in this most interesting area. This time some of the early mills and tramways of Wilson's Promontory, Foster, Toora and Welshpool will be described. This is the second of three instalments covering this area, so be sure to be there.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday, 9 February 1984. TIME: 8.00 pm.

SYDNEY

Interested in doing some research? If so you should find Craig Wilson's talk at the February meeting of interest. Though covering many of the different aspects of research the talk will concentrate on interviews and the information to be gained from them.

The talk will be illustrated by pictures of Sydney's between wars quarry railways.

LOCATION: Government and Transport Club, Regent Street, Sydney.

DATE: Wednesday, 22 February 1984.

TIME: 7.30 pm.

ADELAIDE

During 1984, meetings will continue once every two months, on the first Thursday of the even months at 8.00 pm at the Mile End Railway Museum, Railway Terrace, Keswick. This means that our first meeting for 1984 will be on Thursday, 2 February - Make a note of it!!

At this meeting, arrangements will be finalised for a proposed hike on the following Saturday, 4 February, over the road bed of the light railway used during the construction of the Mt Bold Reservoir. Remember visitors and friends are welcome to meetings and outings.

LOCATION: Mile End Railway Museum, Railway Terrace, Keswick.

DATE: Thursday, 2 February 1984.

TIME: 8.00 pm.

LIGHT RAILWAY NEWS

Published by

The Light Railway Research Society of Australia

No. 39

April 1984

Hon Editor: J. Browning , 36 Tait Street, MACKAY 4740 Qld.

LRRSA Hon Sec: C.Wilson, P.O.Box 290, BURWOOD 2134 NSW.

LRRSA Hon Sec: G.Maynard, P.O.Box 21, SURREY HILLS 3127 Vic.

Deadline for next -issue:- 20 April 1984.

EDITORIAL

Apologies to all those confused by just what is the editorial address. Unfortunately, your Editor did not point out to LRN Production Manager, Mike McCarthy, that the change shown in LRN 37 was permanent. The correct address is shown above.

REMEMBER : Membership Subscriptions are due by 31 May, to obtain \$1 discount (pay only \$15.50).

NOTES, CORRECTIONS AND COMMENTS.

BOOK REVIEW

List of Locomotives built by the Victorian Railways, compiled by Peter Medlin.

Published by Platina Publications, 9 Drake Street, Ferntree Gully. 23 pages.

Recommended price \$3.00.

In what is to be the first in a series of locomotive listings, the compiler has brought together data on the 590 locomotives and steam cranes built by the VR in its four workshops between 1872 and 1960. Detail on each locomotive covers the constructing workshop, VR classification, wheel arrangements service dates, renumberings and final disposition.

This is a most worthwhile listing for those who have found the seemingly myriad renumberings of VR locos in the past confusing. The information on each locomotive, given in one place, is clear and easy to follow. A list of sources would have been valuable for further reading and reference, however.

For those interested exclusively in light railways, apart from the 15 NAs, only three locomotives from this list were sold to industry. However, the list can be recommended as a handy reference on VR-built locomotives.

CLW

CORRECTION

Apologies to David Mewes for the item which appeared under the heading "Bingera Mill" in LRN 38, p.9. In fact the item should have applied to Millaquin Mill (see elsewhere this issue).

LIGHT RAILWAYS

The Editor of Light Railways has received a good flow of well-researched articles from members in recent months and he is currently holding sufficient material for issues up to and including LR88, allowing space for letters etc. These issues will include Part II of the SECV Railways at Yallourn and Morwell (LR84), the Laverton explosives tram, Oakleigh-Fern Tree Gully Tramway, Richards & Sons Tramway, Warburton, from Victoria; Kandos Colliery locomotives (photo feature), Coffs Harbour Tramways, and Rous Sugar Mill from New South Wales; Tasmanian Iron Mines, Penguin; the Cooktown Quarantine Tramway, Cumberland Mine Tramway, Etheridge, and home-built 2 ft gauge locomotives (photo feature) from Queensland; and the steam locomotives of Nauru and Ocean Island.

RESEARCH COLUMN

Information is sought about the following:

1. A possible woodline leading from the ANR siding at Ooldea, S.A., on the Trans-Australia Railway, where a stack of light rail was noted adjacent to the formation. This line is said to have extended about 5 miles south of the main line.

2. The "Bulong Tramway" near Kalgoorlie. A W.A. Mines Department file in the Battye Library, Perth, relates to the sale of this line to the Colonial Government in September 1898. It indicates a 2 ft (?) gauge tramway 4.5 miles long from the battery to Bulong, plus a locomotive and 49 wagons.

3. The "Last Chance" mine tramway. A related file to that mentioned above dated April 1896 outlined an application from George Edmund Lane to construct a 4 mile tramway of 2 ft 6 in gauge from the "Last Chance" gold mine (near Bulong) to Bulong Lake. (Possibly the same line as mentioned above).

Any member who can provide more information on any of the above,

please write to Mr J.M.Austin, 61 Juniper Way, Forrestfield 6058 W.A.

AUSTRALIAN RAILWAY SONGS & MUSIC

The Bush Music Club has launched a project to establish a collection of Australian Railway songs and music. There must be many songs and poems that relate to Australian Light Railways, and members interested are asked to assist by sending copies of any material, regardless of origin, quality or views expressed, to Brian Dunnett, Bush Music Club, Box 433 G.P.O., Sydney 2001. Full acknowledgment will be given to collecting sources if the material is published.

FIELD REPORTS

KANGAROO ISLAND. South Australia

Harveys Return

Harveys Return is a small bay situated on the remote extreme north eastern point of Kangaroo Island. Here there are the remains of a tramway system which once served a jetty and which ran up the cliffs by means of a cable-hauled incline.

The route of the incline is now used as a walkway down to the beach. At the top, all that remains of the haulage equipment is the stone foundations of the building which housed it. Sleepers remain all the way down the incline and then along the edge of the beach towards the jetty. A few remains of rails were seen; it appeared to have been 15 lb rail laid to 2 ft gauge. Two axles were found on the beach area, which seemed to confirm the gauge. All that remained was the axles, wheel centres and the broken remains of four spokes at each end.

Cape de Couedic

The unloading jetty which was used to bring supplies to the lighthouse keepers at Cape de Couedic still carries the remains of a tramway. 2 ft gauge track laid in 15 lb rail runs most of the jetty's length. From the end of the jetty to the top of the cliffs, about 40 metres high, a flying fox was once installed. After winching goods up the cliff, they were carted some 5 km overland to the lighthouse. It is understood that this system fell into disuse when a road was built into this area in about 1930.

R.H.Saunders

SLEEPS HILL QUARRY. South Australia

(see LRN 38 p.3)

A number of additional interesting items have been discovered recently this time on the south face of the quarry. The remains of a hopper were found in a small roadbed leading to one of the work faces. It consisted of a wooden body reinforced with steel, but badly damaged and burnt. No chassis was found for it. A body from a steel "V" skip was also found, near the floor of the quarry close to the remains of the crushing plant. On one end was a small brass plate which carried the name:

**MESSRS. CAMERON, SUTHERLAND AND SEWARD PTY LTD
MACHINERY MERCHANTS
MELBOURNE AND SYDNEY.**

R.H.Saunders

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

E.M. BALDWIN & SONS PTY LTD, Castle Hill, N.S.W.

(see LRN 37 p.2)

Late in February, three used mining diesels were seen on site. one was an E.M.Baldwin 4wDH, numbered D2 and believed to be a 20 tonne loco. Builder's plates had been removed. The other two were single-ended 4wD locos numbered 7 & 8 and with no visible builder identification.

Craig Wilson 2/84

NEW SOUTH WALES

DORRIGO STEAM RAILWAY AND MUSEUM. 1435 mm gauge

(see LRN 36 p.4)

A large amount of equipment has been moved from the Society's storage site in Newcastle to Glenreagh. This move has been brought about earlier than expected because of the decision to sever access from the

SRA to the storage site. A number of trains were despatched from Cockle Creek to Glenreagh during November, December and January. Most of this equipment is ex NSWGR, but on 18 December, the following former private railway locos left in company with former government stock:

14	0-8-2T	Avonside	1559	1908	ex Peko-Wallsend
3	0-6-0ST	Kitson	2236	1878	ex J.& A.Brown
2	0-6-0ST	Avonside	1916	1922	ex J.& A.Brown

A further train had been programmed in January and would contain these former private railway locos:

20	2-8-0	North British	22042	1918	ex R.O.D. & J.& A.Brown
24	2-8-0	Gt. Central Rlwy		1918	ex R.O.D. & J.& A.Brown
2408	2-6-0	Dubs	2631	1891	ex Electricity Commission

Andrew Barclay 0-4-0ST *Juno* (1739 of 1923) has once again passed its annual boiler inspection. It is currently still situated in Newcastle. DSR&M Newsletter 1/84

QUEENSLAND

MR ASHDOWN, Clairview Sawmill 610 mm gauge

(see LRN 30 p.6)

John Fowler 4wDM 21914 of 1936 remains out of use at this location. The present owner, Mr Ashdown, states that the loco will be removed elsewhere for use in powering a generating plant. The location was not stated, although local island development springs to mind as a likely destination.

Editor 1/84

CSR LTD, Kalamia Mill 610 mm gauge

(see LRN 37 p.8)

The new line car was observed in the navy shed at the mill early in January. The car has four wheels with a driving position at each end. It is painted yellow and has canvas blinds at each side of the passenger compartment. It appeared to have a petrol engine in the centre and seemed to have hydraulic drive onto one axle. It was built by Plasser Australia but no builder's details were seen.

Seen in use on the mill plantation was Com-Eng 4wDM *Ivanhoe* (GA1030 of 1950}. This unit does not seem to see much use in the crushing season but was being used as a personnel carrier by a mill worker checking irrigation equipment on the plantation on this occasion.

Editor 1/84

DREAMWORLD PRODUCTIONS PTY LTD, Coomera 610 mm gauge

(see LRN 35 p.9)

Motor Rail "Simplex" 4wDM loco 21543 of 1956 has been acquired by Dreamworld for use on permanent way duties. It is thought to have been at Dreamworld for some months, and was purchased from CSR's Kalamia Mill.

John Fowler 0-4-0WT 16249 of 1923 arrived at Dreamworld for display

around January. This loco had been on display in the open at the Rocky Point Mill of W.Heck & Sons Pty Ltd at Woongoolba since 1981.

David Mewes 1/84.

GIBSON & HOWES PTY LTD, Bingera Mill. 610 mm gauge

(see LRN 38 p.9)

The report in LRN38 of Ruston & Hornsby 339211 being seen here in November was in error (see Millaquin Mill.)

A number of units were seen out of use at the mill in early November. A Malcolm Moore 4wDM (ex 4wPM) with a Ford 4-cylinder diesel was without a gearbox. Motor Rail "Simplex" 4wDM 10234 of 1951, and Ruston & Hornsby 4wDM 387893 of 1955 rebuilt by the mill with a Ford diesel were also lying nearby, along with a second Malcolm Moore which has been engineless and derelict for many years.

Stationed at Wallaville to work the former Gin Gin Mill tramlines were Com-Eng 0-6-0DM locos *Thistle* (A1207 of 1955) and *Sharon* (A1935 of 1959), together with E.M. Baldwin 0-6-0DH *St.Kilda* (6-2179-1-6-67 believed to have been rebuilt from a large Ruston & Hornsby diesel). *St.Kilda* had been sent to Wallaville to cover a breakdown of *Hydro*, a Malcolm Moore 4wDH (rebuilt by the mill from 4wPM), which normally works on the Currajong Creek lines.

Seen at Uping Road, Mcllwraith, on the same day were *Hydro* and similar loco *Mcllwraith*, both fitted with Ford 6-cylinder diesels and tractor canopies. *Hydro* had been brought out to Mcllwraith for repair, using a convenient bridge for an inspection pit.

The Mcllwraith area tramlines are very light and have remained in operation in very uneconomic fashion because of an agreement made with growers when Gin Gin Mill closed at the end of the 1974 season. Bingera management applied to the Central Cane Prices Board for permission to close the Mcllwraith network for the 1984 season, but this request was refused. The light Malcolm Moore locos have been difficult to keep operating, and it appears that the lines will have to be relaid in heavy rail or else a new lightweight loco will have to be obtained if the lines cannot be closed within the next few years.

David Mewes 2/84

ISIS CENTRAL SUGAR MILL CO. LTD 610 mm gauge

(see LRN 38 p.9)

Three E.M.Baldwin brake wagons are in use on the hilly tramway system here. Considerable problems with wheel lock-up on these vehicles have been experienced, so measures have been taken to improve the situation. Brake wagon No.1 (EMB 7937-1-7-78) has been fitted with an electronic anti-slip device and works in conjunction with combination loco 8 (Clyde DHI-71

0-6-0DH locos 64-385 & 61-220) on the Farnsfield line. The other two brake wagons have been fitted with outside side rods and cranks by the mill. No.2 (EMB 7937-2-7-78) works in conjunction with E.M.Baldwin B-B DH 10 (?267-1-6-77) on the new Gregory River line. No.3 (EMB 10278-1-5-82) works in conjunction with E.M.Baldwin B-B DH 11 (10310-1-6-82) on the Farnsfield line.

A Plasser track jack not previously recorded was noted near the loco shed in November. This is Plasser 221 of 1980, Model HGR-230, powered by a VM 2-cylinder diesel.

A new yard layout is under consideration, which, if proceeded with, will involve major earthworks and alterations around the mill. A new loco shed will be required as part of this scheme, and a former sugar shed will be relocated to serve as combined loco shed/garage/truck shop.

David Mewes 2/84

MILLAQUIN SUGAR CO. PTY LTD Millaquin Mill, 610 mm gauge

(See LRN 33, p.9)

Ruston & Hornsby 4wDM 339211 of 1953 was seen here early in November (not as incorrectly reported in LRN38 at Bingera : editor's error!). Millaquin Mill has no small loco suitable for permanent way duties, so the Ruston & Hornsby was transferred temporarily from Fairymead Mill for ballasting work.

D.J.Mewes 2/84

MILLAQUIN SUGAR CO. PTY LTD, Qunaba Mill 610 mm gauge

(see LRN 27 p.10)

Neither loco at this mill carries a name or number. One is an E.M.Baldwin 4wDH rebuilt by Millaquin Mill in 1980 (from EMB 8860-2-8-79, itself rebuilt from EMB 4529), originally a tunnelling loco. This loco was named previously (and probably unofficially) *Beetle* and (definitely unofficially) *Beetle Bomb*. The second loco is a Com-Eng 0-6-0DH (FC3473 of 1964), formerly *Burnett* of Bingera Mill. No servicing work on these locos is done by Qunaba staff. Routine servicing is done under contract by a local service station, and end-of-season overhauls and major repairs are done by Millaquin Mill, normally at Millaquin.

David Mewes 2/84

ROYLEN ENTERPRISES PTY LTD, Brampton Island. 762 mm gauge

(see LRN 34 p.15)

A loco was seen with train on the island wharf late in January, painted in a new mostly yellow livery. This loco was F.C.Hibberd "Planet" 4wDM 3476 of

1950. This and sister loco 3475 both work on the island, and were originally ordered by the D'Arcy Exploration Co. Ltd, apparently being despatched to Port Moresby. The four-wheel passenger cars in the train had also been repainted and carried numbers. The colour scheme includes yellow, orange, white and blue.

Editor 1/84

TASMANIA

IDA BAY RAILWAY CO. PTY LTD, Lune River 610 mm gauge

(see LRN 26 p.12)

This line is operated on weekends and Wednesdays throughout the year and every day during peak periods by Mike & Fay Williams. Motive power now consists of three Malcolm Moore locos built in 1943 as 4wPM, which were previously operated on the line hauling limestone by Commonwealth Carbide. No.1 is Malcolm Moore 1038, now fitted with an Isuzu diesel. No.2 is Malcolm Moore 1056, which last ran with a Perkins six-cylinder diesel, and is being overhauled. No.3 is Malcolm Moore 1017, still fitted with a Ford V8 petrol engine. Of the two remaining locos, the old number 1 (Malcolm Moore 1010) is derelict and the old number 4 (Malcolm Moore 1052) has been cannibalised for spare parts. Trains run over 6.8 km of track and there are four carriages. Tourists wishing to visit the Hastings caves and ride on the railway can rent ex-mines workers cabins from \$5 per night.

Allen Turner 1/84; Editor.

SECOND RIVER TRAMWAY. Karoola 610 mm gauge

(see LRN 23 p.17)

The main line of the tramway is now completed with the run round loop now in operation. A small station building is being built for the southern terminus of the line.

A genuine Zeehan & North East Dundas 2 ft gauge carriage has been purchased, and restoration work has commenced. This work is being carried out at the Devonport home of member Peter Martin, and when completed, the vehicle will be fitted with Z&NED tramway bogies at Karoola.

Krauss 0-4-0T loco No.1 (rebuild of 5682 & 5800 both of 1907) is in the process of being dismantled for a D.L.I. inspection. It has been steamed regularly at Karoola since 1972. Train operations are now carried on with Krauss 0-4-0T loco No.2 (Krauss 6067 of 1910), or during fire ban days, a regauged ex-A.N.R. motorised gangers trolley.

Ralph Proctor 1/84

WEE GEORGIE WOOD STEAM RAILWAY INC., Tullah 610 mm gauge

(see LRN 25 p.15)

In October, John Fowler 0-4-0WT *Wee Georgie Wood* (believed to be 16203 of 1924) was seen on the back of a semi-trailer at Queenstown. It was stated that the loco was being taken to Hobart for repairs to be carried out.

By late December, the loco was back at Tullah having various boiler fittings remounted, having passed its boiler test. A 2 ft gauge carriage body (ex Mount Lyell), enclosed toast rack type, is nearing completion for operation on the line. Two bogies are already for positioning under the body when restoration is complete. The old turntable base has been retrieved from Farrell Junction and is being set up in a concrete-based pit, for future use near the loco shed. Operations on the line are stated to be expected to commence within the next twelve months.

Allen Turner 1/84; Ralph Proctor 1/84.

WEST COAST PIONEERS MEMORIAL MUSEUM Zeehan 1067 mm & 610 mm gauge

Krauss 0-4-0WT 4087 of 1899, which last operated at Renison Bell in 1960 and has stood for many years at the Bluff at Devonport is now in the workshop area at Zeehan for eventual display as a static exhibit in the museum's locomotive display area. A considerable amount of rusting and wastage of metal parts has taken place, and a lot of work will be required to get the loco into a presentable condition.

It will join on display Krauss 0-4-0T 5480 of 1906, Nicola Romeo 4wPM 770 of 1925, General Electric 4wWE 2375 and a bogie coach, all on 2 ft gauge ex Mount Lyell, and on 3 ft 6 in gauge Dubs 0-4-2T (Abt) 3369 of 1896, a petrol railcar and a brakevan ex Mt. Lyell; 4-8-0 *Murchison*, Dubs 3854 of 1900 ex the Emu Bay Railway, and ex TGR 2-6-0 C1 (Beyer Peacock 2509 of 1884).

Ralph Proctor 1/84; Editor

VICTORIA

THE BIG GRAPE, Swan Hill 610 mm gauge

(see LRN 30 p.18)

This attraction is situated just north of Swan Hill on the main highway and has been open for about 12 months. A Ruston & Hornsby 4wDM (223725 of 1944) is in use, carrying the number 1 and name *Big Grape Special*.

This loco is on loan from Brian Peart and is painted yellow. Its train is made up of six converted sugar cane trucks. The line is a circuit around 0.8km long

which passes through vineyards. The trip takes about 20 minutes with a commentary and stops along the way to explain about different types of vines, the drying process, etc. Plans exist to purchase a second loco and to put in a siding.

K.Russell 1/84

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 37 p.13)

Considerable problems have been experienced with the NA class 2-6-2T locos built by the Victorian Railways at Newport for the VR narrow gauge lines. 6A (built 1901) has had its boiler condemned and early in January was sitting in the Menzies Creek Museum awaiting workshop space before entering shops for boiler replacement. 14A (built 1914) has also had its boiler condemned and was quickly dismantled so that the new boiler originally planned to go on 3A (built 1900) can be fitted. The loco was due back in service in late January.

More minor problems were experienced with 7A (built 1905) which had axle box defects remedied in an "all-night session" with volunteer workers, resulting in no trains being cancelled. One train was cancelled early in January because of the temporary unavailability of 8A (built 1908), due to unspecified mechanical troubles. The restoration programme with 12A (built 1910) has been put back as a result of the problems with the operating locos.

The 4w+4wTE Climax loco (1694 of 1928) is progressing well in its restoration process. Boiler lagging and cladding was in progress by February, a repaired ashpan had been delivered, and work on the rear bogie had advanced to the stage where reassembly was possible.

Ruston & Hornsby 4wDM NRT1 (296058 of 1951) has been travelling the line between Emerald (its allocated depot) and Belgrave in recent months. It has shown itself to be a good shunting unit, but has not yet been called on to handle a limited passenger service planned for total fire ban days.

Two V class Drewry 0-6-0DM locos (introduced 1948) have been purchased from the ANR in Tasmania. V12 is being converted to 2 ft 6 in gauge by the Emu Bay Railway for use on Puffing Billy, while V9 will be used for spare parts. V12 will be used on total fire ban days and for heavy ballast trains.

Peter Medlin 1/84

GEE LONG STEAM PRESERVATION SOCIETY, Bellarine Peninsula Railway 1067 mm gauge

(see LRN 37 p.14)

Preliminary hydrostatic tests carried out on Vulcan 0-6-OST 4 (2539 or 2541 of 1916) revealed a fractured main steam pipe. This has been removed for replacement, and other minor details are being fixed, to enable a DLI inspection to be carried out once the steam pipe is replaced.

Perry 0-4-2T *Klondyke* (271 of 1927) was steamed several times recently to provide steam power for the Worthington pump used for hydrostatic testing.

Hudswell Clarke 0-4-25T *Wesley B. McCann* is serviceable and may be used on light duties as required.

A VA class Drewry 0-6-ODM loco (built in 1948) has been purchased from the ANR in Tasmania. This loco, VA1, has required minor repairs but will be a useful unit.

BPR Monthly Notice 1/84

PUFFING BILLY PRESERVATION SOCIETY MUSEUM. Menzies Creek gauges various

(see LRN 34 p.17)

Work is continuing on the restoration of *Delta* Perry 0-6-2T 9767.45.1 of 1945, with the chassis being lowered back onto its wheels. The passenger vehicle (ex NQR wagon) ex the Walhalla & Thomson Steam Tramway is still housed at the museum.

Peter Medlin 1/84

LEISURELAND FAIR, Langwarrin 610 mm gauge

This park was opened on 26 December 1983 and will eventually incorporate a wide range of attractions. Noteworthy, and in operation from the opening day, is a 6 km dual track railway. The entire railway system is said to have cost some \$1.5m. and is believed to have been supplied by Chance Brothers of Witcheta, Kansas, USA. There are three locos, of steam outline, although powered by internal-combustion engines probably diesel. The wheel arrangement is in steam loco parlance, 4-2-4 but in fact the centre axle is unpowered and the bogies are driven by cardan shafts, making the locos B-1-B DH or 4wDH-2-4wDH. One of the locos is numbered 142.

The carriages are carried on 4-wheel bogies and have transverse bench seating. Each train was operating with 7 cars plus a flat top for the carriage of bicycles and other freight when operating in December. The park is currently constructing another 12 cars for use on the line. Brakes operate on all wheels of the train, and appear to be hydraulic.

The greater part of the line was in operation from the start, with finishing touches, including some ballasting to be completed. Two stations and engine shed are in use, while another station is under construction and a fourth

station planned. The layout is complex, as can be seen on the accompanying plan.

1. entrance building (a)
2. car park (a)
3. lake (b)
4. fauna reserve (c)
5. lake (b)
6. golf driving range (b)
7. short hole golf course (b)
8. BMX track senior (b)
9. BMX track junior (b)
10. kiosk (c)
11. water flume and boat ride (c)
12. lake (b)
13. train station (a)
14. water slide (c)
15. train station (b)
16. roller coaster (a)

Choco ICE CREAM SUPPLIER TO
LEISURELAND FAIR

17. large adventure playground (b)
18. tennis and netball courts (c)
19. train station (c)
20. kiosk (b)
21. sports oval (b)
22. train station (a)
23. carousel (merry-go-round) (a)
24. chair-o-plane ride (a)
25. restaurant (b)
26. swimming pool (c)
27. sports oval (b)
28. playground (b)
29. engine shed (a)

To be programmed

Australian bird aviary • Indoor pool
• Practice areas for golf, tennis, cricket etc. • Children's boat rides

Legend

- (a) operating
- (b) under construction
- (c) to be constructed
- *** picnic/barbecue areas
- **** train track - 6 km.
- bike track

The park aims to be a “budget” attraction with highest admission prices (weekends and public holidays} being \$4 for adults and \$3 for children. Reduced rates apply for entry after 2 pm, and Monday-Friday during school holidays. Admission price includes unlimited use of all rides.

Dick Hope, 12/83; Peter Medlin 1/84

WESTERN AUSTRALIA

GOLDEN MILE LOOP LINE RAILWAY SOCIETY INC., Boulder 1067 mm gauge

(see LRN 37, p.14)

F.C.Hibberd “Planet” 4wDM 3966 of 1962 is at last in running order. However, more work will be done before it is brought into service. A standard coupling has to be fitted and an engine cover manufactured and fitted. This work will be made possible thanks to a grant of \$2,500 from the State’s Instant Lottery Fund. After this work, and repainting, the “Planet” will enter service as understudy for the ex WAGR Z class 0-6-0DM (built by Robert Stephenson & Hawthorn for Drewry) currently in passenger service.

Golden Mile Loop Line Railway Society Newsletter No.12

OVERSEAS - PAPUA NEW GUINEA

CHOISEL PLANTATION PTY LTD, Kunua Plantation 610 mm gauge

(see LRN 38 p.14)

The Kunua Plantation tramline showed plenty of signs of neglect when visited early in January. All the level crossings had been removed, a high level bridge over a creek had been removed, and tracks generally overgrown. Two trucks were in the workshop for repairs to the bearings, one was in use and one “was still out in the bush somewhere”. The 4wDM loco (Hunslet 7532 of 1977) is still in working order but is not being used. However, a new manager has started clearing some of the tramlines, and making minor repairs.

Michael Pearson 1/84

CHOISEL PLANTATION PTY LTD, Soraken Plantation 610 mm gauge

(see LRN 38 p.14)

While some sections of the tramline here are still in use for hand pushed operations, most track is in very poor state. Most of the level crossings have been buried in the sand or removed. The Hunslet 4wDM loco (7531 of 1977) was in the workshop early in January and is out of action with several parts

removed to repair tractor engines (it has the same engine as the Massey Ferguson 135 tractor). The Lister 4wDM loco was reported as being at Section 4 but without its motor, which was in the workshop for repair. Some of the track here is ex World War II 201b rail.

Michael Pearson 1/84

MEETINGS

MELBOURNE

Andersons Mill, Marysville

A 3 ft gauge tramline operated out of Andersons' Mill near Marysville for many years prior to its closure in the late 1950s. Keith Kings visited the mill while it was operating and recorded on movie film and slides both the mill and the tramway.

Keith will be showing both his movie (about 20 minutes) and his slides at the April meeting. This is a rare chance to see this footage so be sure and be there.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday, 12 April 1984.

TIME: 8.00 pm

SYDNEY

Our April meeting is being held early on the 18th of the month. Peter Neve w111 present some movies of his recent trip to India with plenty of narrow gauge steam.

Also in April, NSW Division members Paul Simpson and Ben Rachwal will be running their Hudswell Clarke at the Menangle Steam Rally on the 28th and 29th. The track has been lengthened and there are plenty of other attractions so how about coming down, its only 4 km south of the railway level crossing at Campbelltown on the Menangle Road.

Don't forget our April meeting is a week early.

LOCATION: Government and Transport Club, Regent Street, Sydney.

DATE: Wednesday, 18 April 1984.

TIME: 7.30 pm

ADELAIDE

The next of the Adelaide group will be held on Thursday, 5 April 1984. Members wishing to attend are welcome to do so. Details are available from Arnold Lockyer of 6 Dunedin Street, Dover Gardens 5048.

LOCATION: Mile End Railway Museum, Railway Terrace, Keswick.

DATE: Thursday, 5 April 1984.

TIME: 8.00 pm

NOTES, CORRECTIONS AND COMMENTS

BOOK REVIEWS

Tram to Sorrento

By A.P.Winzenreid Published by APW Productions, P. O. Box 360, Belgrave 3160. 56 pages, RRP \$5-75 posted.

This second publication in the *Tram to ...* series is similar in layout to *Light Railways* and is lavishly illustrated with 36 photographs.

The story of the Sorrento Tramway is unusual in that it was built to serve the needs of tourists in the nineteenth century and although basically a street tramway, it used conventional locomotives, both attractive narrow gauge Baldwin 0-4-0STs, as well as a horse tram. The story of the line is fully told, and a range of historical sources consulted. The booklet is attractively produced and should sell well to the general public. The only criticism might be that the author has filled up a number of pages towards the end of the book with material of doubtful interest.

This publication is strongly recommended to devotees of Australian Light Railways and is available from the publisher or from the LRRSA Sales Dept.

JB

Locomotives of Australia

By Leon Oberg Published by Reed Books Pty Ltd, 2 Aquatic Drives Frenchs Forest 2086. 324 pages

This is a completely revised and enlarged edition of the well-known book first published in 1975. It certainly is a great improvement on the earlier edition, incorporating expanded and more accurate information. Many more industrial types are included and the list of preserved locomotives has been expanded and updated, although not very useful for those wishing to view these locomotives, as there is a lack of specific information to enable them to be located. In a work of this size, errors are inevitable, and the author's distinctive style of writing may grate on some, but this volume is a treasure-house of photographs and information.

It is not just a "coffee table" book of trains but deserves a place on the shelves of all those interested in Australian locomotives.

JB

LIGHT RAILWAY LOCOMOTIVES BUILDERS

LRRSA Council have agreed to an approach from Bob McKillop to co-ordinate the development of a series of booklets of locomotive builders lists. The idea would be to produce booklets of quality similar to LRN which would contain lists of locomotives which came to Australia, including notes on the builders and possibly some line drawings as well as notes on loco types. A number of members have already expressed interest, and supplied material for this project. Any other members who would like to assist in any way (supplying information, editing preparation of drawings, production work etc) are invited to write to Bob at 10A The Bulwark, CASTLECRAIG 2068.

MEMBERS ADVERTISEMENT.

Keith Duncan, of Megalong Valley, Blackheath, N.S.W., would like to hear from people interested in becoming involved in assisting with the completion of the 2 ft gauge railway at Megalong Valley. Potential for an interesting tourist railway more than a mile long is good with substantial progress already achieved. There are two steam locomotives already on site together with other equipment. Ideas and suggestions would be welcome. Please phone (047) 87 9127 or write to Keith at Megalong Valley, Blackheath; 2785.

FIELD REPORT

Yamba, N.S.W.

On the western side of the Yamba - Angourie Road, opposite the turnoff to the Yamba sewerage works, can be found the very rusted saddle tank off an old steam loco. No other remains are to be found. The steam loco on which this saddle tank sat is thought possibly to have been an early Australian-built one. It was used on the railway (apparently of standard gauge) which ran between Angourie Quarry and Yamba, and which was built to convey rock for breakwater and training wall construction at the Clarence River entrance. The line operated between 1893 and 1899. After 1899, stone for use on the Clarence River Entrance Works was obtained from the Woodford Island quarry. The loco is thought to have fallen into disuse after 1899.

John Kramer 4/84

NEW SOUTH WALES

DORRIGO STEAM RAILWAY & MUSEUM 1435 mm gauge

(see LRN 39 p.4)

On Sunday 26 February, the last train of stock destined for Glenreagh left Cockle Creek. Included in the consist were the following former private railway locos:

20	2-8-0	North British	22042	1918	ex R.O.D. & J.& A.Brown
24	2-8-0	Gt. Central Rwy.		1918	ex R.O.D. & J.& A.Brown
2408	2-6-0	Dubs	2631	1891	ex Electricity Comm.

R.O.D. 24 developed a hot box en route and had to be left at Paterson. Unfortunately; the train did not make schedule due to various delays and was stowed for six days, finally arriving at Glenreagh on 4 March. Meanwhile, R.O.D. 24 was jacked up, the faulty bearing was removed, remetalled and reinstalled, all by Society members, and finally arrived at Glenreagh on 1 April.

The following private railway locos remain at Newcastle:

<i>Juno</i>	0-4-OST	Barclay	1739	1923	ex Comsteel
<i>Badger</i>	0-6-OST	AIS		1943	ex AIS
2535	2-6-0	Beyer Peacock	2322	1883	ex AIS
4	0-4-OT	Porter	5685	1915	ex Comsteel
2414	2-6-0	Beyer Peacock	2636	1891	ex Electricity Comm..

These items will probably go to the museum by road transport.

D.S.R. & M. Newsletter 4/84

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 38 p.4)

The February steaming day was the fifth anniversary of regular operation at Albion Park. During that period the museum has been open to the public on an average of 15 days each year while almost 46,000 passengers have been carried. The bulk of this patronage has occurred over the last two years when 14,000 - 15,000 passengers per year have been carried.

Major expansion and improvements to the picnic grounds and the completion of the main-line circle in November 1982 have contributed to the recent increase in visitors. Normal steaming day patronage now ranges from 600 to 1,100 per open day. Even under the very poor weather conditions during the 1984 Heritage Week programmes the museum railway carried over 100 visitors on Saturday afternoon 7 April and almost 600 passengers the following day.

In five years of passenger operation only one steaming day has been truncated due to poor weather. This occurred on Sunday 15 January 1984, when heavy rainfall caused operations to be cancelled after 11.30 am.

The chain wire enclosure around the main station area was completed on 3 March. This major project used 210 metres of wire and by mid-April five sets of gates were still needed to secure this large area.

Former NSWGR lamp standards were erected on the "Yallah" station platform and along the picnic paths during January. In February, the junction signal post was fitted into position at the eastern end of the main station yard. During March, a locked single lever and frame was located on the eastern end of the main station platform to control the facing station yard points and so reduce the number of people needed on the steaming day operation roster.

The first large slab for the new stationary steam display area was completed by 17 March. On 27 March, the 7 tonne Brown Hoist vertical boiler was lifted onto this slab. Work is now progressing on fitting auxiliaries to this unit.

By mid-April the main line access points to the station area display and back roads were nearing completion. During March, the various display points were connected in these sidings so that the skip roads will have physical connection to the main line.

These sidings still require packing and ballast. Material for this task was delivered in March, but the wet weather prevented spreading and levelling being carried out.

Standard track maintenance has continued; considerable work has been carried out in resleepering the entrance road and points into the loco

compound area. The track in this location was constructed almost ten years ago.

The items received from South Clifton Colliery were of 3 ft (912 mm) gauge and not 3 ft 6 in (1067 mm) gauge, as transposed in LRN 38 in the final typing. (Apologies - Ed.) On 14 April, open sided toastrack four-wheel man car from South Clifton Colliery was mounted on two 2 ft gauge wheel sets and operated around the main line behind the Mancha battery electric mine locomotive. This vehicle will soon be repainted and will be available for operation on special occasions to demonstrate typical underground colliery transport.

By mid-April, the underframe retrieved from the damaged South Clifton Colliery Ambulance Car only required bogie bearing rollers to complete its reconstruction. This chassis is being mounted on former Condong Mill bogies, which have been strengthened with new cross bolsters. The former International Bus body, saloon car No.2, will be fitted to this steel underframe.

With the return of cooler weather, work has progressed on scraping over 90 years accumulation of varnish from the ceiling of former Melbourne saloon cable tram trailer 430. This most unpleasant task was completed by mid-April and when final detailed rubbing back is completed, the ceiling can be repolished enabling work to commence on the construction of longitudinal seats in the saloon.

Davenport 0-4-OST *Kiama* (1596 of 1917) was reversed by crane on 2 February, after working anti-clockwise around the main line for six years. Suitable RSJ girders have been located for a bridge across the swamp and it is hoped that this will enable the remaining arm of the loco turning triangle to be constructed in time for the next loco turning period!

During February, most of the tubes from the boiler of Hawthorn Leslie 0-4-OST *Burra* (3574 of 1923) were drawn from the tubeplates. New tubes from the extensive stock at the museum are now being prepared for refitting.

The museum was able to purchase a fork lift in Sydney for \$100 (believe it or not) during February. This unit was delivered to Albion Park on 2 March. The deal involved three spare tyres and an additional lifting tyne. The reason for the vehicle being available for disposal was a blown head gasket. The museum is now searching for a 4-cylinder Meadows petrol engine head gasket. Even if a specially made one at \$200 has to be purchased, the total outlay of \$300 will result in a very reasonably priced piece of equipment.

The Museum Committee is planning for a grand official opening to be held this year. The local council celebrates 125 years of local government in June, but the main celebrations will most probably be conducted during the

annual Festival Week in November, during which time the museum opening ceremony will most probably be held.

STOP PRESS

On Saturday 9 June, a Special "Two-foot Varietrails" Enthusiasts Day is to be held at the museum. The day will run from 10.30 to 6 pm with gate admission of \$3 for adults; children half price.

There will be a wide range of different locomotives and rolling stock in action from noon. Admission includes rides in approved vehicles and footplate rides may be available for a small additional cost. The following day is a regular open day, so why not make a weekend of it?

Ken McCarthy 4/84; Tony Madden 4/84.

NEW SOUTH WALES SUGAR MILLING CO-OPERATIVE LTD, Condong Mill 610 mm gauge

(see LRN 2 p.3)

During February, it was noted that Ruston & Hornsby Type 40DL 371959 of 1953 was missing from its normal place of display between the new bypass road and the old highway outside Condong Mill. The other vehicles preserved with the loco were still in place (a cane truck, a set of rail bogies, a four-wheeled ballast wagon, a bogie ballast hopper and a bogie passenger car). The loco has been removed to the workshop at the mill for restoration by apprentices.

John Kramer 4/84

RICHMOND VALE PRESERVATION CO-OPERATIVE SOCIETY LTD Richmond Vale Railway Museum, Richmond Main. 1435 mm gauge

(see LRN 13 p.15)

In spite of a lack of publicity, this Society has been active its project of developing an operating railway museum in the Newcastle area. Under development is stage two of tracklaying, from Richmond Main Colliery site to Mulbring Road, including a triangle. This will enable the commencement of regular passenger operations. Later development is planned to extend the line to Pelaw Main, Weston, and ultimately Hexham.

A number of locomotives have been acquired for the project. Ex John Lysaghts 040ST *Marjorie* (Clyde 462 of 1938) has been completely dismantled for restoration. The boiler is being retubed and other work to be carried out includes repairs to running boards and cab, overhaul of steam brake, overhaul of motion and renovation of all boiler fittings. It is hoped that this loco will be ready for the commencement of services.

F.C.Hibberd 4wDM 3715 of 1952 (ex Maritime Services Board, Coffs

Harbour) is presently used for works trains and will be available as reserve to *Marjorie* on opening. Two 2-8-2T locomotives are on loan from Coal & Allied Industries. These are 9 *Pelaw Main* and 10 *Richmond Main* (Kitson 4567 of 1908 and 4798 of 1911 respectively). These originally operated under the ownership of J. & A. Brown. It is planned to restore both these locomotives to working order eventually.

Lastly, the remains of an 0-6-0ST loco built by Vulcan Foundry in 1878 (B/n 834) have been donated by Coal & Allied. This loco, now without boiler, had been abandoned at Kalingo Colliery since at least 1938. It initially served on the old GNR of NSW as number 128, and after being sold out of government service in 1915, was used by the Commonwealth Government on the construction of the Jervis Bay breakwater. In December 1932, it was purchased by the Wickham & Bullock Island Coal Company for use at their Kalingo Colliery. Offers of a suitable boiler have been received, but for now it will displayed in its present state of completeness.

Two steam cranes have been acquired from BHP's Newcastle Steelworks. These are No.2, built in 1915, and No.5. There are also 12 four-wheeled wooden coal hoppers donated by BHP Newcastle, and 12 assorted wagons donated by the Maritime Services Board, as well as ex-SRA of NSW stock.

Richmond Vale Preservation Co-operative Society Ltd 4/84; Ray Ellis.

STEAM TRAINS PTY LTD, Kurrajong & St.Ives 610 mm gauge

(see LRN 34 p.6)

Plans for the Heritage Park project, in which this group had been invited to participate (see LRN 34) have been held up for the present. This has led to a decision to rationalise the collection of locos and to use the proceeds to begin the restoration of another loco.

The sale of Fowler 0-4-2T 17881 of 1929 to Timbertown Wauchope has been announced, and the loco was expected to be delivered to Timbertown some time in April. Before operation, the loco will need rebuilding or replacement of side tanks and replacement of ashpan. The loco will be refitted with its original balloon stack spark arrester after this item has been repaired.

Proceeds from the sale will go towards the restoration of Baldwin 0-4-2T 10533 of 1899 ex Fairymead Mill. This loco has been held in dismantled condition following its acquisition from Bruce MacDonald in 1977. It had been recovered by him in a deplorable state from a seaside location in 1972.

Bruce Belbin 3/84

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford. 610 mm gauge

(see LRN 38 p.6)

Earthworks have been carried out to provide a new station platform and to treble the size of the car park, enabling a satisfactory traffic flow to be developed in the future. Working parties have spent many hours cleaning up the site, stacking equipment and planting trees. The clutch has been removed from John Fowler 0-6-0DM 18260 of 1929 for repairs. On restoration of this loco to running order, it will be possible to commence the overhaul of Ruston & Hornsby 4wDM 279567, which has been in regular use on work trains at Woodford since 1979.

Durundur Railway Bulletin 2/84, 3/84.

BUDDHA GOLD MINES N.L., Dittmer 457mm gauge

(see LRN 37 p.7)

Production has been halted at this mine, and operations have been placed on a care and maintenance basis. Production may resume in the future after a new exploration programme has been carried out. Two small battery electric locos were in use here in 1983.

Weekend Australian 24-25/3/84; Editor

CATTLE CREEK CO-OPERATIVE MILLING ASSOCIATION, Finch Hatton 610 mm gauge (see LRN 34 p.9)

Tenders have been invited to lift the disused QGR 3 ft 6 in gauge railway line between Finch Hatton and Netherdale. This 12 km section of line had been purchased by the mill with a view to being converted to 2 ft gauge, but the work had been deferred so long that the condition of sleepers and timber bridges had deteriorated beyond recovery. It would be good sense economically to relay the line, but the present state of the mill financially would appear to make such capital expenditure a major burden.

Mackay Daily Mercury 31/3/84; Editor

DREAMWORLD PRODUCTIONS PTY LTD Coomera 610 mm gauge

(see LRN 39 p.5)

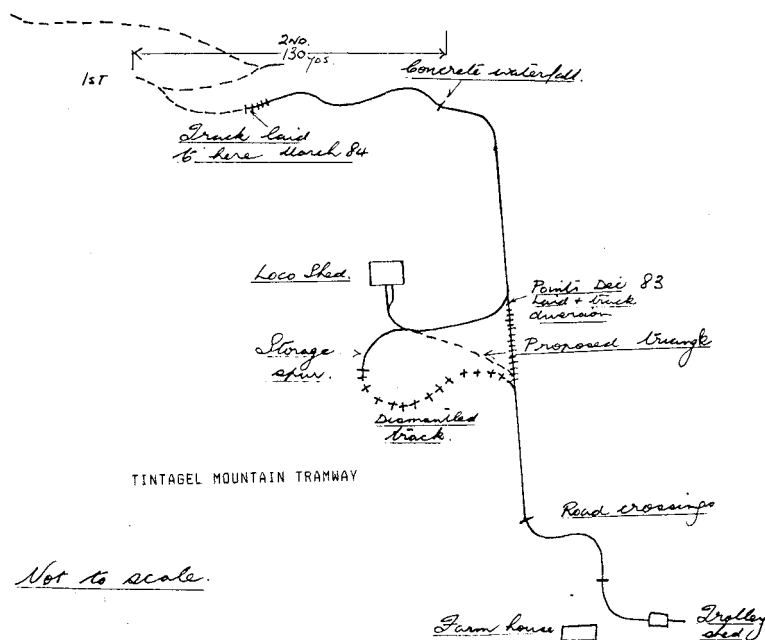

John Fowler 0-4-0WT 16249 of 1923 from Rocky Point M111 at Woongoolba sits on a short siding near Rocky Hollow Station, with a "dummy" driver at the controls.

John Kramer 4/84

TINTAGEL MOUNTAIN TRAMWAY, Arcadia, Cooroy 610 mm gauge

(see LRN 35 p.11)

During December 1983, part of the track near the loco shed was removed and was replaced by a continuation of the straight track leading from the farmhouse to the foot of the mountain. This has eliminated the lengthy loop of track which formerly took the main line past the loco shed, which is now served by a siding consisting of a portion of the old main line. This brought the total length of track to 765 metres. It is planned to construct a triangle here later on.

Work also commenced in earnest on the first stage of the switchback, which necessitated rock drilling down to 3.3 metres. A total of 36 metres was blasted with explosives and in March 1984, a bulldozer was employed clearing the rubble. The permanent way formation is now completed to the top of the mountain. It is planned to lay track at both the switchback sites in May-June 1984. 400 timber sleepers will also be laid in the track from the concrete waterfall site to the first switchback, a distance of 117 metres.

A small "Fairmont" section car ex-ANR South Australia is presently being regauged from 1600 mm to 610 mm gauge in Mildura. The Jenbach 4wDM 2216 of 1958 is now stored in the trolley shed awaiting rebuilding. A flat car

has been constructed from two ex-Moreton Mill cane trucks to carry the compressor to the drilling and blasting sites.

Russell Savage 3/84

SOUTH AUSTRALIA

AUSTRALIAN NATIONAL RAILWAYS COMMISSION, Port Augusta 1067 mm gauge

(see LRN 36 p.5)

Baldwin 0-4-OST *Sandfly*, first used by railway construction contractors C.& E.Millar, has been stored in a shed at Port Augusta since removal from the Port Augusta station platform. Prime Minister Bob Hawke has recently informed Chief Minister of the Northern Territory, Paul Everingham, that the locomotive will be displayed on the platform of the new Adelaide passenger terminal at Keswick. Mr Everingham had hoped to display it at Pine Creek, and two high ranking Territory Public Servants were dispatched south at the end of April to find a replacement.

Mackay Daily Mercury 2/5/84.

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM 610 mm gauge

(see LRN 33 p.12)

Early in April, Hudswell Clarke 0-6-0 1098 of 1915, Fowler 0-6-0T 11855 of 1909, and a Malcolm Moore 4wPM loco were outside the shed at the museum site, along with about a dozen side-tipping skips, ex-Rubicon Tramway bogies, etc. and a bogie passenger carriage. The carriage is an end-loading saloon with longitudinal seats along the sides painted red, with "Yangardook Tramway" painted on one side and "The Dustlander" painted on the other. This carriage has clearly arrived from the Yangardook Tramway owned by Jim Baines at Toolern Vale, (see LRN 31 p.21) but it is not known whether the Malcolm Moore loco here is also from Jim Baines (B/n. 1090 of 1943), or is the one obtained from the Gippsland Folk Museum at Yea, (sic?) (B/n 1049 of 1943) which was stored at the Alexandra Hospital. (It should be easy to tell, as the Yangardook Malcolm Moore is cabless, while the one ex-Yea is fitted with a cab - Ed.)

Darryl Grant 4/84

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 39 p.8)

As planned, NA class 2-6-2T 14A (built Newport, 1914), returned to service at the end of January. This followed the replacement of its boiler with the all-steel welded boiler in stock, and involved the replacement of a number of important parts. The work was only completed in time thanks to the dedicated efforts of a few who were prepared to work long hours to finish the task. This loco failed in action on 18 March when the valve rod pulled out of the buckle.

4W+4wTG Climax loco (1694 of 1928) has had its sheet metal boiler cladding replaced, following a donation of materials by Rowe & Wood Insulations Pty Ltd of Clayton. The leading bogie has been stripped and is being cleaned and primed, and wheel sets will be sent to the Melbourne t Metropolitan Tramways Board for turning. This follows the return from the MMTB of the rear bogie wheelsets and subsequent reassembly of the rear bogie. Work on cab repairs is also progressing. On 24 January, a day of total fire ban, a diesel service was run to Menzies Creek with two carriages hauled by Ruston & Hornsby 4wDM NRT1 (226058 of 1951). This was repeated on 12 February. By April, however, this unit was undergoing gear box overhaul.

A new boiler for the NA class 2-6-2Ts is under construction, and is expected to be delivered by the end of May.

PBPS Monthly News 4/84, 5/84, Narrow Gauge 3/84

LEISURELAND FAIR, Langwarrin 610 mm gauge

(see LRN 39 p.9)

Further detail on the locomotives here indicates that they have petrol engines and automatic transmissions, making them petrol-mechanical locos. The engines are quoted as being Holden 6, which sheds doubt on the complete locos being built in the U.S.A., although they do appear to be very similar to those built by Chance Brothers in Witcheta. The locos are rather small and appear built to miniature proportions with the exception of the gauge.

The carriages are also narrow, and appear to seat fourteen adults each on cross bench seating. They have open sides and clerestory type roof, and are air braked on the Westinghouse principle. The ride of the carriages is described as "unbelievably good" thanks to the miniature bogies fitted.

The main line is double track throughout and on very substantial earthworks including impressive embankments and concrete bridges. Rail is

10 kg/m. on 5" x 3" sleepers with main line ballast, but there is also a large quantity of portable type track with steel sleepers on site. Overall the track work is good but the track is not properly levelled as yet. There are numerous curves and crossovers laid to a very small radius. (Sounds like maintenance problems in store! - Ed.)

There are two double-tracked stations with full roof cover and subway entrances and also one single track station.

Russell Savage 3/84

WESTERN AUSTRALIA

HOTHAM VALLEY TOURIST RAILWAY W.A. INC. 1067 mm gauge

(see LRN 34 p.18)

A B class boiler has been acquired by the Society. Most recently used for steam cleaning work at Kalgoorlie, this has now arrived at Pinjarra. It is proposed lifting the existing boiler from the ex-Millars 4-6-0 *Menzies* (Dubs 3595 of 1895) with a view to fitting the B class boiler. This will enable the loco to be used on a possible "bush railway" east of Dwellingup.

Pinjarra Steam Express 3/84

MEETINGS

SYDNEY

The next entertainment meeting will be proceeded by the Annual General Meeting. Nominations for positions are welcome.

Following the AGM, Noel Reed will show a collection of slides dealing with Welsh Narrow Gauge railways in the 1950s. Anyone with even a slight interest in narrow gauge will find this a fascinating subject. The AGM will be short so come along and enjoy an interest evening.

LOCATION: Government and Transport Clubs Regent Street, Sydney.

DATE: Wednesday 27 June, 1984, 7.30 pm.

ADELAIDE

Recent meetings have included slides of tram remains in the Thomson Valley (Vic), narrow gauge railways in the Phillipines and railcars at Bridgewater. Future meetings will be held at 8.00 pm on 2 August, 4 October and 6 December. Members wanting to know more can contact the LRRSA SA Convenor, Arnold Lockyer at 6 Dunedin Street, Dover Gardens, 5048.

LOCATION: Mile End Railway Museum

MELBOURNE

ARTHUR STRAFFEN EXTRAVAGANZA

Yes its on again. The annual (well almost!) showing of some of Arthur Straffen's extensive local and overseas film collection will occupy the program for the June meeting.

As most meeting attenders will know, Arthur collects films of mostly narrow gauge content and his showings in the past have been very well attended.

This time the theme of the evening will be 'Garratts and Mallets' and will feature South African, Australian and American subjects.

This is always an interesting evening so be sure and be there

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton

DATE: Thursday 14 June 1984, 8 pm

BUSHBASHING

Geoff Thorpe has been appointed "bush bashing Secretary". His role will be to give advice to people wishing to view relics of Victorian timber tramways in particular, for example by putting in contact people who are interested in "bashing" a particular area, organising guides for novices at this activity, and also keeping records of discoveries, especially necessary following the bushfires uncovering many sites of interest. It is hoped that more field reports will thus come the way of LRN. If you are interested in "bushbashing", are prepared to accompany other bashers, or have any information which might be followed up or made available to others please contact Geoff Thorpe at 40 Roy Street, DONVALE 3111.

FIELD REPORT

Alexandra & Rubicon Tramway Victoria.

The route of this interesting 2 ft gauge tramway, once worked by Krauss steam locos, and then two substantial Kelly & Lewis diesel locos, can still be clearly seen from the roadway. The cuttings and earthworks around the foot of McKenzie Hill, south-east of Alexandra are obvious, as are the stumps of the trestles which carried the former tramway and roadway across the Goulburn River west of the present road bridge.

Two kilometres south of Thornton, the tarred patches on the roadway indicate that sleepers have only recently been removed from the roadway surface. For two kilometres beyond the junction of the Rubicon Road with

the Taggerty Road, the serrated edge of the tarred road indicates where sleepers were situated at the roadside.

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD Albion Park 610 mm gauge

(see LRN 40 p.3)

During the Queen's birthday weekend of 9 - 11 June, the Shellharbour area celebrated 125 years of local government. On Saturday approximately 200 visitors witnessed the special workings when just about every vehicle which was roadworthy in the ILRMS collection worked around the main line.

Several times that day a double headed train steamed around the circuit with the Davenport 0-4-0ST *Kiama* (1596 of 1917) and Hudswell Clarke 0-6-0 *Cairns* (1706 of 1939) at the head hauling former Queensland rail motor trailer P119, semi open car No.1, Melbourne cable tram trailer 430 and end loading saloon car No.2.

On Sunday June 10th, the picnic area was crowded for most of the day, the visitors taking around 1000 rides on the museum railway. A further 200 visitors sampled rides behind diesel motive power on the last day of the holiday weekend.

Work is now progressing on boiler repairs to Tully No.6, a Perry 0-6-2T (7967.49.1 of 1949). The provision of a new firebox as well as repairs to the smokebox is being carried out by employees at the fabricating shop at the Australian Iron & Steel plant at Port Kembla. Joe Bruni, boilermaker and Jack Buffolin, leading hand boilermakers have considerable boilermaking experience and this opportunity is being taken to pass on the expertise to young apprentices. The chassis of this locomotive was overhauled several years ago and is awaiting the restoration of the boiler.

Following the cutting in of the main line points leading to the back road in the main station area on 24 April, the final levelling and ballasting of this siding track was completed on 12 May.

On 2 June 1984, the station lights wiring project was completed enabling the night time running on 9 June to be safely conducted.

The fork lift purchased in Sydney for \$100 fired to life on 2 June. It was thought at one stage that a special head gasket would have to be made for the Meadows engine but an "off the peg" gasket was tracked down, which greatly reduced the restoration cost. When the spare tyres obtained with the

unit replace the worn ones fitted to the wheels, this useful vehicle will be available for use.

The former International bus body of c.1918 vintage was transferred to its permanent steel underframe and bogies on 26 May. Following-clearance tests the body was bolted to the chassis on 2 June. This vehicle operated on 9 June, but brake rigging must be fitted and platform steps fabricated before it is available for regular service.

A gloss coat of varnish was applied to the prepared and stained ceiling of former Melbourne cable tram trailer No.430 on 19 May. On 26 May the internal repolished window post covers were refitted. This 94 year old vehicle operated on 9 June, but it is not expected to be available for regular work until the end of this year. Work on 430 has now progressed to the repair, cutting back and revarnishing of the interior and bulkheads. When this task is concluded the final stage will commence, that of restoring the longitudinal seats. Fortunately, the tram was obtained with the punched veneered seat backs in place, but new seat bottoms and legs will have to be made. Unfortunately the hot summer weather made work unbearable on ceiling restoration. In spite of a loss of time of about three months due to this problem, the entire restoration project on 430 will have occupied only 29 months.

Ken McCarthy 6/84

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, DurundurRailways Woodford. 610 mm gauge

(see LRN 40 p.7)

Three extra seats have been fitted in the rear saloon of coach PL111 to increase this vehicle's passenger carrying capacity. Only half the vehicle was fitted with seats when received from the QGR; the other half was given over to a guard's compartment with ample space for baggage and other goods. Increasing demands for passenger accommodation has resulted in the need for extra seats.

The Bundaberg Foundry 0-6-2T (5 of 1952) had to be withdrawn from service for a short time recently when the main steam pipes were found to be leaking and it was decided to replace them. This work was carried out in record time and the loco returned to service.

Durundur Railway Bulletin 5/84; David Mewes 6/84

COMMONWEALTH DEPARTMENT OF TRANSPORT, Pine Islet Lighthouse - gauge?

The Pine Islet lighthouse, about 120 km south-east of Mackay, is served by a tramline which connects wharf to lighthouse. Presumably the tramline consists of a cable worked incline. This lighthouse is one of eight that has been recommended for demanning in a recent government report. It is known that a number of other lighthouses in Queensland have been and maybe still are served by tramway, and more details would be welcome.

Mackay Daily Mercury 9/5/84; Editor

CATTLE CREEK CO-OPERATIVE SUGAR MILLING ASSOCIATION. Finch Hatton 610 mm gauge

(see LRN 40 p.8).

Considerable work has been done during the slack season to upgrade track on the main line adjacent to the highway near Finch Hatton township. This includes the renewal of a number of culverts and the laying of additional formation work and ballast in the form of river gravel and sand. Parked near the mill at the end of June was seen the old Plasser ballast tamper from Farleigh Mill (90 of 1975). It is not known if this machine has been purchased from Farleigh or is merely on loan, but it seems to have arrived fairly recently. The mill's four locos were in or around the loco shed, in preparation for the start of the crush a few days later .

DREAMWORLD PRODUCTIONS PTY LTD Coomera. 610 mm gauge

(see LRN 40 p.8)

John Fowler 0-4-0WT 16249 of 1923 on display here is still owned by W.H.Heck & Sons Pty Ltd It is planned to return the loco to service at some time in the near future, presumably at Dreamworld. It is expected to be exhibited ultimately at Dreamworld or a new transport museum being planned for an adjacent site.

Work is continuing on the return to service of a Perry 0-6-2T which it is planned will be in use shortly. This is ex-Bingera Mill Perry (5643.51.1 of 1951).

Len Shaw (Maintenance Manager, Dreamworld) via John Kramer 4/84.

ENDEAVOUR FOUNDATION 14a Wilmington Street, Ayr 1067 mm gauge

This is the new name of the organisation which runs centres for the handicapped in Queensland. In the grounds of their Ayr centre is to be found Hunslet 0-4-2T *Pioneer* (642 of 1896) ex Pioneer Mill. The loco is exceptionally complete and painted green and yellow. However it is also very rusty and

looks as if it may not have had a repaint since being placed there, apparently in 1966.

Editor.

ISIS CENTRAL SUGAR MILL CO. LTD 610 mm gauge

(see LRN 39 p.5)

The anti-skid devices fitted to radio-controlled brake wagons in 1983 have proved very successful. Problems with wheel/axle lock-up had caused flat spots (each brake wagon suffered at least one "flat" every season), springing problems, and even axle breakages previously. Brake wagon No.1 was fitted with an electronic anti-skid device which was totally successful in service, with no adjustment or maintenance necessary. Brake

wagons No.2 & No.3 were fitted with new extended axles and outside cranks and coupling rods fitted by the mill, requiring the precision location of axle centres. This made lock-up less likely, and a sensor device was also fitted to flash a light on the wagon if wheel lock-up did occur.

Results here were very successful also, with no "flats" being experienced although the vehicle modifications were somewhat more expensive than the electronic device fitted to No.1. No longer will the brake wagon wheelsets have to be reprofiled every season.

"Proceedings of the Australian Society of Sugar Cane Technologists 1984"

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 38 p.10)

Proserpine Mill's self-propelled ballast regulator (Com-Eng Aresco BR683 of 1978) was noted in the mill yard at Marian in late June.

John Fowler 0-6-2T 20277 of 1934, being restored by a mill supplier at Boldon, was noted in its shed during May completely stripped down to the frame with only the cylinders still attached. This locomotive is still owned by the mill and will be kept in working order.

Minor derailments are still a problem on sugar cane tramways, although recent track improvements have done much to minimise them. A bin on a Marian 166-bin train from Mt.Castor was derailed at a "hole in the road" recently and on encountering a set of points, one of the turnout rails was broken, at the same time tearing away the front wheelset of the bin, which became wedged under the second axle. From this point onwards, considerable damage was done to the track as the ballast was ploughed up and sleepers damaged for a distance of maybe a hundred metres until the train was brought to a halt, with all vehicles upright although three other bins were derailed. The navvies and mill crane were radioed for help and

soon had two damaged bins removed from the rails and the other derailed bins back on the tracks. The train on its way again within an hour and a half of the mishap occurring, and work could begin on track repairs.

Editor 7/84

EVAN MORRISON Kin Kin 610 mm gauge

(see LRN 33 p.9)

Work has been continuing on the restoration of Krauss 0-6-0T 5869 of 1908 (rebuilt from 0-4-0T by North Eton Mill). The machine is now almost completely dismantled, with only cylinders, slides and crossheads remaining on the frames. The cab has been rebuilt and is ready to receive its roof. It is likely that the wheelsets will be remachined.

Evan Morris 5/84

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(See LRN 38 p.10)

Bundaberg Foundry 6wDM 13 of 1954 ("Bundaberg Jenbach" Model BJ220) has been completely rebuilt in the mill workshops. It has been fitted with its third engine, a Detroit 6-cylinder unit, which was purchased second-hand by the mill and reconditioned. A new bonnet has been fitted and this, together with the Commonwealth Engineering cab fitted in 1982 means it has lost most of its distinctive appearance.

Editor 7/84

PLANE CREEK CENTRAL MILL CO. LTD, Sarina 610 mm gauge

(see LRN 36 p.8)

Clyde 0-6-0DH Model HG-3R 67-569 of 1967, numbered 10 on the mill's roster is the latest to be fitted with a soundproofed cab. The cab fitted earlier this year was built up from the remains of the old cab of loco number 3 (Com-Eng 0-6-0DH FA1036 of 1959) which had a new cab fitted in 1982. Loco number 11 (Clyde 70-709 of 1970) must have met with an accident at some stage, for after running around with no bonnet doors for some years it has been fitted with mesh fitted doors to replace the original louvre doors.

Ruston & Hornsby 4wDM 371381 of 1954, number 6 on the mill rosters still lies out of use behind the loco shed, "awaiting repairs".

For many years, the mill has operated an out depot at Koumala, some 20 km south of the mill, where a main line loco has been stationed during the season. This area was originally the site of an isolated tramline, which was linked up to the mill main line in 1960. The sale of the private land upon which

the shed at the depot was built necessitated its removal and the decision was taken that the outdepot was no longer needed. New sidings have been constructed at Koumala during the slack season this year.

Observed in the navvies' shed at the mill at the end of June was a motorised weed poison car. This is the MACSPRED CANE-PACK, a project of Du Pont (Australia) Ltd, to enable the simple application of granular herbicide on cane tramway track. Liquid herbicides are out of favour now that the end of steam traction has meant the discontinuing of trackside watering points which were suitable for obtaining water for herbicide mixing. After initial trials in 1980, Du Pont realised there was no suitable platform for application of the herbicide. A loco-hauled unit was developed but communication between loco crew and unit crew was difficult, and the operation was expensive in requiring a loco. Therefore the self-propelled unit was developed. It is believed it was built by A & G Industries of Griffith, NSW, but this requires confirmation. It is powered by a 4-stroke Honda 7.5kw motor driving onto one axle by means of a belt drive. The vehicle is of steel construction with a timber floor and incorporates twin driving controls and disc brakes. A separate motor powers the blower fan for herbicide application. At \$2 500 approximately, this unit proved much cheaper than one suitable for liquid applications, and results at various mills have been most satisfactory. At Plane Creek, the unit has been found rather too speedy at 20 km/h and so it has been mounted on a truck for haulage by a loco!

"Proceedings of Australian Society of Sugar Cane Technologists, 1984"; Editor.

B.& S.RADIC, South Coolum Road, Coolum 610 mm gauge

These cane farmers have purchased a diesel loco to haul cane bins on their 2.5 km private tramline which connects with the Moreton Mill system. This loco came from Racecourse Mill, Mackay, at the end of 1982 and is a 48hp 4wDM 392120 of 1955. At Racecourse, this loco was named *Old Smokey*.

John Miguel 7/84

SUGAR RESEARCH LTD, Mackay 610 mm gauge

(see LRN 36 p 9)

Sugar Research's track evaluation vehicles were observed in a QGR wagon at Racecourse Siding on 21 June, consigned to the Millaquin Sugar Co, Bundaberg. These vehicles consist of a one-axled measuring vehicle and a two-axled power and recording unit, and have been at Kalamia Mill for some time

Editor 6/84

SOUTH AUSTRALIA

SOUTH AUSTRALIAN DEPARTMENT OF MINES, State Battery, Peterborough 610 mm & 508 mm gauge

(see LRN 22 p 19)

A visit to this site during the Easter break proved to be very disappointing. Although the same rolling stock (a total of two flat cars, three tip wagons, and one underframe) was on site, the track had been removed from around the gold stamp. All that now remains of the former rail system was a short incline up into one of the buildings. The remaining track had been left to rust in a heap at one corner of the site, rather a shame at a site listed by the National Trust. Any information about the future of the rail equipment at the site would be welcome.

Rob H. Sanders 5/84

TASMANIA

MONTEZUMA RAILWAY, Melba Flats - Williamsford 610 mm gauge

A proposal has been put to the State Government to restore and reopen the 21 km section of the old Zeehan & N. E Dundas railway from Melba Flats to Williamsford. This plan is being mooted as a cheaper alternative to the scheme to reopen the Abt railway formerly operated by the Mount Lyell Mining & Railway Co; from Strahan to Queenstown until closed in 1963.

Enthusiasts Dr David Flecker and Mr Tony Coen have been investigating the scheme for two years and have now prepared a detailed submission. It is well known that the Tasmanian Government are looking for projects to be undertaken with Franklin Dam compensation money.

The Zeehan & N. E Dundas Railway was built by the Tasmanian Government Railways and connected Zeehan with Williamsford, 29 km away. It opened in 1898 and officially closed in 1929. It featured a summit at Confidence Saddle, where views west and south to the coastline may be seen, and passed within a few metres of the Montezuma Falls, 104 metres high. Locomotives which ran on the line included a Hagens 2-6-4-0T loco and the world's first Beyer-Garratt locomotives.

It is stated that the line could be reopened in 18 months at a cost of about \$3 million. Three operating locomotives suitable for the line are stated to be available in Tasmania, with many more operating in Queensland. The line could be expected to attract many tourists.

The Advocate 27/6/84 via Chas Goodwin; Editor

VAN DIEMEN LIGHT RAILWAY SOCIETY INC., Don River Railway 1067 mm gauge

(see LRN 29, p.8)

Work has progressed on Dubs 4-8-0 *Heemskirk* (3856 of 1900) ex Emu Bay Railway. All the boiler cladding and lagging has been removed and the cab removed completely. The next step will be complete dismantling and sandblasting of all parts. This loco was an oilburner on the EBR in its latter years, and consideration is being given to restoring it as an oil burner which will be able to operate on days of high fire danger.

"Don River Railway News Sheet", Autumn 1984

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM 610 mm gauge

(see LRN 40 p.10)

Half the 610 mm gauge track of what will eventually be a circle of about 600 metres has been constructed in the old railway yard of at Alexandra, parallel with Vickery and Station Streets.

Hudswell Clarke 0-6-0 1098 of 1915, John Fowler 0-6-0T 11855 of 1909 and Malcolm Moore 4wPM 1049 of 1943 stand outside the shed on three parallel sidings together with an end loading semi open sided car called *The Dustlander*, two army flat trucks, six side tip Wagons and at least six former Rubicon Tramway bogies.

Three items are situated in the shed, an 0-6-0PM Day's rail tractor fitted with a Fordson engine (1029 mm gauge), the underframe and parts of Kelly & Lewis 0-6-0DM 4271 of 1935 (formerly diesel No.1 of the Rubicon Tramway), and an open sided large bogie passenger car modelled on the drawings of the ILRMS passenger carriage No.1

Ground preparation suggests that the main circuit will eventually pass through the platform of the former VR Alexandra Railway Station, while two branches will terminate in the former VR goods yard.

K.McCarthy 5/84

J. GOULD, Alexandra. 610 mm gauge

J.Gould is now the proprietor of the timber mill on the route of the former Rubicon Tramway just beyond the 1600 mm gauge station yard at Alexandra. Bogies once used on the Rubicon tramway are still employed in the mill yard to carry timber on 610 mm gauge sidings. This track within the plant

is connected by a large electric traverser (or transfer table) which receives three-phase power from side trolley wires.

Ken McCarthy 6/84

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway. 762 mm gauge

(see LRN 40 p.10)

The present situation regarding the NA Class 2-6-2T locos built by the Victorian Railways was as follows during June:

3A (built 1900) at Emerald, awaiting restoration.

6A (built 1901) at Menzies Creek Museum, requiring fitting of new boiler, but no work planned in the near future.

7A (built 1905) and 8A (built 1908) in traffic.

12A (built 1910) being rebuilt at Belgrave. Parts for the frame being manufactured and front pony truck being built.

14A {built 1914} available for traffic but due for front end overhaul.

The Ruston & Hornsby 4wDM NRT1 (296058 of 1951) has now passed its trials and is stationed at Emerald.

4w+4wTG Climax 1694 of 1928 is continuing to make good progress, the sheet metal cladding on the boiler has been completed, including painting. The sand dome and cast iron bell have been fitted. The regulator valve has been rebuilt and the valve gear is being overhauled. The leading wheelsets have now been turned, new axle box brasses have been cast, and when they are machined, both bogies will be ready to be assembled and placed under the frames. The Radley & Hunter smoke stack is receiving attention with some of the internal components needing replacement.

P.B.P.S. Monthly News No.134 via Arthur Winzenreld

WESTERN AUSTRALIA

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC., Whiteman Park, Caversham. 610 mm gauge

(see LRN 37 p.14)

The station building to become "Central" at Whiteman Park has been moved onto site. The former Claisebrook Station building had its roof removed and was then cut in half for removal. New concrete footings were provided and the building was set up with the two halves joined together and roof timbers refitted. Tile station canopy will be restored to its original wide profile and the original brick fireplaces retained. The ticket office will be retained and the remainder of the building will contain a railway style refreshment room

to be run as a joint venture between the Perth Electric Tramway Society and WALRPA.

Restoration work has progressed well with F.C.Hibberd "Planet" 0-4-0DM 2150 of 1939. Before arriving at Whiteman Park, work had concentrated on superficial restoration such as removal of rust and scale and then painting. A Mack truck radiator has been fitted using the original top and bottom header tanks. A new water manifold is being fabricated to replace the old cracked and corroded one. A new Kelly & Lewis water pump has been purchased to replace the worn out originals and the Villiers 8 hp motor for driving the air start compressor has been rebuilt. The Ingersoll Rand two stage compressor has been serviced and had one exhaust and inlet valve replaced. Fuel pump and injectors were checked. This loco will be fitted with a Rotary Vacuum Exhauster from an ADX railcar ex Westrail. A spare gearbox and final drive is held for this loco, as well as many other spare parts.

Carriages are being constructed by four Community Employment Programme carpenters and will be fitted with standard Westrai1 vacuum brakes.

A bridge is under construction across Bennett Brook and the concrete has been poured in preparation and the steel spans lowered into place. The brook flows in the winter and the bridge site is now known as Bridgewater.

By mid-May 900 m of track had been laid. Rail is 45 lb in 28 ft lengths. Sleepers are ex Pilbara jarrah sleepers originally 9 ft long, cut in half and gang nailed at one end.

L2, the Maylands-built 4wPM loco goes well with Holden engine and automatic transmission. The wheels however are badly worn. The Ridley loco is in running order with Vanguard engine and gearbox fitted, but more restoration work has to be completed. This loco has six wheels, four on a bogie.

The ex-Whiteman Brick 4wPM F.H.Hibberd "Planet" (2055 of 1937 or 3428 of 1949) will be fitted with a Morris 1500cc engine and gearbox and these were being prepared prior to fitting in May.

Charles De Bruin 6/84

OVERSEAS - INDONESIA

P.G. KEMBON AGUNG, Malang, East Java. 700 mm gauge

This sugar mill is located 5-6 km south of Malang, itself some 95 km south of Surabaya. The mill operates a 700 mm gauge tramway system which according to officials, is some 25 km in length, but judging from the locomotive power -

8 steam, 3 diesel-mechanical and 8 diesel-hydraulic it may be more extensive than this. All locos, especially steam, are in well maintained condition.

There is a large loco running shed and workshop, and around midday on Saturday, 19 May most of the locos had returned to base. The following locos were noted:

2	0-8-0T	Orenstein & Koppel	4440	1910	stored in workshop.
3					not seen; apparently in service
4	0-6-2TT	Henschel	19962	1928	in steam.
5	2-6-0TT				under repair.
6	0-8-0TT	Henschel	19231	1922	in steam.
7	2-6-2				in steam.
9	0-8-0TT	Orenstein & Koppel	9357	1920	in steam.
10	0-8-0TT	Orenstein & Koppel	9356	1920	in steam.
B1	4wDM	Orenstein & Koppel			shunting empties yard.
B2	4wDM	Orenstein & Koppel			undergoing overhaul.
B3	4wDM	Schottler			delivering portable rail
C3	0-6-0DH	Schottler			
C5	0-6-0DH	Schottler			converted from underground loco; undergoing overhaul.
C6	0-6-0DH	Schottler			
C7	0-6-0DH	Schottler			identical to C6.
C8	0-6-0DH	Schottler			identical to C6.

Bob McKillop 5/84

CASUDI MILL East Java 700m gauge

This older mill is located on the Malang Road, approximately 30 km south of Surabaya. Most of the tramway system appears to have been abandoned and cane is brought in by truck. However, the mill is located on a congested road and accordingly all cane is transferred to rail at a depot 2.6 km south of the mill.. No less than four diesel-hauled trains were noted on this section of the line in convoy on 19 May.

(a) 'Bundaberg Jenbach' type. Original Jenbach engine replaced by Gardner 8LW

Fitted with ComEng cab from D5, 1983.

(b) 'Bundaberg Jenbach' type. Original Jenbach engine replaced initially with Gardner 8LW engine. Now fitted with GM 6 cylinder diesel. Fitted with Com-Eng cab from D6. Rebuilt and fitted with new bonnet, 1984.

(c) Fitted with Rolls Royce 6 Cylinder diesel engine.

(d) Fitted with GM V8 diesel engine.

(e) fitted with GM V8 diesel engine. Fitted with Hockey Engineering sound-proofed cab, 1982

(f) fitted with GM V8 diesel engine. Fitted with Hockey Engineering sound-proofed cab, 1981.

(g) fitted with GM V12 diesel engine.

(h) Originally fitted with Dorman 2-cylinder diesel engine. Engine currently removed and loco derelict.

(i) Fitted with 3 cylinder diesel engine.

MEETINGS

MELBOURNE

The Annual General Meeting will be held as usual during the August meeting. Nominations for positions on the Council are welcome.

Following the AGM, Norm Houghton will be speaking on the Beech Forest area.

Norm has recently published a history of this area which as you are probably aware has a past richly endowed with sawmilling and light rail transport. Norm's talk will cover more than just the saw milling and tramway aspects. He will be describing the general history of the area and in doing so will attempt to place the sawmilling industry into context with a more general historical background.

This will be a most interesting evening's entertainment and you will be well rewarded by coming along.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton

DATE: Thursday 9 August, 1984, 8-00 pm

SYDNEY

Ken McCarthy will talk at our August meeting on his just published gazetteer of Illawarra locomotives. His talk, in addition to covering some of the locomotives of the south coast, will cover the approach he has taken in researching this topic. We hope that copies of the book will be available on the night for members to purchase.

So come along and get an autographed copy.

Please note this meeting is one week later than normal and on 29 August.

LOCATION: Government and Transport Club, Regent Street, Sydney

DATE: Wednesday 29 August, 1984, 7.30 pm

ADELAIDE

Arnold Lockyer is the South Australian convenor of the Society. Any member wishing to find out details of the Adelaide meeting can contact him at 6 Dunedin Street, Dover Gardens, 5048. The next meeting will be held on 4 October 1984.

LOCATION: Mile End Railway Museum

DATE: Thursday 4 October, 1984, 8-00 pm

NOTES, CORRECTIONS AND COMMENTS

BOOK REVIEW

Gazetteer of Industrial Steam Locomotives Illawarra District, N.S.W. by K.McCarthy. Published by A.R.H.S.(N.S.W. Division).

The first locomotives to work in the Illawarra area were for private owners and from that time, especially with the increased industrialisation in the interwar period, the district has seen one of the largest concentrations of privately operated locomotives in Australia.

Ken McCarthy has identified 123 steam locomotives which have come to the district and on each has listed all known details of the locomotive's entire history, accompanied by an illustration where pictures are available. The details given are both from previously published material and also from the files of a number of railway historians, notably Mr.J.Southern. Members are referred to p.102-3 of *Light Railways* 76, where an example of an entry was shown. The book makes available to the casual reader and researcher a wealth of material that will serve as a starting point for further interest and research into some of the railways of the south coast.

The only point of criticism would have to be in its presentation, A reference work with an index (of the locomotives only) yet without page numbers, the maps hidden at the back as if an afterthought, and number of photographs

excessively cropped or poorly reproduced is disappointing. A little more attention by the publisher would have made the book easier to use. While these faults may be annoying, for anyone with an interest in industrial steam locomotives the Gazetteer is highly recommended.

Available from the publisher or N.S.W.Division LRRSA.

CW

Recently released by The National Trust : *Steam Railways of the South Maitland Coalfields* - 26 minute video. The Editor would be pleased to publish a review of this in LRN 43.

FIELD REPORTS

Douglas Park - Cordeaux Dam, N.S.W.

A 2 ft gauge railway formerly extended 20 km. from the southern side of the Nepean Gorge at Douglas Park to the Cordeaux Dam construction site, mainly on the side of the road formation along Mount Keira Road. During the construction periods from 1917 to 1926, two Davenport 0-4-0ST locomotives (1595 and 1596 of 1917) hauled materials along the route as PWD No.64 and No.65. Loco 1596 was combined in about 1938 with identical engine 1517 (or 1513) at Kiama Quarries to form one reconditioned unit which is now preserved at the Illawarra Light Railway Museum Society railway at Albion Park N.S.W.

The north end terminus of this construction tramway was disturbed in 1980 during the construction of the F5 freeway bridge. During 1983 and 1984, considerable road widening work has been undertaken along Mt.Keira Road and the earthworks of the railway on the eastern side of that main road have now been obliterated. The route is still clearly visible between Mt.Keira Road and the dam, and north of the Wilton-Appin Road.

Ken McCarthy 8/84

Lucknow Sawmilling Company, Big Pats Creek & Muddy Creek, Victoria

During the 1920s, the Lucknow Sawmilling Company operated a sawmill near the head of Big Pats Creek, about 8 kilometres south-east of Warburton. In 1928, the mill was shifted to a new site on Muddy Creek, and a tramway laid northwards, to link up with the old line which followed Big Pats Creek and the Yarra River to Warburton.

Big Pats Creek mill site was on a small watercourse just to the east of the creek, and was surrounded by rather dense scrub. Two small sawdust heaps about five metres in diameter and a possible sawpit nearby were the only remnants of the mill when visited in June, although a 3 ft diameter flat-belt

pulley was found in the ferns beside Big Pats Creek. The first 500 metres of outlet tramline was laid virtually in the creek bed, with occasional cuttings into the bank. A small section of bridging was the only relic discovered along this part of the track. The line then reached a steeper section of creek, and left the creek bed to skirt the side of the valley. About 800 metres north of the mill site, it entered a quite impressive cutting about 4 metres deep and 30 metres long, and then crossed Big Pats Creek. The next 500 metres were cut into the side of the hill on the west side of the creek, and proved difficult to follow due to the post-bushfire grasses which have grown in the area. The line was not followed any further north from this section.

A medium-sized sawdust heap just above a present-day road marked the site of Muddy Creek mill, and a few pieces of wire rope and a flattened section of steel chimney were the only relics found here.

The outlet tramway followed the eastern side of Muddy Creek, only a metre

or two above creek level, and on a fairly even grade. About 700 metres north of the mill, the slope becomes steeper, and a 1 cm diameter wire rope was visible for 100 metres or so.

The line curved away from the creek about 1 km north of the mill, and entered an area burnt in the bushfires, where it was easily followed until a rail crossing was encountered. Below the road the line was lost in a broad treeless area covered in waist-high bushes and bracken, and was not followed any further.

Geoff Thorpe 7/84

LOCOMOTIVE AND ROLLING STOCK MANUFACTURERS

E.M. BALDWIN & SONS. PTY LTD, Castle Hill. N.S.W.

(see LRN 37 p.2)

During a visit in mid-August, two of an order of three 4wDH 1067 mm gauge mining locomotives for Coal & Allied Industries were noted (the third was in a shed). The first of the order has builders plates DH25M Mk5 105971684 (10597-1-6-84 - Ed.), and carries the number B.L.9. It is painted yellow with yellow/black dazzle stripes at each end and appeared complete. The second unit had wheels and some of the control equipment installed but had not yet received its engine.

As the E.M. Baldwin builder's numbers have become longer, the size of the numbers on the builder's plates has been reduced, and would now be very hard to decipher in the field.

Also seen on site were the two second-hand 4wDH 1067 mm gauge locos 3568-1-9-70 and 3568-2-9-70 which have been at the works for a number of years.

Baldwins have diversified into the construction of large farm tractors, and at least six were seen in the course of assembly on this visit.

Craig Wilson 8/84.

NEW SOUTH WALES

DORRIGO STEAM RAILWAY & MUSEUM 1435 mm gauge

(see LRN 40 p.3)

An F.C. Hibberd Planet 4wDM locomotive has recently been purchased from the Sydney Metropolitan Water Sewerage & Drainage Board. The loco is builder's number 3575 of 1952, and ran as the Board's number 51. Originally used with two similar locomotives in the construction of the Warragamba

Dam, it was later transferred to the Ryde Pumping Station where it was used to shunt coal wagons, becoming redundant in 1981. The locomotive was collected from Sydney on 20 July, arriving at Glenreagh on 22 July.

DSR&M Newsletter 7/84.

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 41 p.2)

During 1984, Shellharbour Council is celebrating 125 years incorporation as a municipality while the City of Wollongong is marking 150 years of European settlement. It is planned to stage the official opening of the ILRMS railway on 10 November at 3 pm in conjunction with the local festival week. Readers planning to attend this gala occasion should check through 042 71 3707 or 042 95 1776 a few weeks prior to that date or write to P.O. Box 1036 WOLLONGONG 2500.

The Lawton-Meadows fork lift restoration was completed on 28 July with the fitting of reconditioned brake drums and liners. Since then, this unit has certainly proved its worth around the museum on maintenance duties. During early August the courtyard in front of the former HG guards van body in which is now situated the souvenir shop was paved with bricks obtained from the Kaiser Refractory plant at Port Kembla. By mid August the new hood and flue had been fitted to the former Brownhoist vertical boiler which will soon provide steam for the stationary engine exhibition.

In July, the back road sidings to the north of Yallah Station were connected to the "graveyard" sidings on which are stored various items of light railway rolling stock awaiting restoration. In addition the main line points which will eventually serve as a loco reversing triangle were connected to several lengths of track to form a branch siding. Two RSJ members, some 11 metres long, which will be used to carry the triangle road across the creek, have been welded to two bogie bolsters and stored on this new siding to free up track space in the main station yard.

The Department of Arts has granted the ILRMS museum \$5000 as a matching amount to museum expenditure for the construction of a large toilet-shower block. The new sewer main has been completed across the corner of the museum property and by late July the site had been cleared and the levels set out for this project.

Work is progressing on the restoration of the E.M. Baldwin battery-electric 1067 mm gauge man transporter car. This was constructed in 1963 for Huntley Colliery where it carried number 2 (B/n. 801-1-5-64 of 1964 according to my records - Ed.). The vehicle, stripped of batteries and traction motor, has been

at the museum in a dismantled condition for some time. During the recent winter period the vehicle was positioned on a display track in the picnic area and the roof refitted to the underframe.

During August, steel steps were fitted to the underframe of saloon car No.2 (former International bus body of c.1918 vintage). It is planned to have this car available for regular service during this summer traffic period. During July and August, the longitudinal seat frames were fitted to former Melbourne cable tram trailer No.430. The original pierced veneer seat backs have been restored; one short length on one side had to be reveneered due to rain damage when the car body was used as a shed near Bairnsdale. This 94 year old car will be available for regular traffic by summer enabling the museum railway to provide total seating for almost 100 passengers on the four car train.

Ken McCarthy 8/84.

LACHLAN VALLEY RAILWAY, Cowra 1435 mm gauge

(see LRN 14 p.12)

An industrial loco has been purchased to assist with shunting and stock movement of the ex-NSWGR equipment operated by this organisation.

The loco is a F.C. Hibberd "Planet" 4wDM purchased from the Sydney Metropolitan Water Sewerage & Drainage Board's Ryde Pumping Station, where it had been used until 1981 for shunting coal wagons. The loco, built in 1952, carries builder's number 3590 although official makers records state it is 3570. It was originally used in the Construction of the Warragamba Dam with two similar locos, both also preserved. It carries the Board's number 52.

Dorrigo Steam Railway & Museum Newsletter 7/84.

RICHMOND VALE PRESERVATION CO-OPERATIVE SOCIETY LTD, Richmond Main 1435 mm gauge

(see LRN 40 p.6)

Overhaul of the ex-John Lysaghts 0-4-0ST *Marjorie* (Clyde 462 of 1938) is progressing well, and it is hoped to have it in operation by

Christmas. Recent work involves the reconditioning of axleboxes and journals, eccentrics and straps. The wheelsets have been refitted to the frames and the brake gear refitted. Next to be reassembled will be the valve motion. A partial retubing was to be carried out on the boiler during July. Following a renewal of all boiler studs, and a successful hydrostatic test, it was hoped that the boiler would be refitted to the frames by the end of August.

On 28 April a special invitation running day was held and on 20 May the

first public running day. On both days the F.C. Hibberd "Planet" 4wDM 3715 of 1955 (not 1952 as stated in LRN 40 - Ed.) was used to give brake van rides. Further open days are planned for 2 September and for the Christmas holiday period.

Work has been done on the restoration of the engine shed, with both pits and the concrete floor completed. Timber is now on hand (three tonnes in all!) for the new Engine Shed doors.

Ernest Winter 7/84.

NORTHERN TERRITORY

TENNANT CREEK

The fiftieth birthday of this mining town of 3000 people was marked by various festivities. One contest of note was a "hand bogging" competition, and a newspaper photo shows two burly miners in action hand-tramming a mining tip wagon on track of about 2 ft gauge.

The Weekend Australian 12-13/5/84 via Craig Wilson.

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge

(see LRN 41, p.31)

Repair work recently carried out to Bundaberg foundry 0-6-2T 5 of 1952 was the replacement of the steam header pipes which were found to be badly corroded in the area under the smokebox floor. These pipes bolt direct onto the front tubeplate and pass down through the smokebox floor to bolt onto each cylinder block. On 2 June the pipes were removed and on the following day Ruston & Hornsby 4wDM 279567 of 1949 handled open day passenger trains. By 8 June Boiler Engineering fabricated two new steam header pipes which were installed on 9 June and a test steaming the same day proved satisfactory. The special refractory cement for the firebox floor has now been replaced. It is expected that certain boiler tubes will have to be replaced in this locomotive later in the year.

Work has continued slowly on Hudswell Clarke 0-6-0 *Melbourne* (1701 of 1938), which has been completely dismantled for return to working order. It is planned to do this work as thoroughly as possible even though some considerable time may be involved. Meanwhile, investigations are being

carried out on ex-South Johnstone Mill 5, Hudswell Clarke 0-4-2T 1705 of 1938 (built for John Fowler: B/n. 2275Z) with a view to its early return to service.

Ex-Goondi Mill John Fowler 0-6-0DM 182&0 of 1929 has had further attention to its clutch. However, engine repairs are also indicated before this unit can be returned to service.

Durundur Railway Bulletin 6/84, 7/84.

BABINDA CO-OPERATIVE CENTRAL MILL SOCIETY 610 mm gauge

(see LRN 37 p.7)

This mill is suffering continued financial problems and is currently one of a number threatened by the current industry downturn. A recent report stated that Babinda Mill was unlikely to survive the next five years. Many inefficiencies were highlighted in the report, for example in the cane transportation system, caused in part by union restrictions. Computer locomotive scheduling is believed to offer a potential saving of \$450,000 per annum. (Most mills have used computer scheduling for years - Ed.) As well as serious deficiencies in the factory, the mill's fleet of bins need repair urgently and major upgrading of tramlines is overdue.

Queensland Country Life 7/6/84 via Durundur Railway Bulletin 7/84.

CSR LTD, Hambledon Mill, Edmonton. 610 mm gauge

(see LRN 38 p.8)

The level crossing over the Bruce Highway at Edmonton has been rebuilt without replacing the 3 ft 6 in gauge trackage and crossover formerly incorporated. This severs the mill's link with the QGR which had been used for the transport of raw sugar until it was placed onto road transport a couple of years ago.

C.J.Hart 7/84.

CSR Ltd, Macknade Mill 610 mm gauge

(see LRN 37 p.8)

For the 1984 season, loco 14, E.M. Baldwin 0-6-0DH 6-2490-1-7-68 of 1968, has been assigned to the bulk sugar haul from the mill to Lucinda Point, along with brakewagon No.1. Loco 20, E.M. Baldwin B-B DH 7070-4-4-77, and brakewagon No.2, which have been used mainly on the sugar trains since their purchase in 1977, are now working cane trains. Loco 19, E.M. Baldwin B-B DH 7070-3-4-77 of 1977, which formerly worked with brakewagon No.1 continues to work cane trains but now without a brakewagon.

C.J.Hart 7/84.

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 38, p.9)

A major tramline derailment during the first week of July caused the loss of 2500 tonnes of cane according to a mill spokesman. (This simply means that crushing operations were held up to the extent that this amount of crushing was lost - Ed.) However, this does not amount to much when compared to the mill's total crush for the week of 45,548 tonnes.

Mackay Daily Mercury 10/7/84.

PLANE CREEK CENTRAL MILL CO. LTD, Sarina. 610 mm gauge

(see LRN 41 p.6)

On 10 July a cane train was derailed on the Plane Creek bridge at Sarina, causing a delay of a few hours in the delivery of cane from the area to the south of the town. The concrete bridge was built in 1959 and is a curved structure some 117 m. long with twelve 9.7m. spans carried on single piers.

Mackay Daily Mercury 17/7/84; Editor.

RACECOURSE COOPERATIVE SUGAR MILLING ASSOCIATION LTD, Mackay, 610 mm gauge

(see LRN 36 p.9)

The commissioning of a new unloading station to the south of the Peak Downs Highway, together with associated work of a new shredder and mill, is to be further postponed until the 1986 season. This work will also incorporate a new tramline link to serve the unloading station, with cane being conveyed over the highway by conveyor belt thus eliminating the troublesome tramline road and rail crossings at the entrance to the mill yard. Some formation work for the tramline work was seen to be pegged out during August. Work has proceeded slowly on the installation of conveyor equipment over the bridge across the highway completed in 1983, and it is believed that tramway yard and loco shed will be completely relocated to the south of the highway in the longer term.

Mackay Daily Mercury 19/7/84; Editor.

SIMSMETAL PTY LT., Rocklea. Brisbane. 610 mm gauge

Former Isis Mill 10, Sharp Stewart 0-4-2 4432 of 1897 (originally 0-4-2T for the North East Dundas Tramway in Tasmania) has been purchased from the BP Sugar Inn Service Station at Childers, reportedly for \$200, and arrived at the Franklin Road depot of Simsmetal on 13 August. It is reportedly to be

restored for display purposes at a new depot to be established at Dunn Road, Rocklea.

Bob Gough via David Mewes 8/84.

SOUTH AUSTRALIA

AUSTRALIAN NATIONAL RAILWAYS COMMISSION, Adelaide Passenger Terminal, Keswick. 1067 mm gauge

(see LRN 36 p.5)

On 18 May, the new passenger terminal was opened, revealing Baldwin 0-4-0ST 7860 of 1886 *Sandfly* superbly restored and under cover on the main platform. This locomotive was first used by contractors C.&E. Millar before becoming NA1 on the Northern Australia Railway.

Catchpoint 7/84.

ELECTRICITY TRUST OF SOUTH AUSTRALIA. Thomas Playford Power Station, Port Augusta. 1435 mm gauge

(see LRN 37 p.12)

The commissioning of Northern Power Station, adjacent to Thomas Playford, is proceeding, and it is now possible for the boiler bunkers at Thomas Playford to be fed by conveyor from Northern. When Northern is fully up and running, it is planned to remove the Thomas Playford unloading facilities. This will make the two Clyde HG-6R 6wDH locos, No.1, 61-237 of 1961, and No.2 F.J.SHEA, 58-192 of 1958, redundant.

Catchpoint 7/84

MILE END RAILWAY MUSEUM (S.A.) INC. gauges various

(see LRN 23 p.16)

A new tender for BHP 4 has been constructed at the museum on an underframe acquired for the purpose. The loco with which this vehicle is now paired is 3 ft 6 in gauge Baldwin 4-6-0 41242 of 1914 which was built to haul iron ore on the Iron Knob - Whyalla tramway. The locomotive was acquired from BHP without tender, and when painting is complete it will make an impressive and noteworthy exhibit.

Catchpoint 7/84.

VICTORIA

THE BIG GRAPE, Swan Hill 610 mm gauge

(see LRN 39 p.8)

Operations at this location have been most successful, and the 26 acres of

vines are open to the public daily. Track has been constructed from 45 lb rail from Western Australia, and there are now 8 carriages built up on cane truck frames, as well as another four truck frames on hand. Trains are hauled by Ruston & Hornsby 4wDM 223725 of 1944.

Barry Beckerley 7/84.

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway, 762 mm gauge

(see LRN 41 p.9)

On 30 July ex-TGR Drewry-designed 0-6-0DM V12 emerged from the Emu Bay Railway Co. Ltd's Burnie works converted to 2 ft 6 in gauge for use on Puffing Billy. This work involved removing the drive components, stripping wheel sets, and machining new axles. It is believed that the loco built at Launceston, has been shipped to Melbourne separately from its engine and gearbox. A second loco of this class, probably V9, is believed to be also at Burnie for similar attention.

The Advocate 31/7/84 via Chas. Goodwin.

PUFFING BILLY PRESERVATION SOCIETY MUSEUM, Menzies Creek. gauges various

(see LRN 39 p.9)

Complete painting of the museum's two 2 ft gauge Hudswell Clarke steam locos is in progress. These are ex-Pleystowe Mill 0-4-0ST 1559 of 1925 and ex-Macknade Mill 0-6-0 1863 of 1952. Also being restored is a Malcolm Moore 4wDM loco (presumably the one from Inkerman Mill- Ed.), and the engine of this was started for the first time in April.

A 2 ft 6 in gauge steam loco from Thailand is to be exhibited in the museum and is expected to arrive later in the year.

Narrow Gauge No.94 via Arthur Winzenreid.

PRIVATE PRESERVATION 610 mm gauge?

An 0-4-0 Porter steam loco from the Philippines was expected to be landed in Victoria for private preservation on 23 July. It is believed to be 2 ft gauge, and other steam locomotives may also be imported from the same source. Further details would be welcome.

Peter Medlin 7/84.

WESTERN AUSTRALIA

HOTHAM VALLEY TOURIST RAILWAY W.A. INC. 1067 mm gauge

(see LRN 40 p.11)

The B class boiler acquired by the Society has been given a successful hydrostatic test. It was built in 1950 and was originally fitted to WAGR loco B184 until its withdrawal in 1955, afterwards working for 20 years on stationary duties. It will be fitted into the frames of the ex-Millars 4-6-0 *Menzies* (Dubs 3595 of 1895) as soon as time permits. It is possible that the boiler presently fitted to *Menzies* can be repaired eventually, thus giving a spare boiler for this loco.

Pinjarra Steam Express 6/84 & 7/84.

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC. Whiteman Park, Caversham. 610 mm gauge

(see LRN 41 p.9)

Two steam locomotives the property of Lou Whiteman, which had stood in the open at the then "Mussell Pool Museum" for a number of years, have been donated to the Society. These are two much travelled locos. The first is Krauss 0-4-0T 2181 of 1889, originally brought to Victoria by John Robb for construction work, and later used at the East Murchison United Gold Mine. The second is the ex-Mount Magnet Tramway (Tasmania) Orenstein & Koppel 0-4-4-0T Mallet 2609 of 1907, which was later used at the Great Boulder Mine in Kalgoorlie. The boiler of the Krauss is beyond repair, but the boiler of the Orenstein & Koppel may well be repairable. The Krauss has already been stripped down for external restoration.

A carriage shed has been erected next to the loco shed at Whiteman Park. It is identical in design to the loco shed but is 30 m long rather than 24 m. This has been made possible by the availability of three carpenters and a female trade assistant under the C.E.P. programme. Most of the loco shed floor has now been concreted, and concreting is progressing in the carriage shed.

The C.E.P. employees have now commenced work, alongside volunteer labour, on the construction of bogie carriages. WAGR Midland Workshops are assisting in the regauging of bogies from WAGR QBB flat wagons, by machining new axles onto which the 813 mm diameter wheels are pressed. The frames of these wagons will then receive new coach bodies, 9 m long and 1.9 m wide. It is expected that four carriages will be completed by February 1985.

The ex-Whiteman Brick F.C. Hibberd "Planet" 4wPM loco (2055 of 1937 or

3428 of 1949) has been stripped down to enable its frame to be lengthened to allow for the fitting of a new engine.

A brake wagon is nearing completion, built on the frames of an ex-Lake View & Star hopper wagon. Two other hopper wagons have been made into flat tops, and a third is awaiting alteration. The first small four-wheel passenger cars constructed some time ago will have their wheelbase lengthened to improve riding qualities.

Tracklaying is going ahead on the trackbed completed between Bridgewater and Central, where the Maylands Brickworks built 4wPM loco L2 has been isolated for some time.

Rusty Rails 7/84; Lindsay Watson.

MEETINGS

MELBOURNE

Got some slides you haven't seen for a while? Well here is a chance to see them once again and share the experience with your fellow members. It seems

that most of us have slides hidden away in the back of cupboards and drawers which for one reason or another haven't been seen on a screen for a long, long time. The biannual slide night provides the opportunity to pull those long lost treasures from their hiding places for the benefit of an appreciative audience.

This regular activity has proven to be a very popular event in the past and it is hoped that once again it will receive strong support. If you have some slides of tramway or railway interest, even if you consider them to be far from professional quality, please bring them along so that others may enjoy them too.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton
DATE: Thursday 11 October 1984 at 8-00 pm

SYDNEY

This month Bob McKillop will be showing slides he has taken of overseas light railways in countries as diverse as Switzerland and Indonesia.

TIME: 7-30 pm, Wednesday 24 October 1984.

TOUR

The Division's annual tour will be to the shale mines and works at Hartley.

Details will be given at our October meeting but for those who can't make it to our meeting the tour will commence from Hartley Vale Station at 9-30 am, Saturday 24 November 1984.

ADELAIDE

Arnold Lockyer is the South Australian convenor of the Society. Any member wishing to find out details of the Adelaide meetings can contact him at 6 Dunedin Street, Dover Gardens, 5048. The next meeting will be held on 6 December 1984.

LOCATION: Mile End Railway Museum

DATE: Thursday 6 December 1984 at 8-00 pm.

Deadline for next issue :- 20 December 1984.

EDITORIAL

The Society's publications *Light Railways*, *Light Railway News* and also the Society's books, maps and drawings hopefully reflect the interests and the activities of its members. These publications are a service to members, but depend on the members for their support, both by contributing to them, and also, in some cases, purchasing them. One area of activity that has been highlighted recently in these pages is that of those who go in search of the physical remains of defunct tramways, especially timber tramways. Victorian members interested in developing this facet of their interest are urged to contact Geoff Thorpe (address above) to join visits or to find out areas which would bear investigation, so that information may be recorded and published.

Australia has its fair share of active industrial railways, serving sugar mills, salt works, mines, construction projects, power stations, steelworks and factories, as well as pleasure railways and preserved railways featuring former industrial equipment.

The aim of "LRN" is to report all developments in all these areas. Please join those who contribute to LRN and help to make LRN better. Brief notes, press cuttings even a phone call will do for those who do not wish to pen a full report. Thanks to all those who support LRN in this way. More contributions would be welcome.

CORRECTION Rotary Club of Blackwater, Queensland.

(see LRN 34 p.14)

Enquiries carried out by Bill Henderson have established that the gauge of this pleasure line is 508 mm (1 ft 6 in [sic]), not 610 mm as previously thought.

FIELD-REPORT

Burnt Ada Mill, Ada River, Victoria

The Burnt Ada Mill site is on the south side of the Ada River, about 2 km south-east of Starling Gap. The route of the tramline which served this mill has become very overgrown, although it is still traceable with suitable effort; it follows the southern side of the river through fairly scrubby country, skirting the hillsides a few metres above water level.

The section of tramline from near Ada No.2 to the mill site crossed several side creeks on fairly low trestle bridges, of which the decayed remnants of three were found. The bridge near Murray Gully still had some pieces of wooden rail in places whilst nearby a number of moss-covered sleepers were observed. Dual bridges crossed the next creek before the line curved in a south-westerly direction to pass by some old house sites near to the mill. A further low bridge was crossed before the mill itself was reached, about 100 metres on.

The sawpit at the mill was located about 50 metres from the river, uphill from the tramline. No sawdust heap was found, although relics observed here included 6 sawblades, a galvanised iron water tank, several axle bearings, 10 or so wheelsets, several sections of heavy gauge wire ropes and various other items. An incline heading up the hill behind the mill in a south-westerly direction was observed whilst another track crossed the river to the north-east before climbing a spur in the direction of the New Federal Tramline.

Geoff Thorpe 8/84

LOCOMOTIVE AND ROLLING STOCK MANUFACTURERS

FOX MANUFACTURING CO. PTY LTD, Smithfield

(see LRN 33 p.5)

Two further examples of the "Tyrant" 4wDH underground mining locomotives have been constructed. The first, exhibited at the 1983 AIMEX 83 Exhibition in Sydney was builder's number L1 and was later delivered to the Bellambi Coal Co. The two latest locos, builder's numbers L2 and L3 of 1984 are rack/adhesion locomotives for the Newcastle Wallsend Coal Mining Co. Ltd and have recently been put into use at their Ellalong Colliery (details in this issue). Fox also designed and supplied 3 km of rack for use in this mine. This innovation by Fox follows the decision of the State Department of Industrial Relations to no longer approve the construction of conventional locomotives for use on grades steeper than 1 in 15.

Three Fox diesel man-riding cars were noted undergoing modifications at the Fox works during mid-October. These were Bellambi Coal Co. numbers 3A, 5A and 10A.

Craig Wilson 10/84

SCHWEIZERISCHE INDUSTRIEGESELLSCHAFT. Neuhausen am Rheinfall. Switzerland

This company has recently entered the Australian mining market, when late in 1983, after twelve months exhaustive testing below ground, a Model B06 battery-electric loco was purchased by a major Western Australian mining company (which one? - Ed.)

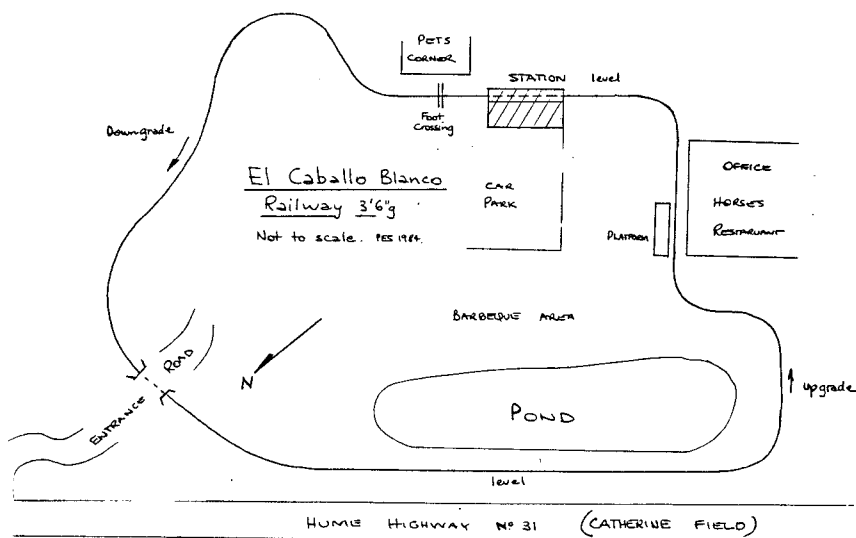

The cover of the July 1984 *Australian Coal Miner* magazine featured a photo of one of a new series of battery mine locos. The example shown was a 20-tonne Model B20LX-PD9K capable of use in single or multiple and also suitable for remote control applications.

Australian Coal Miner 7/84 via Durundur Railway Bulletin

NEW SOUTH WALES

EL CABALLO BLANCO, Catherine field 1075 mm gauge

A 2.7 km long railway has been constructed in the grounds of El Caballo Blanco at Catherine Fields near Narellan. The line forms a continuous loop around the perimeter of the property and there are no points used. However a tunnel is used to pass under the entrance roadway. The layout is shown on the accompanying diagram.

The track was installed by Alfred Lacey, of Goulburn, in 6 weeks. The direction of travel is anti-clockwise with the steepest grade against the load! The many sharp curves had eaten into the wheel flanges within weeks of operations commencing in 1983.

The rails are 45 lb per yard purchased from Western Australia, and most are 1898 vintage whilst others are marked "N.E.S. Co Ltd W.A.R. 1909."

The locomotive is steam outline and is a 2-6-0DM using a 60 hp Perkins diesel motor with a Borg Warner transmission. It was constructed by Neil Moxom Pty Ltd of Moss Vale (who have constructed some mining locos - Ed.). Maker's identification is ECB loco of 1983. The tyres on the fabricated wheels appear to have come off some other railway equipment.

Two bogie carriages were also built and supplied by Neil Moxom Pty Ltd. Each carrying 50 people, the cars are of the open type and are very long.

The loco and carriages are stored in the covered platform area to keep the elements at bay.

The leading pony truck of the loco originally had flanged wheels but with only a pivot above the axles it kept derailing. As a result the flanges were removed and the wheels set approximately 1 cm above the track.

The loco has a spacious motor compartment to which access is through the cab only. Ventilation for the summer months would seem to be inadequate.

El Caballo Blanco is open to the public Wednesday to Sunday from 10 a.m.

to 5 p.m. Admission is \$10 for adults and \$8 for children and pensioners. Entry includes the horse performances, water slide, roller skating and unlimited rides on the railway. Phone 606 6266.

Paul Simpson 10/84

LACHLAN VALLEY RAILWAY SOCIETY CO-OPERATIVE LTD, Cowra 1435 mm gauge

(see LRN 42 p.5)

F.C. Hibberd "Planet" 4wDM 3570 of 1952 has been used for shunting carriages at Cowra, and has proved itself capable of moving 200 tons of empty cars, although somewhat limited in braking power. The loco is painted green and is fitted with NSWGR type automatic couplers. Its last duties at the Ryde Pumping Station were moving BCH wagons of coal to the boiler house.

A.Kanak 9/84

THE METROPOLITAN WATER SEWERAGE AND DRAINAGE BOARD 610 mm gauge

(see LRN 37 p.5)

On 11 September an auction sale was due to be held at the Board's Plant Service Depot at Cooper Road, Birrong.

A number of locomotives and rolling stock items were to be offered.

Locomotives were 10-ton Gemco laces numbers 100, 58, 99, & 98, offered as lot numbers 334 to 337. There were also three Gemco battery boxes and three battery chargers. Four Hudson mining trucks numbered 298, 309, 345 & 444 were offered as lot numbers 304 to 307, and twenty Gemco mining trucks numbered 2416, 2320/13, 2078, 2302/41/17/38/22/53/99/90/93/94/3 9/95, 2411/19, & 2510/41 were offered as lots 308 to 327. Also offered was a 1981 Atlas Copco type FF1524 Mini I Fullfacer Tunnel Boring Machine, three Atlas Copco Tunnel Loaders (numbers 618, 611 & 609) and a Taylor Dunn Model B2400 electric concrete transporter (number 18). Any information about the disposal of these items would be welcome.

Greg Stephenson 9/84

RICHMOND VALE PRESERVATION CO-OPERATIVE SOCIETY LTD Richmond Main 1435 mm gauge

(see LRN 42 p.6)

On Sunday 2 September, the Richmond Vale Railway Museum was opened to the public for the second time. About 800 people visited the site during the day and train rides were given with the F.C. Hibberd "Planet" 4wDM 3715 of 1955 hauling an S truck and CHG guard's van.

New members are always welcome at the museum, so if interested please write to the Secretary, P.O.Box 126, WALLSEND 2287 for further information,

P.King 10/84

PAUL SIMPSON, Panania 610 mm gauge

Over a number of yearly restoration has been progressing on Kelly & Lewis 0-6-0DM 5957, built for use on the Rubicon Tramway, Victoria in 1936. On 20 September, a milestone was reached when the loco chassis was lifted into position over and above the wheels and the Dorman 4HW engine lifted into position in the loco.

Fitting the loco to the axles using a crane proved difficult so the loco was left up on blocks. On 23 September, the wheelsets, one at a time, were lifted up into the hornguides using a 20-ton jack. The loco was then lowered onto the track the same day using jacks, and for the first time since the late 1940s it moved on its own wheels. It was towed 100 ft along the backyard track by its companion, Motor Rail "Simplex" 4wDM 20560 of 1955, and after a number of trips the larger loco was moving freely.

Restoration work so far has involved the casting and machining of new axleboxes. The centre flangeless driving wheels were worn and it was discovered that at some time in the employ of Clarke & Pearce, the wheels had worn and had been remachined, with for some reason the centre wheels being reduced to 0.5 inch smaller diameter than the outer, flanged wheels. Consequently the centre drivers had to skid to keep up with the other wheels, thereby increasing wear.

However, the wheels have now been built up and remachined to the same diameter of the other wheels by Tracks Pty Ltd at Villawood, and an impressive job has been carried out.

The Dorman diesel engine has been rebored and four new pistons made by Repco, together with new rings. The fuel pump and injectors have been overhauled by Lucas Australia, who also provided a starter motor and generator to match this 1930s vintage motor.

Brake equipment was overhauled and missing parts manufactured, together with new brake blocks, levers, rods etc. The brakes were tested when the loco was towed on 23 September, and proved to be effective.

Considerable work still remains to be done before the loco is complete. The siderod bearings are to be remetalled and then fitted before the motor is started and adjustments made. Then testing of the gearboxes, especially the Wilson preselect box, can commence.

The final job will be a complete repaint, and hopefully, fixing of builder's plates. A request is made to the person/s holding the builder's plates to

arrange their return, or loan to enable replicas to be obtained. Please write to Paul at P.O. Box 105, Panania 2213 or phone (02) 771 3929.

Paul Simpson 10/84

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway 610 mm gauge

(see LRN 42 p.7)

Boiler inspection of Bundaberg Foundry 0-6-2T 5 of 1952 has resulted in the requirement that the tubes will have to be replaced before the loco can run again. It is likely that these tubes will have to be specially manufactured. As a result, it has been decided to use Ruston & Hornsby 4wDM 279567 of 1949 on passenger trains on the first and third Sunday of each month until a steam locomotive is available again. Meanwhile, one of the two Malcolm Moore 4wPM locos stored at Rosewood (either 1031 or 1035 of 1943) is being prepared for use at Woodford by being rewired. Another petrol loco built by Alwyn Zinn of Ipswich in his back yard in 1975 (builder's number 3), has been test run at Woodford for the first time. This loco, fitted with a Leyland Cub engine has limited haulage capacity driving on the rear axle only, but will prove useful on navvy trains. Repairs to the air operated clutch and brakes and to the radiator and cooling system will need to be carried out on this unit.

Durundur Railway Bulletin 9/84, 10/84

BUNDABERG TRAMWAY PRESERVATION SOCIETY INC. 610 mm gauge

(see LRN 37 p.7)

The Society's Bundaberg Foundry "Bundaberg Fowler" 0-4-2T (3 of 1952), ex Millaquin Mill, has been moved to storage at the Pioneer Equipment shed at the New Agro Trend Field Day site. Restoration has been progressing with this unit, with new chimney, side tanks, floor, boiler cladding and boiler mounting studs having been fitted. A new cab has also been constructed and this with the chimney were fabricated by the local T.A.F.E. College as part of a boiler making and welding course using materials supplied by the Society.

Most exciting of all has been the total rebuilding of *Felin-Hen*, Baldwin 0-6-2T 46828 of 1917, ex Fairymead Mill, by T.A.F.E. students, as part of a Federal Government scheme to enable apprentices whose indentures were at risk to complete their training. A complete overhaul and in some places renewal of chassis, wheels, axles, axle boxes and brasses, cylinders, pistons, rods and all running and brake gear has been carried out. The boiler has been completely

restayed and is currently receiving attention to the front tube plate. New side tanks, cab, floor plates, bunker and chimney have been manufactured. The Society acted as Consultant and provided drawings and data.

Alan Robert's *Bundy*, Bundaberg Foundry 0-6-2T 2 of 1952, ex Mossman Mill, has been placed in temporary storage, following the sale by its owner of his cane farm.

Proposals are being discussed to incorporate the Society's projected museum railway as part of Hinckler Park in North Bundaberg, where Bert Hinckler's house from England has recently been re-erected. Plans include a variety of attractions with the tourist tramway as the complex's transport system.

B.T.P.S.Inc; Alan Robert 9/84

CROYDON 1067 mm gauge

Ex-QGR Class A10 No.202, Vulcan Foundry 802 of 1877 built for the Fairlie Engine Co. (602 of 1877), has been brought into Croydon from its former resting place at Golden Gate. This loco was sold by the QGR in 1906 to John Forsyth and was used by him to shunt the siding serving his Pioneer crushing mill until about 1915. The rails were later removed but the loco was left to be engulfed in the bush. Brass and copper fittings were removed over the years, but substantial portions remain. The loco can be seen off the road on the left while heading out of town in the direction of Normanton. It is hoped to have it restored for display by 1988. Can any reader provide details of the current owner?

Lonely Rails in the Gulf Country by John Knowles; Don Carlsson 9/84.

HAUGHTON SUGAR CO. LTD, Invicta Mill, Giru 610 mm gauge

(see LRN 34 p.13)

With a very long main line and very few short branches, this mill operates relatively few locomotives over long distances with large loads and fast speeds. E.M. Baldwin B-B DH *Burdekin* (10215-1-7-82 of 1982) runs to Dalbeg (182 km round trip); Baldwin B-B DH *Selkirk* (6750-1-8-76 of 1976) to Millaroo (132 km); while one Com-Eng 0-6-0DH runs to Clare (68 km) and another to Mona Vale (68 km). The third operating Com-Eng 0-6-0DH works in the mill yard. These three Com-Eng units are:

<i>Haughton</i>	0-6-0DH	Com-Eng	AH3878	1964
<i>Northcote</i>	0-6-0DH	Com-Eng	AH4091	1965
<i>Barratta</i>	0-6-0DH	Com-Eng	AH4098	1965

Burdekin operates at speeds of up to 40 km/h hauling loaded rakes, and the

track standards are good enough to allow for this maximum speed on long stretches.

Com-Eng 0-6-0DH *Clare* (AH4080 of 1964) has been converted to a brake wagon. Com-Eng 0-6-0DH *Scott* (C1015) although still appearing to be a locomotive, has had its final drive unit removed and also operates as a brake wagon. (It is possible that in an emergency it might be converted back into a loco - Ed.)

David Mewes 9/84

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 41 p.5)

Work on the restoration of John Fowler 0-6-2T 20277 of 1934 by a mill supplier at Boldon has slowed during the crushing season. However, by early September, an authentic John Fowler tender had been obtained for possible use with the loco. This is a bogie tender which was allocated builder's number 17684 of 1928. It was obtained from a scrap area at Racecourse Mill, and had been built to be attached to 0-4-2 loco 17683 of 1928, now "preserved" at the Mackay Harbour.

Ballast regulator Com-Eng Aresco BR683 of 1978 which was noted in the Marian mill yard earlier in the year has been acquired from Proserpine Mill for the joint use of Marion and North Eton mills.

David Mewes, Editor 9/84

MOSSMAN CENTRAL MILL CO. LTD 610 mm gauge

(see LRN 37 p.10)

The "Ballyhooley Steam Express" is proving to be an outstanding success story. Passenger figures are continuing to rise with 1002 passengers being carried during the last week of August. The four coach train is easily handled by the crew of three and *Bally Hooley* Bundaberg Fowler 0-6-2T 6 of 1952. It is intended to run the train over the Christmas period this year for the first time, in spite of the fact that the mill will be closed down by then.

David Mewes 8/84

PIONEER SUGAR MILLS LTD Brandon. 1067 mm gauge

(see LRN 31 p.14)

A Hockey Engineering soundproofed cab was fitted during 1984 to a second Clyde Model DHI-71 0-6-0DH loco *Colevale* (65-438 of 1965).

All the locomotives have been fitted with Willison automatic couplers as has a series of new bins currently being introduced. These are similar in size and design to the old design, but the superstructure is not removable. The

older bins still retain hook and chain couplings.

Walkers 0-6-0DH *Aramac* (583 of 1968) is fitted with full size QR automatic knuckle couplers. This is for the role of shunting VASO bulk sugar wagons which is carried out daily by this loco,

David Mewes 9/84

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION, 610 mm gauge

(see LRN 36 p.9)

A new self-propelled ballast regulator has been purchased and is Plasser 243 of 1984, Model PBR-201. It weighs 13 tonnes and has a top speed of 30 km/h utilising a Perkins 4-cylinder diesel engine. The old ballast regulator, built by Com-Eng Aresco (BR683 of 1978) has been sold to Marian and North Eton mills.

The mill has a roster of seven Clyde Model DHI-71 0-6-0DH locos and twin E.M. Baldwin bogie diesel-hydraulics. Only two of the Clydes are in use on the night shifts however, along with the Baldwins.

David Mewes 9/84

HOWARD SMITH INDUSTRIES PTY LTD, Mourilyan Mill, 610 mm gauge

(see LRN 37 p.11)

Two of the former QGR Innisfail Tramway 14.5 tonne Com-Eng 0-6-0DM locos have been rebuilt as diesel-hydraulics. No.6 (AA1543 of 1960) has been fitted with a General Motors 6-cylinder diesel and ballasted up to 18 tonnes. It has a higher bonnet and cab as a result of this rebuilding. Loco 7 (AJ2359 of 1962) has been rebuilt also but retains its original profile and weight.

David Mewes 8/84

SOUTH JOHNSTONE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD, 610 mm gauge

(see LRN 38 p.11)

Loco 14, Baguley/Drewry 0-6-0DM 2396 of 1952, is engineless and derelict in the mill yard. It is hoped to rebuild this loco into a brake wagon - some time in the future. The Hockey Engineering brake wagon, which has already been rebuilt once since delivery in 1982, was on blocks in the mill yard with wheels missing.

Loco 1, Com Eng 0-6-0DH AD1453 of 1962, was observed in the loco shed stripped down ready to be fitted with a new Rolls-Royce 6-cylinder Eagle 195 hp diesel engine. Another identical engine is on hand also.

In the past, locomotives were kept at both Silkwood and at Japoon during

the crushing season. Japoon seems to have been eliminated as an out-depot from the 1984 season, with three Com-Eng 0-6-0DH locos now stationed at Silkwood.

On 28 August, loco 5, E.M. Baldwin B-BDH 6470-1-1-76 of 1976, was observed hauling 230 full bins into Silkwood from the Maria Creek line. Number 2, Com-Eng 0-6-0DH AK3675 of 1964 followed behind, pushing 5's brake wagon, but without giving assistance. The massive train stalled in Silkwood, however, but once it was confirmed that no bins were derailed, another and this time successful attempt was made to start the train. Silkwood has seen many cane trains come and go, but the proceedings on this occasion did succeed in attracting a fair degree of interest even from local residents.

David Mewes 8/84

TINTAGEL MOUNTAIN TRAMWAY, Arcadia, Cooroy. 610 mm gauge

(see LRN 40 p.8)

During May, the track was extended up the side of Mount Timbeerwah through the rock blasted area for 130 yards to the site of the first switchback points. These points have now been laid, sleepers and ballasted. The tail will be completed in December. A further 600 timber sleepers were laid during May under "portable" track which previously had steel sleepers only. Experience has shown that fully sleepers and ballasted track is superior to other methods, and this will be installed in all new construction in future.

A third road has been laid into the loco shed and this incorporates a small turntable.

The homebuilt 4wPM loco R707 failed during May with a major gearbox problem and is unlikely to be repaired. Its designated replacement, H220, built last year as an 0-4-0PM, has been converted into a 4wPM by having its connecting rods removed and replaced by chains. This modification has proved to be highly successful.

This line is on private property and should only be visited by prior arrangement. Any intending visitor should ring 071 47 6580 to make the necessary arrangements.

Russell Savage 9/84

SOUTH AUSTRALIA

ELECTRICITY TRUST of SOUTH AUSTRALIA, Thomas Playford Power Station, Port Augusta 1435 mm gauge

(see LRN 42 p.9)

Regular coal traffic has now ceased and the two coal tipplers are out of use.

Coal is now supplied to the station from the adjacent new Northern Power Station. Although some rail traffic is still using the sidings for the associated cement works operation, and presumably for power station maintenance purposes, loco haulage will no longer be performed by E.T.S.A. No.1, Clyde Model HG-6R 6wDH 61-237 of 1961 is to be placed on permanent loan to the Mile End Railway Museum in Adelaide, while the fate of sister loco No.2 F.J.Shea (58-192 of 1958) is uncertain. It has been cannibalised for spares for some time and was seen in August on the headshunt near the main entrance.

Catchpoint No.43; R.J.Pearman 8/84

MILE END RAILWAY MUSEUM (S.A.) INC. gauges various

(see LRN 42 p.9)

The Electricity Trust of South Australia have agreed to place on permanent loan to the museum their No.1 loco from the Thomas Playford Power Station at Port Augusta. This is 3 ft 6 in gauge Clyde Model HG-6R 6wDH 61-237 of 1961, which is in operating condition and will be accompanied by all available spare parts. Transfer to the museum was expected to take place in September.

A project has commenced to restore 3 ft 6 in gauge Andrew Barclay 0-6-0T *Peronne* (1545 of 1919), formerly of Broken Hill Associated Smelters Port Pirie. The boiler was to be removed from the frames to allow a thorough inspection to be made by the boiler inspector. It is hoped that it will be practicable to return this loco to working order in due course.

Catchpoint No.43.

MOUNT LAURA HOMESTEAD MUSEUM, Ekblom Street, Whyalla. 1067 mm gauge

A tank locomotive is displayed on a short section of track in the grounds of this museum. Painted (just!) in a variety of colours, this is reported to be the loco which was formerly displayed on the foreshore at Whyalla, apparently until late 1982. Accounts vary as to the identity of this loco, but it is thought to be Beyer Peacock 3357 of 1891 formerly of BHP.

Rob Pearman 8/84.

TASMANIA

MOUNT LYELL RAILWAY 1067 mm gauge

Some details of the proposed restoration of part of the former Mt.Lyell Mining & Railway Co. line between Strahan and Queenstown as a Franklin Dam compensation project have been received. The plan is to reopen about

17 km of the line including an Abt rack section. The plan has been proposed by Hobart entrepreneur Roger Smith, and its focus will be the section through the King River Gorge. Mr. Smith claims the project will cost \$8m., but other estimates put this price as high as \$20m.

Tasmanian Travelways 8-9/84 via Paul Simpson.

WESTERN AUSTRALIA

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC., Bennett Brook Railway, Caversham. 610 mm gauge

(see LRN 42 p. 11)

A name has been decided for the Society's line currently under construction in Whiteman Park, and this appears above.

Another locomotive has been acquired in the shape of Ruston & Hornsby 4wDM 404982 of 1957, 3 ft 6 in gauge, which has been donated by Bunnings. It had been used latterly at their Manjimup Works, but had been supplied new to Christiani & Neilsen for a construction job. This 3-cylinder diesel loco, a Model LBT, will be converted to 2 ft gauge and fitted with a cab in due course. When acquired it was fitted with a Westrail chopper coupler at each end and sported a primitive canopy. It is painted yellow and is fitted with vacuum brake and exhausters.

It was hoped that by the end of October, three kilometres of track would be finished and a limited passenger service is expected to be introduced shortly afterwards.

Rusty Rails 9/84; Charles de Bruin 9/84

OVERSEAS FIELD REPORT

Kangu Hill - Nakaro - Kara Airstrip Tramway, Buin, Bougainville, Papua New Guinea

(see LR 64 & 70)

This 2 ft gauge tramway was established by the Imperial Japanese Navy for the transport of supplies and munitions during the Second World War. Enquiries have established that supplies were hauled along the tramway as far as Nakaro for transshipment onto motor vehicles which would run along the Siwai road towards Torokina. Other supplies were hauled to the terminus of the line at Kara Airstrip (Buin). There were two major bridges, across the Sikabai and Lururu Rivers. At Luguai, the site of the scrap collector's base, at least three different types of side tipping skips were found. One of these

carried the inscription:

R. HUDSON LIMITED GILDERSOME NEAR LEEDS MARTIN & CO. CALCUTTA

Michael Pearson 10/84

MEETINGS

MELBOURNE

At the next meeting Colin Harvey will be giving a talk and slide show on highlights of the recent Association of Railway Enthusiasts "Roof Of Europe" tour. This five week tour covered mainly Switzerland and Austria, and included the Jungfrau and Gornergrat rack railways, various light railways operated on steam, electricity and diesel, funicular railways, and urban and country tramways.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton

DATE: Thursday 13 December at 8:00 PM

SYDNEY

There is NO Sydney December meeting because of the Hartley Vale tour. The next meeting will be in February. Details will be in the next Light Railway News.

ADELAIDE

This meeting will feature highlights from the recent Lorne Tour. Arnold Lockyer may be contacted at 6 Dunedin Street, Dover Gardens for details of Adelaide meetings.

LOCATION: Mile End Railway Museum

DATE: Thursday 6 December at 8:00 PM

OBITUARY - C. W. (BILL) JESSUP

It is with great sadness that we report the death of Bill Jessup on 8 November 1984, as the result of a serious illness. He was 34 years old. Bill joined the LRRSA in 1966, and was a member of the LRRSA Council from April 1971 to August 1978. He was President in 1973-74, and Vice-president in 1974-75 and 1975-76. In 1970 he was living in Perth, and volunteered to act as W.A. Representative for the Society. Through his efforts, W.A. membership increased from about 6 to 24.

He made a number of contributions to *Light Railways*, the most notable being Millar's Denmark Railway (LR33), and the South Gippsland Tramway (LR48). Millar's Denmark Railway - an excellent article in itself - was a milestone in *Light Railways*, being the first article to be published with fully annotated references. Bill was strongly in favour of fully annotated references, and presented a cogent, succinct argument to support his view in LR34 (p.28). He

pioneered the practice which is now the norm in LRRSA publications, and is being adopted by other railway societies.

Bill was responsible for organising this Society's only interstate trip; a three-day venture to the west coast of Tasmania and the Lune River Railway, on the Queen's Birthday Weekend, June 1975. About 16 members attended this memorable and very successful trip.

Bill was a very keen bushwalker, and was a life member and past Council member of the Youth Hostels Association. His bushwalking took him to remote mountain regions of Tasmania, and Nepal, ... and to Kelly Basin (LR39).

Bill's outstanding achievement was his work as the driving force behind the establishment of the Ballarat Tramway Preservation Society. He lobbied city councillors, the SEC, politicians, and railway enthusiasts; successfully motivating a competent group of people to take on the task. He put a great deal of thought into preparing a realistic and practical case for preservation, and then called and chaired a meeting in April

1971, in Melbourne, which directly led to the formation of the B.T.P.S. He was the Melbourne Vice-president of the B.T.P.S. from its formation until he decided to retire in 1981, in favour of his bushwalking interests.

Bill always provided good companionship on trips into the bush, mapping out timber tramways. He was of a friendly disposition and took an interest in a wide variety of subjects, leading to much entertaining conversation. He made a positive contribution to all the organisations in which he actively participated, and will be greatly missed by all who knew him.

The number of his former colleagues and friends who attended his funeral service at the packed Carey Grammar School chapel indicated the high esteem in which he was held by all who knew him.

To his wife Rosalind; and his mother, we extend our deepest sympathy.
(F.E.S.)

THE POWELLTOWN TRAMWAY LIVES AGAIN

(by Les Harsant)

From *Mountain Views*, Tuesday, November 13, 1984

The historic Powelltown - Yarra Junction tramway was opened officially on Sunday last week, some forty years after the last tram trundled along its lines in July 1944.

It was a symbolic opening to mark the publication of a book of local history: *Powelltown: A History of Its Timber Mills and Tramways*; and the line was laid to rest again within an hour, with a shroud being drawn gently over an original timber sleeper and a wreath placed on the "corpse" to mourn its passing.

If all that suggests a solemn and tearful occasion then the impression is quite false. Powelltown in celebration is a joyful place to be and this book launching was an occasion to be celebrated.

The delayed “official” opening and closing of the line which served Powelly so well for forty-one years from 1913 was something of a gimmick to highlight the fact that it never was formally so honoured. Rather like Topsy it seems, it “just grewed”, and the service ceased with an equal lack of fuss.

Almost sold out before publication

The book of Powelltown’s history received somewhat better treatment; it was ceremoniously launched by the former member of Parliament for the area, Mr Jim Plowman, at the Upper Yarra Historical Society’s museum in Yarra Junction.

Of the 1250 copies printed, more than 1000 were ordered before publication and the remainder were being snapped up by the large crowd attending almost as quickly as the sellers could hand them over. Intending buyers should not delay.

A period setting

The festivities began in the Powelltown Public Hall, which provided a perfect period setting for the opening: two historic films depicting timber getting, hauling and milling in the days of cross-cut saws, snigging logs with horses and bullock teams, and the transport of logs and sawn timber on the tramway bogies hauled by horses.

Comments overheard from the audience which packed the hall to overflowing indicated that many were intimately familiar with so many elements of the timber industry, some directly as participants themselves and others of the “that’s the same way Dad used to do it” variety.

Interest and good humour abounded as the President of the hall committee, Mr Rob Adams, opened proceedings, which were then taken over by Mr Mike McCarthy, of the Light Railway Research Society of Australia. The films followed.

Then came the big event. The star, quite rightly, was Mr Frank Stamford, one of the three authors of the book, who performed the official opening ceremony with tongue in cheek solemnity.

A carriage will keep the rain out

“Standing in” for the managing director of Victorian Powell Wood Process Ltd, Mr John Rose Gorton, [who was largely responsible for the construction of the Powelltown mill and tramway and was the father of one who became Sir John Grey Gorton, Prime Minister of Australia]. Mr Stamford assured his audience that with the opening of the tramway, “No longer will you have to

ride your horse to Yarra Junction, pack your purchases on his back and walk all the way back home.

"No longer will you be cut off when the road is ankle deep in mud. "Our two engines, "Little Yarra" and "Powellite", will be providing reliable daily communication for the first time. And soon we hope to have a carriage which will keep the rain out.

"I therefore have much pleasure in declaring the Yarra-Junction Powelltown Tramway officially open."

At that point the air was pierced by an ear-splitting shriek from an authentic whistle operated from a tank of compressed air by Mr Norm Golding. The line was open and the first train was ready to depart.

School children replica

It was ready indeed, there, in the hall - a life-size cardboard silhouette replica of one of the locomotives (Powellite?), which had been constructed with many hours of hard work by the children of the Powelltown Primary School under the guidance of their principal, Mr Max Yardy.

In true country style the audience responded to the mood of the occasion; even the dog perched between his owners on the slatted wood garden-type seats wagged his tail briskly in appreciation. We were back in less sophisticated days of the early century and we loved it.

Away at the Junction

Obedient to the director's instructions, the audience then high-tailed itself to the museum at Yarra Junction where in due course Mr Golding, who in about 1933 began a passenger car service which competed with the tramway, whistled again for "all aboard for the last train from Powelltown to Yarra Junction", and laid the sleeper to its well earned final rest.

He was an appropriate person for the task, and the former Yarra Junction railway station, which now is the home of the U.Y.H.S., was an appropriate location.

Afternoon tea at the Junction was provided by members of the historical society, and visitors were free to wander and marvel at the fine museum which has been established through the enthusiasm and dedication of the relatively small group of people, some 25 at present, who form the society.

The Book

Powelltown is a fine contribution to the local history of the Upper Yarra Valley and the timber industry. In 150 pages of detailed fascinating narrative, laced with anecdote and reminiscence as well as document-screed information, it tells a human story which any timber-related person could not

fail to enjoy. Plentifully illustrated with photographs and maps and produced to a high standard it will make a worthy addition to any bookshelf.

F.E. Stamford, E.G. Stuckey, G.L. Maynard, *Powelltown: A History of its Timber Mills and Tramways*; Melbourne, Light Railway Research Society of Australia, 1984. 150 pp., \$27.00.

COUNCIL NEWS

Heritage Week 1985 is from 14 to 21 April. We are planning to participate in this by organising a walk along part of the Richards'/ Starvation Creek tramline. The section from Big Pats Creek to the line's junction with the old Mississippi tramlines about 4 km distant, has been cleared following the bushfires, and makes an excellent walk. The walk is planned for 21 April, And will probably start at the Big Pats Creek picnic ground at about 9.30.

Around February/March 1986, the Society will be 25 years old. A subcommittee has been formed comprising Frank Stamford, Jack Stock and Mike McCarthy to plan a celebration for this event. The initial proposal is to charter a special Puffing Billy train hauled by the Climax to Nobelius Packing Shed for dinner. Entertainment will be slides films etc. of past Society events and possibly other film material. An "Anniversary Book" has also been proposed. Anyone who has any suggestions at this early stage should get in touch with one of the Subcommittee members.

NOTES, CORRECTIONS AND COMMENTS

BOOK REVIEW

A History of the Railways and Tramways of Tasmania's West Coast, by Lou Rae.
Published by the author. 212 pages.

This excellent book was first produced for the Mount Lyell Centenary in 1983 and was so popular that it sold out within weeks of publication with few copies reaching the mainland! Fortunately, a second and enlarged edition in both soft cover, and hard cover numbered and autographed by the author is now available.

Previous books on Tasmanian railways have tended to be pictorial and fairly small, but this volume traces the fascinating history of the myriad of railways and tramways of the west coast region of Tasmania and is a welcome and worthy addition to the growing number of good books on Australian railways. The text outlines in succinct detail and readable style the story of the area's railed transport, how it assisted in the development of its rich mineral wealth, and was a preferred alternative to road transport.

All of the well known railways and tramways get good coverage, although for such a vast subject, space available has to be somewhat restricted. However, source references would allow readers with a particular interest to follow through on a particular subject if desired. There is something to suit most railway tastes - light, industrial, public and modern railways - as well as some of the "might have beens". The text is complemented by an excellent selection of photographs which enhances the book's interest, the majority of which have never been published before. A chapter added for the second edition traces the preservation scene and outlines proposals to reconstruct either part of the Mt.Lyell rack railway or the North East Dundas Tramway.

The only area of complaint would be regarding the maps which, although adequate, are somewhat confusing to read due to the same thickness of line being used for both railways and roads. In some cases it requires careful study to sort out one from the other!

Lou Rae has tended to keep away from the mainstream of railway enthusiasm and therefore may not be known to many, but this excellent book firmly places him amongst the best of Australian railway historians. He is currently working on a similar book on the railways and tramways of Tasmania's north west areas and although it is some way off yet, this will be eagerly awaited by all with an interest in Tasmania.

Highly recommended.

Copies are available from the author, Mr L.Rae, 9 Short Street, Glebe, Hobart, Tasmania 7000. Softback : \$21; Hardback (autographed and numbered limited edition) : \$35. Postage and packing included.

CORRECTION - Lachlan Valley Railway, Dorriggo Steam Railway & Museum

Lachlan Valley Railway (LRN 42, p.5 & LRN 43, p.5) and Dorriggo Steam Railway & Museum (LRN 42, p.4)

Confusion in the editor's mind, as well as inaccuracies in previously-published information led to the builder's numbers of the two F.C. Hibberd "Planet" diesels from Ryde Pumping Station being wrongly quoted. The correct information is that Dorriggo Steam Railway & Museum-has builder's number 3570 of 1952, and Lachlan Valley Railway 3575 of 1952. Thanks to Keith Jones for pointing out this error.

MEMBERS ADVERTISEMENT

Wanted : People interested in constructing and operating a 2 ft gauge railway (presently 50 percent complete). Operates at steam rallies at Menangle six times a year. Work day once a month; more frequently as track materials become available. For details contact Paul Simpson (02) 771 3929.

LRRSA LORNE TOUR NOVEMBER 24/25 1984

The Lorne Tour was attended by 44 people, and commenced in mild overcast weather at 10 am at the St.George River road bridge, just west of Lorne. The first walk was along a section of tramline now converted to a walking track, to Allenvale, about 2 km distant. The country is fairly hilly, with medium density open forest cover, some sections having been burnt in the Ash Wednesday bushfires. The last 500 or so metres of walk was not along the tramline, although its formation could be seen, in places being cut into the rocky hillside.

The return trip was made via an overgrown and partially bulldozed incline up to a saddle separating the St.George River from Cherry Tree Creek. From the saddle the line gradually descended for about 1 km to rejoin the main track not far from the start of the walk.

The cars were then driven to the Sheoak picnic ground, 2 km past Allenvale, where lunch was taken, with at least one sausage falling victim to one of the resident kookaburras!

The afternoon walk followed the tramline westwards along Sheoak Creek valley, at times 50 or so metres above water level. After about 1.5 km the Sheoak Creek Mill site was reached near the Little Sheoak Creek junction. Relics included a long section of rail, pieces of boiler, plus other sundry ferrous items. The sawpit was also visible although only a foot or two deep.

The line continued west of the mill site, on a rising grade past the lower

Kalimna falls, and was followed to the Upper Kalimna Falls, beyond which the line has not been cleared. Numerous sleepers were visible along the track, although many have been pushed aside as the track has been upgraded for tourists.

Sunday morning's walk was along a foot track past the Phantom Falls, to the formation of the 2 ft 3 in gauge St. George River tramline, which is becoming overgrown with post-bushfire grasses.

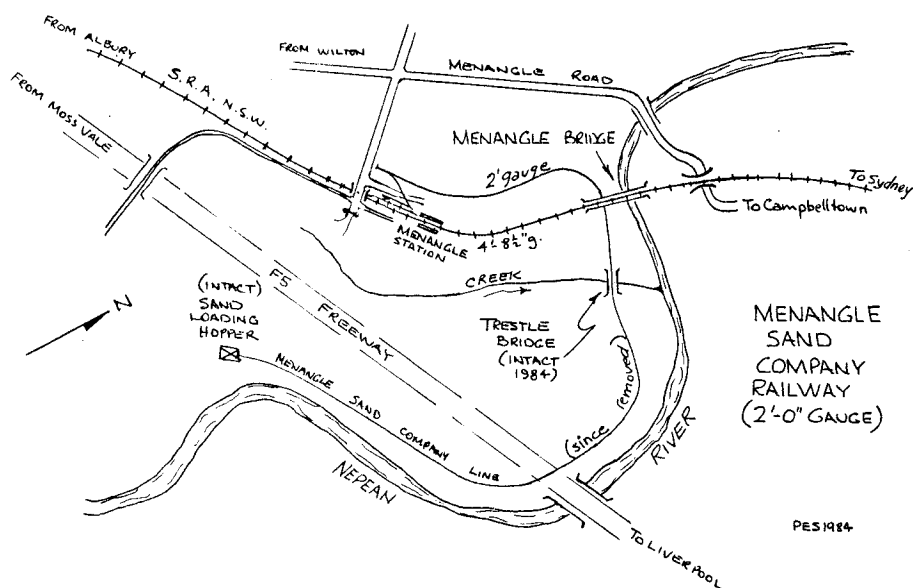

Geoff Thorpe 12/84

FIELD REPORTS

MENANGLE SAND COMPANY, N.S.W.

On Sunday 24 August, 1984, a visit was made to the only tangible remains of the former 2 ft gauge line which operated here, the sand loading hopper at the terminus, and the trestle bridge about half way along the line (see map).

The hopper is made of steel supported on wooden piers and longitudinal rails. It is not very high overall as the bottom of the hopper is only 4/5 feet off the ground, just high enough for the sand wagons to be pushed underneath. Some eight chutes are under the hopper, and were lever operated from the side, so it was not too critical where the wagons were positioned for loading.

The area of ground on the side of the hopper approached from Menangle is reasonably flat and would suggest that several sidings may have existed here, although no physical evidence like spikes or sleepers were found.

The owners of the land relate how they discovered the 50 year old trestle bridge while looking for some errant cows. The trestle is normally hidden from view by trees that have grown up along the creek which it crosses. On approaching it, the bridge is most impressive to behold. A comparison with the photo which appeared in ARHS Bulletin No.389 (March 1970) was made. This would seem to indicate that when the photo was taken, the Nepean River, into which the creek flows, was in flood, as the creek was only a few feet high when viewed on this occasion.

The state of the bridge is remarkable. It appears the cover of trees has helped to preserve it and protect it from vandalism. The only change apparent is the absence of rails and sleepers removed in 1932. Photos of this line are sought for an article for a future issue of *Light Railways*. Anyone who has access to any such photographs please contact Paul Simpson at P.O.Box 105, Panania 2213 (02) 771 3929.

Paul Simpson 11/84

BYRON BAY, N.S.W.

The former Norco premises are now occupied by the Byron Bay Services Club. The siding from the main SRA line remains although the points have been removed. Only traces remain of the former coal sidings and the line to the other plant. In the forecourt of the club near the garage, traces still exist of the hand-worked tramway which was used to supply coal to the works boilers. Rail is very light, approximately 12-15 lbs per yard, and set in concrete.

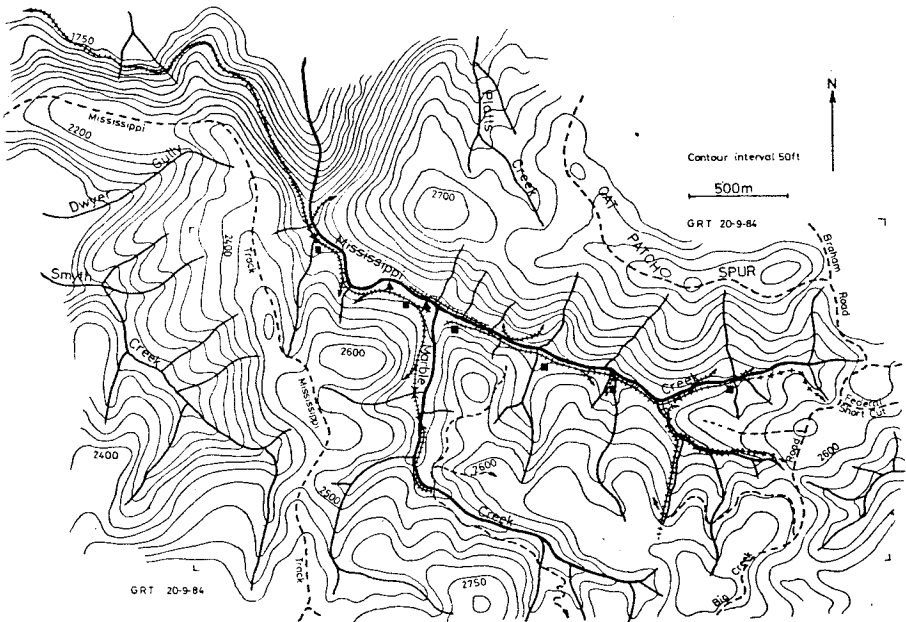

The meatworks (see LRN 37 p.3) closed in October 1983, and were being dismantled in September. Most traces of the 2 ft gauge tramways have been removed except for a short section set in concrete. The works sidings remain intact with the solitary ex-NSWGR truck still rotting away. The Motor Rail "Simplex" loco is now in the care of the local Council {see elsewhere this issue}.

Rob Pearman 10/84

MISSISSIPPI SAWMILLING COMPANY. MISSISSIPPI CREEK, Victoria.

The upper reaches of the Mississippi Creek, east of Warburton, were logged by the Mississippi Sawmilling Company during the early 1900s and the timber hauled by horses over a 3 ft gauge wooden railed tramline to Big Pats Creek.

To reach this area from Big Pats Creek, the line followed Mississippi Creek east for about 3 km, then climbed the hillsides to the south before levelling out and following the creek valley for a further 3 km. Here the first 500m of track includes two collapsed trestle bridges, some old house sites and at least three log lines leading out from the main line.

A mill site at the top of a bend in the creek is then reached, with extensive sawdust heaps on both sides of the creek, but few other relics are evident. Two hundred metres on, at Marble Creek, is a second mill site, with a four metre deep cutting leading down from the main line level to the mill shed site partially cut into the hillside behind. The sawpit and machinery foundations are readily found, and half a dozen wheel sets lie in a nearby ditch.

A 1 km log line heads south from the mill, and passes through thick undergrowth 20 metres or so above Marble Creek, on a medium grade. It then rejoins the creek, passing through a small cutting to reach the site of a 40 m long pigsty bridge, which crossed a small side stream. The larger of the two supports is about 4 m tall, and very well preserved.

A couple of hundred metres further on, Marble Creek was crossed on a low pigsty bridge, and then a rather swampy area entered. Here the line could

not be traced, although a short section of wooden rail featuring a single nail was sighted lying in the mud. From here to a present-day track, the line becomes virtually untraceable.

Returning to Mississippi Creek, remnants of the main line's crossing over Marble Creek could not be found, but the formation could be followed eastwards along the south side of the creek. About 300m from the mill site was a formation leading back to the sawdust heaps north of the mill, and several steep log lines heading up the adjacent hillsides were also noted.

The main line continued along the south side of the creek just above creek level, mostly in treefern country, to a creek junction about 1.5 km east of Marble Creek. Here a well constructed log line ran about 250 m south-east to the base of an easily-followed cable-worked incline; this used 2.5 cm diameter cables and was constructed in a gravelly creek bed. Heading east from the base of this incline was another log line, which followed the creek for a couple of hundred metres before ascending via a steep, narrow, well preserved cutting into a recently replanted area, where it was lost, just west of Big Creek Road.

Back on Mississippi Creek, the main line continued east, crossing a small well-preserved bridge, and ascended a small cable hauled section, with cables and a wooden cable drum observed. A log line crossing the creek to head up the hill to the north was also followed for a short distance. The main line soon reached a few house sites and then could not be traced any further.

AUSTRALIAN CAPITAL TERRITORY

CANBERRY HOLDINGS PTY LTD. Canberry Fair, Dickson. 610 mm gauge

(see LRN 36 p.2)

After a period of disuse, the tramway was scheduled to reopen here on 15 December, following further development work at the attraction. The old rolling stock has been disposed of and replaced by an American steam outline loco and carriages supplied by Chance Brothers of Wichita, Kansas, similar to those used at Leisureland Fair in Victoria (see LRN 40 p.11). The loco is believed to have a petrol engine and could be described as a B-1-B PM. (4-2-4 steam outline with the bogies powered and "driving" wheel unpowered.)

The track gauge is believed to remain as 2 ft, but tightened up because of skinny tyre width. Track extensions will be introduced soon.

0-4-2T Decauville 246 of 1897 is believed to be destined for the Megalong Valley Tourist Railway, near Blackheaths N.S.W. The Ruston & Hornsby 4wDM

304457 of 1951 has presumably returned to Kevin Ruby at Forresters Beach, N.S.W. The other two Ruston & Hornsby 4wDM diesels, 354040 of 1953, and either 235657 or 235677 of 1945, together with the three bogie carriages, have gone to another tourist attraction, Sandhurst Town, near Bendigo in Victoria.

Bruce Macdonald 11/84; Jeremy Wainwright 12/84; Canberra Times 20/11/84 via J.Wainwright.

NEW SOUTH WALES

BYRON BAY COUNCIL 1435 mm gauge

The Byron Bay Historical Society are acting as custodians for the Council of Motor Rail "Simplex" 4wDM 2129 of 1923, ex the now-closed Byron Bay meatworks. Plans for the loco's future are not yet finalised. Its last commercial operation was in June 1984 when equipment was removed from the meatworks for a Perth Company. During early September, the loco was repainted green and tram couplings refitted. Intending visitors should contact the custodian, Brian Parkes on (066) 85 6512.

Rob Pearman 10/84

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park. 610 mm gauge

(see LRN 42 p.4)

On Saturday afternoon, 10 November 1984, the Illawarra Light Railway Museum was officially opened by the Mayor of Shellharbour, Alderman Bob Harrison. The occasion of the 125th anniversary of the Shellharbour Municipality was selected for this official opening, the event being witnessed by about 200 visitors. Local members of parliament present expressed their appreciation of what the museum members have achieved in their contribution to the heritage and tourism of the region. The Federal member for Macarthur, Collin Hollis, announced with considerable pleasure a Commonwealth Grant of \$50,000 to the museum through Shellharbour Council for the provision of a carriage and loco shed, the construction of a machine shop for which the frames and trusses are already on site, and for several restoration projects.

At 4.10 pm the Mayor of Shellharbour declared the museum open by driving Hudswell Clarke 0-6-0 loco *Cairns* (1706 of 1939) through a ribbon stretched across the track. Half the visitors crowded aboard the four coach train and sampled the inaugural run to the music of the Salvation Army brass band.

Throughout October and November, all efforts had been directed towards

the opening ceremony. Semi-open car No.1 and former QR rail motor trailer P119 were repainted. The restoration of Melbourne cable car 430 was also completed. The interior seats were fitted and polished and the few missing etched pattern glass panes in the clerestory replaced. Although some of the blistered varnish on the small clerestory windows still has to be removed and the frames repolished, this 94 year old vehicle re-entered regular traffic on 10 November for the first time since 1935. The former c.1918 saloon car No.2 also entered regular traffic on the opening day. Although the body restoration was completed in 1982, the new steel underframe and permanent bogies, as well as the platform steps and drawgear were not completed until late October. Although *Cairns* was the star performer in the opening ceremony, Davenport 0-4-0ST *Kiama* (combination 1517 of 1915/1596 of 1917) was also in steam and decorated for the occasion. Following the ribbon cutting ceremony several double headed trips were made with the four car train.

By early November the boiler of Perry 0-6-2T *Tully* 6 (7967.49.1 of 1949) was approaching the stage where the new inner firebox and smokebox had been fitted to the barrel and stay bolts were being prepared and fitted. This work is proceeding at the Al&S Steelworks at Port Kembla, As soon as the boiler restoration is completed, it will be fitted to the already restored frame unit and only a period of another four to six months will be required to have this locomotive in steam. A party of ANGRMS members from Queensland visited Albion Park to witness the ceremony. They did not arrive empty handed for further Shay parts were presented to the museum for the eventual thorough restoration of two-truck Shays Lima 906 of 1904 and 1097 of 1907. The next major rolling stock restoration project will be the body for the restored chassis of the Baguley-built Drewry cane inspectors car ex Victoria Mill. When that task is completed, it is planned to commence work on the restoration of a pair of 2 ft gauge Shay bogies made available by ANGRMS.

Thanks to the efforts of the Saturday workers from the Corrective Services Department, the station area and the adjacent picnic grounds looked very attractive on the opening day. In addition, these community workers completed the chain wire gates for the large picnic area enclosure and station compound on 21 September. Large areas of the station platform and associated footpaths have been resurfaced using paving bricks.

The museum has been successful in its tender for the Otford Station signal box and lever frame which will soon be replaced with a centralised safe working system. The Society has also purchased signals and other safeworking equipment from the Queensland Railways, and by November, these items were in a Brisbane carrier's store awaiting the delivery journey south.

In addition to the \$50,000 Commonwealth grant, the Society received a matching \$5,000 grant from the State Ministry for Arts to assist with the construction of a brick toilet and shower block. By September, the foundations for this facility were being excavated. This project has top priority for the coming summer season. In addition to the buildings and toilet block, work was due to commence in late November on a new stationary engine shelter around the recently restored large vertical Brownhoist crane boiler. It appears that the next ten years should be as successful as the last in the development of this museum.

Ken McCarthy 11/85

LACHLAN VINTAGE VILLAGE. Forbes 610 mm gauge

(see LRN 15 p.10)

After a period of up to five years closure, it appears that this attraction will be reopening under new management. Early in December, green-painted John Fowler 0-4-2T 16339 of 1925 was seen undergoing a hydrostatic test near the entrance to the village, and it is expected it will be back in service again soon. The two passenger cars were enclosed in a small security compound nearby. The two other locomotives, Bundaberg foundry 0-6-2T 4 of 1952, and John Fowler 0-4-2T 16341 of 1925 are out of use and practically derelict.

Tony Madden 12/84

MEGALONG VALLEY TOURIST RAILWAY. Blackheath 610 mm gauge

(see LRN 34 p.6)

It is reported that Decauville 0-4-2T 246 of 1897 from Canberry Fair, Canberra has been acquired by one of the participants in this project. It is not known whether this loco is still owned by Tod Watson, and leased out, or has been purchased outright. It is understood that repair work is required to be done on this loco before it can be returned to service.

Bruce Macdonald 11/84; Editor.

NEWCASTLE WALLSEND COAL MINING CO. LTD, Ellalong Colliery 1067 mm gauge

As noted in LRN 43, two Fox "Tyrant" 4wDH underground locomotives have been placed in service on a rack railway at this colliery. The locomotives weigh 20 tonnes each and can operate either by simple adhesion or by rack/adhesion. It is possible for them to enter the rack section at 10 km/h, a considerable improvement on overseas practice, and this has been made possible by the provision of a special rack designed and manufactured by Fox Manufacturing. Three kilometres of track has been installed including two

sets of points and Fox also provided the signalling system used. The locos have a 157 kw Caterpillar engine and can haul 30 tons up a grade of 1 in 8 on the rack (50 tons in tandem).

(This report was omitted from LRN 43 in error - Ed.)

Craig Wilson 10/84

STEAM TRAINS PTY LTD. Kurrajong & St.Ives. 610 mm gauge

(see LRN 40 p.7)

Weekend Magazine on ABC on 11 November featured the collection of Phil and Bruce Belbin. Shown was Perry 0-4-2T 2714.51.1 in orange livery in the front yard at St.Ives, and also the dismantled remains of Baldwin 0-4-2T 10533 of 1899 which will be restored in due course. Resplendent in blue livery at Kurrajong was shown Hudswell Clarke 0-6-0 1838 of 1950. Also shown here were two ex-QR rail-motor trailers, one restored and the other under restoration.

Editor 11/84

QUEENSLAND

A.GERMANOTTA, Mulei

See MARION MILL

MARION MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 43 p.8)

Tony Germanotta is a Marian Mill supplier and the custodian of the mill's Perry 0-6-2T 2601.51.1. He plans to operate a tourist passenger service with the authorisation of the Marian Mill on their tramline between the Bruce Highway at Mulei and the terminus of the scenic Mount Jukes line.

On 13 December, Mr.Germanotta took delivery of two diesel locomotives he purchased from a mining project near Tenterfield, N.S.W. The locos had apparently never been used at this site, and had been imported from Germany some time before as part of a complete mining plant. The locos were built in Germany and are both 4wDM. One is a 4.5 tonne loco Gmeinder 4574 of 1949, built by Gmeinder & Co. GmbH., Mosbach. The second is an 8 tonne loco, Windhoff 452 of 1940, built by Rheiner Maschinenfabrik Windhoff AG. Rheine, and is an underground design. Both locos are painted a metallic grey and each carries a plate bearing the inscription "Polensky & Zollner" and numbers 3059 and 3061 respectively.

Mr Germanotta plans to have a number of bogie carriages constructed for the tourist service. It is planned to fit the Windhoff loco with a high cab and

to overhaul it for service as the passenger loco.

On 15 November, Marian Mill's Clyde 0-6-0DH *Melba 2* (64-377 of 1964) was involved in a spectacular accident when it became derailed on a bridge on the Mt.Jukes tramline because of a broken rail. The loco plunged into the creek bed, the driver and fireman jumping clear in time. The accident took place on the last day of the crushing season as the loco was light engine on its way to pick up the last few bins of cane from the Mount Jukes area. The loco was seriously damaged structurally although amazingly its engine continued to run and the driver had to clamber down to cut it off. It took several days to retrieve it as an access track had to be bulldozed into the site over a considerable distance. It will be rebuilt at the mill over the slack season.

Peter Robins, Len Heaton 11/84; Bob Gough, Tony Germanotta 12/84.

MORETON CENTRAL SUGAR CO., Nambour 610 mm gauge

(see LRN 36 p.7)

About 6 weeks before the end of the season, a serious head-on collision took place at the entrance to Howard Street yard on the outskirts of Nambour. A loaded train heading towards the mill, headed by E.M. Baldwin 0-6-0DH *Bli Bli* (6-1257-6-7-65 of 1965) with Clyde 0-6-0DH 63-289 of 1963 under locotrol power also in the rake, came into collision with E.M. Baldwin B-B DH *Coolum* (5565-1-10-74 of 1974) which was engaged on shunting work. The weight of the loaded train took heavy toll of the lightweight bogie loco *Coolum*, which was knocked off its bogies, lost its buffer beams, and suffered serious damage to its superstructure. The loco was taken into the loco shed for repairs and reassembly and re-emerged about four weeks later.

David Mewes 12/84

RACECOURSE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD Mackay 610 mm gauge

(see LRN 42 p.8)

Further experiments have been made by Sugar Research using the wagon approximately 40 ft in length noted in LRN 36. This has now been modified to a four-wheel wagon with the fitting of two QGR diameter wheelsets given suitable flexibility to negotiate curves. The wheelsets are instrumented so that readings may be taken and recorded in the Sugar Research computer-fitted car. A train consisting of Racecourse Mill's E.M. Baldwin 2-2wDH *Road Runner* (6-2612-2-11-68 of 1968), power car, computer car, and long wheelbase wagon were noted in the Racecourse mill yard in late November.

Editor 11/84

(see LRN 36 p.9)

See RACECOURSE

THE SUGAR BOARD, Mackay Harbour. 1067 gauge

On 6 December, a second diesel loco was noted alongside the loco shed at the Mackay Sugar Terminal. The loco used here formerly is orange-painted Com-Eng 0-6-0DH *Alex S. Hamilton* (F1018 of 1957), but it is reported that this unit is now up for sale. The new loco is the unnamed and yellow-painted Com-Eng 0-6-0DH F1029 of 1958, formerly used at the Townsville Bulk Sugar Terminal, and now replaced there by a large diesel-electric loco.

Editor 12/84

SOUTH AUSTRALIA

BHP LTD, Whyalla 1067 mm gauge

(see LRN 32 p.15)

A 3 ft 6 in gauge line runs from Whyalla to the iron ore mines at Iron Knob and Iron Baron, both about 50 km inland. The junction for the line to Iron Baron diverges from the Iron Knob line about half way from Whyalla. A new line may possibly be built for about 35 km from Iron Baron to ore deposits at Iron Duke. Two Clyde Bo-Bo DE locos handle each train of 45 wagons, each with a gross load of 95 tons loaded. There are seven of these 980 kw locos, numbered DE 03 to DE 09. Several trains normally operate each day. BHP at Whyalla are happy to furnish details of the times and frequencies of ore which vary according to shipping requirements, and tours of the Whyalla plant are also available.

Catchpoint November 1984 (Mile End Railway Museum)

MILE END RAILWAY MUSEUM (S.A.) INC. gauges various

(see LRN 43 p.10)

Due to a few technical problems at Thomas Playford Power Station, 3 ft 6 in gauge Clyde 6WDH 61-237 of 1961 was not expected to become available to the museum until late in November.

Andrew Barclay 3 ft 6 in gauge 0-6-0T *Peronne* (1545 of 1919) was due to have its boiler removed from the frames following an inspection which found the tubes to be in good condition. The tender for Baldwin 3 ft 6 in gauge 4-6-0 BHP 4 (41242 of 1914) has now been painted and only requires numbering and lettering to be complete.

Catchpoint November 1984

PICHI RICHI RAILWAY PRESERVATION SOCIETY, Quorn 1067 mm gauge

(see LRN 31 p.17)

The Society has taken delivery of its first ex-Industrial steam loco. Andrew Barclay 0-6-0T *Passchendale* (1546 of 1919) was delivered to Quorn by road on 8 December. Painted in garish colours, this loco had been placed in the Risdon Park Kindergarten at Port Pirie in 1962, and was previously used at Broken Hill Associated Smelters, Port Pirie. It is hoped it can be restored to working order.

Tony Madden 12/84

TASMANIA

COMMONWEALTH DEPARTMENT OF TRANSPORT, Matsuyker Island and Tasman Island.

Best of A Big Country shown on ABC in Queensland on 11 November featured the lighthouses on these two islands each of which have balanced inclines for hauling stores and passengers to the light from the shore. Gauge appeared to be about 3 ft Plans had been made to make these into unmanned lights, but the programme stated that Maatsuyker at least is still manned.

Editor.

COMSTOCK TRAMWAY, Queenstown 610 mm gauge

This line is another proposal to develop a tourist railway on Tasmania's west coast in the aftermath of the Franklin Dam controversy. A 2 ft gauge railway would be constructed on the formation of the Mount Lyell 2 ft gauge and ex-North Mount Lyell 3 ft 6 in gauge Comstock Tramways between Queenstown and Linda, making a virtual circuit of Mount Lyell. This line would be cheaper than the proposed Abt rack railway reconstruction and would benefit Queenstown more directly than the North-East Dundas proposal, which would serve Zeehan.

The Advocate 11/10/84; The Weekender 3/11/84 via Chas. Goodwin

MOUNT LYELL MINING & RAILWAY Co. LTD, Queenstown. 610 mm gauge

(see LRN 5 p.8)

Closure of the famous Mount Lyell mine seems inevitable within the next few months, exacerbating the already grim employment situation in Queenstown.

The mine is served by a 2 ft gauge underground railway with trolleywire and battery/trolleywire electric locos which haul ore from two tunnels on 11 level

to the surface at the tunnel yard where the ore is unloaded for concentration. It is believed that the 900 mm gauge equipment brought here for installation at the 17 level has been disposed of.

The Weekender 3/11/84 via Chas. Goodwin; Editor.

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM. 610 mm gauge

(See LRN 41)

A green painted Malcolm Moore 4wPM was noted on site in December, fitted with fully enclosed cab. (This loco would be 1049 of 1943 ex the Gippsland Folk Museum at Yea [sic] and previously the State Electricity Commission - Ed.) It is believed that the engine of Kelly & Lewis 0-6-0DM 4271 of 1935 has now been freed, but at the cost of the pistons which will have to be replaced. However, this loco should be returned to operating condition in due course. Hudswell Clarke 0-6-0 1098 of 1915 and John Fowler 0-6-0T 11855 are still sitting in the open, looking rather forlorn, but work is proceeding to have one in steamable condition soon. Track laying is taking place, using prefabricated track panels delivered on site, and a line is being laid to the old Station goods shed, where it is planned to have the two steam locos under cover soon.

Tony Madden 12/84

SUNRAYSIA STEAM PRESERVATION SOCIETY. Mildura. 610 mm gauge

This Society has taken custody of Kerr Stuart 0-4-2T 742 of 1900, which was formerly on display at Redcliffs (see LRN 30 p.19). The loco has been dismantled for thorough restoration and will be returned to working order. Also on hand are a number of side tip underframes. This Society, which has been involved in the restoration of steam machinery for some time, is hoping to operate the loco and is looking for a suitable site to lay track.

Tony Madden 12/84

SANDHURST TOWN MANAGEMENT PTY LTD, Eaglehawk. 610 mm gauge

(see LRN 14 p.19)

Two Ruston & Hornsby 4wDM locos from Canberry Fair, Canberra, are believed to have come here. These are 354040 of 1953 and presumably 233657 or 235677 of 1945. Also here from Canberry Fair are the three bogie carriages built at Denis Steinhäuser's "Kiewa Works".

During December, a diesel-hauled train was operating here, probably hauled by Ruston & Hornsby 0-4-0DM 305328 Off 1954. The steam locos,

Perry 0-6-2T 7967.50.3 of 1950, and Hudswell Clarke 0-6-0 1553 of 1925 have still not been put into service.

Bruce Macdonald 11/84; Tony Madden 12/84

WESTERN AUSTRALIA

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC., Bennett Brook Railway, Caversham. 610 mm gauge

(see LRN 43 p.11)

Another locomotive has been obtained for the project. This is PW27 of the Public Works Department, a Gemco-Funkey 4wDM built in 1964, currently stationed at Wyndham Jetty. Although currently 3 ft 6 in gauge, it is understood that it can be easily converted to 2 ft gauge.

Rusty Rails 11/84

OVERSEAS

CHRISTMAS ISLAND

PHOSPHATE MINING COMPANY of CHRISTMAS ISLAND. 1435 mm gauge

This company, successor to the British Phosphate Commission in this External Territory of Australia, operates a 17.5 km standard gauge line hauling phosphates. The railway featured on ABC's Countrywide shown in Queensland on 12 September. Twin Bo-Bo DE locomotives were shown operating on this line. These locos are two out of four which were built by General Electric in the USA for the US Army, and were imported in 1943 for use at the Commonwealth Department of Munitions St.Mary's factory, becoming NSWGR 7920 and 7923. In 1974, they were sold for service at Christmas Island but within a few years had to be completely rebuilt. This work was done at the Perth engineering firm of F.R. Fulk, the first loco, 9401 (ex 7920) being completely re-engined and refurbished in 1979. The second loco, 9402, has since been similarly treated.

Locomotives of Australia, by Leon Oberg; Editor.

FIJI

GATEWAY HOTEL, Nadi. 610 mm gauge

(see LRN 26 p.14)

The former Lautoka Mill 7, a John Fowler 0-6-0TT preserved here has been moved to a less prominent position behind the new tennis courts. A close inspection revealed the builder's number 10656 (built 1906) stamped on the frames. The boiler is also numbered 10656. The loco is in fairly good condition apart from a badly rusted section at the base of the boiler.

Bob McKillop 12/84

PLANTATION ISLAND RESORT, 610 mm gauge

A small pleasure line has operated here, with trains hauled by one or possibly more Motor Rail "Simplex" 4wDM locos ex Fiji Sugar Corporation. However, a visitor to the island in September discovered the line to be derelict and possibly out of use for some time.

Rob Pearman 12/84

THURSTON GARDENS. Suva. 610 mm gauge

(see LRN 26 p.15}

Hudswell Clarke 0-6-0 1663 of 1936 (ex Lautoka Mill) has been painted in gay "Hollywood" colours. The basic colour is green, with yellow red and blue lining, white running gear and black smokebox. Badly rusted plates in the tender have been replaced during this "restoration".

Bob McKillop 12/84

PAPUA NEW GUINEA

ULAMONA CATHOLIC MISSION. West New Britain Province, 700 mm gauge

There was originally a 6-7 km line bringing logs from the bush to the sawmill until about 1962. The line has now been cut back to the sawmill yard only. The locomotive operating here was originally built in Germany as an 0-6-0T by Jung (Arnold Jung Lokomotivfabrik GmbH., Jungenthal bei Kirchberg a.d.Seig) as 8644 of 1938. The boiler was removed and taken to Vunapope and the loco has been fitted with a diesel engine. There may have been other diesel locos here. The track from the bush line has been removed to Vunapope Catholic Mission Wharf, Timber Yard, Slipway and Bulk Stores and to Kaliai Catholic Mission.

MEETINGS

SYDNEY

This month's meeting is something different. Have you ever wondered what material is in the ARH5 archives? Well, you're not the only one, so we have arranged for Graeme Harper, the ARHS Archives Officer to show us over the collection at the next meeting. It contains reports, photographs, signal diagrams, Weekly Notices, serials from affiliated societies and many other items, much of interest to the researcher of light railways.

Why not find out if the Archive has material on your current research interest. Come along and ask. Please note that we will be meeting at the ARHS Sales Centre and Archive at 431 Elizabeth St.

LOCATION: 431 Elizabeth St., Sydney

DATE: Wednesday 27 February at 7:30 PM

MELBOURNE

Since the turn of the century the Gembrook area in Victoria has played a significant role in the sawmilling industry in Victoria. The use of tramways was extensive in this region, with haulage power taking the form of steam locomotives, tractors, and of course horses.

Mike McCarthy will be speaking on the history of the tramways in this area at the February meeting, and the talk will be illustrated by slides.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 14 February at 8:00 PM

ADELAIDE

The dates for the next Adelaide meetings are Thursday, 7 February and Thursday 4 April. They are held at the Mile End Railway Museum at 8:00 PM and details of "what's on" may be obtained from Arnold Lockyer, the South Australian Convenor. Arnold's address is 6 Dunedin St, Dover Gardens.

Deadline for next issue:- 20 April 1985.

EDITORIAL

The forthcoming 25th anniversary of the Society is attracting much interest and a number of plans are on hand to celebrate it. Readers are referred to the information circulated with the February *Light Railway News*. This information contained a list of Society tours held since 1961, but did not include those organised by the NSW Division. Could a NSW Division member send a complete list of these to Frank Stamford, so members can be circulated?

COUNCIL NEWS

The outstanding success of *Powelltown* has enabled the Society to plan ahead for the publication of several books in the next 18 months or so. Firstly, Norm Houghton's *Sawdust and Steam* is currently being reprinted after being out of print for several years. A new book, also written by Norm, and dealing with tramways of the Yea and Healesville districts is nearing the "final draft" stage, and it is hoped it will be available in 6-9 months time.

The "25th Anniversary Subcommittee" are working on two publications. The first is a budget priced "Society Highlights" book documenting important events which have occurred since the Society's inception. The second book will be of similar size to *Sawdust and Steam* and will feature several early and now out of print *Light Railways* articles. About ten articles are planned for inclusion, and a number of photographs which have come to light since original publication will be included. Other photos from the Society's

extensive collection will also be included to make the book as interesting as possible.

FROM THE PAST

Found in the 12th Annual Report of the Victorian Country Roads Board (to 30/6/1926) - 2 miles of a 2.75 mile tramway from Fish Creek Station (South Gippsland) easterly to gravel pits has been constructed under Board supervision.

Greg Stephenson

FIELD REPORTS

BELLS TRAMLINE, Tatong, Victoria

About 13 km south of Tatong are the remains of Bell's 3 ft gauge wooden railed tramline. This line ran through fairly dry open stringybark forest, and served a mill situated on the flood plain of Holland Creek, about 2.5 km south from the Tatong - Toombullup road. At the mill site, the sawdust heap has virtually been levelled, although a nearby trench is probably the remains of the sawpit.

A couple of hundred metres south of the mill site the tramway formation may be picked up, climbing from the flood plain to skirt around the hillsides east of Holland Creek. The remains of three or four bridges are encountered along the first 1.5 km of track, and sections of wooden railed tramline are evident. A small branch line leading up a creek valley to the east is then passed, whilst the ruins of a trestle bridge over the same creek indicate the route of the main line, which subsequently descends to cross Holland Creek close to water level. No bridging

is evident at Holland Creek, although an interesting log line may be followed uphill to the west from near this point. A 9 metre long trestle bridge with very well preserved decking is located 100 or so metres along this branch, while further on the remains of a couple more bridges and a loading platform may be found. There are many sleepers along this branch line, although no cables were discovered near the summit, where the gradient appears to be rather steep for normal working.

On the west side of Holland Creek the main line rises steeply and skirts a steep hillside 30 or so metres above water level, and then levels out to pass through a fairly flat area before reaching another bridge site. The abutments at the northern end have gone, but at the southern end about 50 feet of bridging remains, with some sleepers still in place. The line then descends from the creek, curving round a spur to the east of Holland Creek, and finishes in a rocky gully four or five hundred metres further on.

Geoff Thorpe 2/85

MARVEL LOCH GOLD DEVELOPMENT. Marvel Loch, W.A.

During the 1930s, Marvel Loch Gold Development N.L. mined and processed gold ore in an area currently covered by Kia Ora Gold Corporation leases. The formation of a 2 ft gauge tramway from several shafts to the treatment plant is still visible.

Anthony Weston 1/85

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

E.M. BALDWIN & SONS PTY LTD. Castle Hill, N.S.W.

(see LRN 42 p.4)

It is understood that of the 10 4-wheel battery-electric personnel carriers constructed for Newcom Collieries in 1982-3, five (numbered 1-5) were delivered to Coorangbong Colliery, and the remainder (numbered 6-10) were delivered to Myuna Colliery.

A four-wheel diesel mining loco was noted being despatched from the Baldwin works on 15 January. Colour scheme was yellow with yellow/black dazzle stripes at each end. (Possibly the third of three locos for Coal & Allied? - Ed.)

ARHS Bulletin Supplement 11/84, Craig Wilson 1/85

NEW SOUTH WALES

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 44 p.8)

The rebuilding of the boiler for *Tully 6* (Perry 0-6-2T 7967.49.1 of 1949) by AI&S at Port Kembla had reached the stage where a new set of tubes had to be delivered for fitting. This was done on 12 February, when it was seen that the firebox work was complete with a new inner box as well as new stay bolts in position. Work was well advanced on the construction of a new smokebox. Part of the recent Commonwealth grant to the museum is for a boiler maker to construct new driver's cab panels and to overhaul the side tanks.

During the summer periods work continued on the restoration to static display of the E.M. Baldwin 3 ft 6 in gauge battery electric man transporter car No.2 (801-1-5-64 of 1964) from Huntley Colliery. This vehicle has now been externally repainted and parts bent out of shape through a hard working life have been reshaped.

Parts of a 2 ft gauge Ruston & Hornsby 4wDM loco were retrieved from Bankstown on 15 January. This item (can anyone supply builder's number? Ed.) was obtained many years ago for a long-forgotten project and gradually taken apart for restoration. The relic was left under a tree for more than a decade in this state. The dismantling was performed so thoroughly that bearings were entirely taken apart, leaves removed from spring sets, and even the drive chains dismantled! The owner had sold the land on which the relic stood several years ago, and the new owner wanted the unit removed. The diesel engine was beyond easy restoration but the other parts were purchased to provide spares for the museum's 4wDM Ruston & Hornsby (285298 of 1949).

Shay loco number 2 (Lima 1097 of 1907) made a 0.5 km journey on rails on 18 December, the longest rail movement it has made in 50 years! The loco has been mounted on temporary shop trucks for several years and these carried the unit to a new siding on the NE corner of the property to clear the museum compound for the construction of engine and carriage sheds. The Shay has added interest on the running circuit as it stands in the bush as if ready to move onto the main line.

Further mechanical work has been carried out on the Malcolm Moore Fordson four-wheel kerosene loco (ex Fairymead Mill 123). Although restored after major engine overhaul in 1981, the unit has proved cantankerous compared to other locos. The awkward side crank handle worked through

bevel gears has been relocated on a straight through alignment, a newer carburettor fitted, and kerosene used for periods of long operation. Some adjustments still need to be made to the clutch linkage before this loco is available for regular use.

About two years ago, a request in the local press for Fordson tractor parts resulted in the Society receiving among other items, a complete Fordson tractor of 1940s vintage. This was in a condition too good for use as spare parts. One member, who is an auto mechanic, has progressively dismantled the tractor and is now almost at the half way mark of reassembling it after extensive overhaul. When completed it will share the work load with the Fiat tractor which has carried out most of the hard work at the museum for the last five years.

A second main entrance gate was fitted at the property boundary in early January adjacent to the original gate. These two gates are standard railway level crossing fittings obtained on the Society's second work day in April 1972 at the Corrimal Coal Co. - Princes Highway crossing at Corrimal. The new gate has eliminated the entrance bottle neck on Tongarra road.

Further work on the toilet/shower block did not get under way until late January as the sewer main will not be available for connection until mid 1985. By early February the foundation edging had been completed, reinforced wire for the concrete floor positioned, and the underfloor plumbing laid. The concrete pour for the floor took place on 14 February, while bricks were due to arrive in time for bricklaying during late March.

A new large open sided stationary engine shed was erected during late January and February by the BATL (Building Apprentice Trade Ltd) scheme. This structure is located at the western end of the compound adjacent to the recently-restored large vertical boiler from the former Al&S rail mounted Brownhoist crane. The stationary engines are now being progressively transferred from the old display shed at the eastern end of the compound to make way for the construction of a large workshop.

During December the Museum was informed that an additional \$16,000 had been added to the Commonwealth grant made in November, bringing the total to \$66000. This additional grant is to assist in the purchase of a new 20m x 13m locomotive shed. The Shellharbour Council was expected to conduct the employment interviews during mid-February, and work under the grant was expected to commence on 25 February. The major task will be the erection of the locomotive and carriage sheds and the construction of a large machine shop for which the roof trusses and columns have been on hand for many years.

Patronage during the four Sundays on which the museum operated during

January was not as encouraging as previous years. Allowing two rides per head on "all day tickets" about 2000 passengers were carried during the period, about 1000 less than January 1984. Hot humid weather made the nearby surfing beaches more attractive, while the local TV station WIN4 has been forced to reduce the amount of prime time showing of the ILRMS half minute advertisement due to complaints by other community groups which have not received comparable exposure!

The final major restoration stage on former Melbourne cable tram trailer 430 was carried out during January and February. This was the cutting back of 94 years of paint and varnish on the clerestory windows and roof edges and the repolishing and painting of this section. This part of the project proved to be the most awkward and time consuming of the entire restoration task which took 30 months. Some window frames will have to be replaced by new material in the near future while many of the louvre sun shades still have to be restored and fitted but this car now generally resembles its original appearance at the turn of this century.

Ken McCarthy 2/85

MEGALONG VALLEY TOURIST RAILWAY, Blackheath 610 mm gauge

(see LRN 44 p.9)

A gala steaming day was understood to be scheduled for the weekend of 16 March. The Editor would welcome a report on the activities of this weekend for publication in LRN.

Ken McCarthy 2/85; Editor

N.S.W. STEAM TRAM AND RAIL PRESERVATION SOCIETY, Parramatta Park. 1435 mm gauge

(see LRN 30 p.4)

Two cars formerly used on the North Coast Steam Navigation Co. Byron Bay tramway have been preserved here for some time. Bogie cross seat trailer 74B arrived at Byron Bay in 1924 and was last recorded in passenger charter service there in May 1955. After use at Parramatta, it was withdrawn from service at the end of 1979 for major restoration. Four-wheel saloon tram C37 was sent to Byron Bay in 1924 for use as a trailer and was last used at Byron Bay on a charter trip in November 1961. Purchased privately for preservation by Mr Brian Mantle in Sydney in 1963, it was on loan at Parramatta from 1974 until February 1985. On 15 February it left for Canberra, having been sold to the Tradesmen's Club at Dickson, which already boasts five tramcars as part of its decor.

The relocation of the steam tramway at Parramatta is expected to take place as the next stage of the Parramatta Park redevelopment. The museum

depot will be located near the Westmead (SW) corner of the park, while the main line will consist of a 3 km circuit. The entire route will be located to the west of the present museum site.

The Society is also developing the roadside railway concept which existed in various parts of NSW. With this idea in mind, a number of ex NSWGR items have been acquired for use, including it is understood, a Z13 loco from the RTM. Railmotor CPH 5 has already arrived from Thirlmere.

Ken McCarthy 2/85

RICHMOND VALE PRESERVATION CO-OPERATIVE SOCIETY LTD, Richmond Vale Railway Museum, Richmond Main. 1435 mm gauge

(see LRN 43, p.5)

During July 1984, the Museum was able to return to the district a piece of equipment once used on the Richmond Vale Railway. This is the Cadillac railcar, a 1923 Cadillac which was converted by John Brown for use as an inspection unit between Hexham, Minmi, Richmond Main and Pelaw Main. The railcar was used until about 1942, when it was stored at Pelaw Main running shed. In the early 1960s, it was moved to the South Pacific Electric Railway Museum at Loftus. It will be restored to operating condition at Richmond Main Colliery.

Another exhibit recently returned is the ex-John Lysaghts 0-4-OST *Kathleen*, Avonside 1862 of 1921. It was used at the Lysaghts works in Newcastle until 1964, when it was transferred to the Port Kembla works, where it was used until 1972 before going to the Rail Transport Museum collection at Thirlmere. It arrived at Richmond Main in November 1984.

Ex-John Lysaghts 0-4-OST *Marjorie* (Clyde 462 of 1938) is progressively being restored. Wheels, valve gear, hand brake and reversing gear are in place on the frame. Boiler fittings have been overhauled and refitted to the boiler, which is now ready for testing. 20 tubes have been replaced while the cab and saddle tank have been sandblasted.

The loco shed is being restored under a CEP job creation project. Work includes new concrete floors, two new pits, repairs to brickworks and four new shed doors.

Peter King 2/85

TUBEMAKERS OF AUSTRALIA LTD, Newcastle. 1435 mm gauge

On the morning of 29 December, E.M. Baldwin 6wDH *Worimi* (4877-1-7-73 of 1973) was seen shunting at the Company's plant. The loco is painted green with black/yellow dazzle stripes at each end and with a yellow and black frame. The nameplates are mounted on the cabsides under the Baldwin plates.

Craig Wilson 2/85

QUEENSLAND

NORTH QUEENSLAND SUGAR MILL TRAMWAY PLAN 610 mm gauge

Economic Adviser to the Queensland Cane Growers' Council, Greg Ferguson, has put forward a plan to make the north Queensland sugar industry more efficient. The plan involves setting up a tramline company, owned by the mills from Cairns to Tully, to own an integrated tramline network serving all the mills, (from north): Hambledon (CSR), Mulgrave, Babinda, Goondi (CSR), Mourilyan (Howard Smith), South Johnstone and Tully. Most of these mills already have tramlines linked or easily linked, but two new sections would have to be built, between the lines of Babinda & Goondi (8 km), and South Johnstone & Tully (4 km).

Existing mills would retain ownership of locos and rolling stock but would be charged to use the tramline system. The main advantage off the plain would be in enabling greater flexibility in the industry. Cane would not necessarily be assigned to any one mill, but could be directed to mills in order to enable each to operate with maximum efficiency. Changes to the payment system would make the grower indifferent to which mill crushed his cane.

Mackay Daily Mercury, 1/2/85; Editor.

ACLAND COAL CO. LTD. Island Colliery, Acland. 610 mm gauge

(see LRN 2 p.5)

This colliery was due to close on 9 November 1984, making 12 employees redundant, following 55 years of coal mining by the Company. It was claimed to be the last coal mine in Australia where coal was hauled to the surface in skips. An auction of equipment was due to be held on 23 November with three four-wheeled diesels of Jenbach design and the remains of a fourth presumably to be included. The complete locos were Jenbachs 1137 of 1952, 1138 of 1952, and Bundaberg Foundry 16 off 1955, while Jenbach 1139 of 1952 had been stripped for spore ports.

Courier Mail 23/10/84 via David Mewes; Editor.

BRISBANE CITY COUNCIL

Tenders were due to close on 30 January for the construction of Section 1, Stage A, of the Bulimba Creek Main Sewer between Gibson Island and Boundary Street, Tingulpa. This section is 3 km in length and will be a 1650 mm diameter sewer in tunnel conditions. It seems quite possible that tramway will be utilised in this project.

Weekend Australian 12-13/1/85, Editor.

BUNDABERG TRAMWAY PRESERVATION SOCIETY INC. 610 gauge

(see LRN 43 p.7)

Plans for the establishment of the Society's museum railway in the grounds of Bert Hinckler's house are progressing well, with council work already having been done on earthworks.

Alan Robert 1/85

CATTLE CREEK CO-OPERATIVE SUGAR MILLING ASSOCIATION, Finch Hatton

See NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 41, p.3 & 5)

A report has been prepared by the staff of both mills with a view to a merger. The final decision will be taken by the grower-shareholders of each mill later in the year. It was only two years ago that Cattle Creek shareholders rejected an attractive merger proposition put forward by their own directors for a merger with Marian Mill.

Mackay Daily Mercury 6/2/85; Editor.

BURGOWAN COLLIERIES PTY LTD, Burgowan No.12 & 13 Collieries, Takura 610 mm gauge

(see LRN 17 p.4)

Two 4wDM diesel locomotives still lie out of use at the abandoned site of the No.13 Colliery. They are Jenbach 1079 and 1077, both of 1951, numbered 1 and 4 respectively. There are also many wooden mine skips lying around.

Coal is still being mined at Burgowan No.12 Colliery nearby. It is believed that men and materials are still transported on a cable-worked incline here, but the mine was not visited on this occasion.

The mines are easily reached by a road which runs from the Hervey Bay - Maryborough Road to Torbanlea. The No.13 mine site is just north of the crossing of the QGR Pialba-Urangan branch and a well distinguished road leads from here to the No.12 mine.

Editor 1/85

DREAMWORLD PRODUCTIONS PTY LTD, Coomera 610 mm gauge

(see LRN 41, p.4)

Perry 0-6-2T 5643.51.1 of 1951 was placed in service during the Christmas period. The loco is immaculately finished in green livery with the main

alterations from original being the fitting of a cowcatcher, new wooden cab, and the bunker sides being flaired out towards the top, together with a generous provision of brass beading. The loco is numbered 4 and carries the name (?) G.R.CLAPTON & CO. on the cabside. The loco was in service only for the peak part of the day on 7 January, hauling the three original carriages. There have been problems with getting the loco to steam and there is talk of converting it from wood and coal firing to distillate in the near future.

Baldwin 4-6-0 No.4 *Reg.Colter* (45212 of 1917) was in service throughout the day, hauling three new cars constructed to form a second train set. These cars are approximately 12 metres long and take the form of bogie wagons fitted with longitudinal seats along each side. Each car is divided into two large compartments and seats about 50. The cars are finished in a red oxide colour and bear the legend DREAMWORLD FREIGHT LINES.

No work has been done on John Fowler 0-4-0WT 16249 of 1923 since it arrived from Rocky Point Mill. It is on display near Rocky Hollow Station, which was closed at the time of the visit. The 4wDM Motor Rail "Simplex" loco (21543 of 1956) was standing behind the loco shed. It is used for maintenance work when the park is closed to the public.

Editor 1/85

GIBSON & HOWES PTY LTD, Bingera Mill. 610 mm gauge

(see LRN 33 p.7)

Naming of locomotives is well established in the sugar industry, but this mill seems to be the pioneer in the naming of rolling stock! Recently observed were four ballast wagons, apparently rebuilt from contractor's stock, with the following numbers/names:

1 *Titanic*

2 *Endeavour*

4 *Bismark (Sic)*

6 *Australia II*

One imagines that the missing numbers 3 & 5 also have nautical names.

Editor 1/85

TONY GILBERT, Dalby 750 mm gauge

Tony Gilbert some time ago acquired four Henschel 0-6-0WT locos from Chonburi Sugar Mill in Thailand. Two of these went to the United Kingdom in 1982, and it believed that a third has recently arrived at the Puffing Billy Museum in Victoria (see elsewhere this issue). The fourth loco was landed in Brisbane in early January and has been since moved to Dalby.

David Mewes 12/84, Alan Robert 1/85.

ISIS CENTRAL SUGAR MILL 610 mm gauge

(see LRN 41 p.4)

A visit to the mill saw all the operating locomotives in the shed or stabled under the road bridge at one end of the yard. Also seen was the out of use and engineless number 1, John Fowler 0-6-ODM 20776 of 1935 which has been painted a fluorescent yellow colour and which had been used for some kind of firefighting demonstration by Wormald fire Services.

Editor 1/85

MACKAY TOURIST CANE TRAIN PROJECT 610 mm gauge

Members of the Institute of Engineers (Australia) in Mackay have put forward the idea of a tourist railway, based on existing sugar industry track and equipment in the Mackay area. They see their role as that of catalyst for the project, which might be set up and developed by a tourist-oriented group. The train would be operated by a restored steam locomotive visiting sugar mills, historical sites and areas of environmental beauty.

Mackay Daily Mercury, 12/2/85.

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 44 p.10)

Repairs to Clyde 0-6-ODH *Melba 2* (64-377 of 1964) are part of the mill's maintenance programme this year. The locomotive was noted in the loco shed at the mill on 13 January reduced to frame and wheels only. At the mill's Annual General Meeting held in November, it was stated that the best return on investment for the mill at present would be further extensions to the tramline system in order to contain haulage costs as far as possible.

Mackay Daily Mercury 1/11/84, 22/12/84; Editor 1/85

MILLAQUIN SUGAR CO. PTY LTD, Millaquin Mill, Bundaberg 610 mm gauge

(see LRN 39 p.6)

All five Millaquin diesel locomotives were seen in the shed, some undergoing annual overhaul. Also being worked on, both with engines out, were Com-Eng 0-6-ODH FC3473 of 1964 and E.M. Baldwin 4wDH 4529 of 1973 (rebuilt E.M. Baldwin 8860-2-8-79 in 1979 and rebuilt Millaquin Mill 1980). These are the two locos from Qunaba Mill, which are sent to Millaquin each slack season.

Seen in the yard was an unpowered "DuPont Macspread" weed control vehicle (see LRN 41 p.6), built on a bin frame. Although apparently operational the unit had a half-completed canopy over the operator's position.

Bundaberg Foundry 0-6-2T 1 of 1952, retained by the mill for preservation, was noted in a building where work had started on the needle gunning of paint from the loco. This revealed the original green livery underneath the yellow latterly applied.

Editor 1/85

MILLAQUIN SUGAR CO. PTY LTD. Qunaba Mill 610 mm gauge

(see LRN 39 p.6)

The future of this mill is in question as the Millaquin Sugar Company states that is uneconomic at present. However it is intended to operate the mill during the 1985 season as long as a normal crop is available. A number of different rumours were circulating in Bundaberg in January as to how reassignments consequent upon a possible closure of Qunaba at the end of 1985 could be arranged between the three remaining Bundaberg sugar mills (Millaquin, Fairy _ ad & Bingera.)

Courier-Mail 12/2/85 via David Mewes, Editor.

MORETON CENTRAL SUGAR CO. LTD, Nambour 610 mm gauge

(See LRN 44 p.11)

A number of locomotives here have received new names and all main line locos now carry painted nameplates; a11 locos which had temporarily lost their names have had them restored. The alterations were as follows:

<i>Jamaica</i>	0-6-0DM	Baguley/RMP	3389	1954	(formerly <i>Innisfail</i>)
<i>Yandina</i>	0-6-0DM	Com-Eng	B1112	1956	(formerly 8)
<i>Dunethin</i>	0-6-0DH	Com-Eng	H1022	1958	(formerly <i>Kalbo</i>)
<i>Bli-Bli</i>	0-6-0DH	E.M. Baldwin	6-1257-1-7-65	1965	(formerly <i>Bli Bli</i>)

The standard livery is yellow with red buffer beams, and some locos have their engine compartment doors painted green.

Malcolm Moore 4wDM *Joe* (811 of 1942) has been fitted with a cab roof consisting of a half-cylinder section of steel. This loco is the exception to the standard livery, being painted yellow and red.

The two preserved locos, Malcolm Moore 4wPM *Sandy* (1058 of 1943) and Fowler 0-6-0T *Eudlo* (16207 of 1925) have been repainted in yellow and green respectively. *Eudlo* has also had steel plates welded onto its side tanks to cover ugly rust holes. It appears that this loco will be moved to a new plinth that has been constructed a few metres closer to the mill entrance than its present position.

Editor 1/85

QUEENSLAND PIONEER STEAM RAILWAY CO-OPERATIVE LTD, Swanbank. 1067 mm gauge

(see LRN 22 p.17)

During running days in the latter part of 1984~ Motor Rail "Simplex" 4wDM 11205 of 1965 named *Hornibrook* was borrowed from The Hornibrook Group _ at Bulimba, Brisbane (see LRN 17 p.5). This was necessary as the usual run-round facilities at the Swanbank end were unavailable and the carriages needed to be shunted to allow the ex QGR PB15 4-6-0 to run around its train. The loco was taken up to Swanbank each weekend by road transport.

David Mewes 1/85

B. & S. RADIC. South Coolum Road, Coolum 610 mm gauge

(see LRN 41 p.6)

These cane farmers are considering selling Ruston & Hornsby 4wDM 392120 of 1955, purchased from Racecourse Mill, Mackay, at the end of 1982. This is a 48 hp loco weighing 7 tons. It was originally built to 2 ft 8.5 inch gauge for Southern Portland Cement Ltd at Berrima Colliery, N.S.W. and was fitted for underground use in gassy mines.

A.Germanotta 12/84, B. & S.Radic 1/85

SUNSHINE PLANTATION PTY LTD, Forest Glen 610 mm gauge

(see LRN 32 p.10)

On the morning of 11 January, the green-liveried 4wDH SUGAR CANE TRAIN No.4 (Ruston & Hornsby 379072 of 1954 rebuilt E.M. Baldwin 7808-1-11-77 of 1977) was hauling a normal train of twelve four-wheel cars around the circuit of track. The ride takes about 15 minutes and when two trains are in operation they leave the station at 15 minute intervals. Continuous air brakes have been fitted to the cars in recent years, and the loco cabs have been fitted with new controls and instruments. Steepest grade on the line is 1 in 12 but the locomotives handle this hill with ease.

Editor 1/85

TINTAGEL MOUNTAIN TRAMWAY, Arcadia, Cooroy. 610 mm gauge

(see LRN 43 p.10)

During December/January, the section on the zig zag between the top and bottom points was completed and the top points installed. Further preparation work needs to be carried out on the formation before the line can be extended to the top of the mountain. Other heavy work to be completed during this work period was the relaying of the "farm straight" on timber sleepers bringing the entire line up to standard. The "Fairmont" car

was delivered to the railway towards the end of 1984. Although containing a few "Fairmont" parts from South Australia, this unit should really be described as being of new construction, having been built by Russell Savage in Mildura. It is painted yellow with yellow/black dazzle stripes at each end and fitted with headlights for night work.

Editor 1/85

TORBANLEA MINING MUSEUM 610 mm gauge

This museums owned by Mr & Mrs A.J.McRae (see LRN 20 p.5), contains a number of interesting displays, including details of the 49 mines which have operated on the Burrum coalfield, most of them with tramways. There is a simulated mining gallery, in which 5 *Rusty*, Bundaberg Foundry "Bundaberg Jenbach" 4wDM 19 of 1956, ex Burgowan No.13 Colliery, is displayed behind glass with one wooden coal skip. A number of similar skips are to be seen elsewhere around the site.

The museum is a few hundred metres off the new Bruce Highway by-pass of the town and is open daily from 9.30 am to 4.00 pm.

Editor 1/85

SOUTH AUSTRALIA

NATIONAL TRUST MOONTA BRANCH. Wheel Munta Mining Museum, Moonta. 610 mm gauge

(see LRN 35 p.12)

It is reported that government funding has been granted for the construction of a second locomotive for use at the museum.. The existing loco is a 4wPM which was acquired from the Maylands, Perth, works of Metropolitan Bricks, where it had originally been constructed.

Arnold Lockyer 2/85

TASMANIA

ELECTROLYTIC ZINC COMPANY of AUSTRALIA LTD, Williamsford 610 mm gauge

(see LRN 6 p.10)

The 86-year old balanced incline lending from the historic Hercules mine has been closed. The incline was used to transport lead-zinc ore in a pair of bogie wagons to the start of the aerial ropeway to the EZ mill at Roseberry. This too has been closed as a road has been constructed to the top of Mount

Read to handle ore transport.

Ralph Proctor 3/85

THE HYDRO ELECTRIC COMMISSION

Tenders have been sought for the supply of two items of railway associated equipment. One is for the design, supply, delivery to site and commissioning of one portal type rail-mounted drill jumbo supporting hydraulic drifters. The second is for the supply of road barriers for a railway crossing. It is not clear if the two tenders associated in any way.

Weekend Australian 23-24/2/85

IDA BAY RAILWAY CO. PTY LTD. Lune River. 610 mm gauge

(see LRN 39 p.6)

The composite Krauss 0-4-0T (chassis 5800 with boiler from 5682, both of 1907) from the Second River Tramway, Karoola (see LRN 39 p.7) will be in use on the Ida Bay Railway between 17 March and 14 April. Also travelling to Lune River will be the guard's van constructed for use at Karoola. By the start of March, a loading ramp had been prepared for loading the stock at Karoola for transport south. It is hoped the period of «team running will provide a much-needed publicity and revenue boost to the Ida Bay line, which has had difficulty attracting sufficient patronage to continue as a viable operation. (The Editor looks forward to receiving reports from this and other Tasmanian sites as a result of the LRRSA tour which will take place over the Easter weekend!)

Ralph Proctor 3/85

MOUNT LYELL MINING & RAILWAY CO. LTD, Queenstown. 610 mm gauge

(see LRN 44 p.13)

Fears of the immediate closure of the Mount Lyell mine have been averted with the announcement of an agreement involving financial assistance from the Tasmanian government. The government was to buy \$5 million of company assets while the Hydro Electric Commission would pay \$5 million for the Lake Margaret power scheme, which will be leased back to the company. It is expected that these steps will enable the mine to remain open until 1989, but the 100 employees retrenched in January will not get their jobs back.

Australian 7/2/85.

VICTORIA

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway. 762 mm gauge

(see LRN 42 p.10)

NA class 2-6-2T loco 6A (Newport 1901) was due to be displayed in the Melbourne city square during December as the centre piece for a Dandenong's promotion. Sister loco 7A (Newport 1905) has had its smokebox replaced and in addition had some tubes replaced as well as having a new brick arch and steam pipe seals fitted.

Steady work has been proceeding on the rebuild of 12A (Newport 1910). Many parts have been prepared ready for fitting and new side tanks have been delivered while the boiler has had its inner firebox fitted. Tasmanian Drewry 0-6-0DM V12 has arrived, converted to 2 ft 6 in gauge, with transmission adapted to suit. Work has been done at Belgrave to adapt the brake rigging to the narrower gauge.

Rolling stock has also been receiving attention. Mount Lyell car 1NBL has been fitted with brass MOUNT LYELL plates and the other Lyell cars will receive names from various Mt. Lyell stations. Car 2NBL is being upgraded to VIP standard following the success of 1NBL in this role. 135NQR was expected to be in service for Christmas converted from open wagon to a covered passenger vehicle of the type commonly seen in use for excursions in previous days.

The QG hopper wagon ex Tasmania (regauged from 3 ft 6 in) has had frame modifications carried out and bogies fitted. Work is still needed to design and fit discharge and draft gear. Three more ballast wagons have arrived from Tasmania for conversion. Cattle Wagon 13NM has had a floor overhaul and the metal side and roof frames painted. Work has started on the fitting of new wall timbers.

Work on the Climax 4w+4wTG loco (1694 of 1928) is slowly moving towards completion. It is expected that the bogies will now be in position under the loco, with work continuing on air pump and valve gear.

A Malcolm Moore/T.A.C.L. 4wPM loco (19568 of 1928) ex Forests Commission of Victoria has lain dismantled outside the Emerald Carriage Shops for up to ten years since its arrival from Walhalla. It is possible it may be reassembled for transfer to the Menzies Creek Museum if people willing to undertake the job can be found.

Narrow Gauge 95 & 96 via Arthur Winzenreid.

PUFFING BILLY PRESERVATION SOCIETY gauges various

(see LRN 42 p.10)

2 ft gauge Hudswell Clarke 0-4-0ST 1559 of 1925 was returned to running condition following the refitting of its eccentric sheaves repaired at Belgrave. On 1 August, ex Tasmanian Drewry 0-6-0DM V9 arrived at the museum for storage and display. This 3 ft 6 in gauge loco will be used for spares for the regauged V12 to be used on the main line of Puffing Billy. It is understood that a 750 mm gauge Henschel 0-6-0WT from Thailand was landed in Melbourne recently for display at the museum.

Narrow Gauge 95 & 96 via Arthur Winzenreid, Alan Robert 1/85.

WESTERN AUSTRALIA

KIA ORA GOLD CORPORATION N.L., Marvel Loch Gold Mine. 610 mm gauge

This is an underground gold mine east of Marvel Loch township. Access is by a vertical shaft and haulage of waste material and ore on the levels is by side tipping and Granby trucks hauled by battery-electric locos on 2 ft gauge track.

Anthony Weston 1/85

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC., Bennett Brook Railway, Caversham. 610 mm gauge

(see LRN 44 p.14)

The official opening of the railway took place on 8 December. The former Claisebrook station (now Central) looked very impressive with the Planet 0-4-0DM loco (F.C. Hibberd 2150 of 1939) and two QBB coaches at the platform. Western Australian government minister Peter Dowding declared the line open and drove the first train out of the station. Approximately 500 passengers were carried on the opening day, and some good weekends have been experienced since, especially when the weather is mild. Several hired specials have been run, the most successful being a Father Christens special for Telecom.

Work on the third QBB carriage is progressing well, and the building of a smaller passenger vehicle is being investigated. 1964-built 3 ft 6 in gauge Gemco-Funkey 4wDM PW27 from Wyndham Jetty has arrived at the Association's Mussel Pool depot at Caversham.

Rusty Rails 1/85.

MEETINGS

MELBOURNE

Alan Williams has kindly consented to show a sample of his extensive collection of early movies dealing with the running of the Gembrook Narrow Gauge line soon after the formation of the Puffing Billy Preservation Society.

The films Alan will be showing concentrate mainly on the section of line from Upper Ferntree Gully to Belgrave, now converted to 5 ft 3 in gauge, and also the area around the site of the landslide. This promises to be an excellent evening's entertainments so we look forward to seeing a large turnout of our Melbourne members.

LOCATION: Ashburton Uniting Church Hall, Ashburn Gve, Ashburton

DATE: Thursday 11 April at 8:00 PM

SYDNEY

The district around Bulladelah for those interested in tramways conjures up images of the many timber railways in the surrounding area. Colin Wear has been interested in this area and will be talking at our April meeting on his researches there.

LOCATION: Government and Transport Club, Regent St, Sydney

DATE: Wednesday 24 April at 7:30 PM

ADELAIDE

Please note that the venue for Adelaide meetings has had to be changed from the Mile End Railway Museum to 84 King William Street, KENT TOWN. Please note also that the April meeting will be held on 11 April at 8:00 PM, NOT 4 April.

Any queries to Arnold Lockyer (address on front cover).

EDITORIAL

Editing LRN is a time-consuming but enjoyable business. It is especially enjoyable because it brings me into contact with rail enthusiasts throughout Australia, and because there is satisfaction in seeing information recorded, which otherwise would be lost or inaccessible. Thanks to all those who continue to contribute in whatever way - keep up the letters and the phone calls.

Spare a thought for those responsible for the distribution of Society publications including LRN. Occasionally foul-ups do occur, but remember that the people who prepare the mailings do so on a completely volunteer basis, and get for less satisfaction from it than that which comes to Editors and the like. Without these workers there would be no LRRSA worthy of the name, so let's all be grateful to them and if something does go wrong, just contact the Victorian Secretary. The problem can usually be righted fairly easily.

RESEARCH COLUMN

Tarwin Meadows Milk Tramway, Melbourne Zoo Horse Tramway

Information is requested on two rather different tramways which operated in Victoria. The first is a milk tramway which operated in the Tarwin Lower - Tarwin Meadows region near Venus Bay in South Gippsland around 1936-7. This line is believed to have served about twelve farms in the district. The second tramway was a horsedrawn tram which operated between Royal

Parade and Melbourne zoo in about 1920. Anyone who can provide any information about either of these is asked to contact David C. Lowe, School Road, Erica 3825, Victoria.

Bulong Ore Reduction & Tramway Co.

David Whiteford is researching the Bulong Ore Reduction & Tramway Co., which had a brief existence on the Eastern Goldfields of Western Australia between about 1896 and 1898. It is thought to have had a German steam loco. If anyone can assist, please write to David at 102 Cohn Street, Kewdale 6105, Western Australia.

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

BAGULEY-DREWRY LTD, Burton-on-Trent, U.K.

This company ceased operation as a locomotive and railcar manufacturer at the end of 1984. A combination of two long-established firms, it supplied a loco to Fiji in recent years while its constituents supplied a number of interesting locomotives, both steam and diesel, as well as petrol railcars to many users in Australia and other parts of Oceania over a long period.

Narrow Gauge News, 12/84 via Bob McKillop

NEW SOUTH WALES

LACHLAN VINTAGE VILLAGE, Forbes 610 mm gauge

(see LRN 44 p.9)

After years of controversy and closures this tourist attraction was purchased by local businessman Dennis O'Keefe in late 1984, and he has begun the slow task of building up the facilities which had become very run down. The 2 ft gauge railway had not operated for some years, and all three steam locos were unserviceable.

John Fowler 0-4-2T *Britannia* (ex Tully Mill) now with shortened side tanks has been repaired painted green, and returned to service under the care of local steam enthusiast John McNaught. This loco operated over the 1.5 km section from Blackridge Station to the Blacksmith over the Easter holiday period. It is planned to operate the railway on holidays and weekends between April and September.

The second Fowler 0-4-2T, also from Tully Mill, is kept for spares but it is planned to restore Bundaberg Foundry "Bundaberg Fowler" 0-6-2T 4 of 1952, for return to service in 1986. Some 130 m of additional track is required to

complete the 5.6 km main lines and priority is to be given to this task plus the installation of a "wye" to enable turning of the locos.

(There seems to be some confusion about the identity of the Fowlers here. Bob McKillop identifies them as formerly Tully Mill No.4 and No.5 respectively, which would make them 16340 /16341 of 1924. However, there has been doubt as to whether it was No.3 (16339 of 1924) or No.4 which came here, and secondly which one is the one restored to service. Can a reader settle this question? - Ed.)

Bob McKillop, 4/85

MUSEUM OF APPLIED ARTS AND SCIENCES. Castle Hill 1435 mm gauge

It is understood that the Museum of Applied Arts & Sciences' Manning Wardle 0-4-0ST 1781 of 1911 ex Metropolitan Water Sewerage and Drainage Board Ryde Pumping Station has been at Thirlmere for about six months for work to be carried out under contract. It was hoped that the loco could be restored to working order for operating purposes but it appears that significant boiler problems may have been encountered.

R.J.Pearman 4/85

PERISHER SKITUBE JOINT VENTURE, Little Thredbo 1435 gauge

This project involves the construction in Kosciusko National Park of a standard gauge Abt rack railway from Little Thredbo to Perisher Valley with an extension to Blue Cow, east of Guthega.

Above the snow lines the line will be in a five metre diameter tunnel. The ruling gradient will be 1 in 8. The first section from Bullocks Terminal to Perisher Valley, to be opened by winter 1986, will be 3.3 km in length, climbing 412 m. The tunnel entrance will be above the Thredbo River, which will be crossed by bridge. The second section, all in tunnel, will be completed in 1987 and will connect Perisher Valley with Blue Cow, a distance of 2.64 km. In this section, the line will rise 180 m.

The four trains will consist of electric multiple unit vehicles running on single track and using passing loops. Each car will have a capacity of 225 passengers with a basic two-car set capable of being extended to four cars. Trains will depart from Bullocks Terminal every 12 minutes in peak periods, and take 10 minutes to reach Perisher Valley, with a further 5 minutes travelling time to Blue Cow.

Colin Harvey 3/85

RAIL TRANSPORT MUSEUM. Thirlmere

See MUSEUM OF APPLIED ARTS AND SCIENCES

SIMSMETAL, Mascot 1435 mm gauge

(see LRN 37, p.6)

Ruston & Hornsby 0-4-0DM 313393 of 1952 was recently noted still present at this site, very much out of use. It was also noted that State Rail Authority 44-class diesels are being scrapped here.

R.J.Pearman 4/85

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway. Woodford 610 mm gauge

(see LRN 43, p.6)

The tubes have been removed from the boiler of Bundaberg Foundry "Bundaberg Fowler" 0-6-2T 5 of 1952. This has revealed the boiler to be in excellent condition and new tubes will be fitted when they arrive from the manufacturer.

Two buildings have been acquired from the closed QGR Northgate workshops for re-erection at Woodford. The first is a small weatherboard hut that was used as a first aid centre and will be erected on the station platform at Woodford to act as a temporary ticket office. This was removed to Woodford on 10 March. The second building is a 37 feet by 18 feet shed fitted with a travelling crane, which will be erected to serve as a workshop. This was removed from Northgate by Society volunteers at the end of April.

Durundur Railway Bulletin 3/85; David Mewes 4/85.

MACKAY CO-OPERATIVE MILL MERGER PLAN 610 mm gauge

Racecourse Mill cane train hauled by a Clyde DHI-71 0-6-0DH crosses Sandy Creek bridge near Mackay, Queensland

A merger of all five co-operatively owned mills in the Mackay district is being examined by a special task force. The mills involved are Cattle Creek, Farleigh, Marian, North Eton and Racecourse. Such a move would enable the rationalisation of milling and transport facilities to make the local industry more economic. Tramline links would be fairly easy to establish, with the exception of Farleigh Mille, which has a very extensive system.

Mackay Daily Mercury 23/4/85; Editor

COYA CONSTRUCTIONS PTY LTD. Moggill 610 mm gauge

This Brisbane-based firm of underground mining engineers purchased two 5-ton 4-wheel battery-electric locomotives from the Melbourne & Metropolitan Board of Works in 1973. Numbered 327-2021 and 327-2022, both were originally purchased new in 1968. It is unknown at this stage where these two locos have been used by Coya Constructions.

Mike McCarthy 4/85; Editor

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 42 p.9)

The Macspred Cane-Pak herbicide rail unit observed at Plane Creek Mill in 1984 (see LRN 41 p.6) was noted at Farleigh Mill in April, still mounted on a cane truck chassis.

Avonside 0-4-0T 1909 of 1922 had gone from its accustomed position in the mill yard. It is understood that it has been placed on loan to local vintage machinery enthusiast Eric Gibson, who intends to restore it, at least for static display.

Barry Sheedy 3/85; Editor 4/85

TONY GILBERT. Dalby 750 mm gauge

(see LRN 45 p.10)

Henschel 0-6-0WT 29583 of 1956, ex Chonburi Sugar Mill, Thailand number 104, is undergoing restoration in Dalby. Overall condition is very good, due in part to the fact that the loco had only been used for about 3 months per year over a ten year period before being placed into store. It is hoped to have the loco in steam soon.

Plans are being looked at to have an operating line in the Dalby district, probably to be run in collaboration with a service club. This will mean the construction of up to three bogie carriages, and the laying of track.

Any reader interested in viewing the loco is welcome to do so as long as they make the necessary arrangements with Tony in advance (phone 074

62 2204). Likewise anyone interested in loco restoration, building carriages, track laying or narrow gauge railway operations is encouraged to contact Tony. Suitable wheelsets for regauging are also sought.

Tony Gilbert 4/85

GOLDEN PLATEAU GOLD MINE, Cracow

What appears to be a Jenbach 4wDM loco shunting on the surface at the now closed Golden Plateau Gold Mine, Cracow, Queensland.

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 45 p.10)

"Repairs" to Clyde 0-6-0DH *Melba 2* (64-377 of 1964) will in fact amount to the construction of a new loco. As a result of an accident suffered late in 1984, the frame was found to be buckled and beyond economic repair, so the insurers were prevailed upon to allow the construction of a new mainframe and the fitting of all re-useable parts. Accordingly, wheels, springs, brake gear, engine, radiator, and gearbox were all recovered and sent to E.M. Baldwin & Sons at Castle Hill, Sydney for incorporation in the replacement loco, which

is expected to be delivered to the mill in mid-June. The old frame was seen in the mill yard during April, and will probably be disposed of for scrap.

Len Heaton 4/85, Editor

LIONS PARK, Bruce Highway. Nambour 610 mm gauge

(see LRN 22 p.15)

Dick Kerr 0-4-0IST *Valdora*, built in about 1894 for Farleigh Mill, later acquired by Racecourse Mill, and purchased by Moreton Mill in 1937 (see cover LR 88) is "preserved" here. Unfortunately its condition has deteriorated over the years but it is still worthy of examination as a most unusual type of locomotive.

Greg Morris 4/85

MORETON CENTRAL SUGAR CO. LTD, Nambour 610 mm gauge

(see LRN 45 p.11)

The new plinth adjacent to the mill entrance besides "preserved" locos Fowler 0-6-0T *Eudlo* (16207 of 1925) and Malcolm Moore 4wPM *Sandy* (1058 of 1943) was constructed for the famous Nambour *Shay* (Lima 2091 of 1908) a two-truck Shay, which until 1944 worked with a similar loco on the steeply-graded Mapleton Tramway connected to the Moreton Mill system. This locomotive had been on display at the Child Care Centre opposite the mill for many years (see LRN 22 p.15) and has now been placed in a far more photogenic position. It is believed that some overdue cosmetic restoration will be carried out on the loco before long.

Greg Morris 4/85

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 45 p.8)

Commonwealth Engineering 0-6-0DH D4 (FB3169 of 1963) has been fitted with a new insulated cab as part of the slack season maintenance programme at the mill. Previous new cabs fitted to the Com-Eng diesels at this mill were supplied by Hockey Engineering, but the mill itself constructed the one fitted to D4. One major design difference is that the Hockey cabs have fixed front and rear cab windows, while the new cab has opening windows similar to those fitted to E.M. Baldwin cane locomotives. A number of the locomotives have also been repainted in the mill's livery of yellow with red frames. This includes tiny 3-ton E.M. Baldwin 4wDM 4-473-3-63 of 1963 used by the navvies and unnumbered by the mill. Still dumped in pieces in the mill yard is Motor Rail Simplex 4wDM 21503 of 1953. The mill has been purchasing

new chopped cane bins and new units numbered from B3601 to B3693 were noted in the mill yard.

Editor 4/85

**QUEENSLAND PIONEER STEAM RAILWAY CO-OPERATIVE LTD, Swanbank
1067 mm gauge** (see LRN 45 p.11)

Hornibrook's "Simplex" 4wDM loco (Motor Rail 11205 of 1965) was used on running days in October, November and December 1984, due to subsidence of part of the balloon loop at Swanbank. It was used for shunting purposes only and handled the three cars with ease.

The restoration of Perry 0-4-2T *Kilrie* (265 of 1927) is proceeding well. The frames have been primed, the axle boxes are in good order, and the boiler has been found to be in good condition.

Retubing will hopefully be done in the near future, and the loco reassembled. It is hoped that it may be available as reserve power before too long.

Wayne Hughes (QPSR Co-op) 3/85

ROYLEN ENTERPRISES PTY LTD, Brampton Island 762 mm gauge

(see LRN 39 p.6)

This tourist island with its 2 ft 6 in gauge railway has been sold to Trans-Australia Airlines for \$6 million after being under the control of the McLean family for 22 years. Handover date was to be 1 May, and the operation will trade as Brampton Island Pty Ltd. It is expected that considerable new development will be undertaken on the island under its new owners with \$7m to be spent over the next three years.

Mackay Daily Mercury 26/2/85, 30/4/85.

ST.JOSEPHS CATHOLIC SCHOOL, Mount Isa 1067 mm gauge

A rationalisation of Catholic educational facilities in Mount Isa involves this school and the adjacent church being closed and the sale of the premises to Mount Isa Mines, who are expected to use them for accommodating visitors. Mount Isa Mines number 1 loco, Peckett 0-4-0ST 1069 of 1905, was donated to the school following its withdrawal in 1955, and is believed to be still there.

The Leader, 31/3/85; Editor.

SUNSHINE PLANTATION PTY LTD, Forest Glen 610 mm gauge

(see LRN 45 p.12)

Privately preserved here in static condition is John Fowler 0-6-0T *Coolum* (16036 of 1924) ex Moreton Mill. It is in good condition and in a good position for photographs.

Greg Morris 4/85

TASMANIA

ELECTROLYTIC ZINC COMPANY of AUSTRALIA LTD,, Williamsford 610 mm gauge (see LRN 45, p.13)

The official closure of the 1.6 km Williamsford Haulage took place on 20 February, 1985. Both the haulage and the associated ropeway had been out of use for about six months before this. The official decommissioning included runs with both ore and man riding cars, which were recorded on video on behalf of EZ in order to provide a lasting record, which will become part of a documentary film "Williamsford - the way it was". Road transport now takes the ore to the treatment plant at Primrose, and there are known reserves for at least five years more mining on Mount Read. Work has commenced in dismantling both the haulage and the ropeway, although a section of ropeway is being retained where it crosses the Murchison Highway. It is understood that parts of both the haulage and ropeway will be displayed at the West Coast Pioneers Memorial Museum at Zeehan.

The Advocate 21/2/85; The Weekender 9/3/85; via Chas. Goodwin.

THE HYDRO-ELECTRIC COMMISSION 1067 mm gauge

(see LRN 45 p.13)

Tenders have been invited for the supply of rail equipment to be used in tunnelling work on two west coast power schemes which have been brought forward as a result of the cancellation of the Gordon below Franklin Scheme.

The Anthony River Scheme and the King River Scheme each involve the construction of a 6 km tunnel through hard rock.

Equipment required will include five 20-tonne diesel hydraulic locomotives, 28 heavy duty 12 cubic metre side dump muck cars, up to eight timber-decked flat cars, muck car tipping equipment, two personnel carrier modules, and two electric powered rail mounted loaders, all of 3 ft 6 in gauge. All "hydro" tunnelling work for many years has been carried out on "rubbers". It is believed that the last rail tunnelling job done was about 18 years ago on the Lemonthyne Scheme in northern Tasmania.

(Perhaps this is the scheme referred to in LRN 4 p.7, probably carried out by Citra Constructions - Ed.)

Weekend Australian, 16-17/3/85; H.E.C. 4/85

IDA BAY RAILWAY CO. PTY LTD, Lune River 610 mm gauge

(see LRN 45 p.13)

A most successful period of steam running using Krauss 0-4-OT 5800 from the Second River Tramway extended from 16 March to 14 April, with a steam passenger service operating for 30 consecutive days. Total distance run was 1104 km, and total number of passengers hauled was 2730, a considerable increase in normal business considering the annual patronage is usually around 6500.

Most trains consisted of the three Ida Bay bogie passenger cars and the DB van from Karoola. On an average 14.5 km return journey, the loco consumed 455 litres of water and burned approximately three wheelbarrow loads of old railway sleeper ends (cut to approximately 300 mm length).

Two night time runs were made for enthusiast groups, and the Pyle National turbo generator powering the cab and head lights added to the atmosphere of the occasion. A special works train, was also run for enthusiasts, and consisted of the Krauss loco hauling some 4-wheel limestone trucks, a couple of side tippers and the DB guard's van at the rear. The loco and van returned to Karoola on 15 April.

Unfortunately, in spite of the success of the steam running, Mr Michael Williams, operating leaseholder of the line, has put his lease on the market for \$60,000 for personal reasons. Mr Williams commented that the Tasmanian Government ought to take more responsibility for financial help in upgrading the railway and local accommodation, and promoting the line to make the operation more viable.

The Mercury, 10/4/85 via Ralph Proctor; Ralph Proctor 4/85

THE MOUNT LYELL MINING & RAILWAY CO. LTD 610 mm & 900 mm gauge

(see LRN 45 p.14)

Tenders have been invited for the sale of a quantity of mining equipment, including a number of locomotives and other rail items, closing on 8 May. New and unused equipment purchased in 1975 for a planned underground mine expansion on 17 level which was never carried out comprises 900 mm gauge locomotives, mine cars, and tippler. The locomotives are three 30-tonne four-wheel battery/overhead wire electrics supplied by Siemens AG. It is understood that Siemens do not manufacture complete locos, but the actual builder is unknown at this stage.

The approximate dimensions of the locos are 8.8 m long over buffers, 2.1 m high and 2 m wide. Taking current from 500 volt overhead wires, they have 168 kw at their disposal with a maximum speed of 30 km/h, and can also run using their own battery power. Wheelbase is 3 m allowing them to negotiate a 25 m radius minimum curve.

There are also 30 Hudson "Rockflo" bottom dump ore cars, weighing 9.5 tonnes each empty, and with a capacity of 9.5 cubic metres of ore (weighing approximately 15.5 tonnes). Approximate dimensions are 5.7m long over couplers, 1.9 m high and 2.1 m wide. 15 of these cars are fitted with Westinghouse air brakes.

The system designed to be used involved 25 loaded ore cars to be hauled by two locos, one at each end of the 690 tonne loaded train, at a maximum speed of 24 km/h, between ore passes and unloading station, a round trip of approximately 1700 m on a continuous basis, seven days a week with one 8-hour maintenance shift. Designed capacity of the system was 2.5 million tonnes per year, with initial production expected to be 1 million tonnes. Operating conditions were to include the presence of dust, slime, falling waters and water lying over the rails to a depth of 30 mm, as well as falling rocks from loading chutes.

Used 2 ft gauge rail equipment also available for tender includes eight ASEA 9-tonne battery/overhead wire electric locos, Type LGBT9, two Gemco 3-tonne battery electric locos, two Atlas Copco LM250 bidders, three Hagglund HRST1158 shuttle cars and two Eimco 915 LHD loaders.

The remaining 2 ft gauge locomotives used on the 11 level at the mine comprise what are believed to be two English Electric 10-tonne battery/overhead wire electric locos, serial numbers stated to be 743 and 860, four Mancha AXType 4-tonne battery electrics, and two 14.5 tonne Gemco tandem battery/overhead wire electric locos. 550v is used for overhead power on the 2 ft gauge lines. As the ASEA locos, now for sale, were the mainstay of ore

transport on the 11 level, it is clear that operations are being scaled down considerably.

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM 610 mm gauge

(see LRN 44 p.13)

In early April it was noted that the track into the former Alexandra goods shed has been completed and the two passenger carriages moved inside. New earthworks extend from a set of points on the goods shed track around to the former passenger platform with some track having been laid over this formation. Further along the goods shed track is another set of points, though there is no indication of where the track from them will be laid.

Darryl Grant 4/85

TONY GILBERT, Melbourne 750 mm gauge

The report of a Henschel 0-6-0WT arriving at the Puffing Billy Museum (see LRN 45 p.15) was premature. The loco has arrived in Melbourne, but is currently stored privately, awaiting a decision regarding its future. Owned by Tony Gilbert, of Dalby, Queensland, the loco is Henschel 25427 of 1956, ex Chonburi Sugar Mill, Thailand number 103. It is believed this loco may have come to Chonburi from the Srimaharacha Timber Company. The loco is in good conditions and it is hoped to have it in active use before too long.

Tony Gilbert 4/85; Ray Ellis.

WESTERN AUSTRALIA

KUNUNURRA CHILD CARE CENTRE 1067 mm gauge

Thought to be preserved here is Com-Eng 4wDM PW25 (GB1045 of 1960) ex Public Works Department, formerly used on the Wyndham Jetty (see LRN 29 p.12).

David Whiteford 4/85

LESCO PTY LTD, Osborne Park 508 mm gauge?

An advert in the machinery section of the classifieds in the West Australian of 25 August 1984 read

“Mining equipment : bidders u/ground, Locomotives carriages air legs air winch elect motors and starters”.

Investigations showed the vendors were Lescos and inspection revealed 3 Gemco side tip box hoppers of around 20 inch gauge, one long hopper frame, and one hopper frame(possibly Gemco) without wheels. The locos had already been sold and it was said they had come from Marble Bar in the Pilbara following closure of a gold mine, but the buyer's name was not revealed. The price tag on the Gemco hoppers was \$1200 each! Also at Lesco was a Talku 500 loader (bogger) number 30362 of 1970. Can any reader identify the Marble Bar rail operation?

David Whiteford 4/85

PUBLIC WORKS DEPARTMENT OF WESTERN AUSTRALIA. Wyndham 1067 mm gauge

(see LRN 29 p.12)

All PWD loco stock has been withdrawn from service here and disposed of to various bodies (see elsewhere this issue). There is still some wagon stock left behind here for use by the Marine and Harbours Department.

David Whiteford 4/85

PUBLIC WORKS DEPARTMENT of WESTERN AUSTRALIA. Carnarvon 1067 mm gauge

(see LRN 29 p.11)

Light painted Motor Rail "Simplex" 4wDH PW28 BANANA *Clipper* (9040 of 1952) has been sent from Wyndham to take over rail operations at Carnarvon. Similar loco 4wDM PW21 (Motor Rail 9096 of 1955) was still at Carnarvon in September 1984 and was to be cannibalised for spare parts for PW28.

David Whiteford 4/85

SHANTYTOWN, Kelmscott

This is a private museum which was developed by Jan Hinloopen. Unfortunately it is now only open for school visits due to lack of financial support, and the owner's illness. A mock mine shaft includes a couple of lengths of skip rail and a few hoppers, and is the main item of rail interest in the museum.

David Whiteford 4/85

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC. Bennett Brook Railway, Caversham. 610 mm gauge

(See LRN 45 p.15)

Another Community Employment Programme Work Scheme has been approved. It is a Locomotive Reactivation and Restoration Scheme employing nine people. The object of the scheme is to overhaul the Orenstein & Koppel

0-4-4-0T Mallet (2609 of 1907), overhaul or externally renovate the Krauss 0-4-0T (2181 of 1889), regauge and service the Gemco-Funkey 4wDM of 1964, regauge and overhaul the Ruston & Hornsby 4wDM (404982 of 1957), both ex 3 ft 6 in gauge, finish overhauling and service the ex-Lake View and Star F.C. Hibberd "Planet" 0-4-0DM (2150 of 1939), and service the F.C. Hibberd "Planet" 4wPM *Yellow Rose* (2055 of 1937 or 3428 of 1949), the Maylands Brickworks built 4wPM, and the Whitemans Brick "Ridley" six-wheeled petrol loco.

Yellow Rose has been restored with help from the Metropolitan Regional Parks Authority, and will be used by their C.E.P. gang in finishing the 3.6 km loop line and bridge construction.

Stripping down of the Orenstein & Koppel Mallet loco has revealed many parts still serviceable. Tanks and cab have been removed showing that the boiler shell is in reasonable condition. Trains are in regular operation between Mussel Pool and Central. Anyone wishing to volunteer for train operations should ring Lindsay Watson on 294 1148 anytime.

Most exciting news is that the Association has purchased two steam locomotives from South African Railways for operation on the railway. These are two members of the massive NG15 class of 2-8-2 locomotives used on the Avontour lines and originally constructed for use in South West Africa (Namibia). The locos concerned are NG118 and NG123 which were purchased in 1984 and are currently awaiting shipping. In working orders loco weight is 36.7 tons and tender 26.45 tons. Both were built by the Belgian works of the Societe Anglo-Franco-Belge. NG118 was subcontracted by Henschel and bears their number 24476 of 1938. NG123 is Anglo-Franco-Belge 2670 of 1951. It is hoped that they may arrive in Fremantle later this year.

Rusty Rails 4/85; Lindsay Watson 4/84; Ray Ellis 4/84

WYNDHAM - EAST Kimberley SHIRE COUNCIL, Wyndham 1067 mm gauge

Gemco-Funkey 4wDMPW27, built in 1964, was donated to this Shire Council for preservation by the Public Works Department from the Wyndham Jetty (see LRN 29 p.12). However, following a request from the Western Australian Light Railway Preservation Association, the Council agreed to accept Com-Eng 4wDM PW26 (GB1046 of 1960) instead.

David Whiteford 4/85

OVERSEAS - NEW ZEALAND

OHAI RAILWAY BOARD. Wairio 1067 mm gauge

The railway runs 13 km from a coal screening plant at Morley near Ohai, to the New Zealand Railways at Wairio where the loco shed, workshops and offices are located. The line was visited on 21 February, 1985. Locos are:

1	0-6-0D	Mitsubishi	1475	1967
2	0-6-0D	Mitsubishi	1476	1967
-	0-6-0D	?	?	?

Anthony Weston 3/85

STATE COAL MINES. Morley State Mine. Ohai 610 mm gauge

This mine was visited on 21 February 1985. It is a small underground coal mine one kilometre north-west of Ohai. Access is by portal and inclined drift following the coal seam.

Coal is produced from two sections. In one, blasted coal is dumped by scraper loader either direct into "boxes" or onto a belt conveyor and thence into boxes. In the other sections blasted coal is washed or "hydro mined" to a central collection point where it is dewatered and loaded into boxes. The boxes are half-tonne capacity skips with rounded bottom sheet steel bodies and wooden frames running on 2 ft gauge track. Rail weight is 10 and 15 kg/m.

Haulage is by single drum electric winches and main ropes. A main and tail rope haulage with a large double drum winch is out of use. The boxes are hauled to a transfer point undergrounds made up into sets of 20, and hauled one kilometre to the surface. Here they are unloaded in a rotary tippler.

Anthony Weston 3/85

WELLINGTON CITY COUNCIL, Mount Albert Sewer Tunnel, Kilbirnie 610 mm gauge

There is an adit through a house basement and a tipping point for spoil. A 4-wheel battery-electric loco and side tipping trucks were noted in use on 2 ft gauge surface tracks.

Anthony Weston 3/85

MEETINGS

SYDNEY

Ross Mainwaring has for some time been researching the tramways and inclines of Hillgate, and

will address the June meeting on the mining tramways of this district.

LOCATION: Government Transport Club, Regent Street, Sydney.

DATE Wednesday 26 June at 7:30 PM

MELBOURNE

It's time again for a slide night, so you are all urged to fossick around in the dark recesses of your cupboards and drawers for 20 or so slides of tramway or railway interest, and bring them along to the next meeting. Never mind if they are not of first class quality because there will be lots of people there who will find them interesting anyway.

LOCATION: Ashburton Uniting Church Hall; Ashburn Gve, Ashburton

DATE: Thursday 13 June at 8:00 PM

ADELAIDE

Arnold Lockyer has details of the next meeting and may be contacted at 6 Dunedin St, Dover

Gardens.

LOCATION: 84 King William St. Kent Town

DATE: Thursday 6 June at 8:00 PM

MEMBERSHIP

Many thanks to those members who responded so promptly to the call for renewals. There is no doubt that the new procedure introduced this year has proved its worth. Renewals at this stage are far up on what we have come to expect and we are looking forward to the new year with some confidence in knowing what our membership is.

However, it seems that some members did not notice the inclusion of the renewal note in the April mailout (it was shoved inside the cover of *Light Railways*!) and were upset at the receipt of a reminder note in the mail early in June. It is possible of course that one or two members might have missed out on receiving a renewal note, but one also wonders whether some members discard the notices received with the magazines without reading them.

Therefore we ask two things of those members who do not look beyond their issues of LR and LRN when opening their envelope. Firstly please do read the notices enclosed; they may include news of interest to yourselves as well as items of importance. Secondly, if you have views on how to improve the running of the Society, or some aspect of it, please drop a line to the Victorian Secretary. The Council is very keen to hear your ideas on how we can improve the worth of a LRSSA membership.

Mike McCarthy - President LRRSA

NOTES, CORRECTIONS AND COMMENTS

Lachlan Vintage Village. Forbes

(see LRN 46 p.2)

Bob McKillop writes to say that the number 16341 is to be found on the John Fowler 0-4-2T currently kept for spares while his informant John McNaught was definite the operating loco is 16340.

Richmond Vale Preservation Co-operative Society

(see LRN 45 p.7)

Ken McCarthy has supplied details of the history of the J & A Brown Cadillac rail motor since the early 1960s. It was purchased then by two brothers members of the South Pacific Electric Railway Co-operative Society Ltd (SPER), to save it from scrapping.

The unit arrived at Loftus in October 1963 in a sorry condition. A goods vehicle had once been shunted into it at Pelaw Main. In spite of this, mechanical repairs were soon put in hand, and it operated for the first time at Loftus in November 1963. Bodywork repair and painting took place in time for it to be used in regular museum operation from 1 January 1964, taking advantage of a church summer camp being conducted nearby to produce income for the museum.

Before March 1965 when electric passenger running started officially, the Cadillac carried the bulk of museum passengers on the first Sunday of each month. However, it was moody, especially to start. On 3 January 1965, passengers got a preview of electric services when tram 1345 had to rescue the passengers and Cadillac marooned at the outer terminus by a blocked fuel filter!

The arrival of equipment from Brisbane at Loftus meant the Cadillac was moved to storage at Bellfield in September 1968. In September 1972 it was moved to the Enfield Roundhouse, then the home of the Rail Transport Museum, where it joined some trams in storage. The Cadillac gained much admiration among the RTM collection at Enfield.

With the pending redevelopment of Enfield, the museum was moved to Thirlmere, and the SPER items returned to Loftus. The Cadillac returned there in May 1975 in a condition far from that to which it had been restored 11 years before.

Since that time, nothing was done to restore the vehicle, so it is fitting that it has returned to its home territory, and hopefully will soon be in pristine working order once again!

"Aussie Touring"

The autumn issue of the magazine Aussie Touring has a feature article promoting Tourist Steam Trains in Australia. Fairly detailed coverage is given to Puffing Billy, the Bellarine Peninsula Railway, Mossman Mill's "Ballyhooley Steam Express", Pichi Richi, the Rail Transport Museum (Thirlmere), Zig Zag and the Hotham Valley Railway. The article uses material provided by LRRSA and Society membership is promoted for those interested in the location of railways and tramways and in museums and excursion trips.

Bob McKillop

RESEARCH COLUMN

European loco builders list project

Some LRRSA members are working under the leadership of Craig Wilson to develop listings of all locos built on the continent of Europe which came to Australia. Any contributions which can be made would be of great value.

One question which someone might be able to answer concerns an 0-4-0DH loco built by Gaston Moyse of France in 1970. It was imported in 1971 by Speno International as motive power for the Hamersley Iron rail grinding train. Information is sought as to its present whereabouts and its builder's number. In addition, are there other similar units which have been imported?

Perhaps a member may be able to shed light on the identity, origin or disposal of three 2 ft gauge Deutz 0-4-0DM locos which were out of use at the Mount Lyell Mine in Tasmania in 1966. These were painted blue, numbered 1, 2 & 3, and were lettered "TRANSPORT & INDUSTRIAL INDEX (AUST.) PTY LTD, PORT KEMBLA, N.S.W."

Another query concerns a 4wBE loco by the Swiss firm SIG (Schweizersche Industriegesellschaft) which is believed to have been put into use at a West Australian mine in 1982. Can anyone say which mine it went to?

There are other questions which have been thrown up, such as the loco captured from the German Army in 1918, a pre-World War I petrol loco on South Australian Railways, and a well-documented Queensland cane steam loco whose presumed German builder defies identification. Any information about any European-built locos could be sent to Craig Wilson at 22 Jackson Crescent, PENNANT HILLS 2120.

FIELD REPORTS

OLD FEDERAL TRAMLINE, Warburton, Victoria

From around 1921 to 1934, the Federal Timber Co. operated a tramline from its old Federal Mill to link up with the 3 ft gauge Starvation Creek Tramway.

Most of the route can still be followed, although within about 1 km of the junction with the Starvation line the formation becomes lost under grass and treeferns. To the south of Big Creek Road, the line skirts the side of Starvation Creek and thence Federal Creek, which it crossed over a substantial pigsty construction bridge. Four or five hundred metres on lie the remains of the mill and its associated settlement. Two very large sawdust heaps may be found here, along with old sawblades, loading areas machinery mountings, and the sawpit. and numerous smaller items.

Heading up the hill to the east of the mill site are the difficult to follow remains of a log line, and a pair of 4 ft gauge regauged wheelsets indicate that this line was probably of this gauge. A section of 3 ft gauge tramline may be found along the western side of the north sawdust heap, and is very well preserved. The main outlet tramway also appears to have been 3 ft gauge, as evidenced by the occasional intact sleeper, and the general narrowness of the formation. Remaining bridging along the line is of wide, heavy construction, and this is consistent with the fact that horse haulage was used on this line.

Geoff Thorpe 6/85

ST.GEORGE NOS. 1 & 2 MILLS, Lorne, Victoria

The history of these two mills is briefly dealt with in Chapter 12 of Norm Houghton's *Sawdust and Steam*. A search for the No.1 mill site on a ridge proved negative, so an attempt was made to find the later No.2 site. Just to the north of Fisher Creek, in the valley north of the No.1 Mill site, was found an immaculately preserved 10 ft section of 2 ft 3 in gauge wooden railed tramline. The formation was fairly easily followed for nearly a kilometre, to the vicinity of the No.2 Mill site, which also could not be positively located.

A couple of lengths of heavy (about 30 lb) rail were found near one of the three bridge sites on Fisher Creek. These bridges would have been at most a couple of metres above water level. Near the presumed No.2 Mill site was a large flat area right at creek level, and shaded by large tree ferns. Several formations could be imagined here, but further efforts are required to find the mill site, and/or follow the remainder of the tramline.

Geoff Thorpe 6/85

JAROSITE WORKS, Point Addis, Victoria

Hidden in the bush near Point Addis, east of Angelsea, are the remains of the jarosite works, which operated from 1925 to 1928. A tramline was used to haul the ochre-coloured jarosite rock which lay on the beach, up to the processing plant at the cliff top. The product was used as a pigment in paints. A cutting in the cliffs as well as a tramline embankment are among the remains which can be seen. Access is by walking across the Ironbark Basin or following the beach from Point Addis.

Tourist News, Autumn 1985 via Geoff Thorpe

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

E.M. BALDWIN & SONS PTY LTD

(see LRN 45 p.4)

This Company have opened a new plant in the old Armstrong Holland premises at Kellogg Road, Rooty Hill, many times the size of the old Castle Hill works, which was rather cramped and inadequate. The major move occurred at Christmas, although there were still employees at Castle Hill in June. It is assumed that the old works will be sold for development.

Craig Wilson 6/85

The E.M. Baldwin canefields B-B DH loco, introduced 12 years ago, caused a revolution in mill tramway transport.

{bmc d:\lrrsa\lrn\graphics\lrn047b.bmp}

Kalamia Mill's second E.M. Baldwin bogie diesel, *Norham* (5383-1-7-74 of 1974). This loco was supplied with drawhook and dumb buffers with air brake trainpipe connection to enable it to shunt Queensland Railways rolling stock on dual gauge mill trackage.

{bmc d:\lrrsa\lrn\graphics\lrn047c.bmp}

NEW SOUTH WALES

CENTRAL PARK, Forresters Beach 610 mm gauge

(see LRN 28 p.5)

Only minor changes have occurred here, with the track overgrown and most rolling stock not having moved in years. The yellow-painted John Fowler 0-6-0DM 16830 of 1925 has been moved into the station area and in front of it is the maroon-painted Ruston & Hornsby 4wDM 304457 of 1951, which was on loan to Canberry Fair, A.C.T., during 1983-4. The Motor Rail 4wDM 11023 remains at the other end of the station area, separated from the other two

locos by a train of coaches converted from cane trucks. On the other station track remain the three other Ruston & Hornsby 4wDM locos from the Eastern Suburbs Railway Construction, 404453, 304455 and 304460.

Rob Pearman 5/85

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge (see LRN 45 p.4)

Work at the museum under the C.E.P. grant commenced as planned on 25 February, when a boiler maker, a welder and two labourers commenced employment under the terms of the six months project. In the short period of nine weeks, the new 18 m x 12 m loco and carriage shed was completed and ready for partial occupation, and by the end of May, the columns and girts for the 18 m x 6 m machine shop were also in position and ready to receive the roof trusses.

At that halfway stage, the C.E.P. employees diverted their efforts to the other aspect of the grant projects - the restoration of metal components of *Tully* No.6 (Perry 0-6-2T 7967.49.1 of 1949), and *Burra* (0-4-0ST Hawthorn Leslie 3574 of 1923) ex Corrimall Colliery. By mid June, the saddle tank and cab of *Burra* had been totally reconstructed and work was well advanced on overhauling the main frame of this engine. At that stage repair work was about to commence on the boiler barrel prior to the refitting of tubes.

The slab floor of the machine shop is being progressively poured to take the heavy machinery which must be positioned prior to the completion of the structure walls. During the first week of June, the large radial drilling machine, heavy duty lathe, and large pedestal floor drill were in place. During periods of wet weather and at other times the C.E.P. employees have been assembling and welding shelf and bin storage units.

The brick walls of the toilet/shower block were finished by mid June and awaited roof construction and internal-fitting out. This facility will not be available until the end of the year when main sewer connection becomes available. The brickwork was carried out by TAFE College pre-apprenticeship students.

Two of the three roads for the new loco and carriage shed were constructed early in May, using 45 lb rail and metal sleepers. The sleepers, progressively donated by Titan Industries are for 1067 mm gauge, but additional chairs have been welded into position for 610 mm gauge. Using spring clips for fastening, track laying is quick and easy. Roads No. 2 & 3 were in use by mid-May, with the remaining shed space being used as a workshop until the conclusion of the C.E.P. project in August. Provision has been made for an 18 m x 5.5 m side extension of the sheds and roof truss materials for this project

were obtained from a demolished Wollongong building in April.

At the end of April, the Mancha 4wBE ex-Ivanhoe Colliery returned to traffic after major overhaul which included controller maintenance, main cable rewiring and resistance grid replacement. Member Paul Simpson purchased a Leyland petrol truck engine of about 1920 vintage for the Society in April. This will be the standby unit for the Leyland/Krauss 4wPM loco (originally Krauss 2179 of 1889) ex Newbolds, Home Rule.

By the end of May, a 32 v electric lighting system had been provided in former Melbourne cable trailer 430. The two lights have been located in the same position as those fitted to the car in 1920 when battery lighting replaced the kerosene units in the Melbourne cable trams. Some inexpensive bell-shaped plastic crinkled lamp shades closely resembling the original glass fittings of 1920 have been fitted. Power is received from a 32 v transformer while in the shed, but it is planned that the loco turbo generator will provide power when in steam passenger service.

During May the bogies were removed from the around-1918 vintage saloon car No.2 for the fitting of rings to provide a thicker flange profile. This car is mounted on former Condong Mill bogies which, together with ex-Army flat trucks have very thin flanges. This occasionally caused problems when passing through point frogs. During 1980, similar action provided a solution to problems with semi-open car No.1.

The overhead electric system tracks had been out of use since early February due to the museum compound wire fence being diverted over the tracks to provide room for the shed construction. This system returned to use on 8 June when the Gemco loco (formerly battery electric) ran a "miners tram" service on the enthusiasts day. Power is being provided by a new substation unit now housed in a special building. The unit was obtained from a local machinery dealer for \$120 and transforms and rectifies 415 v 3-phase to various DC voltages up to about 80 v at 100 amps, more than adequate for recharging traction batteries and operating electric mine locos from overhead trolley wires.

At the 8 June enthusiasts day, various items not in use on regular steaming days were in operation. Two passenger locos were in steam with cars P119 and No.1 hauled by Hudswell Clarke 0-6-0 *Cairns* (1706 of 1939), while Davenport 0-4-0ST *Kiama* (1596 of 1917) provided a service with cars No.2 and 430. Both mixed and goods operations were provided with steam haulage as well as using the Mancha 4wBE, Ruston & Hornsby 4wDM (285298 of 1949), and Leyland/Krauss 4wPM *Newbold*. It is hoped that the two additional steam locos *Tully* No.6 and *Burra* will also be available for such operations in the not too distant future.

Great progress has been made under the C.E.P. project, and special thanks are due to Society members who made themselves available to supervise and administer the scheme. It is doubtful if a single day has gone by without someone on site to fulfil this role.

Ken McCarthy 6/85

BERNIE LACEY PTY LTD, c/- Lot 5, Dell Road, West Gosford. 610 mm gauge

Plant and equipment belonging to this company (in liquidation) was auctioned on 23 May by Hymans Valuers & Auctioneers under instructions from Arthur Andersen & Co., Chartered Accountants. Present on the site, which appeared to be a storage yard, on 22 May was a selection of mining and contractors plant and equipment.

Included among a number of rail items were two complete side dump wagons with several spare bodies and one bogie, a Hagglund shuttle car, two Moran marine car agitators and a large quantity of prefabricated track of approximately 20-25 lbs/yard weight.

Two locomotives were also present. One was a small Gemco 0-4-0BE loco of the "Trammer" type (described as 1.5 ton 4 hp) in the sale Catalogue. Originally yellow, this loco had been repainted blue on site and was fitted with battery box and batteries. It was apparently complete but in poor condition. The second loco was a 4wDH built by E.M. Baldwin (Type DH4T Mk.II), builder's number 6008-2-7-75 of 1975. This had been repainted green on site. (It was delivered new to the Melbourne & Metropolitan Board of Works - Ed.) This item was not included in the auction catalogue and was reported sold to an unknown buyer .

Rob Pearman 5/85

MEGALONG VALLEY TOURIST RAILWAY, Blackheath 610 mm gauge

(see LRN 45 p.6)

The scheduled open day / steaming operation conducted by Mr.Keith Duncan and a group of people sharing his interest in this project took place on the afternoon of Sunday 5 March.

Former North Eton Mill Perry 0-6-2T 6 (2382 of 1941) was in steam hauling a new end-loading bogie passenger car. This car is the first of three ordered from the Goulburn engineering firm which constructed a similar vehicle for the Goulburn Steam Museum in 1981.

The vehicle is based on the design and size of the standard Melbourne 8-windowed cable tram trailer, and the engineering firm is constructing the steel chassis, body frame, roof and end platforms. The railway group then completes the vehicle with side panels, roofing, end platform canopy covers,

floor, seating, windows and bogies.

Although only one loco was in operation to work the 1 km main line, two other steam locos are on site. These are Decauville 0-4-2T 246 of 1897 ex-Canberry Fair, Dickson, A.C.T., and ex North Eton Mill Perry 0-6-2T 7 (6634.52.1 of 1952). Details of future planned regular operation at Megalong Valley have not yet been published.

Ken McCarthy 6/85

NSW WATER RESOURCES COMMISSION, Burrinjuck Tramway 610 mm gauge

A steering committee has been set up to recreate the Burrinjuck Tramway, which ran from Goondah to the Burrinjuck Dam site from 1907 to 1928. The committee consists of representatives of the Yass Shire Council, the Yass and District Historical Society, the Burrinjuck State Recreation Area Trust, and the Water Resources Commission. It is hoped that the line can be recreated with the help of a Bicentennial grant.

It is proposed that a line will be constructed around the Burrinjuck State Recreation Area, and later be extended from there to the dam wall. The former Goondah-Burrinjuck trackbed is now the course of a road. It is reported that former Burrinjuck Tramway Krauss 0-4-0T *Jack* (5945 of 1907) has been sold by the executors of the estate of the late E.M. Baldwin to the Water Resources Commission. This loco had been held by Bruce Macdonald as trustee since 1972, at first at Goulburn Steam Museum and later in Canberra. It is believed that substantial boiler work will be necessary before this loco can be returned to steam.

Four similar Krauss locos were used on the line. As well as *Jack*, two others still survive, *Dulce* (5869 of 1908), rebuilt to 0-6-0T, and *Archie* (6063 of 1908), all three having passed into Queensland sugar mill use, at Fairymead, North Eton and Farleigh mills. The fourth, *Robin* (5870 of 1908), was not so lucky, being scrapped at the State Metal Quarries, Kiams, in 1938. The locos were named after the children of Engineer, Mr. De Burgh.

E.J. Brady in his book *River Rovers* (published by George Robinson & Co., 1911), gives a description of a journey on the line. The publication *Southern Weekly* of 3 June 1985 has an article on the line (address P. O. Box 264, Cootamundra, 2590).

Frank Sutton 6/85: Ken McCarthy 7/85

ROTARY CLUB OF LITHGOW, c/- "Northbrook", Piper's Flat. 1067 mm gauge

Two ex Lithgow Valley Colliery locomotives have been stored at this

property for the last five years, pending placement at the park near the dam at Wallerawang, One is North British 27297 of 1952, an 0-4-0DM of the 100 hp "Miner" type, which has been restored. The second is numbered 3, a Gibson Battle battery electric serial number 88004. Also on site are a number of rail wagons, both personnel and coals as well as some rubber-tired shuttle cars.

Craig Wilson 6/85

ROTARY CLUB OF LITHGOW, Rotary Park, Lithgow, 1067 mm gauge

(see LRN 35 p.7)

The Hunslet 0-6-0DM mines loco (4059 of 1950) and one mine car are still present on a short length of track set in concrete. Although the park has been developed as a roadside picnic area with tables and chairs it is not in an ideal locations being situated between a major road and the main western railway line. The loco has now lost its engine Covers and the yellow paintwork is becoming rather weathered.

Rob Pearman 5/85

ROYAL AUSTRALIAN NAVY, H.M.A.S. Penguin, Clareville Beach 610 mm gauge

This shore establishment was used as a torpedo testing base, and a rail system was used for transporting the torpedoes along a jetty to the waiting boats on Pittwater.

The pier is approximately 125 metres long (formerly 220 metres) and has twin 2 ft gauge lines laid directly onto the decking. Rail is 30 lb/yard spiked to the timbers, with welded flat bar acting as spacers, two to each 6.5 m length of rail.

Motive power is two Dorman Long & Co. Ltd. battery electric "locos". Each has two banks of seven batteries recessed into the frames under a wooden and steel-braced deck. Drive is to one axle through a cardan shaft. Power of 28 volts feeds the motor through a resistance controller. The batteries can be charged overnight from a transformer located in the workshop. They carried two torpedoes and sundry equipment ready for testing. There are four wagons, each with bracing shaped to carry one torpedo.

There are three pairs of points with a simple piece of steel-bar to hold the blades in the required position. Two points are at the end of the wharf and two pairs are in the workshop.

Current use of the tramway is to carry divers' heavy tanks and other gear to boats and service equipment to ships tied up at the pier.

A group visit is planned for early Decembers with permission already having been obtained from the Navy. A date will be announced in LRN. Members will

have to register with NSW Division of LRRSA as numbers will be required by the navy. It is anticipated that photography will be permitted and the motive power demonstrated.

Len King 6/85

(Industrial Railway Society (UK) Handbook L states that Dorman Long & Co. Ltd., Britannia Works, Middlesborough Yorkshire, built locomotives only for their own use. Is there a connection therefore between the above locos and the Sydney Harbour bridge, for which Dorman Long were the main contractors? - Ed.)

QUEENSLAND

ANSETT TRANSPORT INDUSTRIES LTD, Hayman Island 610 mm gauge

(see LRN 38 p.6)

The 2 ft gauge tramway which has served this resort since the 1950s is to be closed. The island is to be entirely redeveloped and a monorail will replace the rail system. The tramway equipment including three locomotives will be disposed of or scrapped.

The resort was to close from Sunday 7 July for nine months while rebuilding operations go ahead. More than \$100m is being spent and the island will re-open as the Ansett International Hotel in April 1986.

Mackay Daily Mercury 1/7/85; Ansett Transport Industries 7/85

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610 mm gauge

(see LRN 46 p.3)

The small building removed from The QGR Northgate workshops will be re-erected on the station platform at Woodford as the Station Master's Office. A new roof will have to be provided for this building.

A load of the rail lifted from the Tennyson sidings of the Queensland Electricity Generating Board has been delivered on site to the trackbed from the present railhead to Peterson Road, and should enable track construction over this section.

One tube has been removed from the boiler of Hudswell Clarke 0-4-2T 1705 of 1938 (carries John Fowler 22752), ex South Johnstone Mill 5. It is anticipated that this loco will be partially retubed along with the retubing of "Bundaberg Fowler" 0-6-2T 5 of 1952.

Restoration work is progressing on the engine of F.C.Hibberd "Planet" 4wPM 2566 of 1942. This loco had its original National diesel engine replaced with a David Brown petrol engine at Marion Mill.

A quantity of equipment acquired by Mareeba member Mike Loveday has been amassed for transport to Woodford. This includes two ex-Innisfail Tramway bogies, some ex-Mossman Mill bogies, steel and wooden cane trucks and a cane bin.

Durundur Railway Bulletin 4/85, 5/85

ERIC GIBSON, Gibsons Road Mackay 610 mm gauge

Avonside 0-4-0T 1909 of 1922, on loan from Farleigh Mill, is stored in the open not far from Racecourse Mill. It is planned to place it under cover, replace rusted out sections of metal, sandblast the loco and repaint. If the standard of restoration of Eric's fleet of old cars and other machinery is anything to judge by, the results should be impressive.

Editor 6/85

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 46 p.5)

The new 0-6-0DH being constructed by E.M. Baldwin to replace the Clyde 0-6-0DH wrecked last season is now expected to be delivered on about 5 July.

Len Heaton 6/85

BLI BLI CANE SUPPLIERS COMMITTEE, Alf Muller Park, Bli Bli 610 mm gauge

(see LRN 22 p.16)

Bli Bli, an ex-Moreton Mill John Fowler 0-4-2T (14418 of 1915) was donated to this group and placed here in 1968. In the years since, its condition deteriorated markedly, and it is reported that it was about to be sold to an unknown buyer by the Maroochy Shire Council when locals stepped in. It is understood that work will be done to restore the locomotive to a safe condition in the near future.

George Hadley via David Mewes 6/85

MORETON CENTRAL SUGAR CO. LTD, Nambour 610 mm gauge

(see LRN 46 p.5)

The Shay locomotive (Lima 2091 of 1908) is in joint mill and Maroochy Shire ownership. The Sunshine Coast Railway Modellers Society has taken responsibility for its upkeep, and already a new water tank/bunker has been constructed for it. The cab floor will be replaced and a progressive programme of restoration continued. A canopy will be constructed to protect the loco from the elements.

E.M. Baldwin 0-6-0DH *Bli-Bli* (6-1257-1-7-65 of 1965) has been thoroughly overhauled for the crushing and has been fitted with a completely new

soundproofed cab. Also receiving heavy attention over the past few months has been E.M. Baldwin B-B DH *Coolum* (5565-1-10-74 of 1974) which had been involved in a serious collision last year.

David Mewes, George Hadley 6/85

SUNSHINE COAST RAILWAY MODELLERS SOCIETY INC.. Florence Street, Nambour 610 mm gauge

Dick Kerr 0-4-0IST *Valdora*, built in about 1894 for Farleigh Mill, was removed from its former resting place on the Bruce Highway (see LRN 46 p.5) to the Model Engineers' park behind the Railway Station on 7 May. It will be placed under cover, sandblasted, have its chimney replaced, and be repainted.

David Mewes, George Hadley 6/85

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (S.A.) INC. gauges various

(see LRN 44 p.12)

Good progress has been made with work on the boiler of Andrew Barclay 3 ft 6 in gauge 0-6-0T *Peronne* (1545 of 1919). The boiler and firebox have been sandblasted and repainted and firebox stays were being drilled out to establish actual boiler work to be done. It is hoped that pad-welding a couple of spots in the firebox may be the only major work required. The cab roof is being rebuilt because of rust damage, and new side tanks may have to be constructed. Pistons and cylinder liners are in excellent condition. The loco was completely rebuilt by Perry Engineering in 1950.

Catchpoint 5/85

STEAMTOWN PETERBOROUGH PRESERVATION SOCIETY 1067 mm gauge

(see LRN 11, p.11)

Clyde Model DHI-110 0-6-0DH NC 1 (builder's number 56-94 of 1956) has been acquired from Australian National Railways for preservation. This unit was originally supplied to the Lakewood Firewood Co. of Western Australia, and was purchased by Commonwealth Railways in 1966 on the closure of their railway. This loco had a spell as shunter in Darwin before returning south to Port Augusta. It arrived at Peterborough on 10 April.

Catchpoint 5/85

TASMANIA

THE HYDRO-ELECTRIC COMMISSION 1067 mm gauge

(see LRN 46 p.7)

Further tenders have been called for rail equipment for the Hydro's tunnelling jobs on the King and Anthony River schemes. Up to four rail mounted electrically agitated concrete transit cars of 6 cubic metres minimum wet mix capacity are required, with tenders closing on 1 July.

The Australian, 5/6/85

MOUNT LYELL HISTORIC MINE PROJECT, Queenstown 610 mm gauge

A \$5m. Mt.Lyell working museum is to be developed over the next four years. The project was announced at Queenstown on 18 June by the Premier, Mr.Gray. The government has decided not to proceed with either of the two major railway restoration proposals, the Abt Railway, and the Montezuma Railway, which were both considered uneconomic in construction and

operating costs.

The Mt.Lyell project will include a short train ride from Miners Siding in Queenstown to the Mt.Lyell works site, a surface machinery display, a simulated smelter producing copper, and a 3 km underground rail trip to the Cape Horn mine to see underground mining operations. Initially battery

locomotives engaged in present underground operations will be used for the trip from Miners Sidings but steam locomotives might be used at some time in the future. The Mount Lyell Company will not be involved in operating the museum, but will co-operate in every way with its development.

The Advocate 19/6/85 via Chas. Goodwin

VICTORIA

PRIVATE PRESERVATION, c/- Spotswood Workshops - gauges various

These premises are currently leased to Steam Age (Aust.) Pty Ltd, and the Plan R Group, and are being used for storage and restoration of a number of privately-owned locomotives.

Stripped down and undergoing restoration was 750 mm gauge Henschel 0-6-0WT 25427 of 1956 ex Chonburi Sugar Mill in Thailand owned by Tony Gilbert (see LRN 46 p.9).

Standing besides the Henschel and covered with a tarpaulin was an American 0-6-0T with number 14 on the smokebox plate, and the initials VMC on the cab side. This loco, imported from the Phillipines last year (see LRN 42, p.10) is a 2 ft gauge Porter from Victorias Sugar Mill, North Negros. Numbered 14-P in the mill's roster, it was built in 1920 but its builder's number is uncertain at present. It was last recorded in the Phillipines carrying builder's plate 6555, supposedly the number of sister loco 15-P. It was earlier recorded as being 6465, but the mill's records apparently have it as 6580. This loco was oil fired at Victorias Mill, whereas the other steam locos there, believed to be still in use, are wood fired.

Behind these two locos was the frame of a Peckett 3 ft 6 in gauge 0-4-0ST. The boiler was standing nearby. This loco is undergoing an extensive overhaul and is believed to be 1174 of 1908. This was built new for Mount Morgan Mines in Queensland, and passed to the ownership of Mount Isa Mines in 1932. After being withdrawn in 1954, it was donated for preservation at the Soldiers Hill State School on the Barclay Highway. It is believed to have arrived in Melbourne during 1984.

John Buckland 5/85; Ray Ellis; Peter Medlin 6/85

WESTERN AUSTRALIA

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC. Bennett Brook Railway, Caversham 610 mm gauge

(see LRN 46 p.11)

The two NG15 class 2-8-2 locos from South Africa were landed on 2 June, and were expected in Fremantle on 19 June aboard SS Niederburg. The locos are NG118, believed to be built by Franco-Belges but carrying builder's plate Henschel 24476 of 1938, and NG123, Franco-Belge 2670 of 1951. It is believed that NG118 has been involved in a roll-over and that some repairs will be required to the cab and running board.

F.C. Hibberd "Planet" 4wPM *Yellow Rose* has been serviced under the C.E.P. loco work scheme and this unit has been used on weekend passenger trains as well as by the C.E.P. track construction gang. It is thought that this unit is likely to be Hibberd 2055 of 1937, the first of its type to come to Australia, the point of identification being that this loco was fitted with narrower wheels than the others of its type.

The C.E.P. loco group have also worked on the Maylands-built 4wPM and the Ridley petrol loco which has one rigid axle and one bogie. The rigid axle is powered along with one axle of the bogie.

Work is continuing well on the main loop line with the C.E.P. track construction gang having laid a considerable length of track. Work is already well advanced with the steel girder bridge which will be a feature of this line.

Rusty Rails 6/85: Lindsay Watson 6/85

MEETINGS

ADELAIDE

Trevor Triplow will show a film of the building of the Trans-Australian Railway.

Location 84 King William Street, Kent Town. Date Thursday 1 August at 8.00 PM.

MELBOURNE

Arthur Hill will be showing a selection from his extensive collection of movies. Among those Arthur plans to bring along will be films of the Fyansford Railway, Anderson's Mill at Marysville, plus some footage of the Colac-Beech Forest narrow gauge railway. This is rare footage of operating light railways so an interesting night is assured. See you there.

Notice A.G.M.

Please also note that the August meeting will also be the Annual General Meeting. A nomination form is enclosed for anyone wishing to nominate for the Council.

Location Ashburton Uniting Church Hall, Ashburn Gve, Ashburton.

Date Thursday 8 August at 8.00 PM.

SPECIAL NOTICE - ARE YOU A SOLICITOR ?

Do we have a Solicitor in our midst ? The Council is currently looking at the possibility of incorporation. - we need legal advice for this process and would like assistance from a member solicitor in Victoria if at all possible. If you believe you could help, please contact Mike McCarthy on 762 5847.

SYDNEY

The August meeting will feature a talk by Ken McCarthy on the steam street tramways of Rockhampton.

Location Government Transport Club, Regent Street, Sydney.

Date Wednesday 28 August at 7.30 PM.

BOOK REVIEWS

BHP Tramways Centenary History, by David Griffiths.

Published by Mile End Railway Museum (S.A.) Inc. 88 pages

This attractive volume, well laid out with a generous quota of colour plates, is a good addition to the books on Australian Industrial Railways. The first rail operations in the area were to serve the iron ore mine at Iron Knob in 1901, and the steelworks at Whyalla did not follow until 1941, so although this book may be compared with *Steel and Rails to Newcastle*, the story it tells is more varied. The book contains a fair variety of types and scales of rail operations with the main lines serving Iron Knob, Iron Prince, Iron Monarch and Iron Baron, quarry operations there and at Rapid Bay, the mineral sands line at Coffin Bay, and of course the port and steelworks operations at Whyalla itself being included. Steam, petrol, diesel and electric traction all feature in the story, and the book is very generously illustrated. There is a selection of drawings of various locomotives types, and a detailed loco list. The publishers

make some apology for the quality of some of the photographs, but I for one, could see little to complain about, considering the difficulties of reproducing old and often faded or damaged photographic material. Some detailed maps or drawings showing track layouts would have made it easier for the reader to grasp the scale and nature of the operations described. However, the author and publisher are to be congratulated on the publication of this book, which is reasonably priced. Strongly recommended.

Available from Mile End Railway Museum, P.O.Box 487, Cowandilla, South Australia 5033. Softback \$9.95 plus \$1.50 postage.

JB

John Fowler & Co. Locomotive Works List compiled by Frank Jux

Published by the author. 58 pages

British researcher Frank Jux has done a fine job in producing this valuable reference work. Not only is the list clearly presented, but several pages of explanatory notes on both the steam and internal-combustion engined locomotives built by Fowler are provided. Before the 1890s, there are clearly many difficulties and uncertainties caused by the fragmentary nature of the records, yet a good job has been done in presenting the available information. The material certainly provides a fertile area for further research around the world. Australia, New Zealand and Fiji were all very important markets for Fowler products, and although canefields locomotives were the most numerous, they were also used in many other areas of industry.

This publication will be available in Australia through the LRRSA NSW Division and further details will appear in the next mailout. Please do not send money at this stage, either to LRRSA or to the publisher.

JB

SOCIETY VISIT

"Hello, sailor! Come on down to the pier and the navy." Saturday 7 December at 2 pm. As is usual, the NSW Division has arranged a tour with a difference. The Royal Australian Navy has granted us permission to conduct a group visit to their base at Taylor's Point, Clareville, Pittwater (next to Long Beach). To be inspected is the pier approximately 400 ft long on which runs a 2 ft gauge railway (see LRN 47).

Still in use, the railway has two Dorman Long "locomotives" and several wagons. Three sets of points join the twin tracks. Come along to the October meeting to see slides and learn the bare facts - come on the day out to learn more. Public transport is by Government buses from Wynyard, Route 190.

Change to Pittwater Bus Lines at Avalon; this travels just past the gates of the base. A family could make this a day out, with Long Beach, Clareville, just a few steps away. It has grassed areas at the edge of the sand, and safe bathing.

It is a requirement that the Navy knows a close approximation of the numbers attending, so please contact Craig Wilson (84-7984); Len King (81-2462); David Laidley (888-2560) or Paul Simpson (771-3929) or inform a committee member at the October meeting. When entering the site, an indemnity will have to be signed. Photography is permitted and everything on site may be inspected. Come and have an interesting afternoon (in the sun hopefully). If you don't have a vehicle, then arrangements for a lift might be made at the October meeting (see back cover for details).

RESEARCH COLUMN

Moe-Walhalla Railway and associated tramways

Information or photographs relating to the Moe to Walhalla Railway or to tramways which operated in the Erica-Walhalla district are requested. Anyone who can help with information or photographs which did not appear in *Rails to Walhalla* Parts 1 & 2 is asked to contact Stephen Watson, 3 Sudholz Street, BITTERN 3918.

Fiji's First Steam Loco

Peter Dyer and Peter Hodge, who are preparing a new version of *Balloon Stacks & Sugar Cane* have found reference to Fiji's first steam loco which worked at Holmhurst Beach on Tavenui, as reported in the *Fiji Times* of 22 July 1882. The ship *Banffshire* arrived in April 1882, with mill equipment including tramway tracks, cane wagons and a locomotive built in 1881. The mill first crushed in 1883, and was put up for sale the following year. One loco, an 1883 Andrew Barclay, has been identified, but the 1881 loco defies identification. Can anyone help? Any suggestions may be sent to Bob McKillop, 10A The Bulwark. CASTLECRAG 2068.

Berwick Quarries, Gippsland.

John Peterson writes that a history of Berwick Quarries appeared in *The Trader* of 28 July 1983, as a Gippsland History feature by John Wells. From 1876, a quarry was opened to provide ballast for the Gippsland Railway. Railway operations, on 1600 mm gauge, with connection to VR, are described in the article

FIELD REPORT

TASMANIA

Tourists to the west coast of Tasmania may still find plenty of tramway relics. David Whiteford writes that coming into Queenstown from Hobart, there are plenty of narrow gauge formations visible, with heavy earthworks and trestle bridges still standing. The Regatta Point terminus of the Mount Lyell Railway was also visited, and was very derelict. The cranes and goods shed are gone, and it would appear that the station will soon become too derelict to leave standing. The former engine shed is still in use as a garage.

NEW SOUTH WALES

AUSTRALIAN IRON & STEEL LTD, Port Kembla 1435 mm gauge

English Electric (Aust.) standard gauge B-B David Eaton of Australian Iron & Steel, Port Kembla.

HISTORIC VILLAGE MOTEL COOLANGATTA via Berry gauge unknown

This tourist attraction overlooking Shoalhaven Heads boasts a number of features, including the "Here She Comes" train ride, claimed to be the original train ride from Taronga Park Zoo. This was advertised for sale by auction 24/25 November 1984, as part of the Don Robinson Collection at Sutton Farm, Sutton Forest (9 km from Moss Vale).

Peter Hodgson 7/85

GREENS MOTORCADE PARK, Leppington 610 mm gauge

(see LRN 4 p.8)

It is reported that this attraction closed in December 1984, and the railway equipment sold to another tourist scheme named "Adventureworld". The loco is a petrol-engined steam outline machine built by John Dunlop.

Paul Simpson 8/85

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 47 p.5)

By mid-August, the Community Employment Programme activities were reaching their conclusion. The second half of the six month employment programme resulted in two steam locomotives being rebuilt to a stage to receive their boilers, namely 0-4-0ST *Burra* (Hawthorn Leslie 3574 of 1923) and 0-6-2T *Tully* No.6 (Perry 7967.49.1 of 1949).

The CEP tradesmen constructed a new cab for *Burra* and rebuilt much of the saddle tank with new components. *Tully* No.6 is practically a new unit. Under the CEP scheme, new footplate, cab, bunker and side tanks have been constructed and fitted to the previously overhauled chassis. The old tanks and bunker are still repairable and would be available at scrap price to any interested group.

The rebuilt boiler for *Tully* No.6 is awaiting the fitting of new tubes at the Port Kembla steelworks. When this is completed, the final restoration stages of this loco can be determined. Some tubeplate work has to be carried out on the boiler of *Burra*, and then the new tubes will be installed at Albion Park.

As mentioned later in this issue, the former Kiama Tramway 0-4-0T by John Fowler (16089 of 1923) arrived at the museum on 7 August. It has been purchased by a Kiama group for a proposed scheme in which ILRMS will participate.

On 27 July a four wheel, three compartment manriding car arrived at Albion Park from Metropolitan Colliery at Helensburgh. Some 22 lengths of 45 lb rail were also included in the donation. During the following week, the CEP employees fitted a new sub-chassis with four sprung 610 mm wheels in place of the original 1067 mm gauge arrangement. Work has progressed on the restoration of the former Victoria Mill, Ingham, Drewry inspection car. A new wooden subframe, central seat and flooring were fitted to the restored underframe during July, and by August work was progressing on the reconstruction of the end body components.

By the end of July, the entire framework and roof trusses were completed

on the 18 m x 6 m machine shop, and one third of the roof cladding secured in place. During the final weeks of their engagement, the CEP tradesmen prepared the main steel columns which will be used in the planned extension of the rolling stock shed to expand from the present three road accommodation to five tracks.

Throughout the winter period, the number of rides taken each open day consistently stood at over 600. This required three car trains to be operated throughout the afternoon period, with departures at 15 minute intervals.

The CEP scheme has accelerated museum development by about three years, and for this the museum members are grateful. With the departure of the tradesman, the museum workforce will be busy for several months in cleaning up the construction materials from the main compound area, completing the cladding of the machine shop, constructing the third road in the new rolling stock shed, realigning the compound trackwork and points and setting up the stationary steam engines in the new display shed.

In addition, 400 metres of track from the former Wollongong Gasworks sidings will be available for retrieval by the museum when title to the property is transferred from the State Rail Authority to the City Council, while an interesting item of passenger rolling stock is expected to arrive at the museum for restoration prior to the end of the year . . . There are adequate museum projects to keep members busy for the next five years!

Ken McCarthy 8/85

KIAMA LOCOMOTIVE TRUST, Kiama, 610 mm gauge

From 1914 until 1941, a 2 ft gauge steam worked tramway operated along Terralong Street, Kiama, linking the Pikes Hill Quarry with the gravel loading bins in Robertson Basin in Kiama Harbour. Until around 1935, a branch tramway also linked the main line along Hanning Street with the NSWGR goods yard. The tramway was operated by the Public Works Department until 1935, when the blue metal quarries were sold to Quarries Ltd This company continued to work the tramway until March 1941 when the last gravel ship was commandeered by the navy for wartime service.

During the life of the tramway, two Baldwin, two Davenport, one Krauss and one Fowler steam locomotive were attached to the undertaking. One of the Davenport 0-4-0ST locos (1596 of 1917) was eventually acquired by the Illawarra Light Railway Museum Society in 1977, and this now operates regularly on the Albion Park museum railway.

The Fowler loco, an 0-4-0T (16089 of 1923) remained at Pikes Hill until 1958, when it was obtained by the Marsden Museum of Historic engines at Goulburn, NSW, (now Goulburn Steam Museum) as a stationary boiler to

provide steam for the waterworks beam engine during the early period of its restoration. Named *Wollondilly* while at Goulburn, the loco only operated on the museum's tracks on limited occasions, and was sold for private preservation in 1974.

The Public Works Department expressed intentions some time ago to upgrade the areas surrounding Wollongong and Kiama Harbours as a tourism project. It was intended to retain both harbour basins as working harbours but to restore the surrounding areas using original fabric to resemble the appearance of the 1870s when both locations were originally developed.

It was recently suggested at meetings of the Environmental Heritage Committee which serves the three Illawarra coastal councils that consideration should be given to having about 200 m of 610 mm gauge track positioned in the reconstructed roadway at Robertson Basin, Kiama, so that the Davenport loco from Albion Park could be steamed in its original location on special occasions. During the official opening ceremony of the ILRMS last November, Don Cottee, the Assistant Municipal Engineer of Kiama Council, expressed his interest in developing further the possibility of reintroducing steam tramway operation at Kiama as a major tourist attraction. In December, he compiled an illustrated proposal which earned the support of local businessmen, some residents, kindred community groups and the sympathy of the aldermen.

Since 1974, the Fowler had been stored under cover at Kenthurst. The owner was willing to sell the unit, but an option had been negotiated by an interstate group. When this expired, a group of Kiama businessmen and interested citizens immediately formed a Locomotive Trust under the direction of Don Cottee, and raised the not inconsiderable purchase price.

The loco returned to the Illawarra district on Wednesday 7 August and pending the development of the Kiama project, is located at the Albion Park Museum Railway of the Illawarra Light Railway Museum Society.

The Locomotive Trust is now proceeding through development applications and other legal aspects, which it is hoped will result in the award of a government grant to enable part of the Kiama Tramway to be rebuilt for tourist operation. Although such a development will be opened in stages, plans have been prepared which would see three routes branching from the eastern end of Terralong Street at Kiama Harbour:

1. Northwards for 0.4 km to the Showgrounds
2. Northwards for 0.3 km along the edge of Robertson Basin adjacent to the Blow Hole and the local folk museum
3. North-west for 0.8 km towards the "Quarrymen's Cottages" tourist complex

The Robertson Basin branch would follow the original tramway right of

way but the other two routes would serve tourist locations not on the old tramways.

If the proposal is approved, the Illawarra Light Railway Museum will participate in the scheme and steam locomotives, as well as rolling stock, would be exchanged between the two locations. The Kiama Tramway would have its major daily tourist activity during the summer season, diesel haulage being used during the quieter period and steam at peak traffic times. Only one or two steam locomotives would be at Kiama at any one time.

Ken McCarthy 8/85

**MEGALONG VALLEY
TOURIST RAILWAY,
Blackheath 610 mm
gauge**

Mr David Bardwell, general manager of rail transport at Canberry Fair, attends to Frenchy, the ailing engine at Canberry Fair. Frenchy has corroded boiler tubes and has failed its annual boiler inspection.

This loco (Decauville 0-4-2T 246 of 1897) is now at the Megalong Valley Tourist Railway, Blackheath.

PERISHER SKITUBE VENTURE, Little Thredbo 1435 mm gauge

(see LRN 46 p.3)

Construction of the tunnel between Bullocks Terminal to Perisher Valley has reached 400 m after 6 weeks, and this section of tunnel is planned to be

completed by March 1986. However, legal action is being taken by Guthega Development Pty Ltd to attempt to stop the construction of the Perisher Valley to Blue Cow section. This company, proprietors of the Guthega resort, fear that the completion of Skitube to the new Blue Cow resort will jeopardise the viability of their operation.

The Abt electric multiple-unit cars are being constructed by Comeng NSW, and will operate at 40 km/h uphill and 21 km/h downhill. Services will operate 24 hours a day.

The Weekend Australian 31/8-1/9/85

QUEENSLAND

CANE RAILWAY ENGINEERING GUIDE

A guide to cane railway engineering is being compiled by staff of the Sugar Research Institute. Although there have been increasing demands of performance from these lines, and higher track quality as a result of crushed metal ballasting and track maintenance machinery, there has been no uniform guide to track maintenance or material specifications. The object of the guide is to have specifications and drawings suitable for and acceptable to the industry for the design of cane railways. The scope of the guide covers such aspects as earthworks, track materials, track geometry, ballast, sleepers and weed control.

Mackay Daily Mercury 13/8/85

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway 610 mm gauge

(see LRN 47 p.9)

Since 1979, Goodman 3 ft 6 in gauge 4wWE 6035 of 1950 ex Bulimba A Power Station has been stored at the Brisbane Tramway Museum Society's Ferny Grove site. The Tramway Museum Society expressed a desire to see it removed from the site, and so an alternative site has had to be found. No permanent home for the loco has been found, so it has been decided to transport it to the private property of Mr Graham Chapman at Kallangur for storage. This move was expected to take place in August.

Good progress has been reported in removing the remaining rail from the Tennyson powerhouse. A subsidy grant of \$2000 has been received from the Queensland Travel and Tourist Commission in respect of capital works carried out on the museum project.

Durundur Railway Bulletin 6/85, 8/85

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 42 p.8)

Motor Rail "Simplex" 2 (possibly 3717 of 1925) spent all the 1985 slack season in storage in a siding of the mill yard with its motor dismantled. On 3 or 4 July it was moved to the loco shed, and a week later was moved to the scrap area. Apparently its motor is beyond economic repair and the axle bearings are worn out. This leaves number 4, Motor Rail 10232 of 1951 as Macknade's last operational Simplex.

C.J.Hart 8/85

TONY GERMANOTTA, Mulei

(see MARIAN MILL CO-OPERATIVE 610 mm gauge)

MARIAN MILL CO-OPERATIVE 610 mm gauge

(see LRN 47 p.10)

0-6-0DH loco 15 was delivered to Marian Mill by road transport from E.M. Baldwin on 5 July. This loco is officially a rebuild of Clyde 0-6-0DH *Melba* 2 (64-377 of 1964) but in fact should be regarded as a new loco as new frames have been manufactured by Baldwins. However, many parts from the old loco have been incorporated and the loco has the appearance of a Clyde Model HG-3R, albeit with modernised cab profile. The Baldwin construction number is not known at present. The loco was delivered in the Marian livery of red, yellow and green, and is now usually used on the line from Gargett to Marian.

On 20 July a party of media and local businessmen made a preview trip on the tourist train which it is hoped will be introduced on the Marian Mill line to Mount Jukes. Tony Germanotta, the instigator of the project, obtained permission from the mill and the use of a couple of navvy carriages to make the journey up the Mount Jukes Valley possible, to the enjoyment of all who took part. The train was hauled by Mr Germanotta's Gmeinder 4wDM 4574 of 1949, which has been overhauled.

Three bogie carriages are under construction for the project which it is hoped will commence by the end of the year. It is hoped that some of these will be used in connection with the Marian Centenary celebrations on 29 September.

Repairs have also been carried out to the second of Tony Germanotta's locos, Windhoff 4wDM 452 of 1940. Both locos were found to be 600 mm gauge, and so have had to be regauged to 610 mm. They were purchased from K.N. Penfold of Brisbane, who acquired them as part of a deceased estate. They had been imported to Australia about 1974 by a Wilhelm Darhman, who had

hoped to develop a mining operation at Silent Grove, near Tenterfield, NSW. However, they were never used.

*Tony Germanotta; Ken Penfold 7/85;
The Pioneer News 24/7/85; Editor 7-8/85*

MORETON CENTRAL SUGAR CO. LTD, Nambour 610 mm gauge

(see LRN 47 p.10)

Shay locomotive Lima 2091 of 1908 was observed in its new position near the mill entrance late in August. The bunker and rear footplating had been removed, and the entire loco sandblasted and primed. Extensive wastage of metal was apparent, and at some stage reinforcing inserts have been welded into position on the frames.

The state of the loco gave ample opportunity to observe the braking and drive arrangement to the rear bogie. Considerable restoration work is needed to bring this loco back to an acceptable standard, but it is understood that a new bunker and cab floor has already been manufactured for it.

Editor 8/85

MOSSMAN CENTRAL MILL CO. LTD 610 mm gauge

(See LRN 43, p.8)

The last load of bagged sugar leaving Mossman for Port Douglas in 1958. Driver - Ted Eddleston, Fireman - Bruiser Hume and standing by - N. Rex.

The Ballyhooley tourist steam train is to extend its operations to Port Douglas in connection with a major tourist development of the area. The

first step in the proposed extension occurred recently when the Douglas Shire Council granted permission for the Mossman Mill to relay tracks along the original route from its existing Mowbray line (near Craiglie), across the mangrove swamps to the Four Mile Beach area. Later the line will be extended into Port Douglas to the wharf.

The mill company still owns an easement on the route granted by the Mossman Tramway Act, 1960. The formation from near its original junction point on the present Cook Highway to near the Port Douglas Road at Four Mile Beach still exists. In spite of having had a water main buried in it, a few dog spikes and lengths of rusty rail can still be seen along the trackbed. Two low bridges cross tidal creeks, and their upper timbers will need to be replaced, but piles may still be sound as some at least are copper sheathed.

Santana Pty Ltd is to build a new motel and historic village at Four Mile Beach, and the railway will loop around the site. A Ballyhooley Station will be erected here in period style. It is envisaged that a commuter tourist service will operate between Port Douglas and Four Mile Beach when the second stage of the rail extension is completed. A tourist service will run from Port Douglas to Mossman Mill and include mill tours. It is understood that the mill is still seeking a suitable second steam loco for use on the tourist service.

*C.A.Bevan 8/85; Mossman & Port Douglas Gazette 8/8/85
via C.A.Bevan; Mossman Central Mill Co. Ltd 8/85.*

PLANE CREEK CENTRAL MILL CO. Ltd Sarina 610 mm gauge

(see LRN 42 p.8)

Following a further rise in rail freights for cane transported to the mill from the Carmila and Flaggy Rock areas south of Sarina by QGR (subsequently deferred for this season only), there has been speculation as to what solution might be taken to reduce transport costs. One possibility is for the tramline to be extended from its present terminus at Koumala South to Carmila (where there once was an isolated tramway). Another suggestion is an extension to between Koumala and Carmila, and the elimination of cane growing further south. Other options would call for the entire elimination of cane growing south of Koumala, and the substitution of other land in the tramline area. Any solution short of doing nothing would involve major expenditure which would need government financial assistance.

Mackay Daily Mercury, 29/7/85

TINTAGEL MOUNTAIN TRAMWAY, Arcadia, Cooroy 610 mm gauge

(see LRN 45 p.12)

A series of land slips occurred in the zig zag during May and many man

hours were needed to clear the track in June. Further drainage work and heavy ballasting has now been carried out in this section.

In July, an excavator was used to complete the track bed from the top points to the summit, and outstanding success was achieved using a laser for determining the correct grades. Little more work will need to be done on the trackbed in this section.

During April-June, a bogie wagon with drop sides, vacuum brakes, safety chains and sprung axles was constructed by Russell Savage at Mildura and has been designated NQR. Construction has now commenced on the line's third loco, which will be a bogie loco with drive to all four axles. Completion is forecast for the end of the year.

Russell Savage 7/85

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (S.A.) INC. gauges various

(see LRN 47 p.11)

X-rays have been taken of the boiler of Andrew Barclay 3 ft 6 in gauge 0-6-0T *Peronne* (1545 of 1919), showing good results. Details of the exact work to be done are now being finalised. New steel water tanks and cab roof are being manufactured as part of the project to return this loco to steam. Delivery to the museum of 3 ft 6 in gauge Clyde 6wDH 61-237 of 1961 from Thomas Playford Power Station is not now expected until late in 1985.

Catchpoint (Mile End Railway Museum) 7/85

TASMANIA

DOVER STEAM MUSEUM gauge unknown

A tiny tramway is used for some wood fuel movements on this site, which is a mecca for steam engine enthusiasts. "The constant smooth movement of the many engines, the barely audible hiss of steam, and the warm, almost fragrant, atmosphere of the bright, clean hall made for a memorable visit", writes our correspondent. (Sounds great! - Ed.)

David Whiteford 7/85

HYDRO ELECTRIC COMMISSION, Tarraleah gauge unknown

Two incline tramways were constructed alongside the pipelines to two hydro electric power stations here. Both are disused, the one on the south being totally overgrown, while the wooden supports at the bottom

terminus of the other appear decidedly unsafe. A warning sign prohibiting unauthorised use of the line can still be seen!

David Whiteford 7/85

IDA BAY RAILWAY CO. PTY LTD, Lune River 610 mm gauge

(see LRN 46 p.7)

Many relics of pre-tourist days are still in evidence on the line, with both Ida Bay and Deep Hole having many abandoned sidings, hopper remains, and even the remains of a turntable at each terminus. The general inaccessibility of many parts of the line to photographers need not be much of a drawback as around both Ida Bay and Deep Hole there are many photographic opportunities.

David Whiteford 7/85

MINERS SIDING, Queenstown 1067 mm gauge

(see LRN 37 p.12)

Ex-Mount Lyell Railway 3, 0-4-2T Abt Dubs 3730 of 1898 is preserved here, and is rated one of the best in Australia. The preserved loco is part of a tribute to the miners and to the infrastructure built up to serve the Lyell mines, and is very impressive.

David Whiteford 7/85

WEE GEORGIE WOOD STEAM RAILWAY Inc., Tullah 610 mm gauge

(see LRN 39 p.7)

John Fowler 0-4-0WT *Wee Georgie Wood* (believed to be 16203 of 1924) was observed and photographed in its shelter shed at Tullah in April. The railway through Tullah was observed to have been lifted at the loco shed end and to be undergoing a complete relaying, but it was unclear when the railway will be in operation.

David Whiteford 7/85

WEST COAST PIONEERS MEMORIAL MUSEUM, Zeehan 1067 & 610 mm gauge

(see LRN 39 p.7)

The museum is well worth a visit, and although the locomotives on display are not immaculate, they are under cover. Various items of rail interest including a steam loco (2 ft gauge Krauss 0-4-0WT 4087 of 1899), and underground mining rail equipment remain around the museum area and in the workshops awaiting restoration and display.

David Whiteford 7/85

VICTORIA

THE BIG GRAPE, Swan Hill 610 mm gauge

(see LRN 42 p.9)

This tourist recreation complex was advertised for sale by tender in late July. Included in the description was "1 km of railway track winding through 12 varieties of grapes" but there was no mention of the loco or rolling stock. The loco formerly used here was Ruston & Hornsby 4wDM 223725 of 1944, believed to have been leased from Brian Peart from Barry Beckerley who established the "Big Grape". There were also at least eight carriages built on cane truck frames in use here.

The Australian 24/7/85

WESTERN AUSTRALIA

CITRA CONSTRUCTIONS LTD 125 Sheffield Road, Welshpool. 610 mm gauge

An auction was due to take place on 30 July when surplus equipment of this contracting firm was due to be auctioned by Gregsons Auctioneers Pty Ltd A substantial amount of rail-mounted tunnelling equipment was included. This included six "Gemco" battery electric locomotives as follows:

11E13 Geo.Moss 3C 2352/116/73 10 ton

5C 2352

11E14 Geo.Moss 2C 2352/117/73 10 ton

8C 2352

11E15 Geo.Moss 5C 1108/120/73 10 ton

2B 7470

11E16 Geo.Moss 1576/11/73 6 ton

1751

11E17 Geo.Moss 1826/12/73 6 ton

1827

Rolling stock included a "Salzgitter Bunker Train and Bogies" (hopper cars), two side tip hoppers without wheels or identification, and two Allens side tip hoppers with plates reading:

**ALLENS of TIPTON
W G ALLEN & SONS (TIPTON) LTD
TIPTON STAFFS. ENGLAND
RAILWAY MINE & PLANTATION EQUIPMENT LTD LONDON**

There were two Moore 6 cu yard concrete agitator cars numbered 9D4 and 9D5, and also two Dosco TN 1800 tunnelling machines. Several hundred tons of railway line (45 lb) were also included, some made up into panels with steel sleepers welded to the rails, and there was a quantity of sleepers which had been used for 2 ft gauge track.

Can any member suggest which construction job(s) this equipment was used for ?

David Whiteford 7/85

DIZZY LAMB, Wanneroo Road. Perth 610 mm gauge

This new tourist attraction includes a railway about 0.5 km in length. The line has been built over a number of years and for some time a bridge and embankment had been visible from Wanneroo Road. There is also a concrete pipe tunnel, which is used as a shed for the train when it is not in use. The loco purchased for use on the line is steam outline with a Holden engine and is similar in appearance to others built by John Dunlop in Sydney. Three bogie carriages have also been purchased for the project, each with eight bench seats, and each using two hopper frames which came from a Kalgoorlie mine nearly seven years ago. The tracks which also came from Kalgoorlie, is constructed from rather light rail. There are no sidings on the line. For ballasting operations, a hopper wagon was borrowed from the West Australian Light Railway Preservation Association. The station building is a very elaborate one and the cafe area features many ex-WAGR train nameboards.

David Whiteford 7/85

GOLDEN MILE LOOPLINE RAILWAY SOCIETY, Boulder 1067 mm gauge

(see LRN 39 p.11)

F.C.Hibberd "Planet" 4wDM 3966 of 1962 is now capable of being used for shunting and as a back-up for the ex-WAGR Z class diesel used in regular service. The long saga of bringing this loco to running order had appeared over last year, but further problems emerged with water leaking from the cooling system into the sump. Now, hopefully, these problems have been solved.

Loop Line News No.14

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC., Bennett Brook Railway, Caversham 610 mm gauge

(see LRN 47 p.13)

On Friday 21 June, the two South African locos were unloaded from the Saffordian Nederburg at Fremantle. They were transported to Whiteman Park and placed in the carriage shed pending completion of rail access to the new loco shed. NG123 (Franco-Belge 2-8-2 2670 of 1951) looks very good, and could be steamed by Easter 1986 if all goes to plan. NG118 (Henschel 2-8-2 24476 of 1938) will need more work done, but this requires further investigation.

Three petrol locos are now available for passenger use, the Maylands Brickworks-built loco L2, the "Planet" *Yellow Rose* (Hibberd ?2055 of 1937), and the Whitemans Brickworks "Ridley" six-wheeled loco. A postcard has been released showing a train at Central Station with the Maylands and Ridley locos at either end.

The boiler from the Orenstein & Koppel Mallet 0-4-4-0T (2609 of 1907) has been removed, the smokebox removed, and the boiler tubes cut out. Descaling and sandblasting of the boiler will follow.

Track laying is continuing steadily. Over six months of operation, over eight thousand passengers have been carried, with good traffic especially during school holidays.

Rusty Rails 7/85; 8/85

OVERSEAS

FIJI SUGAR CORPORATION 610 mm gauge

On 8 July, the Fiji Sugar Corporation recovered a loco that derailed and fell 15 metres from a bridge on the Lautoka Mill system into a Nadi river. The loco was dragged down after three wagons left the rails on the bridge. The cab

was separated from the rest of the unit when it was recovered from the river. The loco suffered "quite a bit of damage" in the incident. From a photo in the Fiji Times and the quoted weight of 18 tons, it would seem that the loco was a Baldwin product (probably Lautoka 16 or 17 - Ed.)

A proposal has been made for the re-introduction of a passenger service on a commercial basis. The main advantage would be the more efficient use of equipment which is normally left idle outside the crushing season. Although the operational costs of a passenger service would not be high, the initial costs would be. This is due to the need for faster trains, better carriages, and a general upgrading of the whole rail system. A feasibility study is to be carried out by a team of three consultants financed by the Asian Development Bank. In the meantime the Fiji Sugar Corporation is negotiating with people to cart "other goods apart from cane in the railway areas".

Fiji Times 20/6/85 & 9/7/85 via John Peterson

MINIATURE LINES

THE TRAM STOP. Beerwah. Queensland

This 15 inch gauge operating museum of model trams is situated beside the Bruce Highway between Brisbane and the Sunshine Coast. A circuit of 0.5 km is in use, with a second under construction. A number of model trams from around the world are currently in use and more are under construction. This is a pleasant spot and would be suitable for a family outing

Martin Bell 8/85

MEETINGS

MELBOURNE

Peter Evans will be presenting an audio-visual on tramways which served the Timboon Branch Line, conveying timber, limestone and gravel. Also to be featured is the Heatherlie quarry, which operated in the 1880s and supplied sandstone for Victoria's Parliament House.

LOCATION: Ashburton Uniting Church Hall, Ashburn Gve, Ashburton

DATE: Thursday, 10 October at 8:00 P.M.

ADELAIDE

Members are asked to bring a list of South Australian privately owned railways and locomotives (not S.A.R. or C.R., but including other Government Departments). The aim is to compile a list of S.A. private lines and locos, and information on owner/operator, location, gauges motive power, period of operation, type of traffic are needed.

LOCATION: 84 King William St., Kent Town

DATE: Thursday, 3 October at 8:00 P.M.

SYDNEY

The October Meeting will see a return of our old favourite for many of our members for meetings subjects, the MEMBERS SLIDE NIGHT. So bring along some slides on any item of light railway interest.

LOCATION: Government Workers Transport Club, Regent St., Sydney

DATE: Wednesday, 23 October at 7:30 P.M.

TOUR Our December tour to H.M.A.S. Penguin is proceeding, and details should appear elsewhere in this L.R.N. Any members with questions should contact one of the N.S.W. Division Committee members. Our latest advice on the base is that it will be recommissioned, removing possible future access, and the railway possibly removed, so this may be our LAST opportunity to visit.

EXHIBITION Don't forget the Open Day at Menangle, 9 - 10 November. As in past years the Division intends having a Stand with new displays on show. So why not come down and have a ride on member Paul Simpson's railway (now extended) and have a chat to the members running the stand.

RESEARCH COLUMN

Manly Ocean Beach Railway

Ken McCarthy of 3 Shoobert Crescent, KEIRAVILLE 2500, is seeking details of an elaborate steam railway once existed at the northern end of the Manly ocean beach beside North Steyne. He found one postcard showing a loco and open passenger cars under the pine trees. The loco seems to be of Cagney Brothers manufacture. This was a U.S. firm located at Niagara Falls NY, who constructed fairground type locos for miniature railways between 1892 and 1935. Most appear to have been of 4-4-0 design resembling the record breaker No.999. It seems that locos were built to the following gauges: 9-1/2 in, 12-5/8 in, 15 in, 18 in, and 22 in The Manly railway was in use around 1908. It seems to have commenced on the beach parallel to North Steyne near Pacific Street. The track crossed the entrance to Curl Cur (or North Manly) Lagoon on a low trestle and skirted the Curl Curl head under Queenscliffe Road. The headland was pierced by a tunnel through which the railway operated to reach the cove formed by Harbord (once Freshwater) Beach. The line terminated near the southern end of this beach under Pavillion Street.

Ken would be very pleased to receive any further details of any kind.

Victorian Railways Narrow gauge register

Peter Medlin of 9 Drake Street, FERNTREE GULLY 3156 (03 758 5387) is compiling a detailed roster of Victorian Railways 2 ft 6 in gauge locos and

rolling stock, showing where each item was allocated and used at various times.

For example:

1NA - Issued to traffic - to Wangaratta -

1/9/98 to Newport - 1/12/02 . . . etc.

Any member who is interested in assisting Peter, please contact him.

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

E.M. BALDWIN & SONS PTY LTD

(see LRN 47 p.4)

It is understood that this company has had to go into voluntary receivership as a result of difficulties caused by economic downturn. However, the impression gained is that the company will be able to trade itself out of its present plight. The old premises at Castle Hill were still being used recently as well as the newly acquired Rooty Hill factory.

Craig Wilson 9/85

FOX MANUFACTURING CO. PTY LTD, Smithfield, N.S.W.

(see LRN 43 p.3)

Clyde Engineering has sold Fox Manufacturing to Peco Wallsend. Fox is Australia's largest manufacturer of underground coal mining equipment, including 1067 mm gauge colliery locomotives and man riding cars. It is believed that the heavy manufacturing activities of Fox may now be transferred to Melbourne.

Craig Wilson 9/85

HEXHAM ENGINEERING PTY LTD, Hexham, N.S.W. 1067 mm gauge

This company, owned by Coal & Allied, has a thriving business in the overhaul and rebuilding of underground locomotives and rolling stock. A quantity of items of rolling stock can be seen in their yard, some of it basically derelict or at the best stored, but repair and rebuilding work is also usually evident. New construction of dolly cars and wagons/riding cars is also undertaken.

The following items all ex Coal & Allied Collieries were noted in the company's yard on 12 September.

Agnes 2 4wDHR E.M. Baldwin 2301-1-1-6 8 1968 Model 6DHS Mk3A (supplied to Aberdare East - believed here ex Liddell - stored)

Ann 4 4wDHR E.M. Baldwin (2301-4-2-68 1968} (Model 6DHS Mt 3A) (no builder's plate) (supplied to Aberdare East - believed here ex Liddell - derelict/stored)

12 4wDHR E.M. Baldwin 3022-6-9-70 1970 Model 6DHS Mk4 (supplied to Wallarah)

No.4 4wDH E.M. Baldwin 3550-1-11-71 1971 Model DHS20M/A2 (stored - has been here since at least 1983 and is ex West Wallsend No.2)

2603 4wDHR E.M. Baldwin ? (no builder's plate) (in white primer following overhaul)

2682 4wDHR Fox 356 10/75 1975 (in white primer following overhaul)

DC01 dolly car Hexham Eng. 619 9/5/83 (ex West Wallsend No.2 - a dolly car is the vehicle permanently attached to the haulage rope on an inclined drift)

Several bogie 40-man transport vehicles were also noted and it was reported that a 25-ton locomotive was being rebuilt inside the workshops. There is a test track at the works, and also one in a quarry at Cessnock. This incorporates a 30 metre radius brow descending to a 1 in 3.5 incline approximately 50 metres long. The track is used to test braking systems.

D.J Mewes 9/85

NEW SOUTH WALES

J. & A. BROWN & ABERMAIN SEAHAM COLLIERIES LTD, Hexham 1435 mm gauge

Owned by Coal & Allied, Australia's last steam operated industrial railway still survives with ex-South Maitland Railway Beyer Peacock 2-8-2T locos hauling coal between Stockrington Colliery and Hexham Washery. On 12 September, 25 (6126 of 1922) was the working loco with 22 (6055 of 1920), 27 (6137 of 1922) and 30 (6294 of 1925) on shed at Hexham.

D.J.Mewes 10/85

GOULBURN CITY COUNCIL, Goulburn Steam Museum 610 mm gauge

(see LRN 35 p.5)

The museum is currently closed, pending restoration works, and latterly, according to the Goulburn City Council Town Clerk "the desire of the Council to appoint an effective operator".

K.E. Brown, Goulburn City Council, via Bob McKillop, 9/85

HISTORIC VILLAGE MOTEL COOLANGATTA, via Berry 600 mm gauge

(see LRN 48 p.3)

On a visit in mid-October the track here was measured and inspected. It forms a circle approximately 400 m in circumference. Its location on the side of a hill has enabled the upper half to be situated in a cutting about 3 m deep

while the lower portion is on a slight embankment. The rail seems to be 24 lb/yard.

Three open four wheel passenger cars were noted, but only one was actually on the railway. Of the other two, one was being renovated, the steel frame and waist high chain wire mesh which forms the side of the car having been repainted, but the wheels were yet to be refitted.

The steam outline locomotive is mounted on a four wheel chassis. A compression ignition or internal combustion engine transmits power to all four wheels through chain drive. The loco carries a circular plate bearing "H.V. McKay - Sunshine", but it is not clear if this is a builder's plate or if it has been retrieved from some historic farm equipment. If, as is claimed, this is the Taronga Zoo train, then the driver's cab seems to have been elevated from its original height. Although the loco and one car are on the track for clockwise operation, it does not seem to have worked for some time.

The wheel sets from the car under renovation revealed that one set of conventional "edge rail" single flanged design. However, the other was of double flanged designs which would prevent operation through normal point blades (there are no points at Coolangatta).

It is thought from memory that there were two locos at Taronga. The spare one was housed in a tunnel-like shed reached from the main circle by a set of points. It is clearly remembered that the frog on these Zoo points was of the ramped type which gave uninterrupted rail path for the main line. This frog would have also allowed transit for a double flanged wheel, but memory is not clear as to the nature of the switch blades. These would have had to be of the butt or stub type for such wheels. Incidentally, the Randwick Tramway Workshops were responsible for the maintenance of the old Taronga Park Zoo Railway. This was therefore an eventual casualty of the Sydney tram closure.

Ken McCarthy 10/85

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD Albion Park 610 mm gauge

(see LRN 48 p.5)

On 6 October, the cylinders and steam chests were removed from ex-Corrimal Coal Co. 0-4-0ST *Burra* (Hawthorn Leslie 3574 of 1923). The cylinders are in good condition but the steam chest surfaces will require refacing. During August a small wasted area of the front tube plate in this loco was built up by electric welding carried out by a pressure vessel ticketed tradesman. When this work is X-ray tested the task of retubing the boiler can proceed.

Work is continuing on the restoration of 0-6-2T *Tully* No.6 (Perry 7967.49.1 of 1949). Anchor brackets for the new coupling gear have been fabricated

and fitted into position while new buffer beam plates, to replace the original ones badly dented over years of hard work, are ready to be fastened to the chassis.

In September a vintage roofless open cross bench manriding car was received from Metropolitan Colliery at Helensburgh. This vehicle was requested earlier in the year but the enclosed toastrack car mentioned in LRN 48 was donated in error. Work is nearing completion on the enclosed car; the metal body has been cut back and primed while a missing slatted seat has been reconstructed. During October, work was progressing on regauging the newly arrived open car from 1067 mm to 610 mm gauge. In the near future, the museum will have two enclosed and one open low profile manriding mine cars for use behind the Mancha battery electric loco.

By mid-October, body restoration of the Baguley-built Drewry petrol inspection car ex Victoria Mill, Queensland, had reached the stage where the tongue and grooved roof slats could be fitted. This vehicle had suffered a rough life. At some stage, one end had been rebuilt using heavy angle uprights in place of the original pipe frames. Pipe frames to the original style have now been refitted. The only major tasks to be undertaken before the bodywork is completed are the fastening of canvas to the roof and the refitting of the tool boxes to the interior ends.

Building construction during August and September has concentrated on the new 12 m x 6 m workshop. The cladding of the roof was completed and metal sheets were fixed to the eastern and southern walls. The framework for mezzanine floor has been erected at the southern end of this building in which a security store is being established. Concrete floor slabs are being progressively formed in this building as finances allow. Work is proceeding on realigning the main yard points in the museum compound. This will enable two additional tracks to be constructed in what will be the new extension to the main running shed.

The opening of the Sydney-Wollongong-Port Kembla railway electrification will be marked by a parade and an "Electrofest" on Sunday 15 December. It is planned to exhibit 0-4-OST *Kiama* (Davenport 1596 of 1917) in this parade. The engine will be carried through the streets of Wollongong in steam on a low loader.

Ken McCarthy 10/85

QUEENSLAND

RACECOURSE MILL 610 mm gauge

THE locos (or cane trains) operate around the Mackay district throughout the crushing season from June to November. Visitors should be careful when travelling in sugar can areas.

Racecourse Mill Clyde DHI-71 0-6-0DH.

ARAMAC SHIRE COUNCIL 1067 mm gauge

The remains of ex-QGR B12 class 2-6-0 A1 (Avonside 1179 of 1877) formerly of the Aramac Shire Tramway, have been donated by the Shire Council to Graham Chapman of Kallangur, for inclusion in a future steam museum in the Sunshine Coast area. The locomotive is described as "very derelict", but the new owners plan to renovate it for display.

Len Kingston via George Bond 10/85

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610 mm gauge

(see LRN 48 p 7)

New boiler tubes have now been ordered for Bundaberg Foundry 0-6-2T 5 of 1952, ex-Pleystowe Mill 5. It is expected that tubes will be fitted early next year to enable the loco to re-enter service. Other work being carried out will be fabrication of a new chimney, the fitting of a dosing pot (for boiler

treatment chemicals) and work on the ashpan area.

Work has continued steadily on the removal of track materials from the Tennyson Powerhouse sidings in Brisbane. This project is providing a large quantity of suitable rail and points for use at Woodford. A further seven tons of rail was recently donated by the Golden Circle Cannery, Northgate; this has already been lifted but requires the fishplate joints to be broken.

Title to a stretch of trackbed in Woodford was recently acquired from APM Forests Pty Ltd for a sum of \$1. This section of trackbed, amounting to an area of 7993 square metres, was formerly leased from APM, and forms the second part of the stage one of railway development from Woodford Station to Petersen Road. Track laying is expected to be completed on this section during 1986.

A building permit has been received from Caboolture Shire Council for the erection of the former Northgate Railway Workshops First Aid Hut as Ticket Office on the Woodford Station platform. Various necessary structural repairs are to be carried out in accordance with the building permit.

A new site track plan has been evolved in the light of land purchase, easement requirements, and track availability. This is being followed up with a concept site plan and proposal for presentation to the Shire Council before more detailed drawings are prepared.

3 ft 6 in Goodman 4wWE 6035 of 1950 was moved to private property at Kallangur on 14 October. This site is not available for public inspection.

Malcolm Moore 4wPM 1035 of 1943 is to be removed from Rosewood to Gatton in the near future. It has been restored to operational condition but requires rewiring and repainting before entering service. On completion of this work, it can be maintained in store as reserve for Ruston & Hornsby 4wDM 279567 of 1949, which recently received radiator repairs.

AUSTRALIAN SUGAR MUSEUM, Mourilyan 610 mm gauge

(see LRN 16, p.3)

The museum is open 7 days per week from 9 am to 5 pm and admission charges are \$1 for adults; 50c children. Rail exhibits include John Fowler 0-4-2T 4668 of 1883 originally ex Mourilyan Mill, *Townsville* Hudswell Clarke 0-6-0 1099 of 1919 originally ex Goondi Mill, and a four-wheeled petrol line car ex-South Johnstone Mill. This museum is listed as a major bicentennial project for Queensland.

Australian Sugar Museum via Bob McKillop 10/85; Editor

BUNDABERG TRAMWAY PRESERVATION SOCIETY INC. 610 mm gauge

(see LRN 45 p.8)

Construction of about 1 km of track in the Botanical Gardens at the corner of Gin Gin Road and Yound Street, North Bundaberg, is planned to commence in January 1986. It is anticipated that some form of operations will take place on the site in the latter part of 1986.

B.T.P.S via Bob McKillop, 10/85

CSR LTD Goondi Mill 610 mm gauge

(see LRN 38 p.8)

Wickham four-wheel petrol line car 8376 of 1959 is still to be seen out of use in storage sidings adjacent to the mill, with a large quantity of other outmoded items of rolling stock. Included are large numbers of steel cane trucks, some of which are used for the storage and transport of firewood for use in starting up the mill boilers. This type of practice highlights the obsolete nature of some of the Goondi mill equipment, which is believed to have put the future of the mill in question.

John Kramer 9/85; Editor

CSR LTD, Kalamia Mill 610 mm gauge

(see LRN 39 p.4)

The dismantled remains of Baguley-built Drewry 0-6-0DM 2514 of 1954 *Seaforth* continue to languish near the mill. This loco has had its engine and bonnet removed. There has been some talk of it being converted into a brake wagon, but no work has been done on this project.

John Kramer 9/85; Editor

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 38 p.9)

Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) and the Decauville

passenger carriage were once again used to give free passenger rides in Ingham on 21 September, in conjunction with the annual Maraka Festival.

The mill's Drewry 0-6-0DM locos built by E.E. Baguley Ltd have been fitted with shades over the cab side windows, similar to those first used by e.m. baldwin & Sons on their loco designs. Late in August, it was noted that e.m. baldwin B-B DH *Wallaman* (6400-3-4-76 of 1976) is still used to work trains of raw sugar from the mill to the bulk sugar terminal at Lucinda.

C.J. Hart, 9/85; John Kramer 9/85

MARIAN MILL CO-OPERATIVE SOCIETY LTD, 610 mm gauge

(see LRN 48 p.7)

The Marian Centenary celebrations were held on 29 September, and the mill was closely involved. One highlight was "cane train" rides from the mill yard along the main Mirani line to Boldon and return, a distance of about 5 km for the round trip. The mill's number 12 (Clyde 0-6-0DH 58-183 of 1958) hauled the train, consisting of the first of three bogie carriages being built by Tony Germanotta for his projected tourist service. The car is about 6 metres long and seats about 24 passengers seated back to back on longitudinal seating in the centre of the car. The bogies were constructed by Tony Germanotta using heavy duty axle boxes and wheel sets.

On display in the mill yard were four different types of mill locos, E.M. Baldwin 32 tonne B-B DH 17 (9562-6-81 of 1981), Clyde HG-3R 0-6-0DH 14 (61-235 of 1961), Clyde DHI-71 0-6-0DH 11 (56-104 of 1956), and Perry 0-6-2T 2601.51.1 of 1951. The steam loco is on loan to Tony Germanotta, and had been brought down to the mill specially for the occasion.

Editor 9/85

MILLAQUIN SUGAR CO. PTY LTD, Qunaba Mill 610 mm gauge

(see LRN 45, p.11)

This mill will close at the end of the 1985 season, as part of rationalisation of Bundaberg Sugar Co. operations. (The last mill to close in Queensland, Gin Gin in 1974, was also a Bundaberg Sugar mill). One third of Qunaba's 300,000 tonne crush will go to Millaquin and the remainder will go across the Burnett River to Fairymead. Some Fairymead cane will be reassigned to Bingera to equalise production. The tramline systems of Qunaba and Millaquin Mills are connected and it is assumed that cane will go to Millaquin from the Hummock area by tramway. It is not clear what transport arrangements will be used for the cane assigned to Fairymead, but an existing punt used to ferry bulk sugar trucks could presumably also be used for cane transports.

Qunaba only has two diesel locomotives, Com-Eng 0-6-0DH FC3473 of

1964, and a 4wDH rebuilt in 1980 by Millaquin Mill from E.M. Baldwin 8860-2-8-79 of 1979, itself a rebuild of one of four locos built to E.M. Baldwin serial number 4529 in 1973.

Durundur Railway Bulletin 10/85; Editor

MORETON CENTRAL SUGAR CO. LTD Nambour 610 mm gauge

(see LRN 48 p.8)

E.M. Baldwin 0-6-0DH *Bli-Bli* (6-1064-1-11-64 of 1964) has been rebuilt at the mill with a new soundproofed cab and has also been fitted with wire mesh type engine compartment doors. At the end of September, Baguley 0-6-0DM *Jamaica* (3389 of 1954) was noted on blocks in the mill yard, having had a crack in the mainframe welded up.

E.M. Baldwin 0-4-0DH locos *Maroochy* (6-1064-1-11-64 of 1964) and *Valdora* (6-1258-5-6-65 of 1965) have been fitted up for multiple unit operation for some time. Crews taking empty bins out from the mill prefer to drive the units from the cab of *Valdora*, for they can turn off the engine in this unit and have a quieter ride, with the other loco doing the work.

J.L.Buckland 9/85; D.J.Mewes 10/85

MOSSMAN CENTRAL MILL CO. LTD 610 mm gauge

(see LRN 48, p.8)

The current timetable for the "Ballyhooley Steam Express" is given as follows:

April-May Mon/Wed/Fri 10am

June-September Mon-Fri 10 am & 2 pm

September School Holidays Mon-Fri 10 am & 2 pm

Rest of October Mon/Wed/Fri 10 am

November-January Mon/Fri 10 am

John Kramer 9/85

PIONEER SUGAR MILLS LTD, Inkerman Mill, Home Hill 610 mm gauge

(see LRN 34 p.14)

3 ft 6 in gauge 0-6-0T *Inkerman* No.1 (Hunslet 1119 of 1913) is preserved in the mill yard. It was noted in good condition during August in good order and in a yellow lined out livery.

John Kramer

PIONEER SUGAR MILLS LTD, Pioneer Mill, Brandon 1067 mm gauge

(see LRN 43 p.8)

Walkers 0-6-0DH 583 of 1968 in yellow livery was noted propelling cane bins into the mill yard in late August. This loco was built for the Aramac Shire Tramway, and was purchased by Pioneer Mill, the only one with a 3 ft 6 in

gauge tramway system, in 1976. The mill also has five Clyde DHI-71 0-6-0DH locos.

John Kramer 9/85: Editor

ROCKHAMPTON CITY COUNCIL 1067 mm gauge

During the 1970s, the Rockhampton branch of the National Trust retrieved various relics of the steam trams and trailers which operated on the Rockhampton City Tramways between 1909 and 1939. These included a trailer chassis complete with wheels, body parts and boiler and apron components. In 1983, reconstruction of a steam tram as a bicentenary project was initiated. Local publicity has led to the recovery of more tramway relics. Most important however has been the transfer of a steam car engine unit from the Antique Machinery Restoration Society of Brisbane (see LRN 23 p.10), which had been recovered from a Brisbane sawmill, and the offer of local engineering firm, Burns & Twigg to rebuild a water tube boiler retrieved about ten years ago. Some unusual resting places of relics have been discovered. During May, a backhoe was removing a tree stump at the bus depot to enable parking areas to be expanded, and unearthed a pair of leaf spring tramcar buffers in a relatively good state of preservation. Tram reconstruction is taking place in the bus workshops. By August, main frame construction was advanced and a search for spoked wheelsets began. By October, these had been offered by the Sydney Tramway Museum and the SRA of NSW. Timber body components are being prepared.

The Rockhampton Tramways used nine self contained steam cars built to the Purrey design in Bordeaux, France between 1909 and 1922, and six trailer cars constructed between 1909 and 1921. In addition, two similar cars built by J. Exshaw & Co., who had taken over the Purrey business, and two locally built trailers were operated by the QGR on their Rockhampton - Lakes Creek line from 1924 to 1937. About 250 steam trams and rail cars were constructed to Purrey design, and the Rockhampton car will be the only one of its type in the world.

It is hoped that a tramway will be returned to the streets of Rockhampton, in the historic East Street and riverside areas, in time for 1988, and that a regular steam tram service will operate.

Ken McCarthy 10/85

SOUTH JOHNSTONE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 43 p.9)

All locos seem to have been fitted with prominent stickers proclaiming

"Sugar - a natural part of life". Two locos were noted apparently out of use in the mill yard in August. These were 15, Drewry 0-6-0DM (built by E.E. Baguley) 2520 of 1954, and 17, Malcolm Moore 4wDM 1060 of 1943.

John Kramer 9/85

SUNCOAST PIONEER MUSEUM, Mudjimba Beach, 610 mm gauge

(see LRN ?)

The museum's collection was auctioned on 8-9 September. The only railway locomotive involved was John Fowler 0-4-2T *Petrie* (19930 of 1933), built for Babinda Mill, and sold to Moreton Mill in 1959. It is believed that this loco was purchased for about \$1000 by Malcolm Menzies, a resident of Woodford, on behalf of a Victorian party. Further details would be welcome.

Courier Mail, 9/9/85; D.J.Mewes 10/85

TULLY CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 38, p.11)

Tully No. 9, Clyde 0-6-0DH DHI.4 of 1954 was observed derelict without engine in the mill yard in August. The mill had considered converting this loco into a brake wagon but no work has been done to date.

John Kramer 9/85

Bob McKillop 9/85

VICTORIA

EMERALD TOURIST RAILWAY BOARD PUFFING BILLY PRESERVATION SOCIETY MUSEUM 762 mm gauge

(see LRN 45 p.14)

Restoration work on Beyer-Garratt G42 (Beyer Peacock 2-6-0 + 0-6-2 6268 of 1926) has commenced with the awarding of a contract to Jahco Engineering Pty Ltd for the co-ordination of modification of the boiler from former Australian Portland Cement's 3 ft 6 in gauge number 1 (Beyer Peacock 2-6-0 + 0-6-2 6794 of 1936) to fit the boiler unit from G42. This boiler has been stored at the Menzies Creek museum for some time. (The complete Fyansford Garratt at the museum consists of the engine units from No.1 with the boiler unit from No.2 (6935 of 1938)). A C.E.P. grant has been requested for this restoration work, which will probably be done in three stages: boiler unit/cab; front engine unit; rear engine unit, as money becomes available. No anticipated completion date has been announced.

Work on the Climax 4w+4wTG loco (1694 of 1928) is well advanced. Main boiler fittings are now in place, and a little more work is needed before boiler testing. Fitting out of the cab is under way, with handrails, cab hatch, sanding lever, and regulator in place. The air compressor has been overhauled and the other brake components obtained and stockpiled. This loco is likely to be in service in early 1986.

On Saturday 26 October, two steam locos of different types will double-head on the Belgrave-Emerald section of the line. The two locos will be 2-6-2T 7NA (Newport, 1905) and 0-4-0ST *Sir John Grice* (Peckett 1711 of 1926). This special working hauled by the two tacs painted in two-tone green, has been organised to coincide with the "Great Railway Auction" organised by the "Get G42 Going Fund". Over 500 items will be auctioned including the old boilers from NA Class 2-6-2Ts 12A (with a current boiler certificate) and 3A (last used 1955).

PBPS Monthly News via Peter Medlin 10/85

STATE COAL MINE, Wonthaggi 915 mm & 610 mm gauges

The eastern area of the old Victorian Railways-operated State Coal Mine at Wonthaggi is open to the public, with guided tours of the old underground workings available (at \$2 per person). This section of the State Mine ceased operations in 1931 (although black coal mining at Wonthaggi continued until 1968, when the Kirrak mine closed), but there is still much of tramway interest here. A 610 mm gauge cable-hauled incline with converted mining skips takes visitors down to one of the many working levels, where black coal mining techniques are explained. Numerous shafts and adits radiate from here, and an extensive network of old 610 mm gauge horse-hauled tramways still exists in the mine. A variety of coal skips and trolleys to carry timber into the mine for shoring remain at the site, both on the surface and underground. There is also a section of steel and wooden railed 3 ft gauge tramway along one of the inclined shafts, which was originally used to transport miners down to the main level. The mine is open daily from 10 am to 3.30 pm.

Justin Oakley 10/85

WESTERN AUSTRALIA

HOTHAM VALLEY TOURIST RAILWAY W.A. INC. 1067 mm gauge

(see LRN 42 p.10)

The Western Australian State Energy Commission has donated a Drewry Car Co. 0-6-0ST from the South Fremantle Power Station to the Hotham Valley Railway. The loco appears similar to the TGR V-class, so was probably built by Robert Stephenson & Hawthorns. The loco will be used to move rolling stock from Pinjarra to Dwellingup, to haul maintenance trains, and to power a "bush tramway" service between Dwellingup and Etmilyn. Can a reader provide full details of this unit for publication in LRN?

Pioneer Steam Express 9/85

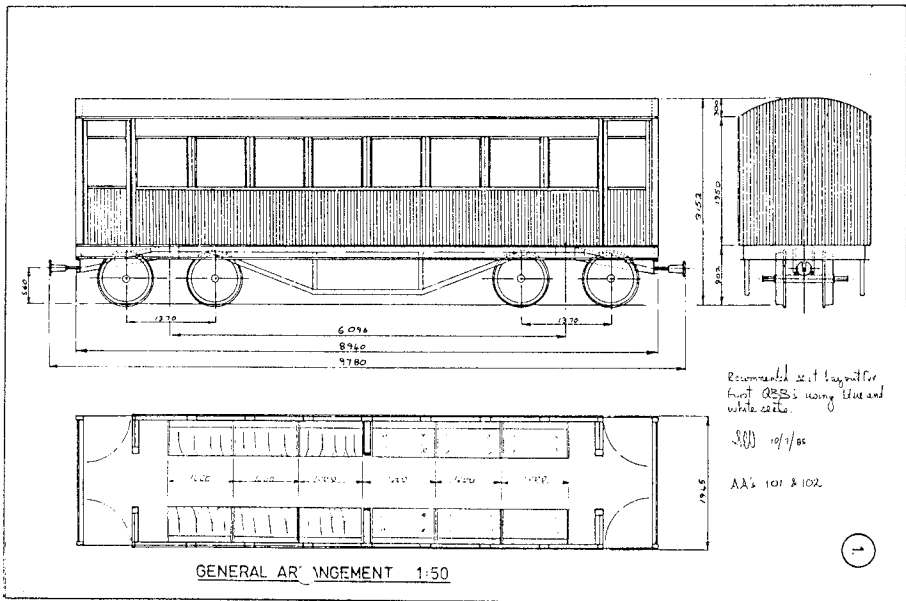

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION SOCIETY INC. Bennett Brook Railway, Caversham 610 mm gauge

(see LRN 48 p.12)

Preliminary work has begun on NG123 (Franco-Belge 2-8-2 2670 of 1951) with the boiler cladding having been removed and some descaling having been done prior to inspection. It is believed that some firebox repairs will need to be undertaken. Work has also continued with the Orenstein & Koppel Mallet 0-4-4-0T (2609 of 1907). This has revealed that the boiler fitted to this loco was constructed by Perry Engineering in the early 1950s. Work is well

advanced on the ex-Lake View & Star F.C. Hibberd "Planet" 0-4-0DM 2150 of 1939. The engine was first started up in September, but further work is required fitting new pistons and new piston rings and liners. This loco is fitted with a vintage "Atlantic" diesel engine. A second coach constructed on a Lake View & Star hopper chassis entered service in August, initially in undercoat and work has now commenced on a third. The first QBB carriage is nearing completion. Bodywork is almost finished and both bogies are almost ready for fitting. Some WAGR wagons have been purchased for gauge conversion, and work has already started on the first, an LA ballast wagon.

Rusty Rails 10/85; Lindsay Watson 10/85

Drawing of car presently nearing completion by W.A.L.R.P.A.

OVERSEAS - PAPUA NEW GUINEA

BOUGAINVILLE COPPER LTD Panguna, North Solomons Province. 900 mm gauge (see LRN 33 p.16)

On 6 March the pit drainage tunnel at Panguna was used for the first time when emergency denaturing equipment was used. As the concrete lining of

the 6.3 km long tunnel had not yet been completed, the contractor, Downer Constructions Australia, moved back into the tunnel a few days later. The task was due to be completed in about mid-year. It is thought possible that the rail line used to bore the tunnel may have been retained while this work was completed

Siakapo (BCL) 3/85 via Michael Pearson

OK TEDI MINING LTD, Western Province Gauge unknown

Mining tramways are in use here in driving adits. These have been noted in photos but no details are to hand. Gauge appeared to be around 2 ft Can any reader provide further details?

Michael Pearson 10/85

MICHAEL PEARSON, Buin, North Solomons Province. 610 mm gauge

(see LRN 33 p.17)

Michael has moved from Buka Passage and has collected one side tipping skip and one fat trolley plus track in the the Buin area. One of the ex-Japanese Navy Kato Works four-wheeled internal-combustion locos abandoned near Buin, (see LR 70 p.20) has been chosen for a preservation attempt. A plate from the cab of another of the locos appears to read "3000kg, 610 mm gauge, FORD 4-cylinder;" So far brakes, chain drive and linkage have been removed from the loco, but some trouble is expected in salvaging the main part of the loco. As there is no heavy machinery available, the recovery job has to be accomplished using a tractor.

Michael Pearson 10/85

OF INTEREST

Sydney's Power House Museum, in Mary Ann Street, Ultimo, will reopen with a new exhibition in January 1986. The exhibition will focus on the plans and development for the entire Power House Museum complex which will open in 1988. No.1 steam tram motor will be on display in January, but the full museum complex in 1988 will feature a number of other preserved locomotives.

Power House Museum via Bob McKillop 9/85

MEETINGS

MELBOURNE

Tonight John Buckland will be presenting some reminiscences from over 50 years of railway and tramway experiences, so we look forward to seeing

a large turnout of Melbourne members to hear all about how things were in the halcyon days of steam.

LOCATION: Ashburton Uniting Church Hall, Ashburn Gve, Ashburton. DATE: Thursday 12 December at 8:00 pm

ADELAIDE

Members are asked to bring 10 slides or photos of light railway interest, preferably South Australian. Note the change of venue to Trev Triplow's residence.

LOCATION: 47 Gardner St., Plympton, S.A.

DATE: Thursday 5 December at 8:00 pm

SYDNEY

There will be no December meeting; next meeting will be in February. Members are reminded of the John Fowler Works List book offer (see enclosed form). The N.S.W. price is \$7.00, other states \$7.50.

LIGHT RAILWAY RESEARCH SOCIETY OF AUSTRALIA - ESTABLISHED 25 YEARS

NOTES, CORRECTIONS AND COMMENTS

The Australian Sugar Journal

The *Australian Sugar Journal* ceased publication with the December 1985 issue. Published by the Australian Sugar Producers' Association since 1909, it is another victim of the current sugar industry problems. The last issue contained an article by LRRSA member David Mewes in which he explained the value of back issues of the magazine to Light Railway researchers. Included were a number of interesting quotations from past issues showing the wide variety of types of information which can be obtained from the Journal's pages.

CORRECTION

Craig Wilson points out that an error appeared in LRN 35, p.4, where an E.M. Baldwin mining loco for Ellalong Colliery is given the builder's number 9879-1-3-79. It should be 8179-1-3-79.

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

E.M. BALDWIN & SONS PTY LTD

(see LRN 49 p.2)

E.M. Baldwin's assets have been liquidated and the railway activities of this company, so significant in the history of light railways in Australia in recent years have been wound up. E.M. Baldwin is believed to have built its first locomotive, for South Johnstone Mill in 1962, and since that time constructed about 80 canefield diesels for Australia and Fiji, about 45 tunnelling locos, and about 33 mining locos and 105 personnel carriers, as well as sundry other units.

Final removal from the Castle Hill site was in October. A number of items of plant from here were advertised for sale in mid-September including two tunnelling locos which had been on site for some years. These were 12-tonne 3 ft 6 in gauge 4wDH locos, 3568-1-9-70 and 3568-2-9-70 of 1970 built for Fluor Australia. They were later used by D'Vanzo Brothers at the Thomson Dam site in Victoria before returning to Castle Hill in 1980. They were removed from site on 21 October, so were very likely sold. An auction of assets took place at Kellogg Road, Rooty Hill on 28 November where no items of rail equipment were offered for sale. However, an underground mining loco was seen in the assembly shop. This was a 4wDH single cab unit, yellow with black underframe and yellow and black dazzle stripes.

The rail business of E.M. Baldwin has been acquired by Hexham Engineering Pty Ltd

Craig Wilson 12/85, Robert James 1/86, Editor

FOX MANUFACTURING CO. PTY LTD, - PROK INTERNATIONAL

The sale of Fox Manufacturing Pty Ltd to the Peko group has led to its incorporation as a Division of Prok International. It is unclear how this may affect manufacturing facilities but a large auction of surplus plant was held at the Smithfield plant of Fox on 9 & 10 October.

Craig Wilson 12/85

HEXHAM ENGINEERING PTY LTD, Hexham, N.S.W.

This company has taken over the railway business of E.M. Baldwin & Sons including spare parts supply and loco manufacturing. It is believed that E.M. Baldwin customers have been notified of this change. Owned by Coal & Allied, of which in turn a 50% interest is held by the Howard Smith groups the business will be a natural adjunct of Howard Smith's coal and sugar milling

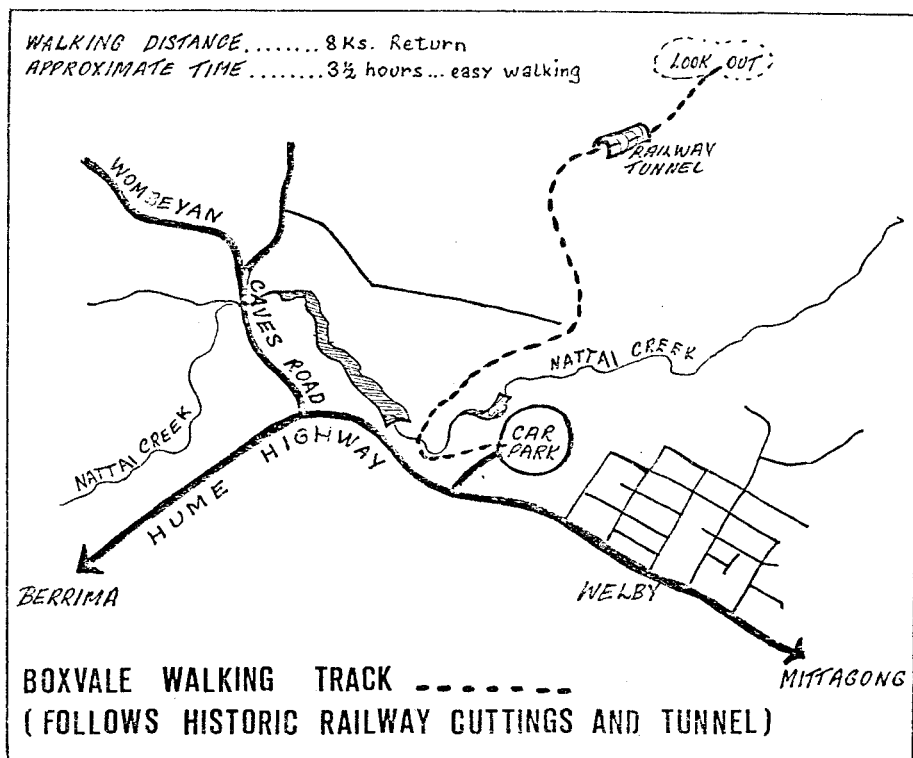

interests, besides having a link with another Howard Smith company, main-line loco manufacturer Goninan.

Robert James 1/86; Editor

FIELD REPORT

Box Vale Tramway Walking Track, Welby, N.S.W.

A new walking track has been opened in the Southern Highlands following the route of this old tramway in the bushland a few kilometres south of Mittagong.

The National Parks and Wildlife Service is responsible for the route, which has been developed in liaison with Wingecarribee Shire Council and a local school.

Access to the track is along the Hume Highway and well signposted. The route of the old Joadja tramline is not far away; neither is the site of the

Fitzroy iron mine and furnaces which, with its tramways, was the pioneer smelter settlement in Australia.

The historic trail, known as the Boxvale Mine Walking Track, is located at the south western flank of Mount Alexandra, a well known landmark of the Mittagong district. Actual work of opening up the trackbed as a path is due to the interest of Mr Trevor Bensley, a member of National Parks Service and Headmaster of Toombong School. Mr Bensley combined his knowledge of the area together with the needs of his students to provide a community project. The students, wards of the state at Renwick Children's Home, required an alternative to the normal school curriculum. The work enabled the boys to be involved in the practical tasks of installing footbridges, steps, picnic tables and signposts and compiling maps.

The Box Vale Railway and Colliery were in operation in the late 1880s. Fitzroy Iron Mines were not operating at the times and there was optimism that the opening of the coal mines would enable the iron mines to be reopened. Mittagong Coal Co. was registered in 1883, and acquired 580 acres on and near the Nattai River. The tramway ran parallel to the Joadja shale mine line as far as Woodlands Estate and then turned in a north-westerly direction.

The *Goulburn Herald* at the time reported that the coal was equal to the best Newcastle. The tramway was completed in 1888, including a cable incline that descended 50 feet down the valley side to the seam where the coal was worked. The mine closed in 1896 after producing a yearly average of 1000 tons.

David Burke, 10/85

NEW SOUTH WALES

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 49 p.4)

During November and December, part of the electric tramway on which the Gemco 4wBE tunnelling loco operates as a wire electric on steaming days was realigned to remove one of the reverse curves. During that period, two new ornamental side brackets were constructed and erected to support the overhead wire. It is planned to replace most of the existing brackets with these more substantial units and to raise the height of the overhead wire generally.

The roof of the ex-Victoria Mill Baguley-built 4wMPR Drewry inspection car was completed on 7 December. The fitting of roof canvas and the completion of new pivot supports for one end windscreen is all that is now required to

complete the bodywork on this vehicle.

The former Otford signal box arrived at Albion Park on 13 November. This is a large building with a floor area of 5.5 m x 3 m which was commissioned in 1888 when the completion of the Clifton to Otford rail link enabled through railway working between Sydney and Kiama to be introduced. The box and 18-lever interlocking frame were made available to ILRMS for \$50. The Albion Park Apex club floated a concrete slab and constructed a brick foundation wall over 1 m high onto which the building was lifted on 14 December. This signal box will control the station yard when the collection of NSWGR, QGR and private signals is restored and erected.

During November and December the construction of the first of two new roads which will be covered by the running shed annex was carried out, and a connection made with the compound yard tracks.

The open man carrying car recently received from Metropolitan Colliery at Helensburgh was placed on the track with its new 610 mm gauge wheels on 30 November. This carries a No.2 on the inside of its main chassis frame. The seats on the vehicle were repaired the following weekend.

Four-car trains were operated all day on 1 December when the local Oak Flats Bowling Club used the museum facilities for its Christmas Party. Well over 1000 rides were carried that day. Patronage was below average on the regular steaming day 8 December. This was due to the first very hot day of the summer season.

The stationary vertical boiler which once powered the Brownhoist rail mobile crane No.7 at Port Kembla was steamed on 7 December and used to power the first two stationary engines in the new display shed.

Davenport 0-4-0ST *Kiama* (1596 of 1917) was the star of the "Electrofest" parade held in Wollongong on Sunday 15 December to mark the opening of the electrified railway. The steam loco was lifted onto a low loader semi-trailer on 14 December and returned to museum tracks on the 16th. The loco was in steam during three parades and the deep whistle of standard gauge loco C3642 at Wollongong Station was in contrast to the shrill whistle of the Davenport. Incidentally, although through operation of electric trains from Sydney had to be postponed due to the condition of Stanwell Park viaduct, a frequent Wollongong suburban electric service has been in operation.

Ken McCarthy 12/85

ROYAL AUSTRALIAN NAVY, H.M.A.S. Penguin, Clareville Beach, 610 mm gauge

(see LRN 47 p.8)

LRRSA NSW Division had fine weather and a good turnout for its annual

tour on 7 December, this year to H.M.A.S.Penguin. The base, currently in use for navy diver training, has two 2 ft gauge Greenwood & Batley 4wBE "locomotives" which are believed to have been purchased on the base's construction in 1940. They can be best described as motorised trolleys, the batteries being carried beneath the hinged table top. Rolling stock consists of 4 four-wheeled trolleys.

Several trips were made the length of the tramway on one of the locos, which carries a brass plate with number 3209, which may be the builder's number. The other loco was not in service, undergoing battery charging. Tour organiser Len King has already gathered some material for a short history of the line and is interested in contacting any person with knowledge or photographs of the jetty at its fullest extent before part was demolished some years ago. He can be contacted c/o the NSW Division

Craig Wilson 12/85

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge

(see LRN 49 p.5)

Bundaberg Foundry 0-6-2T 5 of 1952 will be moved to private property at Kallangur where workshop facilities are available for the loco's retubing. There will also be other repairs and tests to be carried out on the boiler and mechanical work will be carried out as well as painting.

Repair work will also be carried out at Woodford on ex Rail Motor trailer PL111. It is hoped that carriage and loco will be returned to service by around May for a return to service. In the meantime, the ex-Douglas Shire Tramway grover's bogie wagon will be fitted out with seats and canopy to enable a passenger service to continue on operating days.

The Goodman 3 ft 6 in gauge 4wWE 6035 of 1950 was moved to storage at Kallangur on 14 October.

Durundur Railway Bulletin 11/85

AUSTRALIAN RAILWAY HISTORICAL SOCIETY (QUEENSLAND DIVISION) 1067 mm gauge

The Division is involved in the establishment of a museum railway on the former Marburg branch. In October, delivery was taken of Baldwin Locomotive Works steplecab 4wWE 59549 of 1926, formerly owned by the Brisbane Tramway Museum Society, and kept at their Ferny Grove museum.

It was felt more appropriate that this loco be included in a 3 ft 6 in gauge railway museum, having been used to haul coal on the former electrified railway from Murrarie to the Bulimba "A" and "B" power stations in Brisbane.

Durundur Railway Bulletin 11/85

BUNDABERG TRAMWAY PRESERVATION SOCIETY 610 mm gauge

(see LRN 45 p.8)

The Society has obtained a Community Employment Programme grant for a total project of up to \$150,000 to complete construction of approximately 1 km of track on the site of the City Council Botanical gardens, North Bundaberg, together with a substantial loco depot. Work commenced with a crew of 6 in November and by the end of the year, the loco depot was substantially complete. A second crew of 9 commenced trackwork in December.

As yet, operating details have to be finalised and considerable Society work is required to complete restoration of Bundaberg Foundry 0-4-2T 3 of 1952, and Baldwin Locomotive Works 0-6-2T *Felin-Hen* 46828 of 1917. Fortunately, the Bundaberg College of Technical and further Education is providing great assistance, not only with *Felin-Hen* but also in the provision of facilities for loco depot structural fabrication and carriage construction.

Alan Robert 1/86

CSR LTD, Macknade Mill. THE SUGAR BOARD, Lucinda 610 mm gauge

(Macknade see LRN 48 p.7)(Sugar Board see LRN 18 p.8)

Macknade Mill's Clyde 0-6-0DH 18 (DHL.5 of 1954) was loaned to the Bulk Sugar Terminal at Lucinda at least once during the 1985 crushing. This was between 8 and 12 August when the terminal's Com-Eng 0-6-0DM G1023 of 1958 was broken down. As the rail systems are connected, such transfers are easy to accomplish.

C.J.Hart, 12/85

CSR LTD Pleystowe Mill 610 mm gauge

(see LRN 37 p.8)

Some interesting rail items were delivered by George Moss Pty Ltd towards the end of 1985. The first were two four-wheel 12-tonne remotely controlled brake wagons which are designed to be used as a pair on some occasions but which can be also used separately. It was expected that they would be especially useful on the difficult crossing of the Pioneer River behind the mill.

The second unit is a "combination resleepering and scarifying machine" which is a substantial self-propelled 4-wheel diesel unit. This extracts the old

sleeper, scarifies the old ballast beneath it, and inserts the new sleeper. The machine would be expected to replace at least 200 sleepers in an 8-hour day. Although this is the first such unit delivered to the sugar industry, Gemco have previously supplied over 50 similar machines to other railway systems.

Robert James 1/86, Graham Stevens (George Moss Pty Ltd) 1/86; Editor

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 49 p.7)

Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) and the Decauville passenger carriage were in use on 14 December giving train rides at the mill in conjunction with the mill's Social Club Christmas Party. C.J.Hart 12/85

FAIRYMEAD SUGAR CO. LTD

(See LRN 25 p.8)

See MILLAQUIN SUGAR CO. LTD, Qunaba

MILLAQUIN SUGAR CO. LTD, Qunaba 610 mm gauge

(See LRN 45 p.8)

It is expected that loco facilities will be retained at Qunaba following the closure of the mill. This is because cane going to Fairymead Mill will be transported by tramline to a suitable siding in the Spring Hill area to be conveyed by semi-trailer via the ferry across the Burnett River to a siding on the Fairymead bank. From there the cane will go over the tramway the short distance to Fairymead Mill.

Robert James 1/86

ERIC GIBSON, Mackay 610 mm gauge

(see LRN 47 p.7)

Avonside 0-4-0T 1909 of 1922 has undergone superficial restoration in the past few months. The loco has been thoroughly cleaned, and rusted sections of the side tanks cut out. It has been painted in Farleigh Mill colours of green with red frames and buffer beams.

Editor 1/86

MARIAN MILL 610 mm gauge

Marian centenary celebrations featured cane train rides. Marian Mill 12 (Clyde Model DHI-71 0-6-0DH 58-188 of 1958) hauls a passenger car built by Tony Germanotta on 29 September 1985 in this rather drastically cropped press photo.

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 46 p.5)

Construction of a new combined road and tramline bridge on the Pioneer River at Mia Mia will be undertaken as a result of the construction of a weir on the river below the existing bridge as part of the Kinchant Dam irrigation project. The present timber bridge has steep grades and curves on each bank with dangerous road crossings and has proved an operating headache for those responsible for cane transport to the mill. Approximately 1200 bins of cane are hauled across the river each day in the crushing season.

Mackay Daily Mercury, 19/12/85

TASMANIA

VAN DIEMEN LIGHT RAILWAY SOCIETY INC., Don River Railway 1067 mm gauge

(see LRN 41 p.8)

Following the successful restoration and operation of two ex-TGR steam locos, attention is being turned to the restoration of Dubs 4-8-0 *Heemskirk*

(3856 of 1900} ex the Emu Bay Railway which is now at the museum, having been displayed on a beach reserve at Burnie for some years. The railway is 3.5 km long and steam locos operate on Sundays, Public Holidays and from Boxing Day to 6 January. On weekdays in December, January and February, a diesel railcar service operates.

Chas Goodwin 12/85

VICTORIA

AUSTRALIAN RADIO TELESCOPE PROJECT, Culgoa

Six antennae are being erected on an east-west line. Five of them can be moved on a 3 km rail track to enable positioning in a variety of configurations. Can any reader provide more details?

John Kerr via Ruth Kerr 12/86

WESTERN AUSTRALIA

GOLDEN MILE LOOPLINE RAILWAY SOCIETY, Boulder 1067 mm gauge

(see LRN 48 p.12)

A major disappointment is that F.C. Hibberd "Planet" 4wDM 3966 of 1962 converted from 2 ft gauge to 3 ft 6 in, and restored to operating condition cannot be used in passenger service, as it has proved impossible to fit standard couplings to it. However, it will be used for works trains.

Loop Line News No.15

HOTHAM VALLEY TOURIST RAILWAY, W.A. INC. 1067 mm gauge

(see LRN 49 p.12)

The 0-6-0DM loco donated by the Western Australian State Energy Commission carries Drewry's builder's number 2302 of 1950, although like all Drewry products, the loco would have been built by a sub-contractor. The loco was handed over on 18 October, and was to be towed to Pinjarra by Westrail. Unfortunately it ran hot and had to be detached at Kwinana. The rear wheels were jockeyed on a trolley for the next attempt, and the loco eventually arrived on 13 November. It will be named *South Fremantle* in memory of its former place of work.

Pinjarra Steam Express 11/85, 12/85.

The only answer to a request for screened photos so far has come from Len Purcell of the Hotham Valley Tourist Railway. Although going beyond our policy of including government railway locomotives not used by an industrial or private user, this shot definitely features a "Light Railway" scene,

and a Drewry locomotive which is basically an industrial design.

During the second half of 1985 the peaceful bushland east of Dwellingup has been disturbed by the noises of pick and hammer, together with the growl of a diesel locomotive. The old white ant nests among the sleepers of the long closed Dwellingup - Boddington railway have been rudely disturbed by industrious C.E.P. fettlers. Hotham Valley Tourist Railway has almost completed rehabilitation of an 8 km stretch of railway to Etmilyn where a bush picnic site is being established. Seen here is the Society's Z1151 with a 4 wheel sleeper wagon and ex-Westrail brakevan Z522.

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC., Bennett Brook Railway, Caversham 610 mm gauge

(see LRN 49 p.12)

The C.E.P. workers have continued to work on the ex-Lake View & Star F.C. Hibberd "Planet" 0-4-0DM 2150 of 1939. This work has included attention to the cylinder head, piston rings and sleeves, exhauster, oil separator, filter and rods. With the fitting of a vacuum hose and connection. the loco should be running soon.

The boiler has been removed from ex-South African NG123 (Franco-Belge 2-8-2 2670 of 1951) for inspection and repairs. The wheels and frame were in excellent condition with only one broken spring on the back pony truck needing replacement. The 1964-built 3 ft 6 in gauge Gemco-Funkey 4wDM, formerly PW27 from Wyndham Jetty, has been serviced and started up.

Quotes have been obtained for the regauging of the loco.

The first QBB bogie carriage is almost finished with final touches needed to doors and roof. The three C wagons have been re-wheeled with wheelsets from Citra, raising them to the same height as the cars built on ex-Lake View & Star frames. Construction has commenced on the third Lake View & Star car. Regauging work is progressing well on ex-WAGR ballast wagon LA23778.

Points for use in the yard and for the loop at Mussel Pool are being prefabricated by Society workers for transport to where they needed. At least five sets will be required.

Rusty Rails 12/85

OVERSEAS

FIJI SUGAR CORPORATION 610 mm gauge

(see LRN 38 p.14)

Fiji Sugar Corporation has reached an agreement with Acorn Corporation (Fiji) Ltd, to operate a tourist train in the western division. Initially the train comprising loco several carriages and a dining car will operate daily between Nadi and Natadola. Later the trip will be extended to the Fijian Hotel at Sigatoka. Fiji Sugar has been offered either an annuity with periodic reviews, or a grant of equity in the Acorn Corporation which it must exercise within 12 months.

Fiji Sugar Corporation Annual Report 1985 via John Peterson.

MEETINGS

MELBOURNE

Special L.R.R.S.A. Anniversary Night. A slide presentation recording the history of the Society, its activities, achievements, “sensational revelations” and great discoveries. From Rocky Bluff to Denmark, from Lune River to Wyndham, and some newly discovered pictures of the Powelltown Tramway (even Gilderoy station!).

A special supper and 25th Birthday cake will be provided. Don’t miss it; the next meeting of this type will not be until February, 2011.

LOCATION: Ashburton Uniting Church Hall, Ashburn Gve, Ashburton.

DATE: Thursday 13 February at 8:00 PM

ADELAIDE

Contact Arnold Lockyer for details of the next meeting.

LOCATION: 47 Gardner St. Plympton, S.A.

DATE: Thursday 6 February at 8:00 PM

SYDNEY

It is a while since our meeting topic took us northwards so to remedy this our February meeting will feature films of Paul Simpson’s recent visit to the Queensland canefields. Meetings this year are being held at the Bowlers Club “Old Board Room” at 95 York St. Sydney. Entrance to the room is not through the Club itself but through the Forestry Commission Office entrance on the Town Hall side of the building. The room is located on the 2nd floor and will be signposted. This change of venue offers much better facilities than we had previously at the Transport Club. Please be present by 7:30 PM or should you arrive late, access can be arranged by the doorman at the Club.

DATE: Wednesday 26 February at 7:30 PM

John Fowler Works List Book.

We knew this would be a popular title, but we underestimated how popular when initial orders were placed in the UK. So if you have ordered this book, please be patient - copies are somewhere in between the UK and Australia now. For all orders received (and we have some spare \$7.00 N.S.W., \$7.50 other) they will be sent immediately on receipt.

LIGHT RAILWAY RESEARCH SOCIETY OF AUSTRALIA - ESTABLISHED 25 YEARS

BOOK REVIEW

Directory Of Australian Tourist Railways And Museums - 1986

Published by the LRRSA NSW Division, P.O.Box 290, BURWOOD, NSW 2134

Edited by Robert F. McKillop

This well produced little booklet is best described by a paragraph from its introduction: "The directory provides a brief background to each museum or railway operation, followed by directions on how to get there by public and private transport, a summary of the feature exhibits and information on operating hours/operating timetables and contacts. Particular attention has been given to those who wish to use rail transport to visit the listed museums".

As intended, the booklet will fit into pocket, purse, brief case, or whatever and carried at all times for ease of reference. It is ideal for overseas or interstate travellers, as well as those within their own state, and gives all the information required for the "rail basher", "gricer", call him what you will, to plan a very interesting, informative and pleasurable holiday. Many of the lines featured are part of an overall tourist operation, theme park, etc. and can therefore provide all the additional entertainment or gastronomical delights to please the WHOLE family, an important factor these days!

The 39 page booklet provides details of most systems likely to be of

interest; however one omission the reviewer felt could have been included is Seaworld on the Gold Coast (if Dreamworld can be included) which features a pleasing scale replica of a Queensland Railways A10 class albeit internal-combustion powered, on its round-the-site tramway - there may be others in similar vein which are worthy of inclusion. The book is briefly illustrated by some interesting pen and ink drawings and emblems of many of the operations included.

Buy a second copy for your car's glove box, but don't forget the camera! The emphasis placed on directions for rail travellers is commendable; however the problem is getting the state rail systems to co-operate and provide the passenger services when and where required, particularly at weekends! An excellent production highly recommended, copies being available from the address above at \$2.80 including postage.

RFE

WANTED

15 lb/ft rail or similar needed for extensions to Mile End Railway Museum's miniature railway track. Please contact Rob Sanders at 4 Wilson Court, GRANGE 5022 if you can help.

RESEARCH COLUMN

Beaconsfield, Tasmania

Bob McKillop recently visited the Grubb Shaft Museum being developed by the West Tamar Historical Committee around the old Tasmania Gold Mines. Although the main focus is on the huge pumps used to combat the water menace in the shafts, there are photographs of the Beaconsfield Tramway operations. Also featured is the iron making era of the 1870s when the Tasmanian Charcoal Iron Co., the Ilfracombe Iron Co., and the Tamar Hematite Co. constructed tramways to link iron mines with their blast furnaces. The museum opens Tuesday to Sunday.

Manly (NSW) Miniature Railways

(see LRN 49 p.1)

David Burke writes that another miniature railway in addition to the North Steyne undertaking existed at Manly. This was located at the harbour beach near the fun park at the ferry pier. This appeared to be approximately 10 inch gauge worked by a steam locomotive. David's research reveals that Gordon Douglas, the Assistant CME to E. Lucy on the NSWGR (1911-32) assisted the miniature steam railway in maintenance matters during the c.1908 period.

A Cagney style 4-4-0 miniature steam loco appeared on a portable funfair line near the seafront at Cronulla, NSW.

In addition to the above information, a third light railway has emerged in Manly photos. As late as 1914, a jetty tramway was in position along the length of the passenger pier at Manly extending up to the kerb at the wharf entrance in the Esplanade. This would have been worked by push powered trolleys to carry passengers' luggage from the passenger steamers to the NSWGT terminus and the cab rank. Photos seem to indicate that the gauge was possibly 3 ft or 3 ft 6 ins.

Ken McCarthy

VISIT REPORT

LRRSA Marysville tour December 14th-15th 1985

Marysville is about 80 km north-east of Melbourne and was the venue for the December tour. About 40 people gathered in fine weather for the first walk along the Vic Oak Sawmilling Company's south/south-eastern tramline, starting from near the former mill site. Walking was very easy, and many sections of the 3 ft 6 in gauge wooden-railed tramline were to be seen. Undergrowth was fairly light, and this coupled with the close proximity of the Steavenson River made this 2 km walk most pleasant.

Lunch was taken back at Burrengeen Park In Marysville township, where a Day's tractor and log on bogies are displayed. After lunch, a 15 minute drive was taken to the commencement of the afternoon walk on Granton Road, to the south-east of Marysville. The walk along Anderson's tramline for a distance of 4 or so kilometres proved most enjoyable, with small sections of rail, bridge remains, loading ramps etc to be seen along the way. Eventually the base of an incline was reached, and as it had been bulldozed a rest was had by most of the party before returning to the cars along the same route. After tea, an excellent audio-visual presentation by Peter Evans on some of the tramways in the area was attended by the members staying overnight, plus several locals, at the Crossways Motel.

Sunday morning's activity was an inspection of the Buxton Sawmilling Company's mill site near Buxton. A five metre high loading gantry, mill boiler, wagon frame and sections of wooden railed tramline were the main highlights at this site. Picnic lunch was at the nearby Silvergum Reserve. Most people returned to Melbourne via the Acheron Way, and a short visit to Fieglin's mill site was made. The main feature here is the impressive remains of the cement kiln. Other relics were hard to find due to long grass and blackberries.

Geoff Thorpe

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

GEORGE MOSS PTY LTD Osborne Park Western Australia

The announcement was made late in January that this 50-year old company would be "going public" with an issue of \$5 million worth of shares. The share prospectus forecasts that turnover will increase by more than 50% to \$16m. over the next three years, with profits increasing more than seven-fold to almost \$1m in the same period.

The company claims to be the only Australian producer of underground battery electric locos, and has begun an expansion into other electric vehicles such as towing tractors for airport use. Current export markets claimed are in 27 countries, in every continent. In addition to rail equipment, the company is involved in manufacturing equipment for drilling, rockbreaking, mine ventilation, pneumatic power, pumping and defence, as well as general fabrication and consulting/contracting work.

More than 1000 locomotives have been manufactured, mostly for the mining industry, with the first produced in 1956 being a 1.5 ton 4 hp battery electric. Battery locos range from 1.5 to 30 tonne designs, with trolleywire electrics and diesels also available. Flameproofing is a speciality, with rack type locos available for gradients up to 1 in 6. The company designs and builds its own traction motors, enabling complete flexibility in voltage requirements. There is an extensive range of rolling stock available, and personnel carriers are also produced. Locos and rolling stock have been exported to the Philippines, India, Korea, Peru, Bolivia, Ecuador, New Zealand, Indonesia, Papua New Guinea, Fiji, Portugal, Burma and Zaire.

Track laying and maintenance equipment is produced for many industrial users as well as every Australian government railway, and some overseas. The range of mechanised equipment centres on small independent and robust units suited to local conditions. This contrasts with the European model of large, multi-function, technically complicated and expensive machines necessary with the limited track occupancy available in such countries. A manufacturing agreement exists between Gemco and the French company Geismar to produce their designs of track equipment.

George Moss Pty Ltd The Australian 30/1/86

NEW SOUTH WALES

HISTORIC VILLAGE MOTEL COOLANGATTA. via Berry 600 mm gauge

(see LRN 49 p.3)

Lee Rodda was able to visit Coolangatta during January. He feels that the

"Here she comes" loco at the Historic Village Motel is either the unit used at Adelaide Zoo up to the late 1950s or an identical engine. The square cab is a later addition as the Adelaide loco only carried the "Belpaire" style cowling to cover the controls.

John Shoebridge has reported that the Taronga Zoo engines in Sydney, although powered by internal combustion engines, were mounted on locomotive style underframes with drive and connecting rods. The Coolangatta unit is carried on two simple wheelsets with pedestal outside axle boxes.

Ken McCarthy 2/86

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD. Albion Park 610 mm gauge

(see LRN 50 p.4)

On 28 January the news was released that the ILRMS 1986 proposals for a further CEP grant had been approved. The Museum will receive \$108,742 which will enable seven tradesmen to be employed on restoration projects. This enables a supervisor to be engaged for 11.5 months and two sets of 3 tradesmen for six months each.

The submissions include the major overhaul of the museum's stationary steam engine, and further progress in the restoration of the Perry 0-6-2T *Tully* No.6 (7967.49.1 of 1949), Hawthorn Leslie 0-4-OST *Burra* (3574 of 1923) and one of the two Lima 4w+4wTG Shays from Munro's Hampton Tramway in Queensland (906 of 1904 & 2097 of 1908).

By late February, the wall cladding on the 18 m x 6 m workshop building was completed. The heavy machinery is now in position on permanent concrete bases while a wire mesh wall now encloses the stores racks, and the flooring and staircase to the mezzanine floor have been completed.

Throughout summer the trolley wire system on the electric tramway was overhauled, insulation improved, some span poles replaced with side brackets, the ornamental poles in the car park area repainted and the working wire height raised.

Six steaming days were held during November and January, and over 3,200 rides were made by visitors to the museum railway.

Ken McCarthy 2/86

PROPOSED CORRIMAL COLLIERY MUSEUM 1067 mm gauge

Plans have been announced for the development of the Corrimall Colliery as a tourist attraction. The plan includes a mining museum, and access to more than 300 metres of underground roadways featuring mining machinery

is also planned. A viewing gallery will be installed in the workshop where a local company will continue to test and overhaul mining equipment. There will also be the usual tourist catering and souvenir facilities. The complex is expected to open in about a year and should provide up to 70 new jobs.

The move follows the transfer of operations from Corrimal to Cordeaux Colliery, developed as a more convenient access to mining operations which extend many miles from the Corrimal pit-top. This occurred on 24 December, and ended the 115 year career of Corrimal as a working mine.

The establishment of the complex will enable the preservation of a representative selection of locomotives and rolling stock from the heavy duty 3 ft 6 in gauge underground rail systems now almost universal in the NSW industry, and which date back to the introduction of Malcolm Moore diesel locos by Australian Iron & Steel in the 1940s.

Daily Telegraph 15/2/86 via Craig Wilson; Editor

GUNNEDAH

A fatal accident at a Gunnedah district colliery was featured on the ABC TV News on 16 January. The story mentioned rail access to the scene of the tragedy. Can any member provide details of the collieries in the area with rail systems?

Editor

QUEENSLAND

CSR Ltd, Victoria Mill 610 mm gauge

(see LRN50, p.7)

A large plaque has now been fitted to the left hand side of the tender attached to Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914), giving the locomotive's history, plus also a few of its specifications.

Christopher Hart 1/86

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 49 p.8)

Planning is in the preliminary stages for the construction of a new \$2m. road/tramway bridge over the Pioneer River at Marian. It is expected that the bridge will be built in 1988. The new crossing will eliminate the low level tramway bridge with steep grades on each bank of the river which has been a problem since it was built in 1923 to replace an earlier winch worked bridge. The mill will contribute towards the cost of the tramway portion, while the road component will upgrade the present flood prone road crossing.

Tests are expected to take place at the mill before Easter of some experimental large four-wheeled cane bins. The specification of these has been developed by Sugar Research Ltd and a number of manufacturers have been involved in producing pilot designs. A cane capacity of 18 tons is being looked at, with a flexible wheelbase arrangement. After tipping trials have been carried out, the new bins will be subjected to an extensive programme of running trials during the season.

Mackay Daily Mercury 27/2/86; Len Heaton 2/86

MOUNT ISA PRESERVATION 1067 mm gauge

Contrary to the report in LRN 46 p.6, Peckett 0-4-0ST 1069 of 1905, formerly on display at St. Joseph's Convent School, has been disposed of for preservation in Victoria (see later this issue). Peckett 0-4-0ST 1174 remains at Soldiers Hill State School on the Barclay Highway. Meanwhile, Hudswell Clarke 0-4-0ST 928 of 1910 has been removed from the Central State School. Around the end of 1983, it was removed from the school, and some difficulty was experienced in finding a home for it. Eventually, it was mounted on a plinth overlooking the Barclay Highway near the entrance to the town by service club members.

Jeff Daly, 3/86

THE SUGAR BOARD, Mackay Harbour 1067 mm gauge

(see LRN 44 p.11)

An advertisement has appeared in the press offering for sale an F class Com-Eng diesel loco. This is assumed to be 0-6-0DH F1018 of 1957, which has been replaced as the working loco at the Sugar Terminal by sister loco F1029 of 1958 from Townsville. Both locos were still on site a few months ago. The loco is a 30 ton 230 hp design, and may be sold either as a complete unit in operational condition or broken up for parts. It would be an ideal shunting or work train unit for a 3 ft 6 in gauge preservation project.

Railways of Australia Network, via Craig Wilson; Editor

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (S.A.) INC. Gauges various

(see LRN 49 p.10)

The museum is to be moved to a new site over the next few years. The new museum will be based on a new undercover premises at the Port Dock station site in Port Adelaide. The new site will feature an extended 18 inch gauge system as well as provision for a running line on both 2 ft and 3 ft 6 in gauge.

The restoration project on Andrew Barclay 3 ft 6 in gauge 0-6-0T *Peronne* (1545 of 1919) is continuing. The boiler was given a hydrostatic test just before Christmas, and it was hoped that the work of replacing 25 stays, and some pad welding on the firebox would be completed during February. Frames have been cleaned and painted and new side tanks will be built to 'prepare for the reassembly of the loco.

On 2 ft gauge, it is hoped that three exhibits will be restored for operation at the new museum. These are ex Waratah Gypsum 304 (Ruston & Hornsby 4wDM 187078 of 1938) and 306 (Ruston & Hornsby 0-4-0DM 373981 of 1956) and ex Qunaba Mill Perry 0-6-2T *Skipper* (1850.46.1 of 1946). In addition, there is also a former 2 ft gauge machine running on the 18 inch gauge line. This is a 4wPM built by Barry's Brickyard? Torrensville. It is planned to acquire a flat car from the Dry Creek explosives tramway, but the museum is interested to hear of other suitable 2 ft gauge items.

A donation of 500 feet of track has been made by the Mines Department, but more is still needed for the 18 in gauge miniature line (see "Wanted" p.2)

Rob Sanders 2/86; Catchpoint 1/86

TASMANIA

THE BUSH MILL Port Arthur 381 mm gauge

A 15 inch gauge steam railway was due to open at this tourist attraction in February. The railway is narrow gauge rather than miniature in concept. The line is about 2 km long and runs from the Fox and Hounds Tavern on the Arthur Highway to the Bush Mill Complex. The line has an overall grade of 1 in 40 with 1 in 20 on some curves, and features a switchback. From the Outdoor Pavilion at the Bush Mill, four levels of track can be seen winding up the nearby hill. An 0-4-0TT loco has been imported from Holland to work the line (maker unknown), but has proved unable to handle the grades hauling the two bogie carriages which have a capacity of 48 adults. A second tender, powered by an Isuzu diesel engine has been constructed as an auxiliary motive power unit, but exact operational details are not to hand.

A steam sawmill operates daily, and there are a number of bush tramway exhibits on static display. These include a petrol tractor of the 1920s, log trucks on wooden rails and a vertical boilered steam winch and log loading ramp. There is also an excellent audio-visual display of the timber era in Tasmania, which includes a number of slides depicting timber tramways.

Bob McKillop

THE EMU BAY RAILWAY CO. 1067 mm gauge

(see LRN 31 p.18)

Until recently, operations on the railway consisted of 7 trains per week, consisting of five mineral trains of four locomotives, 22 ore cars and one guard's van, and two general goods and mine supply trains of 2-3 locomotives and a varying number of cars.

Present operations are five "block" trains consisting of ore, general goods and mine supplies giving a total length of approximately 40 cars. Motive power comprises 7, 8 or sometimes 9 locomotives. Increased-power has meant a proportional increase in drawbar forces, and all 11-class frames have had to be strengthened to stop the draft bars being pulled out.

One train operates per day for a five day week, leaving Burnie at 4.30 am and arriving back at 2 pm that afternoon. One engine crew and guard take the train down to Rosebery and Melba Flats while a second crew drive down by car and return with the train. The first crew come back in the car. The reason for the railway persisting with the small 10 and 11 class Walkers B-B DH units is simply because bridges on the line restrict axle loads to 14 tons.

The track itself may be changing soon. The Rosebery - Melba Flats section is under threat as it depends on the Mt. Lyell mine for its traffic. However, a branch may be built from Hatfield to a new zinc mine some 10-12 km to the east, if the proposed mine development goes ahead. The sidings at Goodwood, Hampshire and Gilford have been removed, while those at Rigby, Hatfield and Boco remain.

David Jehan 2/86

THE ELECTROLYTIC ZINC COMPANY OF AUSTRALASIA LTD, West Coast Mines, Rosebery

A quantity of assorted equipment was offered for sale by tender during February. The sale was being handled by Asset Data Control Pty Ltd of Hobart. No actual location of the material was given except "the Company's West Coast Mines, Rosebery". Included in the sale were various spare parts for Gemco 1.5, 3, 5 and 10 ton, and Mancha 5 ton battery electric locos. These included parts for controllers, motors, transmissions, braking systems and axle assemblies. A 3-ton Gemco handbrake beam was identified as 2 ft gauge, otherwise no more specific information was given. In addition to the locomotive parts, there were many parts for Eimco and Atlas Copco loaders, as well as other rock handling and drilling equipment.

Asset Data Control Pty Ltd 2/86

TASMANIAN TRANSPORT MUSEUM SOCIETY, Glenorchy 1067 mm gauge

Excellent progress has been made in the development of this museum, with an ex-TGR loco operating demonstration trains on about 500 metres of track in January. However, most rail items are still stored in the open.

The Climax 4w+4wTG loco from Maydena (1653 of 1923) has been partly reassembled, although the cab and bunker were sitting beside the loco. Also on site is an 0-4-0VBT (vertical boiler) acquired from Chesterman & Co. which has been recovered from a forest resting place.

Bob McKillop 2/86

VAN DIEMEN LIGHT RAILWAY SOCIETY INC. Don River Railway, Gauges various

(see LRN 50 p.8)

A number of interesting items from private and industrial railways form part of the collection here. Ex-Emu Bay Railway 3 ft 6 in gauge 4-8-0 *Heemskirk* (Dubs 3856 of 1900) has been dismantled for thorough appraisalment of restoration possibilities. The smokebox has been cut off and the boiler has undergone a preliminary inspection which shows some hope of repair. The frame has been separated from the wheels and will be sandblasted and repaired. The main problem here is the extensive corrosion caused by years on the exposed Burnie seafront.

Restoration of John Fowler 3 ft 6 in gauge 0-6-0T 5265 of 1887 has been suspended following the discovery of a crack in the copper firebox tubeplate on hydrostatic test. The loco was built for the Kiama Council in New South Wales and was used by various contractors before being put to work hauling stone for a breakwater at the mouth of Macquarie Harbour, Tasmania. It was last steamed in 1912. It is now housed in a museum building awaiting the refitting of cab and boiler fittings.

Ex Ida Bay 2 ft gauge Hunslet 0-4-2T 1844 of 1936 is housed in the same shed as the Fowler. It is partially dismantled with no restoration programmed at present. Ex-Mt. Lyell Krauss 0-4-0T 5988 of 1908 is a static exhibit, and has recently been painted and lined out. Also on static display is 2 ft gauge Hudswell Clarke 0-6-0 1548 of 1925 ex Macknade Mill, Queensland.

An early internal combustion engined unit is *Riley*, a four-wheeled rail motor used on the North Mount Lyell and Mt. Lyell lines. Although devoid of superstructure, all mechanical parts are present. This unit was recently moved to Don from Tarraleah by a Society member, and is a long term preservation project.

Two Ruston & Hornsby 3 ft 6 in gauge 4wDM locos are available for shunting

work. 187072 of 1938 was used by the Mt.Lyell Company at Regatta Point, Strahan for many years but was later owned by contractors. It has now been rebuilt with a new cab. 279571 of 1949 was initially used by the Marine Board of Burnie and was later used by the Cornwall Coal Company.

A new station platform has been built at Don, and plans have been drawn up for a new station building. A 184 mm gauge miniature railway operates most Sundays and public holidays and is an added attraction.

Chas. Goodwin 2/86; Bob McKillop 2/86

VICTORIA

JEFF DALY, Melbourne Gauges various

Jeff Daly is the owner of two of the locomotives reported in LRN 47, p.13. One is a Porter 2 ft gauge 0-6-0T ex Victorias Sugar Mill in the Philippines. There is some doubt about its identity, but it is suggested that the loco consists of the boiler from 6480, the cab from 6555, and the frame from 6465. The second is a Peckett 0-4-0ST which was built for Mount Morgan Mines. It is in fact builder's number 1069 of 1905, which worked at Mount Isa from 1931 to 1955. It was donated to St.Joseph's Convent School for preservation, and finally arrived in Melbourne in January 1984. The boiler has been repaired and successfully tested. The frame needs straightening and a complete overhaul is to be carried out.

A third loco owned by Jeff is a 3 ft gauge John Fowler, 15989 of 1923. This was originally supplied for the Warburton Timber Co, and went to Mount Morgan, Queensland, in 1940. It was returned to Victoria for preservation in the 1970s, and was recently acquired by its present owner.

Jeff Daly 1/86, 3/86

RAY MCKINNON, Daylesford 610 mm gauge

(see LRN 31 p.22)

Advice has been received that the steam outline loco owned by Ray McKinnon is for sale. This is an 0-4-0PM loco, probably built by John Dunlop of Sydney in 1977. It was purchased from Bullens Lion Park at Rockbank. For more details, prospective purchasers are invited to contact Ray at 8 Leggatt Street, Daylesford 3460 (053 48 2077).

Ray McKinnon via Craig Wilson 1/86

BRUCE WEATHERHEAD, Tynong 610 mm gauge

Bruce Weatherhead owns Decauville 0-4-2T 454 of 1906 which was originally supplied to Mulgrave Central Mill, Gordonvale, Queensland. It

was briefly in the custody of Bruce McDonald at Goulburn before being transported to Victoria in 1975.

Industrial Railway Bulletin; Editor

WESTERN AUSTRALIA

AUSTRALIAN RAILWAY HISTORICAL SOCIETY (Western Australian Division) Bassendean. Gauges various

The Society is to move the location of their museum from Bassendean to Whiteman Park in Caversham. A number of former industrial locomotives are included in their collection. The current site at Bassendean will be used as a locomotive and carriage running depot and workshop. Whiteman Park is currently the home of the Western Australian Light Railway Preservation Association and of the Perth Electric Tramway Society.

Rusty Rails 2/86

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC. Bennett Brook Railway, Caversham 610 mm gauge

(see LRN 50 p.9)

During early January, a major effort was made to complete the track layout in the Mussel Pool yard and station precincts. This was necessary to enable trains to operate on the 5 km loop which will be brought into use before long. The prefabrication of pointwork and the use of a front end loader has enabled substantial work to be done over a few weekends.

The former Lake View & Star F.C.Hibberd "Planet" 0-4-ODM 2150 of 1939 entered service early in the year and has proved valuable for ballasting work on the loop.

Rusty Rails 2/86

OVERSEAS

FIJI

FIJI SUGAR CORPORATION 610 mm gauge

(see LRN 50 p.9)

Coral Coast Railway Co.

A tourist train should by now be in operation running 16 km between the Fijian Hotels Cuvu (Thuvu) and the beach of Natadolu. The operating company is the Coral Coast Railway Co., 80% owned by the Acorn Corporation (Fiji) Ltd,

and 20% by Fiji Sugar Corporation.

During 1985, carriages and locomotive were prepared under the direction of Acorn managing director, Peter Jones, at a site known as Field 40, near Lautoka. At least four specially built carriages appear to be destined for use in the train, with the standard type being a fully air-conditioned 10 m bogie car. Construction is of steel with a double skin and large windows. There will be facilities for serving drinks and snacks on board the train. The locomotive is Hudswell Clarke 0-6-0 1855 of 1950, formerly number 23 at Lautoka Mill. This is in beautiful external condition in maroon livery with white lining. It will not be powered by steam but by a diesel-hydraulic motor installed in the tender which is believed to drive onto the rear axle of the loco. The locomotive and three carriages were first placed on the track on 15 January.

The fare for the ride will be about \$20. Passing loops have been laid in at each terminus and tracks will be upgraded as necessary. Train control will be through the mill tramway two-way radio links.

Meanwhile, the Asian Development Bank is investigating a modern passenger service by rail as bus companies are in difficulties and road transport costs rise.

Lautoka Mill

Clyde Model DHI-71 0-6-0DH locos 1, 2, 3, 4 & 6 (57-140, 57-146, 57-173, 57-174, & 58-197) are still stationed at Cuvu. The light track in the area makes these the preferred locos for this depot. By mid-January, only number 2 was present at the depot, with the others having returned to Lautoka for slack season maintenance.

On 13 January Lautoka 20, a Hunslet 6wDH was seen shunting empties at Lautoka and later heading towards Rarawai. This is a new loco and no builder's number has been reported as yet. Other locos were seen stabled at the mill or under repairs with Clyde 0-6-0DH 8 (63-290) shunting in the yard.

Hudswell Clarke 0-4-0ST 1056 of 1914 is still preserved in good condition in the mill yard, while Hudswell Clarke 4-4-0 1118 of 1915 is in poor condition at Churchill Park, Lautoka.

Rarawai Mill

John Fowler 0-6-2TT 11458 of 1908 is preserved in good condition at the mill as number 10. Among the locos seen on 13 January were 1, a Hudswell Clarke 0-6-0DM (D753 of 1950), and numbers 2 and 19, 4wDH locos said to have been "built in New Zealand", but probably 20 ton Plymouth diesels. A Clyde 0-6-0DH numbered 18 is reported here, possibly a transfer since 1981 (see LRN 26 p.16). Many other locos were also observed stabled or under

repair, with the locos shunting in the yard being E.M. Baldwin 4wDH 17 (5060-1-9-73) and Motor Rail "Simplex" 15 (14024 of 1957).

Penang Mill

On 14 January, two Motor Rail "Simplex" locos were seen under repair. These had lost their numbers but were thought to be 10440 of 1955 and 14046 of 1959. Motor Rail Simplex 5 (5064 of 1930) was seen at Ellington Wharf. E.M. Baldwin 4wDH 3 (5060-2-9-73) was believed in use on track maintenance duties.

*John Peterson 2/86; Islands Business 8/85, Fiji Times 25/10/85, C&C Trade News 12/85
via Greame Bell, Bob Merchant & Bob McKillop; Editor.*

NAURU

NAURU PHOSPHATE CORPORATION 914 mm gauge

(see LRN 18 p.1)

On 31 July 1985, Nauru issued four stamps to commemorate the 15th Anniversary of the Nauru Phosphate Corporation. Two of the stamps depict items of rail interest. The 25 c value shows a modern train hauling crushed rock, headed by a 4wDH loco numbered 52. This is clearly not a Clyde diesel (could be a Hunslet - Ed.) The 50 c value shows an Orenstein & Koppel 2 ft gauge 0-4-0WT loco and tip wagon on a concrete slab with an island background. This suggests a loco has been preserved on the island. Can any reader provide further information on either locomotive?

Bob McKillop 2/86

MEETINGS

MELBOURNE

John Ritter will be speaking to us about two areas in NSW he has had a close interest in over recent years Carson's timber operations in the Olney State Forest north-west of Wyong will be the first to be featured followed by an illustrated summary of findings from visits by John to Tarrawingee, north of Broken Hill.

LOCATION : Ashburton Uniting Church Hall, Ashburn Grove, Ashburton

DATE : Thursday 10 April, 1986 at 8.00pm

SYDNEY

This month's meeting will consist of railways in Sri Lanka by Jeff Mooney who has recently spent several weeks there.

LOCATION: "Old Board Room", Bowlers Club, 95 York Street Sydney. Access through Forestry Commission Offices

DATE : Wednesday 23 April 1986 at 7.00pm

ADELAIDE

Contact Arnold Lockyer for details of meeting His address is on the front of LRN.

LOCATION : 150 First Avenue, Royston Park

DATE : First Thursday in each month at 8.00pm

LIGHT RAILWAY RESEARCH SOCIETY OF AUSTRALIA - ESTABLISHED 25 YEARS

25th ANNIVERSARY CELEBRATIONS

25th ANNIVERSARY MEETING, 13 FEBRUARY 1986

Sixty-seven people attended this meeting, at which a slide show outlining the scope of the Society's interests, its achievements, the activities of its members, and tours, was presented. The slides were provided by Mike McCarthy, Graeme Inglis, Arthur Straffen, Geoff Thorpe, Colin Harvey, Lionel Rickard, Hal Hennell, Rod Smith, Frank Stamford, and Steve Martin. A special thank-you is due to Ella Hennell, Gloria Stebbing, and Doris Bevan, who volunteered to look after the supper arrangements, and were kept very busy. Mrs.Hennell, the Society's first Honorary Life Member, blew out the candles on the 25th Anniversary Cake. A display of maps, photographs and early issues of *Light Railways* was also provided.

Frank Stamford

THE GREAT PACKING SHED AFFAIR, 29 MARCH 1986

Belgrave to Nobelius Siding via Lakeside

Planning for this 25th Anniversary function first commenced in January 1985, when it seemed likely that the ex-Tyers Valley Climax 4w+4wTG

locomotive (1694 of 1928) would be available for the event. By late 1985, it became clear that it would not be ready. As an alternative, a double-header - hauled by the ex-West Melbourne Gasworks Peckett 0-4-0ST *Sir John Grice* (1711 of 1926) and the ex-SEC and MMBW Ruston & Hornsby 4wDM NRT1 (296058 of 1950) - was suggested. This apparently presented Puffing Billy with some problems, and they advised us that it was not possible. It may have also presented us with some problems - the novelty of such a train might have attracted more people than the two locomotives could haul. The decision was made to go ahead with the event, with an NA locomotive, as it was felt that the combination of a train trip, dinner, Society meeting, and film night was appropriate for the 25th Anniversary, especially as there would be a number of interstate visitors. The PBPS agreed to allow the use of the Nobelius Packing Shed for the social part of the evening, although up to this time it had not been made available to outside groups, as work on its restoration was not quite complete.

Unfortunately, members were slow in booking. Cancellation seemed a possibility, but instead a further mailout was sent to our Melbourne members telling them the "details of what promises to be a truly memorable occasion". This worked - we needed 30 people to make it economic and we got 47.

On the day before the Great Packing Shed Affair, the LRRSA's fifth National Conference had been underway for less than an hour when Society President Mike McCarthy was called out to take a phone call. It was from the PBPS, advising that due to mechanical problems they only had one NA locomotive available to run Saturday's service; and our train would therefore be hauled by the Peckett and NRT1!

Our train was due to depart Belgrave at 4.30 pm, but before this our party had the opportunity to wander over the workshops. The Peckett hauled the Climax out into the open, so that it could be more easily photographed. The Climax is now substantially complete; the most obvious work still to be done is re-assembling the motion gear. The superb restoration job on the Peckett was remarked upon by many. Though the Climax has a plain black livery, unlike the fully lined green of the Peckett, it is obviously being done with the same care and attention to detail. The polished builder's plates, and white painted *Climax* insignia on the cab side contrast well with the shiny black. Although a good-looking diesel is contradiction in terms, the finish of NRT1 was of an equally high standard.

(In the following description of the train trip, it is trusted that readers will note that although the writer has a normal healthy dislike, loathing, even hatred of diesels, it has in no way affected his objectivity in describing the performance of NRT1)

Our train consisted of the two fully-refurbished ex-Mount Lyell cars, NBL1 and NBL2, appropriately named *Mount Lyell* and *Rinadeena*, and an NBC van. The Peckett was leading the diesel (and quite rightly so). Drinks and much projection equipment were duly loaded into the van, prior to a departure which was about ten minutes late. Once the train was underway, we were treated to some fascinating sounds, as the large sharp exhaust of the Peckett combined and harmonised (!) with the growl of the diesel. The shrill high-pitched whistle of the Peckett contrasted with the diesel's siren (which came from a VR suburban Tait electric train); one answering the other, and sometimes working together. Meanwhile the PBPS drink waiters were providing an excellent service. A photo stop was made before our arrival at Menzies Creek; where we had to wait to cross the last regular train of the day. In the intervening 50 minutes we had the opportunity to look over the museum.

A stop was to have been made at Clematis to pick up some special van goods, but after some careful calculations it was decided this was not necessary, so the stop was abandoned. The load was heavy for the Peckett as it tackled the long 1 in 30 grade into Emerald, but although the pace was slow there was little doubt that it would make it. At the onset of the grade the change of gears on the diesel could clearly be heard, as it growled loudly whilst it tried to keep up with the Peckett. Much whistling heralded our arrival at the main road level crossing at Emerald, and the train attracted considerable attention from those motorists and bystanders clever enough to tell the difference between an NA and Peckett/Ruston & Hornsby combination.

We terminated at Lakeside, where we stayed for about twenty minutes whilst engine requirements were attended to. The locomotives then ran round the train.

This was a revelation! The Peckett, in almost complete silence, displayed outstanding acceleration and a remarkable turn of speed as it pushed the diesel along the run-round loop, the diesel roaring its disappointment at this treatment. Up to this time, I had not been able to understand why we had the dead-weight of the diesel at all, but as dusk was now falling the reason became apparent. The diesel was now in the lead, for it has a powerful headlight, whereas the Peckett has none. Although it had been suggested volunteers could be called for to lift up the Peckett and turn it round, this did not eventuate, and it returned running cab first.

We arrived at the Packing Shed at about 7.30pm, about an hour later than scheduled, to find it lit only by candles! Power was quickly restored, and we unloaded the drinks and projection equipment. Inside, bench seats and trestle tables had been set up, with spotless white tablecloths. This was the

first time I had seen inside the packing shed, and the PBPS's refurbishment was very good. The character of the original building has not been lost, and it has a rustic, rugged simplicity completely in keeping with the environment. At one end framed photographs, presumably of Mr & Mrs Nobelius, look down upon the scene. At the other is a big fireplace, surrounded by large photographs of the Gembrook railway in its heyday.

Tender roast beef and pork, with a variety of fresh salads and deserts were provided for the meal. The formal part of the evening then commenced. In his opening speech, Mike McCarthy pointed out that this was the Society's first truly national function, with members attending from all states. After outlining the past history and future directions of the Society, Mike then presented the Honorary Life Membership award to Norm Houghton, for his prodigious efforts in researching and writing the histories of Victorian light railways. Norm Wadeson was then introduced, to do the launching ceremony of our new book "Rocky Bluff to Denmark". Norm pointed out that we had been very even-handed in choosing Nobelius Siding for the launching, for it was halfway between Rocky Bluff and Denmark - the halfway siding. Norm considered that a railway book should be "dispatched", rather than launched, so he dispatched it with the wave of a green flag and the sound of a guard's whistle.

We were then treated to a wide variety of films, which were organised by our member Roger Seccombe. These covered a wide field, including "Whistles in the Hills", a recently released ARHS film on Victorian narrow gauge lines, both government and private. On the return journey the Peckett valiantly hauled the train and pushed the diesel up the grade to Emerald, and it was then plain sailing all the way to Belgrave. At the highway crossing at Emerald the diesel whistled but when it seemed that some cars might ignore it, the Peckett quickly brought them to a halt with a shrill blast on its whistle. That was the last we heard of the Peckett's whistle for - to avoid waking the local residents - the diesel now gave only a short whistle at level crossings. Arrival at Belgrave was at about 11.40pm, ten minutes late. Coffee and port were served by the catering staff on the return journey.

The night was an outstanding success; even the weather was perfect, the hot cloudless day being followed by a beautiful clear starlit night. Much of that success was due to the PBPS, whose volunteers from many branches of the organisation provided a service which many professional tourist and service organisations could do well to use as a model. One of the PBPS catering staff apologised to our President for the non-availability of an NA loco for the trip. From our viewpoint this was somewhat akin to getting an apology from someone who has just sold you a winning lottery ticket.

Many PBPS-members are also LRRSA members, and amongst these were Chas Bevan, who was guard; and John Thompson who was fireman on the diesel on the down trip (a very tricky and demanding job on these temperamental little machines, I believe), and who fired the Peckett on the return. Special thanks are due to Norm Wadeson, who not only launched the new book, but did some behind the scene work to make this trip even more memorable than any of us expected.

Interstate visitors were David Whiteford, Gary Howieson and Neville Watson from Perth; Arnold Lockyer and his wife, and Chris Andrews from Adelaide; Lou Rae from Hobart; Bob McKillop from Sydney; and John Browning from Mackay. Youngest attendee was Anthony Jessup - 14 months - the late Bill Jessup's son. Bill's mother Dot, and widow Rosalind attended the function as guests of the Society. Like the rest of us, they thoroughly enjoyed themselves.

Frank Stamford

McIVOR TRAMWAY INSPECTION, 30 MARCH 1986

Organised as part of the 25th Anniversary Celebrations, this trip was attended by 25 people. Much of the southern and eastern sections of this former 5 ft 3 in gauge tramway now run through Army land, and the number in the party was limited to 25 at the Army's request. An Army guide was provided, partly because of the possible presence of unexploded bombs in the area, and partly to make sure we did not set fire to the place, as the vegetation was tinder dry, and the day hot.

Previous Society trips to this area were on 13 December 1970 (see LR 35 pp.26-28) and 15 July 1972 (see "The McIvor Timber & Firewood Company's 5 ft 3 in gauge Tramway - Historical Notes and Maps" published by this Society in 1972, and reprinted this year for the trip.) Access to much of the area through which the tramway operated is now not normally available, so it was going to be interesting to see how things had changed since 1972.

Referring to the "Historical Notes and Maps" publication, in the area covered by maps 1, 2 and the southern half of map 3; not much has changed. The earthworks in this area are quite heavy in places, and these survive, although the sleepers in road marked in the middle of map 2 have gone. In the area around the Triangle (top of map 3), the sleepers in the paddock and the cattle grid have gone, and it is difficult to see where the tramway ran. The formation of the triangle is still visible, though not very clearly, and it is intersected by a fire-break road, which runs along the northern boundary of the army property. Conditions here were terrible, with bulldust up to a foot deep - one member of the party remarking that this was normally reserved for our meetings.

The bridge remains to the east of the Triangle still exist, and are visible from the public road just to the north of the Army land. One of the most interesting finds in 1972 was the "Junction for Cherrington" marked on the left of map 4, where all the sleepers were in situ for a long distance. This area is now part of the army firing range, and the ground is kept clear to find bombs. As a result, all the sleepers have been cleared away, and the junction is quite difficult to find.

One of the highlights of the 1972 tour was the stretch of tramway shown on the northern section of map 6. (See section commencing with the note "Very steep super-elevation on curve"). This section was easy to find in 1972, with all sleepers in situ, and the remains of fences on either side. This has since all been cleared away, and the tramway is almost impossible to find in this paddock. The trestle bridge marked as "intact" in 1972 still exists, but the bearers have been swept aside by floods. If you wish to find this bridge, the best way is to walk through the paddock in a north-north-easterly direction, aiming for a group of trees on the creek, as the bridge is close to trees. There was one interesting thing we did find in this paddock, and that was a cattle grid, which appeared to be on the wrong heading and to the east of the main tramway. We did not see this cattle grid in 1972, and I believe it marks the junction point for another branch line not previously mapped.

Beyond this point all the sleepers seem to have been removed from the formation, and as little remained of the tramway north of here in 1972, the tour party turned around and headed for Mclvor Siding. It was pleasing to see that little had changed here - the engine shed and company offices still existing in good condition, and earthworks of the tramway still being clear.

This was probably the Society's final tour to the Mclvor Tramway. So little now remains, and is so difficult of access that it is no longer possible to make an interesting tour, although one or two more visits by members of the LRRSA Mclvor Survey Group will probably be made for mapping purposes. In 1972-3 the area then outside the army boundary was thoroughly covered by the LRRSA Mclvor Survey Group. Last year a re-formed Mclvor Survey Group covered the eastern sections of the tramway, in army land, and made a number of interesting discoveries, though much of the tramway in this area was almost impossible to find. A book on the Mclvor Tramway is in preparation, and may be published next year.

Thanks are due to the Army for allowing the tour party to visit the area, and for allowing members of the Mclvor Survey Group to inspect, map and photograph the tramway remains.

BOOK REVIEW

ROCKY BLUFF TO DENMARK Twenty-fifth Anniversary Selections from Light Railways

by P.L.Charrett, R.H.Secombe, G.Verhoeven, and the late C.W.Jessup

On seeing the main title of this publication one could be forgiven for wondering just what it is about! Few would immediately recognise the name Rocky Bluff or realise this was ANOTHER Denmark! The sub-title gives a clue but still does not solve the aura of mystery. This attractive booklet was produced specially for the 25th Anniversary of the LRRSA and contains four articles chosen by popular choice from past issues of the Society's Journal *Light Railways* of the late 1960s and early 1970s. Even those members fortunate enough to have the original issues could not fail to be impressed by their reprinting in this "new style" - newer members have the opportunity, by purchasing this booklet, to benefit from the researches of the four writers.

The four articles cover a wide geographical and subject range. There are the multi-gauged tramways used for the construction of the Hume Reservoir on the Murray River across the New South Wales - Victorian border; two timber tramways which carry the same product but are vastly different in character - the Elphinstone Tramway in Victoria and the Denmark "Railway" of the vast Millars organisation in Western Australia. Last, but certainly not least, is the mining tramway to Stannary Hills, Irvinebank and Rocky Bluff in north Queensland. The reviewer's only sorrow is that examples from Tasmania, South Australia and the Northern Territory could not have been included to make it more completely "Australian".

All the articles have been totally reset, but apart from correction to typographical errors and minor corrections and re-setting of the tables, have been unaltered. The original photos have been included, as well as some pleasing new ones, and all definitely benefit from the better reproduction possible by the new printing style. The maps have also been re-drawn in a style which can be best described in one word - excellent!

For anyone with an interest in the wide diversity of "light railways" which operated in Australia this booklet is a must. Copies are available from the Society Sales Officer at \$6.95 plus \$1.20 for postage and handling.

RECOMMENDED

RFE

NOTES, CORRECTIONS AND COMMENTS

W.A Pearce of Kensington, Victoria, writes as follows: In LRN51, there is a

review of the publication *Directory of Australian Tourist Railways and Museums* - 1986. Your reviewer has said a lot of nice things about this work, but he seems to have failed to notice that it has left out any mention of what is probably the oldest, and still among the largest railway museums in Australia, that is the North Williamstown Railway Museum, operated by the Victorian Division of the Australian Railway Historical Society. The omission of this museum is most strange; one can only assume that it was done by accident, and it certainly has spoiled this publication as a complete directory of railway museums.

(Of course this was an accidental omission - it somehow was left out at the paste-up stage, I am informed. Naturally, this is a source of embarrassment and regret to the LRRSA. It will be rectified in future editions. Readers - have you got your copy yet? - Ed.)

RESEARCH COLUMN

Northern Territory tramways.

Fred Kluth of PO Box 40554, CASUARINA 5792 is compiling a history of transport in the Northern Territory. He would like to hear from any LRRSA members with information on light railways which operated in the territory, particularly the Mt. Ellison - Iron Blow Tramway and the Cosmopolitan Gold Mine Tramway.

Climax locomotives

Richard Dunn of 4885 Crow Canyon Road, Catro Valley, CA 94546, U.S.A. has a long-standing interest in the history of Climax locomotives in Australia. He would like to hear from LRRSA members who may have photographs of Climax locos operating here. He was recently able to purchase the Climax two-cylinder engine unit from a 1913 loco originally owned by the Great Northern Timber Co. at Woolgoolga, NSW, formerly in the E.M. Baldwin collection in Australia, and is hoping to restore it to operation in the near future.

Western Australian timber railways

Dr F.J.G. Arnold of PO Box 120, DENMARK 6333 (Official Historian of the Hotham Valley Tourist Railway) is currently researching West Australian timber tramways related to the following: Hotham Valley branch; South Coast Torbay-Denmark; and Eastern Railway - Mundaring Branch. Any information including photographs which could be of assistance would be most gratefully received.

Killarney Heights, Sydney

Reports in the North Shore Times in recent months have drawn attention to a mystery stretch of railway line which was discovered in bushland at Killarney Heights near the Middle Harbour foreshore. This turned out to be the remnant of a line used for tunnel construction during the development of the Killarney Heights housing estate in the early 1960s. The track was used for sewer construction on behalf of developers L.J. Hooker. Other lines which were remembered by local people included a line to the former Killarney picnic grounds earlier in the century, an old logging tramway which operated in the timber getting days, and a funicular railway used to haul telephone cables from the Roseville shore. Further afield were memories of the cable line from Brookvale brickworks to Mona Vale Road.

FIELD REPORTS

Bombo, N.S.W.

On 15 April, excavations at North Bombo unearthed a pair of 1067 mm gauge wheels with inside bearings. At first it was hoped that these were relics from the Kiama Council tramway which was constructed in 1885-6.

This council tramway was used for the steam tests of John Fowler 0-6-0T 5265 of 1886 during December 1886, but never opened to carry blue metal from the Pikes Hill Quarry to Kiama Harbour. The unused track was lifted from the road in November 1889 while the loco was sold in June 1890.

It now seems that the wheels are from gravel trucks used on the 1067 mm gauge railway which served Cameron's Quarry at Bombo. Hudswell Clarke 0-4-2ST 550 of 1900 was employed in this quarry from 1927 to 1929.

Ken McCarthy 4/86

Warrentina, Tasmania

John Buckland and Bruce Macdonald recently visited Tasmania and made a foray to the IXL Timber Co. Warrentina sawmill site. Here they found the upturned remains of Orenstein & Koppel 0-4 OWT 4631 of 1911. This was a 2 ft 6 in gauge loco originally from the Grafton Copper Co., Cangai, NSW, which went to Tasmania in about 1920. There is also another wreck "under impenetrable blackberry".

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

HEXHAM ENGINEERING PTY LTD, Hexham, N.S.W.

(see LRN 50 p.2)

It would appear that this company is to become involved in the former cane railway business of the defunct E.M. Baldwin & Sons as well as its underground coal mining railway business. At the present time, Hexham Engineering is fulfilling orders placed with E.M. Baldwin for six mining units for Elcom Collieries, Newcom Colliery and Australian Iron & Steel as well as for a brake wagon for Isis Central Sugar Co.

Editor 5/86

PTA ENGINEERING PTY LTD, Launceston, Tasmania

This company has won an \$800,000 contract from the Tasmanian Hydro-Electric Commission to make 1067 mm gauge rolling stock for tunnelling work on the King River power scheme. The order includes 24 Granby-type tipping cars, 8 flat top cars, a diesel-hydraulic mobile tipping ramp, and a passenger module.

National Constructor 3/86 via Greg Stephenson

NEW SOUTH WALES

CEMENTATION CO. (AUSTRALIA) LTD, Bargo

An auction was held at a storage site here on 18 March on the cessation of Cementation's Australian operations. The site consisted of four galvanised iron sheds in an area of about 0.3 acre. It was situated on the north side of Bargo off the Pacific Highway 0.5 km from the road and behind a house and farm shed. Cementation was a Melbourne company and it is possible there was another auction in Victoria where other rail items may have been offered. The rail items in the Bargo sale were as follows:

- | | |
|--------------|---|
| Lots 276-278 | Three Hagglund 90B shuttle cars built by the Joy Manufacturing Co., 610 mm gauge, all in poor condition. Builder's numbers 11507 of 23-6-72, 11511 of 20-7-72 and 11508 of 5-7-72 respectively. |
| Lot 211 | One Moran concrete agitator car without bogies in poor external condition but otherwise complete. Sold for \$150 |
| Lot 212 | Two home-made bogies. 3 ft 5 in gauge. May have been used with the above Lot. Sold for \$5. |
| Lot 215 | E.M. Baldwin Model DH8M 4wDH loco. Builder's number 4660-1-8-72 with GM Bedford engine 8878/1554 and Twin Disc transmission TR 1568 A. Running number 70403 - in poor external condition. Sold for \$1000 |

- | | |
|----------|--|
| Lot 214 | E.M. Baldwin Model DH8M 4wDH loco. No builder's number but presumed to be 4660-2-8-72. GM Bedford engine 6.8784/1560 and Twin Disc transmission TR 15674. Running number 70404 - in poor external condition. Sold for \$800. |
| Lot 215A | Spares for Baldwin locos comprising new engine, a new torque converter and assorted brake shoes, rubber springs, water pump etc. Sold for \$1500 to the same buyer as 215 & 214. |

There were also several sections of prefabricated track (rail welded to steel sleepers) noted. The rail was of heavy section - 80/90 lb - gauge 3 ft

(The locomotives noted above were supplied new to Pearson Bridge Pty Ltd, and were later sold to the Cementation Co., Melbourne - Ed.)

Craig Wilson 4/86

PHILIPP HOLMANN - JOHN HOLLAND JOINT VENTURE, Sydney 900 mm gauge

An advertisement appeared in the press in March for new or second-hand equipment for a project being undertaken by the above, to suit 900 mm gauge and 1550 mm maximum overall width. The equipment needed included battery electric locos, both 27-20 kw and 75-120 kw, with a battery charging station, muck wagons (approx. 6 cu.m.), personnel cars, agitator wagons (approx. 5-7 cu.m.), flat wagons, 18,400 m of rail, one California switch and other pointwork. Proposals for the supply of this equipment, presumably for a tunnelling job, were due by 7 April.

Western Australian 22/3/86 via David Whiteford.

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge (see LRN 51 p.4)

The 1986 CEP employment project commenced at Albion Park on 10 March. By mid-April most efforts had been directed at overhauling the heavy machinery in the large workshop. The large pedestal as well as the radial drilling machines have been overhauled and repainted. The lathe and shaper machines have been dismantled for major overhaul and the fitting of new bearings.

During March and April, the 415v supply was extended to the new workshop and 415v and 240v power outlets installed. In April a heavy duty air compressor and reservoir was purchased. This will supply air to a workshop line from which air tools can be powered.

By April, work was well ahead on the construction of a new turnout for the southernmost store track (road 5) in the museum compound. This is parallel to the road 4 completed during February. Both of these tracks will eventually be covered by an extension to the rolling stock shed completed in 1985.

The completion of a CEP workers' amenities block was expected by late

April. In addition to a meal and locker area for the employees, this new building contains separate rooms for a mower store and for a small carpenters shop.

On 1 February, 24 batteries were delivered to the museum to increase the supply in the Mancha 4wBE locomotive. These were purchased for a nominal cost from the contractor who is breaking up Government Railway rolling stock at Port Kembla. Carriage lighting switchboards as well as an axle driven generator were included in the deal.

With the return of cooler weather it was most rewarding to see over 600 passengers taking trips on the museum railway during Heritage Week on Sunday 13 April.

Ken McCarthy 4/86

KIAMA LOCOMOTIVE TRUST - KIAMA HERITAGE LIGHT RAIL 610 mm gauge

(see LRN 48 p.5)

On 17 April the John Fowler 0-4-0T 16089 of 1923 was transferred from the store site at the Illawarra Light Railway Museum at Albion Park to Kiama. On Sunday 20 April the engine was on display in Kiama for the Heritage Week celebrations.

Art work which accompanied the Heritage Week supplement in the *Kiama Independent* for 9 April featured the proposed street tramway at a terminus behind the restored terrace cottages in Collins Street. Additional drawings used to promote the tramway scheme during the 20 April display presented an impression of the Fowler loco hauling passenger cars around the Post Office curve from Manning Street into Terralong Street.

During mid-February, further excavation work for the retirement centre at Pikes Hill exposed several of the former terminal sidings of the old gravel tramway. This construction project is being carried out on portion of the property once used for the engine shed and the balloon loop at the quarry terminus.

Ken McCarthy 4/86

PERISHER SKITUBE JOINT VENTURE, Little Thredbo

(see LRN 48 p.6)

A fire took place in the almost completed first section of the Perisher Skitube in early April. A newspaper photograph shows a construction tramway leading into the tunnel entrance. Gauge appears to be around 3 ft Any further information about this construction line would be gratefully received for inclusion in LRN.

Daily Mirror 9/4/86 via Craig Wilson.

QUEENSLAND

SUGAR MILL CLOSURES / AMALGAMATIONS - Johnstone River District

A proposal to close CSR's Goondi Mill and reassign growers to neighbouring mills has not met with the wholehearted approval of the mill's suppliers. It is believed that the CSR company offered to sell the mill to the growers last year but in the present industry climate, closure appears inevitable as it needs major investment to bring it up to economic standards. The Queensland Government proposes the reassignment of the majority of Goondi growers to Babinda and Mourilyan Mills, with only a small number going to South Johnstone. Mourilyan Mill is owned by Howard Smith Industries, a proprietary company, and Babinda Mill although a co-operative is not favoured by Goondi growers because of a poor performance record. They claim that the closure of Babinda Mill too is inevitable and are unanimously in favour of transfer to South Johnstone Mill.

Tramway links between the Goondi, South Johnstone and Mourilyan systems are already in existence but to link the Goondi and Babinda systems a tramway link along the edge of Eubenangee Swamp would be required. The reassignment of growers on the closure of Goondi Mill would be matter for determination by the Central Cane Prices Board.

Mackay Daily Mercury 13/5/86; Editor.

SUGAR MILL CLOSURES / AMALGAMATIONS - Mackay District

(see LRN 46 p.4)

Agreement in principle has been reached by the managements of Farleigh, Racecourse, Marian and Cattle Creek Mills for the formation of an amalgamated sugar milling co-operative. Detailed proposals are under preparation and will be released to shareholders for decision later.

It is believed that discussions have been held with representatives of the CSR company concerning the future of their Pleystowe Mill, for any major rationalisation of assignments in the district would need to include lands presently supplying Pleystowe Mill, which lies at the centre of the cane growing area.

North Eton Mill directors withdrew from merger talks at an earlier stage and appear to be putting their faith in a policy of diversification. Notable in this is a scheme for developing a cut flower industry set up with the advice of Israeli experts.

Editor 4/86

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge

(see LRN 50 p.6)

Work is proceeding for the placing of the new Stationmaster's office at Woodford Station. This will include site office and sales centre and is an important part of establishing an appropriate atmosphere at the terminus.

The boiler of Bundaberg Fowler 0-6-2T 5 of 1952 has been moved to Babcock & Wilcox in Brisbane. Here its retubing will be done as an apprentice training scheme. Conversion of the ex-Douglas Shire Grovers wagon to a passenger car is underway.

The establishment of Society access to the mail corridor from Woodford to Chambers Road, a distance of about 4 km, is proceeding well. The former trackbed has all been secured for this distance with the exception of one length approximately 400 m in length, for which negotiations are under way.

Durundur Railway Bulletin 3/86, 4/86; David Mason 4/86

BUNDABERG TRAMWAY PRESERVATION SOCIETY INC. 610 mm gauge

(see LRN 50 p.6)

The Society's track at the Botanical Gardens, Bundaberg is now completed, together with a fine loco shed, thanks to the success of a CEP scheme. The track is in the form of a circuit approximately 0.8 km in length.

Restoration is continuing on Bundaberg Foundry 0-4-2T 3 of 1952. Repairs have been carried out on the firebox, and new tubes have been purchased for fitting. Eighteen stays will have to be replaced. A new cab has been fabricated at the Bundaberg College of T.A.F.E. Additional wagons have been donated by the Bundaberg Sugar Company for conversion into passenger carriages. It is hoped that services may be able to commence before the end of the year.

B.T.P.S. 3/86; Alan Robert 4/86

CSR LTD, Pleystowe Mill 610 mm gauge

(see LRN 50 p.7)

An examination of the two new brake wagons supplied by Gemco was made recently. These were coupled together in the loco shed and are painted two-tone grey. They differ from previous designs in having two axles instead of three, having an overall body covering all upper parts, and being fitted for multiple-unit operation. In addition to a conventional automatic coupler, the brake wagons were also connected by safety chains and a multiple operation control cable. The Gemco combination resleeper and scarifying machine also supplied late in 1985 was examined closely and was found to carry

CATTLE CREEK CO-OPERATIVE SUGAR MILLING ASSOCIATION, Finch Hatton 610 mm gauge

(see LRN 45 p 8)

A small self-propelled tamping machine was seen in the loco shed in mid-April and appears to have been recently obtained from the Australian Army. Painted olive green, and apparently in almost "as new" condition, this was built by Matisa Materiel Industriel SA, Lausanne, Switzerland (builder's number 7665 of 1967). It carries Defence Stock Number 2230-66-025-5413 and Army Registered No. 84501. It is Model BL09M and is powered by a diesel engine driving onto each axle via hydraulic pumps.

Can any member provide information to LRN on 2 ft gauge railways or equipment operated by the Australian Army? The discovery of this unit would tend to indicate that at the time it was supplied at least, the Army had some track on which it might be operated.

Meanwhile on the Cattle Creek tramway system, work was going on to rebuild the road-rail crossing of Cattle Creek near Finch Hatton. It was unclear whether the road portion of this bridge will be restored. Some smaller creek crossings adjacent to the Eungella Road were being replaced in concrete and steel.

Editor 4/86

CITRA CONSTRUCTION LTD, Brisbane 1067 mm gauge

Citra Construction are laying a 3 ft 6 in gauge tramway in connection with the construction of the Gateway Arterial Road. Construction of the tramway commenced in January 1986, and the line was planned to extend for some 800m.

An earth embankment has been built from Wynnum Road about 1 km towards Bulimba Creek, to carry the Gateway Arterial Road over swampland. From this point, a pre-stressed concrete bridge will carry the road over Bulimba Creek and several industrial properties before rejoining an earth embankment for a short distance and then another concrete bridge passing over the Thorneside Railway Line.

The tramway is being built from a temporary concrete casting yard at the end of the earth embankment and crosses Bulimba Creek on a temporary lattice girder bridge. The tramway is then supposed to be extended across the entrance road to two local factories, but the management of the plants concerned have blocked this. Rolling stock consists of ex-QGR freight bogies

which are planned to be hauled by a large winch located at the outer terminus of the line. The line is single track except in the casting yard, where it divides into two for a distance of about 100 m.

Concrete beams, approximately 79 tons in weight each will be cast on site and then winched along the tramway to their desired location for placement by mobile crane. This work is expected to take at least five months.

The first concrete girder was noted standing on bogies over Bulimba Creek on 7 March having been pushed into position by a bulldozer. The bogies with their load were noted on the southern side of Bulimba Creek later in the day. The initial run over Bulimba Creek was apparently a test for tramway and temporary bridge.

David Mewes, J.Hurd (Citra Construction Ltd) 3/86

DREAMWORLD PRODUCTIONS PTY LTD, Coomera 610 mm gauge

(see LRN 45 p.9)

A new line has been constructed here, although not yet open to the public. Entitled the "Enchanted Forest Railway", it is thought to be constructed in the form of a "figure 8", although this has yet to be confirmed. Motor Rail "Simplex" 4wDM 21543 of 1956 was seen on this line with a large ballast hopper in mid-April. It is believed the line will have a dummy steam outline "loco" powered by a diesel-engined "tender". It is understood that Ruston & Hornsby 4wDM 218002 of 1943 recently acquired from Farleigh Mill, has been cut down to form the basis of this powered tender. Passenger stock is being prepared for the line, and was observed on blocks for attention or modification to wheels or bogies.

Meanwhile on the main line, trains were being hauled by Baldwin 4-6-0 4 *Reg.Colter* (45212 of 1917). Perry 0-6-2T S *G.R.Clapton & Co.* (5643.51.1 of 1951) was out of service having its safety valves replaced.

David Whiteford 4/86; David Mewes 4/86

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 46 p.4)

Ruston & Hornsby 4wDM *Little Toot* (218002 of 1943) has recently been sold to Dreamworld, Coomera. This loco was a Model 20DL with 2-cylinder Ruston diesel engine. It was originally built for the British Ministry of Supply, but was returned to Ruston & Hornsby and reconditioned for dispatch in 1947. It was purchased for use at the Commonwealth Ministry of Supply's factory at St.Mary s (NSW) and went to Farleigh in 1960. At some stage it passed through the hands of E.A.Marr & Sons Pty Ltd, Machinery Merchants,

Sydney, and carried their plate B5782.

David Mewes 4/86; Editor

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 51 p.5)

Two extraordinary four-wheel cane bins were seen at the mill in mid-April. With specifications laid down by Sugar Research and construction by Walkers Ltd of Maryborough, these are the first prototypes of an 18-tonne capacity cane bin. Overall dimensions of the vehicles are approximately 10.5 m in length and 2.3 m in height and width. The wheels, mounted at the end of the vehicles, are large diameter, of a size one would expect on 1067 mm gauge wheelsets. The bin floor rises up at each end to clear the wheels, which are attached to the rest of the vehicle by what are basically industrial slings to allow for the necessary flexibility. The side members of the vehicles have slots cut in them, apparently to improve their torsional characteristics. Examples of prototypes built by other manufacturers are expected to be supplied for running trials during the 1986 season. The trials are at Marian because no other mill has a tippler capable of handing the bins.

The advantage of the large capacity four-wheel bin is the reduction in maintenance costs, which are related to the number of axles in use. Their introduction would mean the elimination of the infield transport of rail bins. Most farmers currently transport the bins on road trailers infield to be filled alongside the cane harvester. This system would have to be replaced by the use of infield transport units which return to the siding with a load of cane to tip into the large bins.

Editor 4/86

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (S.A.) INC. gauges various

(see LRN 51 p.6)

During mid-February, the boiler of Andrew Barclay 0-6-0T *Peronne* (1545 of 1919) was returned to the museum site. Pad welding, the fitting of 27 new stays, crown nuts, and new firebox support slides made up most of the boiler work. A renewed ash pan has been fitted and new water tanks are under construction. A repaired cab roof and bunker, tool box compartment and cab floor will also be fitted. A steam test will be carried out soon.

The loco will be used to haul passenger trains at the new museum site at Port Adelaide, a round trip distance of 1.6 km. This track will be dual gauged to enable use of the historic 2 ft gauge Ruston & Hornsby diesel locos, and

possibly even *Skipper*, the Perry 0-6-2T (1850.46.1 of 1946). This museum track may even be extended to link up with the South Australian Maritime Museum, adding another 1.5 km to the running line.

Catchpoint 3/86

VICTOR HARBOR TO GRANITE ISLAND HORSE TRAMWAY 1500 mm (sic) gauge

Double deck four-wheel horse trams were introduced on the Victor Harbor to Granite Island railway to operate tourist passenger services during 1894. This service continued to be operated by South Australian Railway horse trams until May 1955 when the rails were removed from the jetty-causeway to permit maintenance of the structure. One of the two cars which worked the service from 1931 was used by the local kiosk proprietor to provide a short summer service on the Island during the summer of 1955-6. From the summer of 1956, the tourist service was provided by a tractor hauled road train running on rubber wheels.

In September 1984, a detailed proposal was released to reconstruct the 1500 mm (sic) gauge tracks along the old tram route and reopen the horse tramway for the South Australian sesqui-centenary in 1986. The project was expected to cost \$170,000. The financial viability of the project was promising as 500,000 people visit Granite Island each year.

The proposal was approved for sesqui-centenary and CEP grants and the 2 km of track was completed by March 1986. During April the proposed opening date of the tramway had been set down for 17 May. Four new double deck tramcars built to the same design as the 1879 cars were being constructed at Port Adelaide and by mid-April the first car of the fleet was almost complete. The Victor Harbor Council has also established a tram horse stable to accommodate the six animals required to work the service.

The tram service will connect with the railway at Victor Harbor Station and it is hoped to reopen the Victor Harbor to Mount Barker (via Goolwa) railway in August or September for tourist steam train operation.

Lee Rodda, Bob Merchant, Ken McCarthy 4/86

TASMANIA

THE BUSH MILL, Port Arthur 381 mm gauge

(see LRN 51 p.7)

The railway here commenced operation in mid-February. The loco is named *Sarah-Kate* and is an 0-4-0TT. Built in 1970, it arrived in Tasmania in June 1985 and came from a Dutch pleasure park which failed financially. It is believed

to have been built in Holland and subsequently reconditioned in the UK by Severn-Lamb Ltd. It has a locally built 4wDM auxiliary tender remotely controlled by the loco driver. The loco is painted in Midland red and its tender is lettered BMMR. It has a high cab and chimney, brass dome, Walschaert's valve gear and a mechanical lubricator. Consideration is being given to a possible reboiling which might give it the increased power needed on the steeply curved and graded line which winds 2 km down the hillside between the Bush Mill at the summit and the Fox and Hounds at the bottom.

The loco shed is a three track building beyond the Bush Mill station, which has a run-round loop line. The loco runs tender first down grade, reversing out of Bush Mill station to a switchback before commencing the descent on four levels on a continuous grade of something like 1 in 30, with sharply curved reversals of direction in three places; the first identified as Serpentine Trestle, being on a quite high 70 m timber trestle bridge on a very sharp curve. Immediately below it is another reversal of direction in a cutting with the final reversal near the bottom of the grade named Tea Tree Hollow, prior to a final tangent through dense tea tree scrub to the bottom terminal station at Fox and Hounds (adjacent to the tavern of that name). There is a run round loop, a neat timber station with waiting room and ticket office, a water standpipe and a non-operational departure signal. The carriages are continuously braked.

On arrival, the loco cuts off, reverses to the end of track, and runs around the train before coupling up ready for the return trip which was made funnel first. The ascent is made with the aid of the Isuzu-powered diesel "tender" which is cut in, but well silenced so as not to drown the loco exhaust beats.

The round trip takes approximately 45 minutes including a 15 minute stop at Fox and Hounds, and trips run at hourly intervals in either direction for a fare of \$4 adults. There are no pensioner concessions. On return to the switchback at the summit the train reverses to Bush Mill Station, which has a level crossing "protected" by flashing light signals at the platform end. There are non-operational signals at the switchback points. After each trip the loco runs round the train at Bush Mill, where there is a supply of mill offcuts for fuel and a water tank to supply the loco tender, which also carries some coal. This is no toy, but a well-engineered minimum gauge operating railway, which is certainly worth seeing and travelling on.

THE HYDRO ELECTRIC COMMISSION, King and Anthony River Schemes 1067 mm gauge

(see LRN 47 p.11)

The \$313 million King River hydro-electric scheme will include a 6 km head race intake tunnel 7.2 m in diameter. Tunnelling on this and the \$236 million Anthony project is claimed to be the biggest programme of underground works since the Snowy Mountain Scheme. Over the next 78 months, the HEC will drive and line about 16 km of tunnels, shafts and underground chambers.

National Constructor 3/86 via Greg Stephenson

IDA BAY RAILWAY CO. PTY LTD, Lune River 610 mm gauge

(see LRN 49 p.11)

This line was visited in late March. Malcolm Moore 4wDM IBR No.1 (1038 of 1943), with Isuzu engine, was in charge of three carriages, one open and two closed. The two other Malcolm Moores noted were 4wPM No.2 (1017 of 1943), with Ford V8 engine and 4wDM No.3 (1056 of 1943) with Isuzu diesel. A yellow painted line car was noted by the loco shed, lettered SRT.

John Buckland 3/86

VAN DIEMEN LIGHT RAILWAY SOCIETY INC., Don gauges various

(see LRN 51 p.8)

Under discussion at a Special General Meeting of the Society, held on 12 April, was the future of the 2 ft gauge exhibits currently held as part of the Society's collection at Don. It is possible that these may be relocated to another project.

VDLRS 3/86

D. VON STEIGLITZ, Evandale 610 mm gauge

This was a storage site for the Van Diemen Railway Society's 2 ft gauge stock before it was removed to Don, and some remains are still here including two loco frames from 0-4-0WT locos. The first is that of Orenstein & Koppel 719 of 1901, formerly Mount Magnet Tramway number 2 which went to the North Farrell Mining Co. about 1910 and was derelict at Tullah before 1935. This identity is confirmed, correcting some other reports. The second loco frame is that of John Fowler 17732 of 1928, North Farrell's Tullah Tramway loco *Wee Mary Wood*.

John Buckland. 4/86

VICTORIA

CHEETHAM SALT LTD, Laverton 610 mm gauge

(see LR 59 p.24)

This salt works was visited at the start of April. The main system serves salt pans where sea salt is evaporated and harvested. The tramway hauls the harvested salt to stockpiles on a seasonal basis. The tramway is also used to move salt from stockpile to processing plant throughout the year. The harvest was in progress at the time of the visit. Four locomotives, all Ruston & Hornsby 4wDM locos were in useable condition. Painted yellow with green or red frames, they have all been modified in various ways mechanically including the fitting of new engines, and they also have new bodywork fitted as a result of the ravages of salt, which gives them a somewhat rusty appearance.

Locos 2 and 3 (283509 of 1949 and 283510 of 1949 respectively) were seen in the works yard, while numbers 1 and 4 (252805 of 1947, and 320555 of 1951 - formerly of the Melbourne & Metropolitan Board of Works) were out on the salt pans. Rolling stock is mainly four-wheel salt wagons with short wheelbase and galvanised body, but there were also some service wagons including at least one bogie flat car.

Two Motor Rail "Simplex" 4wDM locos were seen out of use. L7 (7351 of 1938) formerly owned by contractors John Howard, with a rusty oil drum for a radiator and the engine covered over with plastic sheeting was dumped by the workshop. Amongst a pile of scrap behind the workshop was 1 (10058 of 1948). The engine and many other parts had been removed. This loco carries a large exhaust conditioner and was first used for tunnelling work by the State Rivers & Water Supply Commission at Jindivick.

Editor 4/86

COSTERFIELD 457 mm gauge

Observed by LRRSA members returning from the Mclvor trip was a small gold mine, on Mining Lease 240. An elevated tramway ran some 20 metres or so from the shaft top, and nearby lay 4 or so steel skip bodies.

Editor 3/86

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 49 p.11)

As referred to elsewhere this issue, the only NA class 2-6-2T available for service on 29 March was 7A (Newport, 1905). Other Newport-built NA class locos observed around the workshops at Belgrave were 6A (1901),

stored outside, 14A (1914) receiving attention in the workshops, 12A (1910) stripped down to frame in the workshops and 8A in works with wheels out. It is understood that 3A (1900) is stored at Emerald. Also at Belgrave was Beyer-Garratt G42 (Beyer Peacock 2-6-0 + 0-6-2 6268 of 1926). Also at Emerald, being prepared to enter service, is Drewry 0-6-0DM V12 ex-Tasmanian Government Railways, regauged from 1067 mm gauge.

In the museum, slow progress continues on 2 ft gauge Perry 0-6-2T *Delta* (9767.45.1 of 1945), which remains dismantled. The 2 ft 6 in gauge passenger vehicle (ex NQR wagon) from the Walhalla & Thomson Steam Tramway is still housed here. No sign could be seen of the Malcolm Moore 4wPM loco obtained from the State Electricity Commission at Redcliffs in 1977

Editor 3/86

GEE LONG STEAM PRESERVATION SOCIETY, Wantirna 1067 mm gauge

Seen in dismantled condition at the traction engine club grounds adjacent to the Burwood Highway in Wantirna was green-painted Vulcan 0-6-0ST 2540 of 1916, This loco was rescued from a park in Ringwood for eventual restoration and use on the Bellarine Peninsula Railway.

TELOPEA GARDENS, Halls Gap 610 mm gauge

(see LRN 22 p.21)

This attraction, comprising gardens and viewpoints, nature reserve and native plant nursery, art & craft studio, tea rooms and scenic railway is now owned by David & Susan Burkhill who purchased the 36 acre property from Lou De Clifford about 18 months ago.

The railway can carry 30 passengers in carriages built from cane trucks and it takes about 12 minutes to travel the 1 km circuit. The locomotive in use is a steam outline 4wDH rebuilt from a 4wPM loco built by Alwyn Zinn of Ipswich in Queensland in 1972, his second loco. Zinn's first loco, a 4wPM built in 1971, is on static display. Society members are invited to visit the site, which opens daily, and introduce themselves to the proprietors.

David Burkhill 4/86

WESTERN AUSTRALIA

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC, Bennett Brook Railway, Caversham 610 mm gauge

(see LRN 51 p.10)

Work is continuing on restoration work on locomotives, with South African NG123 Franco Belge 2-8-2 2670 of 1951 taking pride of place. Boiler work has included welding the firebox corners, while some rivets and stays still require attention. Some frame adjustments have also been made. Meanwhile the wheelsets of Ruston & Hornsby 4wDM 404982 of 1957 have been regauged from 1067 mm by the State Engineering Works. Frame modifications for 2 ft gauge are being planned.

Work on rolling stock has included good progress on the third Lake View & Star coach and the putting into service of a regauged ex-WAGR LA ballast wagon. This wagon was made available to John Roberts Pty Ltd contractors, who had the job of completing work on the track circuit through Whiteman Park. The contractors also leased F.C. Hibberd "Planet" 0-4-ODM 2150 of 1939 for a five week period after it entered service following restoration. Only the installation of two sets of points and some packing and lifting is needed on the loop line.

The Fremantle Signal Cabin A has been purchased from Westrail and it is hoped that it will be erected at Central Station at the island platform. Much of the Perth Station canopy has been acquired and will also be erected on this platform.

Peter Dyer, 3/86

BURMA MINES RAILWAY 610 mm gauge

A very interesting report has been received from this most remote and inaccessible of railway systems. Although maybe a little out of the normal area of interest for this journal, the mining and associated railway system around Bawdwin in north-east Burma was developed with the assistance of Australian capital and personnel, especially in the 1920s and 1930s. The present reporter is the grandson of an Australian General Manager of the Burma Corporation, who was only allowed to visit the area because of his family links there.

The mines were opened up from 1907 on the site of old Chinese workings, and are linked with the smelter/refinery site at Namtu and to the metre gauge government railway at Namyao by an extensive 2 ft gauge railway system. The main line as built was some 50 miles in length. In 1931, there were at least 46 steam locomotives, but the slump in world trade and the introduction of larger locomotives saw this figure decline to 28 by 1939. Steam locomotives are still a mainstay of operations, especially around the mines, although diesels are used to haul ore from Bawdwin to Namtu. There are extensive workshops at Bawdwin, opened in 1947 as part of the reconstruction following devastation caused by the Japanese. These contain facilities for the repair and allegedly even construction of steam locomotives.

Our reporter visited the area in 1984, and travelled between Namtu and Bawdwin by steam hauled train. His train was heavily guarded against possible trouble from Shan insurgents as it wound its way up the steep narrow valleys denuded of trees by the smelter operations of the past. Antique stone bridge works and a spiral complete the picture of typical 19th century colonial railway development - "a living museum" as a visiting engineer put it.

MEETINGS

MELBOURNE

Tonight Frank Stamford will be speaking about the Mclvor Timber & Firewood Company's 5 ft 3 in gauge tramway which operated from 1906 to 1926 in the area to the north of Tooboorac, Victoria. Major new discoveries were made in this area last year by the 1985 Mclvor Survey Group so you will have to attend this meeting to find them out.

LOCATION: Ashburton Uniting Church Hall, Ashburn Gve, Ashburton.

DATE: Thursday, 12 June at 8:00 P.M.

ADELAIDE

Contact Arnold Lockyer for meetings details. Address is on the front of L.R.N.

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday, 5 June at 8:00 P.M.

SYDNEY

Jeff Mooney recently spent several weeks in Sri Lanka, and will be speaking about the railways to be found there.

LOCATION: Board Rooms Bowlers Club, 95 York St. Sydney. Access through the Forestry Commission Office building next door (Town Hall side). on second floor.

DATE: Wednesday 25 June at 7:00 P.M.

Bush Mill Railway, Port Arthur, Tasmania: 15 inch gauge 0-4-0T *Sarah-Kate* (see LRN 52)

Photo: John Buckland 31/3/86

EDITORIAL

Arrangements have now been made for photographs to be screened at no cost to the Society for inclusion in LRN. Photographs would be most welcome for inclusion. They should preferably have some news value. Colour or black and white are suitable. Correspondents requiring photographs to be returned should indicate this clearly on their reverse.

NOTES, CORRECTIONS AND COMMENTS

Philately - Nauru Postal Authority

The Nauru Postal Authority issued four stamps of 5 March 1986 featuring early transport. Of particular interest is the 30c stamp featuring an Orenstein & Koppel 0-4-0T hauling a rake of skips. The Australian Stamp Monthly for April 1986 notes that the sources of all four stamps were photographs in an album dated 1927-33 from the Land & Survey Archives. The depicted loco is much larger than that shown preserved in the 1985 series (see LRN51 p.11}, so if the photographic source is no later than 1933, it might be 2 ft gauge 40 hp Orenstein & Koppel 3300 of 1909. The 3 ft gauge Orenstein & Koppel locos did not arrive at Nauru until 1937 (see LR 88, p.10-11).

Phil Rickard 6/86, Editor

Correction -

Australian Radio Telescope Project In LRN 50, p.8, the location of this project was given as Culgoa, Victoria. This was an error, and the correct location is Culgoora, NSW (near Narrabri). Apologies to John & Ruth Kerr.

Editor

RESEARCH COLUMN

Rodney Weaver of 4 Queen's Close, Kenilworth CV8 1JR, UK is researching a book on Baguley Locomotives and Railcars would like details of any of their products which came to Australia. These include many items supplied to the Drewry Car Co., and carrying their nameplate. Items are thought to include various petrol railcars and inspection trolleys, chassis for Tasmanian Government Railways railcars, cane locomotives, and underground electric locomotives built in association with English Electric. Anyone who can provide any information, including those involved in the operation of these units, will receive due acknowledgment in the book. Readers may write direct to Rodney Weaver, or to Ron Baneth, 25 Codrington Street, Sandringham 3191.

FIELD REPORTS

MOE - WALHALLA RAILWAY, Victoria

Peter Medlin and Ian Barkla recently visited parts of the site of the former 762 mm gauge Victorian Railways line from Moe to Walhalla in Gippsland. At Moondarra, north of Moe, the formation is quite easily recognised by the level embankment on the right of the road. A right turn at the next road leads to the station area, now used as a storage area for gravel. Continuing on this road around the next bend, it is quite easy to follow the trackbed to a cutting in the distance. Next stop was Erica for quick look at the 914 mm gauge McCormick/Deering rail tractor with log wagon preserved at the side of the road.

The station yard at Walhalla - late home of the Walhalla & Thomson River Steam Tramway until 1982 - was visited. The station building is still reasonably intact apart from the canopy and the effects of vandalism. The two engine sheds remain as do all the houses that were connected with the railway. The locomotives and all rolling stock have been removed. The area is apparently occupied.

A quick walk along the creek from Walhalla found the first trestle bridge almost non-existent. However, the second trestle bridge was found to be in good condition at each end but with no middle section to join them. High tide prevented further investigations down the creek.

The section from Thomson towards Platina was followed on foot. Soon after leaving the Thomson "loop" it is a short distance to the first bridge. Access across the bridge is by walking on the girders or by the path under the bridge. The second bridge is not long after. Then a steady upgrade of 1 in 30 extends to Platina. Here traces were found of a former timber tramway which operated from the Walhalla end of the yard, including a dogspike and possibly part of the roadbed through the trees.

Soon after leaving Platina came the famous "horseshoe bend". Water could be heard rushing through the drains below, but blackberries prevented a descent of the steep embankment. What appeared to be the remains of a five span trestle bridge followed soon after, with the bridge timbers still lying on the side of the trackbed. From here the 1 in 30 grade continued until the area near Knotts, where it was found that the trackbed had been filled by use as a tip - rather an anti-climax. The return walk to Thomson was pleasantly downhill.

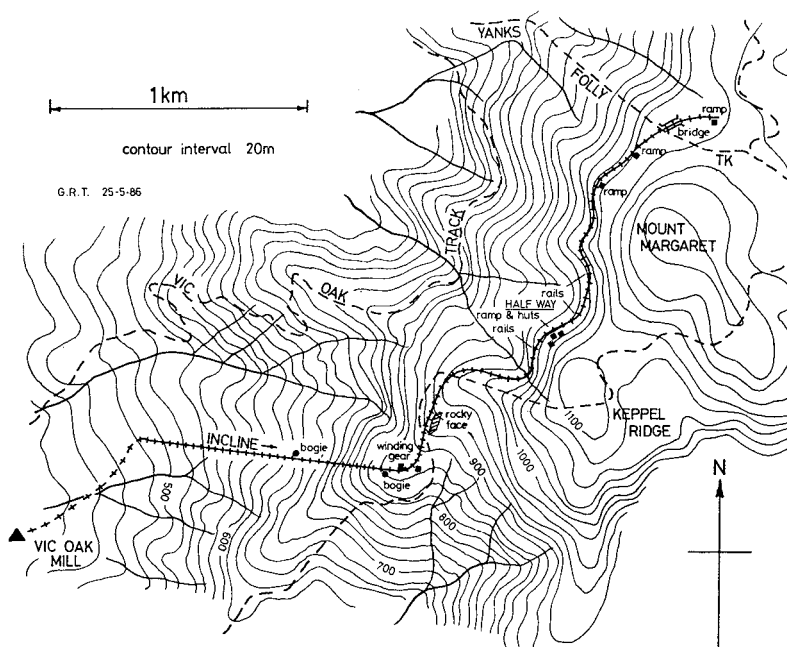

The walk from Thomson to Knotts is quite easy. The track is cleared all the way, and the distance approximately 7 km each way. Plenty of sleepers,

dogspikes and other remains such as rails and telephone poles can be observed along the trackbed. Further information for anyone wishing to do the walk is available from Peter Medlin on (03) 758 5387.

Peter Medlin, 5/86

VIC OAK INCLINE, Marysville, Victoria.

During the late 1930s and early 1940s, the Vic Oak Sawmilling Company operated a 3-rail balanced incline and logline in the Mt. Margaret area to the north-east of Marysville. The logline terminated at a loading ramp in a fairly level area just north of Mount Margaret, and headed in a generally south-westerly direction along the side of the mountain for about 2.5 km to the head of the incline. Vegetation along the line is fairly light, and no great difficulty is experienced in tracing the route. Near the line's intersection with Yank's Folly Track are the reasonably intact remains of a 100 m long low bridge, the only major one on the line. The formation then skirts the hillside for the next kilometre or so to reach "Halfway" to the incline, where the remains of buildings and platforms etc. are to be found. Wooden rails were used on most of the line, but short sections of about 50 lb steel rail were in place on some curves, and especially in a couple of valleys where the ground was unstable. The gauge of 3 ft (914 mm) could be verified on one of these steel railed sections.

The line continued in a generally south-westerly direction through reasonably easy terrain, apart from a 100 m section where significant rock blasting would have been required for construction of the formation. At the top of the balanced incline were the semi-intact remains of the winding and brake gears with two 3 ft diameter sheaves lying nearby. Band brakes were used on the sheaves as each one had a flat running surface next to the running groove. A brake band was found nearby, as were two pulleys on a detached section of the winding gear frame.

About 50 m down the incline, the slope steepened and a log "make-up" was used to mount a couple of cable support rollers. Nearby were the well-preserved remains of a timber bogie, complete with brakes. These were of the shoe types not the more common bell or board types.

The line of the incline formation was clearly evident, and the wire rope could be seen for most of its length. Another intact bogie was found about a third of the way down the incline, and a couple of cable support rollers were also observed. The site of the passing rope was not obvious, and the finishing point of the incline was also indistinct due to more recent farming operations. The formation to the sawmill site 500 m or so distant had also been obliterated.

Geoff Thorpe 5/86

STATE RAIL AUTHORITY OF NSW, SYDNEY HARBOUR TUNNEL

Cave divers are investigating the 551m flooded tunnel from Balmain to Greenwich, started in 1913 and completed in 1926 to feed electricity to Sydney's north shore tramway and rail systems. The tunnel was allowed to flood during the 1930s, and has been disused since 1969. Still in place is a tramway used for construction and maintenance which served the pumping station at the tunnel's midway points 76 m below the harbour's surface. It is suggested the tunnel may be pumped dry for use as a tourist attraction in the future.

The Weekend Australian, 7-8/6/86

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

GEORGE MOSS PTY LTD, Osborne Park, Western Australia

(see LRN 51 p.3)

Five 1067 mm gauge 150 kw 25 tonne diesel locomotives are being supplied by George Moss to the Tasmanian Hydro-Electric Commission for use on the King River Power Tunnel and the Anthony River Scheme (see LRN 52 p.15).

Australian Tunnelling Digest 9/85 via Bob Deskins

NEW SOUTH WALES

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD. Albion Park 610 mm gauge

(see LRN 52 p.9)

The rebuilt boiler for Perry 0-6-2T *Tully* No.6 (7967.49.1 of 1949) was given a hydraulic test late in May. The official inspection was to take place during June, and the boiler expected back at Albion Park soon after. The boiler has been at the BHP boiler shop at Australian Iron & Steel, Port Kembla since June 1981. Since then, the firebox has been practically rebuilt, work carried out on the tube plates, a new smokebox installed and a new set of tubes fitted. The bearings, motion, and cylinder components were overhauled some time ago at the museum, and during 1985 new side tanks, footplate, fuel bunker and cab roof were manufactured under the CEP scheme.

During May, and June, the roof frames, battens and tiles were fitted to the large brick toilet and shower block. The laying of pipes between this structure and the main sewer line followed. By June all the heavy workshop machinery was available for use in the new workshop buildings having been overhauled under the CEP programme. Also due to the current CEP projects most of the stationary steam engines have been completely overhauled and connected to the steam line in the new display shed. Many of the units have been fitted with new piston rings and main bearings.

On 17 May ex-Corrimal Coal Co. Hawthorn Leslie 0-4-OST *Burra* (3574 of 1923) was relocated on a new length of track which will eventually form Road 1 in the rolling stock shed. This alignment had been kept free of rails for workshop purposes but now that this activity has been moved to the new shed, the frames bunker and cabin components have been moved from Road 2 to Road 1. A small section of wasted metal in the front tube plate of this locomotive had to be built up late last year. It is hoped that this work can soon be inspected to permit the fitting of boiler tubes.

During May, the CEP employees carried out a major job on the tender of Hudswell Clarke 0-6-0 *Cairns* (1706 of 1939). It seems that the CSR engineers had fitted a false bunker floor to the tender many years ago leaving an enclosed void between the tender tanks about 750 mm above the floor. For some time water had been leaking from the side tanks into the void. The false hopper floor was removed and replaced by a removable plate and the rusted lower portions of the water tanks repaired by new material.

On 11 May a spare wheel set was exchanged for one with a flat tread in the Rubicon Tramway bogies under ex-Melbourne cable tram trailer No.430. The

"flat" had occurred when the bogies were in use at Alexandra in Victoria, but the fault had gradually grown worse under 430 at Albion Park.

Ken McCarthy 6/86

PHILIPP HOLZMANN - JOHN HOLLAND JOINT VENTURE, Sydney 750 mm gauge

(see LRN 52 p.9)

Another advertisement for tramway rolling stock appeared in *The Age* on 7 June. Wanted was secondhand equipment comprising diesel locomotives of 750 mm gauge, 135 hp minimum, 18-20 tonnes, minimum speed 15 kph and maximum width 1200 mm. Also required was a mine winder.

The Age 7/6/86 via Colin Harvey.

PERISHER SKITUBE JOINT VENTURE, Little Thredbo

(see LRN 52 p.10)

Construction of the 5.9 km line from Bullock's Terminal to Perisher was not completed in time for the 1986 season. However, the passenger terminal at Perisher has been constructed and tunnelling is continuing. The Swiss Locomotive and Machine Works (SLM) is providing the rack-rail expertise of bogies, rack sections (parts of which are being made in Australia) and rack points. The multiple-unit trains under construction by Comeng NSW, will be powered by 1500 v DC overhead supply. The Australian manufacturers are providing power car bodies and driving trailers complete. Brown Boveri is providing electrical equipment. The tunnel is being bored by an American-designed Japanese-built electrically powered borer cutting the 5 m diameter tunnel in one pass. Spoil is transported to the tunnel entrance on an extendable conveyor belt.

Engineers Australia 12/7/85 via Bob Deskins; Editor.

QUEENSLAND

SUGAR MILL CLOSURES / AMALGAMATIONS - Johnstone River District

(see LRN 52 p.10)

The Central Sugar Cane Prices Board has refused an application by CSR Ltd to close Goondi Sugar Mill at Innisfail. CSR's proposal was to sell the mill to Howard Smith Industries, proprietors of Mourilyan Mill, and it is understood that Goondi would have been closed with its cane being transported by tramline to Mourilyan. Babinda Mill was later brought into the deal at the request of the State Government, which asked that some Goondi growers be transferred to that mill. Board members voted 3-2 against absolving CSR

from its legal obligation to crush the 1986 crops and 4-1 against transfers to Babinda.

The board chairman was highly critical of the Queensland Government's attempts to divert Goondi cane to Babinda against the will of the growers, especially as he believed Babinda had only a limited life. In fact, it was stated that it was likely that only one mill would survive at Cairns (Mulgrave) and one at Innisfail (South Johnstone), meaning the closure of Hambledon, Babinda, Goondi and Mourilyan mills.

The State government's reaction to this judgement was to prepare a Bill to retrospectively remove from The Central Sugar Cane Prices Board its power of determining the rezoning of assignments between mills. Rezoning applications have been judicially determined by the Board since 1929.

The Daily Mercury (Mackay) 6/6/86; 26/6/86; Editor

SUGAR MILL CLOSURES / AMALGAMATIONS - Mackay District

(see LRN 52 p.10)

CSR Ltd is reported as being keen to sell Pleystowe Mill to a group of four co-operative mills considering a merger in the Mackay district, "as long as the price is right".

Meanwhile CSR has increased its equity in Pioneer Sugar Mills Ltd (which owns Pioneer and Inkerman Mills in the Burdekin area) from 19% to 28.8% in the last 12 months. CSR owns Kalamia and Invicta, the other two Burdekin mills.

The Daily Mercury (Mackay) 1/7/86

CSR LTD, Hambledon Mill

(see LRN 42 p.7)

A section of the Hambledon Mill tramline system is the only Shire Tramway still in operation in Queensland. The Greenhills tramway was built in 1905 and is operated and maintained by CSR in return for an annual rental. Shire Council financial documents reveal that the tramway is valued at \$22 000 and the annual rental in 1982/3 was \$800.

Bob Deskins 5/86

DREAMWORLD PRODUCTIONS PTY. LTD., Coomera 610 mm gauge

(see LRN 52 p.13)

A visit in June revealed Perry 0-6-27 5643.51.1 of 1951 in use hauling passenger trains. With only one engine in steam, it was hauling the original three covered carriages and also one open freight car carriage. When both steam locos are used two three-car train sets operate. The greater length of

Baldwin 4-6-0 45212 of 1917 means that it cannot haul four carriages because of limited platform length. However, the Perry had to reverse in the station area to gain access to the water column which is placed appropriately for the Baldwin. A loudspeaker system has been fitted to the carriages to enable the guard to make announcements to passengers. The carriages are not fitted with brakes and rather surprisingly the steam brake has been disconnected on the locust leaving the reversing lever as the principal means of stopping. It is expected that the Baldwin will soon be withdrawn to enable some boiler repairs to be carried out.

The "Enchanted Forest Railway" has been completed but was still not in use pending landscaping work. Laid in 20 lb rail with tight curves, the line forms a figure of eight with an extra loop (like the ABC logo) complete with tunnel which one imagines will be used for stabling the train. Although adjacent to the main railways there is no connection to it. The line appears Disney-inspired with ramshackle rolling stock. The "loco", complete with faces is a dummy "2-4-0" named *Little Puff*. Motive power is provided by the "tender", a sadly cut down Ruston & Hornsby 4wDM 218002 of 1943. There are two open and two closed carriages and a semi-open "guard's van". The cars run on miniature bogies and are coupled with long rigid bars.

Bob Gough 6/86; Editor 6/86

SOUTH AUSTRALIA

ADELAIDE

It is reported that 2 ft gauge Bagnall 0-4-0ST 1801 of 1906 has been removed from Barmera (see LRN 30 p.17) to Adelaide for restoration. Any confirmation or amplification of this information would be most welcome.

Bob Gough 6/86

MILE END RAILWAY MUSEUM (S.A.) INC. gauges various

(see LRN 52 p.14)

The boiler of 3 ft 6 in gauge Andrew Barclay 0-6-0T *Peronne* (1545 of 1919) was refitted and boiler mountings installed to enable a successful boiler test to be carried out on 16 April. Both tool boxes had been repaired and fitted, and new side tanks were soon to be completed. Work is continuing on cab repairs.

Catchpoint 5/86

VICTOR HARBOR TO GRANITE ISLAND HORSE TRAMWAY 1600 mm gauge

(see LRN 52 p.14)

The Victor Harbor to Granite Island horse tramway was due to reopen for passenger services on Saturday 14 June 1986. By late April, Mr Dud Bunker, the tramway horse handler, was training the horses along the new route hauling a four-wheel gangers railway trolley. At that stage, five Clydesdale horses were housed in the tramway stables. These were named Faith, Hope, Charity, Helga, and Paul. Although constructed with steel frames, the four double-deck four-wheel saloon cars resemble the 1879 8-window John Stephenson of New York vehicles. Timber cladding has been used to match the original appearance.

The Victor Harbor District Council has proposed the extension of the tramway service along the Victor Harbor to Goolwa railway to Chiton Rocks and Port Elliot in the tourist season. It has been suggested that a replica of Merryweather steam tram motor *Eureka* (80 of 1879) powered by a diesel engine could haul the tramcars on the longer trips. *Eureka* worked on the Port Adelaide tramways from 1879 until 1882 when it was sold to the Glenelg Railway Company. It then hauled the local Victoria Square to Goodwood car until withdrawn from traffic in 1900.

*Ken McCarthy 6/86 with acknowledgments to Trolley Wire 4/86,
The Horse Tramways of Adelaide, Advertiser 29/4/86, & Lee Rodda.*

TASMANIA

IDA BAY RAILWAY CO. PTY. LTD. Lune River 610 mm gauge

(see LRN 52 p.16)

It is likely that a Krauss 0-4-0T locomotive from the Second River Tramway, Karoola, will once again operate on the Ida Bay Railway. Steam operations will take place on selected days from December 1986 to Easter 1987, and it is possible a LRRSA trip will be organised. It would appear that the yellow line car lettered SRT observed on the line in March originates from the Second River Tramway.

John Buckland 6/86; Frank Stamford 6/86.

MOUNT LYELL MUSEUM, Queenstown 610 mm gauge

(see LRN 47 p.11)

An underground electric loco and rolling stock has been set up on static display under a timber "head frame". The 4wWE loco is painted green. It has been extended at the front end to provide for what appears to be a small

refuge for a second man on the loco. It is coupled to a small Granby car and a man riding car, both painted yellow. It is thought the loco's maker could be English Electric. Can any member give a positive identification.

John Buckland 6/86

Mount Lyell Museum, Queenstown, Tasmania. 2 ft gauge 4wWE loco and rolling

stock on display, 2/4/86.

Photo: John Buckland

WEST COAST PIONEERS MEMORIAL MUSEUM, Zeehan 1067 mm & 610 mm gauge

(see LRN 48 p.10)

A second ex-Mount Lyell 2 ft gauge underground loco has been added to the museum's collection. This is a 4wWE painted yellow, with the number 12 visible beneath the paintwork. It appears very similar to the loco preserved at the Mt.Lyell Museum at Queenstown (see above).

John Buckland 6/86

VICTORIA

CASTLEMAINE & MALDON RAILWAY PRESERVATION SOCIETY, Maldon 1600 mm gauge

Steam operations with ex-VR K160 began from Maldon to Bendigo Road (approximately 0.7 km) at Easter. Service loco for the project is a Malcolm Moore 0-4-0DM ex Australian Paper Manufacturers at Broadford. This was built around 1939 for APM's Maryvale works, and was apparently originally fitted with a gas producer. It is now fitted with a Gardner diesel engine. It is currently painted in red oxide, and has had a small engine fitted behind the cab, presumably to power permanent way equipment. It is fitted with air brakes and has been used to haul rolling stock to Maldon from Castlemaine, as the steam loco is not allowed to work across one bridge at this stage.

Peter Medlin 5/86; John Buckland 6/86

EMERALD TOURIST RAILWAY Board Puffing Billy Railway 762 mm gauge

(see LRN 52 p.17)

Of the Newport-built NA class 2-6-2T locos currently available for services 14A (built 1914) has been plagued with leaking tubes, but it is hoped that this fault has now been rectified, while 7A (1905) has had problems with leaking steam cones in the smokebox. Climax 4w+4wTG 1694 of 1928 was

given a hydrostatic test on 12 April. A few minor leaks will need attention. Other work has involved the valve gear, cylinder cock lever and lubrication pipework. Work has been progressing with the preparation of the boiler for Beyer Garratt G42 (Beyer Peacock 2-6-0 + 0-6-2 6268 of 1926), particularly the relocation of the fire door hole.

Peter Medlin 5/86

STATE ELECTRICITY COMMISSION OF VICTORIA, Yallourn 900 mm gauge

(see LRN 35 p.12)

On 27 May the body of a Bo-Bo WE was seen on a semi-trailer travelling from Gippsland towards Melbourne on the Mulgrave Freeway near Dandenong. The number appeared possibly to be 109 (Henschel 25539/Siemens 5205 of 1950).

Darryl Grant 5/86

MELBOURNE & METROPOLITAN BOARD OF WORKS, Western Trunk Sewer 762 mm gauge

Commenced in 1983, this is a 10-year project which will construct a 15.3 km tunnel from the Brooklyn Pumping Station to a new Hoppers Crossing Pumping Station where sewage will be lifted 30 m to a 7.2 km shallow conduit to the Werribee sewage farm. A photo shows what would appear to be an E.M. Baldwin 4wDH loco, but it is understood that the MMBW is considering the use of electric trolley-wire locomotives for the project.

The Weekend Australian 24-25/5/86; M. McCarthy 4/86

MOE-WALHALLA

Bob Lilburn has recently advertised for assistance, financial and manpower, to restore the railway between Platina and Knotts (approximately 3 km). Stephen Watson (author of *Rails to Walhalla: Parts 1 & 2*) makes mention in his latest book *The Gold Town Railway: Part 1* that he is planning to set up a museum at Walhalla.

Peter Medlin 5/86

WESTERN AUSTRALIA

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC., Bennett Brook Railway, Caversham 610 mm gauge

(See LRN 51, p.10)

Fremantle Signal Cabin "A" was moved to Whiteman park in late April, by soldiers of 22 construction squadron. It had to have the roof, porch and eaves

removed to enable this operation to be done, and these was replaced once the building was placed in position.

An ex-Westrail VW workmans wagon has been acquired. It includes most amenities and will be used for overnight stays. Suitable bogies are being prepared for this vehicle. A second ALV carriage constructed by Ron Watson has entered passenger service, while work continues on the QBB bogie cars.

Restoration on 2-8-2 NG123 (Franco Belge 2670 of 1951) has continued with a hydrostatic test to be carried out soon on the boiler. Wheel bearings have been checked and the frame checked and painted enabling gear to be refitted to the frame.

Rusty Rails 6/86

OVERSEAS

PLANTASEN REUNION VANUATU, Norsup, Malakula Island, Vanuatu 600 mm gauge

A short tramline is operated from copra sheds to the jetty. The line as currently used is 130 m in length. Twelve bags of copra weighing about 750 kg are loaded onto each 4-wheel flat wagon, of which the total stock is two. From here they are hand trammed in convoy from the copra shed ("dock") to a weighbridge, then onto the PRV jetty from where it is loaded into company barge for transport to Santa. This process is continued until the available copra is all loaded. On 19 May 130 tons were shipped out in this way. Annual shipments are up to 1500 tonnes. When not in use, the two wagons are normally stored in the weighbridge shed.

A "branch" from the copra shed to the driers has been abandoned, with some isolated sections of track remaining. Apart from the remains of the points for the branch, there are no turnouts. Inside the copra shed there are 4 sections of 6 m lengths of portable track, each with 5 steel sleepers bolted to the cement floor. Elsewhere the track is set in cement. The tramway is due for upgrading. A new hot drier adjacent to the packing shed will use a conveyor for transferring the copra into the dock.

The tramway is to be relaid and the jetty repaired in association with this work. Rails for the tramway relaying have been ordered from an old cobalt mine in the north of New Caledonia.

NOTES, CORRECTIONS AND COMMENTS

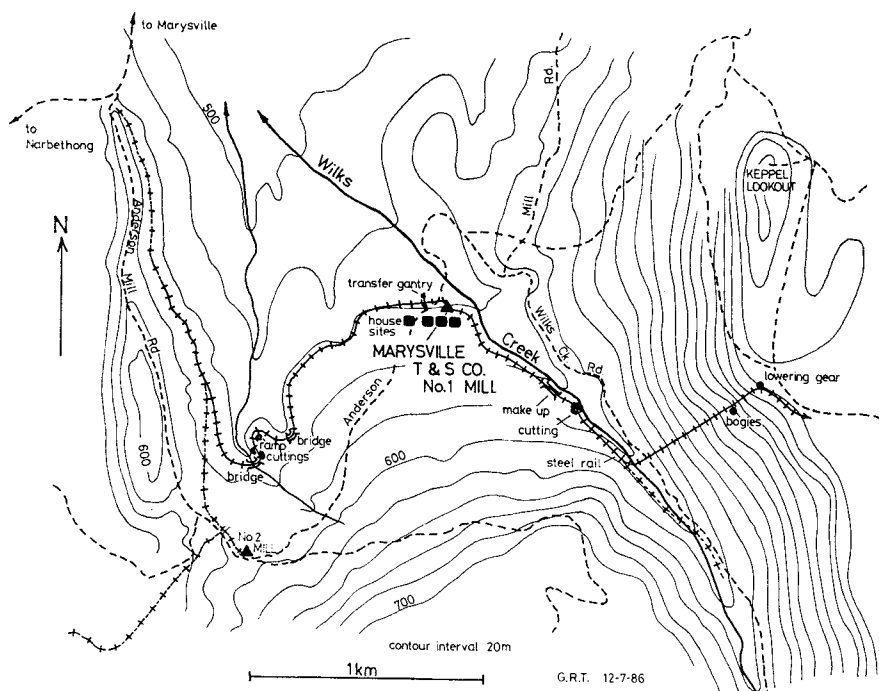

Lindsay Whitham has contacted the Editor concerning the offer he makes to sell copies of his articles at a reduced price as referred to on p.19 of "Light Railways" 93. The publications containing the articles - on the Catamaran Colliery, T-rail in Tasmania, and also the Hotels of Zeehan are available at \$2 each to Society members direct from Lindsay Whitham, 43 Mount Stuart Road, MOUNT STUART 7000.

Mr Campbell who has a book order outstanding from the NSW Division please contact the NSW Secretary (address above). Your address details were destroyed in the mayhem created by the "big wet" experienced in Sydney recently.

FIELD REPORTS

ANDERSON & ROWE TRAMWAY, Marysville, Victoria

About 3 km south of Marysville may be found the remains of some of the tramway and sawmilling operations of the Marysville Timber and Seasoning Company, formed in 1930 by E.J. Anderson & C.H. Rowe.

100 metres south-west of the Paradise Plains - Keppel Lookout Road Junction is the site of the winding gear which served the gravity-operated 3-rail No.1 incline down to Wilks Creek. Only the timber foundation and sections of the wooden frame may be found here, along with a couple of steel brake bands lined with wood.

A couple of hundred metres downhill two log bogies (one with its wooden bell brakes still intact) lie, probably the result of a runaway. Several sections of railway-weight rail, used for the centre rail of the line, may be found on the incline, and a number of cable support rollers are also to be found, although there was no haulage cable to be seen.

Fairly thick ground cover beside Wilks Creek precluded discovery of any remains at the base of the incline, where it curved north-west to follow the creek. The line also headed south-east from this point to a winch site, although this branch was not explored. Tracing the line back towards the No.1 Mill site was not particularly easy, due to the thick ground cover, although a couple of sections of 20 lb rail were found. A small cutting and a log make-up were also observed. An occasional electrical insulator in a tree or on the ground indicated that a phone line connected the No.1 Mill to the winding gear at the head of the incline.

Relics at the mill site included the concrete mill machinery foundations, house sites and a timber transfer gantry, located at the start of the outlet tramway, which was in use prior to the 1939 bush fires. The formation of this line was reasonably easy to follow for the first few hundred metres from the mill, but then became lost in a recently logged area. It was picked up again at a cutting and low curved bridge across a small water course. Remains of a log ramp followed by a second low curved bridge were then reached. After this, the line headed north along the side of the hill, and was followed to within a kilometre of the Marysville - Narbethong Road, when rain set in and the walk was abandoned.

Geoff Thorpe 8/86

NEW SOUTH WALES

CITRA CONSTRUCTION LTD, Burroway Bay, Homebush Bay, Sydney 1000 mm & 1067 mm gauge

(see LRN 4 p.7)

An auction was held here on 28 May 1986, and it was believed that three Billard diesel locomotives here since at least 1974 were to be included in the sale. However, they were withdrawn from sale and were later reported to have been sent to Queensland (see later this issue for more details).

Craig Wilson 8/86

DORRIGO STEAM RAILWAY & MUSEUM 1435 mm gauge

(see LRN 42 p.4)

F.C. Hibberd "Planet" 4wDM 3570 of 1952 worked trials at Glenreagh on 28 June (see cover photo), and worked through to Dorrigo the next day. The large bulk of the collection has been moved to Dorrigo by rail, and in September Army engineers were due to "invade" the line.

John Kramer 7/86

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY, Albion Park 610 mm gauge

(see LRN 53 p.5)

The first part of the 1986 CEP scheme finished on 22 August with great success. The second part, due to commence in early September, involves the restoration of Perry 0-6-2T TULLY No. 6 (7967. 49. 1 of 1949). The boiler was returned from the Port Kembla Steelworks boiler shop on 17 July, having received a new inner firebox, new tubes, new stay bolts, and tube plate repairs. A certificate for 1050 kpa (150 lbs/sq.inch) has been issued, which should enable this loco to steam on into the next century. Underframe, bearings and motion have been overhauled, and a new footplate, cab, bunker and side tanks fitted. The next tasks will be to manufacture new lagging and boiler covers.

High passenger figures continued during the winter steaming days, especially on 13 July, when the Illawarra Jazz Club visited Albion Park for a mid—winter picnic. Jazz and steam proved to be a good combination for the many visitors, and 600 rides were given.

During mid August, a new set of points fabricated at Albion Park were spliced into position in the compound yard. These points will enable carriage shed road 5 to be constructed. Plans and specifications for the shed extension over roads 4 & 5 as well as a museum display building have been prepared. The frame components for the carriage shed extension are already on hand. The roof trusses for the planned display building are also stored at the museum awaiting the moment when the construction of this structure reaches the top of the works priority list.

LACHLAN VINTAGE VILLAGE, Forbes 610 mm gauge

(see LRN 46 p.2)

An auction is to be held on site on 1 November, and included in the sale are the three 2 ft gauge steam cane locomotives here. These are Bundaberg Foundry 0-6-2T 4 of 1952 (ex *Ralf* of Bingera Mill), John Fowler 0-4-2T *Britannia*

(16340 of 1924), which has a current boiler certificate, and John Fowler 0-4-2T 16341 of 1924 (both ex Tully Mill). The auctioneer is Michael Robertson & Co., PO Box 62, FORBES 2871, phone (068) 52 3134. It is believed that the three ex-NSWGR locos here may also be auctioned if title to them can be proved

Craig Wilson 8/86

METROPOLITAN WATER SEWERAGE AND DRAINAGE BOARD, Sydney

(see LRN 43 p.5)

Construction is proceeding on three ocean sewage outfall tunnels to be completed in 1990-1. These will cost \$270 million and will be at Malabar, Bondi, and North Head. The Malabar tunnel is 4.1 m in diameter and descends a 1 in 4 decline to its planned depth, from where a 3.7 km tunnel will run out to sea to the sewage discharge point. A newspaper photo of the Malabar tunnel shows rail tracks of possibly around one metre gauge running down the centre.

Sydney Morning Herald 5/7/86 via Craig Wilson

STEAM TRAINS PTY LTD, Kurrajong 610 mm gauge

(see LRN 44 p.10)

A number of projects in which it was hoped to become involved have proved abortive, resulting in the decision to sell further equipment. Hudswell Clarke 0-6-0 1838 of 1950 and the two restored ex-QGR rail motor trailers have been sold to Mossman Central Mill, North Queensland, for use on their Ballyhooley Steam Express tourist train. This sale was negotiated with the involvement of CSR Ltd, who donated the locomotive for preservation in the first place. It is anticipated that the locomotive and tender will be arriving in Mossman in the near future.

Bruce Belbin 9/86, Bernie Milfora 9/86

TIMBERTOWN WAUCHOPE 610 mm gauge

(see LRN 30 p.5)

It is reported that the rebuilding of John Fowler 0-4-2T 17881 of 1929 is now proceeding after some delay with a view to returning it to service in the near future. This loco was acquired from Steam Trains Pty Ltd in 1984 (see LRN 40 p.7).

Bruce Belbin 8/86

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610 mm gauge

(see LRN 52 p. 11)

The boiler of Bundaberg Foundry 0-6-2T 5 of 1952 is currently at Babcock Australia for retubing. The locomotive chassis is receiving attention at Woodford rather than elsewhere as originally planned. The side tanks have been removed and the frames lifted, enabling the dropping of axleboxes and wheel sets for inspection.

Durundur Railway Bulletin 7/86

BLI BLI CANE SUPPLIERS COMMITTEE, Alf Muller Park, Bli Bli 610 mm gauge

(see LRN 47 p.10)

John Fowler 0-4-2T *Bli Bli* (14418 of 1915) has been repainted and a substantial canopy has been placed over it. However, it unfortunately still lacks a chimney.

Editor 8/86

BUNDABERG TRAMWAY PRESERVATION SOCIETY, Botanical Gardens, North Bundaberg 610 mm gauge

(see LRN 52, p.11)

The Society's trackwork at the Botanical Gardens appears complete. Finishing work to the fine loco shed is still going on. The Society's loco, Bundaberg Foundry 0-4-2T 3 of 1952, is still at the Agro—Trend site in Bundaberg and work has still to begin on the construction of carriages. The Botanical Gardens are open daily.

Editor 7/86

CITRA CONSTRUCTIONS LTD., Goonyella Network Electrification 1067 mm gauge

Citra are contractors for the electrification work on the QGR lines from Hay Point and Dalrymple Bay, south of Mackay, to the mines they serve. Their depots are found at Jilalan, Yukan, and Waitara. On 2 August, what appeared to be a small yellow 4wDM locomotive was seen at Yukan, but it had disappeared a week later. It would now appear that this is one of three such machines, which were stored at Citra's Sydney depot at Homebush Bay for a number of years. These were built by Societe Anonyme des Anciens Etablissements Billard et Cie., of Tours in France. They were originally 1000

mm gauge, and possibly date from around 1969 (see LRN 4 p.7)

The three units were numbered 11E1, 11E2 & 11E3 in Sydney and are 4wDM locos bearing Billard builder numbers T75P VM 224, T75P VM 227 and T75P VM 228 respectively. The second had been converted to 1067 mm gauge by 1978. It is not known if all three are in Queensland.

Craig Wilson 8/86, E. Rudorfer 9/86, Editor

CROYDON 1067 mm gauge

(see LRN 43 p.7)

Restoration of ex-QGR 2-4-0 A10 202 (Vulcan Foundry 802 of 1877 for Fairlie Engine Co.) had commenced by March and it was hoped repainting would be completed in time for the Croydon Centenary celebrations in June. Work done included refitting cab stanchions and plates and the replacement of the smokebox door. Steel plate was used to create a false boiler outline, restoring the loco to close to original appearance. The loco was in industrial use by John Forsyth from 1906 to around 1915. It can be found in a park on the south side of the Gulf Development Road on the western outskirts of town.

Sunshine Express 5/86

DEPARTMENT OF FORESTRY, Woodworks Forestry and Timber Museum, Gympie. 914 mm gauge

This interesting and informative museum is being developed on the Bruce Highway north of Gympie. A number of exhibits are complete, and a steam sawmill is under construction. Video showings and a well-stocked bookshop complement the displays, and there are a number of informative free booklets and leaflets, including a useful *Glossary of Timbergetting Terms*. The main tramway exhibit is a log trolley built for Lars Andersen in 1922. Andersen operated a sawmill near Esk, and the trolley was one of two used on a 740 m balanced incline from Pinecliffe to Cressbrook Creek, at the foot of which the logs were transferred to tramway wagons for the 1.5 km journey to the sawmill. The tramway is believed to have closed in 1942. The log trolley was recovered in severely weathered condition, and rebuilt in 1983. It is displayed on a section of 3 ft gauge wooden-railed track.

Editor 8/86

FAIRYMEAD SUGAR CO. LTD, Fairymead Mill 610 mm gauge

(see LRN 50 p.7)

A new terminal has been built close to the Burnett River ferry to accommodate cane traffic from Qunaba Hill across the river. Two semi-trailer

transports work non-stop bringing three bins at a time each across the river. Two parallel tracks some 600 m in length accommodate full and empty bins at the loading/unloading point. Empty bins are hauled here along the old ferry line to the east of the mill, but loaded bins go to the mill on a new line about a kilometre in length running to the "full yard" to the north of the mill.

A small green 4wPM loco was rediscovered disused near to the mill. It shows some design characteristics of Malcolm Moore "Fordson" locos, and contains a Ruston & Hornsby gearbox. It may originally have been built by the mill.

All the main line locos at the mill carry portable red "STOP" traffic signs attached to the rear of their cabs, presumably for protection in case of level crossing mishaps.

Editor 8/86

FAIRYMEAD SUGAR CO LTD., Qunaba 610 mm gauge

(see LRN 50 p.7)

The majority of this mill's tramline system now serves Fairymead Mill via the Burnett River ferry, while a section near Windermere has been transferred to Millaquin Mill, with which the Qunaba tramways interconnect. The mill itself has been enclosed by a "security fence" made up of a double layer of old

cane bins. New 6-tonne bins are now in use on the Qunaba system serving Fairymead. The two locos remain stationed at the loco shed at Qunaba. They are an E.M. Baldwin 4wDH rebuilt by Millaquin in 1980 from Baldwin 8860-2-8-79 (itself rebuilt from Baldwin 4529 of 1973).

An extension has been built in the Spring Hill area to a new yard constructed very close to the Burnett River ferry. Two semi-trailers each convey three full bins across the river and return with empties. (The ferry is also used by semi-trailers conveying raw sugar to the Port of Bundaberg.) A 12-minute turn-around was achieved when observed on a Friday evening in August.

Editor 8/86

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 52, p.13) .

The mill's loco livery has been modified in the case of some locos painted during the last slack season. A thin black line has been added either side of the thick black line which divides the yellow and grey painted areas of the locomotive. In addition, the loco frames have been painted a buff colour. One newly—painted loco is Com—Eng 0-6-0DH *Carlisle* (A13271 of 1963) which was seen under repair in the loco shed in early July. It had collided with a gravel truck at a level crossing near the mill, and suffered extensive cab damage.

Editor 7/86

GIBSON & HOWES PTY LTD, Bingera Mill 610 mm gauge

(see LRN 45 p.9)

With the closure or upgrading of light lines in the Wallaville area, a large number of small locos are to be seen at the mill, a number out of use. Four Malcolm Moore locos are to be seen, one dismantled for spare parts, plus two 4wDM locos and one 4wDH. The hydraulic loco has now been permanently coupled to a grass cutter powered off the locomotive by hydraulic hoses. These four Malcolm Moores are believed to have originated as 4wPM locos 1007, 1008, 1009 & 1025 of 1943, but which is which seems unknown now. There are also two Motor Rail "Simplex" 4wDM locos. One numbered 173-72 is Motor Rail 10233 and is out of use. The other is Motor Rail 10234, and is fitted with the familiar orange flashing light. Ruston & Hornsby 4wDM 387893 of 1955, which was rebuilt to a grass cutter hauler in 1973, is now out of use. There is also another "Simplex" type 4wDM at the mill, F.C Hibberd "Planet" 4wDM 3919 of 1959, but this was not observed.

Editor 8/86

ISIS CENTRAL SUGAR MILL CO. LTD. 610 mm gauge

(see LRN 45 p.10)

A new brake wagon built by Hexham Engineering was expected around the start of September. Number 1, John Fowler 0-6-ODM 20776 of 1935, remains engineless in the scrap area near the old sugar shed .

Editor 8/86

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 52 p.13)

A second pair of prototype long wheelbase bins arrived at the mill around the start of August . These, built by North Queensland Engineers & Agents of Cairns are built to the same general specifications as those delivered by Walkers Ltd of Maryborough in April. However, there are detailed differences, with a hopper type lower portion and axleboxes much more accessible. Testing of the bins in service was expected to start in mid—September, but some preliminary trials with the Walkers units had taken place earlier, in a train hauled by a mill loco and consisting of the Sugar Research power wagon and computer car followed by the two bins. The reason why Marian was chosen for testing purposes is that only this mill has a tippler large enough to accommodate the new bins - it normally tips three conventional type bins at a time.

The mill plans to extend its tramline about 5 km along the formation of the old QGR Owens Creek Branch from Mount Martin to Langdon.

Robert James 8/86, Editor 8/86

MILLAQUIN SUGAR CO. PTY LTD 610 mm gauge

(see LRN 45 p.10)

Seven four-wheel ballast wagons, painted in red oxide were noted outside the loco shed in August. These appear to be contractor type vehicles rebuilt to serve the mill's needs. Bundaberg Foundry 0-6-2T 1 of 1952 was noted stored in a building near the distillery area. It would appear that no work has been done on its restoration since January 1985.

Editor 8/86

MOSSMAN CENTRAL MILL CO. LTD, 610 mm gauge

(see LRN 49 p.9)

As reported elsewhere this issue, the mill has purchased Hudswell Clarke 0-6-0 *Sydney* (1838 of 1950) from the Belbin family company, Steam Trains Pty Ltd, together with the two ex-QGR rail motor trailers they have rebuilt as 2 ft gauge carriages. The loco first entered service at Hambledon Mill, so it is

returning to a mill close to its original “stamping ground”. It is expected that the loco will go into service next year, fitted with gas firing equipment.

The 1986 season is the last one when the “Ballyhooley Steam Express” will run to Newell. The new Port Douglas line is expected to come into operation next year in connection with tourist development going on at Port Douglas.

Bruce Belbin 9/86, Bernie Milford 9/86.

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 43 p. 9)

Tenders were called nationally in July for the purchase and removal in dismantled condition of Bundaberg Foundry 8 of 1953. This was dismantled in 1980, but firebox repairs were found to be necessary. It was subsequently stored under cover in the mill workshop area .

Editor 7/86

RACECOURSE CO-OPERATIVE SUGAR ASSOCIATION LTD, Mackay 610 mm gauge

(see LRN 44 p.11)

Work is steadily progressing on the new tramway yard being developed to the south of the Peak Downs Highway. The new full yard has been laid down with 6 tracks, and the tippler and “creeper” mechanisms appear to be nearing completion. A number of prefabricated points, made with steel sleepers, were seen on site awaiting installation in July. Little work has been done so far on the empty side of the new yard .

Editor 7/86

SUGAR RESEARCH LTD., Sugar Research Institute, Mackay

The 1985-6 Annual Review of the Institute details a range of developments associated with cane tramways.

The preservation of timber sleepers in fuel oil using a hot and cold cycle has been investigated. The process, not widely accepted because of the cost of heating energy, can be carried out economically by sugar mills using waste heat from the milling process. Also being investigated are new types of elastic fastenings for concrete sleepers.

Investigation into bogie loco performance has focussed on drive train failures. Main line railway locomotives tend to limit tractive effort developed by the loco to about 24% of the loco's weight, but canefield locomotives are frequently called upon to develop a tractive effort of over 40% of their weight. A study of torsional vibration of locomotive bogies has

been continued.

The large four-wheel cane wagon project has developed to the stage of prototype vehicles being constructed, and tested in 1986 at Marian Mill. These wagons, about 10 m in length, have to negotiate curves as small as 100 m radius. Although axle loads will increase, it is believed that maintenance costs are strongly correlated with the number of axles in use so the new concept offers significant savings.

A computer system to generate a schedule for cane railway operation directly from specifications of track geography, cane deployment, and locomotive and rolling stock characteristics has been developed. Work has been continuing on the Institute's *Guide to Cane Railway Engineering*.

Development work has been continuing into a hot axle box detector, which is designed to count the number of axles of a train as it passes, and when a hot box is detected, sounding the alarm to the mill traffic office. It is expected that this device can reduce significantly the number of derailments which occur. Automatic cane bin number identification at the weighbridge has already been adopted by three mill 5 s using a bar code system. An alternative system using a small transponder attached to each bin is currently under investigation.

Sugar Research Ltd., 7/86

The revolutionary new "big bins" developed by the Sugar Research Institute and built by Walkers Ltd, of Maryborough, shortly after arrival at Marian Mill for trials, 13/4/86

Photo: Editor

STUART ARBUTHNOT, Homebush 610 mm gauge

This cane farmer, like a number in this area, has a “horse line” on his property, linked directly to the Racecourse mill tramline system. Bins are moved on these private lines by tractors nowadays, but a small petrol locomotive was formerly used by this farmer. Now dumped out of use, the loco is a small 2-2wPM (drive to the rear axle only), fitted with a 4-cylinder petrol engine. It has a generous number of seats in the cab, possibly once used for transporting the cane cutting gang to the field.

Editor 7/86

TINTAGEL MOUNTAIN TRAMWAY, Arcadia, Cooroy 610 mm gauge

(see LRN 48 p.9)

Worksite at the washaway, March 1986. A variety of rolling stock is to be seen here: (from left) Fairmont & KS petrol trolleys, 4wPM loco H220, the NQR bogie wagon and a Ministry of Supply flat car.

Photo: Russell Savage

During March, extensive drainage works were undertaken in the area of the switch back, with rock retaining walls put in place. This was the area where a large landslide occurred during 1985. The new NQR bogie wagon was put to good use in this work. It has floor space of 1 m x 4m with removable drop sides, and has vacuum brakes and safety chains.

Track improvements have continued, with sleeperring work being

completed, ballasting extended, and heavy duty fish plates fitted on troublesome joints.

The alignment of the top section of trackbed was improved further in August 1986, with blasting and rock moving. The result is a consistent moderate grade to the summit of Mount Tinbeerwah. The next project is to lay track on this remaining 330 m section to the summit. A loop siding will be installed here this year if time permits.

The latest loco is nearing completion in Mildura, Victoria. It will be a bogie loco, petrol engined, with a hydraulic motor mounted on each bogie. (Is it correct to describe machines with hydraulic motors as distinct from torque converters as "hydraulic" or "mechanical" - Ed)

SOUTHERN PRIVATE RAILROAD, Melbourne Gauges various

Recently circulated to a number of preservation and other enthusiast groups was notification from this group that a large number of steam locomotives, mostly 600 mm and 700 mm gauge are to be imported for resale. Most are of German and American design, some are complete, while others need complete rebuilding. Available at present are locos with the following wheel arrangements: 0-4-0, 0-4-2, 0-6-0, 0-8-0, and 0-4-4-0 Mallet. Some of

the locos are fitted with Klein-Lindner axes. Assistance is available for export and regauging. Mailing address of the organisation is 100 - 102 Inverness Avenue, The Basin 3154. One of the principals of the group is believed to be Jeff Daly (see LRN 51 p.9). Further information for inclusion in LRN would be most welcome.

OVERSEAS

FIJI

FIJI SUGAR CORPORATION 610 mm gauge

(see LRN 52 p.18)

Coral Coast Railway Co.

The Hudswell Clarke 0-6-0 locomotive restored for this operation is Lautoka 11 (of 1912), not as previously reported. The builder's plate for 972 is carried on the left cab side, and the plate from 1855 of 1950 is on the right cab side, thus leading to some confusion. The tender has been fitted with a VM 65 hp diesel engine, and hydraulic transmission manufactured by HMC Fluid Power Co. of New Zealand. Drive is onto the rear axle of the loco, which is immaculately finished in red with polished brass work.

The Coral Coast Railway is a joint venture between Englishman Peter Jones and the Fiji Sugar Corporation. A 66 year agreement has been made to operate trains over 16 km of FSC track between Yanuca (Yanutha) Island Station, near the Fijian Hotel, to Natadola Beach. There are currently two carriages in use, one equipped with a kitchen and eight seats, the other with 16 seats. A third 16 seat 10-metre car is under construction in Lautoka. The carriages offer comfortable accommodation amid 19th century decor, with suggestions of Raj and gipsy influences. There are dark blue carpets, polished yaka timber furniture, velvet button seats and framed historical photographs of CSR sugar operations.

The train, known as "Pacific Princess", departs from the Yanuca Island Station daily at 10.00. After a 2 minute stop at Cuvu (Thuvu) depot, it continues past magnificent coastal scenery, canefields, Fijian villages and rainforest while hostesses serve tropical fruit and drinks. The 16 km journey takes 90-120 minutes, depending on crossings with cane trains and the number of trucks left on the main line by farmers. Such meetings require shunting movements to the nearest siding: a first hand experience of the operations of a busy sugar cane tramway. On arrival at Natadola Beach, the train crew prepare a barbecue lunch, which is served in the passenger cars, which are equipped with tables at each seat.

The locomotive is turned at Natadola on a "Y" and made ready for the return journey. Arrival back at Yanuca is usually around 17.00 - 17.30. Here the loco is detached and returns light engine to Cuvu depot for turning and refuelling ready for the following day's journey. At \$F30 for the day's outing, including food and drinks, the "Fijian Princess" provides a memorable experience which is highly recommended.

Bob McKillop 8/86, Sydney Daily Telegraph 19/8/86 via Greg Morris

Sugar Mills - General

Under Fiji's Ninth Development plan (1986-1990), a priority in the sugar industry is rehabilitation of the FSC sugar tramway system, particularly in the Western Division. Upgrading of track using 60 lb rail imported from Australia and increased availability of trucks are the main objectives. An additional locomotive is reported to be on order from the United Kingdom.

The 1986 season is reported to be going well with Lautoka and Penang mills setting new crushing records in August. During the week ending 11 August, Lautoka produced 7252 tonnes of sugar and two weeks later Penang set a new record of 1793 tonnes of sugar. Lautoka's record production came from 63,450 tonnes of cane or 9065 tonnes per day. The FSC expects to crush 3.8 million tonnes of cane, despite a reduction to 900,000 tonnes at Labasa due

to the devastation of Cyclone Martin. However, breakdowns have plagued the Rarawai Mill, and it had only crushed 37.4% of its crop by 24 August.

Penang Mill

Hudswell Clarke 0-6-0 steam locomotive number 4 (1658 of 1935) has been moved from its display stand at the mill, and is now located on the scrap road along with "Simplex" 4wDM number 2 (Motor Rail 10440 of 1955), which is derelict and without its motor. This has probably been transferred to "Simplex" 4wDM number 1 (Motor Rail 10003 of 1947), which has been repaired and returned to service. Otherwise the loco allocation is as reported in 1982.

Lautoka Mill

The locomotive sold to the Coral Coast Railway Co. is number 11 (972 of 1911). Hudswell Clarke 0-6-0 locos 21 and 23 (1664 of 1936 and 1855 of 1950), previously reported as derelict at Lautoka Mill are still there, amid tall grass near the portable track repair yard. Identification numbers could not be located. Hudswell Clarke 0-4-0ST 19 (1056 of 1914) is still on display at the mill.

"Preserved" steam in Fiji

Hudswell Clarke 4—4—0 Lautoka 18, (1118 of 1915) in Churchill Park, Lautoka, is no more than an inglorious heap of rusted metal. Hudswell Clarke 0-6-0 Lautoka 24 (1856 of 1950)) is still on display at the Fijian Hotel, but severe rust is now apparent. John Fowler 0-6-0TT Lautoka 7 (10656 of 1906) on display at the Gateway Hotel, Nadi Airport, is still in relatively good condition.

Bob McKillop 8/86

HAWAII

RAILROADS OF HAWAII, Lahaina Kaanapali & Pacific RR, Maui 914 mm gauge

This 6 km line runs from Lahaina to Kaanapali on West Maui, and operates 5 trips daily. It is partially constructed on the trackbed of the Pioneer Mill's former 2 ft 6 in gauge tramway, which closed in 1952. Locomotives on the line are two rebuilt Porter 0-4-0T industrials built in 1947 and coming from the Carbon Limestone Company of Carbon, Ohio. Built originally to 3 ft 2 in gauge, *Myrtle* has been rebuilt as a 2-4-0 and is the current operating loco. *Anaka* is a 2-4-2 currently awaiting reboiling. The third loco is a Plymouth diesel built originally for the Oahu Railway. There are four passenger cars, three of which were built in Pennsylvania, and the fourth by the LK&PR.

Travel Sales Ltd, Honolulu 8/86

MEETINGS

SYDNEY

3 Announcements

October Meeting:

Queensland will feature again with slides of Jeff Moonie's rip to the northern part of that state, covering sugar mill tramways as well as the abandoned mining tramways of the Atherton Tableland.

LOCATION: Board Room, Bowler's Club, 95 York St., Sydney. Access through the Forestry Commission Office building next door (Town Hall side). on second floor.

DATE: Wednesday 22 October at 7:00 PM

Menangle Open Day -

The Division will again be mounting a display at the Menangle Steam Rally on November 8 & 9. Paul Simpson's Hudswell Clarke has an enlarged run, the track having been extended since the last Open Day. So why not come down and ride the train?

Climax Climax. Climax -

Richard Dunn, an American rail enthusiast who spent many years researching Climax locomotives, will be visiting Sydney and it is hoped to have a meeting with him as guest on 4 December. The date and venue have not been confirmed in time for this notice, so members interested in coming to this meeting should contact one of the N.S.W. Division Committee.

ADELAIDE

Contact Arnold Lockyer for details of the next meeting

LOCATION: 150 First Avenue, Royston Park

DATE: Thursday 2nd October at 8:00 PM

THE SECRETARY

If you have any problem with any aspect of the L.R.R.S.A's activities, don't give up and imagine that nothing can or will be done; a short note to the Secretary at P.O. Box 21, Surrey Hills 3127 will achieve results, as this is part of the secretary's job .

SORRY WE'RE LATE

Due to the LRN master's disappearance somewhere between Mackay and Melbourne, the October mailout has been slightly delayed. In the meantime LR94 has been printed, so we trust that you find the wait well worth while.

(Editor's note: This edition of LRN is unavoidably delayed. It was despatched to Melbourne in mid-September but was lost in the postal system. This was not realised for several weeks, resulting in a severe delay. Apologies to all.)

NOTES, CORRECTIONS AND COMMENTS

Taronga Park Zoo / Historic Village Motel Coolangatta

(see LRN 51, p.4)

A small but interesting display of historic photographs of Taronga Park Zoo was staged in Centre Point, Sydney, during October. One photo taken from the overhead footbridge during the 1950s showed the amusement railway and locomotive. Unfortunately, this is an overhead shot and not a side view. It did indicate that the Taronga locomotive was a serious attempt to model a steam locomotive to scale even though it was powered by an internal combustion engine. This supports Lee Rodda's suggestion that the Coolangatta locomotive did not come from the Taronga Park railway.

Ken McCarthy 10/86

FIELD REPORTS

Simsville, New South Wales

Ian McNeil of 1 Bedford Street, METFORD 2323 is researching the history of the "Jarrah" sawmill and associated logging tramways at Simsville, near Stroud, N.S.W. Simsville was the location for the 1937 film "Tall Timbers", which featured the 3 ft 6 in 1067 mm gauge logging tramways and the B - Class Climax loco *Soward* (1653 of 1923). The timber enterprises in this area had an interesting history starting with Millars of W.A. in 1912, with ownership passing successively to Pines & Hardwoods in 1923, Stroud Timber in 1928, and Smith & Ellis from 1934 to final abandonment in 1942. There was an extensive tramway system and three, possibly four, Climax steam locomotives.

Ian would like to hear from other researchers and LRRSA members who may have information on the Simsville operations, particularly those of Millars Timber & Trading Co. Ltd

Sydney North Head Quarantine Station

The National Parks & Wildlife Service is conducting enquiries concerning the present location or the post—1956 history of the petrol driven locomotive which served the North Head Quarantine Station's 2 ft 4 in (712 mm) gauge tramway.

It seems that a former employee dates the engine as c.1909; the rear wheels were chain driven, the power then being transmitted to the other wheels by side connecting rods. Photos indicate that the vehicle had open sides, weather protection being provided by a full length roof canopy.

The recommended specifications for quarantine station light railways appeared in an article written by J.S.C.Elkington entitled "The Design and Construction of Quarantine Stations". This appeared in the Commonwealth Department of Health's Service Publication No.16 of 1919 *Maritime Quarantine Administration*.

The National Parks and Wildlife Service's records indicate that the loco was sold to a person in Wollongong in 1956 for use as an amusement train. The last correspondence on the matter is dated 1968 when that person enquired about spare parts!

The only clue recalled by local resident Ken McCarthy concerns an amusement railway located on a circle of track in Stuart Park in North Wollongong during the summer season of 1959-60. Around Easter 1960 the track was noted in thick brush bordering North Wollongong Beach just south of the Fairy Creek entrance. No rolling stock was seen on the track at that time but visually the gauge seemed just over 2 ft

LRRSA members Paul Simpson & Craig Wilson have also been conducting research on this locomotive. It is believed that it was of Caldwell Vale — Purcell manufacture. These two members would welcome any further information at PO Box 290, BURWOOD 2134.

Clyde Wagon Maintenance Centre, State Rail Authority of New South Wales

At a special Open Day on 4 September, the Wagon Maintenance Centre at Clyde was inspected . It is located on the "down" or southern side of the western line between Auburn and Clyde. Located in the employees' car park was found a short section of double track 2 ft (610 mm) gauge railway line, very much out of use but in excellent condition. The visible length was about 10 m. The NSWGR did at one time own a 2 ft gauge steam locomotive, 1024, a Krauss 0—4—0WT (2179 of 1889), but it was understood to have been used at the Clyde Laundry, which was located on the opposite side of the main line, near the former locomotive depot . Possibly the track is connected with the storage of the Ruston & Hornsby and Hunslet diesel locomotives previously used on the Eastern Suburbs Railway in the mid 1950s. Can any reader supply the answer?

Peter Neve 10/86

NEW SOUTH WALES

BARCLAY BROTHERS LTD, Boomerang Creek Tunnel, near Wyong

(see LRN 35 p. 15)

An advertisement was placed by this company in the national press requiring quotes on the supply of materials, equipment and services for a tunnelling contract, referred to as PWD Contract No. 85228. The small cross section blind tunnel will be 11 km long, portals via 50m deep shaft. It will run mainly through sandstone, and is situated 15 km from Wyong. Equipment required included "tunnelling plant, including muckers, wagons, jumbos"

Weekend Australian 25—26/10/86 via Editor .

THE BELLAMBI COAL CO. PTY LTD, South Bulli Colliery 1067 mm gauge

(see LRN 28 p. 4)

A coal miner was killed on the night of Wednesday 22 October when the underground locomotive he was driving overturned after a collision with another train. The 40—year old driver was buried under coal and the train .

COOMA

An auction was to be held at Polo Flat Road, Cooma on Wednesday 22 October by F. R. Strange Pty Ltd on behalf of P.M. Rye Plant Hire, Petamin Explorations N. L., and other vendors. Included in the sale was a "quantity of used railway line", and one photograph of plant for sale showed a section of narrow gauge track laid on site, although no rolling stock was listed for sale.

Craig Wilson 10/86

CORRIMAL COLLIERY MUSEUM 1067 mm gauge

(see LRN 51 p. 4)

Some problem has been experienced with the roof of the proposed cross tunnel being prepared for tourist access about 100 m inwards from the mine entrance at the Corrimal Colliery. Although this has set back the construction schedule slightly, publicity releases suggest that a new cross tunnel in a different direction is now being prepared. Initial plans seemed to indicate that tourists would be taken into the mine in cars behind a diesel locomotive a short distance along the original access adit and then parallel with the escarpment in the new tunnel. This should give the illusion of a long trip, but at no time would the train be further than 100 m into the mountain. Tourists would then leave the train and, after a short walk along another adit, find themselves again in daylight.

Ken McCarthy 10/86

HISTORIC VILLAGE MOTEL COOLANGATTA via Berry 600 mm gauge

(see LRN 51 p. 4)

A visit to this location in September revealed that the four—wheel steam outline internal combustion loco then stood in the cutting coupled to two open four wheel cars. Only one car was on the track in October 1985, but two were available by January 1986, at which time one was fitted with a roof canopy frame and the other only carried waist high railings. By September 1986, the second carriage had been fitted with a roof canopy frame. The condition of the track does not indicate that the train is in regular operation. Work has commenced on the construction of a 9-hole golf course, but drawings of the proposal suggest that the train will remain - possibly as an obstacle!

Ken McCarthy 10/86

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY Inc., Albion Park 610 mm gauge

(see LRN 54 p. 4)

The second part of the 1986 CEP scheme commenced on 8 September. The main project in which this team has been involved is the restoration of Perry 0-6-2T *Tully* No.6 (7967.49.1 of 1949). The rebuilt boiler was positioned on the chassis on 4 September. By the end of October, the smokebox door had been refitted, the main steam pipes to the cylinders replaced, a new blast pipe and blower constructed, the lubricators overhauled and new draw gear provided.

The museum is fortunate in having a comprehensive set of drawings for the Perry loco. The boilermaker was able to fabricate a new firebox door from these drawings. Progress is also being made on assembling new piping while new cab fittings, such as gauge glass mountings, are being fabricated. A start has been made to lagging the boiler. The museum hopes to fit a Westinghouse air pump and reservoir to this loco to energise its brakes as well as a train line.

During September about 220 standard gauge steel sleepers, which were rejects from a large order manufactured by local industry, arrived at the museum. The CEP employees have cut a centre section out of these sleepers to suit 2 ft gauge track. The curved end offcuts have then been butt welded together to make up a short sleeper similar in contour to the original. This exercise has provided the museum with 440 new steel sleepers. In addition, a source of new wooden sleepers is now being utilised to enable routine replacement to be made on the main line. These are being purchased from a south coast timber merchant for \$9 each.

On 26 and 30 August, the Wollongong Gas Works Siding was lifted and 130

m of 80 lb rail retrieved for the new No.1 engine shed road in the museum compound. This siding was part of the NSWGR-Mt.Keira colliery curve laid in 1890 to provide access for the government trains to Wollongong Harbour. This harbour line closed around 1937, but the recently lifted portion remained to serve the gas works until 1977 when the reticulated coal gas supply was converted to natural gas.

In late October the museum's success with a bicentenary grant application was officially announced. This matched funding amounts to \$11,000. The grant is for rolling stock reconstruction and includes the major overhaul and construction of a new driver's cabin on the Davenport 0-4-0ST *Kiama* (1596 of 1917) as well as carriage reconstruction which should include new window frames for former Melbourne cable tram trailer No.430, new door frames for former Queensland rail motor trailer No. 119 and the provision of air brakes on passenger cars.

Ken McCarthy 10/86

LACHLAN VINTAGE VILLAGE, Forbes 610 mm gauge

(see LRN 54 p.5)

It is reported that at 1 November all three 2 ft gauge locomotives here were sold, namely Bundaberg Foundry 0-6-2T 4 of 1952, and John Fowler 0-4-2Ts 16340 of 1924 and 16431 of 1924. A TV report of the auction showed *Britannia*, John Fowler 16340 of 1924, taking visitors to the various auction sites.

Ken McCarthy 11/86

MUSEUM OF FIRE, Penrith

The former Fire Services Museum has moved from Circular Quay, Sydney to Penrith, and opens on its new site on 16 November. It is understood that initial plans for the museum featured a 610 mm (2 ft) gauge railway connecting it with Penrith Station. These plans fell through, and it is believed that the rail link will now be a miniature railway constructed by Frank Tynan of North Sydney.

Financial Review 7/10/86 via Craig Wilson; Craig Wilson 10/86

BURRINJUCK STATE RECREATION AREA TRUST 610 mm gauge

(see LRN 35 p.7-8)

Krauss 0-4-0T JACK (5945 of 1907) returned to Burrinjuck during 1975. Previously owned by the estate of E.M. Baldwin, the loco had been in the custody of Bruce MacDonald at Goulburn and Canberra before returning to E.M. Baldwin's works where repairs were commenced. It was purchased by

the State Recreation Area Trust in 1985, and arrived at the dam site separated from its boiler. It is currently stored in an iron machinery shed known as the "Opera House" at Burrinjuck Dam. There are plans to restore the loco and have it run again at Burrinjuck, hauling replica carriages. Details of this and other aspects of the story of the Burrinjuck Railway are contained in the newly-published book *Railway to Burrinjuck* by Sue Chessbrough and Yvonne McBurney.

Sue Chessbrough 10/86

ULMARRA 610 mm gauge

Filming of cane train sequences for a TV mini-series took place at this location, about 13 km north of Grafton, in early October. The series, *Fields of Fire* is based on the book *Cane* set in the Innisfail district in the 1930s and 1940s. Material for the filming was provided by the Australian Narrow Gauge Railway Museum Society, who provided 220 m of track made up of prefabricated panels, and also cane trucks. Two Society members travelled to northern New South Wales to assist the film crew with track laying and train operations. It is understood that a steam locomotive was obtained from Timbertown Wauchope.

Durundur Railway Bulletin 9/86; David Mewes 9/86

THE ZINC CORPORATION LTD, Broken Hill 610 mm gauge

An auction sale conducted by F.R. Strange Pty Ltd, was to take place on site on Wednesday 12 November. Due to reorganisation of product methods a quantity of underground plant was to be included. This was to include 4 "Gemco" 8 ton battery locos, 6 Atlas Copco LM70 underground baggers, 5 "Eimco" 21B underground bidders, and 40 "Granby" cars of 38, 66 and 90 cubic foot capacity.

Craig Wilson 10/86

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge

(see LRN 54 p.7)

Babcock & Wilcox have completed the retubing work on the boiler of Bundaberg Foundry 0-6-2T 5 of 1952. The boiler will soon be returned to Woodford. Three semi-trailer loads of rail from the Tennyson Powerhouse in Brisbane arrived at Woodford on 29 August for stockpiling. Two or three semi-trailer loads remain to be transported, along with a quantity of

pointwork, sleepers and sundry equipment. During September, Society members constructed a quantity of 24 30-ft track panels in 42 lb rail for use in the filming of the TV mini-series *Fields of Fire* in northern New South Wales (see above). Additional rail and wagons were also made available for filming. When the track panels are returned, they will be able to be utilised in future track extensions.

Durundur Railway Bulletin 9/86, 10/86

AUSTRALIAN SUGAR INDUSTRY MUSEUM, Mourilyan 610 mm gauge

(see LRN 49 p.7)

The museum's Hudswell Clarke 0-6-0 *Townsville* (1099 of 1919), housed in a shed outside the main museum buildings was apparently repainted in a blue livery around the beginning of 1986. Unfortunately Cyclone Winifred on 1 February did a good job in demolishing this shed, the ruins of which lie atop the loco. Apparently not much damage was done to the locomotives unlike some of the items of farm machinery stored with it. Bicentenary plans show a major expansion of the display area of the museum with provision for a later connection to the Mourilyan Mill Harbour line, possibly for the operation of museum trains.

Editor 10/86

BABINDA CO-OPERATIVE CENTRAL MILL SOCIETY LTD, 610 mm gauge

(see LRN 42 p.7)

Torque converters have been fitted to the three former 0-6-0DM locos during the last few years: E.E. Baguley *Fishery* (3387 of 1954), and Commonwealth Engineering *Josephine* (A1821 of 1957) and *Russell* (A2027 of 1958). *Fishery* has been repainted white with blue trim and red buffer beams and connecting rods.

BIRCH CRANE HIRE PTY LTD, Mackay Harbour 1000 mm gauge

(see LRN 54 p.8)

See CITRA CONSTRUCTIONS LTD, Goonyella Network Electrification

CITRA CONSTRUCTIONS LTD, Goonyella Network Electrification 1067 mm gauge

(see LRN 54 p.8)

The sighting of a small yellow 4wDM locomotive was confirmed with its inspection at Jilalan on 19 October. Rebuilt with a new cab, QGR coupler and airbrake equipment, the diminutive 8-tonne locomotive was attached

to Citra's overhead wiring train, but was out of commission with radiator fan removed. It has been identified as Billard T75P VM 227, formerly numbered 11E2. It is unclear how much use the loco has been, as subsequently the wiring train has been seen in the charge of a hired QGR locomotive.

The locomotive was rebuilt by Birch Crane Hire at Mackay Harbours and an inspection there revealed two similar locos, lettered CITRA AUST, and numbered 11E1 and 11E3. These are Billard numbers T75P VM 224 and T75P VM 228 respectively. They appear to have been used for spare parts, but possibly another may be rebuilt for use by Citra on the electrification works.

Editor 9/86

CSR LTD, Goondi Mill 610 mm gauge

(see LRN 49 p.7)

It appears that Goondi Mill will close from the end of the 1986 season, although the future of its suppliers is yet to be determined. The mill certainly appears somewhat run down in appearance. One locomotive has already been transferred, no doubt with closure in prospect. This is CSR's newest locomotive, E.M. Baldwin 4wDH 9109-1-9-80 of 1980, numbered 1, and used by the navvies since its arrival, which left for Hambledon early in the year. This meant that the navvies have been using Clyde 0-6-0DH 55-60 of 1960, numbered 2, to haul their motley train to the worksite each day.

Editor 9/86

CSR LTD, Hambledon Mill 610 mm gauge

(see LRN 53 p.7)

Hambledon Mill is another mill which it is said CSR would not mind disposing of eventually. Yields from the cane here are high, but the growth of Cairns has led to much land being taken out of production, and the long tramway to the cane areas north of the city now passes through much "dead country". It would appear that not much investment is taking place here.

E.M. Baldwin 4wDH 9109-1-9-80 of 1980 arrived here early in the year from Goondi, and is used for occasional yard shunting replacing F.C. Hibberd "Planet" 4wDM 3280 of 1948. Another arrival here has been ballast tamper Plasser 10 of 1970, which has come here from Victoria Mill, presumably for spare parts. The former 3 ft 6 in gauge shunter here, a Simplex 4wDM, apparently built on a frame of a 6 ton World War I 2 ft gauge petrol machine could not be located. There is some suggestion that it may have been supplied by F.C. Hibberd in 1948.

Editor 9/86; David Mewes 10/86

CSR LTD Macknade Mill 610 mm gauge

(see LRN 50 p.7)

Owing to loco breakdowns and a resultant motive power shortage, Drewry 0-6-0DM *Herbert* (built by Baguley 2994 of 1952) was on loan from Victoria Mill during August. It was driven over from Victoria by a Macknade crew on 13 August. Next day it got off to a bad start by getting stuck on the climb from the Herbert River Bridge with only 50 full bins. Later the same day, it completely derailed on a sharp curve in the Central line. Although there were no more incidents *Herbert* was an unpopular loco at Macknade, but it did provide the stopgap needed at the time. From 25 August it was used in the yard and was probably last used on the 27th. It returned to Victoria Mill on 1 September. Recent research indicates that this locomotive was new to Hambledon Mill rather than similar loco *Victoria* (Baguley 2404 of 1953) as previously thought.

E.M. Baldwin 0-6-0DH 14 (6-2490-1-7-68 of 1968) has continued to be the loco responsible for hauling the bulk sugar trains to Mourilyan Harbour. E.M. Baldwin B-B DH 20 (7070-4-4-77 of 1977) with braking assistance from a remote-control brake wagon regularly hauls massive trains. A rake of 240 full bins were brought to the mill yard on 4 October, representing a gross of around 1200 tonnes. Motor Rail "Simplex" 4wDM 3717 of 1925 resides adjacent to the scrap area devoid of wheels.

C.J.Hart 10/86; Editor 10/86

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 51, p.5)

An experimental double-headed train was operated on 29 September under the supervision of staff from the Sugar Research Institute. The load was 300 full bins, around 1500 tonnes gross. Motive power was two Clyde HG-3R 0-6-0DH locos, coupled back-to-back, probably *Perth* (69-682 of 1969) and *Canberra* (65-433 of 1965), and a radio-controlled brake wagon was at the end of the train. Between the locos and the load was a weighted flat truck which carried instrumentation to gauge stresses. A number of mills use permanently-coupled 0-6-0DH locos, so this may be a possibility at Victoria Mill also.

There is no loco stationed at McKell's depot near Abergowrie during the 1986 crushing season. It is believed that this is the first season that this has occurred. Motor Rail "Simplex" 4wDM 10381 of 1953 has been modified to operate as a ballast regulator. Its diesel engine is used to power the plough blades rather than the wheels. The preserved Decauville carriage displayed

with Hudswell Clarke 0-6-0 HOMEBUSH (1067 of 1914) has been fitted with a plate giving details of its history like that carried by the loco.

This mill retains the most impressive array of diesel power, with no fewer than 20 main-line locomotives grouped in and around the massive loco shed at the weekend.

The Herbert River Express 2/10/86; C.J.Hart 10/86;

Bob James 10/86; Editor 10/86

HAUGHTON SUGAR CO. LTD, Invicta Mill, Giru 610 mm gauge

(see LRN 43 p.7)

Operation of Com-Eng 0-6-0DH Scott (C1015 of 1957) as a remote-controlled brake wagon while still carrying the original locomotive superstructure may not have been very successful. It has now been converted to a conventional brake wagon unit. Its soundproofed cab, only fitted a short time before its conversion, sits forlornly by the old loco shed. Unique Com-Eng 0-4-0DM CA1040 of 1960 has lost its former name, *Invicta*.

Editor 10/86

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 54 p.10)

Marian Mill Clyde 0-6-0DH 14 (61-235 of 1961) "hits the dirt" north of the Pioneer River on 3 October.

Photo courtesy Mackay Daily Mercury

About \$7000 damage was caused to a cane loco and bins when they were derailed about 5 km. north of Marian on 3 October. A Clyde 0-6-0DH hauling 96 empty bins was derailed at a point where at least 6 cubic metres of gravel

had been deliberately placed on the rail line to enable vehicles to cross. 12 bins were damaged in the accident.

Mirani Shire Council has approved the extension of a tramline from Mt.Martin to Langdon along the former QGR Kungurri branch crossing two roads subject to the provision of concrete crossings and in one case flashing warning lights.

Mackay Daily Mercury 23/9/86, 4/10/86.

MOSSMAN CENTRAL MILL CO. LTD 610 mm gauge

(see LRN 54 p.11)

Hudswell Clarke 0-6-0 1838 of 1950 arrived at the mill on 29 October and was soon taken into the loco shed for inspection. Mill staff were delighted by the loco's condition, and if the removal of asbestos lagging could be expedited, were expecting to see the engine in steam by the end of the year. It is now proposed for the locomotive to run on coal, but this will depend on the decision of the mill board. The carriages which arrived with the loco are in disappointing condition. One is basically complete but with the seats not fitted. Flaking paint and deteriorating woodwork is all too apparent. The second is essentially steel framing, floor and roof but no sides. Mill staff were not optimistic about their usefulness in the future, but this is subject to final review.

Bundaberg Foundry 0-6-2T *Bally Hooley* (6 of 1952) has been repainted in a deep red livery, replacing the previous maroon, and has continued to haul tourist trains to the golf course at Newell. The boiler of John Fowler 0-4-2T *Ivy* (15947 of 1922) has been prepared for hydrostatic test.

In 1987, trains will run from Mossman to the new tourist development at Four Mile Beach, near Port Douglas, and hopefully in 1988 into Port Douglas itself. Reconstruction of the old Port line has been completed for the first stages and this includes a bridge across an inlet among the mangroves which had been disused since 1957. The six piles on this bridge have been found to be still perfectly sound, being well protected with copper-based sheeting to prevent attack by marine organisms. One pile has been positively dated to 1931. It is likely the remainder are older. On 26 September the "last spike" on the reconditioned bridge was driven by local member Martin Tenni, with the *Bally Hooley* loco in attendance. The new station building for Port Douglas is being rebuilt in the mill yard. It was formerly the barracks at the mill.

Com-Eng 0-6-0DH locos *Douglas* (AL2562 of 1963) and *Faugh A Ballough* (AL4190 of 1965) have been fitted for multiple unit operation. They generally operate separately each morning but are coupled together and controlled by the one crew in the afternoons. A resleepering and scarifying unit is believed

to be on order from George Moss Pty Ltd The mill's bogie "canetainer" vehicles are undergoing reconditioning at a steady rate. The containers are straightened, sandblasted and repainted at a special plant in the mill yard. Repainting includes a steam train design and the words BALLYHOOLEY STEAM EXPRESS being applied.

Bernie Milford 10/86; Editor 10/86

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge (see LRN 50 p 8)

The new road/rail bridge across the Pioneer River at Mia Mia was progressing well in late September. It will cross the river at the height of the banks, just upstream of the present crossing. The dangers of operating the existing crossing with its steep grades on either bank and blind road crossings was illustrated by a pile of wrecked bins on the mill side of the bridge where they had apparently come to grief in a runaway. There was considerably more evidence of serious derailments between Mia Mia and the mill in a number of places where wrecked bins had been pushed clear of the track and wheelsets and axleboxes were strewn about. Perhaps these incidents had some connection with the "renumbering" and "naming" of D13 JINX, otherwise known as D7 (E.M. Baldwin B-B DH 6780-1-8-76 of 1976), which was observed in the mill yard with its engine removed.

Editor 9/86

PLANE CREEK CENTRAL MILL CO. LTD Sarina 610 mm gauge

(see LRN 48 p.9)

Plane Creek Mill's D12 ended up well off the track when struck by the loaded car transporter at 5.30 am on 23 October.

Photo Courtesy Mackay Daily Mercury

E.M. Baldwin B-B DH D12 (6890-1-10-76 of 1976), hauling full bins to the mills was involved in a serious collision with a semi-trailer car transporter on the Bruce Highway on the outskirts of Sarina on 23 October. The locomotive was forced off the track and bins were overturned while there was also considerable track damage.

Mackay Daily Mercury 24/10/86

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 54 p.11)

It is believed that Bundaberg Foundry 0-6-2T 8 of 1953, recently advertised for sale by tender in a dismantled condition, may have been sold to a buyer in Brisbane but further details are still required.

Stan Marsh 9/86

RACECOURSE CO-OPERATIVE SUGAR ASSOCIATION LTD, Mackay 610 mm gauge

(see LRN 54 p.11)

The earthworks for the new empty yard being developed as part of a new tramway unloading station on the southern side of the Peak Downs Highway were substantially complete by the end of October. *Road Runner*, E.M. Baldwin 2-2wDH 6-2612-2-11- 68 of 1968, and ballast regulator Tamper 1775577 of 1978 have both been placed on the still isolated full yard tracks with a number of ballast hoppers to assist with the work of ballasting

Editor 10/86

SOUTH JOHNSTONE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD, 610 mm gauge

(see LRN 49 p.10)

Former Com-Eng 0-6-0DM locos 11 (C1125 of 1957) and 16 (A1102 of 1955) have been fitted with Rolls-Royce engines derated to 195 hp and fitted with torque converters and have been permanently coupled back-to-back. Like a number of other locomotives, they have been repainted in a new livery of yellow with silver buffer beams.

The frames of Drewry 0-6-0DM 14 (built by Baguley 2396 of 1952) have been used in the construction of a new brake wagon at the mill. The frames have been cut back from around 6 m to 4.5 m and new heavy welded buffer beams and footplate fitted. The air compressor fitted to this unit is one of the portable type often owned by machinery hire companies and the control panel is marked "E.M. Baldwin". The cab from 14 is to be found painted black

at the roadside near Kalbo, presumably as a school bus stop shelter shed. The other two Drewry 0-6-0DMs, 9 (Baguley 2395 of 1952) and 15 (Baguley 2520 of 1954) both are serviceable but are not used regularly on cane haulage.

The mill proposes to run a short tourist service in the mill yard next year to convey visitors from the mill to a building where an audio-visual display will be shown. The intended motive power for this service, the mill's last Malcolm Moore 4wDM, 17 (1060 of 1943), was found off the track adjacent to the mill office. There is some thought of operating a full-scale tourist passenger service between the mill and Nerada over the old Innisfail Tramway line, in conjunction with the Nerada tea estate.

The old Innisfail Tramway from Currajah Junction towards Innisfail is disused as far as Mundoo and lifted thereafter. In addition the crossing of the QGR at Wangan has been removed recently,

Locomotives observed based at Silkwood Depot in late September were Com-Eng 0-6-0DHs 1 (AD1453 of 1962), 3 (AD1452 of 1961) and 20 (AH4695 of 1965). Also at the depot is an old bogie passenger car which is currently inhabited by a goat !

The depot buildings at Japoonvale, built by the Queensland Government in about 1916, were comprehensively demolished by Cyclone Winifred on 1 February. An ugly portable building has replaced them. The loco observed based here was E.M. Baldwin B-B DH 5 (6470-1-1-76 of 1976).

Denis Kenny 9/86; Editor 9/86

THE SUGAR BOARD, Lucinda 610 mm gauge

(see LRN 32 p.9)

The Motor Rail "Simplex" 4wDM here has been positively identified as Motor Rail 4159 of 1926. It is understood to have come from Hambledon Mill to Victoria Mill in about 1947, and by 1948 it was working at CSR's Lucinda Wharf. With the commissioning of the bulk sugar terminal in 1958, it was handed over to the Sugar Board. The number 2757 on the builder's plate is now known to have been stamped there by the Queensland Government machinery inspector.

Editor 9/86

THE SUGAR BOARD, Mackay 1067 mm gauge

(see LRN 51 p.6)

There was no sign of either Com-Eng 0-6-0DH (F1018 of 1957 and F1029 of 1958) at the bulk sugar terminal in September. Possibly both these have been disposed of following the advertisement published earlier in the year.

Editor 9/86

THE SUGAR BOARD, Mourilyan Harbour 610 mm gauge

Yellow-painted Walkers 0-6-0DH 570 of 1956 is in daily use here shunting bulk sugar boxes delivered by Mourilyan Mill locomotives. This locomotive built in association with the North British Locomotive Co. of Scotland, came to the terminal in 1960, following a rather inglorious career as a demonstration loco at various sugar mills.

Editor 9/86

TULLY CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 49 p.10)

The rusty hulk of Clyde 0-6-0DH DHI.4 of 1954, minus engine and transmission, is stored in the workshops area pending conversion to a brake wagon.

It is believed that the new full yard, built in 1983, has never fully been placed into commission. However, the construction of a new empty yard between the mill and the Bruce Highway, observed in September, would appear to indicate that the implementation of the full new yard plans is imminent. Possibly in connection with this, the main open-air stabling point for the locomotives has been moved from its former position in the mill yard to one nearer the mill buildings.

Three locomotives were observed stationed at the El Arish Depot, Com-Eng 0-6-0DHs *Tully* No.15 (AK3574 of 1964) and *Tully* No.16 (AF4484 of 1964), and E.M Baldwin 0-4-0DH No.2 (6-1082-2-2-65 of 1965).

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (S.A.) INC. gauges various

(see LRN 54 p.13)

The first public steaming of Andrew Barclay 1067 mm gauge 0-6-0T *Peronne* (1545 of 1919) took place on 7 September following the replacement of water tanks and cab. Couplings, steam brakes and sanding gear have also received attention. Bearings and running gear still need checking.

Commonwealth Railways standard gauge General Electric Bo-Bo DE DE91 has been acquired for the museum. This unit came to Australia in 1943 as US Army Corps 7922, and was used at the Commonwealth Department of Munitions St.Mary's works before going to Woomera in 1948. It was acquired by Commonwealth railways in 1950, and has been in store at the Port Augusta workshops for a number of years,

Catchpoint 9/86

VICTOR HARBOR DISTRICT COUNCIL, Victor Harbor - Granite Island Horse Tramway 1600 mm gauge

(see LRN 53 p.8)

The 1.6km tramway reopened for public service on 14 June after a break of 31 years. The South Australian Minister for Tourism, the Hon. Barbara Weise, performed the opening ceremony at 11 am, attended by a crowd of over 4000 people. Two of the new double deck cars, No.1 & No.2 entered service that day, but only 12 trips could be made as the crowds created problems in walking the horses around the trams at each terminus.

The trams will operate daily the entire year. The winter service runs from 10 am to 4 pm with the timetable extended in summer with four cars in service during busy periods. The journey time is 12 minutes in one direction with fares \$1 for adults and 50 c for children. By late September, cars 3 & 4 had arrived at Victor Harbor. One was in the tram depot being painted while the other was stored at the local council yard.

BRUNSWICK PLASTER MILLS, Nowingi 1600 mm gauge

(see LRN 22 p.20)

On 23 March ex-VR 0-6-0DH M232, built at Newport in 1959, hauled the 0-6-0DM built on the frames of former 0-6-0 steam loco Y413 from the gypsum plant at the 26.5 km to Nowingi siding. Following its return to Melbourne, this unusual locomotive was to be preserved by the ARHS Victorian Division.

ARHS Bulletin Supplement 9/86

GEELONG STEAM PRESERVATION SOCIETY, Bellarine Peninsula Railway 1067 mm gauge

(see LRN 39 p.9)

Hudswell Clarke 0-4-2ST *Wesley B. McCann* (646 of 1903) was used on 8 September at Queenscliff for filming purposes in connection with the production of the film *The Light Horseman*. This locomotive sees regular operation with a van in Queenscliff yard in connection with the monthly Sunday market.

Monthly Notice 9/86, 10/86

SHIRE OF KERANG, Koondrook 1600 mm gauge

(see LRN 33 p.14)

In the centre of Koondrook's wide main street is to be found a restored station complete with locomotive and train. The "loco", *Coffee Pot*, is non-working replica of the Sentinel Wagon Works four-wheel vertical boilered geared steam tank loco (4wVBTG) - 7566 of 1926 - which operated on the Kerang to Koondrook Tram until 1941. As the original was sent for scrap in 1952, a replica was built at Hume Colville Engineering, Barham, NSW as part of the CEP sponsored scheme to develop the historical display. The other vehicles in the train are a goods wagon, sheep van and brakevan, all newly painted like the loco and station.

ARHS Bulletin Supplement 9/86; Editor

STATE ELECTRICITY COMMISSION Of VICTORIA, Yallourn 900 mm gauge

(see LRN 53 p.11)

The railway situation has completely changed since the publication of the articles in *Light Railways* in 1983-4. Only a surface line remains to link the loading station at Yallourn with the dumping station at Morwell. The replacement loco shed at surface level is now in use and there has been a significant reduction in loco and rolling stock.

John Buckland via Bob McKillop 9/86

SOUTHERN PRIVATE RAILROAD, Melbourne gauges various

(see LRN 54 p.14)

The following locomotives are believed to be currently offered for sale, apparently all 700 mm gauge so presumably from Indonesia: An Orenstein & Koppel 0-4-4-0T Mallet, an Orenstein & Koppel 0-8-0T and a Henschel 0-8-0T. It is not known whether these machines are currently in Australia.

WESTERN AUSTRALIA

GOLDEN MILE LOOPLINE RAILWAY SOCIETY, Boulder 1067 mm gauge

(see LRN 50 p.8)

F.C. Hibberd "Planet" 4wDM 3966 of 1962 has been used regularly, particularly by the track upgrading gang employed under a CEP grant. The usual train hauled by the "Planet" is an RA wagon, flat trolley, and the H wagon converted for passenger use. Before it could be used to effect, however a stretch of out-of-gauge track on a curve at Kamballie had to be repaired. Under this regular use, the "Planet" has stood up well, apart from braking a rod on the rear wheel brake assembly.

Loop Line Newsletter 9/86, 10/86, 11/86,

HOTHAM VALLEY TOURIST RAILWAY (W.A.) INC. 1067 mm gauge

(see LRN 54 p.15)

The problems experienced with Drewry 0-6-0DM SEC1 *South Fremantle* (2302 of 1950) on Sunday 1 August when it had great trouble hauling four carriages over the grades on the Etmilyn Forest Tramway section have been remedied. The Gardner governor was stripped down and adjusted, and the loco can now handle the four cars up the bank with ease at a speed of 12-14 km/h.

Pinjarra Steam Express 9/86

NORTHAM RAILWAY PRESERVATION COMMITTEE 1067 mm gauge

The Northam Railway Preservation Committee have acquired Motor Rail "Simplex" 4wDM 60s344 of 1967 from the Wundowie Foundry. This 5 ton 60 hp locomotive is the most modern Simplex to have been imported to Australia, and was delivered to the Wundowie Charcoal Iron Co. Ltd through agents Flower Davies & Johnston Ltd, Perth (see LRN 19 p.7).

Loop Line Newsletter 10/86; Editor

COSSACK PROJECT COMMITTEE, Roebourne-Cossack Tramway 1067 mm gauge

(see LRN 36 p.10)

This tramway (originally opened as a horse tram in 1887) is being reconstructed on the original formation. Rails used are heavy section as currently used on the modern ore railways in the area, and look a little out of place on a "light railway". When inspected in June 1986, the sleepers and rails had been placed alongside the formation and track laying had commenced from the Cossack end. About 1 km of track appeared to be in place. On the

track at the end of the line outside the former Cossack station building were three flat top four-wheel wagons, one low-sided wooden four-wheel wagon, a hand-operated four-wheel wagon crane, and the frame and cabin of Motor Rail "Simplex" 4wDM 14034 of 1957. Engine and transmission were missing from this unit.

INC. Bennett Brook Railway, Caversham 610 mm gauge**

(see LRN 54 p.15)

NG123 backs into the coach shed to pick up its coaches on Opening Day, 21 September, 1986.

Photo : Ken Watson

The official opening of Whiteman Park on 21 September was marked by the opening of steam train services on the loop line. Franco-Belge 2-8-2 NG123 (2670 of 1951) entered service hauling the three new carriages constructed on ex-WAGR QBB underframes, a major achievement for this Society.

Four weeks before the opening, the boiler of NG123 had been replaced in the frames with most of the boiler lagging replaced. Then followed the refitting of boiler fittings and cab, followed by painting. Basic livery is black, with silver smokebox. Two weeks to go, and the first steam test was carried out. On 18 September a trial run hauling the coaches was made around the loop.

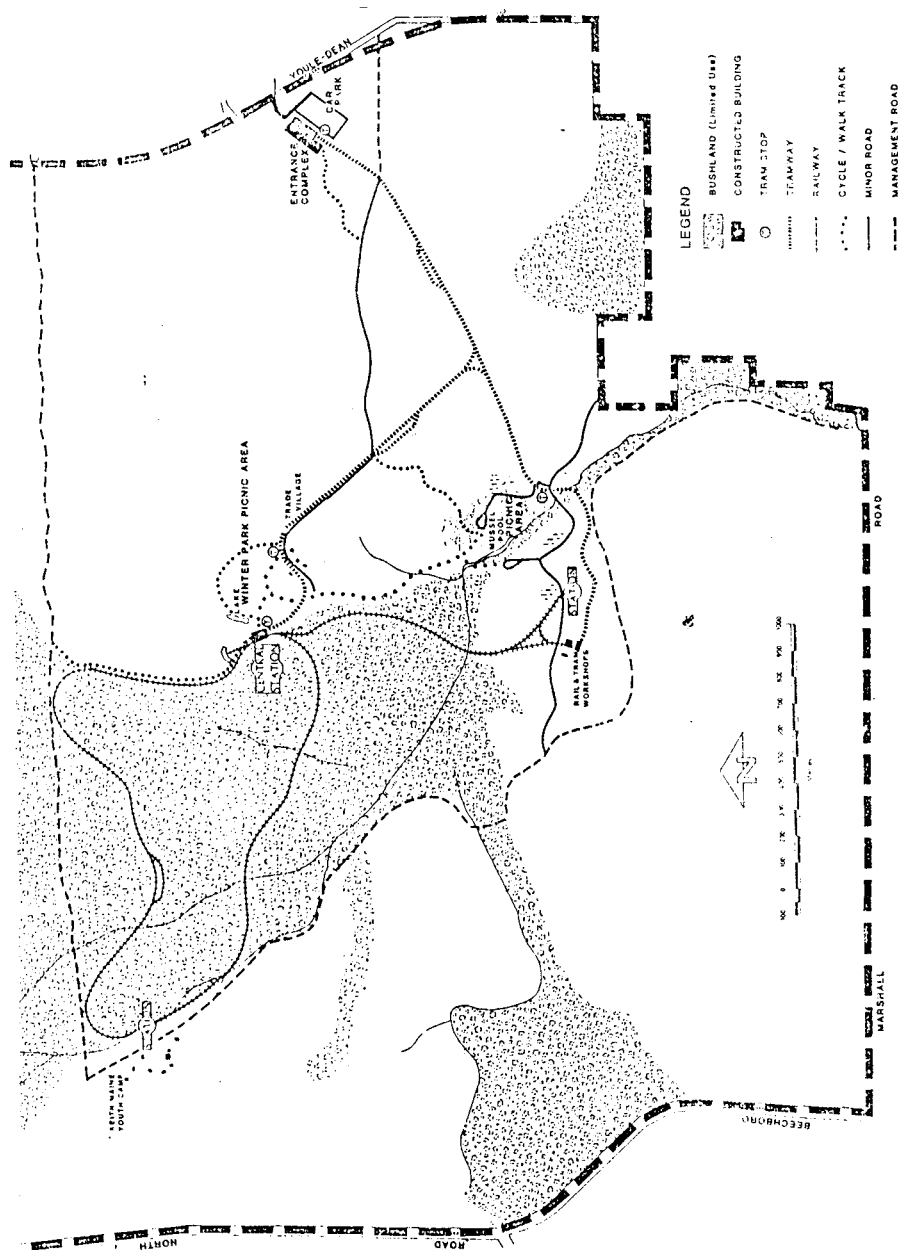

The Gemco in shop grey on the track for the first time at Mussel Pool, 18 September. NG123 looks on.

Photo: Ken Watson

The three carriages had originated as QBB flat top wood carriers and were purchased from WAGR. They were stripped to steel frames and the end bolster and coupling height was adjusted. A carriage design was prepared by Lindsay Watson for construction as part of a CEP project. They were basically completed about a year ago, but were put aside pending the preparation of the steam loco. With two weeks to go before opening, a vacuum coach braking system was ordered to be fitted. Piping, couplings and connections had to be worked on feverishly and the last was only completed the night before commissioning. Other work which had to be completed was the fitting of Malthoid to the roofs, painting and varnishing, the manufacture and fitting of hand rails, and the fitting of seats. A vacuum gauge and valve were fitted in the guard's compartment and windows Carpets, curtains and doors fitted in the V.I.P. section, and side doors fitted. The bogies were taken out and adjusted and the handbrakes reconnected. The carriages are finished out in a reddish brown livery with white window surrounds. They are designated AQ and AQB (brake van).

The Gemco-Funkey 4wDM of 1964 has been regauged and was placed on the track at Whiteman Park on 18 September. This comparatively modern unit was able to be put into service right away, although there are still final touches still required. Another loco which has been successfully regauged

Following the diagrammatic plan of the Bennet Brook Railway shown in LRN 54, this scale plan shows the location of the rail systems more accurately. The station near the workshops is Mussel Pool and that in the north-west Keith Maine Station. State Planning Commission of W.A.

and regularly used on ballast trains is Ruston & Hornsby 4wDM 404982 of 1957.

Much concentration of trackwork was also needed in the weeks leading up to the opening. This included several long sessions at Central Station which went on into the night on occasion.

The round trip from Central Station via Keith Maine Youth Camp is 4.6 km, while the return trip from Central to Mussel Pool is 1.3 km. Return fares are \$2 adults and \$1 children.

*Rusty Rails 10/86; Ken Watson
& State Planning Commission of W.A.*

OVERSEAS

NAURU PHOSPHATE CORPORATION 914 mm gauge

(see LRN 51 p.11)

Four locomotives in all are in use on the island. Two are Clyde Model DHI-71 0-6-0DH locos built in Australia. It is believed that these are 67-539 and 67-540 of 1967. Their original GM 6/71 engines have been replaced with Caterpillar 3306T engines. Three earlier locos of the same type supplied to Nauru were 56-108, 56-118 and 56-121 of 1956.

The other two locos were built by Thomas Hill (Rotherham) Ltd, Vanguard Works, Kilnhurst, South Yorkshire, U.K. They are believed to be 4wDH "Vanguard" Model 268V built in 1976 or 1977 and were originally fitted with Rolls-Royce CCN engines. These units have also been fitted with Caterpillar 3306T engines.

There are 100 side discharge ore wagons of 4.5 cubic metre (6.3 tonne) capacity each. These are normally divided into 4 rakes of 22 standard and 3 brake wagons per rake. Total ore delivery railed each day is approximately 6000 tonnes.

There is also an old steam loco on the island. It is in a mined out area inaccessible by road. The tubes have been removed from the boiler as has the chimney and any identifying plates. There appears to be shrapnel damage to the cab - the area was heavily bombed during World War II. It is suggested from markings on the wheels that the loco may date from around 1928.

LIGHT RAILWAY RESEARCH SOCIETY OF AUSTRALIA - ESTABLISHED 26 YEARS

Timbertown's John Fowler 0-4-2T 17881 of 1928 awaits its next appearance in the TV mini series "Cane" in the main street of Ulmarra 5/11/86.

Photo: John Buckland

LRN EDITOR

John Browning has expressed a wish to relinquish his position as Editor of LRN in the very near future. John has done a magnificent job for the Society and the light railway interest in general in getting LRN off the ground and producing 55 of the 56 issues we received to date. This represents nearly 10 years of effort in producing 6 issues of the magazine each year. Who can blame him for wanting a break after such a period. So we must now find someone else to carry on from John.

LRN has successfully filled a gap in regard to light railway history in Australia. It provides a means of recording the on-going activities of operating tramways as well as news of recent discoveries concerning long defunct operations. It is of vital importance that this should continue so that the history of these lines is faithfully recorded.

So we ask members, particularly those in Queensland, where the majority of current light railway activity is centred, to consider taking on the job, although we would be glad to hear from anyone interested. John has kindly offered to assist anyone who might wish to take over as Editor. If you want to know more you can contact John or myself. John's address is on the front of LRN and mine is in LR. We hope to hear from someone soon.

Mike McCarthy

NOTES

You may notice that this issue differs in some respects to other issues of LRN. The reason for this is that John Browning, the Editor of LRN has returned to England for a holiday. In his absence this issue has been edited by Peter Evans, Frank Stamford and Mike McCarthy using some material provided by John plus other input obtained by the editors. The data for the entire issue was transferred (by modem) over telephone lines between the computers of Mike and Frank .

RESEARCH

WARBURTON

Mike McCarthy is currently preparing a manuscript covering the mills and tramways of the Warburton district. If any members have information or photographs relevant to this area Mike would be very pleased to hear from them. He can be contacted at 27 Verbena Ave., The Basin 3154 or on 03-7625847

FIELD REPORTS

Erith Coal Mine, Bundanoon, NSW

Morton National Park near Bundanoon in southern New South Wales has a variety of walking tracks suitable for family outings. One of these is to the Erith Coal Mine situated on Coal Creek, a tributary of Bundanoon Creek. The National Parks pamphlet contains the following information:

"The mine was opened in the 1860s by the Sydney Melbourne Land and Coal Company. The main tunnel is 450 metres in length and branches into six subdrives. The seam was approximately one metre thick but of poor quality. The coal was hoisted in skips about 25 metres to a staging area directly above the mine entrance."

The mine today consists of four fenced off tunnels about 10 metres above Coal Creek on its western bank, and one tunnel on the eastern bank at the foot of a picturesque waterfall. The western bank tunnels are connected by a level tramway formation.

Above the mine the cliff face rises 25 metres. The tramway formation at the top of this cliff is quite distinct and it would appear that the skips were cable-hauled up a wooden trestle paralleling the cliff face and rising at about 45 degrees. All that remains of this structure are a few timbers containing long iron spikes, a length of 30 lb/yard rail and a length of light Barlow rail. Still in place above the main mine entrance is a wooden cable roller in an iron frame fixed to the rock overhang. Deep grooves in the rock indicates that this roller was not always effective.

At the top of the incline the first cutting in the lip of the cliff swings uphill to the right for about 15 metres. The rock face on the inside of the curve has a deep cable groove worn into it. The tramway formation then continues in a straight line for another 20 metres on an embankment before entering a cutting 25 metres long. The formation from here is on private property and is obscured by a bulldozed track.

Information obtained from the ranger of the park indicated that the tramway continued on from this point to Bundanoon railway station. Another coal mine, the Ringwood, was situated on Bundanoon creek eight chains north of the junction of Christmas Creek. This mine also had a tramway to Bundanoon Railway Station, and apparently parts of the formation still exist.

Peter Evans

F.H. DRAIN/WILLIAM COOK SAWMILL, Taggerty, Vic 914 mm gauge

By May 1940 F.H. Drain had established a sawmill at the junction of the Little River and Storm Creek between the Cathedral and Blue Ranges near

Taggerty, Victoria. A 3 ft gauge logging tramway was constructed in a south-easterly direction along Storm Creek for a distance of approximately 3 km. The mill was later purchased by William Cook P/L and was closed down by the end of October 1955. Cook was a pioneer of crawler tractor haulage in the area and the northern section of the tramway was converted into a rough road.

At the mill site, now a camping area, bogie wheels, machinery parts and mill foundations are evident. From the site of the log yard the tramway formation climbs gently parallel to Storm Creek. Many sleepers remain and sections of 30 lb rail can be seen. The formation was substantially constructed and well graded. Further on sections of wooden rail reinforced on the inside with light steel rail can be found along with the remains of two log bogies. The tramway crossed a swampy area on a low makeup about 50 metres long, and then crossed to the east bank of Storm Creek on a reasonably intact bridge 10 metres long and about a metre above the creek. The tramway formation was lost at a loading ramp 20 metres further on.

Peter Evans

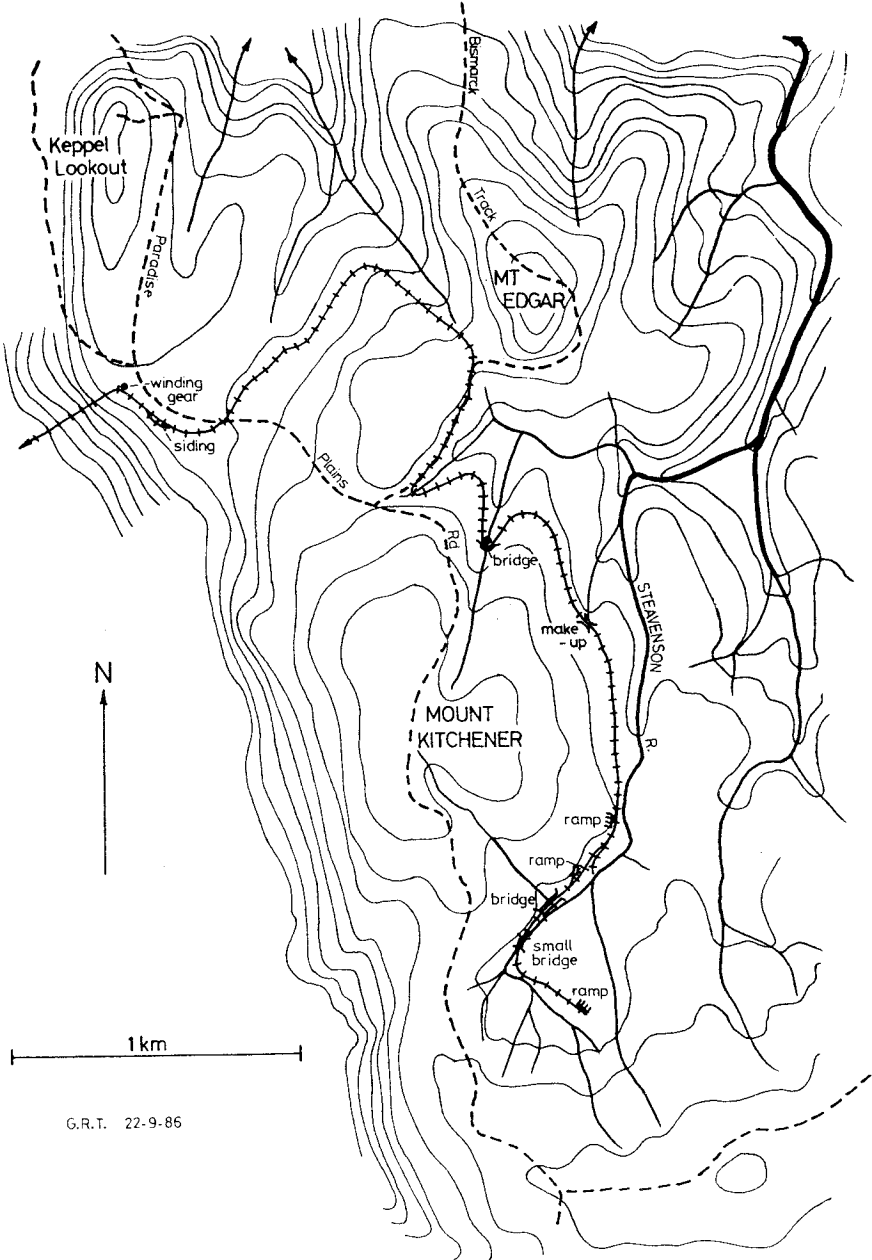

ANDERSON AND ROWE TRAMWAY, Marysville, Vic. Gauge 914 mm

The incline and lower section of this tram line were described in LRN 54 . At the incline winding gear the formation turns south-east to cross a broad saddle between Keppel Lookout and Mt Kitchener. A siding was located about a hundred metres from the winding gear, and a few sleepers, nails , dogspikes, pieces of wooden rail and 20 lb steel rail were observed both along this section and along the remainder of the line.

The line then turns in a north-easterly direction on a gradually rising grade, and runs for about one kilometre before turning south-east to climb over a saddle near Mt Edgar. Very little evidence of the tramline could be found in this section, although the formation was reasonably clear, and its line could be seen as a gap through the trees.

Over the saddle the line appears to have been obliterated by a section of Bismark Track, but was picked up again at the head of a water-course 100 or so metres from Paradise Plains Road. No bridging was needed here. The line was followed for another 500 metres to a 20 metre long 3 metre high bridge, still with many of its sleepers in place. A 45 degree bend half way along the bridge, coupled with a 3 bearer / long sleeper construction allowed the line to cross the creek on a fairly sharp but smooth curve. Large logs were used to support the bearers, and the bridge had been resleepered after being burnt at some stage during its life. (This tramway was destroyed by fire in 1939 and subsequently rebuilt. Ed.)

Onwards from here the line entered a fairly flat forested area, and in many places was hidden under grassy ground cover. Occasional sleepers and

dogspikes were observed, but the line was evident just as a gap through the trees. After about 1.2 km the tramway reached the remains of a loading ramp close to the Stephenson River, and the formation became easier to follow due to the lighter ground cover.

150 metres on, another formation branched off and ran parallel with the main line for about 100 metres before curving away towards the river and disappearing; this branch appeared to be either a storage siding or an early terminus of the main line, as the main line was more evenly graded.

A short siding and loading ramp were then observed before a well preserved bridge was reached. Short lengths of large diameter logs were used to support the bearers, whose maximum height above the water was about 3 metres. The bridge was about 40 metres long and virtually straight, with many sleepers still in place; all of the bearers were intact.

The line continued through a cutting, along a small embankment and over a small bridge before climbing around the side of a hill and levelling out; it continued south-easterly for a couple of hundred metres before terminating at a loading ramp.

QUEENSLAND

BRAMPTON ISLAND 762 mm Gauge

Brampton Island Pty Ltd, F.C. Hibberd "Planet" 4wDM 3475 or 3476 of 1950 (2 ft 6 in gauge) following rebuilding by Jenner Engineering, Slade Point, Mackay. November 1986.

One of the two locomotives on the Brampton Island railway has just been rebuilt at Jenner Engineering at a cost of over \$20,000. The manager of Jenner Engineering, Mr Des Jenner said the locomotive had been rebuilt from scratch. Originally from a Lithgow Coal Mine, the "Planet" locomotive was powered by a Lister diesel before renovation and was due to be returned to service on 21 Nov 1986. It is used to haul up to a hundred passengers on the 1.6 km railway linking the jetty on the island with the tourist resort. The second locomotive may also be renovated.

The Daily Mercury 20/11/86

NORTH ETON SUGAR MILL 610 mm Gauge

New road/rail bridge under construction at Mia Mia. The North Eton mill's tramline will be relocated to cross this bridge. Part of the existing crossing (in newly laid track) can be seen in the foreground, and the tramline's course can be seen climbing the far bank. November 1986.

Photo: Courtesy Mackay Daily Mercury

Construction of the new combined road/rail bridge at a cost of \$1.9m south of Mirani (see LRN55 page 11) is ahead of schedule, and it is hoped to have the tramway relocated to the new crossing in time for the next crushing season. The project is jointly funded by the North Eton Mill, The Queensland Water Resources Commission, The Department of Main Roads and the Mirani Shire Council. (See Photograph)

The Daily Mercury 28/11/86

The Mackay Mills Merger Committee announced on 5 Dec 1986 that it had reached agreement with the North Eton Mill Board on its participation with the historic five way merger with Farleigh, Race Course, Cattle Creek and

Marian Mills. North Eton which has recently diversified into flower growing, had earlier withdrawn from negotiations. A special general meeting of the shareholders of all five mills has been set for 23 Dec 1986.

The Daily Mercury 6/12/86

THE AUSTRALIAN NARROW GAUGE MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge

(See LRN 55)

The boiler from Pleystowe No 5 has been returned to the Woodford site. Babcock Australia has completely retubed the boiler free of charge to the Society. Other work on the locomotive still to be undertaken includes the overhaul of all the boiler fittings.

Durundur Railway Bulletin November 1986

The Main street of Ulmarra in northern New South Wales was transformed into a "North Queensland" location for the filming of the TV mini-series "Cane". The track, supplied by ANGRMS, sits incongruously alongside the parked cars of the 1980s.

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (S.A.) Inc. Gauges various

(See LRN 55)

Narrow Gauge wooden brake van 7553 located at Peterborough has been purchased to form part of the break of gauge platform scene when the museum is relocated to Port Adelaide during 1988. This move has now been officially approved by the S.A. Cabinet. Site boundaries will be fixed within several weeks and site security provided. Site clearing will commence when approval is obtained for the design work and concept plans from the relevant Government authorities. All engines and carriages will be housed within a pavilion 400 foot by 600 foot spanning eight tracks.

Recently restored Andrew Barclay 0-6-0T "Peronne" 1545 of 1919 will be used to haul passenger trains around the 5 acre site on 1067 mm gauge track, while on the 457 mm gauge 0-4-2T "Bub" built at the museum will perform a similar service. Depending on popularity and financial position of the museum, restoration to full working order of 610 mm gauge 0-6-2T

Skipper (Perry 1850.46.1 of 1946) is a possibility. This locomotive could be used in conjunction with the two Ruston and Hornsby diesels owned by the museum.

Catchpoint November 1986.

TASMANIA

VAN DIEMEN LIGHT RAILWAY SOCIETY INC., Don River Railway.

(See LRN 51)

Work on the restoration of Dubs 4-8-0 *Heemskirk*, Builders No 3856 of 1900 is proceeding. The locomotive has been completely dismantled and the frame cleaned, primed and undercoated. The boiler has been detubed and has had its first inspection by the D.L.I. The barrel, front tubeplate and firebox wrapper appear to be in excellent condition, but the firebox tube plate is badly pitted and has a number of cracks between the tubeplate holes. Work has commenced on the restoration of the wheels and front bogie.

The ex-North Mount Lyell car, now TGR No. BA 49 is in the roundhouse awaiting repairs to roadworthy condition to enable it to be moved by rail to Don. Originally owned by the North Mount Lyell Railway, it was acquired by the Mount Lyell Railway in 1924, and later by the TGR for Hobart's suburban service, eventually becoming Camp 134. The vehicle is American in design. Although all of the windows have gone much of the lining remains intact, and there is enough left restore it to very close to original.

Steam Echoes November 1986

WEE GEORGIE WOOD SOCIETY, Tullah 610 mm Gauge

(See LRN 48)

An opening ceremony was due to be held at Tullah at 3 pm on 20 December 1986 by the Premier Mr Gray.

Steam Echoes November 1986

VICTORIA

PRIVATE PRESERVATION/CHEETHAM SALT LTD, Laverton Saltworks 610 mm gauge

(See LRN 52, p. 16)

The remains of 4wDM Motor Rail Simplex 10058 of 1948 were purchased in June 1986 by LRRSA member Peter Evans. The frame of the locomotive had been cut through in six places with the major sections held together only by

the gearbox casing. The frame has now been welded back together and work has commenced on stripping the locomotive for restoration. All parts for this task with the exception of the two-cylinder Dorman diesel engine and drive chains were located around the Laverton works. Anyone who may be able to help with the acquisition of suitable replacements, or who can provide a photograph of this locomotive when it was owned by the S.R.& W.S.C., is asked to contact Peter Evans at 1/24 Howard Street, Kew, Vic 3101.

It is hoped that this locomotive's running mate at Cheetham Salt, Simplex 7351 of 1938, will join it in preservation when it becomes surplus to requirements.

Peter Evans 12/86

BLACK ROCK OCEAN OUTFALL, Geelong

The Geelong and District Water Board is financing a \$13 million dollar Ocean Outfall pipeline at Black Rock 10 km west of Barwon Heads . To be constructed by Leighton-Candac joint venture, the project is due for completion by June 1987. In order to provide access through the surf zone area a 268 metre long steel jetty will carry a rail mounted P & H 670 crane which will be used to excavate the pipeline trench.

ROTTNEST ISLAND 1067 mm Gauge

(See Light Railways 46)

Recent discussions regarding the renovation of the gun emplacements on Rottnest Island have included suggestions to rebuild the railway from the barracks to the gun store.

Rusty Rails December 1986

WEST AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION, Bennett Brook Railway Caversham. 610 mm gauge.

(See LRN 55)

The overhaul of NG 118 (believed to be Franco-Belge, but carrying builders plate of Henschel 24476 of 1938) has been started with the removal of cladding to allow inspection of the boiler. Some members have taken on the ex-Mt Magnet Tramway (Tasmania) Orenstein and Koppel 0-4-4-0T Mallet (2609 of 1907) as a restoration project. Most of the Mallet parts are on hand, however the boiler requires extensive repair.

Work is underway on the construction of a fourth bogie coach with the

conversion of an ex-Westrail V.W. Worker's Wagon to a vehicle of similar proportions to the present AQ coaches.

A water stand pipe has been installed next to the signal box, which should enable watering of the locomotive in the station during the next steam season. Another signal box has been obtained in the country and is awaiting planning approval to move it to Whiteman Park .

Construction of the Mussell Pool Loop is proceeding. One line is across the road, however some formation work and additional sleepers are required. Permanent survey work is being carried out and when the track is fully completed and has been passed by Westrail it will be handed over to the control of W.A.L.R.P.A.

TOUR REPORTS

LRRSA RUBICON AND ALEXANDRA TOUR, 29 - 30 Nov 1986.

This very successful weekend followed the format of our 1985 Marysville tour. Two days of site visits, and a Saturday night meeting. Participants were free to attend any or all of these activities, and each function attracted about 50 participants.

Malcolm Moore tractor running special trips for LRRSA members at Royston Power Station.

Photo: F. Stamford

One of the trestle bridges on the SEC tramway between Royston Power Station and Rubicon Dam.

Left: The SEC's four-wheel battery electric railcar on the tramway to Rubicon Dam;.

Saturday - to Rubicon

We met at the Rubicon River Bridge near Thornton, where the party was consolidated into a convoy of about 16 cars. Our first destination was the Royston Power Station, the journey along the Royston Road being memorable for its dust, on the way we stopped to visit the site of the crossing of the timber tramway from the Royston Valley (to Clarke & Pearce's Nos 4 & 5 Mills) and the dismantled SEC construction tramway to the Royston dam.

At the Royston Power Station (the terminating point for the Society's only previous tour to Rubicon in 1967 - it does not seem like 19 years ago...) the curved trestle bridge was partly dismantled, as the timbers are being replaced. On the Alexandra side of this bridge the 8-wheel battery-electric railcar ran short trips to the SEC sawmill for our benefit; whilst on the Rubicon dam side the Malcolm Moore tractor (complete with snow plough) ran short trips, with three or four passengers clinging on wherever there was room. We

Right: Another view along the tramway to Rubicon Dam.

then set off for the two mile walk to the Rubicon dam - an easy walk along the SEC tramway, with two interesting trestle bridges en route. Like all the trestle bridges on the tramway, these are to be rebuilt, as the timber is nearing the end of its life.

We became aware that we were being followed - by the SEC's four-wheel battery-electric railcar - which gave some added photographic opportunities at the bridges, and provided rides for those who wanted them. The tramway terminates abruptly at the Rubicon dam, with just a dead-end, no point-work at all . A stop was made for lunch here, deep in the forest, before returning to the Royston Power Station. We then drove along the Rubicon River Road for the journey back to Rubicon (Tin Hut). This was an interesting road with deep ruts, rocks, and small fallen trees to negotiate. Progress was slow (0 km/h for most of the way according to my speedometer) which at least kept the dust

down. Much of the road is on an old tramway formation. We came to a dead stop where a large tree had fallen across the road. This fortunately was pretty rotten, and after being battered with a crow-bar it was crossed by the lead vehicle - a Land Cruiser. The second vehicle could not cross it. Our tour leader then attacked it with an axe (the tree, not the second vehicle) until it was made passable. The moral is always bring a crow-bar and axe when attending LRRSA trips.

During this part of the trip the site of Clarke & Pearce's No.1 and No.2 Mills were visited. No.1 Mill was marked by a huge sawdust heap, but blackberries obscured everything else. No. 2 Mill was much the same, except that two boilers could be seen near the side of the road. What was notable was the very deep, steep sided valley. The tramways running from C & P No. 2 Mill to the west must have been very spectacular, and very difficult to build. Being there it was easy to see why the 1939 bushfires wreaked such terrible death and destruction in this area. Powelltown is as flat as a billiard table compared to this.

Some time was then spent at Rubicon (Tin Hut) looking at the foot of the SEC's incline - which is still in use but not for carrying passengers - and the sites of the other tramways in the area. Return was then made to Thornton, where the rest of the cars were parked. Those staying for the weekend then headed for the overnight stop - Alexandra.

The Alexandra Meeting

This was like our Melbourne meetings, but even less formal, and with a more varied audience. Members of the Alexandra and Marysville Historical Societies attended, as well as several of the SEC staff who had made us so welcome at Rubicon during the day.

The feature was an audio-visual presentation titled Rails to Rubicon using two slide-projectors, and a totally-professional prerecorded sound track. This was prepared by Peter Evans. Much of it consisted of a recording of Ernie LeBrun (who had worked in the Rubicon forest from 1927) describing what it was like working and living in the forest. This became quite moving when he described the 1939 bushfires, his description being illustrated with carefully selected slides, including newspaper cuttings of the time. Also of great interest was the description of how they built trestle bridges. Although Ernie retired some years ago, he is assisting the SEC in the reconstruction of the bridges on the SEC tramway, as no current employees have the skills to do this.

This presentation was excellent. I do not think there is any better medium for giving the feeling of "what it was like to be there", for it is the voice of

the person who was actually there that carries much of the atmosphere and emotion. This cannot be conveyed in books.

Thanks are due to Gloria Stebbing, Dorris Bevan, and Dorrel Lockyer for looking after the preparation of supper. Our sales table did a roaring trade, and the meeting was very worthwhile in making the Society more widely known in the Alexandra area.

Sunday - Alexandra Museum

The Alexandra Historical Society has established a museum at the railway station; and this includes a large circular 2 ft gauge track, part of which runs along the front of the platform where the 5 ft 3 in gauge used to be. This was the location of our Sunday activities.

Items of 2 ft gauge interest include the original Kelly & Lewis 0-6-0 diesel-mechanical loco from the Rubicon tramway, a Malcolm Moore 4 wheel petrol loco previously owned by the SEC Yallourn, a Fowler 0-6-0T (B/No. 11885 of 1909) originally from the Gin Gin Sugar Mill (Qld), and a Hudswell-Clarke 0-6-0 (B/No. 1098 of 1915) previously owned by Isis Central Sugar Mill, and later by Gin Gin Mill. On 3 ft 4-1/2 in gauge is a six-wheel Day's tractor, which was used in the Rubicon forest in the 1940s.

Of these locomotives, the Kelly & Lewis diesel is being restored, but is at present partly dismantled; the Malcolm Moore petrol loco is in working order (many of us had the opportunity to drive it); the Fowler is in working order, and was in steam on the day of our visit; the Hudswell-Clarke is not in use; and the Day's tractor is definitely in working order, but has only a very short stretch of 3 ft 4-1/2 in gauge track to run on, and most of this was laid on the morning of our visit .

This tractor is really quite special - though there are a few six-wheel timber tramway tractors still in existence (I know of preserved examples at Yarra Junction, Erica and Marysville), this one is in by-far the best and close to original condition. It has been restored by members of the Historical Society, and is a credit to those responsible.

The Society has only a small number of volunteers, and until recently received little encouragement from the Shire Council. As a result they still have quite a lot of work to do to iron out faults in the track. Unfortunately the Fowler loco derailed before completing one circuit of the track, and was rerailed using jacks and a front-end loader from the timber mill. After this the Malcolm Moore was used to run a one-carriage train.

A 5 ft 3 in gauge track maintenance quadricycle was also in use for people to travel along the old VR line for a short distance up the steep hill towards Koriella.

There were a number of interesting exhibits in the museum in the railway station, but of special note are a number of large models made by Ernie LeBrun. Two of these demonstrate the layout of typical sawmills of the 1930s. Another shows the way loads of timber were transferred from the 3 ft 4-1/2 in gauge to the 2 ft gauge using an ingenious arrangement of transoms and rollers. There were also several models of bush houses, and the school at No. 1 Mill. Ernie was on hand to explain these models.

A barbecue lunch was provided by the Historical Society. This also had a side benefit in providing fat to grease the rails at the tight spot where the Fowler derailed.

This was a very successful weekend. It was good to see a number of interstate members on the tour: Chris Andrews, and Arnold Lockyer and his wife from Adelaide; and Paul Simpson and Ray Graf from Sydney. The weather was the same as on our Easter tours - bright sunshine with above average temperatures.

Thanks are due to the staff of the SEC at Rubicon, who went out of their way to make our visit on Saturday enjoyable, and to the Alexandra Historical Society for Sunday's activities. Particular thanks are due to Peter Evans for organising the tour, a 15 page tour booklet, and the audio visual presentation. The magnitude of the latter cannot be overemphasised; just presenting it required a Land Cruiser full of equipment, without considering the time, care and skill spent in its preparation.

(Frank Stamford)

PUFFING BILLY PRESERVATION SOCIETY, Walk the G into Gembrook

On 22 November 1986 Peter Medlin of "The Get G42 Going Committee" organised a walk from Lakeside to Gembrook for PBPS members, over the formation of the closed and dismantled section of the Gembrook line. This was a fund raising activity for the rebuilding of the Garratt.

The 26 participants travelled on the 10.30 am train from Belgrave, and at Lakeside commenced the 6-1/2 mile walk. The whole distance to Gembrook is maintained as an excellent walking track. Between Lakeside and Cockatoo (about three miles) the track is mostly in forest, which is reserved as Puffing Billy Corridor, so that building of houses near the railway formation is not permitted.

Beyond Cockatoo the forest gives way to open country with magnificent views, and a steady 1 in 30 climb for two miles to within half a mile of Gembrook.

Not much remains of the railway beyond the present end of track, about 400 metres past Lakeside: occasional sleepers and dog spikes, remains of

NA locos 8A and 14A funnel to funnel at the present end of track beyond Lakeside on the occasion of the PBPS's walk to Gembrook, 22 November 1986.

cattle pits, some platform edging at Wright station, one burnt upright of the biggest of the two Wright trestle bridges, and the loco water tank at Gembrook just about sums it up. Rails were embedded in the road at least two level crossings, but those at Cockatoo have never had a train over them. They were laid a few years ago when major road works were carried out, ready for the day when the line is reopened to Gembrook. (The sight and sound of the Peckett tackling the 1 in 30 grade into Gembrook is wonderful to contemplate - maybe in time for the LRRSA's Fiftieth Anniversary in 2011!). Lunch was provided by the PBPS at Cockatoo, and a bus provided transport from Gembrook back to Belgrave. As a walk this can be highly recommended, and it seems a good venue for a future LRRSA outing. It is now hard to imagine that much of this area was totally devastated by the 1983 Ash Wednesday bush fires. On the day of our walk it was made more

interesting by the presence of two locos at Lakeside - 8A which had brought up a chartered special train, and 14A on the regular train. 8A was sitting at the end of track in the forest, looking beautiful. 14A was then brought up to it, funnel to funnel.

(Frank Stamford)

PUBLICATIONS

FIVE TO 500

Five to 500 has finally arrived from the printers. This 128 page book contains a history of the Society and a reprint of the first 12 issues of *Light Railways*. There are now only about 120 copies of *Five to 500* left for sale. So if you did not take advantage of the pre-publication offer, and you still want a copy you should act quickly.

TIMBER MOUNTAIN

Norm Houghton's latest book, on the timber tramways in the area between Healesville and Yea (Victoria) has been selling very well in Yea and Healesville. The local Healesville paper (Mountain Views) carried a full page review of the book, by Les Harsant, the Vice-president of the Healesville Historical Society. It is by far the most thorough review that any of our publications have ever been subjected to, and it is worth quoting from to see how others view our publications...

"It's no exaggeration to state that Norm Houghton's new book *Timber Mountain*, is a major addition to the still small but steadily growing historical record of Healesville, Toolangi, Yea and neighbouring areas thoroughly researched and documented, well illustrated with handily placed maps, diagrams and about forty fine photographs, and with an extensive index, it will stand as a substantial reference work in its own right and serve future writers as a springboard to further exploration.

"Moreover, it is a human record. Fears that might be generated by the name of its publisher ... fears of a book bristling with technical jargon so beloved of the rail enthusiast but incomprehensible to the non-initiate such fears may be dismissed.

"...mill sites - more than seventy - are marked and named on the fold-out map, and it is here that one becomes startlingly aware of the remarkable network of tramlines that men and their animals constructed through the bush clad mountain ranges . . .

"In every sense *Timber Mountain* is a credit to its author, researchers and publisher, It is entertaining, as it must be for a popular market, and with one

exception it also meets this reviewer's fairly exacting reference standards for historical writing. I would like to see a bibliography added.

"It is the product of painstaking research. Three hundred and thirty-six footnotes itemise the sources of Norm Houghton's information..."

A full copy of this review (which runs to 6-1/2 A4 size pages) is available by sending a 36 cent stamp to Frank Stamford, P O Box 1, Yarra Junction Vic 3197. Incidentally, future major Society publications will have bibliographies.

BELL-BRAKES BULLOCKS AND BUSHMEN

Is the title of our next major book, which deals with the timber tramways of Gembrook, and is written by Mike McCarthy. *Bell-Brakes Bullocks and Bushmen* will be in the same style as *Powelltown*, but with about 110 pages. It contains some fascinating material on-the workings of Russell 's tramway with the geared steam locomotive, and apart from the usual complement of maps, photographs, references, index etc. it will have gradient profiles, cut-and-fill diagrams, and other original survey details, and a bibliography! By the time you read this *Bell-Brakes Bullocks and Bushmen* will probably be at the printers, and a pre-publication offer will be included in a forthcoming mailout. We hope to have a special function to launch this book, and the exact publication date will depend on how arrangements for this function progress.

FIFTH NATIONAL CONFERENCE MINUTES:

The minutes of the Fifth National Conference, held in March last year, are now available on receipt of a 36 cent stamp, from Frank Stamford, address above. These have been produced in the form of a 20 page booklet, and include "Draft Policy Papers on *Light Railways* and *Light Railway News*" which were presented by the editors to the Conference.

FUTURE MAJOR PUBLICATIONS:

One of the recommendations made at the Conference was that we should publish a list of future publications, so that people with information on these areas could contact the author, via our Secretary, so that the books might be made more complete. The following is our current list of proposed books. In all cases the basic research is complete, and in many cases writing of the text has reached the fourth draft stage. On present resources we do not expect to be able to publish more than two books a year, and the books will not necessarily be published in the sequence listed: Gembrook Tramways (Mike McCarthy), Mclvor Tramway (Frank Stamford), North Mount Lyell Railway (Ray Ellis), Warburton Tramways (Mike McCarthy), West Gippsland Tramways

(Mike McCarthy), Powelltown Pictorial (Frank Stamford), Beech Forest Railway and connecting tramways (Norm Houghton), Alexandra-Rubicon Tramways (Frank Stamford), Powelltown's Other Tramways (Mike McCarthy), Noojee Tramways - including Neerim and Crossover (Mike McCarthy), Erica Tramways (Mike McCarthy).

BOOK REVIEW

STEAM AROUND PERTH.

Don Finlayson (Editor), published by Australian Railway Historical Society W.A. Division Inc. Price \$5.95 plus postage. This new publication is an album of photographs of railway scenes in the Perth area from the turn of the century up to 1971. With few exceptions the photos are of very high standard, and illustrate a wide variety of interesting motive power on passenger and goods trains. WA had some most unusual locomotives, such as the K class 2-8-4T, and N class 4-4-4T. These and many others are illustrated in this 56 page book, with 103 photographs, almost all of which are of half-page size. Some of these could have been reproduced larger, especially the early view of Fremantle on the bottom of page 28 - a magnificent picture full of detail. This was worthy of a double page spread. The book is well printed on art paper, and is good value at the price. I think the LRRSA will be stocking it, - check the sales list with this and the next LRN.

(FES)

FORTHCOMING TOURS

CHEETHAM SALT WORKS, Laverton Vic.

This tour will take place on Saturday 7 March 1987, and may be the last opportunity to see the 2 ft gauge Laverton tramways. Unfortunately, contrary to previous expectations, there will be no salt-harvest in 1986-87, as the future of the works is in doubt. There is a possibility that the six locomotives and all the rolling stock could be moved to Bowen, Queensland . If you have not already expressed interest in this trip write to Peter Evans 1/24 Howard Street, KEW 3010, or see him at the February meeting.

TASMANIA, Easter

This tour is now fully booked, and there is a waiting list. If interested in the tour you could contact Peter Evans to see if any cancellations have occurred .

MEETINGS

MELBOURNE

POWELLTOWN'S OTHER TRAMWAYS Members would be aware that the LRRSA publication *Powelltown* provided a comprehensive history of the Powelltown Tramway and its predecessor The Gilderoy Tramway. These two lines were the backbone which supported a vast network of tramways radiating to the north and south of the mainline. Mike McCarthy will be speaking on the history of these lines and the mills they served. Location: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton

Date: Thursday 12th February at 8: 00pm

SYDNEY

SLIDE NIGHT The next meeting will be our annual members slide night, so all those coming are asked to bring along 12 or so slides of recent vintage or gems from your personal archives. The choice is yours. This will be preceded by a business meeting to discuss the incorporation of the Society. All NSW members are urged to attend and be involved in formulating the future direction of the NSW Division.

Location: Board Room Bowler's Club, 95 York St., Sydney. Access through the Forestry Commission Office building next door (Town Hall side).on second floor.

Date: Wednesday 25th February at 7: 00pm

ADELAIDE

Contact Arnold Lockyer (see front cover) for details of the next meeting. Location: 150 First Avenue, Royston Park Date: Thursday 5th February at 8: 00pm

HOBART

In conjunction with the forthcoming Tasmanian Tour at Easter a meeting is planned to be held in Hobart . Watch for the next issue of LRN for details .

EDITORIAL

Congratulations and thanks to Peter Evans, Frank Stamford and Mike McCarthy, who formed the Editorial Team for LRN 56. I was able to enjoy a delightful holiday in California and the U.K. secure in the knowledge that LRN was in good hands. The final product justified this faith.

Members will note that the deadline for LRN 58 has been moved forward slightly. This is because I will be attending a work-related course for four weeks after Easter. It is because of the increasing demands of work and family that after almost 10 years I am seeking to relinquish the Editorship of LRN. As mentioned in LRN 57, I would be most happy to assist the new Editor in whatever way seems best. However, I cannot guarantee to continue after LRN 58, so I am very anxious that any potential future Editor contact me as soon as possible.

CORRECTIONS NOTES AND COMMENTS

Roderick B.Smith suggests that a locomotive equipped with hydraulic motors should be described as having hydraulic transmission (reasonably enough), as the wheels can move at different relative speeds from the motor. The editor is led to believe that a transmission consisting of a pump wheel and turbine ("fluid coupling") which simply transmits the engine torque, is generally described as "mechanical". The form of transmission most often described as "hydraulic", a torque converter, contains fixed guide vanes which act to increase the torque acting on the output shaft.

LRN55 p.2 - the second loco at Qunaba is Com-Eng AH2967 of 1963, not FC3473 - thanks to Richard Horne

LRN 55 p.5 - (Lachlan Vintage Village) 16431 should read 16341 - thanks to Ken McCarthy

RESEARCH COLUMN

Sydney North Head Quarantine Station, New South Wales

Although 2 ft 4 in (712 mm) is recorded as the official gauge by Dr Elington in his 1919 report, Paul Simpson has measured the gauge of the track set in concrete at the loco shed and discovered it to be 2 ft 3 in (686 mm).

The loco at this site was built by Caldwell Vale in 1913, being handed over to the Officer in Charge of the Quarantine Station on 13 May 1914. It did not have the patented friction drive centre wheels fitted to other locomotives built by this manufacturer. Instead it had a power-driven winch mounted on

it which held 1000 feet (305 m) of half-inch (13 mm) wire rope. The loco would be coupled to an anchor at the top of the incline and the 4-wheeled wagons lowered or hauled up the 750 ft (229 m) of 1:3 incline from the disinfecting area to the loco shed, uncoupled, turned 90 degrees, and shunted to the "Second Class" quarters. It is thought that the passengers luggage travelled this way to the quarters but not the passengers themselves.

Any photographs of the tramway in operation would be welcomed for inclusion in a future article for *Light Railways*. Anyone having such material available is asked to contact Paul Simpson at P.O.Box 105, PANANIA 2213.

Waymans Tramway, Victoria

Darryl Grant has noted a reference to this tramway in the April 1986 issue of *Roads Victoria*, published by the Road Construction Authority of Victoria. Richard Wayman, a road and bridge contractor, is reported as having built his tramway in July 1846. It was 200 yards (183 m) in length and was used to carry stone from Wayman's Quarry to the banks of the Yarra River. Can any reader provide additional information?

NEW PUBLICATIONS

EFFICIENCY OF TRANSPORT, MILLING & HANDLING IN THE SUGAR INDUSTRY: A CASE STUDY OF THE MACKAY DISTRICT

- B.Borrell & G.Wong; Bureau of Agricultural Economics

Occasional Paper No.96. Australian Government Printing Service, 1986. \$6.95.

This paper presents the findings of a study evaluating the effects of regulations on costs in the off-farm sector of the Australian Sugar Industry. It is based on economic modelling which will probably appear academic to most readers. The model is "applied" to the Mackay District with the finding that substantial cost savings can be made in the transport and milling of cane through reallocation of cane from existing growing areas to mills; reallocation of land; the introduction of weekend milling and closure of some mills; new tramway linkages; and alternative seasonal lengths. The most interesting finding for LRN readers is that the redistribution of cane between mills necessary to bring about cost reductions would make the provision of new tramway links between adjacent mill areas economically possible. Maps are provided of the current mill areas and tramways system; optimum cane allocations with existing supply locations; relocation of cane production; allocation of cane to mills with weekend milling and added

tramway linkages; etc. These make this publication an interesting addition to the literature on Australia's sugar cane transport system.

RJM

AUSTRALIAN SUGAR 1987

This annual production of the Sugar Industry Information Service is designed for use by school students and gives an overview of the industry with specific examples taken from a particular district(s) each year. This year's edition covers the Ingham and Innisfail areas and includes some nice photographs of Mourilyan Mill's Clyde 0-6-0DH 3, a Tully Com-Eng 0-6-0DH, and Victoria Mill's E.M. Baldwin B-B DHs *Wallaman* and *Brisbane*. Also available are a Sugar Industry Map and "Notes on the Australian Sugar Industry". These are worthwhile reference materials available free from PO Box 361, EVERTON PARK 4053; GPO Box 4076, SYDNEY 2001; PO Box 120, TOORAK 3142; PO Box 233, PORT ADELAIDE 5015; PO Box 224, COTTESLOE 6011.

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

E.M. BALDWIN & SONS PTY LTD, Castle Hill, N.S.W.

The two tunnelling locomotives that had been stored in the yard here had been cut up and disposed of around the end of 1985 before the site was sold. These were 4wDH 1067 mm gauge locos 3568-1-9-70 and 3568-2-9-70 of 1970.

David G. Mottram 12/86

GEORGE MOSS LTD Osborne Park, W.A.

The five 1067 mm gauge locomotives being constructed for the Tasmanian Hydro Electric Commission's Crotty tunnelling job are 25 tonne diesel hydraulic locomotives fitted with a 300 hp turbo-charged engine and hydrostatic transmission. They are equipped with exhaust scrubbers to prevent noxious exhaust emissions. Gemco have recently received a grant under the Federal Government's Heavy Engineering Development Programme. This money will be used among other things for developing an import replacement programme and a global marketing plan.

CANBERRY HOLDINGS PTY LTD, Canberra Fair, Dickson 610 mm gauge

(see LRN 44 p.7)

Canberra Fair's Chance *C.P. Huntingdon*, December 1986

Photo: Paul Simpson

A recent visit here saw the Chance "4-2-4" steam outline loco *C.P. Huntingdon* at the head of its train of three bogie carriages at the station. Full details of the loco and carriage manufacturer are : Chance Manufacturing Company Incorporated, 4219 Irving Street, Wichita, Kansas, U.S.A. The loco builder's number is 84-50-200-24, which incorporates date, horsepower, serial number, gauge. The motor, believed to drive front and rear bogies, is a "Continental" 4-cylinder petrol engine No TM27-5201. This unit was put into operation in December 1984, replacing the previous train used at this location, the Ruston 4wDM 304457 having been returned to K.Rubie at Forrester's Beach, and the disposition of the carriages unknown .

Paul Simpson 12/88

NEW SOUTH WALES

AUSTRALIAN IRON & STEEL PTY LTD, Cringila 1435 mm gauge

(see LRN 33 p.6)

Three more diesel locomotives were due to be withdrawn at the end of 1986. Included were the last two of the original batch of Com-Eng 565 kw Bo-Bo DE locos built at Granville from 1950, D6 and D8. The other loco was D30, a similar 645 kw Bo-Bo DE built by English Electric (Australia) at Rocklea, Queensland.

A.R.H.S. Bulletin Supplement 2/87

BOOLAMBAYTE 610 mm gauge

Unconfirmed reports have been received of a tourist steam railway which may be in operation by Easter 1987. This undertaking is located at Boolambyte, between Bulahdelah and Mayers Point near Myall Lakes. It would appear that rail for the project has been obtained from the Timbertown Railway at Wauchope, where the original light rail is being replaced. It has been reported that ex-Mourilyan Mill No.7 (Perry 0-4-2T 2714.51.1 of 1951) is to be made available by Steam Trains Pty Ltd for this project.

Ken McCarthy 12/86

HEAT CONTAINMENT INDUSTRIES PTY LTD, Unanderra Gauge unknown

Among quantities of refractory plant to be auctioned on site on 11 February were listed tunnel kiln cars.

Sydney Morning Herald 14/2/87 via Craig Wilson

GOULBURN CITY COUNCIL, Goulburn Steam Museum 610 mm gauge

(see LRN 49 p.3)

John Fowler 0-4-2T *Britannia* (16340 of 1924) was purchased at the Lachlan Vintage Village auction on 1 November 1986, along with the two four-wheel passenger cars. This locomotive originally went to Forbes from Bruce Macdonald, then of the Goulburn Steam Museum, in 1975. The carriages were also built at Goulburn, and are short open sided cross-bench vehicles fitted to cane truck underframes. *Britannia* is believed to have returned to the Goulburn Museum on 6 November 1986, with one of the two carriages also on site by the end of the month.

Since 1978, the only steam loco at Goulburn had been Krauss 0-6-0T *Stella* (3423 of 1896), and it is understood that this has not seen use for about 3 years. Both this loco and the Fowler are understood to be in need of heavy repair. The F.C. Hibberd "Planet" 4wDM (2388 of 1941) is still present and

expected to be in use in 1987.

It is said that the Council, National Trust and local businessmen intend to have the museum opening regularly from 1988, and that there are plans to revive the idea of extending the museum railway along the riverbank about 4 km to North Goulburn.

Ken McCarthy 12/86; David G.Mottram 12/86

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY INC. Albion Park 610 mm gauge

(see LRN 55 p.4)

The restoration of Perry 0-6-2T *Tully* No.6 (7967.49.1 of 1949) has reached the stage where trial steaming will be possible in the near future. The lagging and clothing of the boiler was completed at the end of November and by mid-December new cylinder pressure release valves had been manufactured and the boiler feed water valve rebuilt. Other items constructed and fitted during November and December included the blow down valve and control handles, ash pan locks, the sand domes and overhauled controls for them, and a false plate under the smokebox to prevent ash settling in the cavity above the front buffer beams. The Museum Committee has reached the decision that this loco will be painted black and green and it was planned to paint the boiler components in early January prior to fitting the new side tanks and cab.

Hudswell Clarke 0-6-0 *Cairns* (1706 of 1939) hauls a lovely array of carriages into "Yallah" Station, 14 December, 1986.

Photo : ILRMS

Work is proceeding with the construction of new siding points in the

museum station yard which will eventually serve the former Killingworth Colliery turntable. The A.& D. Munro Shay loco will be placed on this siding where the construction of a new composite unit using parts of the two Munro Shays (Lima 906 of 1904 and 2097 of 1907) will be carried out. The museum has obtained two RSJ members 8" x 4" each 9 metres long from which a new chassis will be constructed. It is the intention to use the spare boiler from Davenport 1595 of 1917 supplying steam to a former NSWGR D 58 class stoker unit to power the two 2 ft gauge Shay bogies made available some time ago by ANGRMS in this unit.

Under the Society's aim to have four locos in steam by 1988, work switched to ex-Corrimal Coal's 0-4-0ST *Burra* (Hawthorn Leslie 3574 of 1923) during December. The tradesman employed under the CEP scheme has been attending to the main axle journals and bearings as well as the eccentrics and straps. Work was expected to be completed on the cylinder valve openings during January. This work requires the "D" valve bearing surfaces on the cylinders to be built up and machined.

By the end of November the 1.5 ha picnic area had been enclosed by a new chain wire fence. This was carried out in time for the major steaming day of 7 December when over 1000 rides were taken by children attending the Christmas picnic of the local Oak Flats Bowling Club. Steam train fares were donated to the Illawarra Cancer Appeal on 14 December. Publicity in the local press and radio stations resulted in \$240 being raised for the appeal.

Ken McCarthy 12/86

PALM BEACH ENTERTAINMENT, Ulmarra 610 mm gauge

(see LRN 55 p.6)

As could be noted from the front cover of LRN 56, Timbertown's Fowler 0-4-2T 17881 of 1928 was hired from Timbertown for the filming of the TV mini-series *Fields of Fire* during October. The loco was sent out in "grubby" condition as the film company wanted a "workhorse" for its scenes. There will be two two-hour episodes in the series which is likely to be shown towards the end of 1987.

*Port Macquarie Express 8/10/86 via David G.Mottram;

PAUL SIMPSON, Panania 610 mm gauge

(see LRN 43 p.5)

1986 saw the completion of 50 years since the manufacture and delivery of Kelly & Lewis 0-6-0DM 5957 of 1936 to Clarke & Pearce's Rubicon Tramway in Victoria. Restoration of this loco has continued with the side

rods fitted to each sides and installation of equipment such as fuel tank and fuel line, radiator hoses, fuel filter and battery stand. A new paint scheme has been applied using blue with a yellow and black stripe on the buffer beam.

LRRSA member Ian Marks has made available one of the original builder's plates to be fitted to the loco. Cab fittings remain to be completed and when done, the loco should be ready to run for the first time in over 40 years.

Details of the exact date of delivery (sometime between July 1936 and January 1937) are being sought. Any reader who can assist is asked to ring Paul Simpson on (02) 771 3929 or write to P.O Box 105, PANANIA 2213.

TIMBERTOWN WAUCHOPE 610 mm gauge

(see LRN 54 p.5)

Trains here run on a circuit about 2 km in length and the trip usually takes about 10 minutes. No separate charge is now made for train rides. Heavy rail is being laid progressively, with 30 lb rail being replaced by 60 lb and some 80 lb. Currently, 60 lb is being laid from Upper Bago station. There is one set of points to an engine shed close to Timbertown station, and five sets near Broken Bago Station, serving the goods yard, workshop, and engine pit. Maximum grade is 1 in 30.

Timber is used for firing the loco, obtained locally at a very favourable price. At the present, all wood is loaded onto the locos manually from supply heaps at rail level. Six train trips per day is the normal holiday programme,

using about one ton of fuel. Extra trains are scheduled to suit the arrival of tour buses, and during holiday periods the train may run every 20-25 minutes for much of the day.

The fire in the loco is dropped each night, and re-lit each morning at about 6 am. Lubrication of the running gear is then carried out and the first scheduled trip runs at 10.30.

The favoured loco is Hudswell Clarke 0-6-0 1862 of 1953, which was retubed about May 1986 by Ballina Engineers. Working pressure is 150 psi. This loco works alternately with John Fowler 0-6-0T *The Green Hornet* (12271 of 1910). This works at 120 psi, and was also retubed around the same time as the Hudswell Clarke. It still runs without any boiler cladding. Fowler 0-4-2T 17881 of 1923 has recently been fitted with new side tanks and a spark arrester type cowl of local manufacture. As reported elsewhere in this issue, it was recently hired to a film company near Grafton. It may go into service at Timbertown in 1987.

QUEENSLAND

SUGAR MILL CLOSURES / AMALGAMATIONS - Mackay

Co-operative members rejected an historic proposal to merge Racecourse, Marian, Farleigh and North Eton Mills at a vote held in January. With a vote of 75% in favour needed by each co-operative, the figures achieved were 80%, 92%, 72% and 48% respectively. Although excluded from the merger by the other participants the members of Cattle Creek Mill also voted 72% in favour of a merger. Problems besetting the proponents of the merger included not only the exclusion of Cattle Creek but the withdrawal from negotiations of Farleigh in December, reversed in January, a split between the North Eton board and its Suppliers' Committee when the Board agreed to rejoin the merger talks, and the vociferous demands of Pleystowe growers for full financial benefits of membership of the new co-operative from the start. The effect of the merger would have been to enable the merging mills to receive Federal and State funding so as to be able to purchase Pleystowe Mill from CSR Ltd, and close it, thus enabling a rationalisation of cane assignments in the district. It is believed that this issue still may not be dead.

Mackay Daily Mercury 9/2/87; Editor

SUGAR MILL CLOSURES / AMALGAMATIONS - Johnstone River

CSR Ltd has taken action in the Supreme Court of Queensland in an attempt to prevent the Central Cane Prices Board from examining a financial

package involving CSR (owners of Goondi Mill), Howard Smith Ltd (owners of Mourilyan Mill), Babinda Mill and the Sugar Milling Adjustment Committee, as part of the Prices Board's examination of an application to rezone local cane assignments. The package would make Federal and State funding available to Howard Smith and Babinda to acquire and close Goondi Mill and repay some Babinda debts. Under this scheme, the Goondi crop would go to Babinda and Mourilyan, but the Goondi growers have bitterly opposed this, and are demanding to have their assignments transferred to South Johnstone Mill. The case in the Supreme Court will not be heard until late March or early April, and following its determination the Central Board would then have to reconvene at Innisfail. Thus any final decision may not be made until almost the start of the 1987 crush. If necessary CSR will put Goondi into readiness for the crush at short notice.

Mackay Daily Mercury 19/2/87, 26/2/87 via Editor

AUSTRALIAN SUGAR INDUSTRY MUSEUM, Mourilyan 610 mm gauge

(see LRN 55 p.7)

Hudswell Clarke 0-6-0 1099 of 1919 has now been moved to a display position adjacent to the museum building, and the chimney has been refitted. Contracts worth \$850 000 have been let for the development of the museum as a bicentenary project, and approval has also been given for a \$130 000 landscaping scheme under the Community Employment Programme.

C.J.Hart 2/87; D.J.Mewes 2/87

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610 mm gauge

(see LRN 55 p.6 & 56 p.7)

The boiler of Bundaberg Foundry 0-6-2T 5 of 1952 has been returned to Woodford following retubing by Babcock Australia. Work is now proceeding on the preparations necessary to refit it to the frames. A new regulator valve bracket has been manufactured, and a new chimney may have to be built.

The railhead has been extended virtually to Peterson Road, and ballasting work on the newly-laid section is to be undertaken. It is understood that a ballast wagon body suitable for fitting to the Society's ex-CSR line bogies will be made available on loan by Dreamworld so that this work can be carried out more easily.

Durundur Railway Bulletin 12/86; D.J.Mewes 2/87

BABINDA CO-OPERATIVE CENTRAL MILL SOCIETY LTD 610 mm gauge

(see LRN 55 p.7)

Babinda Mill advertised in the Brisbane Courier-Mail on 24 January for expressions of interest in the construction of a 3 km new tramline connecting the Babinda and Goondi tramline systems. The line was described as 3 km in length and with two pre-stressed concrete bridges. It would be presumed that construction of such a link will be deferred until the final determination on the closure of Goondi Mill is reached.

D.J.Mewes 2/87

CQ SALT INDUSTRIES, Bowen 610 mm gauge

(see LRN 38 p.7)

An unconfirmed report has been received that the tramway ceased to operate here a couple of years ago. The rails appear to have been lifted in several spots to allow road vehicles access to the salt pans. The four locos are still on site, namely Ruston & Hornsby 4wDMs 174142 of 1935, 285343 of 1949, and what is allegedly 285340 of 1949, and Motor Rail "Simplex" 4wDM 8653 of 1941.

(see LRN 54 p.12)

Russell Savage's new B-B PH loco nears completion in Mildura, Victoria

*Photo : Russell Savage
September 1986*

In September 1986, work began on track laying above the top points of the switch back. In five days, the construction gang laid 275 m of track as well as excavating three 450 mm pipe culvert drains. The track remains to be ballasted but has been roughly tamped as a safety measure. When only 55 m remained to be laid, a bush fire

swept the mountain side. Much work had to be put into cutting firebreaks and in particular protecting the loco shed and the track. This was successful with the only loss being three sleepers burnt when a number of trees fell across the track at the railhead.

The fire meant that some of the projects scheduled were not completed, but one successful new system was the welding of all rail joints on curves up to 27 m at a time, which has improved curving no end. Ballasting of the new track will be done in March with the use of the latest loco now under construction at Mildura.

Russell Savage 12/86

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (S.A.) INC. gauges various

(see LRN 55 p.14 & LRN 56 p.7)

Work is continuing to prepare Andrew Barclay 1067 mm gauge 0-6-0T *Peronne* (1545 of 1919) for regular use at the museum when it is relocated to Port Adelaide. It has been lifted to enable wheels to be removed, and to allow the cleaning and inspection of axles, springs, brakes and bearings. Further work is being done on the cab to bring it up to the necessary high standard.

Catchpoint 1/87

TASMANIA

HYDRO-ELECTRIC COMMISSION, Crotty 1067 mm gauge

(see LRN 54 p.13)

Five George Moss 300 hp diesel-hydraulic locomotives are being constructed for the 7 km tunnel excavations presumably part of the King River Scheme. The locomotives will be hauling 300 tonne loads incorporating 200 tonnes of tunnel rock spoil in 12 side-tipping Granby cars. Full-load operating speed will be 20 k/mh.

JOHN ROBIN, Jackeys Marsh 610 mm gauge

A 2 ft gauge wooden railed tramway is being built on a 93 acre property here, with the first 70 m having been laid in 1985. The only rolling stock at present is a sawmill trolley ex-VR Spotswood Workshops donated by Jim Baines.

Jim Baines 1/87

VICTORIA

JIM BAINES, Yangardook Tramway, Toolern Vale 610 mm gauge

(see LRN 31 p.21)

Brian Peart's Ruston & Hornsby 4wDM 223725 of 1944 arrived here in December 1985, and has seen plenty of service since. Previously on loan to Barry Beckerley of The Big Grape at Swan Hill (see LRN 48 p.11), the loco was fitted with a reconditioned engine by its owner at Spotswood. Motor Rail "Simplex" 4wDM 9979 of 1953, acquired from Racecourse Mill, has been in regular service since October 1981.

The bogie carriage built by Denis Steinhauser was disposed of some time ago to Alexandra Historical Society. It was replaced by a new four-wheeled carriage, the body of which built by North Sunshine Timber Cases, has been mounted on an ex-Racecourse Mill cane truck chassis. Two Rubicon Tramway bogies are in store awaiting use in an open air bogie flat passenger car. There are two ex-VR KS motor trolleys, one still 1600 mm gauge, and the others converted to 610 mm gauge, requiring frame straightening following a collision.

Late in 1986, a balloon loop was installed at the northern terminus of the line. The track running into the State forest at the top end was dismantled in July 1983. A spur line of approximately 110 m has been laid, trailing into the Bunsen Junction to Busselltown branch line.

Passengers are welcome to visit this interesting line, but need to write in advance to the owner at Lot 78F, Chapmans Road, Toolern Vale 3337.

Jim Baines 12/86

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 53 p.11)

Ex-Tasmanian Government Railways Drewry 0-6-0DM V12 entered service in January 1987. The locomotive was purchased in 1983 but conversion from 1067 mm gauge to 762 mm was delayed while manpower and finances were directed to major work on the NA class of steam locomotives. Sister loco V9

was also purchased to provide spare parts. Both were built in 1948.

The conversion involved raising the engine and gearbox and provision of a new transfer gearbox between the gearbox and the final drive unit. The cab roof has also been lowered about 150 mm in the centre, Westinghouse brakes and knuckle couplers fitted, and new steps provided. At the front, the footplate has been extended, and handrails provided in front of the radiator grille. The locomotive is capable of hauling a standard 12 car train but with this load cannot maintain the schedule of an NA.

Up to 7 February, the locomotive had provided a service on four Total Fire Ban days; the service being three return trips to Lakeside, departing Belgrave at 10.30 am 1.20 pm and 3.30 pm. To maintain the service, the train is reduced to eight cars. A fire patrol trolley follows all trains.

The loco was obviously made ready for service only just in time for the Fire ban season. When observed on 7 February it was still mostly in its battered ANR livery, but had grey undercoat in some parts, not a pretty sight at all. The covers on the engine compartments were removed, so the “works” could be seen. It also carried two fire extinguishers, still in their cardboard cartons. It is to be painted the same green livery as NRT 1, and is reportedly to be numbered D21.

Despite a forecast temperature of 38C and northerly winds (a combination of which should surely deter any sensible tourists . . . and railway photographers), the 10.30 train was well filled, so the loco will obviously earn its keep in bringing in revenue. During February, a 50% discount is being offered on Saturday train fares. Publicity resulting from that probably explained the good crowd on the train. Previously on Total Fire Ban days, NRT1 provided a very reduced service - two car trains (its maximum load) to Menzies Creek only.

The first impression of the loco is that it is big, both in width and height, almost out of proportion with its surroundings, although its axle loading is said to be about the same as an NA. Obviously it will look much better when fully painted but will probably lack the character of NRT1. One report has it that changing gears in the mechanical transmission causes a ride which is much rougher than usual on this line.

Frank Stamford 2/87

WESTERN AUSTRALIA

HARVEY FRUIT BOWL, South West Highway, Harvey 610 mm gauge

On 26 December 1986, the 2 ft gauge Harvey Fruit Bowl railway commenced operations. The 2.5 km line is modelled on the “Big Pineapple” railway in

Queensland, and runs through orchards on the outskirts of Harvey, south of Perth. A Kless Engineering 4wD loco hauls two or three bogie coaches on 45 lb rail.

David Whiteford 1/87

DEPARTMENT of MARINE & HARBOURS Point Samson 1067 mm gauge

(see LRN 36 p.11)

A sale by tender of stockyard materials and railways lines at Port Samson goods yard was advertised in October. (Previous correspondents have indicated that the yard here contained over 50 wagons - Ed.). Tenders could be made for stockyard or rail or both, and sleepers were not to be removed and were to close on at Wickham on 3 November 1986.

MEETINGS

HOBART

Members wishing to attend this meeting on Friday evening, 17 April (Good Friday), to be held in conjunction with the L.R.R.S.A. Tasmanian Tour should

contact Jeremy Wainwright on (002) 30 6049 (business hours) or (002) 23 1392 (AH) for details. Entertainment will include an item on Victorian timber tramways and an item on Tasmania.

ADELAIDE

Chris Andrews will show videos of narrow gauge railways in South America.
Location: 150 First Ave., Royston Park Date: Thursday 2 April at 8:00 pm.

SYDNEY

**For the information of those unable to attend the February meeting, the motion circulated to members was unanimously agreed to. It was further agreed that because incorporation has been delayed, the motion not take effect until later this year.

APRIL MEETING Jeff Moonie went on the tour of Cheetham Saltworks at Laverton (near Melbourne) and two of the M.M.B.W. sewer construction sites in March, and will show his slides at the April meeting.

Location: Board Room Bowlers Clubs 95 York St. Sydney. Access through the Forestry Commission office building next door (Town Hall side). On Second floor.

Date: Wednesday 22 April at 7:00 pm

MELBOURNE:

AUDIO NIGHT. The next meeting will be a series of sound recordings of steam locomotives, including G42, timber tramways and mining tramways in Western Australia, and Shays, Heislars and small Mallet locomotives on USA logging lines; together with a variety of music inspired by the steam locomotive. An informative, and occasionally outrageous pre-recorded commentary will introduce each item, whilst slides will provide a visual backdrop. Revealed for the first time will be the sensational happenings on the occasion of the Entry of the Garratt into Walhalla. The presentation is being prepared by Frank Stamford and Peter Evans.

Location: Ashburton Uniting Church Hall, Ashburn Gve., Ashburton

Date: Thursday 9 April 1987 at 8:00 pm

EDITORIAL

Almost 10 years ago, I approached the Council of the Society with an offer to edit a news publication. When my offer was accepted, little did I imagine that this publication would continue under my editorship for a total of 58 issues of which I would be directly responsible for the entire contents of 56. Now, a quarter of a million words later, the time has come when I must relinquish this task. It has been a very interesting 10 years during which time I believe I have received far more than I have given. I have made many new friends and learnt a lot. I have greatly valued the enormous support I have received from Council members during this time, and wish particularly to mention Frank Stamford, Arthur Winzenreid and Mike McCarthy for their special friendship and assistance.

There are two particular groups of people without whose assistance *Light Railway News* could not have existed. The first are the various members of the Distribution Team who have assembled the issues and made up the mailouts. Their task is an onerous and an unsung one and I salute them. The second (and most valuable of all) have been the individuals and groups who have supplied the information which goes into LRN. These people have taken the time to supply me with details of their observations in order to benefit others in the Society, and to further interest in our hobby. They have my heartfelt thanks and I hope they will be joined by many more contributors to future issues of LRN.

It will be noted that the editorial address of LRN will remain the same until a permanent editor is found. Although this is the last issue I intend to edit, I am available to assist the new editor, who as yet is unknown. I sincerely appeal to readers to consider taking on this most rewarding and interesting task. With best wishes to all members.

John Browning, LRN Editor 1977-87.

NOTES, CORRECTIONS AND COMMENTS

Taronga Zoo / Historic Village Motel Coolangatta

(see LRN 55 p.2)

Ken McCarthy writes that just when various items of information seemed to clear up the source of the 610 mm gauge railway rolling stock at Coolangatta NSW, an extract from *The Staff* magazine (of the NSW Railways and Tramways) for 23/1/1930 has emerged to confuse matters.

That issue reported that the latest addition to the Government "railways"

had been built at Taronga Park Zoo. The earthworks were carried put by the Zoological Gardens staff, while the track was designed and laid by the Tramways Department. The gauge was 1 ft 10 in (559 mm) and the track length 500 feet (153 m) in the form of a flattened oval. The deepest cutting was 3 feet while the sharpest curve was 30 feet radius. The curves were transitioned and superelevated and "checked" on curves. 20 lb rails were used on 4 ft 9 in x 4.5 in sleepers laid on a ballast bed. The rolling stock came from Melbourne and consisted of a petrol-driven locomotive with the high-sounding name of "Here She Comes", as well as several carriages. The train operated at a speed of 6 miles per hour.

RESEARCH COLUMN

Calder Highway Road Construction, Victoria

Craig Wilson, of 22 Jackson Crescent, PENNANT HILLS 2120, has obtained a negative of a photograph showing what appears to be a 2 ft gauge Malcolm Moore 4wPM loco of the type built for the Australian Army in 1943 hauling a rake of at least 40 "Jubilee" skips. The scene is believed to have been taken in 1951 somewhere on the Calder Highway in western Victoria, and the loco carries the number 4-8-245 painted on the front of the left hand side frame. Can anyone provide any details as to locations ownership and/or identity?

Sealers Cove, Victoria

The Victoria Archaeological Survey is undertaking archaeological and historical research on sawmilling at Sealers Cove, Wilson's Promontory National Park, Victoria. The Survey is looking for any photographs documents company records and reminiscences relating to the Buchanan and Turnbull Mill (operating 1850-65) and the King and McCulloch Mill (operating 1903-6). Anyone who may be able to provide any assistance is asked to contact Iain Stuart or Rosemary Buchan at the Victoria Archaeological Survey, PO Box 262, ALBERT PARK 3206 - ph.(03) 690 5322.

SEA SALT & SEWER TOUR III

A report of the LRRSA Cheetham Salt and MMBW 7 March Tour was not received in time for this issue, but photographs did. Hopefully, a report and more photographs will be published in the next issue.

Ruston & Hornsby 610 mm gauge 4wDMs 2 (283509 of 1949), 1 (252805 of 1947) and 3 (283510 of 1949) out of use at Cheetham Salt, Laverton.

Gemco-Funkey 762 mm gauge 125 hp 4wDH tunnelling locos 13 (2896/PI.0474/L620/68 of 1968), 12 (2372/PI.0455/L621/68 of 1968) and 11 (2707/PI.0472/ /68 of 1968) on the surface at Hoppers Crossing site.

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

HEXHAM ENGINEERING PTY LTD, Hexham, N.S.W.

(see LRN 52 p.8)

The first locomotive out of six orders inherited from the defunct E.M. Baldwin company is already in service. The Hexham/Baldwin name is to be phased out and replaced by the Hexham name and logo over the forthcoming months. Hexham is confident of developing Baldwin's markets in the sugar

industry, tourism, civil engineering, and of course mining, the area in which Hexham was already involved before the takeover of the rolling stock assets of Baldwin

Mackay Daily Mercury 2/4/87

QUEENSLAND

SUGAR INDUSTRY RATIONALISATION, CSR Ltd / Pioneer Sugar Ltd

On 31 March CSR Ltd announced a takeover bid for Pioneer Sugar. CSR already owned 31% of Pioneer Sugar prior to the offer. Pioneer Sugar owns Pioneer and Inkerman Mills on the Burdekin and Plane Creek Mill at Sarina, near Mackay. As CSR owns the other two Burdekin Mills, Kalamia and Invicta, a rationalisation in this area seems likely to follow a successful takeover. In terms of tramway operations this would be interesting as Pioneer is unique in having a 3 ft 6 in (1067 mm gauge) tramway system. Plane Creek Mill may become available for some part in a Mackay area rationalisation, where CSR also intends to dispose of Pleystowe Mill. In addition to Goondi Mill near Innisfail (see below) it is also believed that CSR has indicated that Hambledon Mill near Cairns is available for disposal. Thus CSR appears to be concentrating its sugar interests to the lucrative Burdekin and Herbert areas. There has also been speculation that the recent acquisition of a parcel of Bundaberg Sugar shares by Industrial Equity may foreshadow a CSR move into this area also. .

Mackay Daily Mercury 1/4/87; Editor

SUGAR INDUSTRY RATIONALISATION, - Johnstone River

(see LRN 57 p.9)

The Queensland Government has acted to resolve the legal impasse which threatened to prevent the closure of CSR's Goondi Mill for the forthcoming season. The Sugar Milling Rationalisation (Far Northern Region) Act of 1987, which received the Royal Assent on 19 March has the effect of closing Goondi and transferring its assignments of 320,000 tonnes of cane to Mourilyan Mill (in the case of land south of the North Johnstone River and the Innisfail Estate) and 280,000 tonnes (the remainder north of the North Johnstone River) to Babinda. Tramways in these areas are being sold to these two mills but no details are to hand as to the exact disposition of Goondi's rolling stock and other assets between the two mills. The initial reaction of Goondi growers was unanimously to vote to refuse to supply cane to Babinda and Mourilyan Mills because of their belief that their rights had been ignored. They wish to join the South Johnstone Co-operative Sugar Milling Association.

It is understood that a 3 km connection will be built from Babinda's tramline

system to link up with that of Goondi's. Cane to Mourilyan will presumably be routed via Wangan over the Queensland Bridge which until 1977 was part of the Innisfail Tramway, and has not been used regularly since.

Substantial government loans to Babinda Mill have prompted the State Government to take steps to be able to take control of the Babinda Co-operative Sugar Milling Association Ltd until such time as it discharges its financial obligations. This step, also authorised in the legislation is a reminder of the days in the past when the Queensland Government was previously forced to take control of a number of the Central Mills which it had helped to establish.

BULLENS AFRICAN LION SAFARI & ZOO, Yatala 610 mm gauge

(see LRN 26 p.8)

The railway here does not appear to have been used after about 1980. The large petrol engined "4-4-4T" locomotives probably built by John Dunlop in Sydney, together with a carriage mounted on CSR line bogies has been placed near the entrance in a static display.

BUNDABERG CITY COUNCIL, East Rotary Park, Bundaberg 610 mm gauge

In mid-April it was observed that *Old Germany*, Orenstein & Koppel 0-4-0WT 6805 of 1914 has been removed from the park where it had been on display since 1965. It is not known what has happened to this locomotive.

Editor 4/87

G. CHAPMAN, Murrumba Downs 610 mm & 1067 mm gauge

Visible from the Bruce Highway on the northern outskirts of Brisbane are a variety of locomotives stored at an industrial premises. There are three 2 ft gauge steam locomotives, the first being Bundaberg Fowler 0-6-2T 8 of 1953 ex Proserpine Mill 6. This loco was sold by the mill in 1986 and is dismantled

and without boiler but with frame components in good condition. Hudswell Clarke 0-4-2T 1078 of 1914, originally Mourilyan Mill's *Maroochy* is also on site. This unit, which appears to be reduced to boiler and frame, was obtained by a private buyer from Rocky Point Mill in around 1982, having previously been in the Gilltrap's Auto Museum at Kirra Beach. Hudswell Clarke 0-6-0ST 853 of 1908, originally North Eton Mill 2, has come from Buderim Zoo & Koala park probably in the last 12 months. It had been on display there minus its saddle tank for some years. Also on site is 3 ft 6 in gauge Goodman 4wWE 6035 of 1950, property of the Australian Narrow Gauge Railway Museum Society.

CQ SALT INDUSTRIES, Bowen. 610 mm gauge

(see LRN 57 p.10)

Recent visits to the works confirm that the rail operations here have indeed ceased, reportedly at the end of 1983. The four four-wheeled diesel locomotives, Ruston & Hornsbys 174142 of 1935, 285343 of 1949 and what is believed to be 285340 of 1949, and Motor Rail "Simplex" 8653 of 1941 were observed parked in the shed. It is believed that these locomotives and the approximately 30 side-tipping skips at the works are available for sale.

CSR LTD Victoria Mill 610 mm gauge

(see LRN 55 p.8)

Further details are to hand of double-heading trials at Victoria Mill held in late September 1986. The two Clyde HG-3R 0-6-0DH locos used back-to-back were *Perth* (69-682 of 1969) and *Canberra* (65-433 of 1965), and in addition to a run with 298 bins on 29 September, a second run with 327 bins (1621 tonnes gross) was made from the Stone River to the mill on 30 September. It would appear that multiple-uniting will be introduced to this mill when technical and industrial problems have been overcome.

It is reported that two of the mill's line cars are available for tender. These are likely to be Hansen's 4wPM units, made locally between 1972 and 1978 (see LRN 18 p.1) and incorporating Volkswagen engines. The use of line cars and small "navvy locos", once very common, has become increasingly rare with the use of road transport by maintenance crews, the use of mechanised maintenance equipment and the upgrading of track standards which has reduced the need for routine maintenance during the season.

ISIS CENTRAL SUGAR MILL CO. LTD 610 mm gauge

(see LRN 57 p.11)

Former number 3, a Clyde Model DHI-71 0-6-0DH (55-66 of 1955) has had its cab removed and has been converted into a "slave" unit permanently attached to sister loco 6 (59-204 of 1959). This is the second such twin unit at Isis Mill.

The Hexham brake wagon supplied last year is unique in being of a bogie design. The unit has two four-wheel bogies and the chassis used is similar to that used in the Baldwin bogie diesels, with a massive concrete block painted yellow placed on the frame above each bogie. The engine used to power the radio-controlled braking system is mounted in the centre of the vehicle. The unit carries a Hexham/Baldwin plate, and welded onto each side of the frame are letters and numbers indicating "HE 663". Presumably 663 is Hexham's serial number. Concrete blocks have already been cast and were noted in the yard ready to be placed on another brake wagon on order from Hexham Engineering for the forthcoming season. Also noted in the yard was a new Gemco four-wheeled self-propelled resleeper and scarifying machine. This carries serial number 521885005295-R853-87 of 1987.

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 56 p.6)

The new Mia Mia high level road/rail bridge, 175 m in length and 15 m above the old crossing is substantially complete. Track was in place across the bridge in late March, although some rail joints were still to be fixed. The sleepers are laid on top of a mat which seems to be sealed with a bitumen type material. It appeared that the track over the bridge would be set in concrete before the road surface was laid over the concrete bridge decking. Track work on the deviations on each approach to the bridge was substantially complete.

PALMER TUBE MILLS (AUSTRALIA) PTY LTD, Acacia Ridge 1067 mm & 1435 mm gauge

This company has obtained a diesel locomotive for use at its Brisbane plant. Standard gauge wagons are hauled from the main line through an adjoining factory area and into a dispatch area where they are loaded using an overhead crane. A third rail has been laid to enable wagon movements to be handled by a 3 ft 6 in gauge loco, Plymouth 4wDH 6125 of 1958 which had been noted for sale by Index Industrial Brokers in 1981 (see LRN 25 p.10).

It had originally been used in the Snowy Mountains Scheme, and later at Bellbird Colliery, Cessnock, NSW. The 12-ton loco has been rebuilt with new bodywork and an open cab.

RACECOURSE CO-OPERATIVE SUGAR ASSOCIATION LTD, Mackay 610 mm gauge

(see LRN 57 p.11)

The new balloon yard layout was substantially complete by mid-March with a new connection to the main line completed. The full yard has four roads for full bins and three escape roads. A single track runs from the tippler to the empty yard which also has four tracks. Trackwork is huckbolted 60 lb rail on timber sleepers for plain track, with prefabricated all-steel pointwork.

Editor 3/87

ROCKHAMPTON CITY COUNCIL, Curtin Park, Port Curtis Junction 610 mm gauge

In mid-April it was observed that Hudswell Clarke 0-6-0ST 496 of 1898 had been removed from the park where it had been on display since at least 1968. Even the rails on which it had stood have been removed. It is thought that this locomotive may have been acquired for preservation.

Bill Gray 4/87; Editor

SEA WORLD, Main Beach, Southport 610 mm gauge

The Sea World railway continues to operate with steam outline diesel locomotives. The track forms a circuit and there are three locomotives. In late April, one five-carriage train was in service, hauled by 0-4-2DH No.6, built at Seaworld in 1975 as a scale "replica" of an early QGR A10 locomotive. This locomotive is painted pale blue. The second locomotive, numbered 99, was rebuilt at Seaworld in about 1977 from a Caldwell Vale 4wDM originally used by sand miners at Kingscliffe, NSW, and is painted red and yellow. This would appear to be the spare loco. It originally ran with a rake of four-wheel cars as a "mine train" but these vehicles were not seen. The third loco attached to a five-car train in the shed is a second A10 replica, very similar or identical to No.6, and painted red. This would have been built in the last few years but further details are not known. The carriages are open toastrack cars mounted on ex-CSR line bogies although with replacement wheels and axles.

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (S.A.) INC. gauges various

(see LRN 57 p.12)

Regular steaming of the boiler of *Peronne* (Andrew Barclay 1067 mm gauge 0-6-0T 1545 of 1919) has continued and no troubles have been encountered. The locomotive's underframe has been cleaned down and further steel work repaired. The whole steam brake rodding and cylinder has been stripped for servicing and cleaning, ready for replacing. The three driving axles will be turned and refitted to the underframe to ensure a long life for the axleboxes. It is hoped that the locomotive will be completely restored and ready for service at the new museum at Port Adelaide by the end of the year.

Catchpoint 3/87

VICTORIA

A1 Mine, A1 Mine Settlement, near Gaffneys Creek 610 mm gauge

Federal Opposition Leader John Howard opened a new crushing mill at the mine on 11 March. This location, which was reported in *Light Railways* a number of years ago, in the past operated Greenwood & Batley 4wBE 2129 of 1948, a 5 hp 2-ton "trammer" which the Greenwood & Batley works list records as being for "A1 Consolidated Gold". It is not known if this was the same machine which featured in TV news reports painted dark green,

and hauling light green painted mine skips, one of which according to press reports featured in an embarrassing derailment. It is believed that an illustrated article in *The Australian Post* of 19 April 1984 featured the mine and the A1 Mine Settlement.
