It is reported that two steam locos sold by auction by the Lachlan Vintage Village, Forbes, last year were acquired for use at this location. These locomotives are Bundaberg Foundry "Bundaberg Fowler" 0-6-2T 4 of 1952 and John Fowler 0-4-2T 16341 of 1924. Both are understood to require heavy work before regular operation is possible. Further reports would be welcome.

D.J. Mewes 4/87; Editor

WESTERN AUSTRALIA

HOTHAM VALLEY TOURIST RAILWAY (W.A.) INC. 1067 mm gauge

(see LRN 55 p.16)

A \$30,000 bicentennial grant has been made to assist in the restoration of 4-6-0 71 *Menzies* (Dubs 3595 of 1895). The work is to be completed by 31 October 1988 and includes fitting a new smoke box tube plate, obtaining tyres from Tasmania for the driving and tender wheels and shrinking these on to the wheels, overhaul of the running gear, replacement of wasted sections of the frames, at least the lower part of the smokebox and the tender water tank, and rebuilding the spark arrester. It is planned that the locomotive will be used on the Etmilyn Tramway service. This ex-WAGR locomotive was used in timber line service by Millars, and is in substantially original condition including wood burning, its cow-catcher, brass dome and safety valve surround, copper-capped chimney, and kerosene headlight.

Pinjarra Steam Express 4/87

WEST AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC. Bennett Brook Railway, Caversham 610 mm gauge

(see LRN 56 p.10 & 55 p.16)

The Gemco 0-6-0DMs built in 1964, regauged from 1067 mm gauge, has entered traffic numbered PW27. Livery is dark blue with yellow stripes and a triple air horn and headlights are fitted. This locomotive and the three AQ carriages were used for night running around the loop in a joint Christmas social with the Perth Electric Tramway Society.

Since the official opening, the steam locomotive has not been allowed to

run over the loop line, and passenger services on this section are suspended as a result. This situation arises from the fact that the track has to be passed by Westrail before being handed over to the Society by the State Planning Commission. The first step is a permanent survey of the tracks to be followed by negotiations over what remedial work needs to be carried out, and by whom. In the meantime work is being done on maintenance and upgrading on the Mussel Pool to Central line, work on further coaching stock and steam locomotive restoration, as well as Mussel Pool - Central train services.

Westrail have placed a total of 10 bogie wagons on permanent loan to the Association for possible future regauging and use as passenger stock. This is in addition to the 5 wagons owned by WALRPA, three of which have already been fitted with coach bodies and designated AQ and AQB. Details are as follows:

Number	Class	Type	Owner	Remarks
1751	R	High side wagon	Westrail	
1783	R	High side wagon	Westrail	
1788	QBB	Timber bolster wagon	WALRPA	ex R. Converted to AQ6.
2889	QBB	Timber bolster wagon	Westrail	ex Q.
2970	QBB	Timber bolster wagon	WALRPA	ex R. Converted to AQB9.
3251	V	Covered van	Westrail	
3263	VW	Covered workmans	Westrail	
3273	WV	van Covered workmans	Westrail	
3304	VW	van Covered workmans	WALRPA	conversion commenced
3326	V	van Covered van	Westrail	
3578	QBB	Timber bolster wagon	Westrail	ex R.
3644	R	High side wagon	Westrail	
4461	R	High side wagon	Westrail	
4745	QBB	Timber bolster wagon	WALRPA	ex R. Converted to AQ7.
4775	QPS	Pipe carrying wagon	WALRPA	Frame only.

Rusty Rails 12/86, 2/87, 4/87; Western Rails 3/87

OVERSEAS

SRI LANKA Kelani Valley Railway 762 mm gauge

This line still operates between Colombo Fort and Avisawella (55 km) on a weekday basis only. It formerly continued to Ratnapura (Sri Lanka's "gem city") and Opanake (140 km), but this section has been lifted. The line was operated by a fleet of Beyer, Peacock 4-6-4T locos, based at Dematagoda, 4 km from Colombo Fort. Eight J2 class saturated locos were built between

1912 and 1919, while six J1 superheated locos followed in 1925-9. Hunslet supplied three P1 class 132 hp 0-6-0DM locos in 1949 and five N1 class 492 hp 2-6-2DH locos followed from Krupp in 1953. Three Kawasaki 800 hp Co-Co DE locos arrived in 1972.

Freight services no longer operate and the limited passenger patronage suggests that the future of the line is clouded. In February 1987 there were three morning services from Colombo Fort to Homagama, while there were five evening services. One of these goes through Avisawella and returns next morning, the others terminating at Panapitaya or Homagama.

A local train departs Avisawella at 1515 for Panapitaya and returns at 1830. P1 529 (Hunslet 4158 of 1949) is based at Avisawella for this service. The diminutive loco receives considerable care and affection from its driver and fitter. P1 530 (Hunslet 4159 of 1949) is at Dematogoda, while sister loco 527 (Hunslet 4156 of 1949) has been transferred with two carriages to the childrens railway which runs for about 1.5 km through Victoria Park. J1 4-6-4T 220/1 and 291/2 are serviceable with 221/92 in regular use. 264 and J2 160/74/6/7 are stored in Dematogoda running sheds while historic K1 4-4-0T 106 which was used on the Uda Pusselawa Railway was dumped in the open. A sister loco met a more spectacular end during filming of *The Bridge over the River Kwai*.

Two Sentinel steam railcars, 331/2 are retained. 331 was overhauled and ran to Homagama on a trial run in early February 1987, its first outing since 1972. There are plans for full restoration of this unit for tourist services, although approval for this has not yet been granted. A further item of interest is the steam traverser at the Dematogoda works. It features a Cochran vertical boiler (No.101) and a Ransomes & Rapier steam engine of 1912. All narrow gauge locomotive and rolling stock overhauls are undertaken at these workshops.

Your reporter took the 1735 service from Colombo Fort behind J1 221 on 25 February. The 762 mm gauge train is diminutive in comparison with the 1676 mm gauge trains at adjoining platforms, and the unbraked wooden carriages appear to be of Victorian antiquity. Passengers readily condemn the train as uncomfortable, rough and, above all, slow. For the visitor however, it offers a fascinating backyard view of life in Colombo's slums and the contest of the links of the Royal Colombo Golf Club, through which the driver accelerates with a defiant burst of speed. Above all, there is the sound, smell and soot of a steam locomotive! At the large market town of Nugegoda, we crossed with N1 564 and the opportunity of the return trip to Colombo on this train was taken.

Group steam tours of the Kelani Valley Railway can be booked through JB Tours, 42 Glen Aber Place, Colombo 4. For those who wish to travel the full

length of the line, the Avisawella Rest House is located near the station and is recommended for an overnight stay.

Bob McKillop 3/87

MEETINGS

MELBOURNE:

The Easter Tasmania Tour was a great success with 12 participants. Weather conditions were mostly ideal and many excellent slides and photos were taken, so why not come along and enjoy a great slide show on Tassie.

LOCATION : Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE : Thursday 11 June at 8.00 pm.

SYDNEY :

Where do you find narrow gauge timber tramways with 50 mile runs with 0-8-0 steam locomotives? In snow too. In China of course, and at our June meeting Ross Mainwaring will show evidence from his latest trip. Not to be missed.

LOCATION : Board Room Bowlers Club, 95 York St, Sydney, access through the Forestry Commission office next door (Town Hall side). On second floor.

DATE : Wednesday 24 June at 7.00 pm.

ADELAIDE :

Contact Arnold Lockyer for details.

LOCATION : 150 First Ave., Royston Park

DATE : Thursday 4 June at 8.00 pm.

LRN EDITOR

Several people have expressed interest in taking on the editorship of LRN. In the meantime, contributions may still be sent to John Browning who is acting as a news editor. This issue was produced by Peter Evans, Mike McCarthy, John Browning and Frank Stamford.

NOTES, CORRECTIONS AND COMMENTS

HYDRAULIC TRANSMISSION

W.A. Pearce writes that there are two kinds of hydraulic transmissions. The first, "hydrostatic", is where the engine drives a hydraulic variable delivery pump, which in turn drives hydraulic motors connected to the loco wheels. The second, "hydrodynamic" or "hydrokinetic", is where the engine drives a turbine system arranged to give variable flow rates (a torque converter), this being coupled to the driving wheels. A "fluid flywheel" or "fluid coupling" does not change the torque supplied by the power unit from the driving wheels, so locomotives so fitted are considered to have "mechanical" transmission.

Mr Pearce points out that hydrostatic transmission is widely used by the Italian State Railways for shunting locomotives, and that the Italian firm Ranzi manufacture hydrostatic industrial locomotives in which the hydraulic fluid is not oil but a very finely ground powder.

FIELDS OF FIRE

(See LRN 57, p.7)

This TV mini-series made last year went to screen in many parts of Australia in the past few months. A 2 ft gauge line passed down the main street of what purported to be "Silkwood" (North Qld) and the motive power featured was Timbertown's 0-4-2T Fowler 17881 of 1928. There were also canefield scenes featuring loaded cane trucks which appeared to be built with a timber superstructure specially for the film, presumably on steel underframes from Timbertown.

G. CHAPMAN

Thanks to John Buckland for pointing out an error which occurred in LRN 58, p.5. Hudswell Clarke 0-4-2T 1078 of 1914 was of course ex-Moreton Mill, not Mourilyan Mill.

RECENT PUBLICATIONS

Railmac has released two new titles dealing with private railway

locomotives. *Industrial Locomotive Selections (No.1)* deals with ten locations in South Australia and western Victoria in 16 pages. *Silverton end of the line* of 28 pages is based on a private publication of 1970 which commemorated the end of narrow-gauge services. Both these publications contain plenty of interest, but the quality of photographic reproduction is rather variable.

J.B.

RESEARCH COLUMN

TARONGA ZOO

(see LRN 58, p.2)

John Buckland writes with his recollection of seeing a “putt-putt machine trundling round a circle of track” beside the elephant rides at Melbourne Zoo, when he was about seven or eight years old (I am not sure what vintage that must make the machine). On the “smokebox” was the legend “Here she comes”. John remembers the ride on the elephant, but not on the train ...

CALDER HIGHWAY CONSTRUCTION

(see LRN 58, p.3)

John Buckland points out that the Calder Highway runs from Melbourne to Bendigo and Mildura, rather than being in western Victoria.

FIELD REPORT

BRIGGSVILLE, NSW

The NSW Forestry Commission has put out a guide to the Moonpar Forest Drive near Dorrigo. This includes a section of tramline formation which once ran to Briggsville with steam locomotive power. Stops are at a section of tramline spanning the head of a gully and at a tallowwood and brush box bridge which still survives.

R. Gilbert

McIVOR TIMBER & FIREWOOD COMPANY, Tooborac, Vic 1600 mm gauge

The “Towards Graytown” Branch Found!

On 29 March six members of the McIvor Survey Group found another of the elusive McIvor tramway branches, that which went “towards Graytown”. Acting on sightings of alleged earthworks near a road, and blue pencil lines on an old map, the group found a very shallow cutting and embankment, which could have been a tramway, but could also have been many other

things. Then we saw what appeared to be a very old piece of 4 x 2 lying on the ground. Nothing significant in that, until we realised there was another lying parallel to it about five feet away. Probing revealed that these were not 4 x 2's but much larger pieces of timber, most of which was buried. After some genuine archaeological digging, we found the ends of both pieces of timber, each with a bolt head, which showed that they were attached to a cross piece, which was now well and truly buried. The bolt heads were 5 ft 6 in apart, which would have placed them right under the centre of the rails. This was a cattle pit or small culvert, and if we had not stumbled upon it the Graytown branch would still have been a mystery.

We also found where this line junctioned with the Cherrington line, a most interesting spot, which unfortunately the 1972 Mclvor Survey Group missed. There were considerable earthworks here, signs of sidings in several places. It is possible that this was the site of the junction of the Costerfield, Redcastle, Cherrington and Graytown lines shown on traditional Mclvor maps. There is some evidence to support that supposition, but we were not able to find any remains of these lines in nearby paddocks. Up to 70 years of ploughing makes things difficult in this country.

(Frank Stamford)

T.A.C.L. Rail Tractor - A Worthwhile Preservation Project

LIKE TO HELP RESTORE THE CLIMAX'S LITTLE BROTHER?

The TACL rail tractor was an unusual form of 4-wheel tractor used on Victorian timber tramways, its most prominent feature being large spur gears above the back axle. TACL tractors were used on the FCV's 3 ft gauge Thomson Valley Tramway and 2 ft 6 in gauge Tyers Valley Tramway. They were built in Melbourne in the late 1920s by the Tractor Appliance Company Limited - a Malcolm Moore subsidiary. LR 38 pages 4 and 7 has photographs of them in action.

One of the former Tyers Valley tractors is now in the possession of the PBPS, but is in pieces and in need of much work to restore it, either for static display or as a working exhibit.

As the PBPS is very heavily committed to other work, it is likely to be a long time before they can get round to working on it. But it is worthy of restoration, I believe the only one of its type still in existence, and although by no means beautiful it does typify the ingenuity which was used on Victoria's timber tramways. And, it worked on the same tramway as the Climax which is expected to re-enter service this year.

Members of the LRRSA would like to undertake the restoration of the TACL

if a suitable team of volunteers can be found. Anyone interested should contact Frank Stamford on (03) 830 1640 (evenings).

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

GEORGE MOSS LTD, OSBORNE PARK, W.A.

(see LRN 57, p.4)

Gemco has won a contract to supply an order of battery locomotives to Lac Minerals of Canada for use at its Macassa goldmine in Kirkland Lake, Ontario. This is the first Gemco export order for North America, but it is hoped that more orders will be secured from the Canadian mining industry.

Gemco's order for five 1067 mm gauge diesel locomotives for the Tasmanian Hydro-Electric Commission is probably completed as the first was observed under test at Subiaco station in early May 1986.

Western Rails 7/86: Australian Railway 1/87

PTA ENGINEERING PTY LTD, LAUNCESTON TAS.

(see LRN 52, p.8)

It is reported that this company may have been successful in a tender to supply the Melbourne & Metropolitan Board of Works with five battery-electric locomotives.

Robert James 6/87

NEW SOUTH WALES

BOOLAMBAYTE 610 mm gauge

(see LRN 57, p.5)

Ex Mourilyan Mill No. 7 (Perry 0-4-2T 2714.51.1 of 1951) was transported from St. Ives Sydney to Boolambayte on 19 May 1987. This loco is being made available by Steam Trains Pty Ltd for a new tourist project in the Myall Lakes region.

K. McCarthy 6/87

BULADELAH LOGGING RAILWAY 610 mm gauge

(See LRN 57, p.5)

The Buladelah logging railway is part of the programme for the Myall Lakes Christian Youth Camp, and operates in an area which once supported several light railways for timber extraction.

The 610 mm gauge railway is located in heavily timbered forest and is being

constructed down the slope of a valley with the incorporation of a zig-zag. At the moment 500 feet of track is laid in 30 lb rail (ex- Timbertown) spiked to brand new sleepers cut on site. The railway will attempt to faithfully recreate a timber tramway and has a great deal of scope for extension.

Trains are to be operated by Perry 0-4-2T 2714.51.1 of 1951. This loco was run for the first time in 25 years on Saturday 6 June and performed faultlessly. It has a boiler certificate for 180lb / sq. in and is leased to the project until 1990 by Bruce Belbin.

The railway is located 10 km from Buledelah and 1km off the Lakesway, and is run by John and Marilyn Baker. It is open Thursday, Friday and Saturdays, Public and School Holidays. Enquiries should be directed to Box 41, P.O. Buladelah 2423.

Bruce Belbin 6/87

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY INC. Albion Park. 610 mm gauge

The third C.E.P. session finished during March 1987. The final stage of this session was involved with the construction of the 6 m x 19 m carriage shed, restoration work on the main bearings and dee valve surfaces on 0-4-0ST *Burra* (Hawthorn Leslie 3574 of 1923), construction of new sand pipes and overhaul of the sand dome flow valves on 0-6-2T, Tully No. 6 (Perry 7967.49.1 of 1949), completion of the 6m x 4m buliding housing the paint store, employees' meal room and small carpenters shop, preparation of footings and components for the 6m x 6m members amenities building, overhaul of the spare Leyland petrol engine for the Leyland Krauss (ex 0-4-0T Krauss 2179 of 1889) *Newbold*, major maintenance to the Ruston and Hornsby and Leyland-Krauss locomotives.

With the conclusion of the C.E.P. projects, members work parties have strengthened. On Saturdays the usual attendance is 12 to 15 workers while 6 to 8 retired and shift working members usually attend the museum on Tuesdays and Thursdays.

By early June all major components of the Perry Loco *Tully* No 6 had been assembled and work was then progressing on refitting injectors, main boiler water feed valves, drain cocks and cab fittings. This engine has been spray painted green and black to automobile standards. The professional finish of the livery makes one feel that it will perhaps be a pity to actually fire and steam this unit!

At the end of May the wooden driver's cab was removed from the 0-4-0ST, *Kiama* (Daveport 1596 of 1917). Funds for a new cab have been provided through a bi-centennial grant and the new structure was received from Krauss

Kitchens of Dapto during early May. The new cab has been constructed from Tasmanian Oak and has been polished rather than painted. By early June a new rear steel buffer frame had been fabricated and fitted to *Kiama* and work was proceeding on the construction of a new plate steel floor and frame.

On 19 May a tender body was collected from the Belbin family. This unit was kindly made available to the ILRMS by Graeme Belbin who purchased the tender from Bruce Macdonald about ten years ago. The tender was built at Plane Creek Mill to extend the working distance of 0-6-0T *Billy* (Maffei 3677 of 1911) but the wheels and underframe were removed at the Goulburn Museum for some other project. It is the intention of the ILRMS to restore the tender and fit it to a new four wheel underframe. It will be used with *Kiama* enabling fuel to be kept clear of the new cab!

A start was made during May on dismantling bogie units of the A & D Shay locos (Lima 906 of 1904 and 2097 of 1907). The castings will be overhauled, corroded steel work replaced and reconditioned bogies reassembled.

The lever frame in the former Otford signal box has been reassembled and the interior of the building, which arrived at Albion Park in December 1985, is presently being repainted. The fourth 6.5 m bay on the carriage shed was completed during early June. Most of the footings and columns for an additional three bays have been erected and it is hoped that this building will be completed by the end of the year to its final 6m x 45.5m length. At that stage a total track length of 148 m will be under cover.

Since January, 13 new pipe side brackets have been fitted along the trolley wire electrified track. These have been constructed to typical tramway design and have enabled the contact wire to be raised to a working height of 3.1 m. A further eight brackets are needed before this task is completed.

Work on upgrading and realigning the compound enclosure track leading to the loco and carriage sheds was completed during June. Shed construction required the original track to be lifted in 1985 and since then five roads and two back shunts have been constructed to the new alignment. The main engine maintenance road No.1 was completed in May. This has been constructed in 80 lb plant fastened to steel sleepers. During early June the new body on the ex Victoria Mill Drewry Cane Inspector's Car was completed with the fitting of the canvas roof cover and wooden edge moulding. Although the original single cylinder petrol engine unit was overhauled several years ago, the radiators and engine ancillaries have to be refitted before this interesting vehicle returns to working order. Unlike the original superstructure, the new body can be easily unbolted from the chassis as a single unit to permit clear access to the engine and transmission.

After 15 years as Secretary, ILRMS member No 1., Tony Madden retired from

that position at the February Annual Meeting. Tony was awarded Honorary Life Membership for his services since the Museum Society was established in February 1972. Tony can now concentrate on the practical aspects of museum development.

K. McCarthy 6/87

PERISHER SKITUBE Little Thredbo 1435mm Gauge

(See LRN 53 p.6)

Full train operations are not expected to commence until just prior to the 1986/87 summer season due to technical and geological problems encountered during tunnel construction. Depending on train lengths, the railway will be able to carry up to 900 passengers on each trip in carriages 3.5 metres wide. This will make them the widest passenger carriages in the world.

Freight will be conveyed over the line in small containers loaded in several ex-S.R.A. four-wheel wagons. These are now being converted to Skitube specifications by Southern Highlands Engineering Works. Apart from the tunnels, other major work nearing completion includes a 150 metre long bridge built on a curve and which doubles as a fauna underpass.

Australian Railway 12/86

ABC Radio reported that this line went into operation on the weekend of 25-26 July, 1987.

F. Stamford, 7/87

QUEENSLAND

CSR - PIONEER SUGAR TAKEOVER

(see LRN 58, p.3)

It is believed that the takeover by CSR of Pioneer Sugar Ltd will be successfully concluded. Pioneer directors reluctantly approved the bid on 16 June. This will bring CSR ownership to Pioneer, Inkerman and Plane Creek mills, to add to their Victoria, Macknade, Hambledon, Kalamia, Invicta and Pleystowe. CSR's Goondi Mill closed at the end of 1986.

John Browning 6/87

MACKAY AREA MERGER

(see LRN 57, p.8)

In late May, Watkins Pacific Ltd made a proposal to Mackay area co-operative mills to acquire and integrate their milling operations with the Pleystowe Mill to be purchased by CSR. The offer developed to the firm proposal stage, but

was rejected by growers during June. This has stimulated renewed efforts to achieve a co-operative merger.

John Browning 6/87

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge

(see LRN 58, p.4)

The two rail motor trailers owned by the Society have been moved to Woodford from storage at the Redbank Railway Workshops. Both trailers will require extensive rebuilding before being placed in use as passenger carriages at Woodford. The boiler of Pleystowe No 5, 0-6-2T Bundaberg Fowler BF5 of 1952 has been crack tested. The tube plates were found to be sound, but several hairline cracks around boiler mountings required welding. Further testing has disclosed some additional cracks which still have to be welded. Once this work has been completed a hydrostatic test will be carried out. The boiler of *Melbourne*, Hudswell Clarke 1701 of 1938 is likely to be tested at the same time.

Durundur Railway Bulletin 5/87

BABINDA CO-OPERATIVE CENTRAL MILL SOCIETY LTD 610 mm gauge

(see LRN 57, p.10)

The construction of the tramway link between Goondi and Babinda was delayed by unfavourable weather conditions and was not completed in time for the start of cru

shing. Arrangements were put in hand for the road transport of cane bins from Schranks Road to Pawngilly until the link around Eubenangee Swamp is completed. Locomotives transferred to Babinda Mill are ex-Goondi 5 & 6 Clyde 0-6-0DH 55-56 of 1955 and 56-90 of 1956, together with 692 bins.

ABC Radio 4QA 27/5/87; Bob James 5/87; D.J. Mewes 6/87

BUNDABERG STEAM TRAMWAY PRESERVATION SOCIETY INC 610 mm gauge

(see LRN 54, p.7)

The Society has been renamed by the addition of the word "steam". Bundaberg Foundry 0-4-2T 3 of 1952 has been fully restored and has been steam tested for the Machinery Inspector. It was due to be displayed at the Agro Trend Show on 7-8 May. Orenstein & Koppel 0-4-0WT 6805 of 1914, recently noted removed from the East Rotary Park, has been acquired by the Society and restoration has already begun.

Alan Robert 6/87

CSR LTD, GOONDI MILL 610 mm gauge

(see LRN 55, p.7)

This mill closed at the end of the 1986 season, and the rail equipment will be split between Babinda and Mourilyan Mills, or else transferred to other CSR mills. In mid-April, the following items were noted in the loco shed and mill yard:

2	0-6-DH	Clyde	55-60	1955
3	0-6-DH	Clyde	56-93	1956
4	0-6-DH	Clyde	55-57	1955
5	0-6-DH	Clyde	55-56	1955
6	0-6-DH	Clyde	56-90	1956
	4wDM	MotorRail	10219	1950
	4wDM	MotorRail	2117	1923
	4wDM	MotorRail		1924?
	2-2wPMR	E.M.Baldwin		1968

There were also two CSR type bogie ballast hoppers. The mill was being dismantled. E.M. Baldwin 4wDH 8002-1-8-78 of 1978 was not seen and is believed to be destined for another CSR mill, possibly Hambledon. The Clyde locos have subsequently been transferred to Babinda and Mourilyan ownership

C.J. Hart 6/87; John Browning

CSR LTD, MACKNADE MILL 610 mm gauge

(see LRN 55, p.8)

An ex-Victoria Mill molasses tanker wagon, complete except for bogies, was noted on 13 May. The welded tank is to be used as a vacuum receiver in the boiler station flyash dewatering plant. On 12 June, Victoria Mill Hansen linecar V4 (34 of 1972) was noted at Macknade

C.J. Hart 6/87

CSR LTD, VICTORIA MILL 610 mm gauge

(see LRN 58, p.5)

Seen on 11 April were two additional CSR type bogie ballast hoppers. They have not been cut down from original as those at Macknade and most of the others at Victoria. They had link and pin couplers and had obviously been transferred from the closed Goondi Mill. By 11 May they had been fitted with Willison couplers with the exception of one end of one hopper. This end had been bent down in some mishap, and a Willison coupler mounted on it would not mate with one on another vehicle. There is a ring below the buffer and this can be used to couple up via an adaptor to Willisons, and directly to

hook and ring equipped stock.

The Clyde linecar (built 1965) was still in the scrap yard on 20 April. Four Hansen linecars, V1 (78 of 1972), V2 (56 of 1972), V3 (12 of 1972) and V5 (1920 of 1978) were in the navy area on 12 June. V1 was under repair at the navy shed.

Hudswell Clarke 0-6-0 1067 of 1914 *Homebush*, was used on 6 May to convey a tour of visiting international sugar technologists and their wives on the Nyzanza line.

The Gedge Street passing loop in Ingham was removed during the 1986 crushing season.

C.J. Hart 6/87; Herbert River Express 9/5/87 via C.J. Hart.

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 54 p. 10)

A new Tamper Model TSR self-propelled sleeper renewal machine was observed at the mill in early June, although its underframe had been removed. Serial number is 825827.

John Browning 6/87

MOSSMAN CENTRAL MILL CO. LTD 610 mm gauge

(see LRN 55, p.9)

The expanded operations of the "Port Douglas & Mossman Steam Railway Co. Ballyhooley Rail Tours" appear to have moved up market with the opening of the link to Port Douglas. Half day trips to the mill depart Port Douglas at 9.30 am and 1.30 pm daily (except Christmas Day and Boxing Day). On weekdays only from 1 June to 10 November the 9.30 departure also serves the day tour to Drumsara Plantation which can be joined at the mill at 11.15 am. This tour includes barbecue, plantation tour, rainforest walk and a swim in the Mossman River. Prices for the half-day tour from Port Douglas are \$14 adult and \$7 child. The Drumsara tour from Port Douglas is \$45 adult and \$25 child. From the mill, the Drumsara tour is \$31 adult and \$18 child.

Hudswell Clarke 0-6-0 1838 of 1950 was seen in steam at the mill during June.

Bob Gough 6/87

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION 610 mm gauge

(see LRN 58, p.6)

The John Luscombe bridge over the Pioneer River at Mia Mia was opened by Mr Russ Hinze on 11 June. The total cost of all works connected with this

high level road/rail bridge was around \$2 million, with 1.8 km of tramline being relocated on the approaches at a cost of \$250,000. An E.M. Baldwin B-B DH locomotive was in attendance with a rake of empty bins at the opening ceremony which was attended by 300 people.

John Browning 6/87

QUEENSLAND MUSEUM, SOUTH BRISBANE 610 mm gauge

(see LRN 23, p.14)

The Museum's Perry 0-6-2T *Flash* (6160.48.1 of 1948) is believed to have been recently moved from storage at New Farm to the workshops on the new museum premises at the Cultural Centre complex, where it is expected the locomotive will be restored.

Durundur Railway Bulletin 4/87

HOWARD SMITH INDUSTRIES PTY LTD, MOURILYAN MILL 610 mm gauge

(see LRN 43, p.9)

Transferred here on the closure of Goondi Mill are believed to be Clyde 0-6-0DH numbers 2, 3, & 4 (55-60 of 1955, 56-93 of 1956 and 55-57 of 1955).

D.J. Mewes 6/87

TINTAGEL MOUNTAIN TRAMWAY, ARCADIA, COOROY 610 mm gauge

(see LRN 57, p.12)

The April work programme undertaken on the line centred on the delivery and trials of Russell Savage's G42, a 2 tonne B-B PH locomotive built by him from scratch in Mildura. Very few problems were encountered with this machine, which was insured for \$35,000 for its journey from Victoria in late March. A new loco shed was constructed for this loco near the main farm house on a 30 metre spur. A 40 m section of track at the second track crossing was lifted, welded into two lengths, and lowered by 500 mm to greatly improve curvature and running. The next work programme will take place in late 1987 and it is expected that the final section of track to the summit of Mount Timbeerwah will be completed by 1 January. One hundred metres of track will then be laid to the site of the house which the railway has been laid to serve. All construction materials for the house will be hauled up the mountain by rail.

Russell Savage 6/87

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (S.A.) INC. gauges various

(see LRN 58, p.8)

It is expected that *Peronne*, Andrew Barclay 1545 of 1919 will be ready to run before the end of 1987 after the expenditure of \$10,000 and much hard work. The axle journals and brass bearings have recently been turned and are ready to be fitted to the locomotive. Further work is required on rodding and brake gear before final undercoating can commence. Anyone knowing the colours worn by *Peronne* during the early years with B.H.A.S. at Port Pirie should contact the museum.

Catchpoint 5/87

SAFCOL, BEACHPORT 1067 mm gauge

The jetty here is still in use for new hand trollies which are used to bring fish from ships to the SAFCOL plant nearby.

R. Gilbert 6/87

NATIONAL TRUST MOONTA BRANCH, WHEAL MUNTA MINING MUSEUM, MOONTA 610 mm gauge

(see LRN 45, p.13)

Apart from the ex-Maylands Brickworks 2-2wPM loco, used for passenger services, there is also present here the remains of a small internal-combustion locomotive which appears to be built on a skip frame.

Industrial Locomotive Selections (No.1) - Railmac Publications

TASMANIA

IDA BAY RAILWAY CO. LTD, Lune River 610 mm gauge

(see LRN 57, p.13)

The Second River Tramway (Karoola) composite Krauss 0-4-0 tank locomotive (5682 -5800) and guards van finished steam hauled operations at Ida Bay on 21 April 1987.

Steam trains ran daily from the 26 December 1986 until 15 February 1987 plus weekends up to and including Easter - running 218 trips, a distance of 2965 km. Burning about 17 tonnes of coal and carrying approximately 5800 passengers with only minor mechanical repairs being necessary.

The locomotive and guards van will be returned to the SRT site at Karoola (near Launceston) by semi-trailer in the near future.

P.J. Martin 6/87

VAN DIEMEN LIGHT RAILWAY SOCIETY INC., Don River Railway 1067 mm gauge

(see LRN 56, p.9)

Work is progressing on the restoration of Dubs 4-8-0 3856 of 1900. The valves and most of the motion have been placed back in the frame. Very little wear was evident in these parts, no doubt due to the short period between the locomotive's last overhaul (when converted to oil burning) and its withdrawal from service.

The wheels will be turned as soon as the heavy workload at the Emu Bay workshops permit.

Both front bogie springs require replacement due to numerous cracks. This is expected to be expensive and may cause some delay with the restoration.

Steam Echoes 5/87

WEE GEORGIE WOOD STEAM RAILWAY INC., Tullah 610 mm gauge

(see LRN 48, p.10)

The Wee Georgie Wood Steam Railway was officially opened at Tullah by the Premier Mr Robin Gray at 5pm on Thursday 5 February 1987, ending the twenty-two and a half year retirement of John Fowler 0-4-0WT 16203 of 1924. A good crowd attended in bright sunshine to watch Bill Winskill drive the first train with its load of dignitaries.

Further trips followed before everyone adjourned to Tullah's solitary hotel for a smorgasbord and liquid refreshments.

Since the opening day, work has continued and a station building has been completed. Many items of rolling stock have also been obtained.

Membership of the Wee Georgie Wood Society is welcomed and further information can be obtained from the Secretary, Anne Drake of Tullah.

Steam Echoes 5/87

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM 610 mm gauge

(see LRN 46, p.9)

It is reported that John Fowler 0-6-0T 11885 of 1909 was used on a short length of track in the bush near Merrijig (Mansfield area) for filming sequences for the movie *The Man from Snowy River II*. The loco is reported to have been in steam on 24 May and was used to haul a couple of log bogies.

John Buckland 6/87

On Saturday 30 June, John Fowler 0-6-0T 11885 of 1909 was loaded onto a flat bed truck for return to Alexandra from the film set near Merrijig where

it had been in steam for eight days. Unfortunately, it overturned on a greasy clay road surface. Although no human injuries resulted, the same cannot be said for the loco. The frame was slightly bent, and both side tanks and the cab were severely damaged.

The locomotive was rescued and returned to Alexandra where an inspection and trial steaming on 8 June revealed no major damage to boiler or motion. The boiler was officially inspected on 16 June and received a new certificate, although lowered from 150lbs to 130lbs. The locomotive, which was insured, is currently under repair at Stephenson Engineering in Alexandra.

This incident will be a temporary setback for the museum which had just ironed out the last of their major track faults and were experiencing no difficulties with running the Fowler at reasonable speed around the 0.6km track loop at Alexandra.

P. Evans 7/87

EMERALD TOURIST RAILWAY BOARD, PUFFING BILLY PRES. SOCIETY 762 mm gauge

NRT1, 135 NQR, and 5NBD, make up the LRRSA's special train, with "GEMBROOK" destination sign at Menzies Creek, 30 May 1987.

Photo: F. Stamford

In LRN 57 the new diesel was referred to as a Drewry product of 1948. Mel Elliott, Area Superintendent of the ETRB, has pointed out that although the loco is of a 1948 Drewry design, it was built by the Tasmanian Government

Railways in their Launceston Workshops in 1968. On the LRRSA's Gembrook tour on 30 May, this loco was seen at Emerald. It is now painted in a rich green livery, with red trim, and large VR style "D21" numberplates. Special treatment has been given to the TGR builder's plates, and the overall finish is most impressive. On the same day the frames of G42 were also seen at Emerald, having been delivered from Spotswood (where major work had been done on them) the previous day. Reassembly of G42 is about to begin, and the aim is to have it running again by November 1988.

NRT1 (*William H. Collis*) - the small four-wheel Ruston Hornsby diesel - gave a spirited performance on the LRRSA's special return trip to Lakeside on 30 May, hauling 135 NQR and 5NBD, a most unusual train. It was great fun listening to it grinding its way up the grades, and the slow speed gave the passengers time to enjoy the scenery. A bus took the group to Gembrook, and from there they walked back to Lakeside. Barbecue lunch was provided by the PBPS at Cockatoo. Thanks to the co-operation and enthusiasm of the PBPS/ETRB volunteers (including Don Marshall, Flo Southern, Larry James, Peter Medlin and Bruce West) a great day was had by all.

Frank Stamford 6/87

On Saturday 26 July 1987 the PBPS celebrated the 25th Anniversary of the re-opening of the Belgrave-Menzies Creek section. To mark the occasion the workshops at Belgrave were open for inspection, the museum at Menzies Creek was open with two 2-ft gauge locos in steam, the Peckett provided rides within the Menzies Creek station area hauling 5 NBD, and the Emerald car shops were open for inspection. Eight trains were to be run on the day, including two "car-goods" to Emerald only, two "Tasman Limiteds", a re-enactment special to Menzies Creek only, a night train to the Nobelius Packing shed for a special PBPS members' function, as well as the two regular trains - which were to be double headed (the first as far as Clematis only). The first car-goods was banked between Clematis and Emerald. The "Tasman Limiteds" consisted of the four Mount Lyell passenger cars, a passenger brake van, hauled by "D21" the new diesel (ex TGR "V" class), with a very impressive headboard. This timetable called for all available locomotives except Victoria's least offensive diesel locomotive - NRT1 *William H. Collis*. NRT1 was the yard shunter at Belgrave.

Regrettably the third train of the day, (the first "Tasman Limited") was brought to halt between Selby and Menzies Creek when all wheels of the leading Mount Lyell car became derailed. This took over two hours to rerail, and resulted in the cancellation of the second car goods and both "Tasman Limiteds", and late running of other trains. As a result, NRT1 unexpectedly became involved in the proceedings, when it was called upon to haul the

brakevan and three Mount Lyell cars (with a full complement of passengers) back to Belgrave. How it coped with the grade from the trestle bridge I do not know.

All other available locomotives were between Menzies Creek and Lakeside. At one stage in the afternoon there were six steam locomotives in steam at Menzies Creek (3 NA's, the Peckett, and two 2 ft gauge locos in the museum), and two diesels in growl (D21 and a 2 ft gauge unit in the museum).

It was very unfortunate that so much careful planning was disrupted in this way, but few passengers complained, and most had an enjoyable day. The car goods train included the NH explosives van, NT insulated van, NM cattle wagon, newly restored NU louvre van, and two NQ wagons. Hauled by 7A in green livery it made a fine sight.

The Climax locomotive was in steam at Belgrave (for the first time since 1951), but apart from sounding its whistle, ringing its bell (the original - rescued from a church), and working its Westinghouse pump, it was not operational. Work is still to be done on its pistons and and valve gear. General opinion is that its return to service is now not far away. The Westinghouse brake pump has been fitted on the left-hand side, just in front of the cab, and below the footplate. In this position it has little overall effect on the appearance of the loco. It is certainly not an inappropriate fitting, as many Climax locos in the USA were fitted with Westinghouse equipment.

F. Stamford 7/87

S.E.C. HYDRO SCHEME, Rubicon 610 mm Gauge

The Winter 1987 edition of *This Australia* magazine carries articles on The North Australia Railway, and the S.E.C.V. Rubicon Hydro Scheme. The latter includes many interesting and well reproduced photographs of the tramways used during construction. Unfortunately, the text contains some inaccuracies in the overall history of the region, especially in relation to the timber industry.

P. Evans 7/87

STATE RIVERS & WATER SUPPLY COMMISSION, Waranga Basin 610 mm gauge

(see LRN 38, p.11)

The tramway on the dam wall is still used with sleeper renewals in progress in some sections during February.

Ian J. Stanley 6/87

PRIVATE PRESERVATION 610 mm, 914mm, 1067 mm gauges

(see LRN 56, p.9)

The frames and most of the parts of Simplex 10058, owned by Peter Evans, have been sandblasted and primed. On 11 July the locomotive was transported to the Alexandra Timber Tramway Museum where it is temporarily mounted on two Ruoak bogies while re-assembly commences. During a recent visit to Jindivick where this locomotive was used for tunnelling by the State Rivers and Water Supply Commission, one of the original engine covers was found on the tramway formation and has been retrieved.

LRRSA member Alan Stebbing has purchased a 3 ft 6 in gauge rail tractor from a timber mill at Smithton, Tasmania. Powered by a Ford V8 motor with chain drive to all four wheels, this locomotive has a cast frame and was possibly manufactured by Day's. It is awaiting gauge conversion to 3 foot to enable it to be used on a tramway to be constructed on private property near Belgrave.

P. Evans 7/87

WESTERN AUSTRALIA

MR BARLTROP, Osborne Park

The weekend Australian for the 13/14 of June carried the following advertisement:

Wanted to buy- Steam Locomotive, 2 foot gauge. Must be in reasonable or better condition. Description, price, photo to Barltrop, 26 Elizabeth St., Osborne Park 6017 Western Australia.

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION, BENNET BROOK RAILWAY, Caversham Gauge 610 mm

(See LRN 58 p9)

On Easter Sunday 19 April the "Gemco" and large AQ/B coach set commenced operations between Mussel Pool and Central on a regular basis. This was made possible by the completion of the Mussel Pool Loop, allowing the Gemco to run around the train and eliminating the need to propel. Since Easter the Gemco has run every Sunday except one (due to mechanical failure) and patronage has been good. The smaller train is operating on Saturdays as before.

Easter Sunday and Monday, and the Anzac Day public holiday saw NG15-123 in steam again, creating considerable interest. This loco will be steamed only on public holiday weekends due to the additional crew required.

Track construction and maintenance are continuing using a newly acquired compressor and air drills, and petrol-driven sleeper drills. These machines have proved themselves an important asset.

The Fremantle signal cabin has been repainted, and signals from City Railway Station have been transferred to Whiteman Park. On Easter Tuesday, 21 April, the Collie signal box arrived on site at Mussel Pool Station and considerable work has been done on it since then. An additional use of this building will be as a ticket office for Mussel Pool.

Windows are to be fitted to AQB 9 in order to weatherproof this coach for winter patrons and another four ex-Westrail bogies have been regauged and re-assembled to provide exchange units should those presently in service give trouble.

Rusty Rails 6/87

OVERSEAS

FIJI SUGAR CORPORATION, 610 mm Gauge

(see LRN 54, p.10)

The Government has given a grant of \$1.5M for upgrading the Corporation's cane transport system. The grant will be used to purchase 2 locomotives, about 500 cane trucks, portable lines as well as to upgrade main tramlines. The locomotives are to join the fleet in the second half of 1987. The 1986-7 season has been a record one for Fiji with 500,000 tons of sugar being produced. Meanwhile, the Government will use a \$0.5M grant from a U.N. Development Program Aid Fund for a railway engineer to undertake a feasibility study on the setting up of a public railway system.

Bill Lingham (Sigatoka Town Clerk), F.S.C. Annual Report 1986.

Per John Peterson

"Labasa Police are investigating a cowboy-type raid in Daku where 140 empty railway trucks were hijacked on Monday afternoon." Cane harvesting gangs afraid of their crop being left unharvested at the end of the season are believed to be responsible. The technique is to pick a spot on bends where the driver slows down and cannot see the end of the train. Horsemen then "lasso" the trucks while others hop onto the empty trucks and unhook them.

Fiji Times 11-12-86. Per John Peterson

Because of the recent coup in Fiji, the sugar industry is likely to be in the centre of the protest movement, so most of the development proposals seem to be in doubt.

John Peterson 5/87

LRRSA TASMANIAN TOUR II, 16-20 April 1987

Introduction

Twelve members participated in this most enjoyable tour, which followed the same route as the Society's previous Tasmanian tour in June 1975, but with a completely different group of members, and travelling in the opposite direction.

The 1975 trip was primarily organized as a farewell to the Ida Bay Railway, for it was not then expected to be converted to a tourist railway, whilst the second trip was prompted by the running of steam on the same line. Ironically, the second trip may indeed have been a farewell to this interesting railway. More on that below, but the overall impression on this trip was one of admiration for - the preservation work being undertaken in Tasmania, for there is much more activity than we were aware of.

We departed Melbourne about 1-1/2 hours late on Thursday night bound for Hobart, the delay being due to aircraft mechanical troubles, and the trip being notable only for the frugality of the dinner provided. After picking up our two Toyota Tarago mini-buses our trip to the Balmoral Motor Inn, Glenorchy, was made more interesting when our esteemed President was random breath-tested by the local constabulary, (with a zero reading!).

The Ida Bay Railway

Friday was to be the big day, we headed directly to Ida Bay, 65 miles south of Hobart, and the most southerly town in Australia. Unfortunately the cloudless blue Hobart sky gradually became less cloudless, but there was sunshine most of the day. The immediate attraction here was the Second River Tramway Krauss loco, polished up in beautiful green livery, and simmering quietly ready for the first train at 11.00 am. We met a number of people associated with the operation, including Martin Donelly, who was very much responsible for the success of the previous LRRSA Ida Bay trip, and who told us he treasured an album of black and white photographs which one of the participants on that trip sent him.

For the trip to the railway's terminus at Deep Hole the train consisted of one closed and one open bogie passenger car, and a four wheel brakevan, the latter from the Second River Tramway. Michael Williams, the manager of the Ida Bay Railway (who leases it from the State Government), gave a commentary on points of historical interest during the trip. This area has more history than might be expected, settlement and timber milling operations going back over 100 years. At the Deep Hole the original track layout has

Second River Tramway Krauss loco on the jetty siding of the Ida Bay Railway at the time of the LRRSA visit, 17 April 1987

been slightly modified with a balloon loop now provided to reverse the train, and a station has been built, (which was variously described by the party as pretentious, ambitious, utilitarian, or environmentally sympathetic). The jetty here, where the limestone was loaded into boats for transport to Risdon, now has an ominous and large sag in it and the rails have been lifted. For our benefit the train was run on to the jetty siding as far as possible, for the first time in many years.

It was interesting to see large quantities of goods being unloaded from the brakevan. This was actually camping gear for a number of campers who were setting up base at Deep Hole. There are many good walks from this spot.

After returning to Ida Bay we had a second trip on the tramway, this time with some photo stops, which caused the usual sort of uninformed comments from the bemused normal passengers. This railway now relies on normal passengers of the tourist variety for its survival, and Mr Williams has done a lot of work to build it up as a tourist operation. Unfortunately it is a long way from Hobart, and certainly not on a main tourist route, and whilst there is much of interest in this area, it does not have the drawing power of places like Port Arthur. As a result, outside the December - February period, and Easter, the railway has not attracted sufficient passenger traffic to make it viable. It is doubtful if it could be viable without a strong push to develop

the tourist potential of the district as a whole. Mr Williams has been trying to get someone to take over the railway's lease for over twelve months without success. He told us that he now intends to cease operations after Easter, and sell the rolling stock which he owns. He was obviously taking this action with a great deal of regret, for as he said - the Ida Bay Railway is now the longest 2 ft gauge line in Tasmania. With about 65 years of history behind it, it is also one of the longest lived.

The Dover Steam Museum

On our way back we stopped at Casey's Steam Museum at Dover, about 15 miles north of Ida Bay. The unique feature of this museum is the display of 20 restored stationary steam engines, which operate from a large marine boiler. These are housed in a huge shed previously used for apple processing. The engines include some very large examples from local timber mills, the oldest and largest being a Marshall with a ten foot flywheel, from Raminea mill 3 miles south of Dover. One of the smallest was a two-cylinder engine out of a Stanley Steamer (a steam car). The standard of restoration and presentation of these exhibits was extremely high. Casey's Museum complex also includes an Apple Industry Museum (with over 400 varieties of apples displayed), and a Heritage Museum based on the living conditions of pioneers including a very interesting photograph collection. These displays are a also to a very high standard.

Casey's Steam Museum is suffering the same problems in attracting visitors as is the Ida Bay Railway, and moves are now afoot to move it to an old gasworks building in Hobart. It is to be hoped the move is successful, for the enterprise, hardwork and care which has gone into this display deserves reward. It would be most unfortunate if such a fine collection was scattered.

During our return to Hobart we stopped at Margate where an MA class locomotive (No.3) and a train of former TGR passenger cars is preserved, with a number of displays in the cars. As these were closed I cannot comment on them, but at least the train seems to be maintained in good condition.

The Hobart Meeting

After an interesting dinner at a Hobart restaurant run by an American cowboy, we adjourned to an informal meeting attended by members of the ARHS, TTMS and LRRSA. About fifty people attended, and movies, video tapes and slides were shown. The subjects ranged widely, from Victorian and Tasmanian timber tramways, to narrow-gauge railways in Nauru and New Caledonia as they are today. The meeting provided an opportunity to talk to some of the active researchers in Tasmania, including Lou Rae, Ken Milbourne

and Wayne Chynoweth. Long standing Melbourne members will remember that Wayne was the Secretary of the Society in 1969-70, and since moving to Hobart he has undertaken the massive task of working through the official government boiler records, as a result of which he has come up with a much clearer picture of steam locomotives on Tasmanian private railways. He has also found a number of references to Tasmanian built locomotives not previously known, and has unearthed some most interesting photographs. A pole-road 2-4-0T built by the Hobart firm of Russell Allport was especially intriguing. The meeting finished at midnight.

The Glenorchy Transport Museum

First destination on Saturday was Clennett's timber yard, not half a mile from our motel, where we stopped for a brief look at a pair of preserved timber bogies. We then headed for the Glenorchy Transport Museum, which is run by the Tasmanian Transport Museum Society. This is very well set up, the Society having received assistance from the State Government and local Council. They have a number of very substantial buildings to protect their exhibits, the most recently completed being the locomotive roundhouse. A turntable has just been installed in front of this. A station building from Newtown and a signal box from Botanical Gardens station have also been re-erected on the site, the latter has a 22 lever frame from Moonah. The Museum has a well maintained appearance and promotes a sense of confidence in the organisation. (This was true of all the museums and preserved railways we saw, and was a refreshing change from what is sometimes seen on the mainland). The exhibits cover a wide range, including buses, trolley-buses, trams and railway vehicles. Some of these have been rescued from paddocks, and need a lot of restoration work - like the double-deck Hobart tram - but they are well protected and cared for. There are too many items to mention them all, but those I noted with special interest were the Q class 4-8-2 loco, four early carriages from the Launceston & Western Railway, and three ex-Tasmanian Main Line Railway carriages.

Two items of special interest to the LRRSA are the B class Climax loco rescued from Maydena, and the 0-4-0 vertical-boilered geared tank locomotive which was recovered from the bush near Sharp's Siding in the Derwent Valley (see LR 30, p. 17). Both of these locos will need much work to restore them. The 0-4-0 is a remarkable survivor, with 100% timber tramway history. It is believed to have been built in Tasmania in 1892. Vertical-boilered locomotives were a rare breed indeed, I know of no others which still exist in Australia.

The Tasmanian Locomotive Company

Next stop was at Cadburys, the terminus of a short suburban branchline, which fortunately is owned by the Cadburys company, and not Australian National Railways. It is no longer used by Cadbury's and ANR wanted to pull it up. Instead Cadbury's have leased it at \$100 a year to the Tasmanian Locomotive Company, who are using Cadbury's terminus as their depot. Tony Coen is the principal shareholder in the TLC, and he showed us over their pride and joy, an H class 4-8-2 (H2) with a train of ex Tasman Limited cars. The whole train has been painted purple (Cadbury's chocolate wrapping colours), not at Cadbury's request, but as a way of thanking them for their assistance. A purple H class does not look at all bad, a similar colour was experimentally used by British Railways for express passenger locomotives. H2 made its first run on the mainline for many years on 4 April this year. It was a most successful trip, H2 performing above expectations, and the trip attracted a great deal of interest and publicity.

A special trip was organised for us from Cadburys to Claremont Junction, using a former TGR U class diesel and one passenger car. Although only about a mile long, this line is very scenic, and the trip was most enjoyable.

To Queenstown...

We then set off for the 160 mile trip to Queenstown, stopping on the way at two HEC hydro-electric power stations at Tarraleah. Both of these had incline tramways running parallel to pipelines, and in both cases the rails are still in place, but the tramways appear to be out of use. One of the inclines has curves, which prompted a couple of members of the party to walk up part of it to see how the cable was made to negotiate the bends.

On the outskirts of Queenstown we wandered around the hillsides where the Mount Lyell Company's former 2 ft gauge tramways operated. We were lucky to find the remains of the incline which took the tramway into Gormanstown. Most of its formation on the Queenstown side has now been removed as a result of open-cut mining, but it can still be found near its summit and on the Gormanstown side.

In the evening we visited the Queenstown Museum, which was specially opened for our benefit at short notice. This has a large display of photographs and other memorabilia, and is well worth seeing. The display is well done, although the captions on some of the photographs are a little odd.

First thing on Sunday morning we paid our respects to the Abt rack 0-4-2T locomotive which is preserved at the site of the Queenstown rail yards. The display is most imaginative. The engine is mounted on a section of wooden

trestle bridge, on an angle, as if it was climbing a grade. It is surrounded by a moat, to protect it from vandals, and has an overall roof to protect it from the west-coast's notorious climate. There are steps leading up towards the front of the engine, and a waterfall, and a form of display recording major happenings in Queenstown's history, but the steam locomotive takes pride of place, rather like a deity. (I would be quite offended if I saw a diesel locomotive displayed in this way).

The early morning weather at Queenstown was remarkably mild after the crisp cold Hobart mornings, and it remained this way for our drive to Strahan. We stopped just out of Queenstown to photograph a 2 ft gauge 4-wheel electric loco, and a 3 ft 6 in gauge steam crane which are preserved. At Strahan we looked over the Regatta Point terminus of the Mount Lyell Railway, where the station building and engine shed survive. The station building is in terrible condition, but is fenced off and it appears that it is to be restored. We drove along the formation of the Mount Lyell line for some miles, finding on the way remains of some rolling stock. Near the foreshore at Regatta Point a number of sidings are still in situ, with the rails very badly corroded from the sea spray.

True to form, the west coast weather changed suddenly while at Strahan, heavy rain setting in, and the temperature becoming quite cold. On the drive to Zeehan we stopped at West Strahan to see the old TGR turntable still in place, now surrounded by holiday flats. The road to Zeehan is mostly on the formation of the TGR railway, and includes a couple of the original railway bridges, where we stopped for photographs. We also saw the formation of the Mariposa 2 ft gauge tramway running off towards the east. One of the buses ventured up to the old smelters at Zeehan, but little time was spent here, as the weather was now very west coast.

Ideal weather for indoor activities, and the next 90 minutes was spent in the West Coast Pioneer's Memorial Museum at Zeehan. Not by any means enough time to do this outstanding museum justice. Some museums decay with age, this one gets bigger and better. There is a huge display of photographs, and many interesting exhibits including locos and rolling stock. A beautifully restored ex-Mount Lyell railcar (the "Daimler") is inside a glass case, and a 3-1/2 inch gauge model of Hagan's patent locomotive built by Geoff Murdoch (who drew the scale drawing which appeared in LR 43) is also on display. I think I could spend a day at this Museum without getting bored. Railways and tramways take up a major part of this museums and not without reason, for Zeehan had so many that the whole town should be declared an LRRSA sacred-site.

We had an outdoor appointment at Tullah at 2.00 pm, with the Wee

Georgie Wood Steam Railway Inc., where Wee Georgie Wood, the Fowler locomotive which previously worked on the Tullah tramway was operating on a short section of track (probably less than half a mile), running a tourist service. It is very close to the highway, and very visible, and appears to be doing good business. The actual route it takes is on the formation of one of the original mine tramways, but balloon loops have been installed at each end, with most unusual points - neither of the conventional blade or stub variety. Official passenger-carrying operations only commenced late last year, due to a number of problems, including insurance. The price of a ride is \$2, and original Tullah Ore Treatment Ltd Farrell Junction to Tullah tickets are issued, over stamped with the WGSR Inc Inc's seal. There are some steep grades on the line, and Wee Georgie makes some magnificent sounds as it tackles these. The Hydro Electricity Commission has been busy in this area, as a result of which much of the formation of the Tullah tramway is now flooded, including the bridge illustrated in *Five to 500* page 30.

Miraculously the rain stayed away during our stay at Tullah, but set in again once we departed for the north-coast. On the way we diverted to Warratah (see LR.37, p 24), where the old railway bridge still exists, and is used as a pedestrian bridge. It seems to have sunk at the ends for it has a slight gable-like side elevation. A quick trip was made to the Mount Bischoff mine site, where despite the resumption of mining, there are still many signs of the original mining activity, with remains of rusty wagons still lying around. At Warratah the old loco shed which used to house the electric loco still exists, but the ore treatment works which were in ruins, have been removed. Between Waratah and the Highway, we found a boiler on the side of the road (which is almost on top of the railway formation) and the remains of a set of points.

Most of the establishments we frequented seemed to be "in search of excellence", for the tourist industry is very important to Tasmania's economy. It was therefore a surprise to see a Fawltly Towers approach to service at the last motel we stayed at, at Somerset. Its restaurant was closed "because it was Easter", so our final dinner was at an excellent Chinese restaurant in Burnie, where the very helpful staff provided us with a round table for twelve, with a turntable in the middle, from which things could fly-off at a tangent at high-speed, with unexpected results. The majority opted for a nine-course banquet.

The Emu Bay Railway

First appointment on Monday morning was at the workshops of the Emu Bay Railway Company at Burnie, where we were met by Doug Beath, the Works Engineer. He gave us a most thorough and extremely interesting tour of the workshops and loco sheds, and gave the impression of being

an enthusiast himself. The EBR no longer runs a passenger service, but he said they would never turn away a passenger who turned up for the 4.30 am daily train. The last of the passenger stock has been sold to the Tasmanian Locomotive Company, and when they want to run a passenger train, they now hire rolling stock from the Don River Railway.

The EBR has very well set-up engineering facilities, and does a lot of work for outside organisations, including the maintenance of mining machinery and mine rolling stock. They have done work for the PBPS, including gauge conversion of the ex-TGR V class diesel chassis, and work on the wheels of G42. One of the jobs they are currently doing is re-turning the wheels of ex-EBR Dubs 4-8-0 loco which is being restored to running condition by the Don River Railway. When that loco is restored Doug Beath is looking forward to running a passenger train with it on the EBR.

With 14-1/2 ton axle loads the EBR is not a "heavy" railway, but it is certainly not a classic example of a light railway - especially with trains being hauled by up to nine locomotives (a total of about 6400 h.p.). Nevertheless the EBR has the most impeccable light railway ancestry, and it was good to see that the Company is operating very successfully at present and to paraphrase Mr Beath, it is looking to the next century with the same cautious optimism with which it approached the last. Its fortunes are very much tied up with the mining industry, and it is significant that the Company decided against using concrete sleepers because their high initial cost would require a long period to show a return.

Participants in the Tasmanian Tour at the Don River Railway, 20 April 1987. From left: Peter Clayton, Dave Mickle, Doug Wilkinson, Frank Stamford, Colin Harvey, Mike McCarthy, Peter Evans, Steve Martin, Andrew Jeffrey, Jack Stock, Jack Metcalfe, John Ritter.

The Don River Railway

The last place visited was the Don River Railway, a 3-ft 6-in gauge line running from Don village to Coles Beach, using the formation of a former TGR branch line. It is run by the Van Diemen Light Railway Society. I last saw this in 1979, and the progress which has been made since then is amazing. An MA class 4-6-2 loco was running the train service, and there appeared to be plenty of passengers. The train included two beautifully restored veteran carriages. One was an ex-Tasmanian Main Line Railway bogie platform ended car, and the other was a former Launceston & Western Railway 6 wheel second-class four-compartment car, originally built in 1869 to 5-ft 3-in gauge, and re-gauged in the 1880s.

The railway is now very well set up with workshop and rolling stock accommodation, and the Society has a number of gems in its collection. There are quite a few more very old passenger coaches, which it is intended to restore to make up a complete veteran train, and one of these was in the process of restoration. No small task, for many of the vehicles are received in very poor condition, but they are now well cared for and protected.

Another major undertaking is the restoration of the ex-EBR Dubs 4-8-0 loco (B/No. 3856 of 1900), and the frames of this were seen in the workshop, now completely cleaned up and painted in grey primer. The standard of workmanship seems very high. A combination of Federal Government CEP grants and the availability of highly-skilled and enthusiastic labour are helping the Society achieve its objectives. For those who don't like purple H classes, this Society has one finished in traditional green, and in excellent external condition. Other interesting items include the ex-Ida Bay Railway Hunslet 0-4-0T loco, and a very old rail-car with two-cylinder engine from the Mount Lyell Railway Company. (It is illustrated in LR 62, p.10).

We also met our member Charles Goodwin here, where he runs a 7-1/4 inch gauge railway. Amongst the motive power for this is an 0-4-0T with a definite Krauss appearance.

Finally we headed to Devonport airport for the journey home in a Fokker Friendship - a proper aeroplane with propellers.

The success of the trip is due to the work of Peter Evans, who was entirely responsible for its organisation. Thanks are also due to Mike Williams (Ida Bay Rly), Jeremy Wainwright and other members of the TTMS, Tony Coen (Tas. Locomotive Co.), Doug Beath (EBR), and Ian Hall and other members of the VDLRS for making us most welcome, and to our mini-bus drivers: Peter Evans, Mike McCarthy, John Ritter and Colin Harvey.

Frank Stamford

MEETINGS

SYDNEY

A General Meeting to elect officeholders of the re-constituted N.S.W. Division will precede the entertainment this month. Members can nominate on the night or just have your say in what direction the N.S.W. Division is going to take.

Following this, Paul Simpson will show films of trips to Tasmania and the Tour to Rubicon last year. This will be followed by a miscellany of old and newsworthy slides from members' collections.

And don't forget to return those membership applications. To make the N.S.W. Division a success in the long term, the support of as many members as possible is required.

LOCATIONS Old Board Room, 2nd floor Bowlers Club, 95 York St. Sydney. Access through the Forestry Commission office building next door (Town Hall side)

DATE: Wednesday 26 August at 7:00PM

MELBOURNE

In addition to the Annual General Meeting, a vote is being taken on Incorporation of the Society. Following this is the main entertainment item for the evening - the BUSHBASHER'S SLIDE NIGHT. Everyone is invited to bring along up to 20 of their best slides of defunct, overgrown Victorian tramways and tramway relics, and help make the evening a great success.

LOCATION: Ashburton Uniting Church hall, Ashburn Grove, Ashburton

DATE: Thursday 11 August at 8:00PM

ADELAIDE

Contact Arnold Lockyer for details of the next meeting (see front cover for address)

LOCATION: 150 First Avenue, Royston Park

DATE: Thursday 4 August at 8:00PM

JOHN BROWNING, LIFE MEMBER

It is with pleasure that I report that John Browning was awarded Life Membership of the Society at the August Annual General Meeting. The award was made in recognition of John's magnificent effort over the past ten years as the founding editor of LRN. Not only was he the first editor of LRN but the fact that it now exists was solely due to his initiative in highlighting the need for the magazine and then offering to do the work associated with its establishment.

The award recognises not only John's role as editor but also the ongoing work he has had to put in drumming up contributions from others as well as providing a significant proportion of the contents of each issue himself. In recommending the award, the Council was mindful of the significance of John's personal contribution for the benefit of all, a view that was strongly supported by the meeting. Congratulations John on a job well done!

Mike McCarthy 9/87

WE HAVE FOUND AN EDITOR/S! !

With this issue, we welcome Geoff and Peg Hayes of Bli Bli as the joint editors of LRN. We are grateful to Geoff and Peg who offered to take on the role following a special mailout to our Queensland members. We are also looking at the possibility of establishing state news editors to assist Geoff and Peg with the news gathering (and spread the work load a bit!) but more on this in the next issue.

We hope the strong support for the magazine built up by John in the form of contributions will continue. Geoff and Peg's address is on the cover. You can send material directly to them or, for Queensland members, you can continue sending material via John Browning, who has offered to be the Queensland state news editor, if you wish. Either way, keep those contributions coming in, we need them.

Thanks also to the others who offered to assist with the editorship despite heavy commitments in other areas of our interest. The determination of members to see the magazine survive was most gratifying.

Mike McCarthy 9/87

EDITORIAL

As Mike mentioned above, we responded to the Queensland mailout looking for an editor for LRN. Although having no previous experience as "Editors", it seems we fit the bill in most areas and we are happy to offer

ourselves in this respect. We are only feeling our way as yet - there have been a couple of hiccups with this issue! - but it shouldn't take us long till we're "on the rails"! Our association with railways goes back over some 20 years and, as I think we must subscribe to almost every known railway enthusiast magazine in Australia, it is perhaps fitting that we are at last helping with the production side of things, if only in a small way! It will be a joint editorship, with Geoff doing most of the actual "editing" and myself contributing with the typing. We wish to express our thanks to Mike McCarthy and John Browning for all their help and support. We look forward to a long and happy association with LRN.

Geoff & Peg Hayes, LRN Editors 1987-?!!

NOTES, CORRECTIONS AND COMMENTS

Len Heaton points out that South Johnstone number 10 (Fowler 0-4-2T 17881 of 1928), which featured at "Silkwood" in the TV mini-series *Fields of Fire*, was in fact no stranger to the real Silkwood, where it was stationed from 1953. Len himself drove the loco in the 1954 season and it was still stationed there in the late 1960s.

RESEARCH

Member Ian Colman is looking for someone he can assist with light railway research in the Gold Coast area. He can be contacted at 77 Old Coach Road, Coomera, Qld, 4210.

T.A.C.L. RAIL TRACTOR RESTORATION - a project to restore the Climax's little brother

Further to the item in LRN 59 (page 3), a meeting was held at Emerald on 30 August to consider the feasibility of the project.

At present we have a team of at least five people willing to undertake the task, with a good cross section of the skills needed to see the project through. The team is keen to see the machine restored to running condition, and this will be our aim.

No major parts appear to be missing, though a new roof and gear guards will need to be fabricated. The engine is not restorable, but a spare identical engine/gearbox unit is available. This is restorable but will need remetalling/grinding. The magneto and fuel tank still exist. The major problem in restoring the unit to operating condition is the wheels. These are very worn, and it will probably be necessary to get a new set cast using one of the existing wheels

as a pattern.

Restoration will be undertaken at Emerald car-shops on weekends. To facilitate this, the tractor will be put on a flat NQR wagon so that it can be moved in and out of the car-shops. The major item of expense will probably be a new set of wheels. Methods of raising funds for these are now being considered, and you will hear more of this in due course.

In the meantime, if you are interested in helping to restore this historic and ugly beast, either by assisting in the work at Emerald, or with brilliant ideas for fund raising, please contact Frank Stamford on (03) 830 1640 (evenings). For those who have moral qualms at the thought of restoring diesel locomotives, you can be assured this is NOT diesel. It has more in common with a T Ford than a diesel! LR 79 page 11 has a good picture of a TACL tractor on the Tyers Valley Tramway.

F. Stamford 9/87

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

HEXHAM ENGINEERING PTY LTD, Hexham, NSW

(see LRN 58, p.3)

Hexham are reported to have designed a new and substantially larger bogie locomotive for service on sugar cane railways. The design is believed to be of a 40 tonne machine in the region of 1000 hp, and some 10.8 m in length. This would be a quantum leap in cane railway locomotive power: one might question the ability of current drawgear to withstand the loads involved!

John Browning 8/87

NEIL MOXON PTY LTD, Lot 11 Vale Road, Moss Vale, NSW

(see LRN 16, p.1)

This company, which manufactured machinery for the coal industry, has gone into receivership and equipment was to be auctioned on 30 July.

MARCH MOOMBA MADNESS IN MELBOURNE

or

SOJOURN AT THE SALTERNS & SORTIE TO THE SEWER

The following tour report is taken from issue No. 47 of Heavyrails, a mysterious Victorian publication. All efforts to ascertain the identity of the author have so far been fruitless.

As a major part of the Moomba Festivities, the LRRSA held a "Sea Salt & Sewer Tour III" on Sat. 7.3.87. The usual Moomba crowd of 500,000 failed to eventuate and thankfully only 70 hardy souls and 140 hardy soles turned out to savour the delights of trudging for 3 miles around the disused tramways encircling the Salt pans of Cheetham Salt Ltd at Laverton. Weather was fine with a strongish N-Westerly adding to the sombre scene. Some six locomotives were viewed together with an array of rolling-stock, which included the worlds longest 2 ft gauge vehicle. However the "find" was a trestle bridge at the far end of the system.

This massive structure is some 14 ft long and rises 5 ft above water level. It presumably carried the extension to the beach in order to bring sand back to line the salt pans. The walk from the outer end back to the works resulted in many windburnt faces and tired legs.

The tour notes, kindly prepared by Peter Evans, informed us that the original motive-power when the line opened was Saltbush burning Solidungulates, and that in 1902 Cheethams received details from Krauss for a proposed 0-6-0WT Steam locomotive. This loco was to be a direct Salt-burner but the idea was stillborn when the Russian Government banned Prof. Ivan Syrimnyatnikov of the Siberian Institute of Technology from providing details of his unique Firing system to Cheethams.

HR noted with anguish that the earliest track was light portable (20 lb ?) prefab, but was heartened somewhat to note that later relaying had introduced 45 lb by Dowlais Steel dated 1921.

After lunch at a nearby park, the convoy of 24 vehicles and 96 tyres wended its way to firstly the MMBW's Hoppers Crossing pumping station, where several locos were seen plus two little holes in the ground. (If you've seen the old Diamond mine open-cut at Kimberley, South Africa, you know what I mean.)

From here we removed to the Board's Sayers Rd site, where a descent was made underground to the Main Trunk Sewer Tunnel. Some half dozen locos at the bottom of the shaft plus double 2 ft 6 in track with colour light signals were seen and no doubt the PBPS will need to acquire this technology when

they commence the long-awaited Belgrave Underground to relieve the chaotic congestion in Main Street.

The works yard on terra-firma revealed more locos plus rolling-stock. Heaviest rail here was 31 kg (62 lb) and fans were finally seen to smile! Many thanks to Peter Evans, Mike McCarthy, Cheetham Salt Ltd, and the MMBW for a most enjoyable Moomba.

Heavyrails 1/4/87 via Peter Evans

NEW SOUTH WALES

COAL INDUSTRY THREE DAY AUCTION, 11 - 14 May 1987 NEWHAMS YARD, Wolgan Road, Lidsdale 1067 mm gauge

Six 3 ft 6 in gauge battery electric locomotives were present as follows, identical in major respects, with an intermingling of Gibson Battle and Jeffery parts:

LOT	FRAME Nos	BATTERY BOX Nos.
3461	5	601
3462	607 8	608 33/2638

3463	2	607 35/2815
3464	3	602 2
3465	4	605 4

WALLERAWANG COLLIERY

No rail items were for sale.

FERNBROOK COLLIERY 1067 mm gauge

The following rail items were offered:

LOT 414	Fox 20-man drift dolly car
LOT 415	No. 612 Moxon 40-man drift dolly car
LOT 416	No. 613 Moxon 40-man drift dolly car
LOTS 417-419	Drift flat top rail cars

HERMITAGE COAL PREPARATION PLANT 1435 mm gauge

The following standard gauge items were offered:

LOT H214	4w fettlers trolley with SRA markings
LOT H217	4w platelayers trolley

AUSTRALIAN IRON & STEEL PTY LTD, Port Kembla 1435 mm gauge

(see LRN 57, p.5)

The following is believed to be the disposition of the loco fleet:

Com-Eng Bo-Bo DE 560kW

D1 - Rail Transport Museum, Thirlmere.

D2, D3, D4, D5, D8 - mothballed.

D6, D7 - in service.

English Electric (Qld) B-B DE 299 kW

D9 - on hire to Lachlan Valley Railway, Cowra .

D10 - on loan to Blue Circle Southern, Portland.

D11 - sold to Simsmetal, Mascot for shunting use.

D12, D13, D14, D15, D21, D23, D24, D25 - withdrawn.

D20 - in service

English Electric (Qld) Bo-Bo DE 634 kW

D16-D19 . D26-D33 - in service .

English Electric (Qld) Co-Co DE 1455 kW

D34 - in service .

English Electric (Qld) Bo-Bo DE 755 kW

D35-D45 - in service .

A new red and white livery is supplanting the previous orange and black colours .

There are three Whiting Trackmobile and three Aresco road-rail shunters in use, and a Plasser Tamping machine and a Plasser PBR 200 ballast regulator for maintenance work.

The ballast regulator and a number of English Electric 229 kW locomotives have recently been advertised for sale.

Australian Railway 7/87 via John Browning

PERISHER SKITUBE 1435 mm gauge

(see LRN 59, p.6)

Although the 3.3 km section from Bullock's Head to Perisher finally opened in late July, the upper 2.6 km section to Blue Cow will operate with a fleet of buses using the tunnel this year. Track will be laid for the 1988 season.

John Browning 8/87

CENTRAL WEST RAILWAY PRESERVATION SOCIETY, Canobolas Wool Top, Orange

A crew from the Army's 158 Tank Transport Troop at Puckapunyal in Victoria came to the rescue recently when this Society needed help to transport the Andrew Barclay Sons & Company Ltd 0-6-0T, B.No. 1234 of 1911, from Portland to the Society's planned museum at Orange. The loco was given to the Society by the Blue Circle Southern Cement Company at Portland where it had carried road No.3, running from 1911 to 1983. It had been mothballed at Portland for the past four years. Unlike so many other privately owned locomotives, this one stayed put, having been purchased new by the company on 2 June 1911. The Army used a 60-tonne Leopard Tank transport to haul the 37 ton steam engine to its new home. It took about four hours to prepare for the unloading, build the ramp and put down the tracks, but only three quarters of an hour to actually get it off. All that remains now is for the engine to be moved the remaining 30 m into the wool tops building.

Western Advocate, Bathurst, 30/7/87 and

Central Western Daily, Orange, 30/7/87 via Ted Downs 8/87

Central Western Daily, Orange, 31/7/87 via Peter Silva 8/87

CSIRO, Culgoora

(see LRN 53, p.2 & LRN 50, p.8)

Five dishes are being constructed on a 3 km long railway track running from east to west. A sixth antenna will be mounted on a separate 80 m track another 3 km to the west. The civil works at Culgoora were performed by Barclay Brothers Ltd of Brisbane, who constructed the antenna foundations, the track and embankment. The \$3.4 million contract also involved the

construction of diversionary channels for flood waters, culverts, conduits and cattle grids.

Engineers Australia via Peter Silva 8/87

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 59, p.4)

Static steam tests were conducted on "Tully No. 6" (Perry 0-6-2T 7967.49.1 of 1949) throughout Saturday 15 August. The tests revealed only one tube end requiring some minor expansion work and some studs which hold cab ancillaries needing recaulking. The trials included steam brake tests, safety valve adjustments, injector operations and electric turbo-generator tests. The original lining out details were provided by Paul Simpson and this layout has been applied to "Tully No. 6 " .

The minor problems which emerged during the static steaming will only require a small amount of time to correct so operation trials should be conducted towards the end of August.

Patterns for the casting of reproduction "Perry" builders plates as well as "Tully No. 6" identification plates are being constructed and it is expected that castings will be made from these by the Phoenix Foundry of Uralla.

Joint straps for the new driver's cabin for "Kiama" (Davenport 0-4-0ST 1596 of 1917) have been made and galvanised. These are now ready to be bolted to the new structure. Work is also progressing on improving the rear draw gear on this unit.

Steady progress is being made on the reconstruction of the first bogie for A & D Munro Shay (Lima 906 of 1904 and 2097 of 1907). The one surviving brass bearing is being used as a pattern for the fabrication of a new set, axle box castings have been dismantled from the bar frames, new channel cross bolsters and spring seats have been constructed. The large bevel gears are being removed from the driving wheels while the small bevel gears and universal coupling yokes have been pressed from the drive shaft for reconditioning. The reconditioned bogies will be fitted with new drive shafts.

The museum was fortunate in receiving three auxiliary steam engines from the former HMAS Kimbla. This vessel was constructed during 1955 as a boom defence maintenance vessel. She was the last reciprocating steamer in the Australian Navy fleet and was known as "The Snail" due to her slow speed! The vessel is being converted privately at Port Kembla to diesel operation. The main engine has been cut up but the ILRMS obtained two single cylinder vertical engines and a double cylinder compound vertical unit. Several trips had to be made back to the berth before all the parts for the last named

engine were found. These units, at least one of which was made by Kelly and Lewis, will eventually be operated in the museum's stationary engine display area.

August 15th was the completion of the rehabilitation of the overhead trolley wire on the 200 metres of electrified museum track. A total of 21 new pipe side brackets ranging from 2.4 m to 4.2 m in length were fabricated for this project while three new steel pipe span poles were erected and three existing poles extended. Most of the new side brackets are fastened to building columns.

The small Gemco tunnel loco hauling two small mine "man cars" traverses the tramway on public steaming days. Its popularity is supported by the fact that over 400 rides have been made on the electric line during recent open days!

Oxford Signal Box was open for public inspection on 9 August. Except for the fitting of rubber floor covering, the interior restoration of this 100 year old building has been completed and track diagrams, block instruments, magneto telephones, lamps etc. have been fitted into position. The task of repainting the outside of the box is well advanced. The ILRMS was fortunate in being able to retrieve for restoration many interesting signal items from the Bulli Signal Branch Reclamation Yard during July. A mixture of N.S.W.G.R. and Q.R. signals will be worked eventually from the signal box.

Work is progressing on a siding from the station yard on which the Shay loco will be restored. The track consists of 45 lb plant placed on steel sleepers fastened down with Pandrol clips. Member Tony Madden constructed the necessary dies from which sleeper chairs and Pandrol clip seats have been made on the museum's medium size hydraulic press. This new track, known as the "Shay Siding", will eventually link up with the former Stockrington Colliery railmotor turn table from which tracks will radiate into a small round house in which the smaller non-steam motive units will be housed.

The recent closure of Huntley Colliery near Dapto resulted in many interesting items being made available by tender. The ILRMS took delivery of two closed crossbench 9 m man transporter cars on 13 August. These are mounted on substantial bogies similar to the Bettendorf (USA) design and are being presently regauged from 1067 mm to 610 mm in the museum's workshops.

The major task of repositioning and expanding the trackwork in the main museum compound was completed on 15 August. Except for some alignment work, the fitting of wharf type point levers and the ballasting of some sections up to rail level, the five shed roads and two back shunts are available for operation. Saturday 9 April has been selected for the official

ceremony which will result in "Tully No. 6" and "Kiama" re-entering service. Further details will be released in the next issue of this publication.

K. McCarthy 8/87

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610 mm gauge

(see LRN 59, p.6)

Following a work party on 11-12 July, the bottom bearers on each side of the SM's Office were replaced. Two panels of 3 ft 6 in/2 ft track were laid in the Security Compound. The two RM trailers ex Redbank will be winched onto the 3 ft 6 in track and later the 3 ft 6 in bogies will be substituted with 2 ft bogies.

Work has begun on Goondi No. 1, J. Fowler 0-6-0DM 18260 of 1929. The 5-cylinder Gardner diesel motor has been removed from this loco and a 4-cylinder GM-Detroit diesel is to be fitted in its place. The side-rods have been removed and the loco jacked up and the wheelsets dropped out to allow inspection of all the bearings and repacking of the axle-boxes. The lower half of the cab sheeting on the rear of the loco has been cut off and will be replaced with a new sheet to eliminate large rust holes. The cab sides and the cab floor will be similarly treated. New bonnet doors also will need to be manufactured to replace those removed by the Goondi Mill many years ago.

Durundur Railway Bulletin 7/87

S.R. BUGEJA & SONS, Peri Road, Mackay 610 mm gauge

The remains of a home-made internal-combustion locomotive have been located here. It was constructed to haul cane on a "horse line" at the farm perhaps 20 years ago, but was not a success. Its engine and transmission were removed for use elsewhere, and all that remains is a heavily-constructed welded steel frame with axles mounted in SKF roller bearings, lying at the side of the road.

John Browning 6/87

BURGOWAN COAL CO. LTD, Burgowan No. 13 Colliery, Torbanlea 610 mm gauge

(see LRN 17, p.4)

A visit to the mine site revealed that practically all the equipment on the surface had been removed, including the two 4wDM locos built by Jenbach of Austria (1077 of 1951 and 1079 of 1952) which had been stored here since

the mine's closure in 1976. Most of the wooden coal wagons had been burnt but a few derelict examples remained around the site.

John Browning 8/87

CATTLE CREEK CO-OPERATIVE SUGAR MILLING ASSOCIATION Finch Hatton 610 mm gauge

(see LRN 52, p.12)

A firm of civil engineers has been employed to design a tramway extension to Boongana, on the closed Netherdale branch. This study will allow the mill directors to evaluate the cost effectiveness of such an extension, which would be built on the former QGR trackbed, owned by the mill.

Mackay Daily Mercury 1/5/87 via Clive Booth

CITRA CONSTRUCTIONS LTD 1000 mm gauge

(see LRN 55, p.7)

By July, the two Billard 4wDM diesel locomotives which had been at the Mackay Harbour yard of Birch Crane Hire (T75P VM 224 and T75P VM 228) had reportedly been moved to Citra's yard at Moranbah.

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 59, p.7)

A broken coupling caused a collision in Ingham on 4 August when approximately 100 loaded bins broke away from a rake and rolled back in the path of a following train in the Gedge Street area. The end result was the derailment of some 31 loaded bins and some delays to cane supply. A press report of the incident showed *Seymour* Baguley/Drewry 0-6-0DM 2392 of 1952 in attendance as a crane rights spilt bins.

During July, a start was made to relaying the dual gauge line to the coal ramp in the mill yard with normal 2 ft gauge track. By 10 August, the section from the dual gauge points at the Ingham Road level crossing to the last set of dual gauge points before the ramp had been relayed or was in the process. This line was the last in the mill yard to remain dual gauge. It appears that the mill line to Gairloch siding on the QR remains dual gauge at present.

Christopher Hart 8/87

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 59, p.8)

A substantial new shed with a single track road has been built at the depot at Calen, some 50 km from the mill, where a navvy gang is stationed

to maintain the northern section of the mill's "north coast line" to Wagoora. Seen on a siding newly constructed behind this shed was a collection of rolling stock and *Calen Simplex*, Motor Rail 4wDM 21623 of 1958.

John Browning 8/87

GIBSON & HOWES PTY LTD, Bingera Mill 610 mm gauge

(see LRN 54, p.10)

Three main locos are stationed at Wallaville this season. These are *St.Kilda* (0-6-0DH Ruston & Hornsby rebuilt E.M. Baldwin 6-2179-1-6-67 of 1967), *Invicta* (0-6-0DM Com-Eng A1513 of 1956) and *Sharon* (0-6-0DM A1925 of 1959). There was a variety of rolling stock in the old loco shed at the old Gin Mill nearby, notably two ballast hoppers named 3 *Niagara* and 5 *Bounty*.

At the mill on 22 August Com-Eng 0-6-0DH *Tegege* (FD4799 of 1966) sported a new radiator grille with its yellow paint still wet, clearly as the result of a mishap. There was no sign of F.C. Hibberd 4wDM "Planet" 3919 of 1959, but all other locos were present.

John Browning 8/87

ISIS CENTRAL MILL CO. LTD 610 mm gauge

(see LRN 58, p.6)

The new Hexham Engineering bogie brake wagon had still not arrived on 22 August. The new double unit number 5, consisting of Clyde 0-6-0DHs 58-191 of 1958 and the former 3, 55-66 of 1955, coupled permanently together, was seen in service. The first Clyde 0-6-0DH double unit, numbered 8 (64-385 of 1964 and 61-220 of 1961) was seen being assisted in the lead by Clyde Qld 0-6-0DH 9 (75-812 of 1975) up the grade from Cordalba with 60 full bins and E.M. Baldwin brakewagon 3 in the rear. Loco 1, John Fowler 0-6-0DM 20776 of 1935 is still parked out of use near the old sugar shed but has now lost its wheel. Loco 2, John Fowler 0-6-0DM 4110019 of 1950 is still spare loco and has recently been fitted with side rod bushes to replace its old plain brasses.

It is understood that a substantial loan has been obtained from the state government to enable the construction of a new full yard.

John Browning 8/87

MARIAN MILL CO-OPERATIVE SOCIETY LTD 610 mm gauge

(see LRN 57, p.11)

A further extension of about 3 km along the old QGR Kungurri branch trackbed from Mount Martin to Dows Creek has been constructed for the 1987 crushing season. In addition, a branch of about 1.5 km has been built to Benholme Station (the former junction for Kungurri on the Netherdale

branch) to serve as a road dump for cane which previously was brought all the way to the mill by road transport. Only small amounts of cane are now delivered to the mill yard by road.

John Browning 7/87

THE MARYBOROUGH SUGAR FACTORY LTD 1067 mm gauge

Bogie cane bins on 3 ft 6 in gauge track are used here within the mill yard area to store cane, which is delivered by road, and convey it to the tippler. The vehicles concerned are mounted on ex-QGR bogies and are shunted by a tractor. They have no couplings and the highest number noted was 80.

John Browning 8/87

MILLAQUIN SUGAR CO PTY LTD, Millaquin Mill 610 mm gauge

(see LRN 54, p.11)

A new Gemco sleeper renewer machine was noted in the shed at the mill on 22 August. Serial number is 521382002667-R585-87 of 1987. Bundaberg Foundry "Bundaberg Fowler" 0-6-0T 1 of 1952 has been externally restored in Bundaberg Foundry colours of green and red and is on display in the same building in the distillery complex it has occupied for the last few years.

John Browning 8/87

MOUNT ISA MINES HOLDINGS LTD 1067 mm gauge

(see LRN 9, p.14)

Advertised for sale at auction on 26 August were two 30 ton diesel locomotives fitted with Gardner 8L3 engines. These are 0-6-0DM surface shunters. The first is 5804, Drewry 2488, built by Vulcan Foundry (D213 of 1953). The second is 5805, Com-Eng E1017 of 1956. In addition, there were four Eimco 24B rail mounted pneumatic tunnel bidders, 3 ft 6 in gauge, serial numbers 250149, 250415, 250418 & 250151, a number of Gardner Denver rail mounted drill carriers in various states of completeness, with spares.

*Sydney Morning Herald 8/8/87
& Colliers International via Craig Wilson*

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 57, p.11)

It appears that the loco livery here has been changed from yellow and grey to a yellow and grey-blue colour scheme. Locos 7 (Com-Eng 0-6-0DH FC 3776 of 1964) and D12 (D.M. Baldwin B-B DH 6890-1-10-76) were seen in these colours in the loco shed in early August.

John Browning 8/87

SOUTH AUSTRALIA

MILE END RAILWAY MUSEUM (S.A.) INC various gauges

(see LRN 59, p.9)

Peronne, Andrew Barclay 1545 of 1919, will soon be reunited with its wheels, then refitting of rods etc. will begin, prior to final minor work. The loco will then be undercoated in preparation for its final paintwork. Negotiations are currently underway between the railway museum and Pichi Richi Railway at Quorn with the possibility of transferring *Peronne* to Quorn to be available for the 1988 running season. This will fully test the engine and ensure it is in good working order prior to settling down to run at Port Dock.

Catchpoint 7/87

TASMANIA

AUSTRALIAN NATIONAL RAILWAYS, Tasmania 1067 mm gauge

Malcolm Moore 0-4-0DM U3 (26 of 1949) was put up for disposal on 30 May. It had been stored at Launceston for a number of years, and was the last remaining U class in Tasrail service, notable for having been originally built to 3 ft gauge for the State Electricity Commission of Victoria's abortive Kiewa hydro-electric scheme in 1949. A number of them were regauged and rebuilt after 1958 for service on the TGR.

Australian Railway 7/87, John Browning

VICTORIA

CHEETHAM SALT LTD, LAVERTON 610 mm gauge

(see LRN 56, p.19)

The tramway system at Laverton remains out of use. A decision is to be made late in 1987 regarding the future of salt harvesting at Laverton, although the mill will continue to process crude salt produced at the Geelong works. Several employees expressed doubts that the tramway would ever operate again, even if harvesting was resumed at Laverton. While the Ruston and Hornsby locos are maintained in running order, Simplex 7351 of 1938 has been removed from the siding where it has remained for several years and negotiations are underway to ensure its preservation.

Peter Evans 8/86

ALEXANDRA TIMBER TRAMWAY AND MUSEUM 610 mm gauge

(see LRN 59, p.10)

Damaged John Fowler 11885 of 1909 at Alexandra on 8/6/87

Photo: Peter Evans

There has been a great deal of activity at this museum in the past year, and despite the recent accident to John Fowler 0-6-0T B.No. 11885 of 1909 while returning from filming of *The Man From Snowy River II*, the future for the museum looks bright .

The tanks, cab and boiler cladding of the Fowler have been removed , the bent reversing gear rod has been straightened and the construction of a new cab has been started. While new tanks are being made the loco will receive a thorough overhaul, and at the end of the repair work will be completely repainted and all brass and copper parts highly polished.

Hudswell Clarke 0-6-0 B.No. 1098 of 1915 has a current boiler certificate for 150 lb but remains out of use at the present time. When the second road into the goods shed is completed, this locomotive can be stored under cover and those items removed for safekeeping replaced. Minor steam leaks around boiler fittings will then be repaired and the locomotive repainted for return to service .

The Kelly & Lewis 0-6-0DM B.No. 4271 of 1935 is being slowly dismantled and the repair of various components has been started. The seized pistons have been removed from the block and work will start shortly on a complete rebuild of the engine to enable this locomotive to be restored to running order.

The 3 ft 4.5 in gauge Day's tractor is fully restored and an extension to the track is planned to enable it to be run for a greater distance towing a pair of log bogies of the same gauge.

Motor Rail "Simplex" 4wDM B.No. 10058 of 1948 (see LRN 59, p.11) has had new leaf springs and chain tensioners fitted, and is once again resting on its own wheels as reassembly continues. The next major item to be tackled will be the fitting of a suitable engine and drive chains.

The "Dustlander" bogie passenger carriage from the Yangardook Tramway has had new roof panels fitted and has been repainted green and cream to match the Museum's other carriage built by Denys Steinhauser. The end result is a visually pleasing and functional item of rolling stock. Work has now started on the conversion of a "Ruok" bogie into a poison car for weed control.

The Malcolm Moore 4wPM is in use for work trains. Heavy rain this winter has caused some of the newer sections of the formation to subside slightly and these are being jacked up and re-packed. Some sleepers on the older section of track are to be replaced shortly and materials for this have been purchased and are stored on site. A large oil tank with a high steel stand has been obtained for use in watering the steam locomotives. The old V.R. signal located on the long embankment leading out of the Alexandra yard will be shifted closer to the station, reduced in height, and reconnected to the lever on the station platform.

Other work undertaken at the museum includes landscaping of the station area. A group of old dead trees have been removed to enable a picnic area to be provided, and several new trees have been planted. An old Fordson tractor is being restored along with a vintage agricultural mower to enable the grounds to be more easily maintained.

On Saturday 7 and Sunday 8 November, the Museum will be holding open days. The Fowler is expected to be back in service, and all interested LRRSA members are invited to attend. No entrance charge will be made, although any donations would be most welcome .

Peter Evans 8/8

WESTERN AUSTRALIA

WEST AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC., Bennett Brook Railway, Caversham 610 mm gauge

(see LRN 59, p.12)

Permanent Way: Track laid = approx 6 kms

Trains were run over the July school holidays and it proved to be a very successful exercise.

The installation of windows on the AQB is progressing and when complete will provide an all weather coach. The first set of windows were one piece, made so because of the pressure of the opening last year, however a top drop opening window has been designed for the other end. It is intended to close in the doorways as well so the coach will be watertight. Only laminated safety glass is used on the coaches and while this is initially expensive, it is better quality.

The committee has approved the funding of the regauging of eight more sets of wheels by Westrail. This will enable four more bogies as per our standard AQ/AQB bogie, to be constructed. Ten of these bogies are already held which provides five coaches (three AQ/AQB, 2VW) or R class open trucks or even QBB flat top wagons. Four more bogies will provide seven bogie coaches.

The principle aim of the upgrading is firstly to do the line Mussel Pool to Central. This will have to be done in eight weeks to allow for the steam locomotive to be ready for the Park's first year birthday celebration. In accordance with the second part of the project, the loop line upgrading, several improvements to the line are planned including a better alignment north out of Central Stn, and a perfect curve south out of Central Stn. Most of the work on the upgrading will be done by contractors, however some of the work will also be done by the Association.

Work on the Mallet is progressing well and tenders have been sought for repair work on the boiler. The boiler's original manufacturer in South Australia has even been contacted for more information. One rod is also to be replaced.

The Planet diesel is at the end of a major overhaul and should be running very soon. It was started up in early July after the extensive work on the engine and repairs to the clutch and some slack in the rods is currently being undertaken.

The Gemco is being fitted out with vacuum brake equipment and the Krauss is in a very poor state thereby making it a long term project.

As soon as the job of regauging the Kalamazoo from 3 ft 6 in to 2 ft was finished at about 5.30 pm on 19 July, it was promptly decided to take it for a test run. As they disappeared into the darkness, a voice was heard to scream, "Slow down for the points!", but they needn't have worried as it performed faultlessly.

WYNDHAM-EAST KIMBERLEY SHIRE COUNCIL

(see LRN 46, p.11)

Wyndham celebrated 100 years of settlement in 1986 but in March 1987 a giant birthday "cake" still adorned the display of former harbour railway equipment, Preston, Hudswell Clarke 0-6-0ST 379 of 1891. On a nearby track is a hand crane, 3 wagons and Com-Eng 4wDM GB1046 of 1960.

Western Rails 7/87

HARVEY FRUIT BOWL RAILWAY 610 mm gauge

(see LRN 57, p.15)

December 26th, 1986 saw the first public operation on the newest tourist railway in Western Australia - the 610 mm (2 ft) gauge Harvey Fruit Bowl/ Big Orange railway. This complex is situated on the South Western Highway on the northern approach to Harvey township and is modelled on the Big Pineapple (Qld) idea. 2.5 km of 45 lb rail ex the Meekatharra branch (much dating back to 1896) has been laid to make a circuit through orchards of a large variety of citrus fruits, nuts, etc. A commentary on the fruits, railway, and other features will become a regular part of the trip.

Four bridges are a feature on the line, including one over the old Harvey River watercourse. There is also a long steep grade at one point which taxes the locomotives. Permission has been granted for redevelopment of the Harvey River portion of the property to provide a year round boating, swimming, and picnic area.

The locomotive is a steam outlined 4 wheel drive 4.8 tonne Kless Engineering of Marayong product. Kless Engineering is operated by Malcolm Baldwin of the Baldwin loco production family.

The bogie coaches were built on site in Harvey using wheels built by Connellan in Queensland. Three coaches have been placed into service to date.

Initially there are no sidings on the line but a workshop siding will be put in. There is only one platform at present, a gravel filled landing near the main complex.

Western Rails 7/87

MEETINGS

SYDNEY:

At the October meeting, the M.W.S. & D.B. archivist, Noel Thorpe, will give an Overview of the railways of the Water Board, one of the largest users of light railways in NSW. Not to be missed.

LOCATION: Bowlers Club of NSW. Old Board Room, 2nd floor, Forests Commission Building

DATE: Wednesday 28 October 1987 at 7.00 pm

DECEMBER TOUR: In lieu of a December entertainment meeting, our annual tour will be held on 6 December to the quarantine station at North Head. This establishment had an extensive 2 ft 3 in gauge railway, much of which is still in position, which was worked by a Caldwell Vale locomotive for many years. A small charge will be made by National Parks for a conducted tour. Bring a lunch and meet at Manly Wharf at 11 am . For further details contact C. Wilson (02) 484-7984.

MELBOURNE:

Keith Kings will once again be treating us to some of his films. Keith has always provided an extremely interesting selection from his collection and you can expect that the October meeting will be as successful as his past efforts.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton

DATE : Thursday 8 October 1987 at 8.00 pm

ADELAIDE

Contact Arnold Lockyer for details. (296 9488)

LOCATION: 150 First Ave., Royston Park

DATE: Thursday 3 December 1987 at 8.00 pm

ROTARY CLUB OF PROSERPINE 610 mm gauge

(see LRN 10, p.11)

It was reported on ABC Radio 4MK Mackay on November 2, that the Proserpine Rotary Club was considering disposing of Hunslet 4-6-0T 1317 of 1918, which has been displayed in the Rotary Park here for some years. There have been rumours of approaches from southern interests for this locomotive recently .

Clive Booth 11/87

NOTES, CORRECTIONS AND COMMENTS

TARONGA PARK ZOO AND MELBOURNE ZOOLOGICAL GARDENS RAILWAYS

(see LRN 59, p. 2)

Further to John Buckland's reminiscences on the miniature train at Melbourne Zoo, I visited the Zoo for the first time on 13 January 1949. On that occasion a petrol (or diesel) powered locomotive, which was a reasonable replica of the "Spirit of Progress", hauled visitors around the railway circuit.

The Zoo Guide Book for that period contains a photo of the train crossing a replica of the Sydney Harbour Bridge as it traverses the circle in a clockwise direction. Craig Wilson has provided photo copies from the 1930, 1939 and 1940 issues of the Taronga Zoo Guide showing the Sydney miniature railway. These items, I believe, have been kindly forwarded by a reader from Western Australia.

The 1930 Guide shows the "Here She Comes" loco similar to the present train situated at Coolangatta Historic Village near Nowra, NSW. The caption reveals that the railway had been opened in December 1929 by the Hon. R.T. Ball MLA, Minister for Lands. The train had proved a popular attraction at Taronga as 80,000 passengers were carried during the first three months of operation.

The 1939 Guide has a picture on the newer locomotive. This appears to be mounted on a 2-4-2 wheel arrangement and is of traditional British locomotive style of that era. The AEC logo appears on the smoke box door indicating the manufacturer of the power unit.

The photos up to 1939 show a clockwise operation, but the 1940 Guide has a photo of the new loco operation in an anti-clockwise circuit. Taronga Park Guide books of the World War II era do not contain photos of the miniature railway. At that stage the train was carrying over 100, 000 passengers per annum.

Ken McCarthy 8/87

MELBOURNE ZOO

Mr P.F. Rickard has located an illustration from *The School Paper* of 1 February 1933, which shows the elephant which John Buckland rode at Melbourne Zoo, and the front end of his "putt-putt machine". As he writes: "The question is - which little boy on the elephant's back is Mr Buckland?"

John Browning points out that the small 2 ft gauge diesel seen by Ken McCarthy at Melbourne Zoo in 1949 was still present in January 1976 (see LRN 4, p.12). It carried a Day's builders plate, but no serial number could be found. It and its railway was reported to have been removed from the Zoo by July 1978.

John Browning 8/87

COAL INDUSTRY AUCTION

(see LRN 60, p.5 & 6)

Ray Graf points out that the source of this article was Craig Wilson of Sydney and not the July "Australian Railway" as our omission of credit made it appear. (Sorry 'bout that, Craig! !)

Editors 10/87

SIMSMETAL PTY LTD, Rocklea, Brisbane 610 mm gauge

(see LRN 42, p.9)

Enquiries regarding the fate of former Isis Mill 10, Sharp Stewart 0-4-2 4432 of 1897, suggest that the locomotive may have been sold for private preservation. Further details would be welcome.

Bill Gray 10/87

T . A . C . L . RAIL TRACTOR RESTORATION - PROGRESS REPORT

A PROJECT TO RESTORE THE CLIMAX'S LITTLE BROTHER

(see LRN 60, p. 3)

The first work party took place on 25 October at Emerald. On that day the tractor was completely dismantled, and cleaning up of the wheels and frames commenced. The overall condition of the machine was considered to be good, and it was encouraging that items which would be expensive or difficult to replace were mostly re-useable. We do have problems with axleboxes, some of which will need replacements cast, which will cost money. In one case an original sprung axlebox had been replaced with an unsprung one, we will be returning this to its original condition.

A detailed autopsy was also carried out on the engine, the four pistons of which are completely seized. In most other respects the engine and gearbox is in good condition, and the previous intention to use a replacement engine/gearbox unit is now being reviewed. It is more likely that the best parts of the two units will be combined. The engine/gearbox unit is a standard Fordson "N" model tractor of the 1920s, which used petrol to start, and then ran on kerosene.

The design of the whole machine is very simple and quite crude. It was surprising to see deep wear marks on some parts where they had fouled the drive chain .

Many traces of the original paint were found, which was orange, without any undercoat. It appears that everything was painted orange originally, although traces of red and green paint were found on parts of the engine. We have not yet decided whether to restore the orange colour, or to use something less yucky!

It was previously thought that replacement wheels would have to be cast. It now seems possible that two pairs of old NA pony truck tyres can be made to fit, with a great saving in cost. The members of the team are Peter Evans, Mel Elliott, Hugh Markwick, Roger Wotherspoon, James Wotherspoon, and Frank Stamford.

Frank Stamford 10/87

FIELD REPORT

AYR, QUEENSLAND

Not many members may realise that the derelict remains of a Kalamia Mill 2 ft gauge steam locomotive lie in Plantation Creek near Ayr. The loco is a Krauss 0-6-0T, almost certainly 6415 or 6416 of 1910. After use in north-west Queensland, it came to Kalamia Mill and is believed to have eventually been put to use for stationary pumping duties before being abandoned. After being completely covered by vegetation in past years, the locomotive was recently observed almost completely above the level of the swamp. The cab has gone and the firebox removed by scrap hunters, but the machine is nevertheless an interesting sight. It is to be found on the eastern side of the Kalamia line which crosses Plantation Creek and the location can be reached along a rough road beside the formation.

John Browning 9/87; Bill Gray 10/87

PUBLICATION

A 96-page book entitled *Northumberland - Newstan 1887-1987 : 100 years of coal mining* has been produced by Elcom Collieries. Compiled by Ed Tonks, the book includes photos showing some narrow gauge track dating from earlier days. The mine now has no underground rail system. The book is available on receipt of a \$2 stamp by the Colliery Manager, Newstan Colliery, c/- Post Office, TORONTO NSW 2283.

David Mewes 9/87

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

E.M. BALDWIN & SONS PTY LTD

See HEXHAM ENGINEERING PTY LTD

HEXHAM ENGINEERING PTY LTD, Hexham, NSW

(see LRN 60, p.3)

It is understood that Australian Iron & Steel attempted to order a second

Model DH40B B-B DH underground bogie loco from E.M. Baldwin while that company was in receivership, but that the Receiver declined to accept the order. It is believed that subsequently, orders for two 25 ton diesel hydraulics from AIS were accepted by Hexham Engineering, but no details of manufacture and delivery are to hand at present.

J.L.N. Southern 10/87

TOUR REPORT - Victoria

TIMBER AND GOLD TOUR, 4 October 1987

This tour, led by *Timber and Gold* author Norm Houghton, commenced at the Daylesford Railway Station with the aim of visiting LRRSA sacred sites in the Wombat Forest. It had been advertised in the August mail-out, a full two months before, so there was some doubt as to whether many would remember and front on the day. Fears were dispelled though when on arrival at the rendezvous point, I found approximately 1000 people milling around obviously waiting for their tour notes! Alleluia, the membership drive had paid off at last! With some excitement I grabbed the said notes, a pile of membership folios and a fistful of *Bellbrakes, Bullocks and Bushmen*, prepublication forms and hastened into the crowd ready to make a killing only to discover our agreed meeting point coincided with the location of the Daylesford Sunday Market!!! No-one even wanted to know about my prepublication forms.

A hunt around the station yard found the LRRSA crew cowering in a corner of the former goods yard, but all was not lost. Around 60 people had turned up for the tour which was an excellent response and infinitely more manageable than the 1000 that was first thought!

Those who arrived early enough had the opportunity to inspect the Daylesford station and grounds, which are now the headquarters of the Central Highlands Railway Project. The former VR branchline is progressively being reopened over part of its length.

Tour notes sold and formalities over, the cavalcade moved out just after the appointed time of 9.15 am. The first stop was at the terminus of Henderson's tramway (1879-1891) on Jubilee Lake Road where we disembarked and followed the tramway formation on foot down to the mill, a distance of about 2 km. Several deep cuttings provided plenty of interest and the finding of two previously unknown branches to the line provided an air of discovery to the walk.

After a return along much the same route, the party proceeded along Star Track to the big cutting near Graves Siding on the dismantled Daylesford -

North Creswick Railway. The Telegraph Tramway (1860-1893) could be seen alongside the road on the way. Near the cutting, the walkers set off along the tramway with the task of trying to find the diversion point of the original line to the Ballan Road and the later tramway into Graves Siding. Ten minutes into the walk, success!! The diversion was revealed as being in the form of a reversing point on the original line. Both formations were clearly evident and of particular note was the bearer impressions left in the tramway formation.

We were about to head off to inspect the tramway in the direction of the Telegraph Mill when the impossible happened. The rain came. In fact it not only rained, it belted down, drenching everyone who had not prepared for the unheard of likelihood that this sort of thing could actually happen on a LRRSA walk! !! We were dumbfounded and I can assure all who attended that the responsible authority will be sent a tersely worded letter as a result. Surely this was the type of thing you would expect in tropical Queensland, not here in Victoria! We huddled under trees and bushes in the hope that this was only a temporary aberration, but to no avail. The attempt to walk the Telegraph Tramway had to be abandoned and, in despair, we all trudged our way back to the cars.

Lunch was taken at the Daylesford Lake where the hardy Dwyers managed to make use of the electric BBQ under a makeshift shelter in the pouring rain while the rest of us abandoned any such thought and ate pies or sandwiches in our cars. By 12.30 pm it was obvious that the rain was there to stay and, for the first time ever and with great disappointment, the decision was made to abandon the tour.

We will, however, be rescheduling the trip for some time in the near future. What we did manage to see was extremely interesting and has whetted the appetite for the next attempt. Thanks are due to Norm Houghton for the work he put in preparing for the trip and drafting the notes as well as leading the tour for the morning. Thanks also to Chris, Shelley and Lindy McCarthy for collating the notes. We look forward to seeing everyone again on the return trip to the Wombat Forest.

Mike McCarthy 10/87

NEW SOUTH WALES

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 60, p.7)

0-6-0T locomotive *Tully 6* underwent successful steaming trials on Sunday afternoon, 23 August. The engine worked the very heavy traffic at the

museum on the 13 September open day without any problems arising. Since then several minor matters have been corrected as these emerge. The track sanding gear has been refitted so that it can deposit sand for working in either direction and the project of wiring the lights from the steam turbine is well advanced. Patterns of the "Perry 7967.49.1" builders plates as well as name plate *Tully 6* have been sent to the foundry so the fitting of these items in December should complete this major restoration project.

It is a credit to the boiler shop at the BHP Port Kembla Steel Works, to the restoration team at the ILRMS Museum and to the Tully Mill fitters that very few problems had to be adjusted during the steam trials of this loco. Although the wheels were dropped from the frame at Albion Park and the motion bushes etc. overhauled, the valve timing did not require adjustment. After possibly 25 years of inactivity the loco operates with a uniform and steady beat!

Over 1000 visitors took trips on the museum steam railway on 13 September while over 450 passengers were carried behind the Gemco electric loco on the museum's tramway. As the two small man transport cars used with the Gemco only seat a total of 25 passengers, most of the miners' tram trips were made at full capacity. The success of this open day was the result of major publicity due to the annual visit of the Illawarra Jazz Band and the recommissioning of the Perry loco.

All steam trips on the open day were made with four passenger cars with the jazz band accommodated on a large bogie flat car fitted with seats behind the loco. The total seating capacity of the passenger cars amounted to just over 100 passengers but many trips were made with over 150 visitors creating their own peak hour loads!

Restoration work has now accelerated on the Davenport loco (0-4-0ST 1596 of 1917). The application of insulation, cladding and cover strips on the firebox is proceeding as well as the renewal of some items of plumbing. When this part of the Bicentennial project is completed the new cabin will be bolted to the rebuilt cab sub frame and the loco will then be repainted.

In addition to the continual task of brass polishing, minor jobs are being conducted on 0-6-0 loco *Cairns* (Hudswell Clarke 1706 if 1939). New conduit and wiring as well as switch gear are being constructed to replace these worn items on the locomotive.

The restoration of the Otford Signal Box was completed by the 13 September open day. The rubber flooring has been fitted and the fixing of new external fascia boards enabled the outside paintwork to be completed. Member Brad Johns, who has been responsible for this project, has been the VIP in several items of publicity concerning this restoration job. A ceremony is

planned for next October when this signal box reaches its centenary.

The regauging of the two large Huntley Colliery cross bench man transporting cars was completed by early September. No. 4 has been retained in its original condition but the other vehicle has been converted to a bogie flat car almost 9 m long x 2.4 m wide. Stability tests were conducted by loading a mobile compressor and other items onto the vehicle. No member could be found willing to have his or her motor car placed on the flat car for further tests! The wagon is very stable and the conversion has been made so that the seats can be refastened to the frame when needed as a "band car".

The new long "Shay Siding" was completed by mid August, branching from the main station yard. This has been constructed on steel sleepers with 45 lb rail fastened by Pandrol clips.

The first reconditioned castings for the Shay bogies (Lima 906 of 1904 and 2097 of 1907) were received at the museum during September. The museum was pleased to receive an offer by the NSW Rail Transport Museum to reprofile the worn Shay wheel treads at their Thirlmere workshops. Although the main thrust of the Shay restoration team is to first restore two bogies to operating condition, work is progressing on stockpiling and cutting to shape the new main frame components for this loco.

John Fowler 0-4-0T loco 16089 of 1923 returned to the Albion Park museum railway on 23 September from its store site in Kiama. Although steady progress is being made on the formalities which will result in a tourist railway being constructed at and adjacent to Kiama harbour, the Kiama Light Rail group transferred the loco to Albion Park as it is expected that restoration will eventually be carried out in the ILRMS workshops.

During October the window frames along one side of former Melbourne cable car 430 were replaced with new sashes constructed in one piece from 12 mm thick marine ply. Many of the existing frames are 97 years old and carry fleet number "25", the identification carried by the car when it entered traffic on the South Melbourne line during 1890. Construction number 430 became the car number when the M&MTB renumbered all cable rolling stock in a uniform roster in the early 1920s. A total of 20 sashes have been constructed so that all the original items will be replaced by the end of the year.

The ceremony to mark the official return to traffic of Perry loco *Tully 6* and Davenport engine "Kiama" on Saturday, 9 April, 1988, will commence at 2 pm at the Albion Park Museum, Tongarra Road at the southern end of the air strip. The ceremony will mark the conclusion of the three CEP programmes conducted during 1985-7 and the Bicentennial grant projects. Three steam locos, as well as the various electric, petrol and diesel units, will be in operation on this gala occasion.

Readers requiring further details during late February, should direct their inquiries to P.O. Box 1036, WOLLONGONG, 2500.

Ken McCarthy 10/87

ROY MILES, c/- Steelmark, Unanderra 1435 mm gauge

This gentleman purchased Ruston & Hornsby Model 88DS 0-4-0DM 326064 of 1952 ex Helensburgh Colliery at an Australian Iron & Steel auction in November 1982, for the Lachlan Valley Railway. It was stored at Elders Metals Ltd, Berkeley Road, Unanderra. Ownership of the site changed to Steelmark in 1985, but the loco is still there, apparently because of a transmission seizure.

J.L.N. Southern 10/87

AUSTRALIAN IRON & STEEL PTY LTD, Nebo Colliery 1067 mm gauge

This is the last colliery in the group where coal haulage by locomotive can be seen. There are four vintage Malcolm Moore 0-6-0DMs available for use here and they will finish up by 1988, forty years after their introduction to the area. One locomotive and some bogie coal skips were donated to the Zig Zag Railway Co-op during 1987. Company policy is to replace underground haulage by conveyor belts, and diesel locomotives involve operating difficulties because of frequent safety checks and costly exhaust scrubber maintenance.

J.L.N. Southern 10/87

AUSTRALIAN IRON & STEEL PTY LTD, Bulli Colliery 1067 mm gauge

(see LRN 28, p.3)

All underground equipment was withdrawn from the mine by 28 August, and the mine is being sealed off. An auction was held at the mine on 19 September, and the following items were disposed of:

Malcolm Moore 0-6-0DM; 25 tonne; Gardner 8L3 engine

- 1 MM 26-204 No. 1 1948 / Drewry 2211 1947 ex Wongawilli Colliery
- 4 MM 26-204 No. 4 1948 / Drewry 2214 1947 ex Bulli Colliery
- 7 MM 26-204 No. 7 1951 / Drewry 2336 1947 ex Bulli Colliery
- 8 MM 26-204 No. 8 1951 / Drewry 2337 1947 ex Bulli Colliery
- 9 MM 26-204 No. 9 1951 / Drewry 2338 1950 ex Bulli Colliery
- 14 MM 26-204 No. 14 1951 / Drewry 2343 1950 ex Kemira Colliery
- 15 MM 26-204 No. 15 1951 / Drewry 2344 1950 ex Kemira Colliery

Sold for \$1400 each to McAlister Bros (Metal Recyclers) Pty Ltd, Smithfield, for resale as locomotives or engines, together with the engine from loco 10, scrapped at Kemira in 1972 for spare parts.

Four-wheel battery electric locos:

- 1 BHP 1947 ex Cordeaux Colliery) Sold for \$250 each

- 15 BHP 1947 ex Cordeaux Colliery) without battery
- 46 BHP 1947 ex Tower Colliery) boxes to three
- 63 BHP 1948 ex Bulli colliery) different buyers
- 64 BHP 1948 ex Bulli Colliery) for parts/scrap.
- 97 Gibson Battle ex Wongawilli Colliery)

(BHP locos built under licence from Jeffrey; Gibson Battle either built by Jeffrey or under licence from Jeffrey) Personnel carriers:

- 98 4wBER Titan 1002 1977 sold for \$550 for parts/scrap
- 99 4wBER Titan 1003 1977 sold for \$550 going to Melbourne
- 124 B-B DHR Hunslet Taylor 1981? sold for \$500 for parts/scrap
- 125 B-B DHR Hunslet Taylor 1981? sold for \$500 for parts/scrap

Miscellaneous rail-mounted equipment:

- EE 250 hp generating set - sold for \$400
- 154 Consolidated compressor, 80 hp - sold for \$250
- 119 Hexham diesel breaker - sold for \$350
- 121 Hexham diesel breaker - sold for \$450
- 117 Hexham diesel breaker - sold for \$460
- Hexham feeder machine - sold for \$500
- 64 bogie coal wagons (operational) - sold for scrap at \$150 ea
- 65 bogie coal wagons (non-operational) - sold for scrap at \$185 ea
- 4 flat top bogie rail cars - sold to Huntley Colliery for wheels, axles & couplers for \$210
- 2 ambulance rail cars - sold to Huntley Colliery for wheels, axles & couplers for \$200
- 345 hardwood sleepers - sold for \$275 the lot.

BHP battery locomotives 58, 62, 65, 65 & 67, (built 1948) and Fox 4wDMR personnel cars 13, 14, 19, 74 s 60 (Box 241, 213, 222 of 1967 & 338, 344 of 1974 respectively) disappeared from Bulli after closure in May 1987. They may have been transferred elsewhere, but it is suspected that at least personnel carriers 13, 14 & 19 may have been scrapped on site .

Craig Wilson 9/87; J.L.N. Southern 10/87

BHP LTD, Newcastle Steelworks 1435 mm & 915 mm gauge

(see LRN 27, p.4)

A further rationalisation of the operations here will lead to the withdrawal of another six Bo-Bo DE locos, including the elimination of the narrow gauge system with its 7 km of track and five locos, with the latest built in 1977.

Between November 1982 and April 1983, eight Goninan centre cab Bo-Bo DE locos (40, 42, 44, 45, 46, 49, 50 & 51) had been placed in mothballs as a part of the rationalisation implemented then. All except number 40 were standard gauge. Numbers 44, 50 & 51 were returned to service in 1983-4. This was partly due to the withdrawal of Goninan end cab "Cooper-Bessemer"

B-B DE locos 32 & 36 after they broke crankshafts. These locos are currently stored for cannibalisation in Lysaght's "Sankey Yard".

The narrow gauge locos currently in use are numbered 37, 38, 39, 41 and 56. These have narrow cabs, while the standard gauge units have had their cabs widened, or else were delivered with the wider cab. The narrow gauge was used for the transport of ingots from casting to bloom mill, and will be eliminated with the introduction of a new caster by the end of 1987.

It is not known exactly which other standard gauge unit will be withdrawn, but it will be made redundant by the installation of a slag granulator at the No. 3 blast furnace. Slag from here is currently handled by number 50. By the end of 1988, the remaining "Cooper-Bessemer" B-B DEs, numbers 33, 34 & 35 will also be withdrawn. Standard gauge track currently totals 108 km.

Full maker's details of the locos may be found in *Steel & Rails in Newcastle*, published by the LRRSA.

Australian Railway via John Browning 10/87

NSW RAIL TRANSPORT MUSEUM, Thirlmere 1435 mm gauge

(see LRN 46, p.2)

Australian National Railways General Electric Bo-Bo DE DE90 has been acquired for preservation at Thirlmere. It was obtained in 1944 under lend-lease for industrial use at the St. Mary's munitions factory, and in 1948 was transferred to Woomera, becoming Commonwealth Railways DE90. It was latterly used for shunting at Port Pirie and Port Augusta.

Australian Railway via John Browning 10/87

ZIG ZAG RAILWAY CO-OPERATIVE LTD, Lithgow 1067 mm gauge

(see LRN 15, p.9)

In September 1987, a historic Malcolm Moore 0-6-0DM loco was donated by Australian Iron & Steel Pty Ltd from their Nebo Colliery. The loco is Malcolm Moore 26-204 No. 11 of 1951 / Drewry 2340 of 1950. Accompanying the loco were some ten-ton axleless bogie skips for possible use on work trains and ballasting.

J.L.N. Southern 10/87

RICHMOND VALE PRESERVATION CO-OPERATIVE SOCIETY LTD Richmond Vale Railway Museum, Richmond Main 1435 mm gauge

(see LRN 45, p.7)

Progress is continuing well in the development of the preserved railway project here. *Marjorie*, Clyde 0-4-0ST 462 of 1938, is in working order and it is hoped to have tourist trains running between Richmond Vale and Pelaw Main

Collieries in 1988. Work is well in hand in the restoration of 0-4-0ST *Kathleen*, Avonside 1862 of 1921. A major discovery has been that of the body of J.A. Brown's personal carriage on a Cessnock farm. A suitable chassis has been located to restore this relic.

Australian Railway via John Browning 10/87

QUEENSLAND

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 59, p.7)

The last section of the Hawkins Creek line to be so done was relaid with 60 lb rail during the 1987 slack season. This line is now 60 lb throughout, most of it thermit welded.

Just prior to the crushing, brakewagon No. 2 (E.M. Baldwin B-B DH 7065-3-6-77 of 1977) was transferred from loco 20 (E.M. Baldwin B-B DH 7070-4-4-77 of 1977) to sister loco 19 (7070-3-4-77 of 1977). No. 19 received a motor and torque converter overhaul during the slack season, so is now in better shape than 20, and has been put on the heavy Hawkins Creek run instead. The brakewagon goes with the loco on the run. Brakewagon 1 (E.M. Baldwin 7065-5-6-77 of 1977) remains with loco 14 (E.M. Baldwin 0-6-0DH 6-2490-1-7-68 of 1968).

Victoria Mill's Hansen's 2-2wPMR linecar V1 (78 of 1973) was at Macknade for the first five weeks of the crushing, but by mid-August it had returned to the Halifax depot where it is used to maintain the section of line used by both Macknade and Victoria for bulk sugar haulage. Macknade car 2 (1112 of 1973) remains at the mill though little used.

An unusual use of 2 ft gauge track was seen in April when a new dryer drum was delivered from the Bundaberg Foundry. A special trolley was built of six new bin frames to run on a pair of parallel 2 ft gauge tracks with six axles running on each track in order to transport the dryer into the building where it was to be installed. Haulage was by man-powered wire rope.

Christopher Hart 8/87

A truck was badly damaged when it was in collision with Clyde 0-6-0DH 12 (65-434 of 1965) at Ripple Creek (where the Bruce Highway crosses the Seymour line) at 8.30 am on 30 September. The loco ended up in the road at right angles to the track, and a piece of flange was broken off one of its leading wheels. This was welded back into place at the mill, but it was then found that the axle had been bent by the force of the collision.

The small loco is in continual use on the yard shunt, and another is in use for

two shifts on sugar haulage to Lucinda. Five locos are used on cane haulage on the day shift, three on the afternoon shift, and only one at night .

The ex-Victoria Mill Hansen linecar 34 of 1972 has been numbered M1. It replaces the former M1 (more recently numbered TROL 1), Hansen 90 of 1973 , which is rumoured to be going to Victoria Mill for display with the *Homebush* steam loco.

Christopher Hart 10/87; Herbert River Express 1/10/87 via C. Hart.

CSR LTD, Pleystowe Mill 610 mm gauge

(see LRN 52, p.11)

The Gemco brake wagons purchased by the mill in 1985 are permanently coupled together, and one is incapable of being used without the other, which is fitted with the engine and compressor supplying air to the brakes fitted to both vehicles. They are normally used on the hilly run to Habana, and late in August were seen in use. Rather surprising was the discovery that the unpowered brake wagon contained a seat which was occupied by a rather reluctant passenger! A mill fitter had been riding around in the vehicle to try to diagnose some wheel lock-up problems which had been experienced when braking.

John Browning 9/87

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 60, p.12)

A Hansen linecar is said to have been donated to the Australian Sugar Industry Museum, Mourilyan.

The Mill's livery has been modified to light yellow with a grey bonnet top. The Baldwin bogie locos also have a green stripe.

Early in October, just six bogie Baldwin locos out of the mill's total of seventeen locos available for cane haulage duties were noted in service for the afternoon shift. There are another four main-line diesels used for yard shunting, sugar haulage to Lucinda, and navy use.

The mill is repainting its ballast hoppers green instead of the yellow previously used. Eight were seen in green and another in primer by early October, with at least three more to be done.

Christopher Hart 10/87; John Browning 10/87

MACKAY AREA MILL MERGER

(see LRN 59, p.6)

Another attempt to gain grower approval for a merged Mackay co-operative is likely to be put to the vote before the end of the year. CRS has agreed to sell any co-operative of four or five mills formed as a result, their

Pleystowe Mill for a basic price of \$25m. The co-operative mills involved are Racecourse, Marian, North Eton, Cattle Creek and Farleigh.

John Browning 10/87

BABINDA CO-OPERATIVE CENTRAL MILL SOCIETY LTD 610 mm gauge

(see LRN 59,p. 6)

The two Clyde 0-6-0DH's transferred from Goondi were observed in late September still in CSR livery and numbering as follows:

5 Clyde 55-56 1955 - still lettered "CSR", working in Goondi area;

6 Clyde 56-90 1956 - under repair in Babinda loco shed.

The "missing link" of tramline between the old Goondi line along Dinner Creek Road and the Babinda line along Cartwright Road was opened around 24 August. The length of this section which skirts the Eubenangee Swamp appears less than 3 km, but other work includes the regrading and reconstruction of most of the old Goondi line north of Garradunga, including one significant deviation, and the construction of new holding loops at the Babinda end of the link. Within Goondi territory, most of the points still face Goondi, but these are expected to be altered in due course.

Two former Goondi bogie ballast wagons were noted on Babinda metals in late September.

Tom Porritt 9/87; John Browning 9/87

MORETON CENTRAL MILL CO. LTD, Nambour 610 mm gauge

(see LRN 49, p.8)

A visit during October revealed-the surprising news that SHAY Lima 2091 of 1908 had disappeared from its position at the entrance to the mill yard, together with its canopy, sometime after 1 October. Investigations have revealed that the engine has been moved for a period of 12 months to Mapleton, the town which it was built to grind its way up to, for the celebration of that town's centenary.

Bill Gray 10/87; David Mewes 10/87

CITRA CONSTRUCTIONS LTD, Yukan 1067 mm & 1000 mm gauges

(see LRN 60, p.11)

By late September, all three Billard 4wDM locos were together at Citra's Yukan depot, as equipment was cleared with the winding down of the electrification project. The loco rebuilt by Birch Crane Hire, Billard T75P VM 227, had been numbered 007. Unrebuilt loco 11E1 (Billard T75P VM 224) had its axles removed and the wheelsets nearby appeared to be 1067 mm gauge. The second unrebuilt loco, 11E3 (Billard T75P VM 228) was still fitted with wheels at metre gauge. These items were advertised in the *Courier Mail* of 29

September as "Billard diesel loco 3 ft 6 in gauge and spares" to be auctioned on 14 October, but these later disappeared from auction notices.

A visit to Yukan on 15 October found them being loaded by crane onto QGR flat wagons, and it is understood that they had been acquired by the Rockhampton City Council for its bicentennial steam tramway project (see elsewhere this issue). They were observed at Mackay Station loaded on "S" wagons on 18 October, with 007 having had its cab removed to fit the loading gauge.

*Craig Wilson 10/87; Ray Graf 10/87;
John Browning & Clive Booth 10/87*

CSR LTD, Hambledon Mill, Edmonton 610 mm gauge

(see LRN 55, p.8)

Traffic tailed back on the Bruce Highway for some distance and loco crews waited impatiently to take their rakes of full bins back to the mill just before 4 pm on 30 September, when some empty bins became derailed on the highway crossing at Edmonton. E.M. Baldwin 4wDH 9109-1-9-80 of 1980 was sent down from the mill to retrieve some of the bins. It arrived here from Goondi in 1986. A similar machine, Baldwin 8002-1-8-78 of 1978, which arrived from Goondi this year, was seen in the loco shed.

Motor Rail "Simplex" 4wDM 10450 of 1954 has replaced Motor Rail 2090 as truck shop shunter. The more modern loco was fitted with the Dorman diesel engine from the 3 ft 6 in gauge "Simplex" which was formerly used for shunting QGR sugar box wagons. This unit appears to have disappeared from the mill.

A Motor Rail "Simplex" 4wDM was noted stationed at Redlynch depot. This is a 4 ton machine dating from the 1920s, and is possibly 2089 of 1922.

John Browning 9/87

CSR LTD, Kalamia Mill, Ayr 610 mm gauge

(see LRN 49, p.7)

ComEng 0-6-0DH *Delta* (FD5094 of 1965) has been fitted with a Caterpillar D343 engine, giving some 365 hp, as opposed to the original 277 hp. The larger engine has necessitated lifting a section of the bonnet cover in order to accommodate it.

John Browning 9/87

MOSSMAN CENTRAL MILL CO. LTD, 610 mm gauge

(see LRN 59, p.8)

During 1987, "Ballyhooley Steam Express" operations departed from a temporary terminus at the Port Douglas end named "Lakeside Station". This

is very near to where the line emerges from the mangrove swamp which it crosses by a causeway. Construction operations for the new Mirage resort are everywhere around, but the area should be most picturesque when the development and associated landscaping are completed. Some track has been laid in the direction of Port Douglas, and it is believed that stations will serve the new Sheraton Hotel and the old wharf area.

When visited on 1 October, only one loco was in steam, Bundaberg Foundry 0-6-2T *Bally Hooley* (6 of 1952), as the Drumsara Plantation tour was not operating. This loco is still LPG fired, but the other loco, Hudswell Clarke 0-6-0 1838 of 1950 is coal fired. It has been graced with the painted name *Bally Hooley Too* on the cabside, and carries extensive signwriting on the tender also. However, it is in excellent condition and appears well cared for in dark red livery with yellow lining out.

Willison couplers are being fitted to the Ballyhooley stock, which now consists of four metal-construction 4-compartment cars, and three new wooden 5-compartment cars. one of these has South African bogies from one of the ex QGR rail motor trailers acquired from Steam Trains Pty Ltd. Investigations regarding the possible use of at least one of these rail motor trailer cars has revealed problems with floor height compared with platform height.

A "canetainer" bin has been mounted experimentally on a pair of the new Sugar Research large diameter self-steering wheelsets used last year on prototype vehicles at Marian Mill. (Canetainer wagons are normally mounted on bogies.) This was seen going through the tippler, and by all accounts, it has been operating with little trouble. A second chassis of this kind, which apparently failed by a few millimetres to give adequate clearance in the tippler, was noted in the mill yard.

John Browning & Bernie Milford 10/87

Mossman Central Mill has indicated that it has vacancies for steam loco firemen and drivers for their Bundaberg Foundry 0-6-2T and Hudswell Clarke 0-6-0 locos used to haul the Balleyhooley steam express. Anyone interested should apply directly to Mossman Central Mill, PO Box 97, Mossman, QLD 4873, marking the application attention Mr B.J. Milford/KD

Sunshine Express 10/87 via Geoff Hayes

ROCKHAMPTON CITY COUNCIL 1067 mm, 1000 mm & 610 mm gauges

(see LRN 49, p.9 & LRN 58, p.7)

It is understood that the 2 ft gauge Hudswell Clarke 0-6-0ST 496 of 1898 has been stored at the Council Bus workshops following a dispute about its ownership. It had been removed from Curtin Park at Port Curtis Junction

for private preservation. It is understood that progress on the steam tram preservation project is on course for operation in June 1988. One usable Billard 4wDM loco and two others suitable for spare parts have been acquired from Citra Constructions for the project (see elsewhere this issue).

Bill Gray 10/87; John Browning & Clive Booth 10/87

SOUTH AUSTRALIA

COBDOGLA LIGHT RAILWAY LOCO No . 2 610 mm gauge

No. 59 ex Barmera Park , being rebuilt by E. & W. S., Ottoway Depot.

Photo: Rob Sanders, 23.9.87

Most people would probably know the above mentioned loco as No. 59, which was in the Barmera foreshore playground for many years. About two years ago, this loco was removed from the playground, and it was only recently that I discovered that the E. & W.S. had removed it . The loco in this period of time, had been completely stripped down, and almost totally rebuilt by the Industrial Training Section, with the eventual aim of running the loco at the E. & W.S. Cobdogla Museum.

When the loco was brought to the Ottoway Depot and stripped down, things were found to be a lot worse than first expected. The boiler, with the

exception of the Circular firebox, backhead, some stays and throat plate, was totally beyond repair, and so a new barrel, front tube plate, and smokebox wrapper were made. Then, to keep everything as original as possible, these were re-hot-riveted together. As well, three of the four wheels were found to be cracked, and because of this, new centres were cast up. The old tyres were then built up with weld, machined and placed back on the wheels. Axles were replaced as well, as the old ones were also badly worn .

The saddle tank, sand boxes and smokebox door were all replaced, using the originals as patterns, and in keeping with the high standard of workmanship, these were also re-riveted as per the original ones. The cylinders have also been machined out, and new rings and pistons are to be made. Much of the valve gear has had to be made again, almost from scratch, as most of this was missing or broken. At the time of writing, the rebuilt cab still has to be fitted, boiler fittings completed and put back, and valve gear and motion fitting and funnel to be fitted. It is hoped to have this work completed by Christmas, so the loco can start running at Cobdogla early in the New Year.

It appears that the loco is indeed a Bagnall product (1801 of 1906), as the E. & W.S. have obtained copies of general layout from England. They have also managed to find a photo of the loco at work, possibly taken at Cobdogla. I would like to extend a personal thanks to Dean Schultz and Brenton Beard who showed me over the work and answered my endless questions.

Rob Sanders 10/87

TASMANIA

EMU BAY RAILWAY

This privately owned railway which runs 129 km from Burnie to Melba Flats may soon boast a branch line. Since the closing of the Guildford - Waratah Line in 1939 the E.B.R. has had no branches apart from a short loading spur at Primrose Siding. Now however with the planned extension of the Aberfoyle Company's mine at Hellyer, it appears highly likely that a rail link will be built to the mine from the 61.5 km mark on the long established E.B.R. line. Already a survey line has been cleared. If built, the branch will be 11.5 km in length.

Currently the freight hauled on the E.B.R. is almost entirely mineral ore from the mines at Rosebery and Queenstown. Over the past two decades the management has steadily followed a programme of track improvement. Extensive realignment on the northern section of the line has made haulage easier by reducing gradients and removing the sharpest curves. With most bridges now replaced or strengthened, the way is clear for the Company to

consider heavier and more powerful locomotives when replacements are required.

Ken Milbourne 10/87

QUEENSLAND LOCOMOTIVES IN SERVICE

Tasrail has purchased sixteen second-hand locomotives from the Queensland Railways. These engines are being reclassified as ZB class in Tasmania . Some are already in use. Apparently the need to press these engines into service was such that they have not been repainted and are still operating in their Queensland livery.

Ken Milbourne 10/87

TASMANIAN LOCOMOTIVE COMPANY

Despite all manner of difficulties and several years of work in restoring locomotive H2 (Vulcan 5950/1951), the Tasmanian Locomotive Company finally became operational on Saturday, 4 April, when they ran a passenger excursion from Derwent Park to Parattah and return. This was followed the next day by a similar excursion to National Park. These trips on Tasrail tracks are of course subject to the approval of Tasrail. Although this approval has been forthcoming for several trips during the winter, the Company has been refused permission to operate with a steam locomotive during certain summer months.

The operators of the Company are seeking to have this refusal to allow the excursions to proceed, reversed. If they are unsuccessful it will mean that the most suitable and therefore most profitable period of operating will be lost .

Ken Milbourne 10/87

VICTORIA

PRIVATE PRESERVATION 610 mm gauge

(see LRN 59, p.11)

Two 4wDM locomotives have been located at Corowa. Both were in the possession of an engineering company called Uptons, who removed the engines from both locos for use elsewhere.

The first is a Fowler, and has been regauged from 2 foot to about 5 foot by the use of additional framing and axle extensions.

The second, also of 2 foot gauge, was built by the Whitcomb Locomotive Company of Rochelle, Illinios, USA, a subsidiary of the Baldwin Locomotive Company. The builders plate carries the serial number 40521 and class number 5DM26A. The locomotive is believed to have been used in the

construction of the Snowy Mountains Scheme, and was originally powered by an "International" diesel engine.

Both locomotives, substantially complete except for the engines, have been purchased by Alan Stebbing. Anyone who can supply any further information on the history of either locomotive is asked to contact Alan at 2239 Dandenong Road, Mulgrave, Vic. 3170.

Motor Rail "Simplex" 7351 of 1938 has been purchased from Cheetham Salt Limited by Peter Evans. It was removed from the Laverton Works on 10 September 1987 to a site at Belgrave South for some preliminary work. The restoration of this locomotive is likely to be a long term project as several frame members have succumbed to the ravages of salt and will have to be replaced.

In the short term at least, the Dorman diesel engine of 7351 will be used to complete the restoration of "Simplex" 10058 of 1948. Although this engine is of lower HP than the original, the external dimensions will allow it to be fitted into the frame of 10058.

Peter Evans 10/87

ALEXANDRA TIMBER TRAMWAY AND MUSEUM 610 mm gauge

(see
LRN
p.9)

60,

Motor Rail "Simplex" 10058 or 1948 under restoration at Alexandra.

Photo: Peter Evans

A working bee was held at the Museum on 27 September. Although the day was hot, a pleasing number of volunteers attended, and 20 metres of the

oldest section of track was lifted. This section was then relaid with new red gum sleepers, and the rail joints were staggered. Fresh ballast was added, and this section of the track and one set of points were jacked up and re-aligned.

Work is continuing on the repair of the old broad gauge station. The fence near the toilet block has been replaced, and an avenue of trees planted along the driveway.

On 18 October the station platform was resurfaced with finely crushed gravel and rolled flat. The work was carried out by members of the Lions Club of Alexandra. This organisation has strongly and actively supported the Museum in the past, and their continued contribution is greatly appreciated.

When the Alexandra line was closed, four RY trucks were left in the Alexandra yard as receptacles for superphosphate. These trucks were sold by V/Line to Simms Metal as scrap, and were removed early in October. Enquiries are now being made in order to obtain some broad gauge four-wheel vans to place in the goods shed road for the storage of loco wood. This would enable the area around the goods shed to be cleaned up and landscaped.

Motor Rail "Simplex" 10058 of 1948 has had a new floor and driver's seat fitted. The exhaust conditioner has been reassembled, and after new axle journal oilers were fitted on 26 September, the locomotive was towed several times around the track by Malcolm Moore 4wPM B.No.1049. The "Simplex" rode well on its new springs, and progress so far has been very pleasing considering that the locomotive had been partially cut up for scrap when it was purchased.

Work on the repair of John Fowler 11885 of 1909 has been progressing more slowly than had been hoped. The cab has been repaired, and work has started on the construction of new side tanks. When the damaged tanks were removed the opportunity was taken to jack the loco up, remove the springs and hangers, clean the axleboxes and insert new oil wicks. It is hoped to return the locomotive to service in early November.

Anyone interested in joining the Museum's volunteer workforce is asked to write to the Alexandra Timber Tramway and Museum, c/- 7 Rose Street, Alexandra, Vic. 3714. New members are always welcome .

Peter Evans 10/87

OLD WOOLSHED MUSEUM 610 mm gauge

Noted stored near the causeway at Wodonga on 13 September was Orenstein and Koppell 0-6-0T B.No. 4241 of 1910. This locomotive was originally from the Great Boulder Gold Mine in W. A., and came here via the Goulburn Steam Museum. The loco is stored on a short length of track in the open, and is in poor external condition. It is believed to be owned by a

collector of old machinery who bought it in order to establish a tourist railway as part of a museum on the causeway. The museum appears to be closed.

Peter Evans 10/87

A.E. VICKERY PTY LTD 660 mm gauge

This steel merchant and fabricator at 442 Swan Street, Burnley, employs a 20 m length of 660 mm gauge tramway to transport heavy fabricated parts from the machine shop to the spray painting area. One steel-framed four wheel flat truck, approximately 1 m x 2 m is hand pushed along 30 lb rail set into the concrete floor .

Peter Evans 10/87

O'SHEA AND BENNETT 914 mm gauge

Remnants of a once extensive system of 3 ft gauge tramways for the stacking of timber still exist at O'Shea and Bennett's timber yard in Oakleigh. Still intact, although partially buried, is a section about 100 m long. Part of this line, on a slight gradient, is still used. The four wheel truck is moved by hand and braked by using a length of timber as a lever to bear on one wheel. The yard was originally bisected by Connell Road, but the eastern side of the road has been re-developed as factories. However, the section of rail crossing Connell Road is still intact.

Peter Evans 10/87

EMERALD TOURIST RAILWAY BOARD/PUFFING BILLY PRESERVATION SOCIETY 762 mm gauge

(see LRN 59, p.10)

The boiler of the Climax loco was approved for operation at 180 pounds psi on 1 July. This loco is now not likely to be operational until next year. The frames of G42 are still at Emerald. At the Emerald car shops extensive work is underway on ex Mount Lyell car NBL 3, which will be brought up to the same standard as NBL 1 and 2, and fitted with name plates. An ex EBR track inspection car is also at Emerald, being converted from 3 ft 6 in gauge to 2 ft 6 in

On Tuesday October 27, a special mixed train was run to the Nobelius Packing Shed for the launching of Peter Cuffley's new book *That Little Train*. The train was hauled by 14A (in red livery), with two NQR wagons, an NU van, and five passenger cars, including two NBH's, and no Mount Lyell cars - to retain the authentic appearance of a VR train of about 1920. Long time Emerald resident Gus Ryberg - who worked in the packing shed when it was a packing shed - launched the book, concluding with the comment that "it's

worth the price". The book is a social history of the Gembrook line over the period 1900 to 1953. A full review will follow later, but from a brief perusal of the publication it appears to be a magnificent work, excellently printed, with superb photographs, index, bibliography and references. With 240 pages, and a hard cover, I have to agree it is worth the price - \$35.00 plus postage.

Frank Stamford 10/87

MEETINGS

MELBOURNE :

Frank Stamford will be presenting a variety of current and hysteric slides based on his recent trip to England, Scotland and. Wales; with an emphasis on Welsh Narrow gauge lines, Brunel's achievements, and inspiring scenery. (not to mention the Great Atmospheric Disaster of '47) Not to be missed! !

LOCATION : Ashburton Uniting Church Hall, Ashburn Grove, Ashburton

DATE : Thursday 10 December 1987 at 8.00 pm

SYDNEY :

Annual tour on 6 December to quarantine station at North Head. This establishment had an extensive 2 ft 3 in gauge railway, much of which is still in position. which was worked by a Caldwell Vale locomotive for many years. A small charge will be made by National Parks for a conducted tour. Bring a lunch and meet at Manly wharf at 11.00 am. For further details contact C.Wilson 02-484 7984.

ADELAIDE:

Contact Arnold Lockyer for details. (296 9488)

LOCATION: 150 First Ave., Royston Park

HAVE YOU ORDERED COPIES OF OUR TWO EXCITING NEW PUBLICATIONS YET? NOW AVAILABLE : -

JAMES MARTIN / PERRY BUILDERS LISTS, \$5 .95

SPECIAL NOTE

We have been inundated with contributions this time! ! So much so, that unfortunately this issue has had to be fairly heavily "cut" to stay within the 20 pages maximum we are allowed. We have enough material left over for almost half of LRN 62; so if you're looking for your contribution and can't seem to find it - have faith - it will probably appear next time! Although its

hard to have to hold some contributions over till the next issue, it's infinitely better than not having enough material, so please don't stop sending them in Thanks for the support - it's great !

NOTES, CORRECTIONS AND COMMENTS

TIMBER AND GOLD TOUR, Daylesford, 4 October 1987

If anyone taking part in this tour has discovered they dropped a pocket knife, would they please contact Mike McCarthy on (03) 762 5847, as one has been handed in to him.

PUBLICATION

THE DEFIANCE - The Story of North Eton Cooperative Sugar Milling Association Limited 1888-1987 - by Frank Rolleston

This 174 page hard back book celebrates the completion of the one hundredth year of crushing at North Eton Mill. Written by a mill supplier and local identity, it is especially valuable in providing local flavour, and although somewhat lacking in technical historical details, it features some material on tramway history and some tramway photographs. It is a valuable addition to the ranks of mill histories and is good value for money. It is available for

\$20 plus \$5 postage and packing from North Eton Co-operative Sugar Milling Association, NORTH ETON 4741.

John Browning 12./87

RESEARCH

ZINNS LOCOMOTIVES

ILRMS would be interested to learn the history of the Leyland-Zinns loco they have recently acquired from ANGRMS (see elsewhere this issue). They would welcome any information on the story of Mr Zinns and the loco/s he constructed in the 1970s.

Ken McCarthy 12/87

T.A.C.L. RAIL TRACTOR RESTORATION - PROGRESS REPORT A PROJECT TO RESTORE THE CLIMAXS LITTLE BROTHER

(see LRN 61, p.4)

Some specifications of T.A.C.L. Locomotives:

Approx. weight: 4 tons

Power unit: Fordson tractor developing 22 b.h.p. at 1000 r.p.m.

Wheels: 28 in diameter, 5 ft wheelbase.

Speeds: Approximately 3, 6 and 12 m.p.h. in either direction.

Where did TACLs run?

The PBPS TACL has "Loco No. 55" stamped in its balance weights, which would indicate that at least 55 were built. At present I only have definite knowledge of eight, as follows:

- 2 - Forests Commission, Victoria; Tyers Valley Tramway 2 ft 6 in gauge;
- 2 - Thomson Valley Tramway, (Victoria), 3 ft gauge;
- 4 - BHP, Whyalla, 3 ft 6 in gauge;

In addition, the following six Fordson-engined tractors were probably TACLs:

- 2 - State Rivers & Water Supply Commission (Vic), Mildura, 2 ft gauge;
- 1 - Adelaide Cement Co., Kleins Point SA, 3 ft 6 in gauge;
- 1 - South Aust. Railways, Pt. Broughton, 3 ft 6 in gauge;
- 1 - Bowen Salt Works, Qld, 2 ft gauge; (Builder's No. 33 ?)
- 1 - SECV, Rubicon, 2 ft gauge.

That makes a total of 14, all of which were built between 1924 and 1929. After that date Malcolm Moore appear to have built tractors under their own name, and of entirely different types to those built by their subsidiary

company - The Tractor Appliance Company Limited. Anyone have any clues as to where the other 40 odd TACLs may have run?

Frank Stamford 10/87

LEES Tramway, Smithton

Although this tramway ceased to operate more than half a century ago, much evidence of its existence still remains and until quite recently the frame and wheels of *Coffee Pot*, one of two vertical boiler locomotives to work on the line, lay near the old workshops building at Leesville.

As records of all the tramways in the Smithton Area are incomplete to say the least, it is not known when *Coffee Pot* (Thomas Green 173, 1883) was finally taken out of service. It is known that it arrived in 1884 and that it worked on the tramway lines to Broadmeadows, Cuba Mill, Six-Mile, Trowutta Mill and Pelican Point. At some time it was converted to an internal combustion locomotive and by 1940 was derelict at Smithton.

In keeping with the lack of detail concerning this locomotive's operational life, there is something of a mystery surrounding its final disappearance from the Smithton area. Whilst it is reliably reported that it was purchased and taken away by two men for shipment to Victoria, the identity of the buyers and their purpose in acquiring the remains of the old engine are unclear. Hopefully further information will be forthcoming.

Ken Milbourne 12/87

MELBOURNE ZOO

(see LRN 61, p.3)

Keith Vanstan writes that he often rode this train on his visits to the Zoo as a child and can remember it being at another location, using an oval layout and running in an anti-clockwise direction, after being moved from the vicinity of the elephant ride walk. On visiting the Zoo in July 1987 (after 20 years), he could still recognise the location of the oval layout.

Keith has expressed an interest in similar trains made as fund-raisers and parts of Shows, travelling from town to town, etc. Perhaps anyone with similar interests, or a particular interest in researching the Zoo trains further, could contact Keith direct at 4 Robyn Place, Delacombe, Vic 3356.

Editors 12/87

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

EIMCO AUSTRALIA PTY LTD, Alexandria, NSW

Problems experienced with the final drive units of 2 ft gauge E.M. Baldwin

B-B-D-E locomotives has led to some headaches among Queensland sugar mill engineers. The truck-type differentials fitted as final drives were not up to the task under the severe conditions experienced at some mills. In consultation with the Sugar Research Institute, South Johnstone Mill has commissioned Eimco Australia to modify the existing reversing box on a 32-tonne Baldwin bogie loco, and construct a new pair of bogies with a designed wear life of 25 seasons. The new heavy-duty bogies will be incorporating "bogie control", a system of linkages designed to coordinate the movements of the two bogies in use.

It is understood that Eimco have also contracted to construct a new soundproofed cab for a Farleigh Mill Clyde Model HG-3R 0-6-0DE loco.

*Mackay Daily Mercury 12/11/87
via John Browning: Bob James 12/87*

HEXHAM ENGINEERING PTY LTD, Hexham, NSW

A number of orders have been placed with Hexham Engineering for Colliery rail equipment, and it is believed that some have already been completed.

Details to hand are as follows:

7 BE locos	Elcom Collieries Pty Ltd NSW
3 DH locos	Elcom Collieries Pty Ltd NSW
2 DH locos	Newcom Collieries Pty Ltd NSW
1 DH loco	Queensland Coal Mining Co Ltd Cook Colliery, Blackwater
4 DH 18-man personnel carriers	Coal & Allied Operations Pty Ltd NSW
1 DH 22-man personnel carrier	Coal & Allied Operations Pty Ltd NSW
3 BE personnel carriers	Coal & Allied Operations Pty Ltd, NSW

Two 25-tonne 4wDH locos were built for Australian Iron & Steel Pty Ltd and were probably delivered in 1986. A second radio-controlled bogie brake wagon has been delivered to Isis Mill in Queensland, and carries builder's number 684.

ARHS Bulletin Supplement 8/87, 11/87; J.L.N. Southern 11/87

NEW SOUTH WALES

AUSTRALIAN IRON & STEEL PTY LTD 1067 mm gauge

(see LRN 61, p.9)

Three E.M. Baldwin 25-tonne diesel locos are reported to be at Appin Colliery for longwall movement. These would presumably be numbered 20 to 22. Two 16-tonne diesels built by Hexham Engineering are believed to have been delivered to Dordaux Colliery in 1986 and are numbered 23 & 24. No.

24 was transferred to Tower Colliery in November 1987. E.M. Baldwin B-B DH 7722-1-9-78 of 1978 was transferred to Wongawilli Colliery early in 1986 on the Closure of Corrimall Colliery.

Two BHP-built 4wBE locos which disappeared from Bulli Colliery after its closure have been located transferred to other Collieries. No. 62 of 1948 has been transferred to Cordeaux. No. 67 of 1948 has been transferred or work on belt maintenance at Kemira drift.

J.L.N. Southern 12/87

COAL & ALLIED OPERATIONS PTY LTD, Richmond Vale Railway. 1435 mm gauge

(see LRN 49, p.3)

Friday 25 September was the last official day of operation on the line, the last steam-hauled industrial railway in Australia. Green-liveried Beyer Peacock 2-8-2T 25 (6126 or 1922) was the last loco in official use, while black liveried Beyer Peacock 2-8-2T 30 (6294 of 1925) had been used on 18 September. Blue liveried Beyer Peacock 2-8-2T 22 (6055 of 1920) was the third steam loco at Hexham.

However, following a number of protests at the closure of the line during the last couple of weeks before closure, loco 25 was "hijacked" by its crew and became the centre point of a camp set up at Lenaghans Road picketing the road trucks which had begun to haul coal from Stockrington. Stalemate appeared to be the situation during the first weeks of October.

Rail Australia 10/87 via John Browning

COMMONWEALTH OF AUSTRALIA, Munitions Filling Factory, St. Marys 1435 mm gauge

Tenders closed on 25 November for the purchase and removal of Clyde Model DHI-71 18 tonne 58-187 of 1958. This loco is a standard gauge version of the standard cane tramway design and is powered by a General Motors Detroit Diesel model 6080. The engine has a maximum RPM of 2120, is unit No. 6A-71537, and has run for 146 hours. It was originally delivered to Utah Construction.

Network 10/87 via Clive Booth

Financial Review 16/11/87 via Phil Rickard

GOULBURN CITY COUNCIL, Goulburn Steam Museum 610 mm gauge

(see LRN 57, p.5)

John Fowler 0-4-2T 16340 of 1924 was steamed at the museum on 13 July following minor attention after its arrival from Forbes. The Goulburn City Council is keen to reopen the museum and a Council employee has been

transferred to the site with this end in view. An early task for him was to haul Krauss 0-6-0T *Stella* (3423 of 1896) from a precarious position threatened by subsidence, a task which was completed successfully. This locomotive requires major attention including a new smokebox front.

Considerable work is required to bring the existing track at the museum back to passenger standards, and there are plans to extend the line several kilometres to the north.

Australian Railway Vol.1 No.9 via John Browning

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 61, p. 6)

A visit by an ILRMS members to the ANGRMS museum railway at Woodford last July revealed that the Leyland-Zinns four-wheel petrol-mechanical loco could be available for purchase. This unit is fitted with only one reverse gear which limits its use on the end to end Woodford railway operation. The ILRMS has seen searching for a medium size petrol or diesel locomotive to handle school party and mid-week hirings at Albion Park. The battery-electric, diesel and petrol units at Albion Park have adequate hauling power but limited braking due to their light weights.

As a result of successful negotiations, and the efforts of Murray Barker and his ANGRMS colleagues, the Leyland-Zinns loco arrived at Albion Park on 20 November. The ILRMS auto mechanics had the unit running around the main line circuit on the following day! The locomotive is powered by a six cylinder petrol Leyland Cub engine, an air operated clutch and air brakes controlled by former Brisbane tramcar components .

The Leyland-Zinns is presently being overhauled. Keys and keyways are being overhauled, a new fuel pump will be fitted, the radiator is receiving major maintenance and the air clutch mechanism has been modified. The Albion Park Museum is grateful to ANGRMS for making this interesting locomotive available for preservation and restoration.

Reproduction name and builders plates have been received from the Phoenix Foundry of Uralla for Perry loco "Tully No. 6" (7967.49.1 of 1949) and Davenport loco *Kiama* (1596 of 1917).

The museum is fortunate in obtaining the services of a boilermaker under the Department of Corrective Services weekend community services scheme. The new steel floor for the cab of Davenport loco *Kiama* has seen completed and efforts are now being directed to altering the pipe work so that this enters the cabin. through the floor rather than at various locations

through the cabin wall. When this work is completed the new wooden cab will be fitted to the new floor frame. This major work being conducted on *Kiama* has been partially financed by a Bi-centennial grant.

The steam turbine generator on "Tully No. 6" is now fully operational. This provides a 32v supply for the head and rear lights on the loco and the interior lights in former Melbourne cable tram No. 430 through jumper cables.

Heavy section flat steel has been purchased so that new bogie side frames can be constructed for Shay locomotive trucks. (Lima 906 of 1904 and 2097 of 1907). A crank shaft and other power unit component, are being restored away from the museum.

The Mancha battery electric loco ex Ivanhoe Colliery is again operating in an efficient manner. In fact it is able to haul two dead steam locos at the one time out of the loco shed! The museum's collection of traction batteries were carefully tested, exhausted accumulators scrapped and satisfactory ones individually charged before being re-installed in the locomotive.

The task of fitting glass to 20 new marine ply window frames to passenger car 430 is nearing completion. This project will be followed by the application of new canvas to the roof of this 97 year old vehicle.

Over 1000 passengers were carried on the museum railway on Sunday 6 December when Oak Flats Bowling Club again used the museum picnic grounds as the venue for the annual Christmas party. On the December regular steaming day of 13 Sunday, the museum donated all passenger fares from the steam trains to the local Bush Fire brigade.

During early December, the walls of the shower section of the brick toilet block were tendered. Ceramic tiles have been purchased and these will soon be fitted in the shower area.

The new covered table and bench units in the picnic area have been appreciated by the visitors while work is progressing on the replacement of the half drum steel barbecues with large brick units.

Ken McCarthy 12/87

"SIGHTINGS"

Ray Graf reports the following two sightings of locomotives for the interest of readers:

On Wednesday, 25 November 1987, one 4w W/G Battery Electric loco and one Batt box (both newly painted) on the back of a semi, heading away from Wollongong on Picton Road approximately 18 km north of Wollongong. Loco possibly bearing road no. (metal letters) #30.

At 0730 hours on Friday 18 December 1987, ex CR (ANR) 0-4-0D (R & H) (std gauge) #DR1 was seen on a low-loader in Darling Street, Dubbo NSW, near

the Civic Centre, facing north. It was hauled by NSW registered prime mover NBH-639. Destination? Possibly Dorriga?

Ray Graf 12/87

QUEENSLAND

ACLAND COAL MINE MUSEUM 610 mm gauge

The pinhead buildings of the Acland Coal Mine have been preserved as a museum. The mine closed in November 1984 (see LRN 45, p.8). Among the exhibits is a working mining locomotive which hauls a couple of skips along a length of track. This would be a 4wDM of Jenbach design, 1137 of 1952, 1138 of 1952 or Bundaberg Foundry 16 of 1955. There is also an extensive collection of mining equipment, photographs and memorabilia. The museum is open seven days a week with adult admission being just \$2.

The Road Ahead (RACQ) 10/87 via John Browning

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge

(see LRN 60, p.11)

Work on John Fowler 0-6-0DM 18260 of 1929 is continuing with two of the brass axle bearings needing replacement. New ones will need to be cast and machined.

Progress on the overhaul of Bundaberg Foundry 0-6-2T 5 of 1952 is progressing steadily. The interior of the side tanks was due to be cleaned and painted during December. Boiler mountings and cab are then to be refitted, and a new chimney is under construction by Graham Chapman at Kallangur.

Two Douglas Shire Council wagons are being fitted up for passenger use. The ex-QGR rail motor trailer requires maintenance with the timber window frames needing replacement.

The 4wPM locomotive built by the late Alwyn Zinn in Ipswich (3 of 1975) has been sold to the Illawarra Light Railway Museum Society as reported elsewhere in this issue.

*Durundur Railway Bulletin 10/87, 11/87;
ANGRMS Newsletter No. via John Browning 12/87*

BABINDA CO-OPERATIVE: CENTRAL MILL SOCIETY LTD 610 mm gauge

(see LRN 61, p.15)

An E.M. Baldwin line car was transferred from the closed Goondi Mill to Babinda during September. This unit is believed to have been used at Goondi since at least 1975. It seems possible that the later Hansen line cars were based on this vehicle.

Tom Porritt 11/87; John Browning 12/87

BRAMPTON ISLAND PTY LTD 762 mm gauge

(see LRN 56, p.7)

The F.C. Hibberd "Planet" locomotive rebuilt at Jenner engineering in 1986 (assumed to be 3475 of 1950) has been equipped with a hydraulic transmission, although it still has a Lister 2-cylinder engine. It is painted in a red livery and carries the name *Roger's Rocket*. Its sister engine (presumed 3476 or 1950) is spare loco. It is still in yellow livery and carries the name *Sonia*. The small battery electric trolley appears to be serviceable and was noted under charge in a building at the resort.

The passenger station has been moved about 70 m closer to the wharf with the construction of new resort buildings, but the track layout appears unchanged since 1983.

John Browning 12/87

BUNDABERG STEAM TRAMWAY PRESERVATION SOCIETY 610 mm gauge

(see LRN 59, p.7)

Bundaberg Foundry 0-4-2T 3 of 1952 has been magnificently restored, and is currently stored in a shed at the Agro Trend site. Also present were six 4-wheel passenger cars being built on 6-tonne bin frames and a petrol-hydraulic line car donated by Millaquin Mill.

Orenstein & Koppel 0-4-0WT *Germany* (6805 of 1914), is undergoing restoration on private premises. A new cab, along with new sidetanks and smokebox have been fabricated. The boiler is being retubed and extensive work has been done on the frame and running gear.

Little work has been done recently on Baldwin 0-6-0T *Felin Hen* (46828 of 1917) currently at the TAFE premises in East Bundaberg. Parts from seven bogie flat cars (ex Burrinjuck Dam) from Fairymead Mill are also here.

The Botanic Gardens track and running shed are of an excellent standard. A second linecar from Millaquin Mill was noted in the shed here. It is not clear at this stage, when operations will begin here.

David Mewes 10/87

CSR LTD, Haughton Sugar Co. Ltd, Invicta Mill, Giru 610 mm gauge

(see LRN 55, p.9)

Two brake wagons built up from diesel loco frames here show contrasting designs. *Clare* (ex ComEng 0-6-0DH AH4080 of 1964), used with E.M. Baldwin B-B DH *Selkirk* (6750-1-8-76 of 1976) appears to incorporate the full length loco chassis. The second brake wagon carries no identification but used to be ComEng 0-6-0DH *Scott* (C1015 of 1957). This is used with E.M. Baldwin B-B DH *Burdekin* (10215-1-7-82 of 1982), and has been cut down to be of much

shorter length than the original loco.

ComEng 0-6-0DH locos *Northcote* (AH4091 of 1965) and *Haughton* (AH3878 of 1964) have had their names painted in white on the red front buffer beam. Another type of inspector linecar has come on the scene. Seen in the old loco shed at Invicta late in September was a white Mitsubishi Express L300 road vehicle converted for rail use as a 2-2wPMR. Apart from carrying a "Townsville Mitsubishi" sticker, this unit carried no further identification, but its conversion appeared to be a very professional job.

John Browning 9-10/87

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 61, p.14)

No. 12, Clyde 0-6-0DH 65-434 or 1965, returned to regular service on Monday, 26 October, after being fitted with a new axle manufactured at the mill. It had done a trial run the previous Friday. Hansen linecar 1, (originally M1), 90 of 1973, was transferred to Victoria Mill on 17 November and was said to be destined for a museum.

Christopher Hart 12/87

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 60, p.12)

A Hansen linecar is said to have been donated to the Australian Sugar Industry Museum, Mourilyan.

The Mill's livery has been modified to light yellow with a grey bonnet top. The Baldwin bogie locos also have a green stripe.

Early in October, just six bogie Baldwin locos out of the mill's total of seventeen locos available for cane haulage duties were noted in service for the afternoon shift. There are another four main-line diesels used for yard shunting, sugar haulage to Lucinda, and navy use.

The mill is repainting its ballast hoppers green instead of the yellow previously used. Eight were seen in green and another in primer by early October, with at least three more to be done.

Homebush Hudswell Clarke 0-6-0 1067 of 1914, and Decauville carriage were in use giving rides at Ingham on 17 October for the annual Maraka festival, and at Victoria Mill on 12 December for the mill social club Christmas party.

On 13 December, the following Hansen linecars were seen at the mill:

V1 Hansen 78 1972 at Macknade by 16 December

V2 Hansen 65 1972

V2 Hansen 12 1972 renumbered from V3 since 27 November

V5 Hansen 1920 1978

1 Hansen 90 1973 ex Macknade Mill 17 November

It is believed that all Victoria navvies are now based at the mill during the crushing. However, a linecar was based at McKell's depot near Abergowrie (for use in reaching sections of track inaccessible to road vehicles) during the 1987 crush.

By mid-December most of the dual gauge section of the Gairloch line had been lifted. Along one section of the line were stacked ex-"Ghan" steel sleepers which have been punched for 2 ft gauge rail in the middle. These will be used for relaying the line in 2 ft gauge only, but are being retained for any possible use of dual gauge again in the future.

John Browning 10/87; Christopher Hart 10/87, 12/87

FAIRYMEAD SUGAR CO. LTD 610 mm gauge

(see LRN 54, p.8)

The mill is converting to 6-tonne bins. Areas south of the Kolan River and in the former Qunaba Mill area seem already to have been converted whilst the areas furthest from the mill, Avondale and beyond, still use the old 3-tonne bins. Complete conversion is expected within two years. The new bins are fitted with Willison couplings.

Ruston & Hornsby 4wDM 9 (339211 of 1952) was being painted yellow with red and white dazzle stripes on the buffer beams at the end of September. It is believed the mill intends to paint its main line locos in yellow to replace the old maroon and yellow colour scheme.

The longest runs are worked by E.M. Baldwin bogie locos. Loco 80 (8788-1-6-80 of 1980) works to Littabella and 82 (10048-1-6-82 of 1982) to Bucca and Invicta. The Bucca tramline is very lightly laid and is very rough.

David Mewes 10/87

FAIRYMEAD FERRY

To watch the private Fairymead vehicular ferry in operation is a real ey opener. Many years ago cane from a Fairymead owned plantation, near Qunaba Mill on the south side of the Burnett River, was transported by tramline to Fairymead Mill on the north side. Crossing the Burnett River was achieved by placing the cane trucks on a cable-worked ferry which took the loaded trucks to the north bank and the empties back again. Cane from this plantation was later reassigned to Qunaba Mill for crushing. However, the ferry was then used to transport bulk raw sugar trucks from the Fairymead side of the river to the southbank and then the trucks would continue on to the new bulk sugar terminal. The closure of Qunaba Mill and the reassignment

of the cane to Fairymead Mill has meant that the ferry (albeit a more modern one) has again been called on to carry cane.

Luya Julius have the contract to haul the cane from the exchange sidings near the ferry on the south bank to a road/tramline interchange about a kilometre beyond the ferry terminal on the north bank. Each truck can carry three of the 6-tonne bins. The truck drivers use a small hand-held radio control unit to control the winch on their truck when loading full or empty bins. To unload, all they do is back their truck into the ramp, with the rear of the truck automatically picking up the end of the siding and aligning it with the rails on the truck. The driver then releases the lock holding the full or empty bins which roll down off the truck, through a set of springloaded points which maintains the route for the receival road. The driver then walks down from the track dragging the winch rope and connects it to the bins on the departure road and using the remote control, the truck winch hauls the bins up onto the trailer and they automatically lock into place. The driver is then back into his cab and drives off.

Raw sugar trucks from Fairymead Mill also still use the ferry which, along with the cane trucks, combine to make it a very busy place. A truck takes about 15-20 seconds to drive onto the ferry. No sooner is it aboard, than the ferry operator sounds the ferry's hooter and he is off across the river. The crossing takes about 60 seconds, a further 15 seconds for the truck to drive off and the process is repeated. There is usually a truck waiting on either side of the river for transport to the opposite bank.

David Mewes 10/87

FARLEIGH CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 60, p.12)

It is understood that a new soundproofed cab is being constructed for a Clyde HG-3R 0-6-0DH loco here by Eimco Australia of Sydney. Three locos of this type received sound proofed cabs in 1981-2 and two more remain to be so fitted.

Bob James 12/'87

GIBSON & HOWES PTY LTD, Bingera Mill 610 mm gauge

(see LRN 60, p.12)

A severe drought and decline in cane growing in the Wallaville area has meant that this season, a "locotrol" slave unit has not been used on the day shift between Wallaville and Bingera. Two bogie locos have normally worked as separate units on this line, with the third operating in the Splitter's Creek,

Booloongie areas east of the mill. It is understood that the slave loco train has operated on the afternoon shift.

F.C. Hibberd "Planet" 4wDM 3919 of 1959 has been sold to the Bundaberg City Council, possibly for a future tourist project. It is believed the Council has it currently in storage.

David Mewes 10/87

HOWARD SMITH INDUSTRIES PTY LTD, Mourilyan Mill & Goondi 610 mm gauge

(see LRN 59, p.7 & 8)

The Clyde 0-6-0DH locos transferred here from the closed Goondi Mill have been renumbered as follows:

8 - formerly Goondi 2 Clyde 55-60 1955

10 - formerly Goondi 3 Clyde 56-93 1956 - slow ratio gearbox 12 - formerly Goondi 4 Clyde 55-57 1955

Goondi Mill itself and the remaining rolling stock and locos not transferred elsewhere have been handed over to Mourilyan. Additional locos are three Motor Rail "Simplex" 4wDMs seen in late September:

Motor Rail 10219 1950 in loco shed at Goondi

Motor Rail 2117 1923 out of use in old truck shop at Goondi Motor Rail 1924? in Goondi loco shed - has been used by navvies at Mourilyan.

There is still a substantial amount of rolling stock at Goondi including steel cane trucks and navy vehicles. This includes derelict Wickham linecar 8376 of 1959. However, a more modern Baldwin linecar which has been out of use at Goondi for a number of years was not seen. Goondi mill is in the process of demolition and a quantity of beams and long pipes has been transported to Mourilyan on the tramway.

Goondi yard is used by Mourilyan and some full bins are received here by road transport. The Goondi Mundoo line is now the main line-to Mourilyan Mill with a connection to the former QGR Innisfail Tramway Queensland Bridge, which has not seen regular use since the closure of that Tramway in 1977. A triangle has been formed where the Mundoo line joins the old Goondi "main line". Most points still face Goondi, but this is expected to be changed in time

At Mourilyan, a 160-bin long loop has been added to the line heading from Mourilyan towards the Queensland Bridge. A deadend line at the top of the Mourilyan full yard has been extended from 42 bin capacity to more than 100, and it is planned to continue this line as a balloon loop around the mill.

Goondi bins are used in the Goondi area, and also for Mourilyan road

transport and some Mourilyan farmers, as there is a shortage of Mourilyan bins.

Tom Porritt 9/87; John Browning 9/87

ISIS CENTRAL MILL CO. LTD 610 mm gauge

(see LRN 60, p.12)

The new bogie brake wagon from Hexham Engineering arrived around the start of September. It is numbered No. 5 and carries Hexham serial number 684 of 1987, Model BV10266-9-87. It is believed to be the first brake wagon fitted with disc brakes.

Work has already begun to fill in the mill pond to make way for the new yard tramline layout, which will encircle the mill and do away with the need for the headshunt system installed some years ago.

David Mewes 10/87

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 61, p.15)

On 28 November, growers of the five Mackay District co-operative sugar mills voted on a proposal to merge their operations and to acquire Pleystowe Mill from CSR Ltd. The proposal gained the necessary 75% vote among shareholders of Farleigh (78%), Marian (91%), North Eton (80%) and Racecourse (82%). Growers of Cattle Creek Mill gave only a 72% vote in favour, and initially were excluded from the merger, which could go ahead in the absence of one mill. However on 16 December Cattle Creek growers voted again and this time gave a vote of 94.5% in favour. A new milling organisation, the Mackay Sugar Co-operative Association, will take over the five co-operative mills in early January, as well as acquire Pleystowe Mill.

Although it was expected that one mill would close in the 1988 season, it was announced on 22 December that in fact all would remain open to allow proper consideration to be given to the question of closure from the end of 1988.

However, it seems likely that some tramway connections between mills will be built for the 1988 season, to allow for rolling stock transfers, and to allow emergency interchange of cane. It also seems most probable that cane from the Pleystowe north coast area will be hauled by tramline to Farleigh Mill, cutting out a long road haulage to Mandurana.

Mackay Daily Mercury 30/11/87, 17/12/87, 23/12/87;

Robert James 12/87 John Browning 12/87

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 37, p.10)

All the mill's ComEng 0-6-0DM & DH locos have previously had their cabs raised and painted yellow. During the 1987 slack season, this treatment was also given to loco 1, Baguley 0-6-0DM 3377 of 1953, which sees intensive use throughout the season as yard shunter. It is said that the mill is having trouble obtaining replacement gearboxes for this unit.

What appears to be an extra pair of flangeless wheels has been fitted to one end of the brake wagon which is used coupled to loco 2, ComEng 0-6-0DM A1001 of 1955. The function of this can only be guessed at.

John Browning 9/87

NORTH ETON CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 59, p.8)

Following the approval of a regional merger of co-operative mills, trials soon began to investigate compatibility of rolling stock. Some 38 Pleystowe bins were seen at North Eton Mill in mid-December. These 6-tonne capacity bins have a longer wheelbase than the North Eton 3.5-tonne capacity bins.

John Browning 12/87

PIONEER SUGAR LTD, Inkerman Mill, Home Hill 610 mm gauge

(see LRN 34, p.14)

Track work was noted in progress at Keebah late in September. A brand new tamper Model TSR-RS sleeper renewal machine was seen in use, and seemed to find the absence of ballast from around the old sleepers somewhat of a disadvantage! It carries Tamper serial 825817. Parked nearby was a green ex-Army tamping machine similar to the one noted at Cattle Creek last year (see LRN 52, p.12). Built by Matisa Materiel Industriel SA, Lausanne, Switzerland, it carries serial number 7664 of 1967, Model BL09M. It carries Defence Stock Number 2230-66-025-5413 and Army Registered number 84501. It was said to have been converted from 1067 mm gauge. A packing case seen outside the loco shed at the mill was alleged to contain yet another of these machines. Also seen at the mill was an unpowered Tamper "section gang", Model S/G, Serial number 825837. This appears to be a small unit to be trailed from another vehicle, and incorporating a spike puller.

John Browning 9/87

PIONEERS MUSEUM, Dalby 750 mm gauge

Tony Gilbert's Henschel 0-6-0WT 29583 of 1956 (see LRN 46, p.4) has been moved to this site.

Bill Gray 10/87

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 60, p.13)

Plane Creek Mill's E.M. Baldwin B-B DH D12 (6890-1-10-76 of 1976) was seen heading a special test train towards the mill near Yukan on 15 October. The loco was hauling 110 full bins with two specially instrumented weighted bin chassis vehicles between the loco and the load. Sugar Research Institute staff were in attendance and a recording device on the loco was producing a graph of drawbar strain. The report in the previous issue or LRN described the new colours of this loco as grey-blue and yellow, but in the light of day, the blue was seen to be a fairly bright shade of sky blue.

CSR, new owners of Plane Creek Mill, have announced plans to reconstruct its adjacent Australian National Power alcohol plant, so it is likely that the mill and power alcohol operation may become more closely integrated in the future.

John Browning & Clive Booth 10/87

A violent storm struck Sarina on the evening of 28 November, doing considerable damage to buildings and property. A number of cane bins were reported to have been damaged when they were smashed together by the force of the wind. It is believed that a rake of empty bins which were not chained down to the track were blown out of a siding and down a gradient adjacent to Brooks Road, piling up at the bottom. Some 57 bins were seen coupled together on this line in late December, all damaged, and some demolished.

Mackay Daily Mercury 30/11/87

John Browning & Clive Booth 12/87

QUNABA MILL

The mill buildings are surrounded by a "security fence" made by stacking 3-ton bins upside down one on top of the other. The loco shed is still used by the two former Qunaba Mill diesel locos which now gather cane for Fairymead Mill. The old mill weighbridge now acts as a traffic office only, for the two locos. Repairs and servicing are undertaken at Millaquin Mill. Neither loco carries any name or number but are known as 46 and 47 on the 2-way radio, as follows:

46 (formerly *Beetle*) 4wDH EMB 8860-2-8-79 1979

47 (formerly *Burnett*) 0-6-0DH ComEng AH2967 1963

The locos generally work as far as the Seaview/Ffarquahar Road area, beyond which the former Qunaba Mill area is now Millaquin Mill territory. All other lines towards the Port, Rubyanna, Springhill etc. belong to Fairymead. The old mill yard is used as an intermediate marshalling point for the cane before being taken to a tramline/road interchange near the Fairymead ferry for transport across the Burnett River. The locos are fitted with dual channel radios for communication with Fairymead and Millaquin.

David Mewes 10/87

ROCKHAMPTON CITY COUNCIL 1067 mm gauge

(see LRN 61, p.17)

The inauguration of the steam tram will take place on 5 June, 1988. The Billard 4wDM locomotives ex-Citra were observed at the rear of the bus depot on 14 November, but there was no sign of the 2 ft gauge steam loco (Hudswell Clarke 0-6-0ST 496 of 1898).

Steam Echoes (VDLRS) 11/87; John Browning 11/87

SOUTH JOHNSTONE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 55, p.12)

As reported elsewhere in this issue, Eimco Australia are building a pair of heavy duty bogies incorporating "bogie control" for E.M. Baldwin B-B DH *Liverpool* (10385-1-8-82 of 1982). It is understood that the bogies from *Liverpool* will replace those under 4, E.M. Baldwin B-B DH (5477-1-8-743 of 1974).

Towards the end of the season, a major breakdown at Mourilyan Mill led to the crushing of some Mourilyan cane at South Johnstone. Cane in ex-Goondi Mill bins could be handled by the South Johnstone tippler, but cane in Mourilyan bins had to be left as these bins are too wide.

Bob James 12/87; Tom Porritt 12/87

SOUTH AUSTRALIA

ICI AUSTRALIA OPERATIONS PTY LTD, Osborne 1600 mm gauge

Ruston & Hornsby Model 165DS 0-4-0DM 304475 of 1951 has been earmarked for preservation by the Mile End Railway Museum when it is finally withdrawn. The locomotive is used for shunting work within the ICI works at Osborne, and is noteworthy in having been displayed in the Festival of Britain in London in 1951.

Catchpoint via John Browning 9/87

MILE END RAILWAY MUSEUM (SA) INC various gauges

(see LRN 60, p.9)

It is likely that *Peronne*, Andrew Barclay 0-6-0T 1545 of 1919, will be on loan to the Pichi Richi Railway at Quorn for operations during 1989. A passenger carriage may accompany the loco. Restoration of *Peronne* is still proceeding well, and it will soon be placed back on its wheels, allowing the possibility of running tests at Mile End on a small section of track.

VICTORIA

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge.

(see LRN 61, p.13)

A press advertisement on 19 December invited expressions of interest for supply of a ballast tamping machine. Tenders will close on 12 February.

The Weekend Australian 19-20/12/87 via John Browning

ALEXANDRA TIMBER TRAMWAY AND MUSEUM 610 mm gauge

(see LRN 61, p.11)

In this Bicentennial year of 1988, during which Australians will celebrate the rich heritage of our history during the past 200 years, the Alexandra Timber Tramway and Museum has been given notice that its future is at risk. This is due to the fact that the Museum site is owned by VI/Line.

At stake are the Museum premises, the Alexandra station built in 1909, the goods shed, part of which stood at Alexandra Road (Koriella) in 1890, and the repairs and maintenance carried out by the Alexandra Historical Society since the early 1970s. Also threatened are the track itself, and the additional buildings erected by the Museum to house its locomotives and rolling stock.

The site is presently occupied under the last of a series of six-monthly leases, the peppercorn rent being generously paid by the Shire Council.

The choice is - "Pay up" or Get Out! The "Pay up" being estimated to be at least \$100,000. This is under the present Government's policy of disposing of "unwanted" public land.

All new construction work at the site has ceased, pending a decision by the Shire Council on their preparedness to purchase the land required to guarantee the future of the Museum. However, the Museum will remain open and restoration of the exhibits will continue as long as there is hope of a favourable resolution to the situation.

The Museum hopes to celebrate the Australia Day holiday at the end of January with the return of John Fowler B.No. 11885 of 1909 to steam. The Museum will be open over all four days to help celebrate the 200th anniversary of European settlement in Australia.

Peter Evans 12/87

A report on Alexandra's Open Day on 8 November 1987, as described by 10-year-old Elissa Jeffery:

ALEXANDRA - It's only a two hour drive through the lovely bush land. You should go. When you get there, go to the station. You get a great welcome. Then why don't you go and have a look at the antiques. They have got record players, old clothes and photos. Then get a ride on the train. It's ace! They even have some other engines. One of them got used in the Man From Snowy River Part II. They even have drinks if you are thirsty. Then to get your muscles working, why don't you go on the rail cart. It's not too far away. And you have a good day - you really want to stay. That's Alexandra!!

Elissa Jeffery via Peter Evans 12/87

SOUTHERN PRIVATE RAILROAD, P.O. Box 126, The Basin, Vic 3154

(see LRN 54, p.14 and LRN 55, p. 15)

Southern Private Railroad inserted advertisements in the Financial Review on 23/11/87 and 8/12/87 for the sale of narrow gauge steam locomotives suitable for amusement parks, industrial haulage or private collection, rare designs, some in going condition and complete. Locating service of rare parts was also indicated as being available. Further details can be gained from the above address, phone: (03) 762 4553.

These locos are being imported from Indonesia by Mr Jeff Daly, a former boiler operator, who lives at The Basin, Victoria. Two operational steam locomotives dating back to 1901 have so far been imported, but neither has found a buyer. Prices for the locomotives were stated to range from \$25,000 to \$60,000, depending on condition. Mr Daly plans to set up a workshop to construct and sell carriages and other items required to build a complete narrow-gauge railway and is reported as organising an exhibition of narrow gauge steam locomotives at the Exhibition Building in Melbourne in December 1988.

The stock market crash in October is blamed for the demise of at least two prospective locomotive sales.

WESTERN AUSTRALIA

HOTHAM VALLEY TOURIST RAILWAY (WA) INC. 1067 mm gauge

(see LRN 58, p.8)

On Friday, 16 October 1987, "G" class locomotive No. 123 *Koombana Queen*, (Dubs B/No. 3507 of 1897) was transferred from the keeping of the Leschenault Railway Preservation Society at Boyanup into the care of Hotham Valley Tourist Railway, at Dwellingup.

This is the last operating 4-6-0 type "G." steam loco. Now in its 90th year it is a sister to the loco *Menzies* - originally WAGR No. 111 (Dubs B/No. 3495) which is also part of the Hotham Valley stable. *Menzies*, out of use for many years, has been the recipient of a \$30,000 Bicentennial grant towards its eventual complete restoration, which has now commenced. Its then owners, Millars Timber's Trading Coy Ltd, changed the name *Menzies* for the number 71 in 1939. Two other locos from this series are No. 117 (Dubs B/No. 3501) and No. 118 (Dubs B/No. 3502), both static museum exhibits, the first at Merredin and the second at Kalamunda.

No. 123 is owned by Westrail and is being leased by Hotham Valley for use

on the Etmilyn Tramway, an 8 km section of the long closed Boddington branch, east of Dwellingup. In the winter months it will work in conjunction with ex State Electricity Commission diesel-mechanical locomotive, SEC1 and ex-Tasrail V4 and V5, which now operate the service three days each week. The 2-6-0 "G" locomotive No. 233 *Leschenault Lady* (Martin, B/No. 174 of 1898) will remain with the LRPS for use on excursion trains in the Boyanup/Bunbury area.

OVERSEAS

FIJI

FIJI SUGAR CORPORATION 610 mm gauge

(see LRN 59, p.12)

Three Baguley-Drewry 140 hp 0-6-0DH locos, part of an order built for Mozambique in 1983-4, but subsequently cancelled, have arrived in Fiji after being available for sale in Britain for the last few years. These locos, which were built to 600 mm gauge, are believed to be from the builder's number series 3768 to 3772.

Narrow Gauge News (UK) 8/87 via John Browning

NEW ZEALAND

TOKOMARU STEAM MUSEUM, 1067 mm gauge

This Museum is situated 18 km south of New Plymouth on Highway 57. It boasts New Zealand's largest collection of stationary steam engines, powered by a master boiler. A steam railway operates over 1 km of track on live working days. The operating locomotive is John Fowler 0-4-0T 16343/1924 (which actually carries the builders plate off 16581), ex-Napier Harbour Board No. 6. It hauls a passenger car No. 1013 around the loop line. Live working days are held on the Sunday of public holiday weekends from 1330-1600.

The Museum has the following static locomotives in various stages of restoration:

Manning Wardle 0-4-0T B/No. 1890/1915, ex-Inlay Freezing Works, Fielding;
Climax B-class B/No. 522/1904, ex-Ellis & Burnand Ltd Mangapehi;
Price C-class geared locomotive No. 1, ex-bush tramway near Huntley;
John Fowler 0-4-0WT B/No. 15907, ex-Linton Army base, formerly NZ PWD.

Bob McKillop 10/87

NEW ZEALAND RAILWAYS 1067 mm gauge

NZR employees at Palmerston North have restored F-class 0-6-0ST to working order. The locomotive was built by Dubs in 1880 (B/No. 1367). It is used to haul special chartered trains, most trips being through the spectacular Manawatu Gorge to Woodville. It is said to be used about once per month.

Bob McKillop 10/87

MEETINGS

MELBOURNE:

Mike McCarthy will be giving us an illustrated presentation covering a variety of the smaller light railway operations in Victoria. Included will be the 2 ft gauge Red Cliffs Pumping Station Tramway, the Robinvale Pumping Station Tramway, the sand tramways of Kooweerup and the timber tramways of Hallston.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 11 February at 8.00pm

SYDNEY:

FEBRUARY MEETING NOTICE.

At our February Meeting Alan Watson will give an illustrated talk on some of the methods and sources he has used in researching light railways. This will be followed by a general discussion on the subject and it is hoped that members will be able to input some ideas of their own.

LOCATION: Board Room Bowlers Club, 95 York Street, Sydney, access through the Forestry Commission office next door (Town Hall side). on second floor.

DATE: Wednesday 24 February at 7.00pm.

ADELAIDE:

Contact Arnold Lockyer for details.

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 4 February at 8.00pm.

QUEENSLAND DIVISION NOW FORMED

On the very wet Saturday, 13 February, six undaunted Queensland members and one visitor met in Brisbane to consider the merits of the proposal to form a Queensland Division of the Society. The result of the discussion was an unanimous vote to endorse the proposal and to establish an immediate program of field trips and general interest activities.

Thanks are extended to ex-Victorian bush basher Ian Coleman, David Mewes, Graham Chapman and Geoff and Peg Hayes for coming along and supporting the proposal. Murray Barker of ANGRMS, who is a great supporter of narrow gauge preservation, was a welcome visitor. We couldn't do without Murphy of course and he was the one who created the inclement weather and the ubiquitous ARHS tour to clash with the meeting and which accounted for the absence of some expected members. However, whilst we were small in numbers, there. was no shortage of enthusiasm for the proposal or future possibilities.

A program of field trips is being compiled and a Division Newsletter is being developed to keep all members well informed of activities. From a "southern" point of view, we are all a bit mad up here and cases range from semi-troppo to complete troppo (depending how far up the coast you go!), but regardless of these insignificant personal deficiencies, we nevertheless remain a friendly and sociable lot. If you are possibly planning a visit up here and would like to be kept informed of what amazing things we have planned, then why not contact a member of the Society Council and see if they can work out a way of regularly informing all Society members of state Division programs of activities? We sure are the "last outpost" but Boy!, we have some great resource material for narrow gauge railway enthusiasts. Wouldn't it be a great shame, if you came all this way for a visit and didn't know what we were doing?!

Now that we have established a collective Society effort in Queensland, perhaps you may all come to hear of more Queensland subjects from more of

us whilst in the meantime we offer more ground support to our established researchers and historians.

All founding members of the Queensland Division express their thanks to the unqualified support of the Society Council in the proposal. In accordance with the wishes of those founding members to withhold any discussion on the election of Division Office Bearers until such time that a better consensus of opinion can be gauged, the only "position of office" within the existing ranks is that of Publicity Officer. This is a voluntary role assumed by the undersigned and any enquiries regarding Queensland Division activities would best be directed to yours truly as : Hon. Publicity Officer, LRRSA Qld Division, Box 896, QAC, Lawes, Qld 4343. Phone : (work) 075 620 379, (home) 075 622 896.

RESEARCH

T. A. C. L. RAIL TRACTOR RESTORATION

(see LRN 62, p. 3)

TACL Rail Tractor and timber trolleys displayed at Arno Bay museum, SA on 17 August 1987.

Photo: Greg Stephenson

In response to Frank Stamford's request for information on any of the 40 odd TACLs that may have run, Greg Stephenson of Beaudesert Qld has furnished us with details of at least one other still in existence.

This TACL was located in a museum in Arno Bay on the western shores of Spencers Gulf in South Australia, approximately midway between Whyalla and Port Lincoln. It is displayed with two standard Harbour Board wooden trolleys. Unfortunately no details of builders number etc. are available, however the rearmost timber trolley was noted to have the number 106 engraved on the headstock.

The TACL would have operated on the jetty at Arno Bay for the S.A. Harbours Board. The jetty is approached along an earth filled causeway. A short section of rail track to 3 ft 6 in gauge exists on the pier head with a steel trolley to the standard S.A. design in evidence. At the start of the causeway there is a short section of track set in concrete in front of the "Safcol" building. The remains of another trolley to a non-standard design were noted in undergrowth behind this building.

Editors via Greg Stephenson 2/88

VICTORIAS 2 ft 6 in STEAM RAILWAYS

I am currently researching the locomotives and rolling stock used on Victoria's 2 ft 6 in Steam Railways. Companies known to have operated locomotives on this gauge are:- Victorian Railways/Puffing Billy, Forestry Commission of Victoria, Erica; Long Tunnel Extended Gold Mining Co., Walhalla; Meadmore & Ferris, Walhalla; Metropolitan Gas Works; North Long Tunnel Co., Walhalla; Stone & Siddeley, Geelong; Walhalla & Thomson River Steam Tramway; Whistle Stop Amusement Park, Frankston; and V.R. (Narrow Gauge) Line Dismantling Contractors.

Whilst there are still a lot of questions about the rolling stock owned by those mentioned above to be answered, a selection of some are listed below.

Ferris & Meadmore, Walhalla. Some believe that this "circle of track" railway operated in the Walhalla Railway Yard, others believe it operated near the "Bank Vault" in the town proper. Also, did the railway have a carriage, and if so, which carriage? Can anyone help?

Does anybody know the current owners & locations of the following locomotives?:

- a) Former W&TRST No. 2, Fowler 13576 of 1913;
- b) Former Whistle Stop, Decauville 90, Hainault 986 of 1890;
- c) Former Whistle Stop, 'Clarkat', used for maintenance purposes;
- d) Former W&TRST No. 1, Decauville 43, Hainault 861 of 1886.

Tasmanian Government Railways :

a) Builders Number (Drewry & Vulcan) and date entered service of V3; b) Date V12 (now PBPS D21) entered TGR service.

Mount Lyell Railway, Tas. Builder of (now PBPS 'NBL' Class) O Class passenger carriages and date built.

The information is being compiled for publication of a book, profits of which will be donated to the PBPS G42 Restoration Fund.

Peter Medlin 2/88

PUBLICATION

BALLOON STACKS AND SUGAR CANE

The "Winter 1987" edition of NZR&LS *Railway Observer* insert mentions that a second "enlarged" edition of the above book, to be entitled "Cane Train", is expected to be released in the latter half of 1988. Anticipated price is expected to be retail \$NZ50.00. Further enquiries can be made to the New Zealand Railway & Locomotive Society, PO Box 5134, Wellington, New Zealand.

Peter Medlin 2/88

NEW SOUTH WALES

AIMEX 87 (Australias International Mining & Exploration Exhibition)

This exhibition was held at the Sydney Showgrounds on 6-11 July, 1987. One 1067 mm gauge loco was present, a 20-tonne Gemco 4wBE loco for Awaba State Mine NSW with builder's number 3513-14-248-87 of 1987. It was equipped with two 50 hp motors exerting a drawbar pull of 2500 kg. Other items of rail interest on display were couplers made by Bradford Kendall, and a low profile bogie built by Hexham Engineering. Eimco displayed photographs of underground diesel hydrostatic locos under construction by PTA Engineering of Launceston for the Melbourne & Metropolitan Board of Works. These are based on a "PROF" design of Professional Engineering, Zimbabwe.

Ray Graf 2/88

AUSTRALIAN NEWSPRINT MILLS LTD, North Albury 1435 mm gauge

This company has a 4wDH ComEng-Aresco "trackmobile", which was seen shunting here in late November.

Ray Graf 2/88

BHP LTD, Coated Products Division, Wollongong 1453 mm gauge

Formerly known as John Lysaghts, there are two works in the Wollongong area which have rail operations, at Springhill Road and Port Kembla. Four

Goninon General Electric locos service the plants. Three are 194 kw B-B DE "45-tonners", 1 *Anne*, and 2 *Primrose* of 1954, and 3 *Helen Mary* of 1963. The fourth is a 448 kw Bo-Bo 76 tonner, JL4, built 1969. During November 1987, all four suffered failures, to be replaced by D7 and D20 on hire from the steel works fleet (see below). They were joined by *Anne* and JL4, which returned to service after a few weeks, but the future of the other two Goninon locos is currently under review.

Rail Australia 12/87 via John Browning 2/88

BHP LTD, Slab & Plate Products Division, Port Kembla 1435 mm gauge

(see LRN 60 p.6)

An unspecified number of ComEng-Aresco Model G.M.C.C. 4wDH Truck handlers are being advertised for sale at \$30,000 each. These are road/rail units with GM engines and a shunting capacity of 1300 tons.

It is reported that the mothballed English Electric "400 class" B-B DE locos D12, D13, D14, D15, D21, D23, D24, & D25, and the ComEng '750 class" Bo-Bo DE locos D2, D3, D4, D5, & D8 are to be scrapped or sold at scrap value (currently \$10,000 each). Meanwhile 400 class D20 and 150 class D7 were hired by the Coated Products Division (formerly John Lysaghts) from November to cover breakdowns.

Rail Australia 12/87 via John Browning 2/88

BYRON BAY MUSEUM

A British built Simplex locomotive which was brought to Byron Bay by the North Coast Steam Navigation Company in 1922 was donated to the Byron Bay Museum by the shire council when the F.J. Walker abattoir closed in 1983. The engine has been kept in perfect working order by Lennie and Brian Parkes who were the last drivers of the jetty engine which ferried passengers and goods from the goods shed of Norco, the railway yards, and sandmining plant, and the North Coast Steam Navigation Company office to the jetty. There were two tram cars, one an old electric car from Sydney and the other was from a steam operated tramcar. Both are now in a Sydney museum and will not be returned, despite efforts by the Byron Bay Historical Society. The branch line from the railway station to the meatworks and whaling station remains, overgrown with grass, but pretty much in the same condition as during its working life. There have been a number of ideas floated to use the engine as a tourist attraction, but nothing has eventuated.

Lismore Northern Star, 14/11/87 via John Buckland 2/88

Hoping to see the Simplex back in action are, from left, Mr Gordon Ritchie, the son of the first driver, Mr Brian Parkes and his son, Lennie.

COMMONWEALTH GOVERNMENT OFFICE OF DEFENCE PRODUCTION Mulwala Explosives Factory 1600 mm gauge

A 4wDM loco was noted here in late November, fitted with a Fordson engine under a blue-painted bonnet and cab. There are also large closed vans which are hand propelled on internal trackage

Ray Graf 2/88

METAL RECYCLERS (ILLAWARRA) LTD, Unanderra 1067 mm gauge

The seven Malcolm Moore/Drewry 0-6-0DM locos sold at auction at Bulli Colliery in September were located at these premises in late November. Engines had been removed and radiators were being cut out. Also seen here, cut into pieces were two 4wBE locos also ex Australian Iron & Steel, numbered 15 and 91. No. 15, built by BHP, was also auctioned at Bulli, while 91, believed to be built by Gibson Battle, is ex Tower Colliery.

Ray Graf 2/88; John Browning 2/88

UPTONS ENGINEERING, Corowa 1600 mm gauge

The two diesel locomotives acquired by Alan Stebbing (see LRN 61 p.11) were seen here in November. The so-called Fowler locomotive is alleged to have been fitted with a Leyland Tank engine, since removed, when acquired by Uptons.

Ray Graf 2/88

QUEENSLAND

ABIGROUP LTD 610 mm gauge

This company has just completed construction of a 2500 metre tunnel through the mountain range just west of Palmwoods on the Sunshine Coast. The tunnel is to be used to carry a water pipeline from the new Baroon Pocket Dam west of the range to a water treatment works on the eastern side.

A 610 mm gauge tramway was used during construction with locomotives Gemco 4wBE 2518 19-177-79 of 1979, Gemco 4wBE ?, and E.M. Baldwin 4wDH 6008-3-7-75 of 1975. The latter was originally built for the Melbourne & Metropolitan Board of Works and now carries Plant No. 327 3043.

Abigroup's contract finished with the completion of the tunnel and another contractor is to install the pipeline. It is not known at this stage whether they will use the tramways and Abigroup indicated that the locomotives were hired by them and are to be sold to John Holland.

David Mewes; Geoff & Peg Hayes 2/88

Rail equipment used by this company in the construction of the tunnel was advertised for sale in the Sydney Morning Herald on 20/2/88 and included two 8 HR Hagglund muckers, one Joy shuttle car and one 5 cubic metre capacity concrete car.

Sydney Morning Herald 20/2/88 via Ray Graf 2/88

BUNDABERG SUGAR TAKEOVER OF HOWARD SMITH SUGAR MILLS

Bundaberg Sugar Ltd purchased the sugar milling interests of Howard Smith Industries from 1 March, for \$32.3m. Howard Smith (part of Coal & Allied) off-loaded its entire sugar division in the sale - Moreton Central Mill at Nambour and Mourilyan Mill, just outside Innisfail. The purchase consolidates Bundaberg's position as the third-ranking sugar miller behind CSR and the Mackay co-operative. This development leaves only the small Rocky Point Mill and Maryborough Sugar Factory as proprietary mills outside the control of CSR and Bundaberg.

*Mackay Daily Mercury 27/2/88 via John Browning 2/88,

via David Mewes 2/88*

FRANKSTON AQUATIC CENTRE, Bloomsbury 610 mm gauge

This commercial fish farm and tourist venture between Mackay and Proserpine is currently being expanded under new ownership. The train which formerly operated on Hayman Island (see LRN 47 p.9), has been acquired for use at the centre. Tenders are expected to be called soon for about two kilometres of track to be laid. Locomotives used at Hayman Island were Ruston & Hornsby 4wDMs 179872 of 1936 and 285339 of 1949 and a Motor Rail "Simplex", probably 4199 of 1927.

Mackay Daily Mercury 23/1/88 & 26/2/88 via John Browning 2/88

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 62, p.13)

A study has been put into motion to make recommendations concerning mill closures in the group, a condition of the government assistance package. One mill is to be closed for the 1989 season and another by 1991. Matters to be considered would include mill cane haulage systems, factory capacities and mill economic positions. Local speculation well in advance of any recommendations from the study group suggests that North Eton Mill will be the first to close, to be followed by Cattle Creek.

John Browning 2/88

QUEENSLAND NATIONAL PARKS & WILDLIFE SERVICE, St. Helena Island

A tramway to assist tourists see the remnants of Queensland's main prison on St. Helena Island, Moreton Bay, from 1867 to 1932 is to be constructed. Bicentennial funds will be used to lay 1.5 km of track, mostly on the route of the prison tramway for goods and passengers used from 1885 to 1932, which ran from the jetty to the top of the island. Track materials worth \$60,000 are being acquired from the Queensland Railways.

Mackay Daily Mercury 29/2/88 via John Browning 2/88

SUGAR RESEARCH INSTITUTE, Mackay 610 mm gauge

(see LRN 54 p.6)

An open day was held at the Institute on Saturday, 20 February, and many aspects of cane railway technology were on show. Outside the main entrance was displayed on a semi-trailer, the latest prototype 20-tonne capacity large cane bin with self-steering wheelsets, built by NQEA (North Queensland Engineers and Agents). This unit incorporates a number of features developed as a result of trials held over the last few years. NQEA have taken out a manufacturing agreement with Sugar Research, and it is

expected that the prototype unit will be extensively trialed at Farleigh Mill during the 1988 season.

Other cane railway displays at the institute included strain gauge apparatus for measuring drawbar pull and track load distributions, timber sleeper preservation equipment, a digital loco speed indicator, different types of track materials, electronic bin number reading equipment, hot box detection, loco scheduling procedures, and radio control equipment for locomotives and brake wagons.

A number of rolling stock test units were seen behind the main building including a track evaluation vehicle, instrument car, power wagon, and some dismantled long bin prototypes.

John Browning 2/88

TINBEERWAH MOUNTAIN TRAMWAY, Arcadia, Cooroy

(see LRN 59 p.8)

Progress on the line was delayed due to the tragic death in a road accident of Anthony Savage during December. Anthony had made an enormous contribution to the building of the tramway. In spite of this setback, another 100 yards of track was laid at the top of the line during December. In addition some 60 tonnes of ballast was used on the top section, allowing some 400 yards of track to be jacked and hand tamped in six days. Rock edging was given to 350 yards of this track also. A new bogie "Way and works" wagon was placed in service. Track lubrication has been introduced to ease flange wear with great success.

Russell Savage 1/88

SOUTH AUSTRALIA

COBDOGLA LIGHT RAILWAY LOCO No. 2 610 mm gauge

(see LRN 53 p.8 & LRN 61 p.18)

Extract from proposed book "Rolling Stock of the 2' 6" Gauge Steam Railways in Victoria", compiled by Peter N. Medlin.

HISTORY OF BAGNALL 1801 of 1906 built to 2 ft 6 in Gauge.

- / /06 Ordered through Mussabini & Co. (Agents) for the Long Tunnel Extended Gold Mining Co., Walhalla (117).
- /03/07 Left Bagnall Works England for Walhalla (117).
- / /07 Entered service for the Long Tunnel Extended Gold Mining Co., Walhalla. Believed numbered "2" (117).
- /08/11 Long Tunnel Extended Gold Mining Co.'s operations begin to be wound down (115).

- /07/12 Auction of "the whole of the Long Tunnel Extended Gold Mining Co. plant" by Messrs Miller & Co. at Walhalla (115).
- /06/12? Sold to Stone & Siddeley (contractors) for Geelong Sewerage Outfall construction (113).
- / /16 To Glenelg Breakwater Construction, South Australia (Stone & Siddeley) (113)
- / /21 Sold to Forward (Forwood?), Down & Co. Ltd of Adelaide (35).
- / /?? Believed altered to 2'0" gauge around this time.
- /08/22 Sold to South Australian Government - Engineer & Water Supply Dept., Cobdogla Irrigation construction tramway as No. 59? (35).
- / /23 Placed in storage at Cobdogla pumping station (35).
- / /?? Sold to W.G. Woolmer (but not removed from storage). Ownership returned to E&WSD due to non removal (35).
- / /59 Placed in playground at Barmera as No. 59 (35).
- / /86 Removed from playground and restoration commenced on returning loco to service by E&WSD, Ottoway Depot (129).

It has been suggested that this loco was used by Humes Limited (formerly Hume Pipe Co.) between 1921 and 1926 for the works at Cobdogla (118).

LAKESIDE LEISURE PARK, Hackham

Late in December, a new leisure park, named Lakeside Leisure Park, opened at Hackham, south of Adelaide on Main South Road, beside the right of way of the old Willunga railway line just north of Noarlunga. Amongst its attractions is a miniature railway, which circumnavigates the man-made lake that gives the park its name. The railway would be about a kilometre in length, of seven and a quarter inch gauge. Motive power is provided by a six wheeled internal combustion loco painted in WAGR colours. At this stage, no further information regarding its origin etc. is available. A similar looking loco in WAGR colours was reported to be running on a miniature railway at Wirrina Holiday Resort, which is at Yankalilla, some kilometres further south. It has not been ascertained whether it is the same loco.

Arnold Lockyer 2/88

MILE END RAILWAY MUSEUM (SA) INC various gauges

(see LRN 62, p. 15)

The last open day at Mile End Railway Museum at Railway Terrace, Keswick, was held on 3 January 1988. The whole kit and caboodle will now be shifted to the old Port Adelaide Dock Station at Port Adelaide and the name changed to "Port Dock Station Railway Museum Inc.". A special general meeting of the Museum was held on Friday, 12 February, to approve these changes.

Arnold Lockyer 2/88

Successful negotiation between the M.E.R.M. and Pichi Richi Railway Preservation Society will see 0-6-0, ex B.H.A.S. loco *Peronne*, with carriage No. 144, being transferred to Quorn for the 1988 season. This will enable *Peronne* to be thoroughly tested before it takes up regular duties at Port Dock and give Museum members the necessary experience to be able to drive and fire.

Catchpoint via Arnold Lockyer 2/88

TASMANIA

EMU BAY RAILWAY 1067 mm gauge

(see LRN 61, p. 18)

On 3/11/87, Don River Tramway's loco MA2 (Stephenson & Hawthorn B/N 7421/1951) ran over the Tasrail track from Devonport to Burnie hauling a flat top waggon carrying the former Mt. Lyell No. 9 Krauss loco (B/N 5988/1908). The Mt. Lyell company sold this Krauss engine to the Commonwealth Carbide Co. at Ida Bay in 1947. In 1949, it was resold to the North Mt. Farrell Co. for use on their line between the mine at Tullah and Farrell Siding on the Emu Bay Railway. After some years of idleness, it passed into the ownership of the River Don preservation group.

The purpose of MA2's trip was twofold. Firstly the trip was to deliver the Krauss to the EBR workshops where it will be fully restored to enable it to return to Tullah and work on the Wee Georgie Wood Steam Railway. The second reason was to allow MA2 to undergo steam tests on the steeper sections of the EBR's line between Burnie and Hampshire as it is proposed to run steam excursions over a section of the line in April 1988.

At 8.40 am on 4 November MA2; and its consist of diesel loco 1004, loaded ballast waggon 002 and guard's van XV 2 steamed out of Burnie. The inclement weather did not help maintain traction as the 135 tonne load was hauled up the 1:33 grade and slipping was experienced. The diesel was used to assist several times. It was later discovered that the slipping had been aggravated by an incorrectly directed sandpipe which had thrown sand to

the side of the rail. However, this problem was righted at Ridgely where a water stop was made.

From Ridgely to Hampshire, the train made good time and driver, Darrel Luke and fireman, Laurie Milburn handled the loco with ease. As there is no loop between Hampshire and Burnie, the return trip was made with MA2 pushing its load tender first.

There were many beaming faces following the day's test and the future of steam excursions in the North West looks rosy. In addition, narrow gauge enthusiasts will welcome the return of another Krauss to the numbers of those in operating condition.

Lou Rae 2/88

It is interesting to note that the last previous steam hauled train to run on the EBR was on 7 March 1964 when an Australian Standard Garratt provided the motive power.

Ken Milbourne 2/88

FARRELL TRAMWAY 610 mm gauge

See EMU BAY RAILWAY

VICTORIA

ALEXANDRA TIMBER TRAMWAY-AND MUSEUM, 610 cm gauge

(see LRN 62 p.16)

Despite the uncertain future of the Museum, the Australia Day weekend was celebrated with the return of John Fowler 11885 of 1909 to steam. All damage sustained in the accident (see LRN 59 p.10) has been repaired, although painting is not yet complete. The locomotive has had a temporary funnel transplant from the Hudswell Clark pending construction of a completely new funnel for the Fowler. On

Australia Day, 530 passengers were carried on the railway, and the Museum staff were in uniform for the first time. This was one of the most successful days steaming experienced at the Museum. Driver for several circuits of the track was 82 year old George Orchard, holder of the oldest steam ticket in the area. George's father was a driver on the Krauss locomotives used by the Rubicon Lumber and Tramway Company.

The Ricardo-Dorman diesel engine of the 0-6-0DM Kelly and Lewis 4271 of 1935 was sent to Melbourne on 16/2/88 where it will be completely rebuilt by Bi-Metal Engineering Pty Ltd of Dandenong. Work is still continuing on the restoration of the frames and cab.

Motor Rail "Simplex" 10058 of 1948 has had new drive chains fitted, and the

engine from Motor Rail 7351 has been dismantled for repairs before fitting to 10058.

As an official part of the Victorian "Heritage Week" program, the Museum will be holding a special Open Day on Sunday, 24 April, entitled "Historic Timber". A feature of the day will be both the Fowler and Day's locomotives hauling loads of sawn timber and logs donated for use on the day by J.L. Gould Sawmills Pty Ltd

The ex-Victorian Railways branch line has now been completely dismantled from Cathkin to the start of the Alexandra yard. The "Last Train" on the line was the Museum's gangers trolley on 26/1/88. All the broad gauge rail and pointwork in the Alexandra yards has been purchased from the contractor dismantling the line.

No progress has been made in resolving the tenure of the Museum at its present site in Alexandra, although the Hon. Jim Kennan, Victorian Minister for Transport, -made an unofficial visit to the Museum in early February. Discussions with the shire council include the Museum's requirement that the site retains access to the original route of the tramway to Rubicon.

Peter Evans

AUSTRALIAN PAPER MANUFACTURERS LTD, Maryvale 1600 mm gauge

(see LRN 35 p.12)

APM have hired two Vicrail locos for use on its private line from Morwell East to the mill. One is T334, Clyde Bo-Bo DE 56-105 of 1956, which was noted on 27 January at Maryvale Siding painted pink and with the word "OZRIDE" on its side. Sister loco, T342, Clyde 56-123 of 1956 was not seen. It is not known if the two Whitcomb diesel-electrics previously used here are to be replaced permanently.

Ray Graf 2/88; Rail Australia 7/87, 12/87 via John Browning 2/88

BHP LTD, Coated Products Division, Melbourne 1435 mm gauge

There are believed to be two road/rail 4wDH units here. Noted late in January was number 1, a ComEng-Aresco Trak Chief. Also said to be here is number 2, a similar machine alleged to have come second hand from Brisbane, Queensland.

Ray Graf 2/88

BRIGHT & DISTRICT HISTORICAL SOCIETY MUSEUM

Two mine skips were observed on the platform at this Museum which is situated at the old Bright Railway Station. However the place was locked up so no further details could be obtained.

Arnold Lockyer 2/88

THE DOOKIE LINE

A 2 ft tramway ran at the up end of Dookie yard an the up side of the line.

In 1950/52 the remains of the double track tramway from the quarry to the VR line were obvious. No track left down but the roadbed could be made out alongside the roadway edge and an embankment existed to get the tramway high enough to tip into railway trucks. The area was littered with 2 ft dump trucks which were four wheel on a wooden frame bearing the makers name "Sewell, Footscray" on small plates.

"Aust. Railway Exploration Assoc." 20/2/88 via Ray Graf 2/88

KERANG/KOONDROOK TRAMWAY

Most of this tramway has been "lifted", although there are some remains at most of the stations. At Koondrook, the station is in good repair and standing at the platform is a train consisting of a replica of-the Sentinel patented steam loco that once worked the line, a bogie open waggon, a 4-wheeled sheep truck and a typical VR brake (I think they are usually called Z vans). The replica, which has no motive power, bears a plaque "Sentinel Patent Locomotive 5766 COFFEE POT Imported 1929, Withdrawn 1941, Scrapped 1952. Replica built 1984 at Hume Colville Engineering, Barham, under Commonwealth Employment Programme."

Arnold Lockyer 2/88

MELBOURNE & METROPOLITAN BOARD OF WORKS, 762 mm gauge Sayers Road, Laverton

(see LRN 60 p.5)

The following locomotives were observed on the surface late in January:

WESTERN AUSTRALIA

HOTHAM VALLEY TOURIST RAILWAY (WA) INC 1067 mm gauge

(see LRN 62 p.18)

Work is about to begin on G class loco *Menzies* (Dubs #3495) which will be stripped down to the frame. The steel tyres for both driving wheels and tender have been received from Tasmania. As soon as the loco is lifted from its wheels, the fitting of new tyres will be sub-contracted to an outside contractor.

Following negotiations with the Narrogin Apex Club, locomotive Pm 706 will be transferred to Pinjarra for restoration to operating condition. The locomotive, which will be named *Narrogin*, is intended for main line services and, being slightly more powerful than the "W" engines, will enable additional coaches to be attached on some tours.

706, built in 1949 by the North British Locomotive Coy. at Glasgow, saw only 21 years of service with WAGR before going on show in a "protected" display situated in the Apex Park adjacent to the Narrogin railway yard.

The fourth "W" class loco, 908, has passed its steam test and moved under its own steam in mid February for the first time in something like 18 years!

Pinjarra Steam Express 2/88 via Editors

PUBLIC WORKS DEPARTMENT, Derby 1067 mm gauge

(see LRN 57 p.7)

Most of the rolling stock abandoned at Derby has been burnt. This includes at least thirty 4-wheel wagons of various descriptions. The only items reported to be still in existence are two 4-wheel wagons, one small hand crane mounted on a flat wagon and a very large self-propelled mobile crane. These items are understood to have been kept for display in a tourist park.

Bill Gray 1/88

MEETINGS

MELBOURNE:

Members slide night. Yes, its on again! Bring any slides which might be of historical or of general interest to light rail enthusiasts (maximum of 20 slides each).

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 14 April at 8.00 pm.

SYDNEY:

To celebrate our new venue, Ken McCarthy will be our inaugural speaker

and will bring us up to date on the latest on that archetypal narrow gauge railway at BURRINJUCK DAM.

So come along and make our new venue a success.

LOCATION: WE ARE MOVING

Due to cost increases and access problems we are vacating our meeting room in the city and moving to the suburbs. Meetings for the balance of the year will be held at: Woodstock Community Centre Church Street Burwood
Note: plenty of off street parking at the rear of the building, and Burwood station is only a 5 minute walk away. DATE: Wednesday 27 April at 7.30pm

ADELAIDE:

Contact Arnold Lockyer for details, Phone: 08-296 9488 : LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 7 April at 8 00pm,

BRISBANE:

Contact Terry Paton for details Phone: 075-62 2896

NOTES, CORRECTIONS AND COMMENTS

COMMONWEALTH DEPT OF COMMUNICATIONS

For those interested in aerial cableways, an article about the 5.5km line to the above Dept's Bellender-Ker transmitter station in Far North Queensland, built in 1972, appeared in the November 1987 edition of in-house magazine *The Broadcaster*. John Browning can supply a photocopy on receipt of a S.A.E. Thanks to Ray Graf.

LEES TRAMWAY, Smithton

(LRN 62, p.3)

In the above mentioned article, the Thomas Green vertical boilered locomotive *Coffee Pot* was identified as No. 173/1883 which is the number suggested by Small in his *Locomotives of the Railways of Tasmania*. I am indebted to Richard Horne of Croydon, England for pointing out that this locomotive was numbered in the earlier series of Green's engines and that the correct number is 1272/1883.

Ken Milbourne 4/88

T.A.C.L. RAIL TRACTOR

(see LRN 63, p.3)

It appears this article has "misplaced" the TACL located in a S.A. museum. The ex-S.A.H.B. unit is in the Franklin Harbour History Trust Museum at Cowell about 44 km further up the coast from Arno Bay. The TACL worked on the jetty railway at Cowell and not on the line at Arno Bay. It was purchased by the Local History Trust when it was offered for sale by tender, closing on Monday 15 February 1971, and was described as a Fordson loco (1926 tractor mounted on railway wheels) in poor condition, in situ at Franklin Harbour (Cowell). As recent as 17 April 1988, the unit was still at Cowell.

Murray Wright 4/88; Arnold Lockyer 5/88

LOCOMOTIVE AND ROLLING STOCK MANUFACTURERS

PTA ENGINEERING PTY LTD, Launceston

(see LRN 59, p.4)

The five locomotives ordered by the Melbourne & Metropolitan Board of Works were diesel-hydraulics with hydrostatic transmission, not battery electrics as reported earlier. It is believed these locomotives were built in association with Eimco Australia Pty Ltd and that the order was completed late in 1987.

ARHS Bulletin Supplement 2/88 via John Browning

MEETING REPORT - MELBOURNE

More than 40 Light Railway devotees congregated at the Ashburton Uniting Church Hall on 14 April for their bi-monthly fellowship pilgrimage.

There was a slight delay whilst the Temple doors were unlocked, but once inside the assembled multitude quickly filled the pews facing eastwards. The Sales Department table was set up in just 17 seconds and "Sales" are now applying to the Guinness Book of records for the "Railfan Meeting Sales Table Setting-Up Record".

After Bro. McCarthy had delivered his sermon, several of the congregation had their say - chapter and verse! Bro. Straffen then goaded his revered pre-historic slide transparency projector into action, took up the collection of offered slides and proceeded to project their images onto a white shroud. The gathering was treated to pictures of shrines ranging from Ballybunion to Appleby, Austria to Cape Town, Cairns to Gilderoy, Walkerville and Cheetham and many other exalted places where members had been paying homage recently.

Bro. Buckland created a sensation with a slide of some partially-clad ladies. He claimed they each had two cylinders! Such occurrences must be discouraged lest they divert the devotees attentions from their pursuit of Light Railways.

After the main service, the bookstall reopened and did a brisk business, selling sacred ferroequinological journals, tomes and other publications.

After communion of tea, coffee and biscuits had been partaken of, the devotees made their farewells and departed, vowing to re-assemble in 56 days time when Bro. Gunzburg will be special guest preacher. All are most welcome, there being plenty of room. How about it all of those Melbourne members who we don't see often enough?

"Herr V. Rayles" 4/88

TOUR REPORTS

POWELLTOWN TRAMWAY

The "East of the Bump" family day tour and barbecue was held on Sunday, 20 March, in fine to hot conditions. The tour was attended by 35 people, and the activity for the morning consisted of a walk along the Powelltown Tramway formation from the high lead carpark near the Latrobe River to the foot of the high lead incline and return. This area has changed greatly due to the regrowth which took place after the 1983 Ash Wednesday bushfires, and it was pleasing to note that the bridge at the foot of the high lead (see "Powelltown" page 91) is still standing, although in an advanced state of decay. Other bridge remains were also noted along this section of the tramway.

Lunch was eaten at the high lead carpark using a "Trail-a-Barbie" for cooking purposes as there are no facilities provided at this location. The unit proved to be highly satisfactory.

After lunch, with the day warming up considerably, the tour party tackled the section along the Latrobe River, climbing steadily towards the east end of the bump tunnel. The formation has become rather overgrown in places, although near the end of this section some track clearing has taken place. An alarming feature of the return journey was a fire lit by Conservation, Forests and Lands officers clearing debris from recent logging operations along the side of the tramway. Although no-one was directly endangered, it was decided after some discussion at the April entertainment meeting that in future, the Society should notify local authorities when a tour is planned to a location where such risk may occur.

The attendance on this tour was somewhat disappointing, considering the preference for family walks in the Powelltown area shown in the tour survey taken in late 1986.

Peter Evans 4/88

TIMBER & GOLD Mk II

or

How a Wombat Wanderings Washout became a Dusty Daylesford Diversion

Sunday, 9.00 am on 17 April 1988, witnessed cloudless blue skies and a chilly zephyr as some 35 members and friends met at the Daylesford railway station for the re-run of the Timber & Gold Tour. Presumably Mike McCarthy's terse letter to the responsible authority (LRN 61, p.5 & 6) reached the right person, as in contrast to T & G Mk I, our party, led by the World's Wombat

Forest Tramway's expert, Norm Houghton, was able to follow the planned route as six dry months had rendered virtually all roads and tracks passable, if dusty.

First stop was Henderson's mill site, then on (using a short cut that took 10 minutes longer than the long way, but saved 10 minutes by not having to turn the cars around!) to the Star Track railway cutting where the Telegraph Sawmill Co had their broad gauge tramway. The dust on the bush tracks was present in copious amounts and all cars were rapidly assuming the same colour.

The junction of the line to Grave's Siding was re-examined (see LRN 61) after which a walk along the very clear tramway formation towards the mill was made. After some distance, great exclamations of joy echoed through the forest as some relics were spotted. One sleeper ("principal") and one longitudinal "stringer" in fair condition, considering their century plus age, were found close to each other. Some time was spent mulling over these sacred remains as the more energetic ventured towards the mill and back.

Lunch was taken well away from Daylesford, at Mt. Franklin (is this the first time we've had lunch in a volcano?) due to half the people of Victoria being in town for the Daylesford Festival. (They should've consulted us before holding their Festival!)

After lunch, the much overgrown Leonards Hill station site was visited and most found it hard to credit that in 1891 the outward goods loading from here was over 27,000 tons, mostly timber. Nearby, we turned our vehicles onto the old railway formation for a couple of miles. All were impressed by the massive earthworks on this section and much pondering was done about the number of shovelfuls required to excavate a cutting up to seventy feet deep and a quarter of a mile long. At this stage, shortage of time caused a change in route and we proceeded directly(!), followed by an enormous cloud of dust, to Anderson's tramway between Mollongghip and Barkstead, where a walk was undertaken along the formation for some half a mile. Bridge sites, cuttings, small broken pieces of iron strap rail, the last vestiges of a longitudinal stringer and the clear indentations where both these and the sleepers had been, were seen.

Onward through the dust we rode to visit the Anderson's Barkstead mill (closed 101 years ago) site, or rather the sawdust heap, where, as is customary, an impromptu Society meeting was held. (ref; *Five to 500*).

With the sun now on the wane, a quick visit was made to the site of Anderson's bridge over the Werribee River, now overgrown with sycamore trees. The cutting leading to the bridge site is the only tangible remain, with the sleeper indentations in the ground being extremely clear. On past

Blakeville; where the stragglers' cars managed a short cut and met the head of the convoy who had made a detour, we visited O'Hehir's tramway.

In addition to the one wheel set previously known here, a second set was spotted underwater in the creek some 20 yards away. This discovery was the cause of much jubilation but proved unphotographable unless your camera was both waterproof and had an "f2 at a fortnight" setting!

A short walk along O'Hehir's tramway was made to view the moss and grass covered 3 ft gauge wooden rails. With the sun almost asleep, the tour was terminated at this point and all present showed their appreciation of Norm Houghton's skilful guidance and informed commentary during the day with a spontaneous round of applause. Norm replied, mentioning that years of research and ground work was involved in locating many of the sites, and for this we are most grateful. Thanks again Norm, and all the other organisers whose hard work went into making a very successful and enjoyable tour.

(Many LR fans, being canny folk, resurrected their T & G Mk I tour notes for the day and as a result, I believe there are ample copies of the tour notes available at the Sales Dept. So if you couldn't come, why not buy a set of notes and do a self-drive? You won't see as much as we did but you'll get the feel of the "Wombat", the place where Victoria's tramway history began. However make sure that you've read Norm's book *Timber and Gold* (LRRSA 1980, and still available) before you go. This very readable book is made even more valuable, in your scribe's opinion, due to both the Introduction and the chapter "The Forest - Use and Management". Make sure your bookshelf has at LEAST one copy.)

Phil Rickard 4/88

NEW SOUTH WALES

COSTAIN-SKANSKA JOINT VENTURE, Ocean Outfall Declines Contract, Sydney gauge unknown

(see LRN 54, p.5)

An auction was to be held at North Head following the completion of the contract with the Metropolitan Water, Sewerage and Drainage Board on 22 March. Advertised for sale was 900 m of 50 lb rail and sleepers. The declines are known to have been quite steep, with 1 in 4 quoted in one case. This is confirmed by the inclusion in the sale items of an Inclinaible Alligator Headframe, 1 in 4 incline with 10 cubic metre Alligator Skip.

Sydney Morning Herald 5/3/88 via Ray Graf

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 62, p.6)

The ceremony to mark the official return to traffic of Perry loco "Tully 6" (7967.49.1 of 1949) and Davenport loco "Kiama" (1596 of 1917) was conducted at the Museum on Saturday 9 April. The restoration of "Tully 6" loco was greatly assisted by the C.E.P. schemes, while the new cabin and plumbing fitted to the Davenport was part of the ILRMS Bicentennial programme.

Alderman Bob Harrison, Mayor of Shellharbour Council and State Member for Kiama, officiated at the ceremony which was attended by almost 200 visitors, some from as far afield as Victoria and Queensland, as well as civic representatives.

Colin Hollis, Federal Member for Throsby, who has given the Museum considerable support, was unable to attend, having been called to a conference in England two days prior to the ceremony. His secretary, Mrs Sandra Copeland, however, ceremoniously drove one of the locos around the main line circuit in his absence.

Although the function took place in a period of heavy rainfall and poor weather, the sun shone through the clouds during the actual recommissioning ceremony. The formal part of the proceedings was conducted in a large marquee while the visiting jazz band and the afternoon tea servers took cover in the large picnic area weather shed.

The Society was pleased to be able to thank its friends for their support and looks forward to future functions when further major restored items return to operation.

The trial assembly of the first restored Shay bogie (to be used under Lima 906 of 1904 and 2097 of 1907) occurred at the end of March. New rectangular section steel has been purchased to replace corroded bogie frame components while new channel was used on the fixed and floating cross bolters. This bogie was on display on 9 April.

A mechanic who attends the Museum under the Illawarra Voluntary Workers Programme has commenced work on the assembly of the accessories which will return the former Victoria Mill Cane Inspector's Drewry rail car to operation. A new body was fitted to the restored underframe about two years ago while the single cylinder side valve petrol engine was rebored seven years ago. The frozen clutch has been freed and work is now progressing on overhauling the carburettor. Over the past eight years, the Society has been fortunate in having the services of offenders directed to periods of community service by the courts under the Corrective Services Commission

scheme. Some forty community workers have contributed to the Museum's progress during this period.

During November, Chairman Brian Holmes underwent heart surgery and a lengthy period of recuperation. Brian was working on the major Bicentennial project at that time, the fitting of a steel cabin floor and the renewal of steam plumbing and boiler fittings on the Davenport loco. The Society was fortunate, at the same time it gained the services of a community worker who was a boiler maker by trade. During his period of work at the Museum, he completed the Davenport job and then moved on to constructing a large circular saw bench. In fact, he continued on beyond his period of compulsory work to complete this project!

Part of the Bicentennial grant included refinements to the 98-year-old former Melbourne cable tram trailer No. 430. New canvas has been fitted to the roof, while 20 new marine ply window sashes have been glazed, polished and placed in position. The car received an external repaint prior to 9 April. This car is being fitted with air brakes. Braking gear has been fitted to one bogie and work is progressing on the manufacture of levers, yokes, bearing plates and pull rods for this vehicle.

The Leyland Zinns loco No. 3 was ready for running trials by mid April. The top and bottom radiator tanks have been repaired, new gaskets made, the air operated clutch mechanism redesigned, fuel pump overhauled and alterations made to the structure of the driver's cabin.

An ILRMS member discovered by chance, the other two Zinns locos during a tour of Victoria in December. These are situated near Halls Gap. No. 1 has its engine removed. No. 2 has been fitted with a diesel engine and hydraulic gear box and carried a pseudo steam loco cladding. It seems that No. 3 at Albion Park is the only Zinns loco in its original state.

Ken McCarthy 4/88

M.I. STEEL PTY LIMITED, Hexham

An ex-BHP loco, believed to be No. 36, appears to be sitting on narrow gauge bogies in the yard of M.I. Steel at Hexham. Quite possibly this shell was sold to scrap merchants but somehow was rescued by person/s unknown and gaily painted in a reddish shade and white. This is readily seen and no doubt attracts publicity to M.I. Steel.

There are no rails under the wheels - it is sitting on dirt. It is not known if the motor is inside but the cab is certainly only a shell.

Harry Wright 4/88

Ex-BHP loco No. 36 in the yard of M.I. Steel, Hexham on 22/9/88

P.M. RYE PLANT HIRE & SKITUBE JOINT VENTURE

An auction was to be held on site at Bobundara Road, Berridale on 29 March following completion of the contract for the Perisher Skitube. Among items advertised were: a flat car; platform car; 2 x Kumagai side dumpers (DP06047 & DP06004); Maruya Kumagai KH148 2 sq m capacity agitator car; Kumagai DL6 man transport car; 3 x flat cars cut down from dump cars, one with crane; 2 x Kumagai side dump cars (body only) DP06106 & DP06124.

Ray Graf 4/88

PERISHER SKITUBE 1435 mm gauge

(see LRN 60, p.7)

Skitube is reported to be open for its full length to Blue Cow in time for the 1988 ski season. Speed uphill is up to 40 km/h, making it the fastest rack railway in the world, but on the descent is limited to 21 km/h.

The Australian 29/4/88 via John Browning

TOLCO FABRICATIONS, Port Kembla

On Monday, 8 February, at this site, adjacent to Port Kembla North Railway Station, a 4w flat car (inverted) with outside flanged wheels, was noted from the embankment outside the site. Approximately 8 other loose wheelsets (axle + 2 wheels) were also noted. No rails or trackage to be seen at the site. Gauge appeared to be about 3 ft - 3 ft 6 in

Ray Graf 4/88

ZIG ZAG RAILWAY CO-OPERATIVE LTD, Lithgow 1067 mm gauge

(see LRN 61, p.10)

The Zig Zag Railway Co-operative will seek government funding to enable it to operate a newly completed extension to the steam-rail track east of Lithgow. The co-operative was told that tourists could not use the new facility, built with the assistance of a Bicentennial grant, until it funded major roadworks to the entrance on the Bells Line of Road. It hopes the Government will meet the price tag of nearly \$400,000, well beyond the co-operative's financial means, so the track will not lie idle.

Sydney Morning Herald 6/3/88 via Ray Graf 4/88

QUEENSLAND

ABIGROUP LTD, Woolloongabba, Brisbane 610 mm gauge?

Advertised for sale by auction at the Company's Brisbane yard were two HAG underground loaders with conveyors and one Moran underground 5 m concrete car. Gauge was not stated, but possibly the equipment was used on the tunnel at Palmwoods (see LRN 63, p.7).

Sydney Morning Herald 5/3/88 via Ray Graf

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610 mm gauge

(see LRN 60, p.11)

The long-awaited event of a return to steam on the railway occurred on 2 March, with the first steaming of Bundaberg Foundry 0-6-2T 5 of 1952 following its overhaul. This was a protracted process, but now the locomotive is in first-class order again, and attention can be turned to other projects.

Durundur Railway Bulletin 4/88 via John Browning

AUSTRALIAN SUGAR INDUSTRY MUSEUM, Mourilyan 610 mm gauge

(see LRN 57, p.9)

The new building at the museum is finished and when visited in March was being fitted out with exhibits preparatory to its April opening.

Hudswell Clarke 1099 of 1915 has been sandblasted and painted with grey primer. It has been moved onto a section of track inside the building, and some tender and cab platework and the boiler cladding are being renewed. It is planned to operate the engine with compressed air with the wheels raised slightly above the rails, as boiler repairs have been deemed too expensive.

Two wooden cane trucks originally from Babinda and said to have come

from Goondi, were also present. One has been completely rebuilt and will be used as part of a display on the hand cutting of cane.

Christopher Hart 3/88

BABINDA CO-OPERATIVE CENTRAL MILL SOCIETY LTD 610 mm gauge

(see LRN 62,p.8)

It is believed that the mill's two Clyde 0-6-0DH locos (55-56 of 1955 and 56-90 of 1956) will be fitted for multiple-unit use for the 1988 season, enabling greater loads to be hauled from the former Goondi Mill area.

Upgrading and deviation work was observed in progress on the tramway north of the new link early in March. 20, Malcolm Moore 4wDM 1057 of 1943, was seen on a work train here.

Bob James 3/88; Christopher Hart 3/88

BUNDABERG SUGAR CO LTD, Mourilyan Mill 610 mm gauge

(see LRN 62, p.12 LRN 62, p.12)

Rolling stock observed at the Goondi Mill site at the start of March included Motor Rail "Simplex" 4wDM 10219 of 1950, a mower, a weed control unit, and an ex-Goondi ballast hopper (Innisfail Tramway type) in the loco shed. There was also Motor Rail 4wDM 2117 of 1923 in a shed at the opposite side of the mill yard. The mill yard was being used for storing bins. An auction was due to be held at Goondi in late April. Believed to have been included in the material for sale was a "Simplex" loco with a 3 cylinder engine (10219 of 1950), 300 cane bins without chassis, 25 steel whole stick cane trucks, a quantity of wheels and axles, a quantity of Simplex diesel engine spares and the sand dryer from the loco shed.

Christopher Hart 3/88, 5/88; David Mewes 4/88

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 62, p.9)

Modifications carried out to E.M. Baldwin 0-4-0DH 17 (6-1446-1-9-65 of 1965) during the slack season have altered its external appearance. The battery box has been removed from inside the cab to the running plate just in front of the cab on the driver's side. The four cylindrical air precleaners have been removed from the hoodtop and replaced by a single conventional one of much neater appearance. In addition, handrails have been fitted to both sides of the hood.

Christopher Hart 4/88

CSR LTD Victoria Mill 610 mm gauge

(see LRN 62, p.9)

On 25/4/88, aeroplanes in the CSR Hinkler Bicentennial Air Race were at Ingham. The visitors were given a short bus tour of the district including a ride behind *Homebush* (Hudswell Clarke 0-6-0 1067 of 1914), which was running between the mill and the outskirts of Ingham. *Homebush's* train consisted of two Hansen linecars and the passenger carriage. The linecars were for extra passenger accommodation and were ex-Macknade Mill 1 and a V2. The other V2 and V5 were in the navy compound. With the other three such units over at Macknade, then none has yet been disposed of to a museum or anywhere else. There are 13 bogie ballast hoppers at the mill, nine green and four yellow. The yellow ones include two transferred from Goondi early in 1987, which seem to have seen little or no use. Pandrol clips are being used with steel sleepers on the Gairlock line relaying.

Christopher Hart 3/88 4/88

FRANKSTON AQUACULTURE CENTRE, Bloomsbury 610 mm gauge

(see LRN 63, p.8)

Tenders have been called for the laying of two kilometres of track at this location.

Mackay Daily Mercury 15/3/88 via John Browning

MACKAY SUGAR CO-OPERATIVE ASSOCIATION 610 mm gauge

(see LRN 63. p.8)

It was announced on 15 April that North Eton and Cattle Creek Mills will be closed, one at the end of the 1988 season, and the other at the end of the 1990 season. A decision as to which will close first will be announced by June. Speculation is that it will be North Eton.

Construction of tramline links between Marian and North Eton and between Pleystowe and Farleigh is about to start, while it is expected that links between other mills will also be put in for the 1988 season. It is expected that a re-arrangement of transport arrangements will see Pleystowe "north coast" cane being brought over the current Farleigh tramline to an interchange point near to the diamond crossing with the Pleystowe tramline. This will replace a long haul by road transport. North Eton is expected to take Marian cane by tramline from the area south of Marian Mill and from Nabilla, also via a new link. Pleystowe and Farleigh cane from Silent Grove will probably be taken to Marian Mill by road via Mount Charlton to the Marian tramline at Dow's Creek.

There are likely to be many such changes over the next few years, culminating in the mill closures and the complete rationalisation of transport. Such changes are difficult to accomplish as the mills have different rolling stock specifications affecting bin capacity, couplers, length, wheelbase, and wheel and axle dimensions. This causes difficulty not only with running trains, but also with the road and infield transport of bins.

Cattle Creek Mill, Finch Hatton

Farleigh Mill

Marian Mill

North Eton Mill

*Pioneer Community News 17/3/88, Mackay Daily Mercury 15/4/88,
ABC Radio 4QA 15/4/88, Bob James, John Browning 4/88*

Cattle Creek Mill, Finch Hatton

(see LRN 60, p.11)

Com-Eng 0-6-0DH 1 (B1724 of 1957) has been fitted with a Cummins Model NT-855-P 280hp 6-cylinder diesel engine. The trackbed of the old Netherdale line to Boongana, terminus of a proposed extension, has been pegged out west of Kowari Road, but no work on this appears to have started. Complete tracklaying of some sections of line was observed in progress at the end of March.

Farleigh Mill

(see LRN 62, p.11)

Two of the mill's E.M. Baldwin B-B DH locos, *Hampden* (6706-1-5-76 of 1976) and *Foulden* (7220-1-6-77 of 1977), were fitted with Cummins Model KTA19-C 600 hp turbo-charged diesel engines for the 1987 season. These brought about fuel savings in the order of 25%, and it is believed that the third loco of this type, *Inverness* (10123-1-5-82 of 1982) will also receive a similar engine before the 1988 season commences.

Meanwhile, a proposal for a branch line to be built crossing the Bruce Highway in the Calen area has aroused the opposition of some local residents of a nearby subdivision.

Marian Mill

(see LRN 60, p.13)

About one kilometre of track on the old Marian line at Boldon Hill was noted lifted for replacement at the end of March.

North Eton Mill

(see LRN 62, p.13)

A sand drag has been built to protect the new road/rail bridge at Mia Mia from any possible runaways from trains of fulls heading east. The catch points were noted near the Range Camp depot with an adjacent signal installation. It would appear that the points will be operated remotely, but the electric motor had not been connected to it when it was observed at the end of March.

Some 43 Pleystowe Mill bins were noted in the mill yard at North Eton in late March, together with 50 brand new bin underframes of the smaller North Eton design. The Pleystowe bins are of longer wheelbase and are fitted with Willison couplers, while the North Eton bins have link and pin couplers.

MOSSMAN CENTRAL MILL CO LTD 610 mm gauge

(see LRN 61, p.17)

Ex Douglas Shire Council 0-6-0T *Faugh-A-Ballagh*, John Fowler 8733 of 1900, was removed from its resting place in a park in Port Douglas to Mossman Mill late in 1987, for possible return to working order on the mill's tourist train services. This loco was observed without cab and tanks on a dead-end line near the scrapyard at the mill in early March. Also on this line was *Ballyhooley Too*, Hudswell Clarke 0-6-0 1838 of 1950. Bundaberg Foundry 0-6-2T *Ballyhooley* (6 of 1952) was in the loco shed. In the scrapyard were the dismantled remains of John Fowler 0-4-2T *Ivy* (15947 of 1922), and the two railmotor trailers obtained with the Hudswell Clarke. The seven "Ballyhooley Steam Express" cars still have a variety of couplings at present, two with Willisons at both ends, three with link and pin at both ends and two with different couplers at either end. The tramline in Port Douglas has been extended to a station at what appears to be the main resort.

Christopher Hart 3/88

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 62, p.14)

Most of the mill's main line locomotives have now been painted in the new blue and yellow colours. The exceptions noted in the loco shed late in March were Clyde 0-6-0DHs D1 (56-101 of 1956) and 2 (57-147 of 1957), and John Fowler 0-4-0DM 5 (18801 of 1927), which has been out of use for several years.

John Browning 3/88

THE SUGAR BOARD, Lucinda Bulk Sugar Terminal 610 mm gauge

(see LRN 55, p.13)

Motor Rail "Simplex" 4159 of 1926 was observed shunting sugar boxes around the terminal area in mid-January.

Chris Hart 3/88

THE SUGAR BOARD, Mackay Bulk Sugar Terminal 1067 mm gauge

(see LRN 57, p.11)

Both Com-Eng 0-6-0DH locos are still on site here. Orange F1018 of 1957 appears to remain out of use, and is assumed retained for spare parts, with yellow F1029 of 1958 the operational loco.

John Browning 3/88

TULLY CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 57, p.12)

The GM engine from John Fowler 0-6-0DH *Tully* No. 8 (21912 of 1936 rebuilt by E.M. Baldwin 590-9-63 of 1963) has been removed, reportedly with a possible view to fitting it to one of the mill's Com-Eng 0-6-0DH locos. The frame of Clyde 0-6-0DH *Tully* No. 9 (DHI.4 of 1954) is still present, cut down to footplate level, and with the final drive removed. Some of the locos here have had their underframes painted red rather than black as used previously.

Christopher Hart 3/88

SOUTH AUSTRALIA

COBDOGLA LIGHT RAILWAY LOCO No. 2 610 mm gauge

(see LRN 63, p. 9)

Bagnall 1801 of 1906 was registered with the SA Steam Boilers Dept by Stone & Siddeley Ltd for use on the Glenelg breakwater on 22 January 1917. On 16 December 1921, it was reported as having been recently purchased by Forwood, Down & Co. On 16 August 1922, Forwood, Down & Co. advised the Steam Boilers Dept of its sale to the State Government's Supply and Tender Board. During the recent restoring of this loco to working order, plans were found in the old records of the state Engineering and Water Supply Department, showing the conversion of this locomotive from 2 ft 6 in to 2 ft gauge, and from these it would appear that this conversion was carried out by the Department after the loco was acquired by the Government.

Unfortunately there is no record of the date that it actually arrived in Cobdogla to work on the Cobdogla to Loveday Light Railway, although

the local paper reported in its issue of 17 February 1922, that the line was complete awaiting the arrival of the engines and a subsequent issue of 7 November 1922, reported that the line was working all day and sometimes half the night, with two small engines employed. This frantic activity could not have lasted for very long because the issue of 16 February 1923 contained the information that the Hume Pipe Co, which was the reason for the railway, intended closing down "this weekend". In spite of this it was not until the issue of 16 October 1925, that the paper recorded that the demolishing work at the pipe factory was complete; the Company had been granted a clearance by the Officers of the Irrigation Commission and that the last of the Company's representatives had left for the city "on Monday last".

In March 1924, the other loco used on the line (Kerr Stuart & Co Ltd B/N 742 of 1901) was sold and shipped to the State Rivers & Water Commission in Victoria, where it was used on the tramway between Red Cliffs Railway Siding and the Pumping Station.

On 27 September 1926, the Irrigation Commission in Adelaide decided to offer the remaining loco, i.e. the Bagnall, for sale but on being advised that it did not have a current boiler inspection certificate, does not appear to have proceeded with the proposal.

In a report to Adelaide on 31 August 1933, it was stated that there was little left of the light railway except No. 2 loco at Cobdogla. The loco remained "stored" at Cobdogla pumping station, out in the yard amid the firewood stacked for use in the Humphrey pump, until 1947, when it was offered for sale by tender, closing on 21 January 21, at the Supply & Tender Board.

The successful tender was lodged by Mr George W. Woolmer of Glossop (not W.G. Woolmer). He purchased it with the intention of using it for steam raising on his property, but was unable to arrange transport from the pumping station.

I transferred to the Barmera Office of the Irrigation Branch of the Lands Dept in 1948 and resided in Barmera until 1954. About the time that I left, the town was becoming interested in tourist promotion and, a year or so later, the tourist promotion office approached the Department with a view to obtaining the loco and moving it to the shore of Lake Bonney at Barmera. There had been a complete turnover of Officers in the Barmera Branch since 1947, and apparently no-one knew that the loco was no longer Government property, so it was either sold, or given, to the tourist promotion office, who moved it to Lake Bonney. After it had been moved, it was discovered that it really belonged to George Woolmer, but I believe that he agreed to forego his ownership - I do not know if he was repaid what he paid for it!

The number 59 painted on the loco had nothing to do with its working life. I

have always believed that it was given this number by the tourist promotions office because they acquired it in 1959.

With regard to the operation of the railway and the transport of material (cement, stone and sand) from the Cobdogla Wharf and a quarry near the Loveday Road junction with the Cobdogla to Barmera Road, this was carried out by the Irrigation Commission. The suggestion that the line was operated by the Hume Pipe Company, possibly came about because the locals facetiously referred to the train as "The Hume Flyer" and, when I wrote up the history of the line for the ARHS (vide Bulletin No. 161 of March 1951) I used the subtitle "Route of the Hume Flyer". Also, after the loco had been moved to Lake Bonney, the tourist office approached the Hume Company for a suitable plaque to attach to the loco. Humes acceded to their request and provided a plaque, which stated that they had operated the railway.

On a subsequent visit to Barmera, I pointed out to the officer in charge of the tourist office, that this was incorrect, but his attitude, which I have found to be fairly prevalent in this type of situation, was that it was near enough to being right. They wanted a plaque to indicate where the loco came from, Humes Ltd were willing to supply it - the Lands Dept certainly would not have - so they deserved any credit.

As part of the South Australian 150th Anniversary celebrations in 1986, the Engineering and Water Supply Department, which had taken over the administration of the River Murray Irrigation Areas from the Irrigation Branch of the Lands Dept, decided to recommission the Humphrey Pump at the Cobdogla Pumping Station and establish the station as an Irrigation Museum. Included in the plan was the "reclaiming" of the loco from the shore of Lake Bonney, restoring it to running order and establishing a railway on which it could operate at the museum.

In February 1985, the loco was sighted at Ottoway Depot of the E.& W.S. Dept. having just arrived from Barmera for restoration. Some 12 months later, on 7 March 1986, the Cobdogla Irrigation Museum was officially opened and the Humphrey Pump recommissioned, but there was no sign of the Bagnall that was still at Ottoway. Her restoration had proved to be a much bigger job than originally anticipated, and I doubt if there will be much of the original loco left by the time the job is finished.

Arnold Lockyer 4/88

STOP PRESS:

Bagnall 1801 of 1906 was recommissioned at a ceremony at the Cobdogla Irrigation Museum on Friday, 22 April. The loco was in steam for the ceremony. A report on the day will appear in LRN 65.

Arnold Lockyer 5/88

TASMANIA

COMMONWEALTH DEPT OF TRANSPORT, Matsuyker Island

(see LRN 44, p. 12)

It is confirmed that the incline tramway at this location has been placed out of commission. Although the light here is still manned, it is now completely served by helicopter.

VICTORIA

ALEXANDRA TIMBER TRAMWAY AND MUSEUM 610 mm gauge

(see LRN 63, p.11)

The Alexandra Museum's Day's Tractor idling on the newly laid 3 ft 4.5 in gauge track on 24 April 1988.

Photo: Peter Evans

The immediate threat to the Museum's existence would seem to have receded as pressure mounts from several organisations throughout the state in opposition to the Victorian Government's land disposal policy. However, the situation is still far from a satisfactory resolution.

During Easter, the Fowler was steamed on the Saturday, Sunday and Monday. Patronage was good, with 1000 people attending over the three days. The Museum now stocks T-shirts and windcheaters with the Museum's

logo, and sales have exceeded expectations.

On 24 April, as an official activity of Heritage Week, the Museum held an open Day entitled "Historic Timber". Patronage was excellent, due in part to leaflets distributed through railway bookshops in Melbourne, and to a commercial which was run 10 times on GMV6 Shepparton. Footage for this commercial was taken from a 23-minute promotional videotape recently produced to broadcast standards by a member of the Museum.

1200 trips were provided on the tramway during the day and once again the financial return exceeded all expectations. The only element to mar the day was a minor derailment which damaged the mounting of the leading bogie of the ex-Yangardook Tramway carriage causing it to be retired to the goodshed at lunchtime. The derailment was caused by a sleeper which broke as the locomotive passed over it. The sleeper was quickly replaced and running was resumed. This was the only derailment experienced during a running day at the Museum since the LRRSA tour in November 1986 (see LRN 56, p.10).

A load of sawn timber was included in the train consist, authentically secured to Rubicon bogies with chains and twitch bars, with a Museum "Brakeman" riding on top of the load

The other feature of the day was a new exhibit prepared by the Museum. 100 feet of 3 ft 4.5 in gauge track has been laid in 30 lb rail to a winch site. A double drum steam logging winch manufactured by the Steel Company of Australia has been mounted on skids and a log loading ramp constructed next to it with appropriate ropework. The exhibit was built under the direction of Ernie Le Brun, and was demonstrated on the Open Day by "Ike" Sims, both of whom worked in the Rubicon Forest during the tramway era. The Museum's Day's tractor ran up and down this length of track, which includes a "stub" point, for most of the day.

Along with Ernie Le Brun's model sawmills and mill buildings, this exhibit attracted a great deal of interest. All parts of the steam engine and winch motion have been unseized, and it is hoped that by the time a suitable boiler is obtained, the winch will be fully operational. This project has become the first part of the planned timber mill settlement and tramway complex.

The Museum is open every Saturday and Sunday from 1 pm to 4 pm, with trains hauled by the Malcolm Moore locomotive. On the second Sunday of every month, trains are hauled by the John Fowler Steam locomotive.

Peter Evans

AMRA EXHIBITION, Camberwell Gauges HO, HOn2-1/2, N, Z, and 610 mm gauge!

For the first time in many years, the LRRSA took part in this annual Model Railway Exhibition held at the Camberwell Civic Centre over the Victorian Labour Day weekend.

The results of the Exhibition were gratifying, with over \$1000 of Society publications sold, and several new members attracted. Most important however, was the exposure the Society received to railway modellers and the general public.

The stand stressed the central aims of the Society - research and publication, and through a display of laminated posters, showed other Society activities such as site research, mapping and tours. Several large format black and white timber tramway photographs attracted a great deal of interest, as did videotapes covering some aspects of light railways in Victoria.

Centre point of the exhibit was a 610 mm gauge Rubicon bogie, which was completely restored and painted especially for the exhibition. The bogie was displayed on a short length of track, and was surmounted by a display of light railway builders plates, including replicas of those of both the Powelltown Shays.

The LRRSA has applied for a stand at next years Exhibition.

Peter Evans 4/88

CHEETHAM SALT LTD, Laverton 610 mm gauge

(see LRN 60, p.9)

The tramway system here remains out of use, and the four Ruston and Hornsby locomotives have not been moved for some time. No maintenance is carried out on the tramway, and it seems almost certain that it will never be used again.

Peter Evans 4/88

SECV RUBICON TRAMWAY 610 mm gauge

(see LRN 59, p.11)

The new tramway trestle bridge near the Royston Power Station has been completed by the Rubicon Mountain Streams Gang. The eight-man team finished the task in November 1987. They were assisted by Ernie Le Brun who rebuilt the bridges for the SEC after the 1939 bushfires. The new bridge is a replica of the one it replaced. The "legs" were made from hardwood poles obtained from SEC disposals at Brooklyn, as the local Rubicon timber is unsuitable for this purpose. The deck however, was built from local timber sawn at the SEC sawmill beside the raceline.

The next bridge to be replaced will be the Beech Creek bridge, followed by the horseshoe-curved Lubra Creek bridge. Work will start next summer, and SEC access roads have been put in recently to both these locations to assist with the transportation of heavy materials. The final bridge to be replaced will be the "15,000 Syphon" bridge.

The raceline is patrolled every second day using the bogie B.E. "tram" from the top of the haulage to the Royston Power Station, and the 4wBE inspection car from the power station to the Rubicon Dam. The 4wPM Malcolm Moore locomotive is used for heavy construction purposes, and to clear winter snow from the tramway.

Work along the tramway during summer has concentrated on the clearing of undergrowth from both sides of the line and around the bridges in order to reduce the fire hazard. As a result of this, the formation of a short inclined tramway at Rubicon Dam, used during construction of the scheme, has become useable.

Peter Evans 4/88

Newly re-built bridge on the SECV Rubicon Tramway near the Royston Power Station

SOUTHERN PRIVATE RAILROAD, Jeff Daly, Melbourne 700 mm gauge

(see LRN 63, p.14)

Two locomotives imported from an Indonesian sugar mill are in the Melbourne area and are available for inspection to prospective purchasers.

The 1909 Orenstein & Koppel 0-4-4-0T is a Mallet compound articulated locomotive and is believed to be numbered 2, although the publicity material features a photograph of a similar loco numbered 3. Regauging to 610 mm (2 ft) gauge would require some alteration to the inside-framed front engine unit. The 1925 Hanomag 0-8-0T has the flexible Klein-Lindner wheelbase and is inside-framed. A much larger engine, it is numbered 11. Both engines are said to have been last used in 1978 and are operational.

Open-sided passenger carriages can be supplied in minimum orders of six, with a length of 6.2 m, width 2.0 m and height 2.9 m.

Southern Private Railroad via John Kramer

WESTERN AUSTRALIA

MINEMACH (gauge not specified)

This Perth mining machinery company has placed a "Wanted" advertisement for Eimco 12b Bidders (4); 1½ - 2 ton (sic) side tipplers (10); 1½ - 2 ton locos (4). "Must be in A1 working condition and available for sale by end second week April 88." Minemach is in the outer suburb of Helena Valley.

West Australian 13/3/88 via David Whiteford 3/88

POINT SAMSON 1067 mm gauge

The Department of Land Administration invited tenders (closed 19/1/88) for the purchase and removal of old rail wagons located in the former Harbour Reserve at Point Samson. These wagons are remnants of the old Public Works Department 3 ft 6 in gauge jetty railway system. Some items have been preserved in Roebourne, at Cossack, and at the Pilbara Railway Historical Society museum near Karratha. A detailed article about Point Samson appeared in *Light Railways* Numbers 52 and 57.

West Australian 9/1/88 via David Whiteford 3/88

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC, Bennett Brook Railway, Caversham 610 mm gauge

(see LRN 62, p. 19)

The "large train" is now fully fitted with vacuum brakes. During summer, this train has been made up of the Gemco (ex Wyndham) and three AQ/AQB coaches built on converted 3 ft 6 in wagon frames. Work on the vacuum brakes was completed in February.

Ex Westrail flat top QBB 2889 is now operational on the Bennett Brook Railway following conversion to 610 mm gauge. The wagon has already proved invaluable in hauling sleepers, rail, and cleared timber from the track

side following the upgrading of the Mussel Pool - Central section. The wagon was trialed on 17 January.

Planet diesel #2150 of 1938 was trialed on 28 February following a complete engine overhaul. The "Planet" has been out of service for 18 months or more.

A scissors crossover is being prepared for installation at Central Station. As well as being a useful piece of track for train operations, WALRPA will be preserving a form of crossover which is disappearing from the Westrail system. WALRPA's set comes from the Wagin goods yard.

Early in March, depot road number 4 was finally linked to the yard trackage. All six shed roads are now connected to the yard.

David Whiteford 3/88

MEETINGS

MELBOURNE:

Adrian Gunzburg will be showing some of his collection of West Australian railway and light railway slides. You would no doubt be aware that Adrian is one of the more well-known experts on WA locomotives. This will be a very entertaining evening so please be there.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove. Ashburton.
DATE: Thursday 9 June at 8.00 pm.

SYDNEY:

Unfortunately we have not been able to determine the content of this months meeting. (Sorry Craig! Its 1.24 am and I don't think you would appreciate a call at this time of night!!) Any member wishing to know the entertainment item should call Craig Wilson on 02-484 7984

LOCATION: Woodstock Community Centre Church St Burwood

Note : Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 22 June at 7.30 pm

ADELATDE:

Contact Arnold Lockyer for details.

Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 2 June at 8.00 pm.

BRISBANE:

Contact Terry Paton for details. Phone: 075-62 2896

NOTES, CORRECTIONS AND COMMENTS

MELBOURNE & METROPOLITAN BOARD OF WORKS, Laverton

(see LRN 63, p.13)

An additional point of interest concerning the MMBW-built overhead conduit electric locomotive observed by Ray Graf in January is that this machine uses 3-phase alternating current (415V, 50 Hertz or cycles per second). Most railway electrification is either direct current (e.g. the Melbourne and Sydney suburban systems, 1500V), or the more up-to-date 25kV (50 cycles) used in Queensland and well established overseas. 3-phase traction was used on a number of early applications of electrification for overseas use. The last major network using it was the FS (Italy), which was converted to DC in the 1970s. Is this the first railway use of 3-phase in Australia, asks Ray Graf?

P M RYE PLANT HIRE & SKITUBE JOINT VENTURE, Bobundara Road, Berridale NSW

(see LRN 64, p.8)

Omitted from this report was the information that, included in the material auctioned at the completion of Skitube, was a winch and cable system running on 900 mm gauge track. The Mitsui electrical winch had a drum holding up to 4 km of 21 mm rope. Apologies to Ray Graf.

SECV, Kiewa

(see LRN 63, p. 15)

The builder of the battery electric personnel carrier on the 3 ft gauge SECV line at Kiewa is Maximove Industries, Amberley Crescent, Dandenong, Victoria, stated in the telephone directory to be a "Division of H.T.S." This company's main business seems to be fork lift trucks.

John Browning 6/88

SECV RUBICON TRAMWAY

(see LRN 64, p .17 & 18)

The last word in the report on the SEC Rubicon Tramway (page 18) should have been “visible” not “usable”.

TACL RAIL TRACTORS

(see LRN 64, p. 2)

Ray Graf visited the museum at Cowell, in September 1986. He examined the TACL cast end buffer beam weights which have a curved front surface with coupling pockets and cast lettering. On the lower part of the casting are two small flat areas, one of which, (normally on the front right hand side of a TACL loco) should be stamped with the builder’s number. The unit at Cowell has the end weights mounted “upside down” (cast lettering wrong way up) to give a higher coupling height. However, Ray noted the builder’s number, 46, stamped at the right hand side the correct way up, showing the loco was built with the weights reversed from the normal position.

An examination of the two end weights currently lying on the Emerald Station platform should show that the unit under restoration there is builder’s No. 55. Ray noted this number on the front weight before dismantling occurred.

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

ELECTRICAL MINING & ENGINEERING (AUSTRALIA) PTY LTD Glastonbury Avenue, Unanderra 1067 mm gauge

A short 3 ft 6 in gauge test track was noted at this site. However, it appeared that the track had not been used recently. It would appear that this firm has been involved in construction and/or repair of rail mounted equipment for southern collieries.

Ray Graf 5/88

PRE-PUBLICATION OFFER

CANE TRAIN

The New Zealand Railway and Locomotive Society Inc. are offering their new publication *Cane Train* by Peter Dyer and Peter Hodge to LRRSA members at the special pre-publication rate of NZ\$35.00 until 31 October 1988, after which the expected retail price will be NZ\$50.00.

The new book is more than just a sequel or revised edition of *Balloon Stacks*

and Sugar Cane, previously published by the NZRLS in 1961. *Cane Train* details the history of the Fiji sugar industry and its tramways from the 19th century until the 1980s, and is expected to contain 114 photographs, 20 maps and about 30 drawings of locomotives and rolling stock.

The book is due to be published in October 1988, and may be obtained by LRRSA members by sending NZ\$35.00 (bank draft, money order or NZ cheque) to: Publications Officer, NZ Railway and Locomotive Society Inc., P O Box 5134, Wellington, New Zealand. All pre-publication orders will be acknowledged.

NZRLS/Peter Evans 7/88

RESEARCH

AUSTRALIAN BLUE ASBESTOS, Wittenoom WA

Archive footage of the CSR-owned mine operated by this company from 1944 to 1966 has received quite an airing as a result of recent successful compensation cases. The mine appears to have included a drift operation, and a 4wBE loco numbered 5 is shown in one film shot, hauling steel hopper cars. Gauge could be 3 ft or narrower. Can any member provide more information about this remote operation?

John Browning 6/88

FIELD REPORT

WOLFRAM MINE. MARYSVILLE gauge unknown

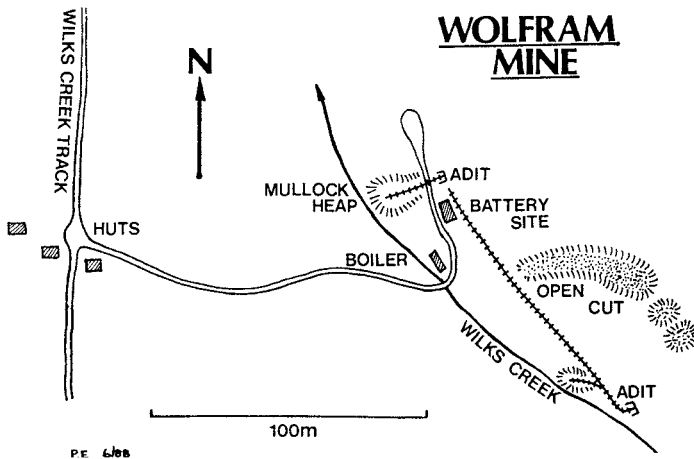

Wolfram, an ore of tungsten, was mined at Wilks Creek near Marysville between 1901 and 1919. The creek was worked alluvially until 1912, when quartz veins bearing the ore were discovered near the head waters. In 1917 a substantial amount of equipment was installed at the mine, including a 25 BHP engine and boiler, a Jaques crusher, trommel, two compartment jig, 3-head battery, wifley table and slime table.

The mine closed in 1919, and in 1940 most of the plant was sold to Mr C.H. Row who was a partner in the Marysville Timber and Seasoning Co. (Anderson and Row), who were operating two timber mills nearby. (For reports of the tramway systems of these mills see LRN 54 p.2, and LRN 56 p.3.)

A recent visit to the mine site in perfect Victorian bushbashing weather (torrential rain and gale force winds) revealed the formation of a short tramway connecting two adits in the steep-sided valley. No traces of rails or sleepers were found, but the formation was very distinct and was

clear enough to walk along easily without the usual struggle through the undergrowth. The tramway was on a slight descending gradient in favour of the load, and was approximately 100 metres long. The gauge could not be ascertained, but would probably have been less than two feet. The tramway terminated just above the battery site near the northern adit. An old boiler and some machinery parts were discovered next to the creek.

Access to the mine is along the Wilks Creek track which is suitable for four-wheel drive vehicles only.

Peter Evans 6/88

NEW SOUTH WALES

CENTRAL WEST RAILWAY PRESERVATION SOCIETY, Orange 1435mm gauge

(see LRN 60. p.7)

The Society has been leased the old East Fork railway depot at Orange from the SRA. It is hoped that the museum on the site, which is right in the centre of town with easy access, will be open in 12 months. First need will be a security fence, following which it may be possible to move onto site

Andrew Barclay 0-6-0T 1234 of 1911, currently stored at Canobolas Wooltop.

Central Western Daily 23/6/88 via Ray Graf

COSTAIN-SKANSRA JOINT VENTURE, Ocean Outfall Declines Contract, Blue Fish Drive, North Head 1067 mm gauge

(see LRN 64, p.6)

An auction was held at this site on Tuesday 22 March, following the completion of a declines contract for the MWS&DB.

On the inspection day, 21 March, it was noted that a 3 ft 6 in gauge wire roped incline had been used in a 1 in 4 adit passing under the sewerage treatment plant and out under the sea. Spoil removal was by means of a controlled winch rope up the adit onto an alligator head frame, where the body was supported by guide wheels on the body side. The skip bottom, hinged at the lower end, then dropped down and discharged the load. A platform for passengers was on the upper end. Also on site was a rail mounted Fox Materials chain-feeder/conveyor which appeared to be unused. A large amount of prefabricated 50 lb track (94 pieces of approximately 9 m each) was stacked nearby. The adit is now used for access for rubber-tired vehicles to go underground (and undersea!) for the ocean outfall tunnel work.

Ray Graf & Craig Wilson 4/88

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge (see LRN 64, p.6)

Now that the sense of urgency has passed since the recommissioning ceremony held on 9 April, the Museum work parties have settled down to a more mundane routine.

The locomotive work force is now active on the restoration of former Corrimall Coal Company 0-4-0ST loco *Burra* (Hawthorn Leslie 3574 of 1923). The restored cylinder blocks have been remounted on the main frame and await the fitted bolts for permanent fastening. The main springs are being cleaned and one broken leaf is to be replaced. The oil ways in the main bearings are receiving attention. The passages are being enlarged and realigned to ensure adequate lubrication.

The restoration of the Leyland Zinns loco No. 3 has been completed. The main work entailed the fitting of an electric fuel pump to replace the worn mechanical unit while the radiator has received major maintenance. The unit has received a primer paint coat, but prior to the application of the final coat, the Museum is investigating how springs can be fitted to the main axle boxes.

During May and June, major track maintenance has been carried out. Much of the running shed yard track is being re-sleepered with steel sleepers while the track levels are being realigned so that the yard can be filled with road base up to the rail top. The yard point levers are being standardised with

spring loaded wharf type levers. Some of the worn light rail on the electric tramway is being replaced by new plant and the opportunity is being taken to also fit steel sleepers in this location.

The new large circular saw bench is now in use cutting up timber for loco fuel. This is one of the continuous tasks performed by the Community Service Workers under the Corrective Services Commission scheme.

Restoration work has been completed on the former Otford signal box. The last part of the project consisted of boxing in the roof eaves. This signal box reaches its centenary in October and it is planned to have a small formal ceremony to mark the event. Work is progressing on restoring one of the former NSWGR home signals retrieved some years ago with other plant from Hexham. The two post junction signal purchased from the Queensland Railways is also receiving attention. The lattice masts were strengthened some time ago by the C.E.P. tradesmen but the tedious task of repainting this object is now in progress. It is ultimately planned to have the main station points and signals connected to the lever frame in Otford box.

Ken McCarthy 6/88

M.I. STEEL PTY LIMITED, Hexham

(see LRN 64, p.7)

The ex-BHP locomotive is confirmed as being No. 36. I first noted the loco in the yard of MI Steel on Tuesday, 1 September 1987, and at that time the engine was still in BHP colours and its number was clearly visible painted on the end of the cab. The cast number plate on the side of the cab facing the street had been removed.

W.J. Lane 6/88

PERISHER SKITUBE 1435mm gauge

(see LRN 64, p.8)

Skitube was closed for some months from December 1987 because of problems with track bolts used to fasten the rails to the concrete track bed. Ice had formed in the bolt holes, causing the bolts to become loose. Track in the Perisher - Blue Cow upper section, to be opened for the 1988 ski season, was to be laid on a conventional ballasted track bed.

Rail Australia 1-2/88 via John Browning 6/88

STEELMARK, Berkeley Street, Unanderra 1435mm gauge

(see LRN 61, p.8)

On May 29, it was noted that Ruston & Hornsby 88DS 4wDM 326064 of 1952, ex Helensburgh Colliery, had been cut up. Also cut up was the tipper

body of a hi-rail equipped Ford Tipper. The cab and chassis of this unit, noted previously, had disappeared.

Ray Graf 5/88

TRANSFIELD KUMAGAI CONTRACTING PTY LTD, Sydney Harbour Tunnel

Experienced contractors have been invited to express interest in the construction of two 10.6m tunnels of around 750m in length through sandstone for the North Shore portion of the Sydney Harbour Tunnel work.

The Weekend Australian 14-15/5/88 via John Browning

QUEENSLAND

GRAHAM CHAPMAN, Murrunda Downs 610 mm gauge

(see LRN 58, p.5)

Another dismantled steam locomotive has been noted added to the collection here. This is Krauss 0-6-0T 5869 of 1908, which has been acquired from Evan Morris (see LRN 33, p.9). This is one of the locomotives originally used in the construction of the Burrinjuck Dam in NSW, and it was converted from 0-4-0T at North Eton Mill. A certain amount of restoration has been carried out on the cab, but the tanks need replacing.

John Browning 6/88

CHILDERS

John Fowler 0-6-0 13325 of 1912 has been removed from the Childers State School, which has been closed, and following cleaning and repainting, it has been placed on display in Taylor Street with three steel cane trucks. The loco sits on an old tramway formation, adjacent to a relocated house being established as an historic exhibit, presumably by the local historical society. The loco was built as an 0-6-2 for CSR's Childers Mill, but was found unsatisfactory and rebuilt to 0-6-0, passing to Isis Mill on the closure of Childers in 1932. The tender has a Fowler chassis, but its later body carries a plate saying "MADE BY ISIS CENTRAL MILL No. 6 27-7-52".

John Browning 6/88

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 64, p.10)

During the week ending 11 June, the tank which had been used for the storage of fuel oil for the steam locos, was removed from the loco shed area for future use elsewhere in the mill. Since the end of steam, it had seen occasional use as storage for diesel fuel.

Christopher Hart 6/88

CSR LTD, Pioneer Mill 1067 mm gauge

(see LRN 49, p.9)

A 2.2km extension has been constructed to one of the mill's tramlines during the slack season in preparation for a record crop. It is reported that some Pioneer Mill cane has been diverted to Kalamia Mill in order to handle tonnages.

Townsville Daily Bulletin 1/6/88 via Chris Hart; David Mewes 6/88

CSR LTD, Plane Creek Mill, Sarina 610 mm gauge

(see LRN 64, p.12)

Clyde Model DHI-71 0-6-0DH's D1 and 2 (56-101 of 1956 and 57-147 of 1957) have been painted in the new sky blue and cream livery since March. The full lines in the mill yard have been relaid and ballasted. Maintenance work on mixed gauge track in the Alcohol Plant area was observed in late June with Ruston & Hornsby 0-6-0DH 9 (rebuilt by E.M. Baldwin 6-825-1-5-64 of 1964) hauling the navy train.

John Browning 6/88

ISIS CENTRAL MILL CO LTD 610 mm gauge

(see LRN 62, p.12)

In spite of a record crop throughout Queensland as a whole, the Isis district is drought-stricken, and there will be a very short crushing season. John Fowler 0-6-0DM 2 (4110019 of 1950) was observed parked in Childers in late June, together with a weedkiller tanker. Other locomotives were stationed in the loco shed and around the mill yard as usual, with the exception of Clyde Model DHI-71 0-6-0DHs 4 and 6 (56-113 of 1956 and 59-204 of 1959), which are the only two of this type at the mill not permanently coupled together.

John Browning 6/88

KOLAN SHIRE COUNCIL PARK, Wallaville 610 mm gauge

An unidentified 0-6-0T, believed to be German-built, has been "preserved" here since 1966. It was originally supplied to Gin Gin Mill by agents Arthur Koppel in 1897. In mid-June, it was observed completely covered with a tarpaulin and under a steel canopy surrounded by a security mesh fence.

John Browning 6/88

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 64, p.11)

The first stage of rationalisation has involved the construction of only minor tramline links, as all six mills are remaining open for the 1988 season.

A connection where the Pleystowe tramline crosses the north coast line of Farleigh was completed in good time for the season, while the connection between Marian and North Eton was completed on 27 June, the day crushing was due to commence.

In the 1988 season, Marian Mill will crush cane diverted from Pleystowe and Farleigh Mills in the Buthurra area, which will be hauled over the Marian tramline from Narpi. Pleystowe will haul its cane from the Mount Ossa area over the Farleigh north coast line, augmented by Farleigh cane from the same area. Remaining road deliveries of Pleystowe cane will be made to a "road dump" near Mount Ossa. Pleystowe cane north of Mount Ossa which can conveniently delivered to the Farleigh north coast line will be crushed at Farleigh. North Eton will take cane from Marian's Mia Mia line over the new link to North Eton Mill. Contrary to the suggestion in LRN 64, Marian Mill will retain Nabilla cane and will not take any Silent Grove cane from other mills.

Farleigh Mill

Marian Mill

North Eton Mill

Pleystowe Mill

Racecourse Mill

*John Browning 6/88; Len Heaton 6/88; Graham Thompson 6/88;
Mackay Daily Mercury 30/6/88*

Farleigh Mill

(see LRN 64, p.11)

A new tramline branch at Moondaba, north of Calen, was seen under construction in mid-June. The new line crosses the QGR north coast line and the Bruce Highway in close proximity to the junction with the main tramline, and serves former Pleystowe growers in the Cameron's Pocket area. Motor Rail "Simplex" 4wDM UNIT 27 *Calen Simplex* (21623 of 1957) was being used in the construction work. The line is currently around 2 km in length, but an extension had been pegged out.

By mid-June, the short Mavis Bank line, which crosses the Bruce Highway near Coningsby, had been cut back short of the Highway crossing.

Clyde Model HG-3R 0-6-0DH *Coningsby* (61-232 of 1961) has been fitted with a new cab supplied by Eimco Australia. The cab carries a plate indicating it was built by Aline Body Builders Pty Ltd Kay Street, Granville NSW. The cab is fitted with overhanging sloped rear windows to enable driver observation of the rear coupler, and cabside doors are fitted at the front, rather than the rear as is normal.

Com-Eng 0-6-0DM *Ashburton* (A1614 of 1956) has been transferred to

North Eton Mill for the 1988 season.

The mill's two remotely controlled brake wagons, built by Clyde Queensland in 1976 and E.M. Baldwin in 1978 (7901-1-6-78) appear to be out of use.

Marian Mill

(see LRN 64, p.11)

Marian Mill will be using both its E.M. Baldwin B-B DH locos 16 & 17 (9562-1-6-81 and 9562-2-6-81 of 1981) on the Narpi line during the 1988 season to handle reassigned tonnages, and consequently 15, its 1985 E.M. Baldwin "rebuild" of a Clyde HG-3R 0-6-0DH will be used on the Mount Jukes line. This means that a smaller Clyde Model DHI-71 0-6-0DH will have to share duties on the lines west of Mirani.

A new high level road bridge planned for the Pioneer River at Marian is expected to incorporate a tramline crossing also.

North Eton Mill

(see LRN 64, p.12)

The new 1 km link between the North Eton and Marian networks was completed on 27 June. E.M. Baldwin 4wDM 4-473-3-63 was in use for track construction duties following the completion of earthworks by a contractor. Money for the interconnection was provided by the Commonwealth Government as part of the \$3.4m assistance package for tramline interconnections to be undertaken as part of the Mackay mill rationalisation.

The start of crushing was deferred from 27 June to 29 June because of rain, and on 28 June the first delivery of empty bins was made on Marian's Mia Mia line which will be served by North Eton during the 1988 season. The empties were delivered by Com-Eng 0-6-0DM *Ashburton* (A1614 of 1956), which had been transferred to North Eton from Farleigh Mill about two weeks before. This loco was in Farleigh grey and yellow livery but carried a North Eton Mill logo on each cabside.

Pleystowe Mill

(see LRN 61, p.14)

During the 1988 season, E.M. Baldwin B-B DH *Shannon* (7126-1-5-77 of 1977) will be running from the mill to the Mount Ossa area over the Farleigh north coast line, a distance of more than 40 km, to haul cane previously taken by road to Mandurana for crushing at Pleystowe. Some Farleigh cane from this area will also be transferred to Pleystowe. The mill's pair of Gemco brake wagons will be used on this run, and the loco is fitted with Farleigh and Pleystowe radio, while the Pleystowe traffic office will be in direct

communication with the Farleigh traffic office.

Racecourse Mill

(see LRN 58, p.6)

Racecourse Mill has taken delivery of a new Tamper self-propelled sleeper replacement unit. Model is TSR and serial number is 825988 of 1988.

MAPLETON CENTENNIAL COMMITTEE, Memorial Park, Mapleton 610 mm gauge

Shay, Lima 4w+4wTG 2091 of 1908 has been placed in this park in the main street of Mapleton, on 11 October 1987, according to a descriptive sign placed nearby (see LRN 61, p.16).

It is reported that a local group wishes to construct a 2 ft gauge steam tourist railway in the vicinity, however they are running into some opposition from local residents who claim they were not consulted about the project. The fact that the planned line is to cross several existing driveways is also causing residents concern.

*John Browning 5/88, David Mewes 6/88
Nambour Chronicle 1/6/88 via Geoff & Peg Hayes*

MORETON CENTRAL MILL CO LTD 610 mm gauge

(see LRN 61, p.16)

The Bruce Highway is being diverted to the east of Nambour, resulting in an overbridge being constructed over the tramline in the Petrie Creek Valley. This has necessitated lowering the tramway trackbed and tracklaying was in progress towards the end of May with Malcolm Moore 4wDM *Jimpy* (1051 of 1943)

Meanwhile on Sunday 26 June, trackwork was in progress in Howard Street adjacent to the crossing of Currie Street (the present Bruce Highway) in the centre of Nambour. Malcolm Moore 4wDM *Joe* was in use on this occasion.

The mill's main line locos have been given Bundaberg Sugar logos on the cabside following the recent takeover, however the Adelaide Steam Ship Co. logo continues to adorn the mill's chimney.

Bridge work was going on at the "Big Lifting Bridge" across the Maroochy River in late May. It was stated that no piles had been replaced here for the last 14 years, and that the pile driving derrick had gone rotten in the meantime!

John Browning 5/88, 6/88; Geoff & Peg Hayes 7/88

MOSSMAN CENTRAL MILL CO LTD 610 mm gauge

(see LRN 64, p.12)

Alan Robert's Bundaberg Foundry 0-6-2T *Bundy* (2 of 1952) has been sold back to the mill for which it was built, for use on the Ballyhooley Steam Express Tourist service. It arrived in Mossman in around April/May, and has been found to be in pleasing condition. Consideration is being given to fitting it with new bearings, but it will be available for service this year, retaining coal firing.

The new station building has been placed in position at Port Douglas near the Mirage resort and adjacent to the marina. This building was previously a barracks at the mill, and has been extensively refurbished to make a station building of real character.

The Ballyhooley Steam Express services have continued as two half day return trips from Port Douglas to the mill, and a trip involving a BBQ lunch at Drumsara Plantation which is a day trip from Port Douglas, but which can also be joined at Mossman.

David Mewes 5/88; Bernie Milford 6/88

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 62, p.13)

Plans are under consideration to establish a steam tourist tramway service from the mill to the beautiful Little Mulgrave Valley. John Fowler 0-4-2T 20273 of 1934 was recently removed from Norman Park, Gordonvale, where it had been standing since 1960, with a view to possible restoration to working order for this service.

Pyramid News 7/6/88 via Christopher Hart

PARKYS PARTS, Alice Street, Maryborough

John Fowler 0-6-0T 11165 of 1907 is dumped at this wrecking yard on the northern approaches to Maryborough. Condition does not appear very promising, with lantana bushes growing out of the boiler lagging. It had been planned that this locomotive should be restored as a museum exhibit (see LRN 38, p.10).

John Browning 6/88

ROCKHAMPTON CITY COUNCIL 1067 mm & 610 mm gauge

(see LRN 62, p.15)

The reconstructed steam tram (V. Purrey Bordeaux of 1909) was ceremoniously recommissioned at Rockhampton on Sunday 5 June 1988. Steam running trials commenced on the Central Queensland Cement plant

railway siding on 29 March. In spite of some teething problems with water feed and jammed valves, the completion of the project came in on time at a cost of \$212,000.

On 29 April, the right hand piston seized and the piston rod shattered the cast iron piston. Two steel pistons were manufactured and fitted by 10 May and improved lubrication systems overcame this problem.

The tramcar was then transferred to the Stanley Street Station rail motor shed from where it ventured early on the morning of 5 June, 79 years to the day when the original city tramway system opened. The tram was first posed on the Stanley Street Wharf railway line beside the restored colonial railway office building where it was joined by Rail Motor 16 for publicity photos.

At 9 am the tram moved to the triumphal arch in Denison Street at Derby Street, where the recommissioning ceremony took place. The arch was a copy of that used in June 1909 at the corner of William and Bolsover Streets in the original ceremony.

After several 1 km trips with invited guests, public operation commenced around 9.30 am and continued until 4.15 pm. In that time over 2,600 passengers were carried. Rockhampton is fortunate in having the main northern railway line located along Denison Street, where the tracks are laid in tramway style paving for five city blocks. The Queensland Railways permitted the operation of the tram between Stanley Street and Fitzroy Street, a distance of 1 km. Rides were restricted to a single direction, the former Sydney double deck Atlantean bus No. 1169 was used to return riders to the starting point. The last trip of the day was so loaded that it resembled peak hour in Calcutta!

On Monday evening, 6 June, the City Council discussed several alternatives for a permanent tourist tram route. The favoured project will link the highway junction at the entrance to the town on the southern boundary to the Botanical Gardens along the shore of Yeppen lake. This is just over 1 km in length and would tap the tourists as they enter the city.

A trailer car is now under construction at the Council Bus Depot. One or more of the Billard 4wDM locos ex-Citra Constructions will be used for off-peak services.

The 2 ft gauge 0-6-0ST cane locomotive (Hudswell Clarke 496 of 1898) was stored at the Bus Depot for a while but has now gone to the collection of Steve Kele, a local steam enthusiast, who has a quantity of steam machinery located near the Rockhampton Airport.

Ken McCarthy 6/88; John Browning 6/88

SOUTH AUSTRALIA

CEDUNA, SA 1067 mm gauge

A single 1067 mm gauge track is in situ on a jetty at the Ceduna foreshore. No rolling stock was seen and the track on the shore has been obliterated by a car park. A set of points is just visible, being partly covered by bitumen.

David Whiteford 5/88

COBDOGLA LIGHT RAILWAY LOCO No. 2 610 mm gauge

(see LRN 64, p. 13)

Bagnall 1801 of 1906 was recommissioned at a ceremony at the Cobdogla Irrigation Museum on Friday, 22 April. The apprentices and others who worked on her at the Ottoway Depot of the State Engineering's Water Supply Dept, have done a magnificent job. After the Minister had made the usual, expected speech handing the loco over to the Museum, all present were invited to have a ride around a circle of track laid within the Museum area, in open passenger carriages made from old side tipping truck frames. Just before leaving, I had a footplate ride which was interrupted by our train being derailed. It had started raining and the unladen passenger carriages climbed off on the curve.

At the opening, it was also announced that a new Society, "The Cobdogla Irrigation Museum - Cobdogla Steam Friends", had been inaugurated to operate the railway and other preserved steam equipment. The Minister became Member No. 1, whilst I became No. 45. It was recently reported in the Adelaide press, that the Society now has at least three members with the necessary Steam Ticket to operate the loco etc.

Arnold Lockyer 5/88

LAKESIDE LEISURE PARK, Hackham

(see LRN 63, p.10)

On a visit to the layout of the Morphett Vale Seven and a Quarter Inch Gauge Club, I was advised by a member that the loco at Lakeside Leisure Park is the same one that was previously running at Wirrina Holiday Resort. He also stated that it was one of three, built commercially in Western Australia, and at present was believed to be up for sale.

Arnold Lockyer 6/88

PICHI RICHI RAILWAY PRESERVATION SOCIETY 1067 mm gauge

(see LRN 44, p.12)

Three locomotives were seen in steam on Saturday, 2 April ex-

Commonwealth Railways steam railmotor 2-2-0T NJAB1 on a charter service, ex-WAGR 4-8-2 W934 on the passenger service, and ex-SAR 4-8-0 T186 at the loco shed. The T class was used to shunt *Peronne* the Andrew Barclay 0-6-0T from the Mile End Railway Museum (1545 of 1919) outside for coaling. The following day this ex-Broken Hill Associated Smelters engine was to be steamed for crew training in preparation for operations at the new Port Dock Station Railway Museum at Port Adelaide.

Ray Graf 5/88

STEAMTOWN PETERBOROUGH 1067 mm gauge

(see LRN 47, p.11)

Clyde Model DHI-110 0-6-0DH NC1 (56-94 of 1956) has been placed in service at Steamtown Peterborough. This machine was originally owned by the Lakewood Firewood Co. at Kalgoorlie. On 3 April NC1 formed the last vehicle in a passenger train hauled by ex-WAGR 4-6-2 PMR720 from Peterborough as far as Orroroo, where the diesel was detached and ran light following the passenger service to Eurelia. It was subsequently hauled back to Peterborough as a vehicle at the rear of the same train. On return, NC1 was used to stable the water gin and passenger coaches. It is currently painted black.

Ray Graf 5/88

TASMANIA

ELECTROLYTIC ZINC CO OF AUSTRALASIA LTD, Rosebery gauge unspecified

See MT LYELL MINING AND RAILWAY CO LTD

EMU BAY RAILWAY 1067 mm gauge

(see LRN 63. p.10)

The Emu Bay line between Burnie and Rosebery was host to the Van Diemen Light Railway Society's ex-TGR 4-6-2 MA2 (Robert Stephenson & Hawthorns 7241 of 1951) and 2-6-0 CCS23 (Beyer Peacock 4415 of 1902) from April 14 to 18 for special bicentennial passenger running over the weekend between Rosebery and Boco.

Steam Echoes (VDLRS) 5/88

MT LYELL MINING AND RAILWAY CO LTD, Queenstown 610 mm and 900 mm gauge

An advertisement in *The Age* on Saturday, 7 May for general mining

equipment to be auctioned on Monday, 16 May, on behalf of the Mt Lyell Mining and Railway Co Ltd listed the following rail equipment:

3 Siemens Electric and Battery Locomotives, rail gauge 900 mm, 2 axle, axle load 15 tonnes with 2 traction motors, gearbox ratio 93/16, max. speed 30 km/h, overhead wire voltage 500, traction battery voltage 150, rating 350 ah (new); 30 Hudson 9.5cm Rock-Flo bottom dump ore trucks (new); Hudson Rock-Flo tippie to suit Siemens locos (new); 2 Gemco 14.5 tonne Battery locos 24 inch gauge; 3 Mancko (sic) 4 ton Battery locos 24 inch gauge; 21 Granby 3 ton side tipping ore trucks 24 inch gauge.

The same advertisement offered the following items for auction on behalf of the Electrolytic Zinc Co. of Australasia at Rosebery on Tuesday, 17 May:

7 Eimco 21B rail bidders; 7 Gemco 3 ton loco chassis; 1 Manca (sic) 5 ton loco and spares; Overhead aerial ropeway with 46 steel pylons 5m-29m, 18 inch pulleys, 24,000 metres of one inch wire rope and 8,000 metres quarter-inch copper wire.

Colin Harvey/Peter Evans 6/88

TASMANIAN TRANSPORT MUSEUM SOCIETY INC 1067 mm gauge

This Society is considering restoring - to working order - the vertical-boilered locomotive which came from Chesterman's timber tramway in the Derwent Valley. Already the loco has been stripped down and several parts sent away for machining or replacement (e.g. replacement of valve and piston rods, machining of valves and valve parts). The sidetanks have been patched and are now reusable. One wheel set has been cleaned and painted.

The boiler is the real problem. It could probably be restored to low pressure operation, but it is much larger than the boiler originally fitted, consequently it is dangerously close to the wheels and frames, and has suffered damage in the past from this cause.

The possibility of manufacturing a new all-welded fire-tube boiler is being considered. If any reader has information of the history and engineering characteristics of this loco, David Beck would be pleased to hear from you. His address is 10 Bryant Street. Midway Point. Tas 7171 (phone 002-65 2835).

The loco dates from about 1892, and was built in Tasmania. It is of considerable historic interest, and well worth restoration.

TTMS Newsletter via Frank Stamford 6/88

VAN DIEMEN LIGHT RAILWAY SOCIETY INC 1067 mm gauge

(see LRN 59, p.9)

Progress with the restoration of ex-Emu Bay Railway 4-8-0 3856 of 1900 has resumed after a five month lay-off. Steel has been donated for the

fabrication of running boards and a new smokebox, using some reclaimed parts from the old smokebox. New axles have been machined and fitted to the wheelsets. Driving wheels are being profiled by the EBR at Burnie. New axle boxes will have to be cast and machined for the leading wheels. A new firebox tubeplate has been fabricated and after being cut to fit the firebox wrapper x-raying and stress relieving will follow.

Steam Echoes (VDLRS) 5/88

VICTORIA

ALEXANDRA TIMBER TRAMWAY AND MUSEUM INC. 610 mm gauge

(see LRN 64, p.15)

On Sunday, 5 June, work started on the conversion of the track circuit at Alexandra from 30 lb/yd to 60 lb/yd "AS" section rail reclaimed from the Alexandra yards. The first section to be dealt with was that from the engine shed to the road crossing. New redgum sleepers were used on this length, which was completed on Saturday, 11 June, in preparation for steam running on the Sunday and Monday of the long weekend. The Museum gratefully acknowledges the generosity of the PBPS for the loan of their mechanical rail bender which enabled the work to be carried out. The next section to be upgraded will be the road crossing, which will be set in concrete.

The 30 lb/yd rail released as a result of this work is being stacked ready to upgrade the engine shed sidings and for further extensions to the track for the Day's tractor.

The ex-VR signal mast from the 1 in 33 grade out of Alexandra has been shortened and re-erected at the southern end of the station to protect the goods and engine shed points. Work has started on refitting the arm and link rods so that the signal can be re-connected to the platform levers. Framing for a roof over the toilet block has been completed and is expected to be covered with corrugated fibreglass sheeting shortly.

At the May meeting of the Museum committee, Doug and Graham Lister were made honorary life members of the Museum in recognition of their outstanding efforts on behalf of the Museum over many years.

Examination of the Act of Parliament passed in 1908 to authorise the construction of the VR line to Alexandra has revealed that a condition of the construction proceeding was that the Alexandra Shire provide all of the land for the permanent way and for the station, free of charge to the Victorian Railways. It would seem that since the Victorian Government no longer provides a railway service to Alexandra, it has at the very least a moral obligation to hand the land back to the Shire. This aspect is currently being

investigated by a local solicitor on behalf of the Museum.

Peter Evans 6/88

AUSTRALIAN PAPER MANUFACTURERS LTD, Maryvale 1600 mm gauge

(see LRN 63, p.12)

An advertisement in *The Age* on Saturday 14 May called for tenders for the sale of two Whitcomb locomotives owned by APM. The locomotives, one driveable and the other dismantled, were described as 50 ton 0-4-4-0 DE chain drive, with a 4-pole DC logo generator power plant, and included a quantity of spares and drawings. They are numbered 1 and 2, Whitcomb 61108 of 1949 and 61109 of 1950, and are Model 50DE70. Tenders closed at 4 pm on June 2.

Ray Graf/Lindsay Bamford/Colin Harvey/Peter Evans/C. Wilson 6/88 The Advertiser Adelaide 11/5/88 via Trevor Triplow 6/88, The Weekend Australian 14/15/5/88 via John Browning, Locomotives of Australia, by Leon Oberg

Of the two V/Line T class locos hired, earlier in the year T342 was reported to be at Bendigo being painted yellow. In May, a yellow T class was reported to be in service (342?). However this is unconfirmed.

Ray Graf 6/88

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Preservation Soc. 762 mm gauge

(see LRN 61, p.10; LRN 62, p.16)

Trouble is still being experienced with the all-steel boilers fitted to the NA locomotives. Locomotive 8A is out of service at present being retubed, this time with copper tubes. This is expected to take a couple of months, so traffic is being handled by 7A and 14A during the winter months when traffic is lighter. 14A has been turned to run funnel first to Lakeside. As the turntable has not yet been commissioned at Emerald, a crane was used turn these locos. 14A is now fitted with kerosene-style headlights.

Frank Stamford, Ray Graf 6/88

Six years of dedicated work is now drawing to a close with the *Climax* restoration. On 4 June the valve-gear timing was being adjusted. The rear drive shaft has been fitted, but the leading shaft is still waiting to be fitted. The air-reservoir for the Westinghouse brake has been fitted on the right-hand side under the footplate. The loco now has headlights on both ends, and wooden tool boxes have been made to go on either side of the smokebox. One of these contains batteries to power the headlights so the loco will be able to run at night. The *Climax* will be a wood burner, there is no brick-arch in the firebox. Knuckle-couplers are being fabricated at present. Fitting of these will not involve changing the appearance of the ends of the loco, as they will be held

in place by the existing drop-down pins. According to an unconfirmed report, the *Climax* was running under its own steam on Saturday, 18 June. The trial was just within the Belgrave yard. The last time it ran before restoration was in 1951. There are apparently only three *Climax* locos in the world in operating condition (2 in USA. 1 in NZ). so they are extremely rare.

The length of track beyond Lakeside was recently doubled when about another 550 feet was laid. It is laid to "mainline" standards with fairly heavy rails, substantial sleepers, and base plates under the rails, and has just recently been ballasted. A further stretch is to be laid later. The distance between Lakeside and Wright is three-quarters of a mile, and I believe it is intended to operate this extension independently to the Belgrave - Lakeside section.

NBL3, one of the ex-Mount Lyell passenger cars, is still in the Emerald car shops undergoing an extensive rebuild, in which many parts are being replaced. Work on the TACL Tractor restoration continues at Emerald. This is being undertaken by the TACL Tractor Group - a group of LRRSA members. The tractor has been completely dismantled, cleaned, and had rust-preventative and red-oxide primer applied. The transmission of the Fordson tractor has been restored, and work on restoring the engine is underway. Reassembly of the tractor is about to commence. The construction of the original rail tractor was quite crude, and many parts will have to be replaced. One example of the crude design is that part of the brake rigging is badly worn from constant abrasion from the drive chain.

Frank Stamford 6/88

SOUTHERN PRIVATE RAILROAD, Melbourne 700 mm gauge

(see LRN 64, p.18)

The locomotives imported from Indonesia are believed to have come from sugar mill PG Kreet Baru. The Hanomg loco is likely to be one of builder's numbers 10354 and 10356 of 1925. The Orenstein & Koppel Mallet is likely to be 3770 of 1909.

Ray Ellis 5/88

SUNRAYSIA STEAM PRESERVATION SOCIETY 610 mm gauge

P.O. Box 204. Buronga NSW 2648

This Society has restored a "Skylark" class Kerr Stuart 0-4-0T B.No. 742 of 1901 - to operating condition over a period of five years. The boiler was recently inspected and granted a certificate for 120 psi.

The loco was owned by the State Rivers and Water Supply Commission of Victoria who operated it over 3.5 miles of track linking the railway station with the Redcliffs pumping station between 1924 and 1953.

It is hoped to run the locomotive at Redcliffs in the near future with the

help of the local Rotary Club.

F. Mabey/Peter Evans 7/88

Kerr Stuart 0-4-0T B.No. 742 of 1901 at Redcliffs

Photo: Sunraysia Steam Preservation Society.

TELOPEA GARDENS/ZINNS LOCOS, Halls Gap 610 mm gauge

Zinns loco No.2 with train at Telopea Gardens, Halls Gap, 26/6/88

Photo: Peter Evans

The No.1 and No.2 Zinns locos referred to in the ILRMS report (see LRN 64 p.7) are located at Telopea Gardens on the Dunkeld Road just south of Halls Gap. This tourist attraction, run by David and Susan Burkhill, has a 1 km loop of 610 mm gauge track laid in very light, steel sleepers, portable track panels. These panels are reinforced with additional wooden sleepers. The track has two timber bridges and is steeply graded in places. Five carriages built on cane truck chassis are operated behind the No.2 Zinns loco .

This site is scheduled to be visited during a forthcoming LRRSA tour of the Grampians area.

Peter Evans 6/88

UPTONS ENG, Corowa 610 mm gauge

(see Private Preservation LRN 61 p.11)

The BLW-Whitcomb unit, B.No. 40521 of 7/47, was originally part of a large group to the French Supply Council.

WESTERN AUSTRALIA

BEDFORD PARK, Broome 1067 mm gauge

The only item from the former Public Works Dept 1067 mm gauge harbour railway believed to have survived is to be found in this park near central Broome. It is a 4-wheel toast rack coach in reasonable condition. It does not sit on a panel of rail. All four axle box covers are different: a GSRV cover with no other information; a GSRV CRC & W Co. Ld 1896 Oldbury; a GSRV Stableford & Co 1896 Coalville; and a WAGR undated plate.

David Whiteford 5/88

KAMBALDA, WA 2 ft 6 in gauge

In a park at the entrance to Kambalda East townsite, is a small 2 ft 6 in gauge railway which appears to be a local fund raising venture that receives little use. It has a two track shed which is extremely securely made from large round culvert pipes, and a "square" of track about 100-150 metres long. Some of the rail is 45 lb BV & Co., 1895! The one set of points, just outside the shed, is a very well made home-built affair. A ground level concrete landing with a "Kambalda" nameboard forms the only station on the line. The train could just be made out by peering through the narrow gap of the shed doors but no detail seen. One road of the shed is a through road for operating trains and both roads contained rail vehicles when seen on 28 March. The rails are welded to angle iron sleepers and the track is well ballasted.

David Whiteford 5/88

MARINE AND HARBOURS DEPARTMENT, Derby 1067 mm gauge

(see LR 57)

A visit to Derby on 28 April, revealed the two 4-wheel flat tops noted by Bill Gray (LRN 63, p.14) bear very historic axle box covers. One has two NZR 1879 covers and the other one GSR cover. The wagon and the flat top mounted hand crane are in a former PWD yard near the Derby jetty while the self-propelled crane is just outside the compound. All track on the jetty is intact - being set in concrete - and at least three tracks exist in the yard although much is covered by gravel. (See map in LR 57).

David Whiteford 5/88

PARKESTON, WA 2 ft 6 in gauge

Adjacent to the Commonwealth Railways Institute building at Parkeston is a small circle of 2 ft 6 in gauge track which is largely now buried in the ground and disused. The rail is possibly 60 lb and the posts of two ex-CR signals have been erected beside the track. Two small open 4-wheel coaches were on the former goods transhipment platform (3 ft 6 in to 4 ft 8-1/2 in) in Parkeston yard. A small display of largely 4-wheel CR wagons is nearby.

David Whiteford 5/88

PUBLIC WORKS DEPT, Wyndham 1067 mm gauge

The former jetty/meatworks rail system has been closed for some years. A local newspaper article in April 1984 stated it "is no longer in use and is progressively being removed". However, various sidings are still at least partially intact and many wagons, 4-wheel and bogie, were noted in a large scrap pile, dumped by roads or old sidings and even lying extremely overgrown in small mangrove groves. The whereabouts of Comeng unit PW 25, one of four locos at Wyndham at closure, is unknown. It was believed preserved at a Kununurra school but could not be found in April this year.

David Whiteford 5/88

STREETER & MALE PTY LTD, Broome 610 mm gauge

Streeter's jetty, Chinatown, Broome, is often featured on postcards and tourist publications as it is the only jetty in Broome townsite where pearling luggers may be seen tied up or sitting on the mud at low tide. The jetty features a 610 mm gauge tramway with (very corroded) 45 lb (?) rail. One 4-wheel trolley is "in use" and when seen on 28 April, it was well and truly chained to a section of rail. It, too, is extremely corroded but still operable. From the jetty, the track leads to a loading platform at a small warehouse. The total length of track being about 70 metres with no points or sidings.

David Whiteford 5/88

WYNDHAM-EAST KIMBERLEY SHIRE COUNCIL 1067 mm gauge

(see LRN 60, p.15)

The Wyndham rail display is now in a small park next to the main road at the entrance to the Port and former meatworks complexes. "Preston" had been displayed elsewhere in Wyndham and it is believed to have been in 1986 or 1987 that the current display was created.

David Whiteford 5/88

CHRISTMAS ISLAND

PHOSPHATE MINING COMPANY OF CHRISTMAS ISLAND 1435mm gauge

(see LRN 44, p.14)

The phosphate mining operation, owned by the Commonwealth Government, is reported to have been closed down as no longer viable on 31 December 1987, putting more than 300 workers out of a job. Plans have now been unveiled for Elders Resources to reopen a smaller-scale operation on the island by the end of 1988. It is not known if this will involve the use of the standard gauge railway.

EDITORS NOTE:

Contributions are continuing to flow in at a great rate which is really fantastic. However, it means we have had to hold over some material once again for the next issue. Thank you all once again for your continued support.

MEETINGS

MELBOURNE:

Murray Ferguson and Mike McCarthy will be presenting an illustrated talk on the history of Tanjil Bren and its mills and tramways. Murray has spent a lot of time in the area in recent years and has acquired quite a collection of photographs and related information. It will be an interesting evening dealing with an area we have all heard of but know little about. Be sure to be there.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 11 August at 8.00pm.

SYDNEY:

Craig Wilson will be talking about the Bunnerong Power Station. From 1926

to 1930 up to 1000 men worked, often in 3 shifts, to build the Bunnerong Power Station for the Sydney City Council. It was one of the last uses of railways for building construction utilising 4 steam locomotives over 4 miles of standard gauge railway with a further mile of 2 foot gauge railway.

LOCATION: Woodstock Community Centre, Church St. Burwood

Note : Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 24 August at 7.30pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 4 August at 8.00pm.

NOTES, CORRECTIONS AND COMMENTS

TARONGA PARK ZOO AND MELBOURNE ZOOLOGICAL GARDENS RAILWAY

(see LRN 61, p.2)

Taronga Zoo Railway, January 1938. The loco carries the name plate "Prince Henry 1934" which possibly celebrated the visit of the Duke of Gloucester to Australia for the Melbourne Centenary at that time. Wal Lane is the youngster sitting in the carriage closest to the loco.

Photo: Mrs G. Lane

A visit to the Coolangatta Village Motel complex near Nowra during late May revealed that the 60 cm track has been lifted. The only item of rolling stock observed on the former railway site was an open four wheel carriage. The internal combustion loco and other carriages seem to have been removed from the village.

Long time railway enthusiast, Wal Lane of Mt Colah, has located two negatives of the Taronga Zoo railway in his family collection. These show the internal combustion steam outline loco "Prince Henry". The builder's date is 1934. Other sources suggest that the wheel arrangement on this engine was 2-4-2T. Ken McCarthy 6/88

SUNRAYSIA STEAM PRESERVATION SOCIETY 610 mm gauge P.O. Box 204, Buronga NSW 2648 (see LRN 65, p.16)

The Kerr Stuart restored by the Society and pictured at the foot of the page is of course an 0-4-2T and not an 0-4-0T. (OOPS!! Ed.)

FIELD REPORTS

QUARANTINE STATION, MANLY, NSW 635mm gauge

Some seventeen members and families attended this tour on 6 December 1987. The weather was fine and we had a guide from the National Parks and Wildlife Services of NSW to show us over the remaining buildings that served as the quarantine station built during the period 1860 through to 1920 until closure in 1984. Tour Notes (compiled by Paul Simpson) were distributed to members in attendance, on the history of the quarantine station and railway and loco.

The station had a 2 ft 3in (635mm) gauge railway laid to serve the jetty and the various buildings such as luggage store, disinfecting block, third class baths, laundry and coal store. Push waggons were used to transfer luggage around the station trackage.

It wasn't until 1914 that a funicular railway was constructed to service other stores buildings and the third class passengers quarters which were located much higher up on North Head. The grade was 1:3. The loco on the top section railway was a Caldwell Vale product of 1913, fitted with a winch, which was used to haul up the push wagons from below and vice versa.

Our visit enabled inspection of the various buildings and the track around the station although parts had been tarred over in places, but it could be traced without trouble.

After lunch, our more intrepid members sought out the funicular section; alas all traces had been removed when it was pulled up, c.1956. Likewise the top section from the loco shed to the third class quarters was traced out and the party of members walked the length of trackbed

The loco shed still stands, being of brick construction, complete with the rails set in concrete, confirming the gauge at 2 ft 3in.

Paul Simpson 8/88

LAHEYS CANUNGRA TRAMWAY, QLD

Saturday, 9 July 1988, was an auspicious occasion for the newly formed Queensland Division of the LRRSA. A perfect day dawned when nineteen members and friends made their way to Canungra, south east Queensland, to participate in the first ever field trip conducted by the Society in Queensland. The participants gathered in the Memorial Park at Canungra and were met by John Guest and Ian Colman who were responsible for organisation and initial research for the outing.

The inspection of the sawmill remains revealed major concrete foundations of some buildings together with associated rusting iron which was the subject of some conjecture. Some of the rails imbedded in the cement were marked "Campbell 1887". This rail appeared to be of 35 lb sections. Another possible relic, a curved brick (possibly fire arch brick), was stamped "Campbell Redbank". On departure from the sawmill, a trip was made via the scenic route (a rough dirt road) to obtain access to the first major trestle on the line. A pilot trip taken some four weeks before by John and Ian and members of their families had some difficulty in locating this owing to the regrowth of the forest which had occurred since John's previous visit. Additionally, a large fallen tree had reduced two of the piers of the last upright trestle, leaving only one vertical post remaining. This was some 30 feet high. Some evidence of minor supporting bents was also illustrated to the party. On back-tracking the route, it was found that the recent heavy rains had washed away some 15 cm of topsoil and uncovered some sleepers approximately 20 metres to the south tunnel entrance. The tunnel is in good condition, easily accessible and fortunately no major evidence of vandalism has appeared. Due to the rains, we were unable to access the complete length of the tunnel for flooding at the northern entrance. Some evidence of sleepers and dogspikes were found in the centre of the tunnel. The bats also provided an additional highlight.

An ascent was made to the road over the top of the tunnel together with a corresponding descent to approach the northern entrance. Here the rains had removed some 20 cm or more of topsoil in various locations and uncovered further sleepers.

After this inspection, the descent of the 1 in 12.5 grade towards the township was made. In evidence was the safety ramp, the operation of which is described at page 21 of LRN 54. Some wash-away had occurred in this area, however the grade is readily discernible by all, particularly so on the way back.

Approximately 50 metres to the south of the tunnel, there is substantial evidence of a major branch from the main line which parallels the main line for some distance. This branch passed through a cutting but after that the roadbed disappears. The purpose of this siding paralleling the main line for this distance is unclear.

After lunch, the party departed Canungra and headed south and west to follow the main line of the tramway. At the first major crossing of the Coomera River, the party set out on foot and reached the remains of the low level bridge shown in the lower photo on page 19 of LRN 54. Little evidence apart from some timber piers on the south side of the river remains. Some 200 metres south west from here, evidence of another trestle exists, of which there are two major bents, one still existing in mid river. This was agreed to be the most substantial find of the whole trip apart from the tunnel, considering its existence after some 50 years of floods and fire.

A dense jungle on the other side of the river prevented any further observation of evidence. On return to the vehicles, some members elected to terminate the journey at that stage, while others ventured further. Approximately one kilometre past this bend, the road appears to have usurped the majority of the tramway's route with the only evidence being bridge piers for some of the small creek crossings remaining. No attempt was made to explore either of the known branch lines, although one small group did travel for a little distance up the road which now covers the Flying Fox branch.

John Guest, Ian Colman 8/88

DRY CREEK MAGAZINE & ICI SALT WORKS, S.A.

Sunday, 29 May 1988, turned out to be an ideal day for the LRRSA SA Division's visit to the Government Explosives Magazine and the ICI Salt Pans at Dry Creek, two sacred sites, each of which were reported to contain some mortal remains of 2 ft gauge railways.

David, the Explosives Magazine Keeper, was an ideal guide and in the course of the morning, showed us the route of a line through the compound, which none of us knew existed, and the photograph of a short branch line which also disappeared years ago. Before proceeding to the Magazine Buildings area, David relieved us of matches and any other artifacts capable

of accidentally or otherwise reducing the area and us, if we happened to be there, into a large hole in the ground. We then proceeded along the route of the railway, between the baffles and the buildings, where the track is still in situ, but is covered up to the top of the rails, which in many places are exposed. We were also allowed to enter a couple of the magazine buildings and inspect the nasties stored therein.

At the end of the magazine buildings, the line curved left before passing through a gate in the fence separating the Magazine Compound from the ICI property. Here the track was also still in position, although it had been lifted (or covered) shortly after passing through the gate. When the line was in operation it continued through a reserve across the ICI land to its terminus on Broad Creek.

Arriving at the ICI, in true railway fashion, about an hour late, we were met by Bob, one of the ICI Supervisors. He promptly produced a key which would give us access to the ICI compound north of the road to St. Kilda, where their railway terminated, and let us out through the gates at the St. Kilda end of the Dry Creek compound. Having completed these formalities, he said, "Well, you are now on your own", and turned us loose.

Once outside, because of - or in spite of - the efforts of one of our party, who had a plan showing the route of the Magazine line, we found Broad Creek, its terminus, where explosives used to be landed and despatched by boat. Broad Creek did have a wharf and a jetty. The wharf was found still in situ complete with track, but all that remains of the jetty are a few short pieces of timber sticking up in the mud.

Leaving the creek area, we were able to follow the route of the line back to the fence and gate, where we had terminated our morning walk in the Explosives Compound. When both lines were in operation, it was near here that the lines crossed. We found the southern end of the trestle, which had carried the line over Swan Alley Creek and was the longest bridge on the line.

We then found our way to the north end of the Swan Alley Creek trestle, and drove along the road which appeared to have been built over the old roadbed to the gate at St. Kilda Road. On the other side of St. Kilda Road were the remains of a short trestle. Although there were other trestles similar to this, they have all completely disappeared. After the remains had been thoroughly inspected, photographed and negotiated by one of our more adventurous members we continued and entered the St. Kilda compound. Because this area has not been changed like the Dry Creek area, it was relatively easy to follow the old roadbed to the last embankment, about a mile long, which led to the original pumping station and the terminus of the railway.

The embankment proved to be most interesting, as the track was in situ for

most of its length. Over the years the salt field has extended far beyond here, with the result that the brine is now much deeper in these pans, than when the railway and pumping station was in operation. Because of this, we found the base of the pumping station and the rail tracks beside it, permanently covered by about a foot of water.

Arnold Lockyer 7/88

NEWS SOUTH WALES

BULAHDELAH LOGGING RAILWAY, Bulahdelah 610 mm gauge

(see LRN 59, p.4)

Perry 0-4-2T 2714/51/1 of 1951 was operational here on Friday 1 July 1988. Signs on the turnoff road stated that steam train rides were available Monday to Saturday. To find this railway when travelling by car, proceed as follows: travelling north, drive through Bulahdelah until you come to the Forster turnoff, Lakesway Drive, then travel 6 km along it until you reach Violet Hill Road, turn right, another 1 km (dirt road), you will reach house no. 3, turn left into the driveway and park your car.

A hike up the steep incline of the hill brings you to the loco shed. From here the track descends into the valley below by means of a zig zag. The bottom set of points has been completed and work has commenced on the middle road.

The train consists of an open four wheel waggon (unsprung) and a log mounted on two sprung bogies and an open flat top waggon. The latter vehicle is very stable for taking videos etc. from, although unsprung.

Although the rides are free, a donation towards the camping scheme of the Myall Lakes youth camp would be welcomed by John Baker, the owner of the property and organiser of the youth camp programme.

Paul Simpson 8/88

BYRON BAY HISTORICAL SOCIETY, Byron Bay 1435mm gauge

(see LRN 63, p.6)

A visit here on 27 July 1988 with Brian Parkes, reveals that apart from a channel TEN video taken of the Simplex B/No 2129 of 1923 in action on the Jetty branch which was to be shown on Sydney TV in May, nothing further has transpired to develop the Simplex as a tourist tram. If this eventuates, a tramcar trailer is needed, so thoughts of a tramcar purchased from Parramatta Park by a Sydney enthusiast comes to mind.

Brian is also researching the NORCO Company tramway crossing at the Sydney end of the Station (1435mm gauge) which is believed to have been

opened in 1913 and used a small petrol engined loco. A possibility is that the loco was first used by the contractors that built the first jetty.

Paul Simpson 8/88

GOULBURN CITY COUNCIL, Goulburn Steam Museum 610 mm gauge

(see LRN 62, p.5)

After being closed to the public for some time, a trial opening was held at the Museum on 21/22 November 1987.

John Fowler 0-4-2T 15340 of 1924 was in steam and ran short trials from end-of-track to the boundary fence of the Museum building, hauling the steel framed passenger car.

The Krauss 0-6-0WT loco *Stella* (3423 of 1896) was not in use. Further work is required on the boiler and replacement of some tubes being necessary.

The F.C. Hibberd "Planet" 4wDM 2388 of 1941 was not in use but is to be overhauled by the local TAFE college in the near future.

The Appleby beam engine was also in steam as well as a display of smaller steam model engines and a small vertical boiler. The Hargraves stationary engine was in steam also.

Work is progressing around the Museum with plans for a new engine shed together with a building to house some of the other steam exhibits which are being restored to operating condition. Another open day was planned for the long weekend of 26 January 1988 but was cancelled because of the hot and dry conditions prevailing.

During 1988, track relaying has taken place and most of the main line was relaid in 80 lb/yd rail donated by Blue Circle Cement Co. at Marulan.

Part of the steep hill, known as the "Bluff", has been removed to ease the sharp curve and increase visibility for road traffic.

It is anticipated that the Museum will be open over the long weekend in October 1988 and the Fowler loco will be in steam.

A new exhibit is being constructed, in association with the National Trust. It is the Wedderburn Colliery poppet head and winding engine which, it is reported, will be ready by 5 November 1988. The official opening of the Goulburn Steam Museum will take place on Saturday, 26 November 1988.

Neville Brown (GSM) via Paul Simpson 8/88

THE MOUNTAIN HIGH RAILWAY, Tumut-Batlow

It is intended to establish a tourist railway by this name over the long-closed Tumut to Batlow line. Clyde model DHI-71 0-6-0DH 58-187 of 1958 has been acquired from the St. Mary's Munitions Factory (see LRN 62, p.5) and has been used on a trial trip from Tumut to Batlow and return. It is hoped that a

second loco will be obtained from among the redundant Australian Iron & Steel locomotives at Port Kembla.

Railway Digest August 1988 via Ray Graf

NSW STEAM PRESERVATION CO-OPERATIVE SOCIETY LTD

Campbelltown Steam and Machinery Museum, Menangle 610 mm gauge (see LRN 35, p.6)

Following a decision by the Macarthur Development Board to sell off most of the area this Society was leasing from them, the railway track was pulled up and removed from the area involved.

The last train ran on 13 November 1987, being the last day of the steam rally. It is not known at this stage when the train will run again as the new track layout has yet to be decided upon, although a perimeter line is suggested, but the engine shed has to be erected to store the rolling stock before work will commence on track construction.

The opportunity has been taken to overhaul the Robert Hudson 0-4-0WT loco (Hudswell Clarke 1423 of 1922). The wheel tyres require reshaping, the valve gear to be rebushed and repinned, axle bearings to be cast for the rear axle and axle boxes and hornguides to be reconditioned, a steam brake is also being considered for fitting to the loco.

Paul Simpson 8/88

PERISHER SKITUBE 1435mm gauge

(see LRN 65, p.6)

Skitube have put their first locomotive into commission. This is Tulloch 0-4-0DM 001 of 1958, which was acquired in very poor condition in September 1987 from A.G. Sims Ltd. It was latterly at the Simsmetal scrap yard near Dunheved Station (near St. Mary's) after having been at the Mascot scrap yard for many years. The locomotive was refurbished by Skitube at Bullocks Flat and is now used to shunt rolling stock around the workshop area at Bullocks Flat. However, it cannot venture beyond this as its wheel profile has not been altered to suit the specialised measurements necessary for the Skitube stock to ensure perfect meshing of power vehicles with the rack.

Railway Digest August 1988 via Ray Graf

SUGARTOWN, Condong 1435/1067 mm gauge

An interesting proposal here is for construction of a "sugartown" opposite the CSR Condong mill using the existing standard gauge line to the mill and the addition of a third rail to 1067 mm gauge to run sugar trains between Murwillumbah and "sugartown". It is not known what rolling stock is proposed

to be used, but purchase of land opposite the mill site is under way.

Paul Simpson 8/88

TIMBERTOWN, Wauchope 610 mm gauge

(see LRN 57, p.8)

The Green Hornet Fowler 0-6-0T 12271 of 1910 was in operation here on 28 July 1988 hauling the usual three passenger cars. The Hudswell Clarke 0-6-0 1862 of 1953 was out of action as the leading wheelset had been sent away to have new tyres fitted. These leading wheels get the brunt of the wear and tear as the loco has no leading pony truck to guide the loco around the curves of the track.

Although it was just before school holidays, the loco was expected to be in operation to handle the usually busy period, but the wheelset had not been returned so *The Green Hornet* would have to work harder.

Fowler 0-4-2T 17881 of 1928, last used for the mini series, "Fields of Fire", was seen residing in the shed just off the end of the station siding, apparently nothing has been done to the loco since it returned from filming.

Motor Rail "Simplex" 4wDM 4214 of 1929 was seen near the Hudswell Clarke. It was in a sorry state - the engine covers discarded, the radiator repaced by a 44 gallon drum and generally the worse for wear out in the open, still in the yellow livery (what's left of it), which it carried when it was acquired from CSR's Harwood Mill, near Grafton NSW.

Paul Simpson 8/88

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610mm gauge

(see LRN 64, p.9)

The return to service of Bundaberg Foundry 0-6-2T 5 of 1952 has brought about a great increase in public attendance at running days. As a result of this, it has been decided that each Sunday should be a running day from January 1989. The locomotive has now been lined out.

Bench seats have been fitted to one end of the Douglas Shire Grover's bogie wagon to increase passenger capacity. A ballast wagon has been on loan from Dreamworld and has been used to lay approximately 42 tonnes of ballast from the Petersons Road end of the line towards Woodford Station

The Bundaberg Fowler was seen operating on Saturday, 24 June 1988. It was steamed up in the morning for filming a sequence for the "Wombat" TV show. On arrival at lunchtime, the loco was still found to have 50 lb on the

gauge, so a trip to the end of the line and back was provided for photo stops etc. The consist was a railmotor trailer and a Grover bogie waggon coupled next to the loco. Work to complete restoration of the Station Master's office/shop on the station was continuing, a coat of paint was all that remained to be done.

*Durundur Railway Bulletin and ANGRAMS Newsletter
via John Browning 9/88; Paul Simpson 8/88*

AUSTRALIAN SUGAR INDUSTRY MUSEUM, Mourilyan 610 mm gauge

(see LRN 64, p.9)

The new building is open. Hudswell Clarke 0-6-0 1099 of 1915 and Fowler 0-4-2T 4667 are on display inside. Although restoration of the Hudswell seems to be complete, it is still only painted in grey primer. The rebuilt wooden cane truck is sitting on a length of portable track in a mock canefield scene. Dominating one end of the building is the A & W Smith mill engine and flywheel from Goondi.

Chris Hart 7/88

BABINDA CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 64, p.9)

Com-Eng 0-6-0DM *Bramston* (AH2460 of 1962) has no identification at present. It had a new Cummins motor and Allison torque converter fitted during the slack. The two ex Goondi Mill Clyde 0-6-0DMs have been fitted with multiple unit equipment. They work back to back, can be controlled from either loco, and can be disconnected so each can work as a single unit. These locos still have their Goondi numbers and livery, but names have been added. No. 5 (55-56 of 1955) is the *Goondi* and No. 6 (56-90 of 1956) is the *Daradgee*. An ex Goondi Mill ballast hopper was seen in a siding just east of Miriwinni.

Chris Hart 7/88

BUNDABERG SUGAR CO LTD, Mourilyan Mill 610 mm gauge

(see LRN 64, p.10)

In the locoshed at the end of July were two ex Goondi Mill 4wDM Motor Rail "Simplex"s: the 6 ton high cab Simplex, 10219; and the red and yellow, bow frame, full length roof Simplex. An ex Goondi Simplex was sold to an unknown buyer at the Goondi Mill site auction on 29/4/88. This, by a process of elimination, would have been the yellow, bow frame, full length roof Simplex, and not the 6 ton Simplex 10219, as reported in LRN 64. Also in the loco shed were two ex Goondi Clyde 0-6-0DHs, now numbered 8 and 12 (55-

60 of 1955 and 55-57 of 1955).

Seen in the mill area were the following items:

Derelict Plasser four wheeled tamping machine model KMX06 No. 10. This was Victoria Mill's first tamping machine, which has now found its way to Mourilyan. It had previously been sent to Hambledon Mill for spare parts a few years ago.

Two Fowler 0-4-2T frames converted to heavy duty wagons, one of which has a crane of sorts mounted on one end.

Two Malcolm Moores, one derelict (1001 of 1943). The other was previously No 10 and carries no identification

Seen at the Goondi site were the following ex Goondi Mill items: one Ballast hopper; the mower; the poison spraying unit.

The Goondi yard was in use as a road-rail interchange point and as well, an ex Goondi Clyde was using it to assist in shunting a nearby farmer's siding. This loco had no number but must be 10 (56-93 of 1956) on the Mourilyan roster. The mill is steadily being dismantled.

Chris Hart 7/88

CSR LTD, Macknade & Victoria Mills 610 mm gauge

(see LRN 65,p.7 & LRN 64,p.10)

On 12 July 1988, Victoria Mill's E.M. Baldwin B-B DH *Wallaman* (6400-3-4-76 of 1976) and Macknade Mill's E.M. Baldwin 0-6-0 DH 14 (6-2490-1-7-68 of 1968) met head on, just on the mill side of Gentle Annie Creek, approximately 3 miles from Lucinda. *Wallaman*, with empty sugar bins and a Com-Eng brakewagon, was heading to Victoria, whilst 14, with full sugar bins was going to Lucinda. Both crews leapt to safety before impact and no-one was injured. *Wallaman* was pushed back some distance with many bins from both trains being derailed, and some being severely damaged. Each loco was derailed at one end only, and both were damaged. The line was reopened to traffic in around 6.5 hours. Clyde 0-6-0 DH 12 (65-434 of 1965) stood in for 14 until it was repaired two days later. E.M. Baldwin B-B DH *Brisbane* (5423-1-9-74 of 1974), with a Clyde brakewagon, worked the Victoria sugar train for about a week, while the *Wallaman* was out of action.

Seen near the truck shop at Victoria Mill on 9 July 1988, were the match wagon which was used for coupling 3 ft 6 in QR rolling stock to 2 ft mill locos, and the frame of the experimental four wheeled sugar bin which had been trialed in the consist of the sugar train for at least two seasons in the early '80s.

Chris Hart 7/88

DREAMWORD PRODUCTIONS PTY LTD, Coomera 610 mm gauge

(see LRN 53, p.8)

A visit here on 23 June 1988 saw 0-6-2T *Perry* (5643/51/1 of 1951) hauling two covered and one open passenger cars. The open one was between the two enclosed cars. The train rides continue to be popular and it was expected to put the 4-6-0 Baldwin into use the next day as it was being lightly steamed in readiness for the school holiday crowd that weekend.

Motor Rail "Simplex" 21543 of 1956, still unpainted, is used on the work train in the early mornings before Dreamworld opens.

The new Enchanted Forest railway has been out of action for some time now the adhesion of the "loco" (with powered tender rebuilt from Ruston and Hornsby 4wDM 218002 of 1943), particularly in the wet, is less than desired. The only way to salvage the operation would be to convert the loco and track to a rack railway. Could it succeed on 610 mm gauge and would this be a first?

A new entertainment section has been opened as the gold mine town, one of its attractions being the "runaway mine car", shades of Indiana Jones! It is a hair raising ride which thunders along inside a mountain where at times the mine car hurtles towards the opening in the mountainside only to swing back into the mountain again. Then, just when you think it is safe again, the car drops down a steep incline at breakneck speed to end the ride.

Paul Simpson 8/88

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 65, p.8)

It has been announced that North Eton Mill will close from the end of the 1988 season, while Cattle Creek Mill will close by the end of 1990. This will necessitate major tramway developments, and re-assignment of cane areas of the mills which remain open, in order to accommodate the growers of the closed mills. It is expected that the greater part of North Eton's cane will be diverted to Pleystowe Mill while Cattle Creek's cane will be crushed at Marian, which will become a double train mill before the 1991 season.

John Browning 8/88

MOSSMAN CENTRAL MILL CO LTD 610 mm gauge

(see LRN 65, p.10)

As of July 1988, the limit of "Ballyhooley Steam Express" tourist operations is a station within the Mirage Complex at Four Mile Beach, Port Douglas. Trains leave here most mornings, at 9.30 am for Mossman, returning at 12.30 pm. The journey takes approximately one hour each way. Construction of an extension to a new marina complex in Port Douglas itself is well advanced.

At the new terminus is a large station, erected as part of the Mirage Marina complex, and a custom-built turntable for the steam locos, particularly the Hudswell Clarke 0-6-0 tender loco (*Bally Hooley Too*, 1838 of 1950). The second steam loco in regular service is 0-6-2T *Bally Hooley*, Bundaberg Fowler 6 of 1952.

When the new extension into Port Douglas itself is fully operational, tourist trains will run from here to Mossman Central Mill and return on an almost daily basis. In addition to this basic service, shuttle trips from the resorts at Four Mile Beach into Port Douglas and back will be operated, utilising a tiny vintage 4 wheel Malcolm Moore diesel loco (1042 of 1943) which has been out of use for a number of years. A new station is also under construction at the southern end of Four Mile Beach. It too has a turntable, located in the middle of the passing loop.

A second Bundaberg Fowler 0-6-2T loco (2 of 1952) has been obtained by the Mill for use on its main passenger services. It is currently under restoration in the Mill's loco shed - it is hoped to have it in service by the end of 1988. This loco was originally obtained by Mossman Mill new for cane haulage but has been owned by Alan Robert since being sold by the mill in 1971

Two other steam locos are owned by the mill, but it is unclear if they will ever be restored to operating condition. These are *Ivy*, a John Fowler 0-4-2T (15947 of 1922) originally from Mossman Mill, and *Faugh-A-Ballagh*, an earlier John Fowler 0-6-0T (8733 of 1900), also ex Mossman Mill, which sat on the waterfront at Port Douglas for many years, prior to its recent retrieval by the Mill

One notable feature of the Mossman Mill's railway network is the fact that a large percentage of it runs parallel or close to the extensive network of bitumen roads throughout the area. This makes the job of the rail photographer much easier, as access is excellent. The ever changing background of lush green cane fields and high rugged jungle-clad mountains make this surely one of the most scenic settings imaginable for rail photography. The large distances needed to be travelled by rail fans living in other parts of Australia is really the only drawback.

J. Kramer 7/88

PUFFING BILLY CO PTY LTD, Mapleton 610 mm gauge?

(see LRN 65, p.9)

A Mr F. Rankin proposes to operate a tourist railway in Mapleton to ply tourists between the township and Mapleton Falls. He proposes that the route of the railway proceed along the strip of land between the gutter and the front fences of houses that it would pass by.

The route and proposal has generated much opposition from local residents, so much so that the route has been changed to lessen the impact on those residents affected. but still there is opposition.

It is not known what gauge the railway would be nor what steam locos would be used if any are obtainable in Queensland. Maybe those imported locos that are available in Victoria would fill the bill.

Paul Simpson 8/88

SOUTH JOHNSTONE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 55, p.12)

E.M. Baldwin B-B DH *Liverpool* (10385-1-8-82 of 1982) has new bogies supplied by Eimco which have the word PROF cast on them. The two bogies are connected by "bogie control" linkages. This loco is now two or three inches higher and a strip of steel plate has been welded onto the bottom of each headstock to retain the same rail clearance.

Chris Hart 7/88

TULLY CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 64, p. 13)

No. 8, a John Fowler 0-6-0 DH (21912 of 1936 rebuilt by E.M. Baldwin in 1963} now has a Rolls Royce motor, model C6NFI,, from one of the Com-Eng locos .

No. 10 (Com-Eng 0-6-0 DH AD1341 of 1960) was rebuilt during the slack with a GM 6 cylinder motor and a raised insulated cab made at the mill. The livery has been modified with this loco. The top half of the cab is yellow with the bottom half and all of the hood being red. Underframes are red as they seem to be with most of the locos now. No. 10 also has brass oval shaped number plates on the cabsides. They are worded "TULLY No. 10".

No. 18 (Com-Eng 0-6-0 DH AO6113 of 1977) was also noted to have a GM 6 cylinder motor.

According to one of the Traffic Officers, No. 14 (Com-Eng 0-6-0DH AK2663 of 1963) is the next to be rebuilt, and the conversion of the frame of No. 9 (Clyde 0-6-0 DH DHI-4 of 1954) to a brakewagon is still in the pipeline.

Chris Hart 7/88

YANDINA GINGER FACTORY 610 mm gauge

Brochures on the Ginger Factory mention a future tourist railway to be added to the grounds at Yandina. A visit there on 24 June 1988 saw a steam locomotive, which on closer examination was found to be *Moreton* Krauss

4687/1900, sitting on a piece of portable cane track.

The loco had been removed from its previous resting place at Brisbane showgrounds. The loco looks in good order, newly painted, but the brasswork is missing. It is not known if *Moreton* has been obtained to run on the proposed tourist railway.

Paul Simpson 8/88

TASMANIA

TRANSDERWENT CRUISE & FERRY CO PTY LTD 610 mm gauge Ida Bay Railway, Lune River

(see LRN 62, p.16)

The Ida Bay Railway at Lune River started operation in June 1988 for the first time in over a year.

The Transderwent Cruise and Ferry Company, which operates the ferry "Emmalisa", has bought the lease and all the rolling stock. Ferry operator, Mr Peter Fell, said the Ida Bay Railway was Tasmania's most under-developed attraction

"Only a handful of these narrow gauge pioneer bush railways operate in Australia", Mr Fell said. "The Ida Bay line is much better than most of these surviving lines. Its trackwork is excellent, but still retains the feel of a bush railway."

Treasure Islander July 1988 via Paul Simpson

VICTORIA

ALEXANDRA TIMBER TRAMWAY AND MUSEUM INC 610 mm gauge

(see LRN 65, p.14)

Work during the past two months has concentrated on general maintenance. Both the engine and goods sheds have been cleaned out and a display of agricultural machinery has been set up under cover on the rear platform of the goods shed. The Station Master's office attached to the goods shed has been repainted, and is to be converted into a museum amenities room with overnight accommodation for Melbourne members.

The roofing of the toilet block has been completed and a painted corrugated iron fascia constructed so that the modern facilities blend well into the old station facade. One of the original ash pit toilets has been retained and will be restored as an exhibit. The other two toilets have been removed and the area used as much needed storage space for tools and mowers.

Much of the track, laid in the early days of the Museum used second-hand sleepers obtained from the Cementation P/L tramway at Bacchus Marsh. These are now fast approaching the end of their useful life and are being progressively replaced with redgum. The old sleepers will be converted into loco firewood using a large swing saw purchased by the Museum in August.

The 20 lb/yd track on the siding to the loco shed used to store the 0-6-0T Fowler between steaming days was replaced with 30 lb/yd rail and new redgum sleepers on 13 August. On the same weekend, work was begun on the embankment for a new 610 mm gauge spur to pass along the front of the goods shed. This will eventually lead to a new loco depot, but in the short term will be used to store the 0-6-0 Hudswell Clarke 1098 of 1915 under shelter for the first time when a new verandah roof is extended from the goods shed.

A short length of 3 ft gauge track has been laid using two lengths of cable tram rail retrieved from a bush mill. This is used to display a number of 3 ft gauge timber tramway wheelsets.

While the Museum's tenure at the Alexandra Railway Station is still not resolved, the Alexandra Shire Secretary is investigating the legal aspects of extending the tramway from the Museum site along the original formation of the Alexandra to Rubicon tramway. The initial distance under consideration is a 2 km length to the Fraser National Park turnoff, and will involve crossing two minor roads and the construction of two bridges. A report is expected shortly.

Peter Evans 8/88

BRIGHT HISTORICAL SOCIETY MUSEUM

This Museum is located in the brick railway station built at Bright in 1900. The Museum houses amongst other items, a display of memorabilia of the Ovens Valley railway line along with some ex-VR rolling stock. The Museum is open during school holidays, on Thursdays, Sundays and Tuesdays, or by prior appointment. Enquiries about the Museum can be made at the Bright Tourist Centre.

Wal Larsen/Peter Evans 8/88

CHEETHAM SALT LTD, Laverton 610 mm gauge

(see LRN 64, p.17)

Victoria's last narrow gauge industrial railway using locomotives is to be closed, ending an era in Victorian light railway history. Cheetham Salt Ltd had its beginnings in Geelong one hundred years ago when Richard Cheetham began construction of his salt works on the shores of Stingray Bay at Geelong in 1888. The use of horse and man-powered tramways began in the early

years of production, and at one stage the company contemplated the purchase of a 1902 design 0-6-0WT Krauss locomotive. However, this was not proceeded with and mechanical traction eventually arrived in the form of 4wPM Day's tractors (one of which is in the PBPS Museum at Menzies Creek), and two "home-made" 4wPM locomotives based on automotive engines and transmissions built in Cheetham's own workshops. One of the latter was recently purchased by Peter Evans and will join the locomotive collection at Alexandra. The other is still in storage at the Geelong works.

In 1924, production at Geelong fell below demand, and the first "harvest" at a new site at Laverton was made in 1926. Tramways were used at this site from its inception, and included one or more of the Day's tractors. In later years the Laverton system used two Motor Rail "Simplex" and four Ruston and Hornsby 4wDM locomotives. Both "Simplex's" (10058 of 1948 and 7351 of 1938) were purchased by Peter Evans in 1986-7 and are being re-built into one operational locomotive at Alexandra.

Still awaiting their fate at Laverton are:

No. 1 R & H 252805 of 1949 - ex Geelong works

No. 2 R & H 283509 of 1949 - new to Laverton 20.10.49

No. 3 R & H 283510 of 1949 - ex Geelong works?

No. 4 R & H 320555 of 1951 - ex M.M.B.W.

(None of these locos have retained their works number plates.)

Only No. 4 retains its original engine and transmission, and negotiations are under way with Cheetham's management for its purchase and eventual restoration at Alexandra. The other locomotives were re-built in 1975-6 with new engines and hydraulic transmissions at a cost of around \$20,000. While several potential purchasers have expressed an interest in the locomotives, the company is keen to recoup some of its expenditure on the conversion.

All four locomotives have stood in the open for some years, but recently No. 1 (the only serviceable loco) was used in the reclamation of some 40 lb/ yd rail from the western leg of the southern loop line around the salt pans. This took place in July, and the rail lifted was sent to Geelong to be used on the conveyor system used during salt harvesting

The main line at Laverton will not be lifted for the moment, as the tramway is the only access route to several of the pumping stations, and will be required for removal of this equipment. Arrangements have been made with the works manager for access for a television crew to preserve some aspects of the tramway on broadcast standard videotape, before the tramway ceases operation forever.

Of all the Laverton operations, only the salt refinery built in 1940 is to be retained to process salt from other Cheetham harvesting sites.

Peter Evans 8/88

CROWES BUFFER STOP PRESERVATION PROJECT 762 mm gauge

A group of PBPS members are involved in the preservation of the buffer stops at the site of the terminus of the VR 2 ft 6 in gauge line south from Colac to Beech Forest and Crowes. With the assistance of local residents, over \$1200 has been raised, and 25 metres of 762 mm gauge track has been laid and ballasted leading up to the buffer stops. The rail used was obtained from the Mortlake line at Terang Racecourse, and is 60 lb/yd "D" section. PBPS has agreed to donate enough parts to re-create an NQR wagon for static display on this track.

Work still to be carried out includes the provision of a small carpark near the Melba Gully Road, and construction of access footpaths. The buffer stops themselves have been damaged by rot and fire, and have yet to be repaired. Once this is done, a railway-type shelter is to be erected carrying the restored VR "Crowes" nameboard complete with cast iron letters. An information and photographic display inside the shelter will complete the project.

R.K. Whitehead/P. Evans 8/88

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Preservation Society 762 mm gauge

(see LRN 65, p.15)

Locomotives:

8A has had new copper boiler tubes fitted, and 11 boiler stays replaced. It is currently being repainted (black, as it was previously) prior to re-entering service. 12A is being fitted with a rear pony transom as work proceeds slowly on its rebuilding. G42 - all wheelsets have come back from Bayswater Engineering where they have had their cranks and pins checked and requartered. The wheels are now being needle-gunned at Belgrave. The Climax has had two trials under steam both within the confines of Belgrave yard, and worked very satisfactorily, although there is some slop in the drive chain, which creates some noise. Knuckle couplers are still to be fitted, also a handbrake on the front pilot beam - as per American practice. It will officially return to traffic on 5 November 1988, which is the PBPS's A.G.M. day. For the first time the A.G.M. will be held in the Nobelius Packing Shed. The T.A.C.L. tractor, which is being restored by a group of LRRSA members, is progressing satisfactorily. The main drive shaft has been reassembled, and the pistons

fitted back in the engine. Reassembly of the chassis is now underway but we are waiting on new axlebox castings.

Track:

An extra span has been put in the Belgrave trestle bridge as part of works to upgrade the road which runs under it. This resulted in a curtailed train service on the last weekend in July and first weekend in August, when trains ran between Menzies Creek and Lakeside only. The same service operated on many weekdays in late July and early August, but all work on the bridge was supposed to be finished by 26 August.

Beyond the present end of track past Lakeside, the formation has been cleared of trees for a considerable distance in preparation for further extension towards Wright.

Rolling Stock:

Removable glass windows have been put in NBH's 15, and 16, and will be put in the extended NBH's - 51 and 52.

Night Train:

The Night Train is normally only available to chartered groups, but this year on the second Saturday in September, October, November and December it is being run for members of the public. It departs Belgrave 7.00 pm, and returns before midnight. Dinner, consisting of an entree, main course (two choices) and dessert (two choices) is served in the Packing Shed. The cost is \$45 per head, including drinks, and bookings are said to be very heavy. Including charter trips, the Night Train is scheduled to run about 12 times in the remainder of this year.

Frank Stamford 9/88

OVERSEAS

FIJI

FIJI SUGAR CORPORATION 610 mm gauge

(see LRN 26, 59 & 62)

The following notes are based on a visit to Viti Levu in May 1988. The sugar industry has weathered the post-coup economic crisis in Fiji remarkably well, with 420,000 tonnes of sugar being produced in an extended season in 1987. Outlook for the forthcoming 1988 harvest is mainly constrained by severe drought conditions in most sectors during 1987, but given good growing conditions this year, the FSC predicts a harvest "in excess of 400,000 tonnes this year" and a bumper crop in 1989.

Lautoka Mill

This mill has received two new Hunslet locomotives, a 4wDH 140 hp model (9267/1986) and a 6wDH 240 hp model (9285/1987), delivered in June 1987 and January 1988 respectively (currently unnumbered, but believed to be Nos. 18 and 20 on the mill roster). Another 140 hp model is reported to have gone to Labasa. No. 19, an 0-6-0DH Baguley-Drewry has also been received and is located at Nadi (not seen). This is believed to be the third Baguley-Drewry unit reported in LRN 62 (possibly 3771/1983). Major upgrading work with concrete sleepers has been completed over 1.5 km of the main line between the mill and Nadi.

Clyde locos 2, 3, and 7 were at Cuvu, with Nos. 4 and 6 undergoing overhaul at Lautoka. When these return to Cuvu, No. 7 will go to Lautoka. Clyde units 5 and 12 still had their engines removed for overhaul.

Two large Simplex locos (Model 122U), 14 and one unnumbered unit (12 or 15) also had their engines removed. Simplex units 7 (Motor Rail 14041/1959), 8 (23014/1959) and 11 (60s375/1969) were at Lautoka loco, but there was no sign of Nos. 1-6, 9 and 10.

Coral Coast Railway

This tourist train still operates, with advertised departures daily except Sunday, though actual workings appear to depend on bookings. There are now three passenger cars, numbered 2, 4 and 5.

Rarawai Mill, Ba

There have been a number of new locomotive deliveries at this mill. All units appear to be well maintained and are now in standard FSC grey livery with red lining. Changes from the list presented in LRN 26 are:

1	0-6-0DM	Hudswell Clarke	D609	1938	written off 6/87; tns Penang-spares
2	4wDH	Plymouth	?	?	rebuilt 1988 using parts No. 18
11	B-B DH	EM Baldwin	7248-1-10-78		ex-Labasa; direct swap with Rarawai 0-6-0DH No.11 (EMB 4413-3-9-72), c.1983
13	4wDM	Motor Rail	10441	1955	written off 7/87
15	4wDH	Motor Rail	14024?	1957	Tns Penang 1987
18	4wDH	Plymouth	?	?	w/off 7/87; parts used No. 2
19	4wDH	Com-Eng	HB2764	1963	ex-NZ Ministry of Works, 1983; formerly Utah Const. Snowy Mtns u'ground; conv. Rarawai mill
20	6wDH	Hunslet Eng	9087	1985	240 hp
21	6wDH	Hunslet Eng	9273	1987	240 hp

22	6wDH	Hunslet Eng	9274	1987	240 hp
23	0-6-0DH	Baugley-Drewry	3772	1983	Built for Africa but not delivered; purch FSC 1987; based Tavua
24	0-6-0DH	Baugley-Drewry	3773	1983	Built for Africa but not delivered; purch FSC 1987; based Tavua.

Penang Mill, Rakiraki

The railway system at Penang is generally in poor condition, but the line to Ellington wharf is being rebuilt with concrete sleepers and secondhand rail. Locomotives continue to be small and elderly units, although the mill expects to receive a new 140 hp Hunslet loco in 1989. Steam loco No.4 (Huds Clarke 1658/1935) is now located near the weighbridge, without tender and in poor condition. The locomotive roster is:

1	4wDM	Motor Rail	10003	1947	Rebuilt with engine from No.2, 1986
2	4wDM	Motor Rail	10440	1955	Engine to No.1 and w/o 1986
3	4wDH	EM Baldwin	5060-2-9-73		Model DH12
4	4wDM	Motor Rail	11036	1956	ex-Labasa Mill
5	4wDM	Motor Rail	5064	1930	Ellington wharf shunter
7	4wDM	Motor Rail	14046	1959	
8	0-6-0DM	Baguley-Drewry	2727	1965	Top overhaul 1988
15	4wDM	Motor Rail	14024?	1957	ex-Rarawai 1987

Bob McKillop 5/88

NEW ZEALAND

A booklet listing the members of the New Zealand National Federation of Rail Societies is available from Len King, 8/58 Kings Road, Five Dock NSW 2046 for \$1.20 including postage. It contains contact phone numbers or addresses where additional information can be gained. (Commercial enterprises, as opposed to preservation societies, are not in the Federation.)

Len King 6/88

BAY OF ISLANDS SCENIC RAILWAY LTD 1067 mm gauge

This private company currently operates a 1927 4-4-0T Peckett, on loan from Wilsons (NZ) Portland Cement. The train is based at Opuia and operates to Kawakawa, a round trip of approx. 2 hours which includes a 45 minute refreshment stop at the Star Hotel Kawakawa, where the line runs down the middle of the street. The line was closed by the NZ railways some years ago, after a coal mine closed down. The tourist operation only runs part of the year, when tourism warrants, and usually from Friday through to Monday, although school holidays usually see every day running. Opuia is on a peninsula in the Bay of Islands, approx. 4 hours drive north of Auckland.

BUSH TRAMWAY CLUB INC, THE PUKEMIRO LINE, Pukemiro Junction via Huntly 1067 mm gauge

This volunteer group have collected locomotives used in the timber and coal industries, plus some equipment and machinery and small diesel shunters ex-NZ government railways. The club was founded in 1965 and initially was able to store and work on the growing collection at the MOTAT museum in Auckland. But by 1974 the storage space was inadequate and a search was undertaken to find a new site. The Rotowaro-Pukemiro-Glen Afton section of the Glen Afton branch railway, 3 miles in length, was acquired. There are 7 chain curves and 1 in 50 gradients in an area once covered by coal mines. When visited on April 25, no locos were in operation as the line was being readied for the school holidays a week later. However many members were working on the rolling stock and the following varied collection of locos was observed in the yard, plus two conventional locos which worked at coal mines as late as 1972, at nearby Huntly:

1904 Heisler, 1924 Climax, 1924 Price E, 1927 Price Cb, 1878 NZR 0-6-0T F, 1923 Peckett 1630 Class 0-6-0T, Union Foundry Rail tractor, bush rail jiggers.

Len King 6/88

FAIRYMEAD TRUST HISTORIC PARK & TECHNOLOGICAL MUSEUM, Christchurch

Established in the 1960s, the Ferrymead railway follows most of the right of way of the original line laid in 1863. The railway is part of the above museum which commenced steam operations in 1972, running being confined to most Sundays and public and school holidays. The track is approximately one kilometre in length, with a connection being laid to the nearby Christchurch-Lyttelton line (port) being relaid for the Festival of Steam to take place in October. There is an extensive collection of locos in varying condition, from the large Kb 4-8-4 968, to the Bagnall 0-4-0T No. 186. There are industrial locos including a Heisler built in 1922, Manning Wardle 0-4-0T built 1914. Price Cb 0-4-4-0 113 built 1924, and Barclay No. 1894

0-4-2T built 1926. Also stored are several diesels and electrics, ex NZR. There is a wide assortment of goods stock and several types of carriages. As well as the railway for transport through the park, there is a tramline which operates every day from the entrance and carpark, to the rebuilt township, with its extensive range of commercial businesses, church and residences. Large exhibition halls contain all aspects of life covering the past 100 years. The tramline has in its collection a fully restored Kitson steam tram, which operates on selected dates throughout the year.

Len King 6/88

GLENBROOK VINTAGE RAILWAY 1067 mm gauge

Generally, steam operations are confined to Sundays and most public holidays. The collection features ex NZR locomotives of the Ww, F and JA classes, plus NZ s only Mallet, a 2-4-4-2, fully operational, but under repair when visited on 25 April. Hauling the train over the six miles of undulating track was the Ww 4-6-4T. The quality of restoration and presentation is very impressive, with clean stations and environs, and smart train. During the round trip of 1.5 hours, time is allowed to visit the workshop depot, where there is also a collection of ex NZR diesels, of three types, awaiting restoration.

Len King 6/88

MUSEUM OF TRANSPORT AND TECHNOLOGY OF NEW ZEALAND TRUST (MOTAT), Auckland 1067 mm gauge

Within the park is a small railway layout of sidings, station and shed and signal box, all ex NZ railways. There are a couple of carriages and several locos on display and a limited season of operations. There is a 1.8 km tramline from the museum beside the Great North Road, offering rides nearly everyday. Within the site there is an extensive trackage laid out, passing through streets of homes and businesses of a past era. The site is large and has an extensive collection of all forms of transport and service vehicles. The section of the museum not visited was MOTAT II (Sir Keith Park Memorial Site), which has a more extensive railway operation, with a loco in steam during school and public holidays.

Len King 6/88

SHANTYTOWN, Rutherglen 1067 mm gauge

Shantytown is based on a typical gold mining town of the 1880s. It's railway is 1.8 km in length, passing through thick fern bush, along Infants Creek. Two locos are currently in use, although usually only one in steam each day. "Kaitangata" is an 0-6-0T built by Sharp Stewart, Glasgow in 1897 and used by Kaitantata coal mine in Otago until bought by Shantytown. There is a Heisler awaiting rebuilding. Of particular interest is the Climax loco, No. 1203, built in 1913, which was undergoing necessary work when visited on 4 May. This loco had worked for the Potate Timber Co. Matapuna, Pukeweka Sawmill Co, and Ellis and Burnand and was owned privately until last year, when the Shantytown management purchased it for \$20,000. There has been extensive rebuilding of the loco, but retaining all its original features. Currently it is the only operating Climax in New Zealand, although several others exist with other preservation groups.

Len King 6/88

MEETINGS

MELBOURNE:

THE GREAT TACL AUCTION Got any TACLs you want auctioned? Yes? Well here is your big chance!

Seriously, we are having an auction in support of the TACL fund as the entertainment item at the next meeting. Of course if you do have the odd Malcolm Moore TACL tractor sitting unwanted in your back yard then send it along. I'm sure we will be able to assist you to get rid of it! For those of you without a spare TACL bring along those spare photographs, magazines and other items that have been cluttering up your drawers for the past couple of years and donate them to the aid of the TACL fund.

Those of you who don't have such clutter can bring along the cash to buy someone else's clutter. What a great idea. Everyone wins'

It should be a fun night and we haven't had an auction for sometime so it will also be something of a novelty.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 13 October at 8.00pm.

SYDNEY:

Unfortunately we have not been able to determine the content of this month's meeting. Any member wishing to know the entertainment item should call Craig Wilson on 02-484 7984

LOCATION: Woodstock Community Centre Church St Burwood

Note : Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 26 October at 7.30 pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-2969488

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 6 October at 8.00pm.

BRISBANE:

Contact Terry Paton for details. Phone: 075-62 2896

NOTES, CORRECTIONS AND COMMENTS

GOULBURN CITY COUNCIL, Goulburn Steam Museum 610 mm gauge

(see LRN 66, p.6/7)

The winding engine referred to is indeed a Hepburn Colliery poppet head winding engine and not "Wedderburn Colliery" as stated.

Paul Simpson 11/88

TARONGA PARK ZOO RAILWAY 560 mm gauge

(see LRN 66, p.2)

Following is an extract from *The Staff* magazine of the Railway and Tramways Department, dated 23 January 1930, which appeared under the heading of "A Miniature Railway":

The latest addition to the Government "railways" of New South Wales is the line opened at Taronga Park Zoo. While the mileage is negligible the interest created among the younger generation will no doubt make up for that deficiency. Alongside Jumbo's beat, where for many years children have had a more or less rocky ride, a short light railway track has been built to provide an added attraction to the Zoo. This track is interesting to us because it was designed and laid by the Tramway Department, although the earthwork was carried out by the Zoological Gardens staff. The line is built to a high standard, and all the calculations were worked out so as to avoid the sacrifice of any existing trees. The gauge is 1 ft 10 in and the track is 500

feet long in the form of a flattened oval - pear shape. Practically the whole of the work is in "cut" or on "fill",- the deepest being about 3 feet. The road is full of curves, the sharpest being 30 feet radius. These curves are transitioned and superelevated as on ordinary lines and the rails are checked. The road is ballasted, laid on sleepers 4 ft 9 in by 4.5 in, and 20 lb. rails have been used. There are no grades, the line being dead level throughout. There is a tunnel on the route which serves the dual purpose of giving a thrill to the riders and providing cover for the vehicles during rest periods.

The rolling stock came from Melbourne and consists of a petrol-driven locomotive, with the high sounding name of "Here She Comes", and several carriages. The train is capable of a speed of 6 miles an hour. No doubt many of our young folk and perhaps some of their elders will make an excursion behind "Here She Comes" when next they visit Sydney.

via Paul Simpson 11/88

RESEARCH

Two additional publications in the LRRSA series, *Australasian Locomotive Builders Lists* are in the course of preparation. John Browning is editing a production on the locomotives built by Commonwealth Engineering (Qld) and Harry Wright is handling a list of the products of the locomotive builders of Hunslet, Leeds: EP Wilson, Manning Wardle, Kitson and Hunslet Engine Company - less Hudswell Clarke, which is the subject of No.1 in the series. Any LRRSA members who have information on the above builders and who have not been contacted should write to John (address page 2), or Harry at 22 Sampson Avenue, Belmont NSW 2280.

Bob McKillop 10/88

OATLANDS TRAMWAY, Tasmania

Accounts of this tramway which ran from Parratah to Oatlands and later became a branch railway of the TGR invariably state that three small tank engines worked on the line in its earlier years. One of these engines is identified as a four-wheeled Baldwin with a diamond funnel. An attempt is being made to compile a history of this line but the absence of any conclusive identification of this engine has raised a question regarding the accuracy of the oft repeated claim that it arrived in January 1886 and worked on the line thereafter.

Articles written by John Buckland (LR 65) and Ray Ellis (LR 78) fail to throw any light on this matter. Does any reader have any information which could help clarify this question?

Ken Milbourne 10/88

T.A.C.L. RAIL TRACTOR RESTORATION - PROGRESS REPORT

(see LRN 63, p.3)

Work on the frames is now virtually complete, and we are waiting on the replacement axleboxes and the re-turning of the wheel tyres before reassembly of the frames can proceed further. The wheels will be turned on the newly installed wheel-turning lathe at Emerald car workshops, but it is still not certain that there is enough metal left on the tyres for them to be successfully turned.

Progress on the engine is very good. A number of replacement parts have been imported from the USA, and we were lucky to get a number of other replacement parts which had never been used.

The new axleboxes have now been cast (at a cost of \$281 - slightly less than the profit from the Gembrook trip, and a much more satisfactory figure than the \$1600 we were first quoted!). They now require a lot of machining before they can be used.

Our next big expense item could be chain sprockets (our first quote was \$1220), and drive chain (quoted at \$61 a foot).

Frank Stamford 10/88

FIELD REPORTS

LRRSA GEMBROOK TOUR, 10 September 1988

This was run as a fund-raising effort for the TACL Tractor restoration project, and consisted of a special train from Belgrave to Lakeside, a bus ride to Gembrook, a walk back to Lakeside along the railway formation, the special train back to Belgrave, and barbecue lunch at Cockatoo - all for \$15 a head! Forty-seven people took part, a full capacity load, and \$291 was raised for the TACL - a very satisfactory result.

The train consisted of NRT1 (Ruston Hornsby diesel locomotive) hauling a two car train (NBH and NBHC car) and departed on time at 9.30 am, arriving at Lakeside about 10.40 am, after a brief stop at Emerald to view progress on the TACL tractor. At Lakeside we saw D21 depart for Belgrave on a special goods train.

The bus journey to Gembrook took twenty minutes, arriving at 11.20 am. After looking around the station yard, we set off on the walk. By now steady drenching rain had started to fall, which continued for the rest of the day. This seemed to encourage the party to walk faster, as we made good time to Cockatoo, where Larry James provided the barbecue lunch under shelter provided by a church.

On arrival at Lakeside the sodden walkers were glad to patronise the railway kiosk which did a roaring trade in coffee. The ETRB offered to run the return trip ahead of schedule, which suited us, so we departed twenty minutes early at 3.40 pm, and arrived at Belgrave fifteen minutes early at 4.45 pm. This is the fourth trip of this type to be run - two have previously been organised by the PBPS and one by the LRRSA. This one attracted the most participants and the worst weather! The saving grace was that temperature was relatively warm, and at the end of the day I could not find anyone who regretted coming. Several expressed strong interest in the next trip.

Frank Stamford 10/68

VIC BUSHBASHERS VISIT TO KIRCHUBELS MILL & TRAMWAY, TANJIL BREN - July 1988

LRRSA publication *Five to 500* gives an interesting account of relics to be found in this mill area in 1973. Fifteen years on, the tour to this site may be re-traced, and virtually the same observations made.

Referring to the accompanying map, bridge number 1 is the one shown in LR 41. Only its lower level remains, and is now a road bridge. On its north side, the tramway curves west to follow the river valley. The formation is very overgrown along this section, and following a parallel track from that bridge to bridge 2 is recommended. This bridge is about 10 m or so long, and about 50 m west of the track. Bridge 3 is close by but is not very big.

Bridge 4 is quite substantial, and still intact. Its photo appears in *Five to 500* on page 42.

Bridge 5/5a is bisected by a very large rock, but both sections are intact, and even have most of the sleepers in place. Height is only 2 or 3 metres.

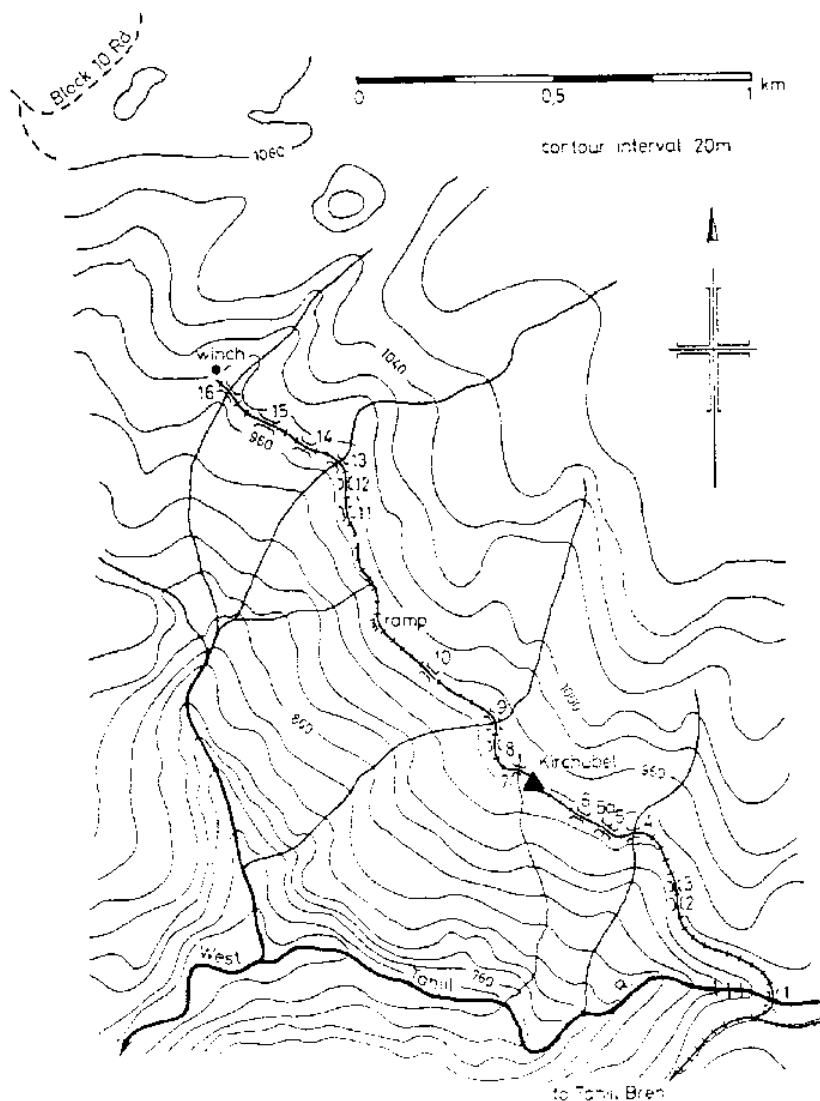

Another small bridge (6) is crossed before the mill site is reached about 200 m on. The mill site is still much as described in *Five to 500*, page 33 and may be explored without much difficulty.

At the north-western end of the mill site, the log-line crossed a 20-30 m wide water course on a now-collapsed bridge, then crossed a small spur before turning north. Bridge 8 is soon reached, followed by bridge 9, an impressive still-intact curved structure about 50 m long and 3 m maximum height. All bearers were intact and many of the sleepers still in situ.

The line continues in a north westerly direction, crossing smallish bridges 10 and 11. The formation is easily followed and fairly clear of undergrowth.

From bridge 12 onwards the line is very interesting tramway country; deep gullies abound, and bridges 13 and 16 (now collapsed) would have been 15-20 m high. Bridge 16 would have been significantly inclined, with a winch located on a spur at the western end. A galvanised iron tank, boiler chimney,

machinery foundations, wire rope, and other items, mark the winch site, and it was soon determined that the end of the log-line had been reached.

The walk along this line is reasonably easy, and the number of bridges makes for a very interesting trip in sub-alpine forest country. Access to the log-line terminus from the Block 10 Road would be difficult due to medium density undergrowth and the heavily undulating nature of the area.

Geoff Thorpe 10/88

PUBLICATIONS

An agreement to publish a second issue of the *Directory of Australian Tourist Railways and Museums* in association with Cromarty Press of Sydney came to a sudden halt in late 1987 when Cromarty went into receivership. Unfortunately, it has not been possible to recover material sent by preservation groups to Cromarty. Negotiations are now underway for a joint venture between LRRSA and the ARHS to publish a new edition of the Directory in early 1989.

Bob McKillop 10/88

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

EIMCO AUSTRALIA PTY LTD

This company has opened a branch office in Mackay, Qld, and will establish workshop facilities there to service both the Bowen Basin coalfields and the local sugar industry. The company is in the market to manufacture new cane railway locomotives.

Mackay Daily Mercury 12/9/88 via John Browning 11/88

NEW SOUTH WALES

NYMBOIDA MINE

The Ten Network's "Jack Thompson's Australia" programme that went to air in Adelaide on 13 November, contained a segment on this mine. It had shots of the mine railway in operation, including a view of the coal unloading area where the skips were cable-hauled. From the commentary, it appeared that this mine and the railway are no longer in operation.

Arnold Lockyer 11/88

PERISHER SKITUBE 1435 mm gauge

(see LRN 66, p.8)

Skitube's giant \$3.5m tunnel boring machine has been sold back to Kumagai and sent back to Japan for reconditioning and possible reuse. It had been stored near Jindabyne for about 18 months awaiting a buyer. It was used to excavate the section from Bullocks Flat to Perisher from December 1985 to December 1986. The section from Perisher to Blue Cow was excavated by drill and blast methods.

The Summit Sun 8/88 via Ray Graf

SUGARTOWN, Condong 1435 mm gauge

(see LRN 66, p.8)

It would now appear that only a standard gauge rail operation will be formulated for use between Murwillumbah and Condong using the existing branch line. A new separate station for the tourist venture will be built north of the present SRA station at Murwillumbah.

Paul Simpson 11/88

QUEENSLAND

BABINDA CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 66, p.9)

Locomotives seen at work in the former Goondi Mill area early in October were Com-Eng 0-6-0DH *Bartle-Frere* (AH3979 of 1964) and the two ex-Goondi Clyde Model DHI-71 0-6-0DHs 5 *Goondi* (55-56 of 1955) and 6 *Daradgee* (56-90 of 1956). The two Clydes were working in multiple back-to-back. *Daradgee* has been fitted with a Cummins engine, and it is reported that *Goondi* will be fitted with one also.

A possible offer from Bundaberg Sugar to purchase the mill was to be discussed with the Babinda board with a view to coming to a mutual proposal, but Babinda was stated to be still interested in pursuing merger with other local co-operatives.

Chris Hart 10/88; Courier Mail 15/9/88

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 66, p.10)

On 16 September, E.M.Baldwin B-B DH 19 (7070-3-4-77 of 1977) was derailed by split points at Hawkins Creek and considerable track damage resulted. Victoria Mill's ballast plough, converted from Motor Rail "Simplex" 4wDM 10381 of 1953 was borrowed to assist with track repairs. It remained at Macknade for three weeks, being used during part of that time on general track maintenance. It was collected for return to Victoria Mill by Baguley/Drewry 0-6-0DM *Leichhardt* (2393 of 1952) on 7 October. The value of the ballast plough prompted a decision to convert a dismantled "Simplex" at Macknade. This is 2, Motor Rail 4wDM (ex PM) 3717 of 1925, which had been in the scrapyard for some time. It was outside the locoshed at Macknade by 30 September.

In early September, work commenced on the replacement of the final drive of Clyde 0-6-0DH 18 (DHI.5 of 1954), which had broken amount mounting

brackets. The 14:1 final drive from this loco has been sent away for casing repairs. Two 10:1 final drives were obtained from Hambledon Mill, the first of which would not fit and has been stored. The second was fitted to 18 after some repairs and was given a trial run on 11 October. It is anticipated that Clyde 0-6-0DH 16 (DHL1 of 1954) will be taken out of service as it is thought to have the same problem. Its 11.75:1 final drive may be replaced by the one from 18.

Chris Hart 10/88

CSR LTD, Plane Creek Mill, Sarina 610 mm gauge

(see LRN 65, p.7)

John Fowler 0-4-0DM 5 (18807 of 1927) is out of use and has been removed from the loco shed to the mill yard. Tamper Type TSR-RS sleeper replacement machine 825817 of 1987 has been transferred from Inkerman Mill. Com-Eng 0-6-0DHs 7 (FC3776 of 1964) and D8 (FC3777 of 1964) have been fitted with "Eagle" 6-cylinder diesel engines, carrying Perkins and Rolls-Royce plates respectively.

An extension of some 2 km has been constructed on the Dawlish tramline, which now extends as far as the QGR main line. Hook and chain couplers are still retained at this mill.

An 18-year old youth received an injury to his right leg when pinned by a loco at about 4 am on 23 September, when shunting in the mill yard. The loco was lifted by mill crane after about 20 minutes to avoid any possibility of further injury.

John Browning 9/88; Mackay Daily Mercury 26/9/88

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 66, p.10)

Seen in the consist of the sugar box train at the mill in August, was a vehicle with a yellow-painted underframe. This is probably the underframe of the experimental 4-wheel vehicle which ran in the train for some years. It had been fitted with bogies, and was presumed to be pressed back into service following the head-on collision in July. By early October, a number of new underframes were noted to be in service, replacing those wrecked previously.

Chris Hart 10/88

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 66, p.11)

Although there was some protest at the closure of North Eton Mill, scheduled for the end of the 1988 season, far more significant has been widespread discontent among Farleigh growers. Dissatisfied at their

treatment, Farleigh growers proposed to leave the co-operative and take back their mill to operate on a "stand-alone" basis. This move is impossible under existing legislation unless agreed to by a vote of 75% of all shareholders. It is understood that a major cause for discontent among Farleigh growers is the more generous provision of rail facilities which have been allowed growers in the other mill areas under the previous co-operatives. Farleigh growers have been used to bearing heavier transport costs themselves, and believe they are at a disadvantage compared to other growers.

Tramway connections expected to be built before the start of the 1989 season include a link from the Pleystowe Peri line to the Racecourse main line, from the Pleystowe Habana line to the Farleigh north coast line and from the Pleystowe Victoria Plains line to North Eton. This will enable cane to be diverted from Pleystowe to Racecourse and Farleigh and enable the transfer of the greater proportion of North Eton cane to Pleystowe. (Oakenden cane will go to Racecourse and Allandale cane to Marian.) Further development for the 1991 season is expected to include the acquisition and gauge conversion of the QGR Finch Hatton branch from Uruba (east of Finch Hatton) to Gargett to link up the Cattle Creek and Marian systems, together with an extension west from Finch Hatton between Kowari and Boongana. There will also be a high level bridge built over the Pioneer River near Marian. Further long-term possibilities include re-routing the steeply graded section of the Farleigh north coast line towards the coast in the Habana area.

On the closure of North Eton, 420 bins will be transferred to Marian and 250 to Farleigh. Pleystowe will receive the North Eton tippler, which will be modified to tip a variety of bin types, enabling Pleystowe to crush cane from other mills in the event of rain, breakdowns etc.

Pleystowe Mill
Racecourse Mill

John Browning 9/88

Cattle Creek Mill

(see LRN 64, p.11)

In August, "Bundaberg Jenbach" 6wDM D1 (Bundaberg Foundry 10 of 1953), was transferred to Cattle Creek, bringing Cattle Creek up to its highest ever total of five main line locos.

Farleigh Mill

(see LRN 65, p.8)

Two branch lines were built on the north coast line for the 1988 season. The first near Calen, recorded in LRN 65, was extended to a total of 3 km by September. It serves one Farleigh and two Pleystowe sidings. The second, near Mt. Pelion is a little over 2 km in length and serves Pleystowe growers. Pleystowe cane delivered to these lines was collected by a Pleystowe loco during 1988, but it is expected that in 1989 these areas will all be reassigned to Farleigh. Farleigh's Motor Rail "Simplex" 4wDM *Calen Simplex* {21623 of 1957) was noted parked in a siding at Mount Pelion in September. Its replacement at the Calen Depot was E.M.Baldwin 4wDH 5-774-6-63 of 1963.

Marian Mill

(see LRN 65, p.8)

All the mill's main line locos were in use during the day shift during the 1988 season. The chassis of wrecked Clyde 0-6-0DH *Melba* (64-377 of 1964) still lies in the mill yard. A new Tamper Type TSR sleeper replacement machine has been acquired (825998 of 1988). A spike puller unit has been purchased from Gemco. It was built in Europe by Geismar (Type AS2 No. 1038). This is a hand-propelled unit with a hydraulically-powered spike puller mechanism.

North Eton Mill

(see LRN 65, p.9)

Com-Eng 0-6-0DH D5 (FB3170 of 1963) has been based at Base Camp (Mia Mia) during the season and works day shift only. On the main line close to the depot is an electrically operated set of points normally set to divert any runaway bins from running onto the road/rail John Luscombe Bridge across the Pioneer River. These points are set for the sand drag except when activated by a hand-held infra-red device operated by the loco driver to set the points for the main line when heading towards the river. Loaded trains crossing the river were observed receiving assistance in the rear as they tackled the steep climb towards the mill once over the bridge.

This season, North Eton was to crush cane from Marian's Mia Mia and Zillfleisch lines hauled over the new connection by Com-Eng 0-6-0DM *Ashburton* (A1614 of 1956). During September, this cane was directed back to Marian, but North Eton remained responsible for its haulage to an exchange point where it would be collected by a Marian loco.

Pleystowe Mill

(see LRN 65, p.9)

E.M.Baldwin B-B DH *Shannon* (7126-1-5-77 of 1977) has been working over the Farleigh north coast line to collect Pleystowe cane from Calen and Mt Pelion (see above). It has been worked hard and because it is not particularly suited to this hill-country route, being geared for fast running on the flat, there have been a number of breakdowns.

Clyde DHI-71 0-6-0DH *Habana* (60-215 of 1960) broke an axle on Dew's line on the night of 13 September. It was removed from the track by a mill-crane and the broken axle dropped out. The loco was left at the side of the line while a new axle was prepared, and was back in service by the 16th. Motor Rail "Simplex" 4wDM 21575 has received a complete repaint in yellow livery.

Racecourse Mill

(see LRN 65, p.9)

A new Tamper Type TSR sleeper replacement machine has been purchased (825988 of 1988). There are a number of electrically-operated points in the new mill yard. There is a colour light signal/points indicator at the neck of the yard which indicates whether the road is set for the full or empty lines, as well as allowing locos to proceed in or out of the yard.

MORETON CENTRAL MILL CO LTD, Nambour 610 mm gauge

(see LRN 65, p.9)

Baguleys/RMP 0-6-0DM *Jamaica* (formerly DL13 *Innisfail*), 3389 of 1954, derailed and came to rest on its side as it rounded the curve at English's siding Bli Bli en route to the mill with a load of full bins on the night of 10/11 November (see front cover). Luckily no-one was hurt as the crew were able to jump clear to safety. The leading two bins had to be cut free and a crane had to be brought from Brisbane to right the loco. Apparently the problem was caused by faulty springs and JAMAICA is now up on blocks ready for the fitting of new springs so will see no further service this season.

Geoff & Peg Hayes, 11/88

ROCKHAMPTON CITY COUNCIL 1067 mm & 1000 mm gauge

(see LRN 65, p.10)

During July, the three Billard 4wDM locos ex Citra Constructions were observed still stored in poor condition at the rear of the bus depot. They are 007 (T75P VM 227), rebuilt for use on the QR electrification project, and two unrebuilt locos, 11E1 (T75P VM 224) with wheels removed, and 11E3 (T75P VM 2289), still metre gauge.

Harry Wright 10/88; John Browning 10/88

SOUTH JOHNSTONE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 66, p.12)

Two new bogie ballast hoppers were seen here, manufactured by the Boogan Implement Co., numbered SJM1 and SJM2. They are painted yellow with black lettering. A pair of spare Baldwin locomotive bogies were noted in the storage shed in the mill yard.

Chris Hart 10/88

TULLY CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 66, p.12)

Com-Eng 0-6-0DH TULLY NO. 14 (AK2663 cf 1963). Note new cab, new livery and

oval number plate.

Photo: Chris Hart 9/10/88

Com-Eng 0-6-0DH No.14 7(AK2663 of 1963) has been rebuilt similarly to No.10 (AD1341 of 1960) with new GM-engine, raised cab and new livery. It also has a cast oval "builder's plate style" TULLY No.14 plate on the cab side, in this case chromium plated (see photo p.19). One of the three Baldwin 0-4-0DH locos was also being repainted in the new livery. The frame of Clyde 0-6-0DH No.9 (DHI.4 of 1954) was noted being converted into a brake wagon.

The frame has been shortened at each end and a CompAir Compact-75 compressor unit has been mounted at one end. The side rods have been retained.

Chris Hart 10/88

SOUTH AUSTRALIA

COMMERCIAL MINERALS, Orraparina Mine, Flinders Ranges

This new firm has re-opened the Orraparina Mine and is working the No. 3 level with a locomotive. The mine was previously worked by SA Barytes Ltd who had, what from photographs appeared to be, a small battery operated loco. It is suspected that the new mine owner has taken over this locomotive, skips, etc.

SA Dept of Mines & Energy via Arnold Lockyer 11/88

GERALKA HOLIDAY FARM, Clare 18 in gauge

The homemade unit marshalled in the centre of the six car train at Geralka Holiday Farm in October 1988.

Photo: Arnold Lockyer

This property is a mixed farm which provides a camping ground and rural attractions for tourists. These include a collection of old farm machinery, some of which has been restored and can be seen working, a Clydesdale horse stud, as well as the normal farm work. In addition, the property has what the owners describe as a "replica" copper mine, named "Wheal Sarah" - wheal being the Cornish word for mine. This mine was made principally by erecting the walls, roof etc., then covering the lot with a pile of dirt. The inside has been fitted out with a large rock collection and underground

mining equipment, much of which came from Broken Hill. Visitors enter the mine on foot through an adit and, after being shown around the "workings", load onto an 18 in gauge train for a ride out of the mine. The line is only a couple of hundred metres in length and the train consists of 6 cars with the loco marshalled in the middle. The cars seat 4 adults - possibly 6 with a squeeze - whilst the loco is a box-like, homemade unit. According to the owner, it is powered by a Morris 1500 motor, driving through a Datsun gear box, with the final drive taken from a Sunshine Harvester. Also displayed on the premises are three 18 in gauge side-tipping ore trucks, now branded "Wheal Sarah Mine". Their origin is not known.

Arnold Lockyer 11/88

EMU WINERY, Morphett Vale 610 mm gauge?

At a visit on 9 November, this winery was found to be in the course of demolition. Some evidence was found that at some time, the winery had a light railway, about 2 foot gauge, in operation. Approximately 12 feet of track was found in situ embedded in a road at the rear of the premises. Further information from any member regarding this line would be appreciated.

Arnold Lockyer 11/88

TARCOOLA GOLD PTY LTD; Tarcoola

Trial mining of 2,000 tonnes of ore occurred from this deep level mine at Tarcoola in mid 1988. The mine has three levels that have been restored for the operation and one Gemco locomotive was in use underground. A phone call to the Company confirmed this information adding that at present the mine is not in operation.

David Whitford via Arnold Lockyer 11/88;

TASMANIA

IDA BAY RAILWAY, Lune River 610 mm gauge

(see LRN 62, p.16)

This little tramway has had a chequered existence since limestone haulage ceased in 1975 and a succession of operators have attempted to develop it as a viable tourist venture. After the previous operator gave up his lease in 1987, the future of the line appeared most uncertain. However a new operator re-opened the line on 1 June 1988. As a result of a vigorous programme of maintenance and improvement, the survival of the line appears reasonably secure.

Four locomotives are now operational: No. 1 and No. 3 being diesel

powered whilst No. 2 and No. 4 have petrol motors; that in No. 4 coming from a Hillman car. The passenger motor which formerly conveyed workmen to the quarry has been returned to the Tramway from the Donnelly family and is being restored as a memorial to the late George Donnelly who was closely associated with the line. It is intended to have this motor return to service at the end of November 1988.

Work has also been undertaken on track improvement and the repainting of rolling stock which now carries a new colour scheme, namely black undercarriage, red body, yellow roof and cream interior. Since the resumption of the service, two trains operate each day except Friday. As from November, the daily service will be increased to three trains per day. This decision reflects increased passenger patronage.

The management of the Tramway have ambitious plans to develop the terminal site as a 1920 railway village and are anxious to reintroduce steam traction on the line. Future developments on this sole surviving two foot gauge tramway in the region will be followed with interest.

Ken Milbourne 10/88

TASMANIAN TRANSPORT MUSEUM SOCIETY INC. 1067 mm gauge

(see LRN 65, p.13)

Some additional details on the vertical boilered locomotive under restoration are as follows:

The locomotive is an 0-4-0 side tank machine with two cylinders (vertical) 6" x 12" geared 2:1 to the leading axle. The slide valves are imparted motion from a separate geared shaft. The date of construction of "about 1892" is open to considerable doubt as this statement was made at its first boiler inspection in Tasmania during 1901. It was common practice at this time for operators to understate the age of their boilers when the Government Inspector eventually caught up with them. The reason to doubt this date is the amount of wear, as opposed to damage, sustained by the locomotive prior to the well known photograph being taken pre-1904. The wear about the coupler pocket on the buffer beam is very considerable although by 1904 this pocket had been abandoned in favour of a lower coupling position to suit timber bogies. There are holes in the buffer beams that indicate that buffers, possibly of the "dumb" variety, were fitted in combination with the original standard drawhook. The standard of workmanship on the framework is excellent except for the crude attachment of the "bush tramway" type wheel/axle sets. It can safely be presumed that the locomotive was at some stage set slightly higher and that the running gear is not original.

This raises the question of where the locomotive came from if it was not

new to the Hastings Tramway. The spacing of the frames is such as to allow either 3 ft 6 in gauge or 5 ft 3 in gauge, but not standard. An original gauge of less than 3 ft 6 in is unlikely due to clearance problems with the boiler.

The question of who built the locomotive is also a problem. The boiler inspector in 1901 stated "Markham & Co Ltd" which is presumably the Broad Oaks Works of Chesterfield, Derbyshire. A letter to this firm has so far received no reply. The boiler inspector of course was only stating the manufacturer of the boiler and not necessarily that of the whole locomotive but it is very likely that he got this information from the large builder's plate on the loco's sidetanks. Efforts to locate a print of the photo clearly showing this plate, have so far been unsuccessful.

The Hastings Mill Tramway, on which the loco was the sole motive power (except for horses) from c.1901 to c.1919, extended from the Mill to the general area of Hastings Caves where a cable incline carried the line to higher ground. This tram had at least two four-wheeled passenger carriages with longitudinal, inward facing seats for use both by workmen and for picnic excursions to the Caves.

The loco passed from the Hastings line to the Weilangta Tram on the east coast and from there to Sharp's Mill in the Thirties. It was not a success on Sharp's steeply graded bush line but at some stage it saw some use hauling sawn timber between the mill and the government railway siding. Its boiler (a 1911 Cowley replacement of the original) was removed and used about the mill for a time but the locomotive was eventually put back together and taken to the upper end of the bush line for stationary duties. It was in this position that it was discovered many years later by Hobart enthusiast, E.M. Lidster, and it was this gentleman's well known sense of direction that resulted in certain LRRSA members spending a night lost in the bush when he attempted to act as "guide"!

The little vertical boilered locomotive really is a perfect gem and every effort is being made to return it to operating condition for use on the Tasmanian Transport Museum's display track at Glenorchy. Just how one restores a rough bush locomotive is causing a bit of argument. I am inclined to retain as much of the rough "bush" fabric as possible, especially as to do otherwise would involve the replacement of almost the entire machine! The immediate question for LRRSA members is where did the locomotive come from before its timber tram duties at Hastings and who was its builder? I am inclined to believe that it originally operated on a conventional steel railed line with standard drawgear, either of 3 ft 6 in or metre gauge. Any suggestions??

D.L. Beck 9/88, Project Co-ordinator

TTMS Vertical Boilered Loco Restoration Project

WEE GEORGIE WOOD STEAM RAILWAY INC, Tullah 610 mm gauge

(see LRN 63, p.10)

Work on the restoration of Krauss loco 5988 of 1908 is proceeding at the EBR workshops in Burnie. New tanks and cab roof together with considerable restoration to the frame and probably a new boiler will be necessary. By mid September much of the above work was under way. It is intended to return this engine to Tullah where it operated for several years from 1950.

Ken Milbourne 10/88

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm gauge

P.O. Box 21, Alexandra, Vic 3714

(see LRN 66, p.13)

A further 10 lengths of 60 lb rail were laid on 1/10/88 between the road crossing and the start of the "big curve". New redgum sleepers were used and the road crossing has been set in concrete. The 30 lb rail lifted has been stacked ready for further extensions to the 3 ft 4.5 in gauge track.

The petrol powered locomotive purchased by a Museum member was delivered to the Museum on 8/9/88. It is one of three manufactured by Cheetham Salt Ltd in the early sixties for use at the Laverton works.

The chassis is fitted with a 4 cylinder engine and transmission from a Morris bus driving a reversing box fitted with right-angle drive. Power is transmitted to both axles by chain drive.

It is a very spartan locomotive, with no cab, no springs, and only the crudest of wooden seats for the driver. It was used on the tramway to the beach on Port Phillip Bay to obtain sand for lining the floor of the salt pans. Of the other-two locomotives, only the final drive gearboxes still exist, and these are now at Alexandra for use as spare parts.

Restoration of this loco will commence as soon as Simplex 10058 of 1948 is finished. Re-conditioning of the engine of the latter is proceeding well, and the first coat of paint has been applied to the frames.

Attendance on steaming days on the second Sunday of every month has only been fair during the winter months, but the Museum's income has been boosted substantially by mid-week coach tours organised by local tourist operators. The Malcolm Moore 4wPM 1049 of 1943 is operated for these tour groups.

The Museum is interested in hearing from anyone who may have frames, wheels, boiler, cab or motion gear, from a 2 gauge 0-4-0WT Krauss locomotive,

or detailed drawings of this type of locomotive. The Museum would like to eventually operate a locomotive of this type as representative of the motive power on the Rubicon tramway when it opened in 1912.

Following a segment on the widely-viewed "A Current Affair" on the Nine Network on 21/9/88, highlighting the land tenure problem of the Museum, the Victorian Government has requested a submission on the Museum's land requirements. This is now under consideration by Victorian Transport Minister, the Hon. J. Kennan.

Peter Evans 10/88

AUSTRALIAN PAPER MANUFACTURERS LTD, Broadford 1600 mm gauge

It was noted in October 1988 that rail traffic at this site had ceased. The Malcolm Moore 0-4-0DM loco previously used here is now at Maldon on the Castlemaine and Maldon Railway. However, the fate of the other unit, a converted 4w truck (possibly ex class IA) which had a full length roof at one time, is unknown. Can anyone provide the answer?

Ray Graf 10/88

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Preservation Society 762 mm gauge

(see LRN 65, p.15 & LRN 66, p.15)

Locomotives: on Thursday 8 September, the Climax ran a test train from Belgrave to Emerald and return, almost exactly sixty years after its delivery run from Collins Siding to Erica (which occurred on 5 Sept 1928). It had a ten car, seventy-ton train, the actual travelling time (exclusive of stops) was 68 minutes for a six mile (10 km) journey. It is reported to have performed very well, though there was some problem with hot bearings, and it ran out of steam on one occasion - due apparently to lack of familiarity with its wood firing. On the return journey NRT1 (dead) formed part of the train. NRT1 was required at Belgrave on the following Saturday for an LRRSA chartered train.

I am told that at speed (above about 5 mph!), the Climax begins to display considerable flexibility and oscillation, a very different sensation to that on the NA's.

On Saturday 8 October, the Climax ran a special return trip from Belgrave to Lakeside for the benefit of the volunteers who worked on it. It hauled a train consisting of three NBH cars and an NBHC. Then on Friday 21 October as part of the bicentennial steam festivities, it double-headed with an NA as far as Menzies Creek. An unusual feature of the Climax is that it is very quiet. The volunteers who are responsible for feeding it have found that it has a gourmet appetite for wood. Cheap and nasty softwoods don't appeal to it at

all, but it is rather partial to sleepers!

A ceremony is to take place at Menzies Creek on Saturday 12 November, to officially mark the restoration of the Climax to service. This will be a Gala Day, with a number of special trains running, special activities at the museum and the Peckett in steam.

Operations: Partly as a warm-up exercise for the Galah Day, four extra trains were run on Saturday 10 September. These included a Night Train to the Packing Shed, a goods (hauled by D23), a "mixed-goods", and the LRRSA's special to Lakeside.

Frank Stamford 11/88

MASSEY FERGUSON AUSTRALIA, Sunshine 1600 mm gauge

This site was visited on October but no sign of the Malcolm Moore 4wDM locomotive was seen. The broad gauge points and the standard gauge diamond crossing had been removed recently. The tracks are overgrown with weeds and the shed where the loco was kept is now empty. Can anyone provide details as to the fate of this unit?

Ray Graf 10/88

SECV RUBICON TRAMWAY/TACL TRACTORS 610 mm gauge

(see LRN 64, p.17; LRN 62, p.3)

During construction of the Rubicon hydro-electric scheme, the State Electricity Commission obtained a Fordson powered rail tractor for use on the raceline tramway running from the top of the haulage to Rubicon Dam. A photograph of this rail tractor in the collection at the Alexandra Museum shows it to be very similar to a TACL tractor, utilising large gears fitted where the Fordson tractor's rear tyres would normally be. These gears drove on to an intermediate shaft, which in turn drove two axles coupled by roller chains. Large cast iron buffer/coupler pocket/traction weights were fitted front and rear.

This tractor was scrapped after the SEC regauged one of their 3 ft gauge "1,000" series locomotives from Kiewa, and sent it to Rubicon where it was used to haul trains for an aqueduct enlargement project. However, one of the heavy cast weights fitted to the end of the original rail tractor was recently located near the top of the haulage, using information from Ernie LeBrun who was in charge of tramway operations and maintenance for the SEC for many years.

The weight has been donated to the Alexandra Museum by the SEC. Cast into the top of the weight are the words "Malcolm Moore Melbourne Loco. No. 23". The weight was removed because of the difficulty experienced when

trying to rerail the tractor. This tractor was not liked by the SEC employees and had a reputation for back firing when being started. The crank handle was located in a difficult position between the frames, until a hole was cut near the top of the weight and an extended crank handle was made. The tractor was not fitted with a reversing mechanism, and relied on the single reverse gear of the Fordson gearbox. Consequently, after a long trip back to the haulage in the evening, the exhaust manifold was almost red hot from over revving the engine in an effort to maintain a reasonable speed.

While differing in some respects from the 2 ft 6 in gauge ex-FCV Tyers Valley Tramway TACL tractor currently being restored by a group of LRRSA members at Emerald, the Rubicon tractor is obviously a very close ancestor of the TACL patent tractor.

Peter Evans 10/88

WESTERN AUSTRALIA

PARKESTON, WA 2 ft 6 in gauge

(See LRN 65, p.18)

AN's Parkeston Railway Institute train, hauled by BL 26, carries a happy crowd of children. Parkeston station is in the background.

Photo: Fred Glenie

The 2 ft 6 in gauge track at Parkeston was built in 1984 by volunteers of the Australian National Institute. It was the brainwave of Keith Edwards, President of the Social Club at that time. The locomotive is powered by a 6 cylinder automatic Ford motor and has forward and reverse in all gears. The line is only used when A.N. Institute has a social function involving children,

which is only a few times a year and being where it is, it doesn't take long to become covered by grass and sand drift! This railway is an Equal Opportunity "employer" and "employs" both male and female drivers - some of whom are well known as drivers on the Golden Mile Loophole.

Elaine & Fred Glenie 9/88

MINEMACH, Perth

(see LRN 64, p.19)

On 16 April 1988, this company advertised for sale: 5 S/H Eimco boggers, 24" gauge, fully reconditioned; 4 S/H 1.5 tonne locos, 24" gauge, top condition; and ten new 1.5 tonne side tippers (gauge not specified).

West Australian 16/4/88 per David Whiteford 10/88

On 24 September 1988, the company advertised 6 Eimco 12B boggers (\$13,000 each); 1 Scona 9250 bogger (\$10,000); and 1 Atlas Copco loco with spares (\$16,500). No gauges were specified for these items.

West Australian via David Whiteford 10/88

PERTH ZOO

The company of Bateman Kesteven Architects called tenders for the erection and completion of a timber station and ticket office for a new replica train at Perth Zoo. Tenders closed on 6 September 1988. Apparently the replica train will be rubber tyred and is being built by Willis Engineering in Perth. This company built the Pemberton-Northcliffe railway trams and has built many miniature railway locomotives and so the replica train is expected to be to a genuine railway design. Perth Zoo had a small railway which closed in the early 1970s.

West Australian 20/8/88 via David Whiteman 10/88

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC., 610 mm gauge

Bennett Brook Railway, Caversham

(see LRN 64, p.19)

Perhaps one of the most unusual hirings of any tourist rail train in Australia occurred on 22 & 23 August when the S.A.S. hired the BBR Gemco and train for all night operations over the 4.5 km loop line at Whiteman Park. The train was part of an army training exercise throughout the park.

The first converted R wagon (ex WAGR bogie low side open wagon) was placed into passenger service on Fathers' Day (4/9/88). The open wagon with bench seating proved very popular despite threats of ash and sparks raining

down on passengers. As some work is still required to finish the vehicle off, it is only placed into use during exceptionally busy days. R 3644 was the first conversion to 2 ft gauge and work is underway on the second, R 1783.

On 1 October, members of WALRPA collected a former WAGR passenger shelter from Pingelly on Westrail's Great Southern Railway. The next day it was positioned on Mussel Pool platform and it is now giving sterling service once again as a shelter for rail passengers. The shelter is standard structure of the 1910-1930 period and this style was seen on many of the WAGR's light country railways constructed in this period.

Former WAGR passenger brakevan ZA, 5100 which; ended its railway career as Workmen's van VW 5100, has been purchased by WALRPA and-placed at Central station behind ex WAGR loco PMR 735. 5100 is being restored for use as a museum/photograph exhibit coach.

An open day was planned for the Bennett Brook Railway on 5 November when all operational locomotives were to be in service on trains closely reminiscent of their pre-preservation life. Some examples are ex-Maylands brickworks petrol loco on a train of hopper wagons, ex-Wyndham Port diesel (Gemco) on train of ex 3 ft 6 in gauge wagons representative of such lines, and ex-Lake View & Star goldmine Planet diesel on train of ex LV&S hopper. NG 123 was to operate a steam passenger service throughout the day. A highlight of the day was expected to be a kalamazoo time trial between teams from various preservation groups in WA.

WALRPA via David Whiteford 10/88

OVERSEAS

FIJI

Light Railways editor, Bob McKillop, is a member of an Australian consulting team selected by the Asian Development Bank to prepare a Tourism Master Plan for Fiji. A significant initiative to be examined by the team is the potential to further develop the FSC light railway system as a tourist feature, linked to rising North American, Japanese and European interest in unusual and specialist railway operations. Bob will undertake field work for the team in November/December. The outcome of the study will be reported through future issues of LRN.

Bob McKillop 10/88

MEETINGS

MELBOURNE: THE GREAT TACL AUCTION

You're right!!!! You have read all this before. Unfortunately the auction had to be postponed from last month because of a delay in mailing LRN. This means of course that you have had an extra month to collect items for sale and to save dollars to spend. Bring them all along and have a great time!

Got any TACLs you want auctioned? Yes? Well here is your big chance!

Seriously, we are having an auction in support of the TACL fund as the entertainment item at the next meeting. Of course if you do have the odd Malcolm Moore TACL tractor sitting unwanted in your back yard then send it along. I'm sure we will be able to assist you to get rid of it! For those of you without a spare TACL bring along those spare photographs, magazines and other items that have been cluttering up your drawers for the past couple of years and donate them to the aid of the TACL fund.

Those of you who don't have such clutter can bring along the cash to buy someone else's clutter. What a great idea. Everyone wins!

It should be a fun night and we haven't had an auction for sometime so it will also be something of a novelty.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 8th December at 8.00pm.

SYDNEY

No meeting this month. The February issue will have details of the next meeting.

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-2969488

LOCATION: 150 First Avenue Royston Park. DATE: Thursday 2nd February at 8.00pm.

BRISBANE:

Deadline for next issue - 3 March 1989

Travelling from Dwellingup to Pinjarra on Tuesday 11 Oct 1988, this Hotham Valley train was photographed at Alumina Junction. Ex Tasrail loco V5 is leading brakevan ZD23; 5 ex Tasmanian coaches with sleeping coaches AQZ420 and AQZ424 (empty stock) and vintage brakevan Z9. These vehicles, apart from Z23, in company with buffet car AQL290, 2RA wagons with coal containers, plus JDA water tanker were to form part of an extended weekend charter train for Merredin/Bruce Rock residents. Loco W908 handled the charter throughout.

NOTES, CORRECTIONS AND COMMENTS

The following item of interest was found in a tourist brochure at a Narooma (NSW) motel:

"...Mr T.S. Mort of Bodalla built a tramway from that town to Narooma. It commenced from near the Bodalla Post Office, followed the old road to the top of Borang Hill, thence via Brou Creek."

W.L. Wembridge 1/89

RESEARCH

CHANCE LOCOMOTIVES

As shown in LRN 44 & 57, Chance steam outline 4w-2-4wPM 84-50200-24 of 1984 came to Canberry Fair in the ACT late in 1984. The British magazine The Narrow Gauge No.118, which features a builder's list up to 1986, shows that this unit was ordered by Exsaco Corporation. The same company also ordered 79-50177-24 of 1979. Did this unit also come to Australia?

Leisureland Fair, at Langwarrin, Victoria, opened late in 1983 with three Chance locomotives (see LRN 39). An examination of the builder's list indicates three locomotives recorded as coming to Australia, 75-50134-24 of 1975 and 76-50142-24 & 76-50143-24 of 1976. These were ordered by Group Property Services. Can anyone confirm that they are the ones at Langwarrin and if so, what they were doing before 1983? (The fact that one was noted carrying the number 142 tends to indicate that it would be 76-50142-24, as Chance are known to number units with the serial number.)

John Browning 1/89

GRAHAM HANDLING EQUIPMENT

A perusal of the book Greenwood & Batley Locomotives reveals that in 1974 two 2 ft 6 in gauge 5 hp 2 ton "Trammer" 4wBE locomotives (builder's numbers 420363/1 and 420363/2) were ordered by Graham Handling Equipment Pty

Ltd Moorabbin Victoria. Can any member indicate where these locomotives were used?

John Browning 1/89

SOUTH AFRICAN GARRATT

The overseas press have featured South African reports of a 2 ft gauge Garratt having been sold to Australia. When will it "come to light" on this side of the Indian ocean?

John Browning 1/89

FIELD REPORTS

ALPHA ISLAND, Monte Bells Group, Western Australia

Remains of a narrow gauge tramway are to be seen on this island, presumably a relic of the British nuclear testing programme which was carried out here in the 1950s.

The West Australian 10/10/85 via Ray Graf

NORTH KEELING ISLAND, Indian Ocean

This is reported to be the only island in the Cocos (Keeling) group which still retains its original vegetation, as all the South Keeling islands were stripped by the Clunies-Ross family for plantations. This is the site of the wreck of the German raider "Emden" and a disused tramway said to be in remarkably good condition leads from the island interior to the Ocean beach. Its exact origin is unknown. One theory is that it was laid by Clunies-Ross when instruments and non-ferrous remains were salvaged from "Emden" in 1915-6. The other theory is that it was laid by the Japanese for a much larger salvage operation, which lasted for about a year.

The Age Sunday Extra 3/9/88 via Ray Graf

REVIEWS

The last couple of years have seen yet two more attempts to establish a commercial rail enthusiasts magazine: "Australian Railway" and "Rail Australia". Unfortunately, neither have fared too well, with the first having been taken over to become a trade-oriented publication, and the second possibly heading in a similar direction.

Rail Australia, since its July 1987 launch, has featured private and industrial railways prominently, and issue No.1 included articles on Weipa, Port Kembla, Whyalla, Hamersley Iron, and Hexham. Since then, there has been a fair

level of news about these and other private railways, with notable articles being in No.5 which included Sugar Mill Railways - an Overview and No.8 which featured Cane Tram Units, both by David Jehan. Both these articles were substantial, interesting and comprehensive, although photograph captioning seemed somewhat of a problem. This publication is well worthy of support - contact Bowenia Publications Pty Ltd P.O. Box 119, Berowra Heights NSW 2082.

Australian Railways appeared to be a lighter style of publication which possibly did not catch the "serious" enthusiast's eye so readily, and seemed to make less of an effort to feature other than government railways. In its new form, it closely resembles a trade journal, but does include numbers of interesting articles. The June/July 1988 issue was devoted to light rail and rapid transport and featured (among others) items on Skitube, Mt Isa Mines, cane tramways, and an historical article on Mortlake Gasworks. Available by subscription only, publishers are Trade News Corporation Pty Ltd 17 Charles Street, Redfern NSW 2016.

NEW SOUTH WALES

BULAHDELAH LOGGING RAILWAY, Bulahdelah 610 mm gauge

(see LRN 66, p.6)

This railway now has steam operations every week, on Thursdays, Fridays, Saturdays and public holidays, and during school vacations from Monday to Saturdays. Visitors may also inspect the railway on non-running days, except Sundays. Running times are from 1000 to 1630. Admission is by donation assisting development of the Myall Lakes Christian Youth Camp.

Bob McKillop 1/89

GOULBURN STEAM MUSEUM, Goulburn 610 mm gauge

(see LRN 66, p. 6)

Goulburn City Council advised in December 1988 that the Museum will reopen during 1989, but a definite opening date is not yet available.

Bob McKillop 1/89

HUNTLEY COLLIERY PTY LTD, Avondale 1067 mm gauge

A number of members of the LRRSA NSW Division visited the Colliery in June 1988. Rail is used for materials and man transport depending on the part of the mine being worked, with a 7 km run to the face. Track also extends for about 1.6 km on a shelf extending north from the mine entrance, along

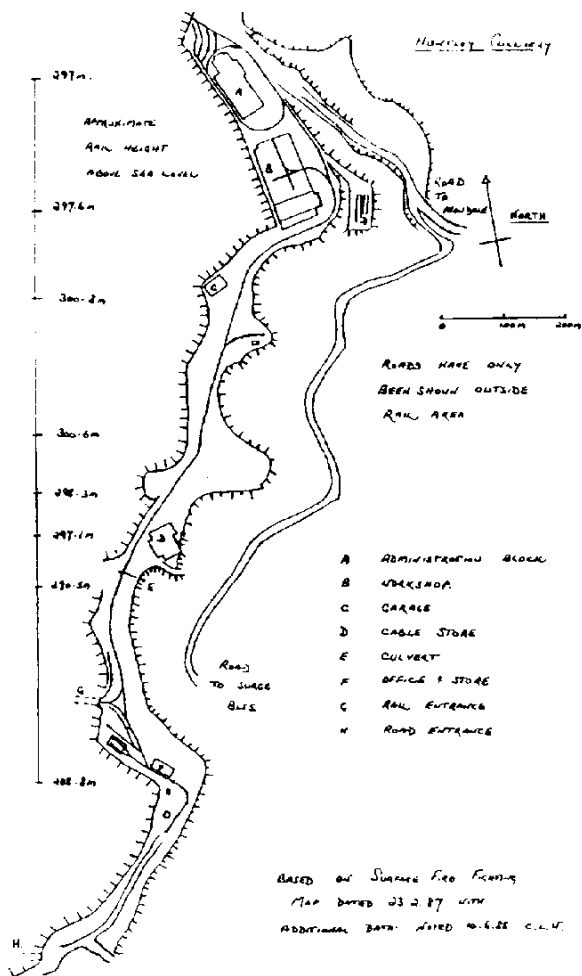

which are sited the mine buildings.

There are two 24-tonne dual cab Gemco 4wBE locomotives in regular use. One, numbered 1, is Gemco 3654.3657.265.88 of 1988, while the other was not seen. One is used for shunting and plant movement underground, while the other is available for transport between the coal face and the surface.

Two diesels are on standby. The first is Kevin, E.M. Baldwin 0-6-0DH 2941-1-2-70 of 1970, which weighs 25 tonnes. This is unusual for a Baldwin underground loco in having side rods, and is fitted with sliding cab doors. The second diesel available for use is 9

Bruce, Neil Moxom 4wDH (L102 12.11.70 of 1970), which came from Coalcliff Colliery in around 1983 (see LRN 28, p.6) and also weighs 25 tonnes. Another similar Moxom locomotive from the same source, 8 Victor, was observed dismantled for spare parts. The derelict remains of Com-Eng 4wDH D1016 of 1957, which was re-engined by E.M. Baldwin in 1979, have been abandoned underground.

Four Gemco 4wBE man-riding vehicles are in service for personnel transport, with two in use at any one time. These are numbered 1 to 4 and

Gemco serial numbers are 3300.01.236.85 of 1985, 3298.99 237.85 of 1985, unknown, and 3540.41.258.86 respectively. These cars have a capacity of 28 men each.

Rolling stock includes Hannaford bogie flat cars for carrying rubber tyred vehicles, two ambulance cars and some flat top wagons acquired at the Bulli Colliery auction, and a four-wheel ballast wagon.

Signalling on the surface includes two-colour lights operated by the driver upon entering each section.

QUEENSLAND

CANE TRAMWAY BIG BIN DEVELOPMENTS 610 mm gauge

A number of mills are pressing ahead with experiments to introduce "big bin" technology. Tully and Babinda mills are reported to have trialled during 1988, a number of four-wheel rigid wheelbase bins of around 10 ton capacity produced by Boogan Implement Works. Marian Mill has trialled a bogie bin equal in size to three of its standard four-wheel bins. This is fitted with bogies produced locally, so constructed as to allow for optimum riding qualities. The bin is fitted with a dummy pair of axles in the centre for automatic handling by the mill's yard creeper system, and it can be tipped in the mill's three-bin capacity tip. The bin worked very successfully for the last few weeks of the season and it recorded loads in excess of 16 tonnes. It is reported that a pair of the same type of bogies have been trialled at Mossman Mill under one of their 12-tonne "canetainers". It is not clear how much service the NQEA/Sugar Research flexible-wheelbase four-wheel bin saw under trial at Farleigh Mill (see LRN 63, p.8). This vehicle was noted parked in the Farleigh Mill yard on a number of occasions during the 1988 season. However, it is reported that Pleystowe Mill will be trialling a number of 15-tonne capacity vehicles thought to be of this type in service in 1989.

The advantage of the bin types being trialled at Tully, Babinda and Marian is that they utilise a significant number of components from existing bin types, such as wheels, bearings, axles and end mesh sections. This means that conversion to such bins is cheaper than building an entire new bin fleet from scratch.

BABINDA CO-OPERATIVE SUGAR MILLING ASSOC LTD 610 mm gauge

(see LRN 67, p.7)

Bundaberg Sugar announced a \$23m takeover bid for Babinda Mill on 30

November. In view of the substantial indebtedness of the mill, it is thought that many growers will be considering the offer carefully. A decision from growers is not expected before the early months of 1989.

Townsville Daily Bulletin 1/12 & 2/12/88 via John Browning

BUNDABERG STEAM TRAMWAY PRESERVATION SOCIETY 610 mm gauge

(see LRN 62, p.8)

From 1 January 1989, this railway will operate in the Botanical Gardens every second Sunday, with additional days during school holidays, between 1000 and 1600. Fares are \$2.00 for adults and \$1.00 children.

CSR LTD, Burdekin District Mills 610 mm & 1067 mm gauge

A development plan for the Burdekin mills has been put forward which, if adopted, could lead to an increase in cane production by 508 to 6.3 million tonnes annually. The plan proposes the amalgamation of all four mill areas (Inkerman, Kalamia, Pioneer and Invicta). A uniform cane bin size and tramline gauge are recommended as well as new tramlines to service future cane areas. The implementation of a uniform tramline gauge would most probably mean the conversion of Pioneer Mill from its unique 1067 mm gauge to bring it in line with the other systems throughout Queensland at 610 mm gauge.

LAPPA 1067 mm gauge

Queensland Railways AIA-AIA DE 1180, built by Walkers Maryborough, was sold during the year to a gold mining company at Lappa (between Mareeba and Chillagoe) for shunting its private siding which serves a treatment plant.

Sunshine Express 10/88 & Rail Australia 9-10/88 via John Browning

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 67, p.8)

North Eton Mill closed on 17 November, at the end of the 1988 crushing season. The tramway system is now under Pleystowe control with the exception of Allandale, transferred to Marian Mill, and Oakenden, transferred to Racecourse. In addition, Habana and the new North Coast line branches are believed to have been transferred from Pleystowe to Farleigh. Physical rail connections already exist to these areas, but the North Eton-Pleystowe link is yet to be built.

Some locomotive transfers from North Eton took place shortly after the end of the season. Com-Eng 0-6-0DM *Ashburton* (A1614 of 1956) was taken to Marian Mill for permanent way work, and will be returned to Farleigh Mill by rail on the completion of the North Eton-Pleystowe link next year. In addition, Com-Eng 0-6-0DH D5 (FB3170 of 1963) was transferred to Marian. Bogie Baldwin locos D7 and D8 (6780-1-8-76 of 1976 and 9815-1-10-81 of 1981) were moved to Pleystowe by road transport, and in return Clyde 0-6-0DH *Palmyra* (63-273 of 1963) and the Gemco Sleeper replacement machine were transported to North Eton from Pleystowe.

It is understood that two more Com-Eng 0-6-0DE locos from North Eton Mill, D4 and D6 (FB3169 of 1963 and FB4383 of 1965) will be transferred to other mills for the 1989 seasons. At this stage, however, there is some divergence of opinion as to whether both should go to Racecourse Mill or one only to Racecourse and one to Marian. In the meantime, both are retained at North Eton for track work during the early part of 1989

Dismantling of North Eton mill was already well under way by December, and considerable cleaning-up around the mill yard seems to have occurred. This seems to have led to the disappearance of the remains of Motor Rail "Simplex" 4wDM 21503 of 1953, which had been dismantled in the mill yard

since 1982.

A considerable amount of track material is stored at North Eton, and the first part of the rail link to Pleystowe will be constructed on about 2.5 km of the trackbed of the old QGR Eton branch line north from Victoria Siding before diverging to join the Pleystowe Victoria Plains line. The old QGR track bed had mostly been graded by late December.

It is understood that Pleystowe will station a number of locomotives on the former North Eton tramway system next year. At this stage, it would appear that these locomotives will be D2, D3 and *Palmyra*, with two based at North Eton and one at Base Camp (Mia Mia). It is expected that bogie Baldwin locomotives will haul made up loads from Mia Mia and possibly North Eton to Pleystowe Mill.

Large numbers of ex-North Eton bins were observed in Pleystowe territory at the end of December both on the Victoria Plains line and at the mill. Other bins were having their wheelsets removed at North Eton Mill, and presumably will be rebuilt for use elsewhere.

John Browning 12/88

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 65, p.10)

It is reported that the planned tourist train service will be inaugurated in May 1989. Overhaul of the locomotive, John Fowler 0-4-2T 20273 of 1934 is proceeding, and the construction of carriages has commenced.

CLIVE PLATER, Caloundra 610 mm gauge

Ruston & Hornsby Model 30DLU 4wDM 371386 of 1954 has been acquired from the Sunshine Plantation by Clive Plater for rebuilding for a tourist project. This unit, originally at Caledonian Colliery, was the original motive power at the "Big Pineapple" but had been on display there for a number of years (see LRN 32, p.10). However, it was not visible on site in May 1987, so it had probably gone by then.

Durundur Railway Bulletin 12/87; John Browning 1/89

EDGAR PLATER, Nambour 610 mm gauge

This long-time employee of Moreton Central Mill has acquired from the Australian Narrow Gauge Railway Museum Society, the Moreton Mill-built 2-2wPM *The Flyer*, built in 1933. This unit was originally fitted with an International petrol engine, replaced in 1954 with a Ford Model A. It was obtained by Ron Aubrey for the abortive Pioneer Transport Museum at Forest Glen in the early 1970s, and was afterwards given to ANGRMS. It has been

stored in Brisbane in semi-dismantled condition for about 15 years.

John Browning 1/89; Bob McKillop 1/89

TASMANIAN TRANSPORT MUSEUM SOCIETY INC. 1067 mm gauge

(see LRN 67, p. 13)

A reply recently received from Markham & Co. Ltd of the Broad Oak Works in Chesterfield, Derbyshire, indicates beyond doubt that they were the makers of the vertical boilered locomotive currently undergoing restoration here. Their order No. 1467 of 27 June 1889 (Olivers) reads: "Customer T.W. & T. Walker - one coffee pot locomotive 3 ft 6 in gauge wheels 7 in on tread, flange two and quarter deep and turned well back, including feed pump and injector, with ash pan, the whole as specified, to burn wood. Total cost 425-17-0 sold for 360-0-0 total weight t6-19cwt-14 lbs". The order book does not record destination. Dispatched in March 1890 (Markham) Markhams had taken over the Oliver works in 1889. No evidence of T.W. & T. Walker having operated a tramway in Tasmania has come to light. The locomotive was a long time in the works and was sold at a loss. The disposition of the locomotive between March 1890 and its first boiler inspection in 1901 is therefore a mystery. It is now obvious that the locomotive was built to run on wooden rails and as it was a wood burner, it was very likely designed for a logging line somewhere. The well known photograph of the locomotive at Hastings

has now been dated at pre-1904 so the evidence of heavy wear with the couplings in the high railway-like position did not have all that many years to occur. Perhaps some reader of LRN may have some idea of the disposition of the locomotive between the years 1890 and 1901 when it is first recorded as being at Hastings, and who were T.W. & T. Walker???

D.L. Beck 10/88

VICTORIA

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Preservation Society 762 mm gauge

(see LRN 67, p.15)

The Climax starts this time, but non-Climax activities will be reported first.

A.G.M.: For the first time ever the PBPS's Annual General Meeting was held at the Nobelius Packing Shed, on Saturday night, 5 November. A special train was run, hauled by 7A, with Mount Lyell cars and an NBH. The AGM went well, though no startling announcements were made. On the departure, 7A sounded magnificent in the quiet night air, as it started to move the train on the steep grade out of Nobelius Siding.

Wright extension: A problem has arisen in that while the right-of-way beyond Lakeside has been reserved for railway purposes, it is currently zoned for recreation. Some local residents have seized on this to object to the extension, and all track-laying work has ceased until the land is rezoned. This may take six months. Apparently one of the alleged concerns of the residents is that the train will disturb the local wombats, which displays an appalling lack of understanding by the residents of the good taste and discrimination of your average wombat.

TACL Tractor: This restoration project is being undertaken by a group of LRRSA members. Work on the frames which are at Emerald is now virtually complete, and the new axlebox castings are currently being machined. Before much further progress can be made the wheel tyres will need to be turned. In the meantime the TACL Tractor Group is negotiating to restore a train for the TACL (and Climax!) consisting of four timber bogies, which are currently at Menzies Creek Museum - two intact and two in bits.

CLIMAX IN THE RAIN

One of the many highlights of the Aus Steam fortnight was the special train to Lakeside, present terminus of the 2 ft 6 in gauge Puffing Billy Railway, on Friday 21 October 1988. From Flinders Street station to Belgrave, the tour

party used the preserved ElecRail set comprising 107M, 341T and 327M "double heading" with the four-car Victoria 150th Anniversary Tait set; the whole ensemble resembling a mobile "Historic Monument". At Belgrave the railfans, many from Britain and the USA as well as interstate, changed to Puffing Billy's station. The special narrow-gauge train had been scheduled for double-headed NA class 2-6-2T's. But, during the preceding week one of the three serviceable NA's had a relapse and reported in sick. With 8A rostered on the regular 10.30am pass., the decision was made to double-head 7A and the Climax locomotive, (B/No.1694 of 1928 ex FCV Tyers Valley Tramway) which had recently been restored to running condition.

The Aus Steam special became its first revenue train, preceding the official launch on 12 November at the Railfans Gala Day (not 5 November as noted in LRN 66)

The weather was rather "soft", with light rain most of the day. This made all English fans feel at home. The 10.30 down pass. departed ten minutes late with driver R. Picking and fireman L. Rickard. Its consist included two carriages for any Aus Steamers who wished to have extra time at Menzies Creek visiting the PBPS Museum which had been specially steamed up for the occasion. This train was followed some half hour later by the Aus Steam special with the Climax (driver D. Marshall, and fireman M. Austin) leading 7A (driver G. Daniel, and fireman L. Thompson).

A slow but steady run ensued to Menzies Creek with the Climax's faster exhaust beat, rumbling gears and clanging bell combining with the NA's slower beat and the shriek of their respective whistles to echo through the rain-sodden forest with an euphonious resonance loud enough to awake the ghosts of Collins Siding.

At Menzies Creek the Climax was detached, leaving 7A to continue to Lakeside and return to Menzies Creek where it was re-attached. The regular train was crossed at Lakeside. At the Museum, Peckett 0-4-0ST (1711/1926 ex West Melbourne Gasworks) was in steam and when placed next to the Climax provided the industrial steam locomotive enthusiasts with a vision of their Shangri-La. Several of the stationary engines were also in steam.

For the return journey to Belgrave, 7A was given the task of leading engine. With the rain setting in and the light deteriorating, photographers were thankful for the sedate pace of the train which still enabled pictures to be made at 1/30 of a second. Try that with the Flying Scotsman all you heavyrailers!!

CLIMAX IN THE SUN

On Saturday 12 November 1988, Melbourne's Age newspaper - which

modestly claims to be Australia's finest daily, proved its claim is justified by giving pride of place on the front page to the Climax.

That day dawned fine and sunny, and stayed that way - unheard of in Melbourne this Spring, but rain would not dare fall on a day of this importance.

A special Galah - sorry Gala - Day timetable was in operation, which was said to be the most intensive in the line's entire VR/ETRB life. All three NAs were in steam (7A, 8A, and 14A), D21 was in growl, and of course the star of the day - Climax 1694 - was in steam. At Menzies Creek museum the Peckett was in steam. NRT1 - Victoria's least offensive diesel locomotive was left out of the proceedings at Emerald car workshops.

The day's events commenced at 9.00 am with diesel-mechanical D21 departing Belgrave yard with a goods train for Menzies Creek. A handful of passengers were accommodated in the combination car/van. This was followed twenty minutes later by the Climax with seven cars and many excited fans. On account of the Climax's demure gait (it was allowed 45 minutes for the four miles to Menzies Creek), it was just after 10.00am before the green painted 7A departed with the next train; a minuscule load that Thomas the Tank Engine would be proud to own. Consisting of one ex-Mount Lyell carriage plus van, the little train had two photo-stops en-route and still arrived at Menzies Creek almost on time.

With the arrival twenty minutes later of the regular Saturday morning pass. behind 8A (black) and 14A (red) bunker to bunker, Menzies Creek was fast becoming a Fat Controller's nightmare. 8A and 14A were in No.1 Road, the Climax in No.2, 7A in No.3 - now on a car-goods train; whilst D21 was hiding at the Belgrave end of No.3 Road.

A large crowd gathered round this impressive sight for the Climax re-commissioning ceremony. PBPS President, Lon Wymond started proceedings by saying that the restoration was done as a result of 9,000 hours of volunteer labour and \$31,000 expenditure. Norm Wadeson then put the Climax in its historical context, by describing the part timber tramways played in Victoria, mentioning the Tyers Valley Tramway in particular, and pointing out the foresight the FCV displayed in choosing 2 ft 6 in gauge. (In retrospect it seems a miracle that the sole survivor of Victoria's steam timber tramway locos was 2 ft 6 in gauge). Norm also mentioned the LRRSA's project to restore the T.A.C.L. tractor. Then Allan Threader - retired former Chairman of the Forests Commission was introduced to re-commission the locomotive. He was responsible for arranging the sale of the loco to the ETRB for one dollar. In his speech he paid tribute to the men who used to work the loco on the Tyers Valley Tramway, to the people responsible for its restoration, and to the Climax itself. He then smashed a bottle of champagne on its front coupling,

and a great cheer arose from the crowd.

It was a simple but very effective ceremony - hopefully someone recorded it on videotape for posterity.

No doubt feeling rather peeved at the attention accorded the four proper locomotives at the Emerald end of the station, D21 sulked as only a diesel can and blew a gasket. Unable to go on, it was rescued by the gallant 14A, which was detached from the regular pass to haul it and its tiny train back to Belgrave. This caused cancellation of the diesel hauled train of Mount Lyell carriages which had been scheduled for later in the day.

With the official ceremony over, trains started leaving Menzies Creek for Lakeside- first the regular pass. now hauled solely by 8A, then the Climax, followed by 7A with a car-goods (mixed). These three trains formed the basis of the day's activities, with the Climax working two return trips Menzies Creek - Lakeside, and both the car-goods and the pass. doing two return trips Belgrave - Lakeside. With such an intensive service, crossing opposing trains at the major stations became the norm; in addition to which Selby and Clematis were at various times open as intermediate block posts to expedite the running of following trains. The car-goods shunted at Clematis twice during the day to provide an authentic recreation of a 1920's VR narrow-gauge train.

Originally some 20 individual workings had been scheduled. Cancellation of the diesel hauled pass. and also the late afternoon Lakeside extra pass. due to late running creep reduced this to 16 workings. With the Night Train also scheduled, it was imperative that the line be clear of all other trains by 7.00 pm. The Climax arrived back at Belgrave about an hour later than its scheduled 5.35 pm.

The Climax was being run very slowly due to one hot axlebox. By the end of the day other people were feeling the heat too.

A most successful day was had, with Museum exhibits in steam, the workshops open for inspection, the sun shining, the steam locomotives steaming, the diesel failing, and almost everyone's first look at an operating Climax loco. A slightly disappointing aspect was that the crowds seemed down on last year's 25th Anniversary extravaganza (which also saw D21 disgrace itself by pulling a carriage off the rails - see LRN 59). Maybe the local fans had OD'd on 3801 or "Flying Scotsman" and could not afford the modest \$25 charge for the go-on-any-train tickets!

Thanks must go to all the volunteers who made it all possible. Next project - G42. If you want G42 to be the only operating 2 ft 6 in gauge garratt in the galaxy, send all your money at once to the "Get G42 Going Committee" at P.O. Box 451, BELGRAVE. (Its tax deductible). By 1995 it could be Collins Siding

Revisited with Climax, Garratt, TACL, and NA s. (Anyone got a spare Harman?).

Incidentally, the Climax is not as soft-voiced as indicated in the last LRN. It made quite a respectable sound as it made its way up the Emerald bank, seemingly without effort, just a very steady rapid beat. Firing it is a hard job - the firemen have had difficulty keeping steam up with a seventy ton load, so a fifty ton limit is in force - still a good train of seven vehicles.s

CLIMAX IN THE DARK!

The PBPS's "End of Year Do" - a social event for its members - was held on Saturday 26 November. A special late-afternoon train consisting of Mount Lyell cars was run to Lakeside, hauled by the Climax. At Lakeside the train continued to the present end of track, before returning to the Nobelius Packing Shed where a good feed was had, and Allan Rowe provided some entertainment. The Climax hauled train then sped back to Belgrave, arriving about 11.15 pm. For this trip the hot axle-box which had been troubling the Climax a fortnight earlier had been cured.

This was probably the last Climax run for some months, as work is now to be done on the drive train, which contains a fair amount of slop, which in turn creates quite a rumble. In any case there is reluctance to use the Climax in the high fire danger period, as it tends to throw out live sparks. These are easily seen on night trips.

WESTERN AUSTRALIA

KIMBERLEY RESTORATION GROUP, Carnarvon 1067 mm gauge

Mike Thomas is heading a group which intends to restore Andrew Barclay 0-4-0T *Kimberley* (1755 of 1922). The locomotive was withdrawn from Public Works Department service in 1960, and was preserved in a local kindergarten. It is planned to move the loco for stripping so that restoration can commence. The boiler and firebox appear to be in good condition. It is also hoped to restore Motor Rail "Simplex" 4wDM 9096 of 1955, which is currently in the grounds of the Lighthouse Cottage Museum after having been placed out of service a few years ago (see LRN 46, p.10).

Rusty Rails 11/88 via John Browning

WEST AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC.

Bennett Brook Railway, Caversham 610 mm gauge

(see LRN 67, p.19)

November 27 marked the end of the 1988 steam season, the first full-length one, beginning on 25 April. Steam hauled trains ran on 34 Sundays and Public Holidays, totalling about 1000 km.

On Saturday 5 November, an Open Day was held on the railway and featured a range of unusual trains, including the Kalamazoo pumper trolley, the Suzuki gang trolley, the Maylands Brickworks-built 4wPM hauling brickworks hoppers, the ex-Bunnings Manjimup Ruston & Hornsby 4wDM (404982 of 1957) hauling four-wheel carriages and flat tops, the ex-Lake View & Star F.C. Hibberd "Planet" 0-4-ODM (2150 of 1938) hauling Lake View hoppers, the 1964-built Gemco-Funkey 4wDM hauling converted WAGR wagons, and ex-South African Railways 2-8-2 NG15 123 (Franco-Belge 2670 of 1951) hauling a mixed train of bogie stock.

The Gemco diesel failed with a faulty final drive gearbox on 13 November, but the "Planet" is available to deputise for it, if required.

Work is continuing on the restoration of the Orenstein & Koppel Mallet 0-4-4-OT (2609 of 1907). Following dismantling, many parts will need to be remachined or built up, with a major early job being the reprofiling of the wheelsets, following building up as necessary. In addition, all the main bronze bearings will need resting and machining. Work is also proceeding on the restoration of 2-8-2 NG15 118 (Henschel 24476 of 1938).

Western Rails 11/88; Rusty Rails 11/88 via John Browning

OVERSEAS

FIJI SUGAR CORPORATION 610 mm gauge

(see LRN 66, p.16 & LRN 67, p.19)

An outcome of Fiji's political upheavals has been an increased concern for security. For the FSC, this has resulted in the construction of high security fences around the mills and restricted access for the general public. Accordingly, photography of railway operations is difficult, particularly outside the crushing season. On the other hand, the FSC is examining the potential for promoting railway enthusiast tours to Fiji. Restoration of Lautoka No. 19 (Hudswell Clarke 1056/1914) to operating condition is under examination.

Lautoka Mill

The new Baguley-Drewry loco mentioned in LRN 66 is B/No. 3770/1985 and

it is numbered SX.18 on the Simplex list, while the 12-ton Hunslet (9267/1986) is No. 17 on the same list. The 18-ton Hunslet (9285/1987) is number LM.18 on the main-line loco list.

Barawai Mill

Loco No. 23 (Baugley-Drewry 3772/1983) has been transferred from Tavua back to the mill. Its place at Tavua has been taken by No. 5 (Clyde 57-149).

Labasa Mill

The new Hunslet loco here is a 12-ton unit, B/No. 9284/1987 and numbered 14 on the mill roster.

Coral Coast Railway Company

This venture is now under new ownership, Bula Investments Pty Limited. The new owners have constructed two additional open carriages and a new station complex at Yanuca Island. They have also opened the Ka Levu cultural and tourist centre opposite the Yanuca station. The locomotive and carriages have been repainted in a bright red livery. A total of five carriages are now available with a total capacity of 90 passengers. A full compliment was aboard for a special tour from a Concorde charter on 1 December 1988. The service to Natadola Beach now operates 7 days a week at 1000 and a sunset and dinner tour recently commenced on Wednesdays.

Bob McKillop 1/89

MEETINGS

MELBOURNE:

WARBURTON

Mike' Mc.Carthy will be speaking on the early years of tramway and sawmilling operations at Warburton. Mike is currently writing the history of tramway operations in this area as a follow-up to Bellbrakes Bullocks and Bushmen. He will be speaking about the mills on Mounts Donna Buang and Victoria, the East Warburton mills, the Mississippi Sawmilling Company as well as the Warburton Steam tramway.

This will be a subject of interest to most members. The area in question featured probably the most intensive use of tramways in Victoria. Be sure not to miss out.

LOCATION: Ashburton Uniting Church Hall Ashburn Grove Ashburton.

DATE: Thursday 8th January at 8.00pm.

SYDNEY

Any member wishing to know the entertainment item should call Craig Wilson on 02-484 7984

LOCATION: Woodstock Community Centre Church St, Burwood

Note : Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 22nd February at 7.30pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-2969488

LOCATION: 150 First Avenue Royston Park. DATE: Thursday 2nd February at 8.00pm.

RESEARCH

PIPEMAKERS PARK, Maribyrnong, Melbourne

Mention of a narrow gauge tramway at the old Humes Limited pipe factory was discovered recently in "Hume News". "After curing in the steam chambers, the finished pipes were rolled onto trolleys on a tramway and then over wooden planks to the pipe racks. Extensive use was made of some 700 m of narrow gauge tramways and a small train to haul pipes to the storage areas. Some of these tramways may have been adapted from the earlier occupants of the site (Melbourne Meat Preserving Company) who also used narrow gauge tracks for the movement of meat.". Does anyone have any further information about this site?

Hume News Vol.65 No.11, 11/88 via Lee Rodda (SA) 1/89

FIELD REPORTS

NSW DIVISIONS BURRAGA FIELD TRIP - 19 NOVEMBER 1988

Fifteen members of the Society attended the annual field trip which was to Burraga, about 240 km west of Sydney on the NSW Central Tablelands, the site of the Lloyd Copper Company's copper mine, smelter and firewood tramway.

The tour was organised by Ross Mainwaring, who put together an

interesting set of tour notes plus a detailed map, and used his familiarity with the site to explain the roles of the various mine, smelter and tramway relics to be seen there.

Members gathered at the derelict Oberon Railway Station which was the terminus of the Tarana to Oberon branch line, now closed. From Oberon it was a 45 minute drive west to Burruga which nowadays is a sleepy village of less than 100 inhabitants, a far cry from the heyday of the mining era when over 1000 people lived there. Two kms south of Burruga, on the side of a steep valley, was where the rich copper lodes outcropped, sparking off Burruga's "golden era".

The copper lode was discovered in 1877 and mining commenced the next year. Mr Lewis Lloyd acquired the property in 1879 and began smelting in 1881. The Lloyd Copper Co. was formed in 1899 to take over the operation. The copper ore was very rich in the early years encouraging the investment of large sums of money, particularly on the copper smelting side. However poor financial and technical decisions characterised this regime and much money was wasted; The "Big Chimney" is a monument to one of these decisions. Together with large water jacket blast furnaces, it cost 60,000 pounds to erect, and was never used because the Burruga ore was not suited to this treatment. The chimney is still standing - apparently it was too expensive to demolish.

Everything was fueled by wood, both mine and smelter. Over 200 tons were burned each day. At times stockpiles of up to 100,000 tons of firewood were accumulated at the works to ensure supply. It is easy to imagine the surrounding area being quickly stripped of trees in the early days. The difficulties in maintaining supplies of firewood, especially in wet weather, led to the decision in 1912 to construct an 8 mile 3 ft gauge tramway north towards still forested regions. Two Shay locomotives were imported to work the line; these eventually found their way down to Powelltown in the 1920s.

The whole operation finally ceased in 1918, though there were some short-lived attempts at mining in latter years during times of high copper prices.

Access to the mine site is over forestry back roads, as the old "traction engine" main road is washed out and also closed off by locked gates where it crosses private property.

An interesting morning was spent inspecting the remains of the mine workings, the Big Chimney, and the foundations of the various crushers, ore concentrators, roasters and furnaces. The large tailings dumps and furnace slag dump are very impressive. Thousands of large moths erupted from the face of the biggest slag dump when we climbed down to look at a tramway formation. Apparently this artificial environment suits them, but it certainly

startled us. Remains of some of the ore and slag tramways were seen but could not be investigated in detail in the time available.

The mine area is liberally sprinkled with open shafts and signs warn unwary trespassers of the perils of venturing off the road. Pebbles dropped down one or two of the nearer shafts certainly took a very long time to hit bottom.

The apparently haphazard layout of the smelter workings was hard to work out, until Ross explained that the Company had ignored conventional smelting wisdom during construction. They did not site each operation lower down the hillside than the preceding one, so that ore could be gravity fed from the mine to the concentrators, down to the calciners, then down to the furnaces. If anything, each installation was sited higher up the hillside than the last so that ores and concentrates had to be hauled back up the hillside after each operation. This materially added to the operating costs.

After lunch the group walked selected lengths of the firewood tramway. Between the mine and Burraga village, strategically sited blackberry thickets called for some detours and also discouraged close-up investigation in their vicinity. Quite substantially earthworks made the formation easy to follow.

North of Burraga, the line traverses open farmland, until near the northern terminus where a Forestry Commission pine forest has been planted on top of it. Finally the line petered out in a broad grassy valley, which was probably thickly wooded before the tramway and the firewood cutters arrived.

In some isolated locations a few sleepers and dogspikes remain, though it seems all the rails and other track materials were thoroughly retrieved.

More information on Burraga and its copper mine is presented in a good local history publication (unfortunately out of print): "The Annals of Burraga", 2nd Edition 1986, by Kevin F. Toole. Ross had brought a copy along, so we were able to compare the photographs of the mine, smelter and tramway in their heyday with today's remains - a great help in interpreting the site.

The Burraga Copper Mine and its tramways have yet to be researched in depth, but they would certainly make for a very interesting feature article in Light Railways someday.

This annual field trip was judged very successful and in the best traditions of the LRRSA - good company, a spectacular location full of industrial archaeology, and the remains of a unique Shay locomotive operated tramway that played a key transport role for an unusual mine and smelter. As one of the group remarked at the end of the day, "This is going to be a hard act to follow next year!"

Tour Notes; Ian McNeil 1/89

SOME RECENT PUBLICATIONS

THE LOST PLANTATION: A HISTORY OF THE AUSTRALLAN TEA INDUSTRY

By R.J. Taylor

This book features mention and illustration of a wooden-railed tramway which ran 800 yards from a wharf at Bingil Bay in North Queensland to a sawmill. The line was built in the 1890s as part of the development of the area by the pioneering Cutten family, and was destroyed by a cyclone in 1918.

THE WONTHAGGI COALFIELDS: A STORY OF THE MEN AND THE MINES

By Philip Harper Published by Electrical Industry Advertising, Melbourne, 1987.

PROSERPINE "THEN AND NOW": A PICTORIAL RECORD

Compiled by Proserpine Historical Museum Society and published by Mercury Printing Services, Mackay, 1988.

This 96 page book is of some interest to light railway enthusiasts, with a few photographs of sugar, mining, and jetty tramways, but these form only a small proportion of the entire work.

CANE TRAIN: THE SUGAR-CANE RAILWAYS OF FIJI

By Peter Dyer & Peter Hodge. Published by the New Zealand Railway & Locomotive Society Inc.

Simply magnificent, excellent value, and a must for every genuine enthusiast!

TIMBERTOWN, Wauchope 610 mm gauge

(see LRN 66, p.8)

On 14 January, Fowler 0-6-0T 12271 of 1910 (no name carried at present) was in use. Stabled at Broken Bago station was Hudswell Clarke 0-6-0 1862 of 1953, and Motor Rail "Simplex" 4wDM 4214 of 1929. Although the Hudswell Clarke does not carry a running number, it is referred to as "No.6" on a sign at

the main station. Fowler 0-4-2T 17881 of 1928 was in storage in the running shed near the main station, and is apparently in need of new tubes.

Chris Hart 1/89

QUEENSLAND

ACLAND COAL MINE MUSEUM 610 mm gauge

(see LRN 62, p.7)

There are two working locos on site, Jenbach 4wDM 1138 of 1952, and Bundaberg Foundry 4wDM 16 of 1955. In addition, there are two 4wDM chassis numbered 1 (Jenbach 1139 of 1952) and 3 (Jenbach 1137 of 1952). One spare Jenbach one-cylinder diesel engine is stored in the colliery workshop.

Kath Greenhalgh (Acland Coal Mine Museum) 1/89

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610 mm gauge

(see LRN 66, p.9)

Two VTS steel ballast hoppers have been donated to the Society by Queensland Railways. It is hoped that they can be mounted on line bogies and placed into service on ballasting duties in the near future.

Durundur Railway Bulletin 2/89 via John Browning

CANNONVALE 610 mm gauge

Observed stored on the site of the closed Airlie Cove caravan park were a number of items of four-wheel rolling stock ex Hayman Island (see LRN 47, p.9). Six passenger cars, one baggage car, five flat cars and one flat trolley were noted. Two Ruston & Hornsby 4wDM locomotives which had been on site here are stated to have been sold somewhere in south-east Queensland for possible reuse. The third locomotive has been acquired for use at Frankston Aquatic Centre, Bloomsbury.

John Browning 1/89

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 67, p.7)

A start was made on 25 October on the conversion to a ballast plough of Motor Rail "Simplex" 2 (3717 of 1925). By December, it had been cut down to footplate level and was moved to near the navvy shed where it remained with no further work being done by 19 February.

From 13 October until the end of crushing, Clyde 0-6-0DH 18 (DHI.5 of

1954), took over the duties of sister loco 16 on cane haulage for one shift per day, following the fitting of 18 with a high geared shaft drive to replace a cracked low gear one. During the 1989 slack season, 16 (DHL1 of 1954) is receiving a virtual complete overhaul, with motor, torque converter, final drive, rods, wheels and other running gear removed and receiving attention.. The final drive was found to have cracks in the mounting similar to those experienced with 18.

The Hawkins Creek line is to be extended by 1.2 km this slack season, with a large loop siding to be constructed at the terminus. This will shorten the 11 km round trip for cane haulouts from the Dalrymple area.

Chris Hart 2/89

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 66, p.8)

On 15 October, Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) and the passenger carriage were used to give passenger rides in Ingham in conjunction with the annual Maraka festival.

Two ballast hoppers received from Goondi Mill when it closed have not been used since arriving at Victoria as a result of their poor condition.

In mid-February, the QR Gairloch loop siding was seen to have been completely removed, including the points. The short length of dual gauge mill trackage from this siding to Sach's Lane had also been lifted, leaving only the level crossing intact. The rest of the dual gauge line to Victoria Mill had been lifted and replaced with 2 ft gauge track during the 1988 slack season.

McKells Depot at Abergowrie closed at the end of the 1988 season. Opened in 1953, it was an important feature of the Abergowrie Extension, a massive expansion which took place from 1950 to 1953, and which resulted in the duplication of Victoria Mill. At its peak it had four diesel locomotives based there, although this was reduced to one in recent times.

Chris Hart 2/89; Victoria Mill Vibes 12/88 via Chris Hart

W.H. & D.C. DINNIE, Strathdickie Smithy, near Proserpine 610 mm gauge

Motor Rail 4wPM 4199 of 1927, ex Hayman Island is in store here, pending rebuilding to steam outline for use at Frankston Aquatic Centre, Bloomsbury (see LRN 64, p.10). Also on site were two wooden framed flat cars with no wheels or axles and a water tank wagon complete, also from Hayman Island. In addition, a four-wheeled steel chassis built on site was observed.

John Browning 1/89

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 68, p.7)

Tenders closed on 23 January for the construction of a reinforced concrete tramway bridge at Dows Creek, on the Marian Mill system. The bridge will have two 11 m spans, and is part of a further extension of tramway along the closed QGR Kungurri branch.

Mackay Daily Mercury 7/1/89 via John Browning

MOSSMAN CENTRAL MILL CO LTD 610 mm gauge

(see LRN 66, p.11)

Omitted from a previous report was note of the arrival of a new Gemco sleeper replacement machine, 521885005293-R854-87 of 1987. Apologies to our correspondent.

John Kramer 7/88

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 68, p.8)

Observed here at the end of December were three yellow painted bogie ballast hoppers, numbered MG1, MG2, and MG4. They carried "CAPITAL ENGINEERING, BRISBANE" plates. Also seen near the mill was a Fowler steam locomotive cab, presumably that from 0-4-2T 20273 of 1934, believed to be under restoration for a tourist train project.

Chris Hart 2/89

NORTH COAST EQUIPMENT HIRE, Mackay Harbour 610 mm gauge

Discovered in this scrap yard was engineless Motor Rail 4wDM 21503 of 1953 ex North Eton Mill. It appeared to have been placed to one side with other equipment which might see further use. Also present were a number of cane bins and wheelsets.

John Browning 1/89

THE SUGAR BOARD, Mackay 1067 mm gauge

(see LRN 64, p.12)

Com-Eng 0-6-0DH F1029 of 1958, which had been absent from its usual position at the bulk sugar terminal for some months, reappeared in January, freshly painted in silver. It was noted in the small shed near the terminal entrance with Com-Eng 0-6-0DH *Alex T. Hamilton* (F1018 of 1957), parked nearby.

John Browning 1/89

THE SUGAR BOARD, Townsville 1067 mm gauge

(see LRN 68, p.8)

A surprising discovery at Townsville Harbour in January was the 4wDM "Simplex" locomotive formerly at Hambledon Mill, which disappeared after 1984. This unit, constructed using the frame of a World War I Motor Rail 2 ft gauge 40 hp petrol locomotive, came to Hambledon in 1949, and was possibly supplied as an F.C. Hibberd "Planet" locomotive. (Hibberd built many "new" locomotives using stockpiled surplus locomotives and parts of World War I vintage). It has no engine or canopy, and is parked just inside the main gate of the bulk sugar terminal.

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm gauge

P.O. Box 21, Alexandra Vic 3714

(see LRN 67, p.14)

Ex

SECV 3 ft gauge Bogong Creek Tramway petrol trolley converted to 2 ft gauge for use at the Alexandra Timber Tramway & Museum.

Photo: Peter Evans

Pleasing progress has been made on several projects at the Museum over

the summer months. A new shed has been erected for the broad gauge ganger's quadricycle, and the old shed dismantled to make room for a new way and works depot. The signal mast has been painted and is now operational, and several tons of loco wood have been cut up and stacked next to the loco shed. A large quantity of 60 lb rail has been lifted from the Alexandra yards for the next stage of the re-railing project, with the added benefit of making the job of grass cutting easier. To further assist in this work, the Museum recently purchased a ride-on mower. A large gantry has also been purchased and erected over the dual gauge line at the loco depot. This was used to lower the two cylinder Dorman diesel engine into "Simplex" 10058 on 15.2.89.

On 10 January, a plaque was unveiled at the winch site to commemorate the deaths of twelve timber workers in the Rubicon forest on the 50th Anniversary of their deaths during the 1939 bushfires. The short ceremony was conducted by Alexandra Shire President, Worrall Jones, who also took the opportunity to re-affirm the Shire's commitment to the continued existence of the Museum. The ceremony was well attended by the local community, including many former timber workers and relatives of the deceased.

Patronage during the summer months has been a little below the Museum's expectations, and was no doubt due to the extremely hot weather which coincided with the running days. Trains are now operated with the John Fowler locomotive running in reverse in an attempt to equalise the flange wear on the wheels. This also makes duty on the footplate a little cooler for the crew!

On 11 February 1989, the Museum took delivery of a new item of motive power. This was originally a 5 ft 3 in gauge Victorian Railways KS petrol trolley. It was last used converted to 3 ft gauge on the S.E.C.V. Bogong Creek raceline tramway. After being taken out of service around 1980, it was purchased by Denys Steinhauser and after being in storage for some time, was restored and further re-gauged to 2 ft by Denys and Alan Douglas at the Wombat Gully Tramway at Leneva, and purchased by Peter Evans for use at Alexandra. While being restored, the number "2" was found stencilled on the frame. The "KS" has been loaned to the LRRSA for display on its stand at the A.M.R.A. Model Railway Exhibition to be held at Camberwell during March.

The Museum has produced a videotape entitled *Rails to Rubicon*, a history of the timber mills and light railways in the Rubicon Forest. Running 53 minutes, the videotape is narrated by those who worked at the mills and on the tramways, and includes a graphic account of the 1939 bushfires. The tape is illustrated with many old photographs drawn from collections held by the Museum and LRRSA members. VHS copies are available from the Museum

for \$30.00 plus \$5.00 post and packaging. A second videotape is now in production.

The Australian 13/2/89

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Preservation Society 762 mm gauge

(see LRN 68, p.10)

Wright extension: Rezoning of the right-of-way beyond Lakeside for railway purposes has not yet happened, so track laying is still halted. One of the objectors allegedly has his vegetable patch on ETRB land (but not interfering with the railway alignment) - when this was pointed out to them they ceased to object! Once the bureaucratic problems have been solved the track laying team will attempt to break all their previous records on the length of track laid in a single day.

Plasser Ballast Tamper: During the week ending 18 February, the Puffing Billy Railway became the proud owner of a brand new Plasser ballast tamper, costing around \$140,000. On Sunday, 19 February, it was in the Belgrave workshops standing next to the Climax - quite a contrast. It bears a plate showing that it is Machine No.361, Type: PTT 116; Year of Manufacture: 1988; Travelling Speed: 40 km/h; and Gross Weight: 12 tonnes.

Locomotives: 7A and 8A are handling most of the regular traffic. 14A is being used less than the others, since it will soon be due for work on the wheel profiles. Few regular trains this summer have suffered the indignity of being hauled by D21, as Total Fire Ban days have been almost non-existent. Volunteer teams are quite active on the restoration of 12A and G42, whilst the Climax team is working on improving the drive shafts, which have a lot of slop in them. On 19 February, four volunteer teams were active at Belgrave on motive power restoration (12A, G42, Climax and TACL). It is intended to bring G42's boiler to Belgrave shortly.

The Climax will shortly end its period of aestivation (its like hibernation but in the summer!) as it is rostered to haul a ballast and firewood train on Saturday 11 March. The trip is scheduled to depart Belgrave at 7.30 am, and the train will spend most of the day at Clematis where firewood will be cut.

It is scheduled to return to Belgrave after the last passenger train of the day.

Frank Stamford 2/89

T.A.C.L. RAIL TRACTOR RESTORATION - PROGRESS REPORT

A Project to Restore the Climax's Little (Ugly) Brother

(see LRN 67, p.3)

Visible progress on this project, which is being undertaken by LRRSA members, came to a hiatus some months ago after work on the frames was effectively completed, but there has been activity behind the scenes. Roger and James Wotherspoon have completely restored the engine, radiator and fuel tank - and made a magnificent job of them. The axlebox castings are currently being machined at Belgrave workshops by the T.A.C.L. team, under Ron Gunn's valued guidance. Replacement coil springs for the axleboxes have been ordered. There remains a major potential problem with the wheel tyres. It appears that three wheel tyres are capable of being turned to the right profile, but the fourth is beyond redemption. We will have to make a decision on this shortly - unfortunately most of the options appear to be expensive. (Standby for some novel fund-raising efforts if this proves to be the case!). Do any of our astute readers have any bright ideas for a solution? (Call Frank Stamford on 03 830-1640; or leave a recorded message on 03 668-7341 and I will call you back).

At some stage in the T.A.C.L.'s rugged life, the bush engineers replaced one of the sprung axleboxes with a very crude fixed axlebox. This has created

more problems for us than anything else with this restoration. The fixed axlebox caused the axle-journal to wear into a sort of pear shape - this has to be turned and sleeved. But so much wear occurred on the wheel tyre that it now has a very thin tread and is beginning to resemble a pulley.

T.A.C.L. Donations: Donations are gratefully acknowledged from W.H.J. Blyth, and Ralph Alger. Total donations received to date amount to \$409.99, income from other fund raising efforts has been \$387.50. Expenses have been \$352 (axleboxes and hornguides); so our available funds are currently \$445.49).

Also acknowledged with thanks, are the several people who called with suggestions for cheaper sources of chains and chain sprockets.

Frank Stamford 2/89

MEETINGS

MELBOURNE:

MARYSVILLE

Peter Evans has undertaken extensive research into the history of the sawmills and tramways of Marysville over the past four or five years. Although his work in this area is on-going he will be describing the history of tramway operations at the April meeting.

Those of you who know Peter will be aware of the considerable time spent by him 'on the ground' in investigating this area. This will be a highly informative and interesting evening dealing with the last sawmilling region to extensively use tramways. Be sure not to miss it.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton

DATE: Thursday 13 April, 1989 at 8.00pm.

SYDNEY:

Indonesia is one of the last frontiers of the traditional steam industrial railway. Several years ago Ian Seers went in search of these narrow gauge exotics. If you like steam, a meeting not to be missed.

LOCATION: Woodstock Community Centre, Church St Burwood.

DATE: Wednesday 26 April. 1989 at 7.30pm.

ADELAIDE:

Contact Arnold Lockyer for details. Phone 08-2969488

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 6 April, 1989 at 8.00pm.

NOTES, CORRECTIONS AND COMMENTS

ILLAWARRA HISTORICAL SOCIETY MUSEUM, Wollongong

The museum has a display of artifacts connected with the coal mining industry. For Heritage Week, commencing 16 April, an exhibition, "Illawarra at Work" was mounted, featuring a fine display of photographs of early collieries, coke works, smelters and steel works, many of which feature rail operations, and many of which come from BHP Archives. The museum is open 10 am to 2 pm weekdays and 1.30 pm to 4.30 pm weekends.

Daily Mirror 10/4/89 via Ray Graf

ROTTNEST ISLAND, Western Australia

Ray Graf has uncovered the publication *All in a Flash - Rottnest Communications 1829-1979* by John Moynihan, which deals with the history of Rottnest Island, and features a number of photographs showing tramway operations. Another useful source would appear to be *Rottnest Island in History & Legend* by W. Somerville, published by the Rottnest Island Board in its 4th edition in 1976.

FOR SALE

TGR Gang motors WG 36 & 66 plus manual and spare parts including turntable. Last serviced 1985. Offers Lou Rae 004 25 5236.

Peter Jzilezck

FIELD REPORT

NORTH KEELING ISLAND, Indian Ocean

(see LRN 68, p.3)

The *West Australian* of 11 March 1989 carried a weekend feature article on a German diving expedition on the *Emden*. A photograph with the caption

"First Officer Hellmuth von Mucke and the German raiders leave Direction Island jetty to take charge of the schooner *Ayesha*" (courtesy Imperial War Museum, London) shows what appear to be two or three small flat top trolleys on a jetty railway. The '*Ayesha*' was the Clunies-Ross schooner which the Germans commandeered for their return to Germany. A paragraph of the article reads: "Clunies-Ross built a small railway line across North Keeling from the protected anchorage, to remove material. It is still there, threading through the growth." Clunies-Ross apparently was the first to salvage material from *Emden*, "smarting about the loss of his schooner", but the Japanese did undertake further salvage many years later.

West Australian 11/3/89 via David Whiteford 3/89

TOUR REPORT

MORE MARCH MADNESS IN MELBOURNE

or

Palm Sunday Pilgrimage Past Powelltown

Despite the weather forecast of a warm 27 degrees, Sunday 19 March dawned rather cool with total cloud and patchy drizzle. No doubt the weather god couldn't handle the change from Daylight Saving that occurred during the night! Stumbling out of beds all over Melbourne, Light Railway devotees commenced their Pilgrimage to the Ada Valley for their annual family day outing. Along the "Pilgrim's Way", through Yarra Junction, Gilderoy and Powelltown; watched over by the spirits of *Little Yarra* and *Powellite*; the smaller than usual crowd convoked where Dowey Spur Road crosses the route of the Powelltown Tramway's High Lead incline.

Shortly after 10 am our assembled pilgrims, including some welcome "new faces", headed off in single file northwards down the incline towards the Ada River. Along the way, remains of sleepers and dogspikes were noted together with lengths of rusty cable and the remains of the three-rail trestle bridge which was part of the incline. At the bottom, a pair of tramway wheels off a log bogie were inspected accompanied by suitable murmurings of reverence. Unfortunately the Ada River bridge is approaching a mid-life crisis point and the traveller must, for part of the way, tramp through the swampy river flats, crossing the river by logs in order to reach the Ada No.2 Mill site. Here there are more wheels, pieces of steel rail, old boilers and the holy grail itself - the saddle tank from *Squirt*, the 0-4-2ST (AB311/1888 and KS539/1896). Suitably enriched by this encounter, the group headed off up the incline towards the New Ada Mill, a distance of some 1.5 km, all uphill. The Federal Mill tramway

was crossed after some 300 yards, then a bit further a winch engine and boiler, encircled shrine-like in the enveloping greenery, were inspected. (See LR 31 for photo of these objects un-encircled - 19 years ago.)

After this brief respite, the faithful resumed their upward climb. On this stretch, the smallest legs in the group gave out and had to retire, however the majority of pilgrims reached their mecca and paid dutiful homage to the various "dejecta membra" at the New Ada Mill site. From here, we retraced our path to the south side of the Ada River, meeting a group of late arrivals along the way. Lunch was partaken at this point with the meat-eaters encircling the barbecues whilst the vegetarians devoured sandwiches and salads.

Suitably refreshed, the party (making real martyrs of themselves) headed off again into the Ada River swamp to retrace their footsteps of the morning passed the Ada No.2, to the Federal Mill tramway crossing where a right turn was made onto the track that meanders eastward a couple of kilometres to the New Federal Mill. The cleared path made walking easy as it follows the contours and it was only the bridge crossings that made you wonder about the "family" bit in the tour brochure! (Could Grandma have done it?) Cut into the hillside overlooking the Ada valley, this tramway must have enjoyed considerable vistas before regrowth. Just before the mill, the tramway crossed the Little Ada River on a massive pigsty type bridge which now leans precariously. It is worth recording for posterity that our world-renowned Tour Organiser may well have been the last person in our Galaxy to have crossed this bridge whilst doing the trial-run for this tour! Since his crossing, the bridge has taken a further turn for the worse and is now in danger of committing suicide! Unfortunately, so much timber industry engineering and construction was with logs and timbers, which being bio-degradable, don't stand the test of time. Can anyone say that to stand in the chilly waters of the Little Ada and gaze up at this venerable bridge is any less an experience than to gaze up, at say, Flinders Street Station or St. Pauls Cathedral? They are all monuments to their designers and the men who built them. (Maybe the PBPS could build a pigsty type bridge at Wright to re-create a decaying art and solve their bridging problem.)

A short distance further on at the millsite, the party scattered to try and locate the remains which had previously been mapped here. The so-called "100 ft poles", once used to support a water tank, had shrunk somewhat, and the old huts are looking a bit worse for wear. Diligent searching is required to locate tramway formations and other revered items that have all but disappeared; the concrete mill foundations will one day become the only relics that pious bush-bashers will find to adore here.

Finally, with their veneration sated, the group reassembled and started the

homeward plod. Over the creeks, across bridges, down slippery paths, "hang-a-lefty" at the Powelltown Tramway, down to Ada No.2 through the mud and slush and finally plod...plood...ploood uphill to the parked cars where arrival was spot on the advertised 4 pm. How's that for organisation! Many thanks to Peter Evans and Jack Stock for the great efforts each put into the day, which despite the small turnout, was much enjoyed by all.

"Herr V. Rayles" 3/89

LOCO & ROLLING STOCK MANUFACTURERS

EIMCO AUSTRALIA PTY LTD

(see LRN 67, p.6)

It is reported that this company has contracted to supply a bogie diesel hydrostatic locomotive to South Johnstone Mill, expected to be delivered by the end of the 1989 season. It is believed that this unit will be constructed by associate company Prof Engineering of Harare, Zimbabwe, and will be imported to Australia in knock-down form, for assembly locally prior to delivery. Prof has already built 762 mm gauge bogie diesels for service in southern Africa. It is understood that the imported unit will be a prototype for future construction planned to be carried out in Australia.

Eimco are also understood to be supplying a soundproofed cab for a Clyde 0-6-0DH at Proserpine Mill.

Mike Gray via David Mewes 2/89; Bob James 3/89

NEW SOUTH WALES

BHP STEEL, Sheet & Coil Division, Wollongong 1435 mm gauge

See BHP STEEL, Slab & Plate Division, Port Kembla

BHP STEEL, Slab & Plate Division, Port Kembla 1435 mm gauge

(see LRN 69, p.5)

The former Lysaght's Works Pty Ltd and Commonwealth Rolling Mills Pty Ltd are now combined as BHP Steel Sheet & Coil Division.

Two of the former Lysaght's Goninon B-B DE locos have now been withdrawn, JL2 *Primrose* (5 of 1955) in December 1987, and JL1 *Ann* (4 of 1955) in May

1988. Sister loco JL3 *Helen Mary* (017 of 1962) and larger Bo-Bo DE JL4 are still in use, but the decision has been taken to replace them with locos leased by the Slab & Plate Division.

Commonwealth Engineering Bo-Bo D7 was expected to enter service in February 1989, with English Electric (Australia) B-B DE's D23, D24 and C21 to follow. These units will be maintained and overhauled by the Slab & Plate Division, but will be reliveried in the yellow with black dazzle stripes of the Sheet & Coil Division. Other Slab & Plate locos hired to Sheet & Coil over recent times will be returned to Slab & Plate to become spare locos for use as required.

Ray Graf observed JL4 hauling D7, in yellow livery, to the Spring Hill works on 6 March. This was possibly the delivery of DL7 to the Sheet & Coil Division. On 10 March, D7 was seen in service hauling the coil steel train which runs over SRA tracks between the two plants.

There is no truth in the rumour that BHP were to buy Westrail K class locomotives.

Rail Australia 1-2/89; Ray Graf 3/89

HUNTER VALLEY TRAINING CO, East Greta 1435 mm gauge

In early January, Coal & Allied handed over the ex-South Maitland Railways 2-8-2T locomotives, which have been unused since the closure of the Richmond Vale Railway in September 1988, to the Hunter Valley Training Co. This organisation was responsible for the restoration of 3801 in Newcastle. It is understood that their operations have now been moved to East Greta, where the SMR locomotives will be restored, but for what type of future use is not known.

ARHS "Bulletin" 3/89 via John Browning

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 65. p.5)

The Leyland Zinns loco No.3 was cleared for regular operation during March 1989. Final work entailed the fitting of a heavier air compressor and new air pipes. This unit is now available for school visits during weekdays when the steam locos are not in service.

Work is continuing on the assembly of former Corrimall Coal Coy. loco *Burra* (Hawthorn Leslie 3574 of 1923). Attention is being paid to the fitting of the slide bars and making new slippers for the crossheads, while initial work is being carried out on assembling the eccentric straps and valve rods.

Automatic couplers have been fitted to the trailing end of the Perry loco *Tully 6* and Hudswell Clarke loco *Cairns* and the leading end of the passenger car set. These were first used on the March running day. It is planned to gradually fit these modern couplings to all passenger rolling stock and locos.

Brake gear has been constructed for former Melbourne cable car 430 and this is being progressively fitted to this 99 year-old carriage. During August 1988 the weather rails above the windows were shaped and screwed into position on this car.

Former Sydney tramcar C 95 arrived at Albion Park on 7 January 1989. This was purchased by member R. Hague from the Steam Tram Preservation Society at Parramatta Park on 27 November 1982 after the standard gauge Peckham truck had been sold to the Ferrymead Museum in New Zealand. This 8 metre long tram entered service on the George St. electric tramway in Sydney during December 1899. R. Hague is leasing this vehicle to the ILRMS for a nominal sum and work has commenced on its reconstruction. The side panels have already been stripped from one side and by early April damaged side ribs had been repaired and rotten horizontal members replaced by new timber. Marine ply has been purchased to replace the cracked red cedar sides.

At present this end loading saloon car is standing on former Rubicon Tramway (Vic) bogies but R. Hague has provided a pair of heavy duty low profile 3 ft gauge bogies which will be narrowed down to 2 ft gauge. A community service worker with boiler making experience is constructing a steel underframe for this carriage from channel and angle steel sections.

By the end of December, the first reconstructed Shay loco bogie was completed which will eventually be used under a unit to be reconstructed from former Munro Shays (Lima 906 of 1904 and 2097 of 1907). Bolt and rivet holes are being currently set out on the RSJ's which will form the new chassis for this locomotive.

Work is progressing on the construction of an imitation battery box for the Gemco electric loco used on the tramway which connects the Museum car park with the main steam train station. This locomotive collects power from overhead wire.

During August, a restored NSWGR home signal was connected to the lever frame in the former Otford signal box. In addition the west points in the "Yallah" station yard are also worked from this frame. The double post former QR lattice mast signal has been repainted and will soon be erected at the eastern end of the station loop. A small display of signal box artifacts has been established in the signal box.

The replacement of wooden sleepers with steel ones has continued in the main Museum compound yard while the points in this area have been connected to individual "wharf type" levers.

The major project completed during September 1988 was the 6.5m x 17m extension to the annex shed. A total of 150 metres of track is now under

cover, while a carpenters' and electricians' workshop has been included in the extension covering a 6.5m x 6.5m area.

A large band saw, a planing machine and a power docking saw bench have been installed in the new woodwork shop. The machines available now in the 7m x 20m fitting shop include a lathe, shaper machine, circular saw sharpening machine, a milling machine, large pedestal drill, small pedestal bench drill, a large radial drill and a power hack saw. In addition to welding equipment and air powered tools, the Museum has light capacity and heavy capacity hydraulic presses, as well as two powered grinding machines. These facilities, as well as machines available in local industrial plants, mean that the ILRMS now has the capacity to possibly build new steam locos if time and funds permitted!!!

Steady progress is being made on assembling the motor unit and ancillary items on the former Victoria Mill Drewry inspection car. The motor was overhauled many years ago while the chassis has been straightened and a new body constructed. It is hoped that this unit will finally be available for limited traffic at the end of this year.

The fork lift, powered by a Meadows engine, has been taken to a local auto engineering shop for a complete motor overhaul.

NOTE: The Society has changed its postal address to BOX 244, ALBION PARK NSW 2527. Items sent to the former Wollongong address are being forwarded over the next few months to the new address.

Ken McCarthy 4/89

MOUNTAIN HIGH RAILWAY CO PTY LTD, Tumut 1435 mm gauge

(see LRN 69, p.5)

A second locomotive has been acquired for the line, from BHP Steel, Port Kembla. This is possibly English Electric (Australia) B-B DH D10, which is said to have been sold into preservation. It is hoped that track maintenance progress will enable trains to run the whole distance to Batlow by late 1989.

The Land Magazine 9/2/89 via Ray Graf;

Rail Australia 1-2/89 via John Browning

QUEENSLAND

CSR LTD, Burdekin district mills 610 mm & 1067 mm gauge

(see LRN 68, p.6)

An industrial dispute concerning the loading of QGR bulk sugar wagons at CSR's Burdekin mills took place last year. The CSR company announced early in the year that all shunting and loading operations would in future

be carried out by QGR employees. The upshot of a Conference before the Industrial Commission was that mill employees would load but that QGR locomotives would be responsible for all shunting, leading to a loss of five mill positions rather than the 17 first proposed.

The decision to have QGR locomotives do shunting in the place of mill locomotives probably applies to Pioneer and Kalamia Mills. Kalamia Mill has a 6.5 km dual gauge line from the QGR main line to the mill on which a 2 ft gauge mill diesel hauled the sugar wagons. Pioneer Mill has a 2 km link with the QGR (the mill tramlines are the same gauge as the government railway), and the sugar wagons used to be handled by the ex-Aramac Tramway Walkers 0-6-0DH 583 of 1968. Inkerman and Invicta Mills were constructed adjacent to the QGR north coast line, and are served by government railway sidings.

A radio report on Cyclone Aivu stated that flooding had been exacerbated on the Haughton River when cane bins from Invicta Mill were washed into the river, causing a barrier to the flow of flood waters.

Pioneer Mill is reported to be further extending its tramline up river on the north side of the Burdekin.

*The Australian Worker 2/8/88 via Chris Hart,
John Browning, Bob James*

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 69, p.6)

Work had still not commenced on the Hawkins Creek tramline extension by the end of March, although 60 lb ex-Ghan rail has been arriving at the mill and made up into panels in preparation for tracklaying. Speculation of further possible extension of this line to link into the Abergowrie area of Victoria Mill has resurfaced as a State Forest area at Dalrymple has been reserved for possible future cane growing.

Motor Rail "Simplex" 3717 of 1925 was converted into a ballast plough at Rinaudo's Engineering, Macknade, in March-April. An 11 hp Honda motor drives a hydraulic pump supplying oil to the three hydraulic rams used for raising and lowering the blades. It is not self-propelled. The two ballast weights which had been removed from Simplex No.4 some years ago have been bolted across the middle of the frame.

Chris Hart 4/89; Herbert River Express 3/1/89 via Chris Hart

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 69, p.7)

Growers have been asked to consider making expressions of interest into an area of vacant Crown Land, the Lannercost section of Wharps Holding,

which is under pending resumption. This area is suitable for cane growing and CSR has indicated that it will be serviced by tramline and siding facilities to cater for cane crops produced on it. The area is directly to the south-west of the township of Ingham.

Herbert River Express 3/1/89 via Chris Hart

MACKAY SUGAR CO-OPERATIVE ASSOC LTD 610 mm gauge

(see LRN 69, p.7)

A great deal of tramline and other work is being carried out in connection with the rationalisation following the closure of North Eton Mill. Major tramline construction and maintenance was observed during March and April, but this was being very seriously hampered by bad weather. Large parts of the former North Eton tramline network are being completely reconstructed, while tracklaying has begun on the former QGR Eton branch formation which will provide the link to Pleystowe Mill. The southern part of the Pleystowe Victoria Plains line, which will also form part of the North Eton link, is also being completely rebuilt. However, by the end of March, work did not seem to have commenced on such important projects as the Habana-Farleigh link, the Langdon extension to the Marian Mill Dows Creek line (apart from foundation work for the Dows Creek bridge), and the new formation on the Pleystowe-North Eton link. Even by the end of April, work on the Racecourse-Pleystowe link had not commenced, and the new formation for the Pleystowe-North Eton link had barely been started, amidst seas of mud and with water standing in excavations everywhere. Continuing bad weather and delayed starts on some jobs means that to have the tramlines ready for a mid-June start of crushing date will be extremely difficult to achieve.

At Racecourse Mill late in March, the soundproofed cabs of Clyde 0-6-0DH's *Rosella* (64-317 of 1964) and *Homebush* (55-58 of 1955) were undergoing a refit, with a five year lifespan for the original insulating material being achieved. Meanwhile *Chelona* (59-201 of 1959) was awaiting a new centre axle following the discovery of a crack in routine testing, while *Racecourse* (65-440 of 1965) had its engine and torque converter removed for attention. A number of the Racecourse locos have had the new Mackay Sugar logo applied

to the cabside, following corporate policy, but are retaining the familiar yellow and green livery. The mill's Tamper tamping machine (4375515 of 1955) and 4wDH loco *Leo* (E.M.Baldwin 6-2612-1-10-68 of 1968) were in use on track reconstruction work in the Oakenden area, transferred from the closed North Eton Mill. The promised Com-Eng locomotives from North Eton were expected to arrive late in April.

At Pleystowe Mill at the end of April, the two ex-North Eton bogie Baldwin locomotives were receiving attention. Baldwin 6780-1-8-76 of 1976 was parked behind the loco shed devoid of its bogies. The bogies had recently been painted, but the wheels and axles had been removed, as all four axles had been found to be bent and in need of replacement. Baldwin 9815-1-10-81 of 1981 had been painted in Pleystowe colours of yellow, hawthorn green and crimson. It is planned to name these bogie locomotives *Mia Mia* and *Septimus*, while the ex-North Eton D3 (Com-Eng 0-6-0DH A2128 of 1958), still based at North Eton mill site, will probably be named *North Eton*. Two Motor Rail "Simplex" 4wDM's (9861 of 1953 and 21575 of 1956), together with the Tamper (4375636 of 1977), have been engaged on track work on the Victoria Plains line.

On the former North Eton lines, E.M.Baldwin 4wDM 4-473-3-63 of 1963 was on track work in the Barrie area. During April, a second Clyde 0-6-0DH was transported by road from Pleystowe mill in the shape of *Victoria Plains* (66-450 of 1966), joining *Palmyra* (63-273 of 1963). Late in March, Com-Eng 0-6-0DH D4 (FB3169 of 1963) was seen stationed at Base Camp Depot, *Mia Mia*, isolated from North Eton by track work, while D6 (FB4383 of 1965) was at the mill site. These two locos were reported to be due to be transferred to Racecourse Mill, but early in May, D6 was observed on a Farleigh Mill ballast train. Bundaberg Jenback 0-6-0DM 13 of 1954 was still at North Eton at the end of April, but is said to be bound for Cattle Creek Mill. Also seen at North Eton in late April was a Com-Eng diesel in Farleigh livery, possibly *Ashburton* (A1614 of 1956) which has been at North Eton or Marian for the best part of a year. The track between North Eton and Mia Mia is being extensively rebuilt, involving much use of locos on work trains.

John Browning 3/89. 4/89. 5/89

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 68, p.8)

The Mulgrave Rambler will be the name given to the tourist train which will run from the mill to Orchid Valley from 1 May. An extension has been built at the end of the Little Mulgrave line to Orchid Valley, and this was substantially complete by the end of February. The tourist train will be hauled by John Fowler 0-4-2T 20273 of 1934, newly restored to running order.

The Cairns Post 22/2/89 via Chris Hart

SOUTH AUSTRALIA

BHP LTD 1067 mm gauge

(see LRN 44, p.12)

A 40 km extension from Iron Baron to Iron Duke is under construction with major earthworks observed underway in January. Tracklaying is expected to be carried out in late 1989 or early 1990. Currently, iron ore mined at Iron Duke is road trucked to the existing rail head at Iron Baron.

Rail Australia 1-2/89 via John Browning

NATIONAL TRUST MOONTA BRANCH, WHEAL MUNTA MINING MUSEUM, Moonta 610 mm gauge

(see LRN 59, p.9)

A photograph in the Travel Section of the *Adelaide Advertiser* showed the tourist train in front of the old SAR Moonta Railway Station building. The train comprised of 4 carriages and what is believed to be a locally built steam outline, internal combustion locomotive. Additional information from any member visiting Moonta, regarding this line and its rolling stock, would be appreciated.

Adelaide Advertiser 18/2/89 via Arnold Lockyer 3/89

PENRICE SODA PRODUCTS PTY LTD, Osborne 1600 mm gauge

(see LRN 62, p.15)

ICI Australia Ltd has sold its South Australian soda-ash business in a "management buy-in" for about \$100m. The operation includes a quarry at Angaston, saltfields at Dry Creek (once site of a 2 ft gauge railway), and the manufacturing plant at Osborne. Ruston & Hornsby 0-4-0DM 304475, built in 1951, was despatched from England for shunting work within the Osborne factory, but it is not known if this unit is still in use.

The Australian 20/4/89 via John Browning

PORT DOCK STATION RAILWAY MUSEUM INC various gauges

(see LRN 63, p.10)

The relocated Mile End museum was opened by Premier John Bannon on 10 December 1988. Main star of the opening ceremony was 1067 mm gauge 0-6-0T *Peronne* (Andrew Barclay 1545 of 1919) which, with the Premier on the footplate, broke the ceremonial red tape. This locomotive is in service giving rides at the museum on weekends and holidays.

Rail Australia 1-2/89 via John Browning

TARCOOLA GOLD PTY LTD, Tarcoola

(see LRN 67, p.12)

This company appears to have ceased operations at Tarcoola and moved their office from Kent Town, SA (a suburb of Adelaide) to Western Australia.

An auction advertised by Minemach, under instructions from the above company, was to be held on site on 15 March 1989 for sale of all mining equipment and plant. The only railway plant and equipment listed, under the heading "Underground Mining Equipment" were: 2 x EIMCO 12B Bidders; 4 x brand new .38 cubic metre side tippers and 1 x 2 ft gauge set of points.

A phone call to Mr R. Wilson of Minemach a week before the sale, resulted in the following additional information. The side tipping trucks still had the manufacturer's paint on them and were what in the past were known as "1 yard side tippers". When asked about the locomotive, which was not included in the list of plant and equipment for sale he stated that this had only been on hire to the Company from a firm in Ballarat, Victoria, however he couldn't recall the name of the firm. He confirmed that it was a battery operated electric loco and added that it was not as good as a similar loco that the Company had once owned. Unfortunately this other loco had "disappeared" and nobody knew what became of it!

West Australian 4/3/89 via David Whitford and Arnold Lockyer 3/89

TASMANIA

EMU BAY RAILWAY 1067 mm gauge

(see LRN 63, p.10)

The one train per day operation, with up to nine diesel-hydraulic locomotives hauling as many as 60 wagons, ceased in early September 1988. The new timetable involves two trains per day in each direction, departing Burnie at 04.45 for Primrose (arriving back at 13.50), and 15.00 for Melba (arriving back at 23.28).

New schedules are being prepared for the additional trains required for the new Hellyer branch. This leaves the main line at the Murchison Highway underpass, south of Guildford, and is being constructed using steel sleepers. The locomotive used on the Hellyer work train is 0-6-0DM 22 (Vulcan Foundry D193/Drewry 2405 of 1953). This was new to the Mount Lyell Railway & Mining co Ltd and was disposed of by them to the EBR in February 1962.

ARHS "Bulletin" 3/89: John Browning

MOUNT LYELL MINING & RAILWAY CO LTD, Queenstown 610 mm gauge

(see LRN 65, p.13)

The underground ore haulage railway system at Mount Lyell closed on 27 February 1987. This was a once extensive system using overhead wire as well as battery electric haulage.

The Abt Railway by Lou Rae

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm gauge

P.O. Box 21, Alexandra Vic 3714

(see LRN 69, p.8)

John Fowler 11885 running in reverse through Alexandra Station on 27/3/89.

Photo: Peter Evans

Recent work on John Fowler 11885 has resulted in the re-commissioning of the steam brake, and the re-facing, re-studding and re-gasketing of all the steam fittings on the turret located above the firebox. Although the locomotive has been performing very well, it will soon require attention to the big-end brasses as a "knock" has developed due to excessive wear.

The 80th birthday of the Fowler, which left the works in March 1909, was celebrated at the Museum on Sunday 26 March when a lady visitor of the same age was invited to cut a cake decorated with an iced replica of the locomotive's builder's plate. The cake was then distributed to Museum staff and Patrons - except for one slice which was fed to the firebox!

Patronage on the three steaming days over Easter was excellent. Sales of the Museum's expanded souvenir range, which now includes teaspoons decorated with an enamelled picture of the Fowler, added substantially to the revenue obtained. Regular steaming days will continue to be held on the second Sunday of every month.

The embankment for the new locomotive storage road has been completed with the assistance of the local S.E.C. gang over a few evenings in March, and a recent working bee almost doubled the size of the locomotive firewood stack.

The Museum's second videotape is now available. Entitled *Two Feet Between the Rails*, it has been produced to broadcast standards and runs 56 minutes. The tape covers the preservation activities at the Alexandra Museum, the last days of Cheetham Salt's tramway at Laverton, and current operations of the S.E.C. tramway at Rubicon. VHS copies are available from the Museum for \$40.00 plus \$5.00 post and packing.

Peter Evans 4/89

AMRA EXHIBITION, Camberwell gauges HO, HO_{N2&1/2}, N, Z,.....and 610 mm!

(see LRN 64. p.16)

Once again, the LRRSA participated in this Exhibition which was held at the Camberwell Civic Centre over the Victorian Labour Day long weekend. The stand, which was manned by a small group of Society volunteers during the four days on which the Exhibition was open, attracted a great deal of interest. Books and Society periodicals to the value of \$1,260.00 were sold, and a special membership offer resulted in a one percent increase in the ranks of the Society.

Exhibited on the stand were maps, photographs, details of Society activities, and a 610 mm gauge ex-S.E.C. petrol trolley loaned by the Alexandra Museum. The track on which the latter stood was especially notable, demonstrating as it did the leading edge of Light Railway technology in Victoria - genuine S.E.C. Rubicon pre-cast concrete sleepers!

The Society has applied for a stand at the 1990 Exhibition.

Peter Evans 3/89

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Preservation Society 762 mm gauge

(see LRN 69, p.9)

Not a great deal to report this time - the most serious news seems to be that the tea urn in the Belgrave workshops broke down ... again!

A grant of \$420,000 has been received from the State Government, this is part of a one million dollar grant to be paid over the next three years. The grant is to be used to finance the new Belgrave station building, rebuilding a locomotive (12A?), and for track maintenance equipment (presumably the ballast tamper).

The contractors for the new Belgrave station moved in early in April. The building is to be on the western side of the existing station.

A full-time Operations Manager has been appointed. His remit covers train operations and publicity. Over fifty applications were received for this position, and the successful applicant has previous experience in the leisure/tourist industries.

Teething troubles are being experienced with the Plasser ballast tamper.

Locomotives: There is now quite a lot of activity on the rebuilding of 12A, which last ran in 1982. A full time fitter has been employed to work on the reassembly of G42. This work is being financed by the funds raised by the Get G42 Going Committee.

Frank Stamford 4/89

T.A.C.L. RAIL TRACTOR RESTORATION - PROGRESS REPORT

(see LRN 69, p.10)

A Project to Restore the Climax's Little (Ugly) Brother

Work on machining the replacement axleboxes is continuing at Belgrave. This is taking some time, as there is quite a lot of work to do, and the team members are new to this type of work.

Replacement coil springs, which go above the axleboxes, have been purchased.

Frank Stamford 4/89

BRIAN PEART c/- Yangardook Tramway, Toolern Vale 610 mm gauge

(see LRN 57, p.13)

Brian Peart has advertised his Ruston & Hornsby 4wDM 223725 of 1944 for sale at an asking price of \$29,000, including "accessories and some rolling stock". The locomotive is described as "fully restored to perfect working order - ideal for tourist or industrial operation." Contact phone number is (03) 830 5249.

The Australian 31/3/89 via John Browning

POWELLTOWN TRAMWAY 914 mm gauge

An examination of the Powelltown mill area while returning from the Ada Valley tour on 19 March 1989, revealed that the last link with the steam era has been demolished. A battery of three Babcock and Wilcox W.I.F. type

water-tube boilers which were installed in 1912 to supply steam to the mill, and which survived intact for many years, have been dismantled. Only one steam and water drum, and one set of tubes and headers, survive more or less intact, the remainder having been cut up for scrap. The boiler foundations have also been demolished.

Peter Evans 3/89

SECV RUBICON TRAMWAY 610 mm gauge

(see LRN 64, p.17; LRN 67, p.16)

The next tramway bridge to be tackled in the replacement program was to have been that over Beech Creek. However, a serious rot problem in a pile in the long bridge immediately to the north of the S.E.C. sawmill, has meant that the latter bridge has been closed to all traffic. Consequently, this bridge will have to be replaced before the bridge over Beech Creek is tackled. It is anticipated that work will start at the end of winter.

Peter Evans 3/89

WESTERN AUSTRALIA

EMPRESS GOLD MINE, Mount Magnet

A mine site clearance auction held on site at this mine on 21 March, included 2 x EIMCO 12B bidders, 2 x 1 ton side tippers, 2 x 1.5 ton side tippers, and 600 ft of 20 lb rail.

West Australian 11/3/89 via David Whiteford 3/89

HARVEY FRUIT BOWL RAILWAY 610 mm gauge

(see LRN 60, p. 15)

Late in 1988, ownership of the Big Orange (Harvey Fruit Bowl) changed, with New Zealander Bruce Snow and his wife taking over from the Chapman and Johnson families. Some changes have occurred to the train operation since then. The journey now takes about 40 minutes with two stops for commentaries and a lengthy stop at "Wild Animal Island" where passengers detrain to view monkeys, lions and a buffalo. The water recreation proposals have not been developed and the railway is still without any sidings or train shelter.

Harvey-Waroona Reporter 11/1/89; David Whiteford 3/89

KIMBERLEY RESTORATION GROUP, Carnarvon 1067 mm gauge

(see LRN 68, p. 13)

Andrew Barclay 0-4-OT 1755 of 1922 (*Kimberley*) and Simplex diesel PW 21 have been moved from their respective resting places, a Carvarvon

kindergarten and the Lighthouse Cottage, Babbage Island, to a workshop at the OTC complex on the North West Coastal Highway. A length of track is being laid through the workshop and the two locos will be housed inside for restoration work.

The body of a 4 wheel coach (possibly ex WA Government's 1879 Geraldton-Northampton railway opening) was removed from a plantation property to the jetty depot and placed on a PWD wagon frame. Unfortunately vandals have damaged the coach but reports are that it is not beyond repair.

It is to be hoped that either the Restoration Group or the Lighthouse Cottage Museum that acquired the coach will ensure that it is placed in a more secure storage.

David Whiteford 3/89

WEST AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC, Bennett Brook Railway, Whiteman Park, West Swan 610 mm gauge

(see LRN 68, p.13)

The latest locomotive to arrive at Whiteman Park is Freudenstein 0-4-0T 217 *Golden Ridge* (217 of 1905), arriving on 3 March. It was originally built to 508 mm (1 ft 8 in) gauge and operated on the Golden Ridge-Boorara railway, east of Kalgoorlie, until around 1910. Its fate between 1910 and 1961 appears to be poorly documented and we would welcome any information readers may have. In 1961 the locomotive was purchased from a scrap dealer by Perth resident Keith Watson and he and Peter Ledgerwood have regauged and extensively rebuilt it. New tanks and other parts had to be fabricated but the frame and wheels are original. Test running of the little locomotive began shortly after arrival but it is not known at this stage whether *Golden Ridge* will operate on regular "Bushland Belle" services over the 4.5 km loop line or will appear at intervals of a month or so. A sister engine is preserved at the ARHS (WA) railway museum in Bassendean.

The upgrading of the 4.5 km Community Welfare Loop for steam locomotive operation was due to commence in early April. Also included as a part of this work will be the building of a new run around and platform to be named "Forest Grove". This facility will be heavily used in connection with a major car rally to be held in September.

During February, members of WALRPA and the Army's 22 Construction Squadron worked on the removal of the Nungarin railway station building to Whiteman Park. Nungarin, on the Westrail network, is 40 km north of Merredin. The wooden building was built during WW II but has been out of use since the station master was withdrawn in 1973. WALRPA purchased the building in 1987 following Westrail's calls for tenders for the purchase and

removal of the building. It will be restored for use as the Mussel Pool station building.

All passenger services were suspended in February and early March. This is the quietest time of the year at the Park and the opportunity was taken to undertake major work programmes. The Perth Electric Tramways completely relaid the section through the Trade Village while the Bennett Brook Railway installed a scissors crossover at Central Station and undertook associated main line and platform line track work.

Rolling stock work is concentrating on having a second passenger train of four 30 ft regauged vehicles in service by September. This will involve modifying two regauged R wagons for passenger use and preparing two more vehicles. Meanwhile work is continuing in finishing off the buffet car which will provide extra revenue when the loop is upgraded. New acquisitions have been a 4 wheel JOA distillate tanker ex Westrail (our second) to be regauged and used for both firefighting and steam locomotive purposes, and a second LA ballast wagon to be regauged for use in the upgrading work. Shell Australia have kindly donated 4 more standard camber bar bogies. The regauged workman's van will be used as a crib room for workers engaged on the upgrading program.

MEETINGS

MELBOURNE

From the point of view of someone who is responsible for organising the entertainment items for members meetings one of the benefits of taking part in a LRRSA tour is that it provides an excellent opportunity to railroad (sorry!) an unsuspecting member into doing something he would normally run a hundred kilometres from. The trick is to trap the poor being in a position from where there is no escape. In this instance the unfortunate was Bill Hanks and the location was a mullock heap at the Coopers Creek lime kilns with a 30 metre leap over the edge of the mini-mountain the only way out! Success! Poor Bill inadvertently mentioned that he had a few light railway slides at home and before he knew what had hit him he was cornered into providing the entertainment item for the June meeting. Thanks

OBITUARY - JOHN L. BUCKLAND

It is with great regret that we record the death of John Buckland on 5 June. John was one of the most well known Australian railway enthusiasts. From the mid 1930s he was a very active contributor to railway enthusiast publications, and a prolific photographer. He was a foundation member and former Committeeman of the Victorian Model Railway Society, and had been a member of the Australian Railway Historical Society for over fifty years. In the 1930s and 1940s the VMRS was actively interested in prototype as well as model railways, there being at that time no other formal railway enthusiast organisations active in Victoria.

John had a very wide interest in railways - mainlines, branchlines, timber tramways, sugar tramways, steam and diesel locos, safe-working, and train operations in all states of Australia and overseas.

John joined the LRRSA in 1963, and was a Committeeman from 1978 to 1980. He was a regular attender at meetings, and made many contributions to *Light Railways*. Of particular note are issues No. 65, 82 and 84, which contain his major articles on Baldwin 0-4-0ST locomotives and the SECV railways at Yallourn.

He was always very co-operative with the LRRSA in providing photographs and information for articles and publications other people were working on. The standard of his photography was very high. John was the pioneer writer on the subject of Victorian timber tramways, with articles appearing in enthusiast publications as early as 1939.

He will be greatly missed by his many friends in the Australian railway enthusiast movement.

Frank Stamford

“... an old English bell whistle was heard echoing down the valley, and in due course, heralded by a tremendous ground shaking roar, appeared a strange apparition on flanged wheels under a cloud of smoke. It literally tore past our party who had taken refuge behind a stout tree, just in case she

decided to do a waltz through the undergrowth; a by no means uncommon occurrence! The engine was an old, and very dilapidated 2-6-0 tender type of unmistakable Beyer Peacock origin... Behind her home-made tender were half a dozen timber bogies- with wide treads and deep flanges loaded high with sawn timber, and on top of them the passengers clung precariously to their belongings and the timber, all of which appeared imminently likely to come to a sticky end at the bottom of a gully!"

*John Buckland, writing of the Goodwood Tramway,
ARHS Bulletin, Dec. 1948.*

RESEARCH

PIPEMAKERS PARK, Maribyrnong, Melbourne

It appears that the company magazine *Hume News* (quoted in LRN 69, p.2) has reprinted excerpts from brochures recently prepared by Melbourne's Living Museum of the West on this important industrial site. Some background may be of interest to readers.

The first manufacture on this site was Joseph Raleigh's boiling down works of the 1840s and 50s. Substantial bluestone buildings housed plant for converting animal fat to tallow, a process which was a boon to the depressed pastoral industry. The factory was sited on the west bank of the Maribyrnong River and use was made of the river for transport. The existence of a tramway from factory to wharf in this period is feasible but no substantial evidence has yet come to light.

In 1854-5 the Victoria Iron Works of Robertson Martin and Smith was located in the by then vacant works. This firm built a locomotive for the Hobsons Bay Railway Company in 10 weeks. This makeshift loco was the first built Australia.

A decade later, the site was once again vacant when the Melbourne Meat Preserving Company was formed to manufacture and export tinned, preserved meat using an innovative vacuum cooking process. The factory was renovated and extended and by 1868 an extensive system of narrow gauge tramways was in operation between the slaughterhouses and the preserving department and from the factory and stores to the river wharf

Surviving tramways from this period have not been positively identified although drainage works by the Board of Works in 1986-8 uncovered several lengths of rail. These tramways were possibly of around 3 ft gauge.

From 1880 to 1882 another novel technique in meat preserving was trialed by the Australian Frozen Meat Export Company who leased-part of the works and built large freezing chambers. They probably also made use of the

tramways but shifted to Newport in 1882 to be closer to the Williamstown Port.

Another idle period for the works lasted from the collapse of the MMPC in 1888 to 1911 when the Hume Brothers Cement Iron Company arrived from Adelaide with a revolutionary method for making steel reinforced centrifugally spun concrete pipes. Hume Pipes (as it later became known) first set up their machinery in the bluestone buildings which still survive. The works later expanded with the construction of rather ramshackle factories of timber and galvanised iron to the south. Tramways were employed for moving raw materials and finished products from the start of the company's operation.

Within the pipe factories, very short lengths of 3 ft and 3 ft 6 in gauge tramway were used to move skips of wet concrete from the concrete mixers to the moulding machines and back again. Somewhat longer traversers on approximately 6 ft gauge track were used to transfer pipes from moulding machines to steam chambers for curing and then out of the steam chambers for disassembling the moulds.

Finally, tramways were used to take finished pipes to the adjacent pipe racks for further curing. With thousands of pipes stored on the site, considerable space was required and pipes had to be moved quite long distances. A small train was used on one section of tramway consisting of two 4 wheel trolleys and a motorised 4 wheel trolley which began life with a two cylinder diesel engine and ended with a six cylinder Holden petrol engine. This unit was cobbled from whatever parts were at hand (as was the rest of the factory) and is believed to have been driven via a chain drive from the gearbox drive shaft to a live axle.

Humes left the site in 1979 scrapping much of the equipment as they went. Vandals and the later site clearance have removed much of the original buildings, machinery and tramways. The company also has factories in country areas such as Geelong and Bendigo as well as interstate and overseas. Many of these are believed to utilise narrow and broad gauge tramways.

The Board of Works now owns the Humes site in Maribyrnong and has developed it as an historic park with the Living Museum of the West occupying one of the buildings as a resource and visitor centre. The Living Museum is documenting the history of Melbourne's Western Region, part of which involves looking at the many industrial sites which have utilised light railways.

Nineteenth and early twentieth century factories and quarries employed material handling systems very different from today's. Where heavy or bulk materials or products were moved, tramways were the normal method.

Prominence of heavy and large scale industry in Melbourne's western suburbs has meant that it has a large proportion of these industrial tramways.

Local industries which are known to have used tramways include:

Nobels (ICI)	Deer Park	explosives manufacture
CSR	Yarraville	sugar refinery
Cuming Smith	Yarraville	fertiliser manufacturer
Cheetham Salt	Laverton	salt collection
H.V. McKay	Sunshine	agricultural implement maker
Michaelis Hallenstien	Footscray	leather tannery
Explosives magazines	Laverton & Maribyrnong	explosives storage
Hume Pipe Works	Maribyrnong	concrete pipes
MMPC	Maribyrnong	preserved meat.

As part of our ongoing program of recording the history of the region, the Living Museum is looking for information and material on all of these and any other industrial tramways and sites. Any assistance will be greatly appreciated. The resources of the Museum are also available for members of the public for private research although they would be of limited use for researching light railways.

PUBLICATIONS

A CENTURY OF SUGAR - RACECOURSE SUGAR MILL, MACKAY

by John Kerr.

Published by Mackay Sugar Co-operative Association Ltd P.O. Box 5554, Mackay Mail Centre 4741.

This hardback book has 224 pages and is illustrated in black and white and in colour. Tramway details are included as part of a comprehensive history of Racecourse and associated mills. Excellent value. Available by mail order from the publisher at \$22.50.

JKB 6/89

LOCO & ROLLING STOCK MANUFACTURERS

EIMCO AUSTRALIA PTY LTD

(see LRN 70, p.4)

It is reported that Bundaberg Sugar has placed an order with Eimco Australia

for the supply of a 32-tonne 600 hp diesel-hydraulic locomotive fitted with DDEC (Detroit Diesel Electronic Control) and a Voith hydraulic transmission and capable of 40 km/h. This machine, for delivery in the 1990 season will probably be constructed at a plant in Brisbane. It is understood that this unit is for a Bundaberg district mill, with Fairymead a possibility.

Bob James 6/89

TOLCO FABRICATIONS, Port Kembla North, NSW

(see LRN 64, p.8)

This company is rebuilding standard gauge RM class 3-bay hoppers for BHP as 2-bay hoppers. The bodies (minus bogies) are stacked in the transfer yard at Port Kembla North. Two prefabricated hopper assemblies are placed within the original wagon body sides of each wagon and welded in, raising the sides by approximately 800 mm. By 26 May, eight bodies had been modified and two remained untouched still with the bottom dump doors in place.

Ray Graf 4/89: 5/89

TOUR REPORT

LRRSA ERICA - WALHALLA TOUR, 27-28 May 1989

About 54 people in about half as many vehicles attended this highly successful and enjoyable event, which began at Tyers Junction at 9.00 am on Saturday morning. Tyers Junction is a 2-1/2 hour drive from Melbourne, so early rising was the order of the day. The morning's activity was a walk along the western branch of the Tyers Valley tramway from Tyers Junction to Morgan's Mill site, a distance of 4 km each way. The tramway formation is a cleared walking track, but Morgan's Mill site is now on private property and completely cleared of any interesting remnants. This part of the tramway was not worked by the Climax, but by T.A.C.L. tractors (and other very odd types). I was quite disappointed not to find any T.A.C.L. wheels lying around complete with unworn tyres, but there were some log bogie wheels.

After lunch at Tyers Junction the convoy headed for Platina on the Walhalla railway, a very interesting spot. We walked along the formation of the lime kiln tramway (1 km each way) and looked at the remnants of the lime kilns at the terminus. Then we inspected the Platina station site, with its deep cutting on a sharp curve, original road overbridge, interesting earthworks, and site of two tramways - it must surely warrant classification as a sacred site.

We then headed further down Coopers Creek Road to the Thomson River ford, where the four four-wheel drive vehicles provided a ferry service across the river, a memorable spectacle, especially when four of them were in the

water at once, and traffic jams were created in the river! After crossing the river, we walked up to the mine site, where there is still a lot to see, including rails still in situ, ore hopper, bridge, and mine wagon.

On leaving the mine site we passed the historic Coopers Creek Hotel, and it was good to see that some efforts towards preserving this building are underway. Our overnight stop was at Rawson, where some slides and films were shown after dinner.

On Sunday, the weather dawned bright and sunny, which was a pleasant change from the previous day's overcast sky. We headed for the Thomson River road bridge, and walked up the firewood tramway formation along the Thomson River, crossed the Poverty Point Bridge, and came back along the other side of the river - a total of 8 km. The first stage of this walk is a precarious narrow track on a steep hillside, but the formation then widens out and the path becomes easy. Of interest were the earthworks of various branch tramways, occasional sleepers, and rock walls along the side of the formation in some places. The leeches were very friendly, and pleased to see us.

We then headed to Walhalla for a leisurely lunch amongst the ghosts of this extraordinary town. Not having been here for about ten years, I was amazed to see that the Mechanics Institute has been rebuilt. It was burnt down in 1944, and the reconstruction is very well done, using all the materials appropriate to its era.

After lunch we went on a guided tour of a small part of the underground workings of the Long Tunnel Extended mine. This consists of a 300 metre long horizontal tunnel to the underground machinery chamber. This is a very interesting site/sight. Whilst the machinery has all gone, some of the foundations were still there. It is interesting to imagine what it would have been like when it was operating - five boilers, some of which were quite large, in a confined space, lit only by candles.

The last activity of the day was a drive along the Cricket Ground Track to see the formation of a firewood tramway on which ran two Bagnall 0-4-0ST locomotives. The site of the trestle bridge which appears in a well known photograph of one of the Bagnalls, was visited, but nothing remains of the bridge.

Thanks are due to Peter Evans for organising the trip, and producing a very comprehensive set of tour notes. These included a map showing the firewood tramways around Walhalla. Previously published maps have not been in any way complete - the extent of the mining tramways in the Walhalla area is almost beyond belief.

Frank Stamford 6/89

FIELD REPORT

GOLDTOWN, Copeland, NSW 610 mm gauge

The Mountain Maid Gold Mine, Copeland, is situated 16 km west of Gloucester NSW, some 260 km north of Sydney. The mine dates back to 1878 and was the richest mine on the Copeland Goldfield at that time. It has been worked on and off since then, according to the fluctuations in the price of gold and the optimistic hopes of various mining syndicates.

The gold occurs in narrow quartz veins within very hard volcanic host rocks. Most of the 100 year-old shafts and tunnels are still intact, though some of the shafts are flooded. The main access today is via a horizontal tunnel driven into the hillside at the bottom of Copeland Creek gorge. It was constructed in the 1880s to intersect the earlier vertical shafts sunk from the top of the ridge, and no doubt was a considerable help in draining the mine and in removing spoil and gold bearing ore. The mine is naturally ventilated and maintains a pleasant temperature of 20 degrees Celsius all year round. Altogether there are over 2.5 km of tunnels on various levels inside the mine.

Of light railway interest is the intact 610 mm gauge steel railed tramway running into the mine for just over a kilometre. This was put in during the 1930s depression years. There is also a mixture of steel and wooden railed originals. One-ton capacity wooden-bodied mine skips were used throughout the mine, all pushed manually. This must have been a back breaking job because most of the tunnels are not high enough to stand upright in. Some more modern steel-bodied skips are still in use.

Just outside the tunnel entrance, a 1 metre diameter turntable enabled mine skips to be turned onto any of three short sidings. The first is the ore siding which runs about 5 metres into the adjacent shed housing the working 5-head stamper battery and a 1930s vintage one-lung diesel generator and air compressor. The second is the spoil siding running 10 metres down a steep drop to Copeland Creek. The third was the battery tailings siding which used to run about 20 metres over a small bridge spanning the creek to the tailings dump. All the mine's surface workings are neatly sited in a very small area.

Other items of interest include the working 5-head stamper battery, a restored 8 hp Robey portable steam engine, old wooden mining skips, and various static stamper exhibits. A replica miner's hut houses various mining era exhibits and is the reception point for visitors.

The Mountain Maid Gold Mine is now the Gloucester district's latest tourist attraction. It is advertised as "Goldtown" and is open 7 days a week. The enthusiastic manager, John Daley, escorts visitors through the first 350

metres of the mine. An exposed quartz reef showing glittering pieces of gold is a highlight of the tour. Hard hats, electric lights and a concreted path inside the tram rails make it easy for visitors in this "tourist section". Outside, the narrow forested valley of Copeland Creek, tame brush turkeys and other wildlife add to the feeling of stepping back in time.

Further information may be obtained by writing to Goldtown, P O Box 22, Gloucester NSW 2422, or by phoning (065) 58 4303.

Ian McNeil 7/89

NEW SOUTH WALES

BHP, Sheet & Coil Division, Wollongong 1435 mm gauge

(see LRN 70, p.4)

Ray Graf has kindly clarified the account published in LRN 70. On 6 March, it appears that Com-Eng Bo-Bo DE D7 had failed at the CRM (Commonwealth Rolling Mills) Works at Port Kembla and was towed back to the Spring Hill (Lysaghts) Works later. The Sheet & Coil Division locos are stationed and used internally at the Spring Hill Works, and take loaded trains to the CRM Works over State Rail tracks, returning after shunting. At CRM the internal traffic appears to be road only. Traffic between Spring Hill and the steelworks (Slab & Plate Division) uses the private tracks between the two adjoining premises.

The four Goninan locomotives JL1-JL4 (4 of 1955, 5 of 1955, 017 of 1962, and 027 of 1968 respectively) have been advertised for sale by tender. JL1-JL3 are advertised as 45 tonne shunting locomotives powered by two Cummins 160 hp diesel engines, and JL4 as a 72 tonne shunting locomotive powered by two Cummins 250 hp diesel engines. Major and minor spares are also available. Tenders close on 9 August.

Ray Graf 5/89; The Australian 22/6/89 via John Browning

BIG BANANA THEME PARK, Coffs Harbour

Hume Pipes has completed a contract to supply approximately 2.25 km of concrete rails for a miniature rail system at Coffs Harbour's Big Banana Plantation theme park.

The miniature railway, or "people mover", as it will be known, will wind its way through the park stopping at points of interest. The ride will take visitors from the Aboriginal Dreamtime, through the first white settlement period, and into the futuristic world of tissue culture, genetic engineering and orbiting space stations.

The major challenge was in finding a people mover that travelled at a constant speed regardless of the gradient or horizontal alignment. The only

systems on the market that met these criteria cost around up to \$10m.

Two Melbourne consultants, Terry Cartlidge, a mechanical engineer with Leisure and Recreation Concepts Australia, and Dick Baird of R.M. Baird and Associates, were commissioned to design a new system. The consultants were supported by farm machinery and locomotive manufacturer R.M. Baldwin & Sons, which eventually designed and built the four prime movers for the people mover. (Does anyone have any further information about these? Ed.)

The undulating terrain of the Theme Park site required the use of a large number of sag, crest, curved and bend rails. Humes order called for the supply of 760 concrete rails in total, consisting of 540 straight rails; 100 vertical sag-crest rails; 82 horizontal curved rails and 38 horizontal curved rails with built-in 1-22 helical incline.

QUEENSLAND

CANE RAILWAY SAFETY VIDEO

The Australian Sugar Milling Council is producing a safety video and instruction booklet on "codes of Practice for Safe Operations on Cane Railways." Filming for the video was due to take place early in the 1989 season.

Mackay Daily Mercury 23/5/89; Bob James 6/89

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610 mm gauge

(see LRN 69, p.6)

Restoration work on Hudswell Clarke 0-6-0 *Melbourne* (1701 of 1938) has been restricted because of wet weather. The top part of the cab has been sent to Palmer Tube Mills for rebuilding, and the boiler has been removed from the mainframes. The two VTS ballast wagons donated by the QGR were delivered to Woodford during April.

The Caboolture Shire Council have announced that they will donate the former D'Aguilar station building to the Society. It is currently located in the council works yard at Caboolture.

Durundur Railway Bulletin via John Browning 4/89, 5/89

BABINDA CO-OPERATIVE SUGAR MILLING ASSOC LTD 610 mm gauge

(see LRN 68, p.6)

Babinda shareholders are once again being asked to review the status of their mill, in the face of a number of takeover offers. Late in 1988, shareholders rejected a plan to change the organisation from a co-operative, which would have been necessary to accept a Bundaberg Sugar takeover offer. Now Bundaberg Sugar is bidding again, and a counter offer has been made by three local milling co-operatives, Mossman, Mulgrave and South Johnstone.

Mackay Daily Mercury via John Browning 4/5/89

BUNDABERG SUGAR CO LTD, Qunaba

A clearance sale was held at the Qunaba Mill, closed at the end of the 1985 season, on 12 May. Included in the sale was no less than 6 tons of 75 mm new tram axles.

Mackay Daily Mercury via John Browning 6/5/89

COYA CONSTRUCTIONS PTY LTD, Gordonstone 610 mm gauge

(see LRN 46, p.4)

An underground drift coal mine is being driven by these contractors at Gordonstone, near Gregory, about 55 km from Emerald. A 2 ft gauge railway is being used in connection with this work, which involves 1,000 metres of 1 in 4 grade tunnel with a further 300 metres at the foot of the decline. A dolly car and winch are being used on the project, which should be completed by about October.

Coya Constructions 6/89*

CSR LTD, Burdekin District Mills 610 mm gauge

(see LRN 70, p.7)

Victoria Mill's Plasser KMX-12 Tamping machine (255 of 1982) was on loan here for about a week late in May.

Chris Hart 6/89; Bob James 6/89

CSR LTD, Hambledon Mill 610 mm gauge

(see LRN 68, p.7)

It appears that proposals for a tourist park adjacent to Hambledon Mill are going ahead. The complex, to be known as "Sugarworld", will incorporate a passenger train ride behind a small diesel or petrol locomotive.

Tom Porritt 5/89

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 70, p.8)

Earthworks for the Hawkins Creek extension began on 6 May. By 18 June, the day before the scheduled start of crushing, the track was laid, but ballasting was not completed. The delays had been caused by rain. From 16 June, nine of Victoria Mill's ballast hoppers were on loan for this job. The ballast plough recently built from the chassis of Motor Rail "Simplex" 4wDM 3717 of 1925 has been successfully used here as well as on repair work at washouts earlier in the slack season.

Chris Hart 6/89

CSR LTD, Plane Creek Mill, Sarina 610 mm gauge

(see LRN 67, p.8)

Com-Eng 0-6-0DH D3 (FA1036 of 1959) has been fitted with a Perkins "Eagle" 6-cylinder diesel engine for the 1989 crush. It is believed that a self-propelled rail jack has been ordered by this mill.

Bob James, John Browning 6/89

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 70, p.8)

It is anticipated that the mill will be acquiring a new loco for the 1991 season. Current axle loading permitted by bridges on the mill tramway is 6 tonnes, meaning that the current 24 tonne bogie Baldwin locos are the largest currently allowed. However, strengthening the bridges on the Lucinda line would enable a 32 tonne machine to be used on the bulk sugar trains, leaving E.M. Baldwin B-B DH *Wallaman* (6400-3-4-76 of 1976) free for cane haulage. The new loco would probably be around 700 hp and geared for 40 km/h operation.

Victoria Mill Vibes 5/89 via Chris Hart

LAPPA 1067 mm gauge

(see LRN 68, p.7)

Ex-QR diesel 1180 was observed parked at the end of the 300 metre remnant of the Mt. Garnett line, having been used for shunting by a mining company. RAILCO (The Ravenshoe Atherton Insteam Locomotion Company) are making enquiries to purchase this loco for a proposed tourist service from Ravenshoe. Five QGR carriages have been purchased already, and RAILCO also hope to obtain a rail motor and a steam locomotive.

*The Cairns Post 13/5/89, 31/5/89; "FNQ Sunday"
11/6/89 via Tom Porritt*

MACKAY SUGAR CO-OPERATIVE ASSOCIATION 610 mm gauge

(see LRN 70, p.8)

The district crush was supposed to have commenced on 19 June, but this did not eventuate due to continuing wet weather. Havoc has been caused to the program of tramway construction and reconstruction, so that feverish work was in progress in mid-June to try to complete the essential work as soon as possible.

Only one ex-North Eton Mill Com-Eng 0-6-0DH has been transferred to Racecourse Mill. D4 (FB3169 of 1963) arrived by road about the end of April. Still with North Eton number and colour scheme in mid-June, this unit will possibly be named *Oakenden*. Construction of the 1.5 km Racecourse-Pleystowe link was only commenced on 19 June, and was expected to take about three weeks, with completion expected two weeks into the crush. Some problems had earlier been experienced in gaining access to the land required for the formation.

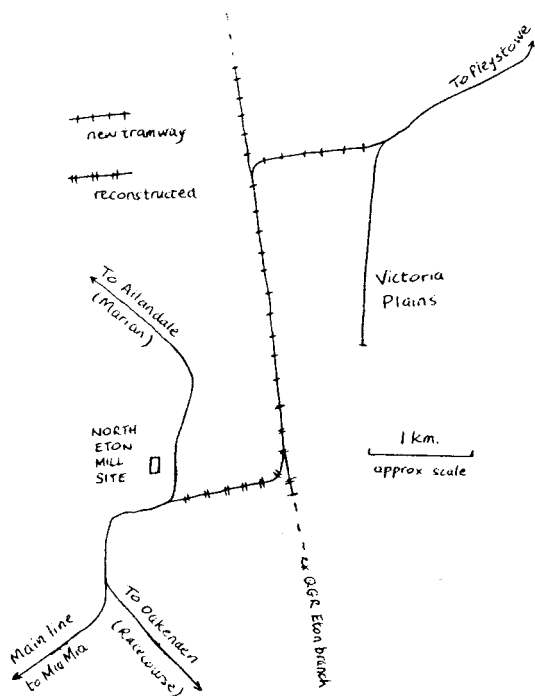

At Pleystowe Mill, ex-North Eton Mill E.M. Baldwin B-B DH locos 6780-1-8-76 of 1976 and 9815-1-10-81 of 1981 (ex-D7 and D8) have been repainted in Pleystowe livery and named *North Eton* and *Mia Mia* respectively. Ex-North Eton Com-Eng 0-6-0DM D3 (A2128 of 1958) was in Pleystowe loco shed in mid-June being prepared for repainting in Pleystowe livery. This unit will receive the name *Septimus*. Still at North Eton in mid-June was Bundaberg Jenbach 0-6-0DM D2 (13 of 1954), along with four Clyde 0-6-0DHs from Pleystowe: *Habana* (60-215 of 1960), *Palmyra* (63-273 of 1963), *Victoria Plains* (66-490 of 1966), and *Palms* (70-708 of 1970). *Palmyra* had been moved by road from North Eton to Pleystowe after the end of April, but was moved back to North Eton, again by road, on 19 June. Two NQEA 15-tonne capacity four wheel "big bins" with self-steering wheelsets have been delivered to Pleystowe Mill for trials this season. These have been designed for infield use, and one was OD display on a trailer at the Mackay Show in mid-June, together with a range of historical cane bins and trucks and the trailers which carried them.

The Pleystowe-North Eton rail link from Victoria Plains had still not been completed by 21 June. At Victoria Plains, some track was being laid on the new formation, but much more work was required to be done. Track had been laid for the whole of the distance for which the ex-QGR Eton branch formation is being used, but this was not completely ballasted. New track had been laid nearly to the connection at the south end of the North Eton mill yard. However, by working the local Show Public Holiday and the weekend, it was hoped to have the line completed for 26 June.- Motor Rail "Simplex" 4wDM locos 9577 of 1951, 9861 of 1953, and 21575 of 1956, and the ballast tamper

Farleigh-Pleystowe link

JB 6/89

North Eton - Pleystowe link

JB 6/89

(Tamper 4375636 of 1977) were observed on trackwork near North Eton. A device for laying concrete track panels was seen. This takes the form of a steel girder truss about 22 metres long, mounted at the centre on a bogie wagon chassis, and with a small overhead travelling crane mounted along its length. One end of the truss extends over a line of track bogies on which the panels are carried, while the other extends over the "head of steel". To lay track, the truss is jacked up at its corners

and a panel of track is lifted, moved to the other end, and dropped into position. The North Eton Oakenden line, which forms the line to Racecourse Mill, has been under reconstruction in the Barrie area, and this line had not been completed by mid-June either.

Ex-North Eton Mill Com-Eng 0-6-0DH D6 (FB4383 of 1965) was transferred to Farleigh Mill by road about the end of April. Still with North Eton number and colour scheme in mid-June, this unit will be named *Barcoo*. One of the bogie carriages built

by Tony Germanotta for his proposed tourist operation (see LRN 57, p.11) was observed in use by the Farleigh navvies in June. The unique Pacific petrol line car (1046 of 1976) which has not been used for some years has found a new use - being towed behind the weedkiller train (by a rope!) to accommodate the operator. Track alterations have been made to connect the former Pleystowe Habana lines to Farleigh Mill. The diamond crossing on the Farleigh north coast line has been removed and trains coming from Habana will now join the north coast line by a new connection installed here. The link from the north coast towards Pleystowe, installed last year, has been retained

At Marian Mill, ex-North Eton Mill Com-Eng 0-6-0DH D5 (FB3170 of 1963) remained in North Eton livery with its North Eton number in mid-June. New locos will be needed for the Finch Hatton tramway link required with the closure of Cattle Creek Mill at the end of the 1990 season, and two or three are being considered, of 32 or 40 tonnes. No order had been placed by mid-June. The new tramline bridge at Dow's Creek has been completed, but the track extension to Langdon will not be constructed until early in the crushing season, as more urgent maintenance work, held up by wet weather, had to take precedence. Three more bogie bins of the type tried out in 1988 are to be supplied during July for further trials at Marian Mill. Preparatory work is about to begin in connection with the construction of the new high-level road/rail bridge across the Pioneer River at Marion. Marian Mill will be making a contribution of \$600,000 towards the costs of the bridge, which will involve a tramway deviation to the south of the Mackay-Eungella Road. Frequent flooding and the annual sugar crush means that the building of the bridge will be staged over two years, with completion planned for 1991.

Mackay Daily Mercury via John Browning 2/5/89, 23/5/89, 30/5/89, 2/6/89, & 24/6/89;

John Browning, Bob James, Len Heaton 6/89

MORETON CENTRAL SUGAR CO LTD, Nambour (Bundaberg Sugar) 610 mm gauge

(see LRN 67, p.10)

It is believed that Bundaberg Sugar's Plasser KMX-12 Tamping Machine was loaned to Moreton Mill for about a week recently to complete some track renewal work. Operator and machine travelled from Bundaberg for this duty.

Bob James 6/89

MOSSMAN CENTRAL MILL CO LTD 610 mm gauge

(see LRN 69, p.7)

Bally Hooley half-day rail tours now operate from Marina Station, Port Douglas to Mossman at 9.30 am on Mondays, May to November; Tuesdays,

Thursdays and Fridays, April to January; and Wednesdays, June to October. Afternoon tours from Mossman Mill operate at 1.30 pm on Mondays and Thursdays, June to October; Tuesdays, May to October; Wednesdays, June to September; and Fridays, May to September. Trains do not operate at weekends or on Christmas Day, Boxing Day, or Good Friday.

Tom Porritt 5/89

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 70, p.9)

The "Mulgrave Rambler" tourist passenger service officially began operations on 15 May following trial trips the previous week. A train of three bogie carriages is hauled by John Fowler 0-4-2 *Nelson* (20273 of 1934) which has been converted from a tank locomotive.

A station has been built at the southern end of Gordon Street from which passengers depart for the Orchid Valley via the Little Mulgrave line. Tours depart Gordonvale at 8.30 am and 2.30 pm daily, and include a mill and Orchid Valley tour.

Considerable problems with flooding were experienced on the Little Mulgrave line during the slack season, with the river having put the line under water on three separate occasions.

THE SUGAR BOARD, Mackay 610 mm gauge

(see LRN 69, p.8)

Com-Eng 0-6-0DH F1029 of 1958 has now been returned to a yellow livery and has been back at work shunting bulk sugar box wagons. Presumably the silver paint scheme noted previously was an undercoat.

John Browning 6/89

SOUTH AUSTRALIA

BHP LONG PRODUCTS DIVISION 1067 mm gauge

(see LRN 70, p.9)

The 32 km tramway extension reported previously is part of a \$50m project to replace the worked out Iron Baron mine with a new Iron Duke Mine. The project is being carried out by KBR, a joint venture between Baulderstone Hornibrook and Kinhill Engineers. By the end of March, tramway formation construction was nearing the halfway mark. Track will be fully-welded from 51 kg rail fixed by Trak-Lok fastenings to steel sleepers, and bedded in a

crushed slag ballast. Maximum gradient is 1 in 90 against empty trains and 1 in 200 against loaded trains.

Two trains daily, each carrying 3000 tonnes of ore, will handle an annual demand of 2 million tonnes. Each train will be composed of 50 bogie ore wagons hauled by twin diesel-electric locomotives from BHP's existing fleet. At Iron Duke, ten ore loading bins will be able to load five wagons at a time. Trains will complete one round trip from Whyalla each 8-hour shift. Completion of the tramway is scheduled for December 1989, with commissioning taking place in February 1990.

Engineers Australia 5/5/89 via Greg Stephenson

TASMANIA

BUSH MILL TRAMWAY, Port Arthur 381 mm gauge

A Garratt locomotive is in the course of construction in the workshop of the Bush Mill near Port Arthur on Tasman Peninsula, south-east of Hobart. This ambitious project is being carried out by Lester Jones who is the regular driver of the 0-4-0 Vanderheiden loco Sarah Kate, on the tourist scenic tramway operated by the management of the Bush Mill complex.

The engine is being largely modelled on the famous K class Garratts which were the first Garratt engines ever built and worked on the 610 mm gauge North East Dundas line. Due to the gauge difference, the engine under construction will be roughly half the size of the K class, and will be 16 ft long and 3 ft 9 in wide. Due to the restrictive nature of a half sized cab, this component will be of a somewhat larger scale.

Engine blocks, bogies, motions and wheels are approximately 75% complete. The boiler will be 7 ft long, have a diameter of 2 ft and is designed to work on a pressure of 150 psi. Work on the project started in November 1987 but a likely completion date has not been predicted.

The building of this locomotive raises several interesting points regarding Garratt engines and the construction of steam locomotives in Tasmania. Recent research done by Wayne Chynoweth and David Beck has established that John Clark was building steam locomotives in Hobart as early as 1877. Other "builders" apparently assembled or modified engines using parts from various sources and seldom, if ever, undertook a complete construction of their own. Whilst it is known that several diminutive Garratts have operated commercially in Africa and Asia, the loco under construction could very well prove to be the smallest Garratt ever built for regular passenger traffic.

Ken Milbourne 6/89

EMU BAY RAILWAY CO LTD 1067 mm gauge

(see LRN 70, p.11)

This company is now a subsidiary of Pasminco Ltd which since 1 July 1988 has held the merged assets of CRA Ltd and North Broken Hill Peko Ltd 1989 haulage tonnage on the 130 km line is 582,000 tonnes of concentrates, 9000 tonnes of rail freight for the Rosebery Mine, and 90,000 tonnes of sulphuric acid for North-West Acid Pty Ltd \$7.6m is being spent to handle the additional tonnage from Aberfoyle's Hellyer Mine, including the 11 km spur line to Hellyer, the purchase of additional rolling stock, and increased storage capacity at Burnie.

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC. 610 mm gauge

P.O.Box 288, Alexandra Vic 3714

(please note new post office box number).

(see LRN 70, p.11)

Between the May and June steaming days, the 1.5 chain radius curve adjacent to the loco shed was relaid in 60 lb rail, a total of 16 lengths. New redgum sleepers were used, along with two truckloads of new ballast which had to be distributed by hand as very wet weather precluded the use of a front-end loader. The Museum crew were assisted in this task by members of the Lions Club of Alexandra, and by the PBPS who kindly loaned their hydraulic rail bender to the Museum. The Museum also wishes to thank John Shaw of the PBPS for his assistance with this part of the re-railing project. Approximately half the loop has now been relaid in 60 lb rail.

The Museum has purchased the last remaining buildings from Molesworth and Cathkin on the Tallarook-Mansfield Railway. When re-erected at Alexandra, the building from Molesworth will become a tool store, and the shed from Cathkin a new Way and Works Depot. The original Way and Works Depot at Alexandra will serve as a garage for the Museum's vintage Fordson

Tractor which is now almost fully restored.

The framework for the extension to the goods shed has been completed and sufficient second-hand corrugated iron purchased for the roof. It is anticipated that the remaining two locomotives stored in the open will be under cover by summer.

There is still no official word from the Victorian Government regarding the Museum's tenure of the railway land at Alexandra. While the Museum committee feels that it has no choice but to continue with the development of the project, a local service club has decided that it will not go ahead with the landscaped picnic area which it had agreed to fund and construct, until the land question is settled.

The Society has a collection of mostly ex-VR rolling stock and operates "trolley trains" in connection with a weekly Sunday market held at Daylesford. However, one industrial railway item is a Malcolm Moore 4wDM formerly used at Massey-Ferguson, Sunshine, Melbourne (see LRN 67, p. 16).

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Preservation Society 762 mm gauge

(See LRN 70, p.13)

The PBPS Monthly News for May 1989 reported that enough rail is on hand to go to Beenak. This is about 20 km past Gembrook!

The Plasser tamper has been working two days a week between Menzies Creek and Clematis, and over 200 tons of ballast has been laid.

Work on rebuilding Clematis station continues, with weatherboards and doors being fitted.

Locomotives:

G42 - The cab/boiler-frame unit was returned to Belgrave on 19 April in preparation for its restoration. Work has now commenced on its cleaning. All driving wheels have been cleaned ready for repainting. All major work on the brake hangers has been completed, and work has commenced on the equalising beams. The Annual Great Train Race was held on 30 April and raised \$15,000 for the G42 fund.

7A is currently in the workshops, with the crossheads being whitemetalled.

12A - Pony truck assemblies have been nearly completed. The weightshaft has been fitted to the frame.

T.A.C.L. RAIL TRACTOR RESTORATION - PROGRESS REPORT

A Project to Restore the Climax's Little (Ugly) Brother

(see LRN 70, p.13)

Machining of the axleboxes continues, the only work remaining to be done on these is to open out the lubrication slots, and clean up the horn-guide pathways.

It seems likely that the solution to the wheel tyre problem will be to get one new driving wheel cast, and turn a running surface on the casting. But we are still looking at the possibility of building up the thin tyre with welding.

Frank Stamford

MELBOURNE & METROPOLITAN BOARD OF WORKS 762 mm gauge?

(see LRN 63, p.13)

Tenders have been invited for the supply of a 4-metre diameter tunnel boring machine to excavate approximately 11 km of tunnel through various ground conditions in the Melbourne metropolitan area. Tenders close on 16 August.

The Australian 31/5/89 via John Browning

WESTERN AUSTRALIA

WEST AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC., Bennett Brook Railway, Whiteman Park 610 mm gauge

(see LRN 70, p.15)

Steam operations for 1989 commenced on 16 April. Since then, two of the superheater elements of 2-8-2 NG15 123 (Franco-Belge 2670 of 1951) have developed leaks and had to be replaced, resulting in the loss of one Sunday's steam operations. Saturday passenger services have been operated using the Gemco 4wDM of 1964 and the AQ/AOB coach set.

The Maylands Brickworks 4wPM, *Maylands*, has been out of service with a fractured oil line to the pressure gauge, and the week after, F.C. Hibberd "Planet" 4wPM *Yellow Rose* failed in traffic with the same problem. The Gemco has been used for materials and ballast trains by the contract track upgrading crew on weekdays, and following the failure of *Yellow Rose*, Ruston & Hornsby 404982 of 1957 was used on the weekend track tamping train.

The track upgrading programme on the 4.6 km Community Welfare loop is to bring the line up to acceptable operating standard for steam locomotives. The initial 1.5 km from Central Station is being done first, with the first 600 m out of Central on new formation, and 240 m of Dead Horse curve, further on, being re-aligned by up to 20 m. A new run around loop is being constructed at Forrest Grove. This initial section should be finished in time for the last leg of "Rally Australia", which will be held in Whiteman Park on 16 September.

An approach has been made with a view to possibly purchasing the 700 mm Hanomag 0-8-0T of 1925 being offered for sale by Southern Private Railroad in Melbourne (see LRN 65, p.16). This locomotive was until recently oil-fired, which would allow all year round operation at Whiteman Park. The Klien-Lindner hollow front and rear axles would make regauging difficult.

MEETINGS

MELBOURNE:

PHILLIP RICKARD - BUSHBASHER EXTRAORDINAIRE

Following our usual short AGM our attention will be transferred to Phil Rickard, one of our most accomplished bushbashers. Phil has undertaken numerous expeditions to the wilder parts of the state in search of the more remote tramway remains. Much of what he has found has only been visited by him so there is a unique aspect to the slides he has taken to record what he has found.

Be sure not to miss this night as there will be plenty to satisfy everyone

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 10 August at 8.00 pm

SYDNEY:

JOADJA: A SOUTHERN HIGHLANDS MINING COMMUNITY

Our special guest for our August Meeting is Leonie Knapman whose work on this subject should be familiar to all with an interest in this area. Her talk will cover the industry, the railways and the people that lived around the shale mines. For those that have seen the valley, it will be a chance to get an understanding of the community of immigrants that lived in splendid isolation to leave only ruins for us today.

LOCATION: Woodstock Community Centre, Church St Burwood

Note : Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 23 August at 7.30 pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 3 August at 8.00 pm.

BRISBANE:

Contact Terry Paton for details. Phone: 075-62 2896

TRAMWAYS AT MACEDON (VIC) RAILWAY STATION

Paul Steinhauser has forwarded the following items published in the Mount Macedon & District Historical Group newsletter (winter 1989 edition).

"Originally there was a sawmill on the other side of the creek, below where the road crosses it, from where a tram track ran up to the main road, along what became known as the Devil's Hole Road - this is the road that runs along the northern boundary of Sefton. The last operators of the saw mill found this unsatisfactory, so they made a track along the side of the hill through private property. This was eventually taken over by the Shire Council and later named Sangsters Road.

"James Nicholls.... arriving at Macedon and again becoming involved in brickmaking from 1857.... operated a brickworks close to the station and was contracted by Cornish and Bruce, who were building the Melbourne-Bendigo railway, to supply bricks for bridges, culverts and station platforms."

And from the *Woodend Star* of 9 November 1888 - "Macedon Steam Brick, Tile & Drainpipe Company have been granted permission by the Gisborne Shire Council to construct a tramway across Government Road to connect the Company's works with the railway at Macedon."

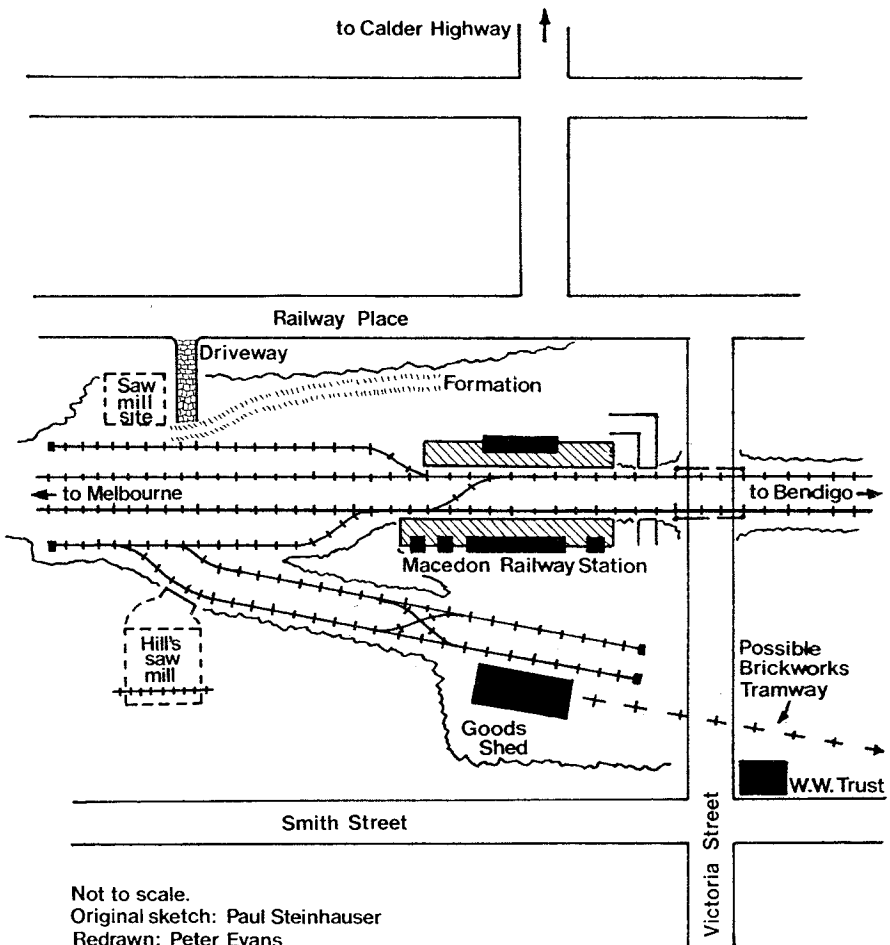

The brickworks were closed by July 1895 when the operators started a eucalyptus distillery on the site.

Paul also adds, "All the remaining sidings at Macedon were lifted about

two years ago, nearly all of it the chaired rail type. The goods shed lines were filled in to form a car park. The goods shed itself was destroyed in the 1983 bushfires. The station area had a sawmill (Hills) operating there for many years until it was moved some twenty years ago to a new site on the Calder Highway. It was situated on the Melbourne side of the Macedon Railway Station. There was possibly another mill on the opposite (Bendigo) side of the tracks as there was a cobblestone drive and a formation running away from the siding northwards at the back of the station waiting room."

Perhaps this is an area warranting further attention from light railway researchers.

Paul Steinhauser via Peter Evans 8/89

DECAUVILLE (COUILLET) B/No 986 of 1886

The following letter has been received from Bernard R. Holmes, Managing Director of T.W. Sands & Co, 449 Elizabeth Street Melbourne 3000 (Phone 03 329 7804). Perhaps someone can be of assistance.

"I am writing in the hope that your Society may assist in supplying any photographs or drawings that show the headlight of the Decauville locomotives that ran at the West Melbourne gasworks.

"We have at present, the remains of one of the headlights in our workshop for restoration (more like a total rebuild!). This is being carried out for the present owner of the Decauville who, knowing of my personal interest in steam, especially narrow gauge and light railways, has entrusted my Company with the task.

"I would like to present the restoration as authentically accurate as possible and to this end I make this request for any assistance possible.

"The more detailed the photographs/drawings are, the closer we will be able to achieve our aims in restoration and preservation of this unique article."

NOTES, CORRECTIONS & COMMENTS

BUSH MILL TRAMWAY, Port Arthur 381 mm gauge

(see LRN 71, p.16)

Further to Ken Milbourne's report on the building of a Garratt locomotive for this line, it may interest readers to know of several other miniature, as opposed to model, Garratts in existence. (You get in them not on them.)

In 1938 Kitsons built two 10.25in (260 mm) gauge Garratts for the Surrey Border & Camberley Railway. This English pleasure line had only a brief existence, closing at the start of WWII. Both locos are still in existence, one in Norfolk, having been to India where it was owned by the Maharaja of Baroda. The other, rebuilt into "n.g." style, is in Dorset, having previously been owned by Sir Thomas Salt who used it on his pig farm railway. Wheel arrangement: 2-6-0 + 0-6-2. Cyls: (4) 3.5 in x 5 in. Weight: 2.25 tons.

More recently, on 7.25 in (184 mm) gauge, two Garratts of about 1:5 scale replicas of East African Railways "59" class 4-8-2 + 2-8-4s were built in the 1970s in England. Each is capable of hauling some 150 passengers on the level.

For the record, the smallest 2 ft (610 mm) gauge Garratts built were two for the Chemins de Fer Vicinaux du Mayumbe in the Belgian Congo. Built in 1911 by SA St Leonard, these 0-4-0 + 0-4-0s weighed in at just over 23 tons in working order and had the distinction of being the first of the species "Garratt" to roam Africa.

Phil Rickard 8/89

FIELD REPORT

TINBEERWAH MOUNTAIN RAILWAY, COOROY, QUEENSLAND:

The morning of Sunday, 19 February 1989 dawned bright and shiny on one of the few occasions of a fine weekend in Brisbane earlier this year. A group of approximately twenty assorted railfans and their families, both young and old, met at Graham Chapman's Engineering Works, Kallangur to travel in convoy to the Tinbeerwah Mountain Railway. After a short inspect on of some of the narrow gauge locomotives stored at Mr Chapman's works, the group departed for Cooroy, approximately 100 km north of Brisbane.

On arrival at the railway's location, we were warmly welcomed by Russell and Peter Savage. After introductions all round, the group was ushered to the base terminus of the railway. A Fairmont style trolley then took some spectators by rail to the new carriage sidings. The balance of the group walked past the original engine shed to the new carriage sidings and shed.

From here the scale of the railway could start to be imagined. A diesel locomotive and passenger car were run out from the shed and the first group commenced their ascent to the top and a second group followed shortly after by the Fairmont trolley. The visual observation of trains was used as the principal method of safeworking. The remainder of the group walked from here to the original sidings where an assortment of semi derelict locomotives, wagons, spares, etc. were kept. These had been used in the original construction of the line, and most had seen better days. Due to its location amongst a large grove of trees, relocation of this area is necessary to avoid damage from falling branches.

One train returned to take the balance of the party to the summit. The writer

travelled on this train and this is his description of the line. It heads almost due east for some 200 to 300 metres on an ascending grade and makes a 90 degree turn north for the steepest portion of the ascent. At this stage grades of 1 in 8 are encountered just prior to the switchback. This grade was handled with ease by the locomotive with its load. The train ran forward into a dead end siding where a small washaway had occurred and then reversed up the first leg of the switchback which goes for some 50 metres. After points were changed, the locomotive again set off up the grade circling the northern and eastern parameters of Mount Tinbeerwah. The grades on the balance of the line vary between 1 in 15 to 1 in 25. It is an almost continuously climbing gradient which eases near the peak. Magnificent views were obtained from here as the summit of the railway offers sights over the Noosa Hinterland.

Two or three trips were made with both the diesel and passenger car and the trolley. Some members of the group enjoyed the free wheeling ride of the trolley down the track. At various points along the line, both Peter and Russell stopped and indicated their various plans and spoke of the difficulties encountered relative to the construction through rock outcrops, over gullies etc.

Eventually the group returned to the base terminus where members of the Savage family had thoughtfully provided barbecue facilities. Throughout lunch both Russell and Peter answered the many questions put by the group. After lunch further trips were made up the mountain while Russell explained their eventual aims with the line.

At the conclusion of the day, Convenor/Arranger, Terry Pa-on, presented Russell and Peter with a carton of appreciation for the warm and generous hospitality extended to each and every member of the group. A most pleasurable day was had by all.

John Guest 9/89

NEW SOUTH WALES

CENTRAL WEST RAILWAY PRESERVATION SOCIETY, Orange 1435 mm gauge

(see LRN 65, p.5)

This Society has raised the \$20,000 needed to buy and renovate four carriages for the Ben Chifley locomotive. The Society's appeal brought great response particularly from schools in Bathurst and Orange Rotary Club which donated \$4,000.

The Sun-Herald 21/5/89 via Ray Graf 8/89

COAL & ALLIED INDUSTRIES 1067 mm gauge

(see LRN 19, p.7)

Rationalisation of Coal & Allied's colliery operations has been underway since 1986. Some mines have been shut, including Aberdare North and Stockrington No.2, while others have been sold, including West Wallsend No.2 and Liddell Colliery. All these had underground rail systems.

An auction was to be held at the Hexham Coal Preparation Plant on 9-10 August, and the lots were inspected on 8 August. The major rail items are listed below:

LOT 743 - "EBM" underground shuttle car. E.M. Baldwin 4wDH 2921-1-4-69 of 1969, Model 6DHS Mk3SR. Numbered 2607. In good external condition but no engine. Some parts are labelled "Stockrington", so it may have last worked there Painted white.

LOT 767 - Baldwin underground locomotive powered by Cummins 6-cylinder diesel engine.

E.M. Baldwin 4wDH 3550-1-11-71 of 1971, Model DES20M/A2. Numbered 4 in cab on left hand side. Also carried number 81319 painted on rear left hand side. This unit was partially disassembled, and the cab had suffered damage. It had been out of service for some time and stored in the open. Painted yellow.

LOT 768 - Baldwin underground locomotive powered by Cummins 6-cylinder diesel engine.

E.M. Baldwin 4wDH 2426-2-7-69 of 1969, Model DHS20M. Carried painted name *Madge* on cab sides, and also "I" on right hand cab side in steel. This locomotive is illustrated in the catalogue. In poor condition, partially disassembled. Had been out of service for some time and stored in the open. Painted white.

LOT 796 - Baldwin underground locomotive powered by Cummins 6-cylinder diesel engine.

E.M. Baldwin 4wDH 2426-3-9-69 of 1969, Model DHS20M-A2. This was numbered 2, with a metal number on the cab side. Also carried number 8682 on left hand rear end. This unit was in reasonable external condition and was painted yellow.

Other items included several rail-mounted transformers, and spare parts for Baldwin personnel carriers, together with wheels from wagons.

At Ayrfield Colliery, North Rothbury - Branxton, on 8 August, a further auction was held, and the items included 40 x 15m lengths of 47 kg rail and a "railway inspection wagon with 4-cylinder petrol engine" (standard gauge?).

*Craig Wilson 8/89, Sydney Morning Herald 22/7/89 via Ray Graf
Rail Australia 6-7/89; The Australian 5/9/89 via John Browning*

METROPOLITAN WATER SEWERAGE & DRAINAGE BOARD, North Head gauge unknown

(see LRN 71, p.9)

A head-on accident took place in the North Head sewerage outfall tunnel on 7 September. This project is under construction, and may in fact be in the hands of a contractor (Holzmann-Holland? see LRN 52, p.9).

The accident took place between a diesel personnel carrier conveying 16 men to the work face for the afternoon shift, and a locomotive hauled spoil train on its way in to the foot of the decline. The spoil train locomotive may have been a battery electric, and apparently it was hauling five muck cars. The collision occurred about 80 m below the sea bed and about 2 km from the foot of the decline, on a curve, at a speed of approximately 10 km/h. Both trains were derailed, and only one of the men on the personnel carrier escaped injury. Most of them were dozing on the 4 km trip, and they were wearing ear plugs, so were not aware of any danger until the impact. The spoil train driver was unhurt. It was stated that the spoil train usually only comes to the decline foot after the afternoon shift has commenced.

Possibly some Sydney member might be able to find out further details of the rail equipment being used for the ocean outfall tunnels at North Head, Malabar and Bondi?

*David Mewes; Daily Sun (Bris. 8/9/89;
Sydney Morning Herald 8/9/89*

MOUNTAIN HIGH RAILWAY CO PTY LTD, Tumut 1435 mm gauge

(see LRN 70, p.7)

D10, a 400 hp B-B DE built by English Electric (Australia) from the Port Kembla steelworks is confirmed as having been acquired for this line. It is understood that this unit is being overhauled by BHP at Port Kembla before delivery. It is also understood that an offer was also made to purchase the ex-Lysaghts Goninon B-B DE JL3 *Helen Mary* (017 of 1962) from BHP (see LRN 70, p.4).

Rail Australia 6-7/89 via John Browning

NEWCOM PTY LTD, Angus Place Colliery 1067 mm gauge

This site was visited on 17 July, and is a Longwall operation. There are two diesel and two battery locomotives as well as three personnel carriers as follows:

DL1	4wDH	Baldwin	3738-1-12-71	1971	DH20M
DL2	4wDH	Hexham	659	1988?	DH25M
BL07	4wBE	Vale Engineering			

BL08	4wBE	Vale Engineering
PC01	4wBER	Vale Engineering
PC02	4wBER	Vale Engineering
PC03	4wBER	Vale Engineering

DL1 has lost its builder's plate, but it went new to Lidsdale in 1971. It carries BALDWIN No.1 on the engine compartment sides. It has a single cab and is painted white, but has previously been yellow. Fitted with a Cummins diesel, it is on standby at present. DL2 has been at the mine for about 18 months, and carries Baldwin/Hexham builder's plate. It has a dual cab and is fitted with a Caterpillar engine.

BL08 carries Vale Engineering plates, and is of single cab design. BL08 and the identical BL07 were originally numbered BL02 and BL01, but Newcom numbering has now been consolidated across the various mines.

PC01 carries 18 men and is painted white. Both the other personnel carriers were being used.

Other rolling stock noted included a four-wheeled dolly car fitted with a driver's compartment and passenger accommodation. The drift winder was installed by Goninon. There are four man riders built by Hannaford. Two were seen which weigh seven tons and have a capacity of 40 men each, numbered 1 (builder's number 1057-77-2) and 2 (1057-77-1). These two have dump brakes and do not go beyond the drift, while the other two are used for man transport beyond the drift. There are also a hopper car by Hannaford, a dust car, two 40 tonne capacity flat wagons, and a 60 tonne capacity flat wagon used for moving a coal shearer underground. When loaded, the shearer straddles 2 m on either side, and it can be turned using a pivot built into the wagon.

The signal system works through the automatic tripping of section signals by side-mounted reflectors. Personnel cars have the reflectors on one side only, while the locos have them on both sides.

Craig Wilson 8/89

NSW STEAM PRESERVATION CO-OPERATIVE SOCIETY LTD, Campbelltown Steam and Machinery Museum, Menangle 610 mm gauge

(see LRN 66, p.7)

Following the reduction in land area and purchase of the smaller site by the Society this year, plans were drawn up to utilise the area to best advantage. In addition to a balloon loop, a feature of the line will be a 32 ft span steel girder bridge to cross the creek on a 1:60 grade. Work has not commenced on the railway track to date, as restoration of the two carriages has been carried out

since the line closed to traffic in November 1987.

The loco Robert Hudson (Hudswell Clarke 1423 of 1922) is next for further restoration. The wheels are to be reprofiled and new axle box bearing cast and machined. The valve gear has to be repinned and bushed, hornguides etc. to be repacked and a steam engine brake fitted.

The new arrangements at the Museum will include a shed to house the locos and carriages, in addition to a Signal Box (ex Thirroul Frame B) to operate the nearer points and signals. The line will also have several level crossings over it, in particular the main entrance to the Museum will be over the level crossing, flashing lights etc. are planned for safety.

The railway group is always interested in hearing from persons over 16 years, interested in working with the gangs. We work two Saturdays a month. Opportunity exists to gain Steam Boiler Attendant's Certificate and Driver's Permits issued by the D.I.R.E. Contact Paul Simpson on (02) 771 3929 or Len King (02) 818 3111 and leave a message.

The next Steam Rally is 11/12 November 1989. Although the steam train won't be running, there will be a section of temporary track in use for converted standard gauge push-trikes (now with 4 wheels for 610 mm gauge) - for a small fee you can propel yourself along the track!

Paul Simpson 8/89

NSW STEAM TRAM & RAIL PRESERVATION SOCIETY, Parramatta Park 1435 mm gauge

(see LRN 45. p.6)

A December deadline has been imposed by the State Government for the Society to raise the \$200,000 necessary to relocate the museum and track at Parramatta Park, otherwise eviction may follow to make way for the latest stage of the park's redevelopment. The Society is appealing for more time.

Daily Mirror 24/7/89 via Ray Graf

PAUL SIMPSON, Panania 610 mm gauge

(see LRN 57, p.7)

On 13 August 1989 the Dorman Diesel motor in Kelly & Lewis 0-6-0DM 5957, of 1936 was brought to life when the final adjustment was made to the timing of the fuel pump! and batteries fitted to turn over the motor for starting. On August 20, the loco itself was made to move under its own power - the first time in over 40 years! Further fitting of the instrument panel is yet to be done and the floor, lamps etc. fitted also.

Paul Simpson 8/89

RICHMOND VALE PRESERVATION CO-OPERATIVE SOCIETY LTD Richmond Vale Railway Museum various gauges

(see LRN 71, p.9)

The Museum has added four 10 class steam locomotives to its extensive collection. The engines are four of 14 ordered by the Richmond Vale mine between 1915 and 1926 and were entrusted to the Museum by Coal and Allied Industries. Three of the locos are operational and it is hoped the fourth will be running within six months.

Daily Mirror (Sydney) 2/8/89 via Ray Graf

WOLLONGONG 1067 mm gauge & 1435 mm gauge

At lunchtime on Friday 11 August, three semi-trailers were seen descending the Macquarie Pass towards Wollongong, loaded with underground mining equipment. Among a quantity of rubber tyred equipment was seen the following 3 ft 6 in gauge rail items: Personnel carriers numbered 11 and 15 (painted white) and a battery locomotive numbered 13 with battery box lettered NA (painted white). There were also two extra battery boxes, 13 (orange) and JC (yellow). The numbers carried were black painted metal, about 30 cm, and the items appeared reasonably clean. Some parts appeared to have been removed however. It is unknown where these items were from or where they were destined.

At approximately 10.30 am on 29 June, a standard gauge slag car was seen on a low loader on the Princes Highway, Unanderrra, facing north. It had been freshly painted white all over with black bogies. Could preservation be a possibility?

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610 mm gauge

(see LRN 71, p.10)

Some repair work to *Melbourne*, Hudswell Clarke 0-6-0 1701 of 1938, is being undertaken by Palmer Steel Industries at Mt. Gravatt, Brisbane. This work includes the replacement of the cab inner and outer roofs and both upper side panels. The tender is receiving a complete rebuild including the replacement of the tank floor and footplating, and the straightening of the chassis. At Woodford, the boiler of this unit is being prepared for inspection, and consideration is being given to the replacement of the smokebox wrapper.

The Caboolture Shire Council have offered the Society the former D'Aguilar station building, which was removed to a Council works yard at Caboolture following the closure of the branch railway. A building suitable for use as a locomotive and rolling stock storage shed, 30 m long and 6.5 m wide, has been acquired from the closed Com-Eng factory at Rocklea in Brisbane. The building was dismantled in two weekends and transported to Woodford on 22 July.

The 3 ft 6 in gauge Goodman 4wWE loco (6035 of 1950) from the Southern Electricity Authority, Bulimba A power house has been sold to a Brisbane bus and tram preservation group known as "Q Bus" This locomotive has been stored at Kallangur for a number of years.

BABINDA CO-OPERATIVE SUGAR MILLING ASSOC LTD 610 mm gauge

(see LRN 71,p.10)

The future of Babinda Mill is still uncertain, with growers only having voted to investigate further the offer of purchase by Bundaberg Sugar. Clyde 0-6-0DH 5 *Goondi* (55-56 of 1955) appears to have been fitted with a Cummins engine like 6 *Daradgee* (Clyde 56-90 of 1956).

John Browning 7/89; Chris Hart 7/89

BUNDABERG SUGAR CO LTD, Mourilyan Mill 610 mm gauge

(see LRN 66, p.9)

The unnumbered Clyde 0-6-0DH ex Goondi Mill (56-93 of 1956), which was numbered 10 at Mourilyan for a while, was observed in mid-July with a small picture of a snail painted on each cab side. This probably indicates the unit is fitted with a low geared final drive.

Some of the Clyde 0-6-0DH locomotives have had headstocks painted with red and white stripes with an orange band on the running board valencies. The Com-Eng diesels had plain red headstocks and valencies

Apart from main line locomotives, other items of interest were noted in the mill area, such as two Malcolm Moore 4wDM locos, one derelict (1001 of 1943) and the other formerly numbered 10, two Motor Rail "Simplex" 4wDM locomotives (10219 of 1950 and 3688 of 1924), and a derelict Plasser KMX-06 tamping machine (10 of 1970). Also observed were two Fowler 0-4-2T frames an 0-4-0WT frame (Krauss 3267 of 1895), and ex-Goondi Mill a ballast hopper, mower, poison spraying unit, and rail-mounted compressor.

Chris Hart 7/89

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 71, p.11)

The new Hawkins Creek extension was completed for regular use from 26 June, shortly after the start of the crush, and has been built with 60 lb rail. A 100 bin siding has been built at the terminus, and the old Fagets Siding near to the previous terminus was relaid as a 60 bin siding after having previously been lifted a few years ago. On 24 June, Clyde 0-6-0DH 12 (65-434 of 1965) was used to haul ballast from a dump some miles away to be dropped into position on the new line, using Macknade's five ballast hoppers and nine from Victoria. The biggest rake of hoppers hauled was 12, and with the ballast plough in use at the end of the train, the loco had to work hard. (The ballast plough, built using the frames of Motor Rail "Simplex" 4wDM 3717 of 1925 was painted yellow during the week ending July 22). The ballast packing was done manually throughout, with the ballast tamper only being used for the final levelling, from 26 June. On this day, Clyde 0-6-0DH 11 (65-383 of 1965) returned to Victoria Mill their nine ballast hoppers. Macknade locos also ran to Victoria the following week, when some Macknade cane was crushed at Victoria because of rain disruptions.

A film crew was at Macknade on 23 June making a cane railway safety film. Locos filmed included 0-6-0DH 18 (Clyde DHI.5 of 1954) and B-B DH 19 (E.M. Baldwin 7070-4-4-77 of 1977) which received extensive coverage on the River line. The film crew was reported to have previously visited at least Victoria and Tully Mills.

There have been problems with loco breakdowns, which resulted in Victoria Mill's Drewry 0-6-0DM *Seymour* (2392 FO 1952) being placed on loan on two separate occasions, from 20 July to 2 August and from 2 to 22 August. Both times, it was used for cane haulage before becoming spare loco, but limited haulage capacity was a restricting factor.

A major tourist project, "Secret Harbour", has been proposed for the area north of Taylor's Beach, and includes a proposal for a tourist tramway service, with a tramline extension to the resort from an existing mill branch, Gosling's line, which diverges from the Lucinda line at Halifax.

*Chris Hart 7/89, 8/89; Herbert River Express 22/6/89, 1/7/89
via Chris Hart*

CSR LTD, Plane Creek Mill, Sarina 610 mm gauge

(see LRN 71, p.11)

A mill locomotive and 12 full bins were derailed in the outskirts of Sarina on the afternoon of 7 August, blocking the Sarina Beach Road for several hours. It is believed by police that the accident, which caused damage worth

\$15,000 to \$20,000, was caused by children changing siding points against the train.

Towards the end of August a head-on collision is believed to have occurred on the Koumala line. Bogie Baldwin D12 (6890-1-10-76 of 1976) sustained damage serious enough to put it out of action for the best part of a week. Another incident, on 30 August, saw a derailment at Alligator Creek, which cost the mill an hour's crushing time.

*Mackay Daily Mercury 7/8/89, 15/8/89 & 5/9/89
via John Browning; Bob James 9/89*

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 71, p.12)

On 23 August, a Lucinda-bound bulk sugar train hauled by E.M. Baldwin B-B DH *Wallaman* (6400-3-4-76 of 1976) collided with full cane bins at the Two Mile as a result of the main line points being left set into the siding. The sugar loco could not pull up in time, and cane and raw sugar were spilt and rolling stock damaged. *Wallaman* was back in service the next day, although replaced by sister loco *Brisbane* (5423-1-9-74 of 1974) on the day of the accident.

Wet weather early in July was disruptive to crushing, and Macknade Mill cane was crushed at Victoria for two days, with Macknade locos working through. Drewry 0-6-0DM *Seymour* (2392 of 1952) was sent to Macknade Mill on loan on 20 July. Some E.M. Baldwin bogie locos have had their underframes painted silver this year.

via Chris Hart*

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 71, p.12)

The North Eton-Pleystowe rail connection was completed just in time for the start of the Pleystowe crushing on 28 June, as a result of extensive and expensive overtime work by all concerned. On 27 June, the former North Eton Mill 0-6-0DM D3 (Com-Eng A2128 of 1958) was observed in the Pleystowe loco shed, newly painted in Pleystowe colours and fitted with *Septimus* nameplates.

The Pleystowe-Racecourse rail link was completed on 7 July, after three weeks feverish work by some 60 people. Former Pleystowe growers in the Palms and Peri areas, who have been reassigned to Racecourse, had to delay the start of harvesting by ten days while the connection was completed. The first train of empty cane bins, hauled by Racecourse Mill's 0-6-0DH *Ceelona*

(Clyde 59-201 of 1959) crossed the 1.7 km line at 4 pm. The former Pleystowe line up to the Palmyra line junction has been transferred to Racecourse, and sidings have been turned around to face Racecourse Mill. At the boundary, a stop board has been erected to control Racecourse locos venturing into Pleystowe territory. It reads "STOP - CALL T.O. FOR CLEARANCE" (T.O. means Traffic Office).

Mackay Sugar's tramway interconnections not only have allowed cane to be reassigned as part of mill rationalisation. They should also enable ore or other mill to take cane from other areas when wet weather disrupts harvesting operations. The Pleystowe tippler had been adapted to handle Marian and Racecourse bins as well as the Pleystowe and ex-North Eton bins which would be its normal fare, and a few problems were experienced at the start of the crush, as what had worked perfectly with empty bins refused to operate with full ones! When the second week in July turned out to be wet, it was time for contingency plans to be put into effect. From the night of 13 July, Pleystowe crushed cane from every mill (with the exception of Cattle Creek which has no tramway link). For a few days, Marian and Racecourse Mills had a loco stationed at Pleystowe for shunting their own bins in the yard. Farleigh had the loan of some "foreign" bins to enable cane to be sent across to Pleystowe (the Pleystowe tippler will not handle Farleigh bins), but this experiment came to an unhappy end when about 30 Pleystowe bins went into tidal Constant Creek on the Farleigh north coast line on 12 July, at a completely inaccessible spot. It was suggested a road would have to be bulldozed into the area to recover the bins.

Marian Mill loco shed was host to Farleigh's Com-Eng 0-6-0DM *Ashburton* (A1614 of 1956) and Pleystowe's Baldwin B-B DH *Mia Mia* (9815-1-10-81 of 1981) on the night of 18 July. *Ashburton* had brought some Marian bins back from Farleigh and was to pick up some Farleigh bins at North Eton on the return journey. *Mia Mia* had brought some Pleystowe bins to Marian to try out in the Marian tippler. On 12 July, 50 Racecourse bins had been loaded at Mirani and had been taken to Allandale by a Marian loco, from Allandale to Oakenden by a Pleystowe loco and picked up from Oakenden by a Racecourse loco. Racecourse also crushed Pleystowe and Farleigh cane on this day, before Pleystowe started up.

A total of 2560 full bins were sent from Marian to Pleystowe between 13 and 19 July, with more scheduled to follow over the next few days. The 32 km run via North Eton took a loaded train about 2 hours non-stop. (The mills are about 10 km apart as the crow flies.) Both Marian Baldwin bogie locos 16 & 17 (9562-1-6-81 and 9562-2-6-81) were observed at Pleystowe on 22 July. Normal crushing arrangements resumed a few days later with the return of

good weather.

A major derailment took place on the Marian tramway bridge on the afternoon of 23 July. Problems had been experienced at this point where the line crosses the Pioneer River with steep grades on either bank, and as a result, the Assistant Chief Cane Inspector and Loco Engineer were on the footplate as bogie Baldwin 16 came onto the bridge with a full load of 53 bins. The first bin behind the loco derailed on the curve entering the bridge, and the driver attempted to allow the load to ease down behind, hoping eventually to come to a halt. However, after some distance, the derailed bin managed to foul the bridge structure, jerking the loco so severely that the front bogie became derailed. The loco pitched around violently before coming to a halt precariously balanced on the bridge, while a number of bins piled up behind it and into the river upstream of the bridge. When the train had come to a halt, two-thirds of the way across, the last bin in the rake toppled over into the water downstream, and dragged off each remaining bin in turn until all were in the river. This was the first major loco derailment on the bridge for many years, and it was probably only newly-installed checkrails which prevented the loco itself going into the river.

The loco was chained to the bridge and floodlights rigged up to enable recovery work to go on through the night. Many loads of dirt were loaded into a large hopper wagon in the mill yard to be hauled by EM. Baldwin 4wDH rebuild 8860-1-8-79 of 1979 (originally 4529 of 1973) down to the bridge approach on the mill side. Here the dirt was dumped on the trackbed, and shifted by a front end loader building a causeway out into the river to enable a road crane to rerail the loco. The crane came out the next morning to do this, but the recovery of the damaged bins and the cane in them was expected to take at least 36 hours.

Ironically, the derailment occurred only a few yards from where preliminary work had begun just a week before in preparation for the construction of the new Marian high-level road-rail bridge, which will come into use in 1991. The bridge will be 220 m in length, with the deck 16 m above the river bed. The roadway will be 8.5 m wide, with an additional 2.2 m width for the tramway. Total cost will be \$5m, of which Mackay Sugar is responsible for \$600,000.

Marian Mill was also adversely affected when a QGR train collided with a truck on a road crossing at Otterburn on 27 July. The truck was propelled onto the adjacent mill tramway, which required repair by mill navvies.

An order for three 40-tonne B-B DH locos for Marian Mill has been placed with Eimco Australia for delivery in August 1990. These will have 750 hp General Motors diesel engines, and Voith hydraulic final drives instead of the axle-mounted crown wheel and pinion gearboxes used on the bogie Baldwin

locomotives. The new units will be 2 m longer than the 32-tonne Baldwins currently in use, and are expected to be used on the connecting line between Finch Hatton (site of Cattle Creek Mill, which will close at the end of the 1990 season) and Marian.

Cane handling and tipping arrangements at Marian Mill will be rearranged for the 1990 season, including the construction of a new weighbridge complex. The mill will become a double crushing mill in 1991. Four 15-tonne bogie "tri-bins" will be further evaluated in service this year. Two prototypes were tested towards the end of the 1988 season.

MILLAQUIN SUGAR CO LTD, Millaquin Mill 610 mm gauge

(see LRN 60, p.13)

It is reported that a major expansion is planned for Millaquin Mill for the 1990 season. Apart from an increase in mill plant and an expanded bin fleet, an additional locomotive is to be obtained. It is expected that this will be either the Eimco bogie machine ordered recently (see LRN 71, p.5) or else a locomotive made available at another mill by its delivery. It is possible that this expansion is to enable Millaquin to handle the entire Qunaba crop. Since the closure of Qunaba Mill at the end of the 1985 season, a portion of its crop has been conveyed, by semi-trailer bin transports, over a ferry across the Burnett River to Fairymead Mill.

David Mewes 9/89

MOSSMAN CENTRAL MILL CO LTD 610 mm gauge

(see LRN 71, p.15)

A head-on collision took place on 22 August, between a Bally Hooley Express tourist train and a cane train just south of Mossman township. Apparently, a loaded cane train was heading into the mill when it came into collision with the steam-hauled train as it left Mossman on its return trip to Port Douglas. Twenty-seven people were injured in the accident, non seriously with eight being admitted to the Mossman Hospital. Press details of the accident appeared sketchy and contradictory, but the mill's two way radio network is normally used to control all traffic and prevent conflicting movements. It is reported that a shuttle passenger service has been in operation between the Mirage resort and Port Douglas, with *Mowbray*, Baguley 0-6-ODM 3378 of 1954 in charge of trains.

*Chris Hart 8/89; The Cairns Post ?/8/89
via Chris Hart: Bob James 9/89*

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 71, p.15)

John Fowler 0-4-2 *Nelson* (20273 of 1934) was observed in service hauling "The Mulgrave Rambler" tourist train on 16 July. The whole train is stored and prepared in the navy compound. Three green open-sided bogie carriages are in use, connected to each other and the locomotive tender by drawbars. *Nelson* has been converted from an 0-4-2T and now sports a bogie tender with a walkway around all its four sides. As well as water, the tender carries diesel fuel for the burner on the loco. Mounted in a sound-insulated compartment within the tender itself is an internal combustion engine used to drive a generator for the electrical gear and an air compressor for the oil burner. The burner is mounted outside the boiler, pointing in through the firehole. Maximum boiler pressure is approximately 175 psi. Mounted on the centre of the smokebox door is a round brass plate bearing the builder's name, builder's number, and year built. A small brass bell is positioned in front of the cab where the rear sand dome used to be. Loco and tender are painted green with black underframes, red rods, and red & yellow trim. The loco's name is in large brass letters on the cab sides. Loco and carriages all have orange beacons on their roofs, and the loco is driver only operated.

The train travels up the valley of the Mulgrave River and then the Little Mulgrave River crossing numerous picturesque bridges, and all the while passing through tropical jungle and canfields, before terminating at the Orchid Valley tourist attraction, which is an orchid plantation. There are balloon loops at both the mill and Orchid Valley which the whole train uses for turning. A short branch has had to be built into the Orchid Valley site from the existing tramway. There are station buildings at each terminus, with that at Orchid Valley being the original Smart's sawmill building from Stratford. Two tourist trips are done each day, but the train only does the outward portion in the morning and the return portion in the afternoon, with a bus filling in for the rest. The train is thus to be found at "Orchid Valley" from mid-morning to mid-afternoon, during which time the loco is shut down.

In the navy area at the mill were seen E.M. Baldwin 4wDH 10 (6-881-6-64 of 1964), the unnumbered 4wDM loco (built at the mill around 1962), the Plasser tamping machine (98 of 1975) and Motor Rail 4wDM 4207 of 1929, a four-ton "Simplex" fitted with a canvas canopy. The gearbox has been removed from this unit, and it was noted that the home built loco appeared to be fitted with a "Simplex" gearbox. Four Capital Engineering bogie ballast hoppers, numbered MG1 to MG4 were also observed.

Chris Hart 7/89; The Tablelander 13/6/89 via Chris Hart

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOC LTD 610 mm gauge

(see LRN 57,p.11)

A new Eimco locomotive cab thought to be for fitting to a Clyde DHI-71 0-6-0DH loco is believed to have been delivered in May 1989. Currently on order is a TSR sleeper renewal machine from Tamper Australia.

ARHS "Bulletin" 8/89 via John Browning

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 67, p.10)

Seen in a workshop here in mid-July was what appeared to be a bogie brake wagon frame. At that time it was a newly constructed bare frame painted in grey primer with a set of South Johnstone type buffers and drawgear sitting on top of it. It is possible that the spare pair of Baldwin locomotive bogies may be fitted to this vehicle, which could be intended for use with the new bogie locomotive on order from Eimco.

The new locomotive, being built in Zimbabwe by Prof, is not now expected to be delivered much before the end of the season, with despatch ex Harare being expected around the end of September.

Drewry 0-6-0DM 15 (2520 of 1954) has been painted a silvery grey above footplate level with the exception of the engine compartment front around the grille, which is yellow.

Chris Hart 7/89; Bob James 9/89

SUGAR RESEARCH INSTITUTE, Mackay

(see LRN 63, p.8)

The 1988-89 Annual Review of Sugar Research gives details of a number of projects related to cane railway research and development.

One interesting development is the Animated Cane Railway Transport Scheduling System (ACTSS). This system not only schedules the rail operation to optimise the use of the railway system, but displays a track map on the screen which the user can modify interactively. The location of the mill, individual sidings and each active locomotive are displayed on the track network. Particular schedules can be simulated, and an animated display of the transport operation is shown as this progresses.

Other projects mentioned in the Review include software to provide finite element analysis of rolling stock (used when planning design modifications or new types of use with existing rolling stock), a study of the load transfer characteristics of sleepers and ballast, trials of the 11-20 tonne two axled wagons for cane haulage, technical advice for the purchase of second hand rail for the sugar industry, the improvement of rail to sleeper fastening

systems, the evaluation of bogie locomotive gearboxes, and progress with the hot axle-box detector and barcode bin identification system.

John Browning 8/89

THE SUGAR BOARD. Townsville 1067 mm gauge

(see LRN 69, p.8)

The canopy off the 4wDM "Simplex" ex Hambledon Mill was noted standing alongside the Bulk Sugar Loading (road transport) bins at Hambledon on Monday, 26/9/88.

R.J. Graf 8/89

TINBEERWAH MOUNTAIN RAILWAY, Arcadia, Cooroy 610 mm gauge

(see LRN 63, p.9)

In spite of some 2000 mm of rain in the first six months of the year, the amount of erosion damage experienced on the zig zag area and below was minimal, and was remedied during a two week working period by means of ballasting and rock wall repairs.

In October 1988, a large dead tree fell close to the bush depot, where most of the line's rolling stock and equipment is stored. Disastrous damage would have been done had the tree fallen across the shed, and this prompted the decision to provide rail access into an existing shed near to the farm buildings, in February 1989. It is intended to move the bush depot shed to this position next year.

The railway was host to an open day in February which was attended by a number of LRRSA members with their families.

Russell Savage 7/89

TONY GERMANOTTA, Mulei 610 mm gauge

(see LRN 57, p.11)

Tony Germanotta has abandoned his dream of operating a tourist passenger service on the Mount Jukes line of Marian Mill. After constructing three passenger carriages, and purchasing two small diesel locomotives, as well as acquiring Perry 0-6-2T 2601.51.1 of 1951 from Marian Mill, expenses amounting to \$200,000 had been committed. However, Mr Germanotta was unable to afford the high insurance cover required by the mill in order to operate his tourist train over mill tracks, and the mill was unwilling to operate the tourist train on its own behalf. Mr Germanotta has now offered the equipment for sale to Mackay Sugar.

Mackay Daily Mercury 17/7/89 via John Browning

TULLY CO-OPERATIVE SUGAR MILLING ASSOC LTD 610m: gauge

(see LRN 67, p.11)

The radio-controlled brake wagon built on the frame of Clyde 0-6-0DE DHI.4 of 1954 was observed in mid July and was obviously in service. It is painted yellow above footplate level and red below with the exception of a white band on the running board valencies, and is fitted with a horn. A further Com-Eng 0-6-0DH locomotive has been rebuilt with new engine and cab, but its identity was not established.

The ARHS Bulletin records Tully Mill as having received four "electronic tandem controllers" from Eimco Australia. This is radio-controlled multiple unit equipment to allow two pairs of Com-Eng 0-6-0DH locos to work together.

*Chris Hart 7/89; ARHS "Bulletin" 8/89
via John Browning; Bob James 9/89*

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm gauge

P. O. Box 288, Alexandra Vic 3714

(see LRN 71, p.17)

During an exceptionally wet winter, work at the Museum has by necessity been concentrated indoors. An extra set of 610 mm gauge track has been laid inside the goods shed in order to display, under cover, several items of rolling stock. A display of builder's plates and signalling equipment has been set up along one wall to allow for easy perusal.

The Shire of Alexandra has allocated the sum of \$700 towards the resurfacing of the station platform. This work will be undertaken as soon as the weather allows.

A new set of firebox door mounts has been fabricated and installed on the John Fowler locomotive, which continues to perform well. A booklet describing all the locomotives at the Museum as well as a short history of the tramways of the Rubicon Forest has been produced by the museum and is available for the modest sum of \$3.00 plus postage.

The Victorian Government has now revalued the disused railway land occupied by the Museum at Alexandra. The Valuer-General arrived at the astounding figure of \$215,000. However the Minister for Transport, the Hon. J. Kennan, has been contacted again by the Museum, and he has indicated his willingness to discuss the matter with Museum representatives.

Peter Evans 8/89

WESTERN AUSTRALIA

BELMONT (WA) BRICKWORKS TRAMWAYS

(see LR 59, Jan 1980)

The Belmont Historical Society has erected plaques at historical sites within the City boundary and included are the former WAGR Belmont station site in Mathieson Road and Millard Brickworks, Fautleroy Avenue, Redcliffe. A small winch operated tramway is commemorated by the plaque at the brickworks site. The Society has produced a booklet Belmont Historical Sites which has additional notes about other brickworks in the area as well as the WAGR branch history.

David Whiteford 8/89

KIMBERLEY RESTORATION GROUP, Carnarvon 1067 mm & 610 mm gauge

(see LRN 70, p. 14)

Ex-Public Works Dept diesel PW21 (Simplex 9096 of 1955) has been made operational at the "Kimberley" Restoration Group's depot under the satellite dishes just outside Carnarvon. It was used to push Andrew Barclay 0-4-0T *Kimberley* into the Group's workshop following the laying of track in May.

The 4 wheel coach body mentioned in LRN 70 should be in the Westrail Midland Workshops when these notes appear in print. The WA Dept of Transport arranged for Westrail to restore the coach (believed to be an original Geraldton-Northampton railway carriage of the 1870s) to as original condition as possible. The Gascoyne Historical Society agreed to the removal of the carriage from their Lighthouse Cottage Museum grounds at the Carnarvon jetty and it is possible the carriage will be displayed in Perth.

The Carnarvon Express jetty passenger train is once again operational following some years of intermittent running. Carnarvon's Rotary Club acquired the mini-moke and carriages from Busselton's Apex Club in 1980 and the first services were operated over Easter 1981 (see LR 76, April 1982). Early in 1988, the Rotary Club donated the train to the Gascoyne Historical Society and services were begun on 1 May. Early in May 1989, the Dept. of Occupational Health Safety and Welfare put a stop to the train, claiming there was no permission to operate and that the track was unsafe. Marine & Harbours Dept. were surprised and annoyed at this move as it was they who owned and operated the jetty and still used their own locomotive for jetty repair work. The issue was resolved in time for Carnarvon's peak tourist season in July and during July the train commenced running once more. It is

now known as "Little Kia-Ora" (*Kia-Ora* was the name given to a former steam locomotive to operate at Carnarvon) and operates regular weekend and holiday services along the jetty.

Nor-West Whaling Company's 0-4-0 battery electric loco hauls one wagon loaded with prawns towards the factory. The siding at the right is a dead end siding adjacent to fuel tanks.

Photo: David Whiteford 5/89

The Nor-West Whaling Company now concentrates on prawn harvesting and has a factory on Babbage Island, a little to the south of the old jetty. The Company's own jetty is served by a 610 mm gauge railway and at least seven four-wheel flat top wagons with wire mesh containers are used on the line and hauled by a diminutive four wheel battery electric locomotive. No identification marks could be seen on the loco during a recent inspection. Boxes of frozen prawns are removed from ships' holds by portable conveyors and placed into the containers. The loco will then haul one or more wagons right into the factory where the boxes are immediately opened and the prawns thawed. Two sidings exist in the factory yard as well as the "main line" to the inside unloading platform. On the jetty there is one track running the length of the jetty and a short siding near the shore end. On 18 July, it was very interesting to be riding on the long jetty passenger train while watching the prawn train operate in the distance! Inspection of the prawn jetty is only encouraged via tours run through the Tourist Bureau and these only run during the prawn season.

David Whiteford 7/89

MOUNT MAGNET

A 20 in gauge miniature railway has been laid in about a 50 metre circuit next to the sports complex built on the former WAGR yard. The rails appear to be 30 lb and steel sleepers (probably ex a local mine) have been used. There is no siding or shed on the site and I do not know what is used on the line.

David Whiteford 7/89

YOUANMI

In the 1930s Youanmi was a thriving gold mining town situated south of Sandstone. It is known to have had a steam loco operated surface railway and locomotive operated underground railways during its history but little is known about these. A visit in July 1989 revealed some standard side tip hoppers in a scrap pile while we were informed that the open cut mining now in place has cut through many of the old underground drives. Many rail hoppers have been recovered from these drives but there seems to be no preservation move. Close inspection of operations was unavailable.

David Whiteford 7/89

MEETINGS

MELBOURNE:

ANNUAL MEMBERS SLIDE NIGHT Yes, its on again! Bring any slides which might be of historical or of general interest to light rail enthusiasts (maximum of 20 slides each).

Always an interesting night with plenty to satisfy everyone. Don't miss it!!

LOCATION Ashburton Uniting Church Hall, Ashburn Grove, Ashburton
DATE Thursday 12th October at 8.00 pm.

SYDNEY:

TASMANIA: THE WEST COAST

Another special guest for our October meeting is Jim Powe. He will be showing some of his films shot in the spectacular terrain of Tasmania's West Coast. These were all taken in the days when steam still ruled and many more railways existed. For anyone with an interest in ABT railways etc. a meeting not to be missed.

LOCATION Woodstock Community Centre Church St., Burwood. Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away. **DATE** Wednesday 26 October at 7 30 pm

ADELAIDE:

Contact Arnold Lockyer for details Phone 08-2969488 **LOCATION** 150 First Avenue, Royston Park

Date: Thursday 5 October at 8.00 pm

TOUR REPORTS

AN EPICUREANS EXTRAVAGANZA or ANY EXCUSE FOR A BEANFEAST!

Commemorating the 40th anniversary of the closure of the Tyers Valley Tramway - Victoria's last steam operated timber tramway.

To commemorate this rather obscure but nonetheless important anniversary, some 56 members and friends gathered at Belgrave on a cold Saturday, 5th of August, to travel by special train to the Packing Shed at Nobelus Siding (via "Lakeside East") for a commemorative meal. Our little train comprising the restored Climax hauling four carriages (and a truck for wood) departed Belgrave around 9.30 am beneath overcast skies. Most passengers preferred to travel either Grott (135 NQR) or Tourist (NBH) Class so they could savour the passing scenery without extraneous items (like windows) spoiling the view. Some lucky ones (depending on your point of view) travelled Executive Class in 5NBD, the beautifully restored combination carriage/van. The Climax quickly got into stride (at a breathtaking 5 mph), paused briefly at Selby for safeworking purposes (to ensure we weren't catching up or the diesel hauled works train which had preceded us) and following a photostop just past the landslide, we arrived at Emerald some ninety minutes after departure.

Here we made two crosses, first the works train, now on its return journey and then the "down" Saturday morning pass., for which the sun miraculously emerged for about 9.5 seconds which enabled the assembled celluloid exposureologists to use up a hundred rolls of film! With safeworking complete we steamed on, powering downgrade to Lakeside at a hair-raising 5.5 mph! Passing Nobelus Siding, nostrils twitched and mouths watered as the smell of cooking mingled with the Climax's wood smoke. Some no doubt would gladly have bailed out there and then! At Lakeside we crossed the passenger train and then continued on to the head of track at "Lakeside East". Until the local shire gets its "act into gear", tracklaying unfortunately will remain halted.

Following the making of photographs to record its presence, the Climax

pushed the train back to Lakeside for run-around purposes. Whilst taking water, one of the Climax's unusual attributes was watched with interest - its ability to blow perfect smoke rings! Underway again, with the "inner-man" fairly hollering out for satisfaction, it wasn't long before we arrived back at the Packing Shed and reversed into Nobelius Siding. Inside, a roaring fire awaited and dense was the throng that gathered around it to thaw out. A magnificent meal awaited us, provided by the Puffing Billy Preservation Society's Night Train caterer and volunteer staff. For those who weren't there, let them suffer a little as we relate the menu - entree of home made chicken and veggie soup with fresh chunky home baked breads followed by main-course of slabs of prime beef AND pork AND chicken (carved by our friendly Chef) with all the usual extras - potatoes, carrots, peas, and corn plus side salad (and the Chef invited the hungry back for seconds!) followed by dessert - a choice of pavlova with fresh fruits, or wine trifle, or (yum! yum!) hot peaches in port wine sauce with loads of fresh cream on top. Several well known members thought so highly of the hot peaches they couldn't resist seconds! Round all that off with a cheese platter then tea or coffee (other drinks at the bar) and many were wishing they could stay there all afternoon in front of the fire. Certainly beats chasing leeches with machetes over rotten slippery bridges in the rain at Ezard's No.27! Our meal was followed by a short home movie from the Stamford collection, taken on Puffing Billy in 1947 with Frank making a cameo appearance!

Back on the train heading home some travellers were fortunate to be invited by our driver Graeme Daniel, for turns at having cab rides in the Climax. Most appreciated by all. Despite the cold day I feel sure everyone rated the trip a great success. Hearty thanks to Frank Stamford who organised it and produced the tour notes which, interestingly, includes a list of all Victorian steam operated timber tramways. Well done Frank, a great job. Just think, next year will be the 41st anniversary of the closing of the Tyers Valley Tramway

"Herr V. Rayles"

YANGARDOOK TRAMWAY TOUR REPORT

Sunday 24 September 1989 (see LRN 70, p.13)

Between 1969 and 1978, Jim Baines constructed a tramway nearly 1 km in length on private property near Toolern Vale to the west of the city of Melbourne. The 610 mm gauge line is laid in 20 lb/yd rail and abounds in tight curves and steep gradients, including a section of 1 in 9. Named the "Yangardook Tramway", the line twists and turns through bushland as it traverses the length of the property along a hilltop ridge. This line is not

normally open to the public, but by special arrangement with Mr Baines, 44 LRRSA members, family and friends visited this location on Sunday 24 September 1989.

Malcolm Moore 1090 of 1943 & Simplex 9979 of 1953 on the Yangardook Tramway.

Photo: Peter Evans

Motive power operating on the line included Malcolm Moore 4wPM 1090 of 1943 (ex State Electricity Commission and "Whistle Stop", Frankston). This unit, which is painted yellow, previously carried the SECV number 26-C-3 when purchased. The other locomotive in use on the day was Motor Rail Simplex 9979 of 1953, a 2.5 ton 4wDM which came from the Racecourse Sugar Mill at Mackay, and is painted green. Also present on site, but unfortunately not in use due to the absence of owner Brian Peart, was Ruston & Hornsby 4wDM 223725 of 1944 *Rusty*, which has been used at several locations since it was purchased from Moreton Sugar Mill in 1976. (This locomotive is currently for sale.) For the energetic, there was the opportunity to work up an appetite using a regauged ex-VR quadricycle which seated two people.

BBQ facilities were provided for lunch, and the tour organiser's run of good luck held with the weather which was fine and sunny with just a pleasant breeze.

After lunch, further trains were run using both locomotives and an assortment of small carriages built on 4-wheel frames, and a modified coal skip once used at Wonthaggi. With a light load both locomotives tackled the 1 in 9 gradient with ease. The descent was made in low gear without use of the brakes to avoid wheel skid on the steep gradient. Several LRRSA

members were offered the opportunity to drive the Malcolm Moore, which was also taken down a siding and operated over a short section of track laid in wood rail.

The tour was enjoyed by all who attended, and its success was due to the efforts of owner Jim Baines who even repainted the locomotives for the occasion. LRRSA members wishing to visit this line in the future should contact Jim at Lot 78F, Chapmans Road, Toolern Vale, Vic 3337.

RESEARCH

COCOS (KEELING) ISLANDS, Indian Ocean (North Keeling Island)

(see LRN 68 p.3, LRN 70 p.2 & LR 78 p.16)

“Light Rail News”

There appears to be two tramways being discussed at this location, one being on North Keeling Island, the other on Direction Island (in the South Keeling Islands). LR 78 contains a short article from David Burke who recounts that Mr Gavin Souter found a tramway on the north-west side of North Keeling Island. It was of about 2 ft/610 mm gauge, some 500 m long, running from the ocean to the lagoon. Local enquiry suggested that it was used for about 20 years until the 1940s to transport copra from the (now overgrown) coconut plantation for shipping. This is presumably the tramway referred to in LRN 68 and the last six lines of the entry in LRN 70. The dispute seems to be its age, builder and use.

“Light Sail News”

The photo referred to in LRN 70 is, as stated there, of the jetty on Direction Island, one of the 3 or 4 inhabited islands on the South Keeling atoll, some 16 miles south of North Keeling. It was on Direction that John Clunies Ross first settled in 1827.

At dawn on 9 November 1914, Commander Karl von Muller anchored the German light cruiser SMS *Emden* about 3 km off Port Refuge, Direction Island. A raiding party of 50, led by the *Emden*'s First Officer, Kapitänleutnant Hellmuth von Mücke, set off for shore in a steam pinnace towing two cutters with orders to destroy the Cable and Wireless station operated there by the Eastern Extension Telegraph Co. Ltd. This cable station was an important strategic target being at the three way junction of the underwater telegraph cables to Fremantle, Australia; Batavia, Dutch East Indies (and hence to S-E Asia); and also Africa. This remote outpost of the British Empire was staffed by 34 people.

After destroying all cable and wireless equipment, transmitters, cutting the cable, blasting down the wireless transmitter's aerial mast (acceding to the staffs' request not to fell it onto the tennis court!), von Mucke heard the Emden's siren sound an urgent recall. The raiding party quickly headed back to sea, but the Emden was already underway, heading out to its last battle. A couple of hours later, just before noon, with his ship a floating wreck from the pounding it had received from HMAS *Sydney*, Commander von Muller steered the SMS *Emden* onto a coral reef off the south-west coast of Norton Keeling Island.

Meanwhile back at Direction Island, von Mucke realised that the much smaller Emden would be outgunned by the larger vessel. He landed his party again at the cable station, commandeered half the staffs' four months supply of rations and proceeded to load them all onto the 97 ton schooner *Ayesha* which belonged to Clunies Ross and was lying just offshore. The raiders had passed her on their way in and had originally intended to scuttle her when leaving. The German sailors worked all afternoon transferring supplies and would certainly have used the jetty tramway to facilitate this. The photo of the Germans leaving, with the empty flat-top trucks at the sea-end of the jetty supports this.

The jetty itself was very short, maybe 70 or 80 feet long, however the distance to the cable station is not known. The rails were not fastened directly to the jetty's decking but rather they appear to be supported on about 6 in x 6 in "sleepers" laid down the middle of the jetty. A small hand crane is at the sea-end of the jetty however, being obscured by people, it would be either affixed to the jetty or to one of the flat-top trucks.

At dusk, no doubt being unable to believe his luck that the *Sydney* hadn't come back yet (it was off chasing the *Emden's* collier), von Mucke and crew departed in the *Ayesha* on one of those epic voyages of the sea.

Read it all in the "Last Corsair - the story of the Emden", published by Hodder & Stoughton in 1983 and written by noted WW I historian and researcher Dan van der Vat. Included in the book are two photos of the jetty; the one mentioned in LRN 70 taken on 9 November 1914 and one taken the following day when the Australians arrived.

Does anyone know how many of the other islands also had tramways?

"Light Mail News"

By now, as the diligent reader will have noted, all this drama took place exactly 75 years ago. To commemorate this event you may wish go "hoof" it down to your nearest Post Office Philatelic centre and procure the set of four stamps (40c, 70c, \$1, & \$1.10) issued by the Cocco Keeling Islands on 9

November 1989. The miniature sheet at \$3.20 is quite nice.

Phil Rickard 10/69

NEW SOUTH WALES

BROKEN HILL 610 mm gauge

In mid-October, a green-painted Ruston & Hornsby 4wDM locomotive was noted in a yard alongside the State Rail trackage. Enquiries revealed that this had previously been stored at the "coke yard" of Zinc Corporation, together with other possible museum items. A closer examination of the site a few days later, revealed the presence also of two small 4wBE locos and at least two small underground trucks. The exact location is in Crystal Street, Broken Hill, opposite numbers 478/480.

Ray Graf 10/89

(Ruston & Hornsby records indicate the following locos went to the Zinc Corporation:

B/N	Ex works	Gauge	Model
287688	4/1951	610 mm	40DLU
287689	4/1951	610 mm	40DLU
349075	10/1953	610 mm	48DLU
370560	10/1953	610 mm	48DLU
394021	5/1956	610 mm	48DLU

The last one, painted green, was seen by Anthony Weston dumped on the surface of the New Broken Hill Consolidated Mine in February 1977. - JB)

KIAMA 610 mm gauge

(see LRN 52 p.9 & LRN 61 p.8)

The proposal to restore the railway line which used to run from the Kiama quarries to the Harbour has been publicised by a display at the Kiama Council Chambers. The 2.3 km line would be expected to attract 200,000 passengers per year, and a Davenport 0-4-0ST (1596 of 1917) and Fowler 0-4-0T (16089 of 1923) locomotive from the line are still in existence at the Illawarra Light Railway Museum Society's Albion Park Museum.

ARHS Bulletin 10/89; John Browning

QUEENSLAND

BABINDA SUGAR LTD 610 mm gauge

(see LRN 72, p.10)

Two cane trains collided head on at Eubenangee at 6 pm on 12 September, as a result of which the driver of one locomotive was taken to the Cairns Base Hospital with neck and shoulder injuries, cuts and bruises. Involved were a train heading towards Babinda pulling 72 full bins, and one heading in the direction of Goondi hauling 42 empties.

Meanwhile, shareholders have converted their co-operative into a new company, Babinda Sugar Ltd in order to facilitate a possible takeover by Bundaberg Sugar Ltd A final decision on Bundaberg's \$27m bid was due to be taken late in November.

Cairns Post 13/9/89 via Tom Porritt;

Mackay Daily Mercury 8/11/89 via John Browning

BUNDABERG SUGAR CO LTD, Mourilyan Mill 610 mm gauge

(see LRN 72, p.11)

Ex-Goondi growers, allocated to Mourilyan by State Government legislation in 1987, are threatening to apply en masse to the Cane Prices Board for transfer to South Johnstore Mill. They are dissatisfied with the way their wishes were ignored when Goondi Mill closed, and by the deal they have received from Bundaberg Sugar.

Cairns Post 7/10/89 via John Browning

CSR LTD, Hambledon Mill, Edmonton 610 mm gauge

(see LRN 71, p.11)

An article on the tourist theme park, "Sugarworld", appears in the September 1989 issue of the magazine *On Q*. According to the article, Sugarworld opened in the grounds of Hambledon Mill late in June, and has a two kilometre "Sugar Railway" used for moving people around. It is stated to have four stations and a "restored steam locomotive". A back-to-front picture illustrating the article shows a head-on view of a small E.M.Baldwin diesel in

Hambledon colours at the head of five small carriages. This would be one of the ex-Goondi Mill Baldwin 4wDHs, 8002-1-8-78 of 1978 or 9109-1-9-80 of 1980.

The project was officially opened by the Governor of Queensland, Sir Walter Campbell, on 11 September. The attraction, 14 km south of Cairns, is open 10 am to 6 pm daily.

Tom Porritt 9/89; Chris Hart 10/89

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 72, p.11)

Clyde 0-6-0DH 16 (DHI.1 of 1954) returned to service following a slack season overhaul which had extended into the crushing, late in July. Clyde 0-6-0DH 18 (DHI.5 of 1954) then became the spare loco once more.

Chris Hart 10/89

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 72, p.12)

On 14 October, preserved Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) and the passenger carriage were, as usual, used to give rides in Ingham on the occasion of the annual Maraka Festival.

The situation of the Drewry 0-6-0DM locos in mid-October was as follows:

Dalrymple	2391	1951	obviously not used for some time; motor removed
Seymour	2392	1952	seeing some use, occasional or regular
Leichhardt	2393	1952	navvy loco
Herbert	2394	1952	seeing some use, occasional or regular
Victoria	2404	1953	obviously not used for some time

Chris Hart 10/89

MACKAY SUGAR CO-OPERATIVE ASSOC LTD 610 mm gauge

(see LRN 72, p.12)

Mackay Sugar's long-awaited new transport policy has been announced. The vexed issue of inequitable transport arrangements between different mill areas was a major obstacle to the merger, and a cause of some dissatisfaction since. The new policy comes down heavily in favour of tram transport, and there will be significant activity in building new branches and extensions as well as re-routing some difficult sections. A two-year programme of work has been announced and a five-year plan is under preparation. For 1989-90, the following \$5m work programme has been approved:

Racecourse Mill	- Balberra line construction;
Pleystowe Mill	- rehabilitation of former North Eton lines in Mia Mia and Septimus areas, and re-routing at Mount Vince;

Marian Mill	- construction of Mirani Weir extension (Mia Mia branch), first stage of Mount Martin extension and a cut-off line to link the Mirani branch and the main line at Mirani: Farleigh Mill - design and survey work for a by-pass of the Summit (north coast line);
Cattle Creek Mill	- construction of Boongana line (ex Netherdale branch railway).

\$1m is to be spent on new bins before the start of next season. More big bins (currently under trial) will be purchased if grower demand warrants it. The position of Cane Railway Engineer at Pleystowe has been advertised. This position requires someone with extensive experience of track construction and maintenance. The person appointed will be responsible not only for the 190 km of track under Pleystowe control, but will also maintain an overview of the entire Mackay Sugar tramway system.

A complex system of haulage is being used to bring cane to Pleystowe Mill from former North Eton territory. One Clyde 0-6-0DH (usually *Palmyra* 63-273 of 1963) is stationed at Mia Mia to work cane in from Septimus and Pinevale. E.M. Baldwin B-B DH *North Eton* (6780-1-8-76), stationed at North Eton, works cane between Mia Mia and the North Eton area. Clyde 0-6-0DH *Habana* (60-215 of 1960) and Com-Eng 0-6-0DH *Septimus* (A2128 of 1958) are also based at North Eton. Cane is hauled from Savannah (near North Eton) to Pleystowe by Pleystowe-based locos, including the two other bogie locos, *Shannon* (7126-1-5-77 of 1977) and *Mia Mia* (9815-1-10-81 of 1981).

Flexibility brought about by tramline links was again demonstrated on 17 September, when Racecourse Mill's Clyde 0-6-0DH *Sunnyside* (57-160 of 1957) arrived at the Pleystowe loco shed to assist as a result of a Pleystowe loco breakdown.

Cane on the old North Eton lines west of "the water" (5 km east of Mia Mia) is still hauled in old North Eton 3.5-tonne bins, while the remainder is hauled in Pleystowe 6-tonne bins. Track in Pleystowe bin territory was supposed to have been upgraded during the slack season, but bad weather prevented this being completed, leading to a number of derailments. During September, track was being progressively replaced at Brightly on the Mia Mia line, by the construction of new track parallel to the existing line, to be cut in as sections are completed.

A major worry bringing cane from North Eton to Pleystowe is a hill at Mt. Vince, at the foot of which is an S-bend. This was the scene of some mayhem in mid-September when a number of 6-tonne bins were derailed on the curves and men were busy picking up cane and repairing track, assisted by Motor Rail 4wDM 21575 of 1956. A number of bins lay upside down nearby, quite a few with undergear completely torn off. As a result of this misfortune, the maximum load on this section was reduced to 100 6-tonne bins.

The two new NQEA 15-tonne flexible wheelbase bins were to go into service at Pleystowe in September after some minor modifications. Each has two bin numbers, a different one being displayed at each end (8335/8336 and 8337/8338).

The final ex-North Eton locomotive due to be transferred, D2, Bundaberg Foundry 0-6-0DM 13 of 1954, was sent by road to Cattle Creek for the start of the crushing season. Here it was soon renumbered 5. With its previously unpainted engine compartment panels (fitted last year) newly painted yellow, it looked quite smart when seen in September shunting cane from the Zarb's Transport road depot across Eungella Road to the mill. 50% of Cattle Creek's cane comes by road, an uneconomic situation which will be changing soon. Also renumbered was Bundaberg Jenbach 6wDM 10 of 1953 (ex North Eton D1) which had arrived here in 1988, becoming number 6. However, Cattle Creek did not maintain its new record number of locomotives for long, for by mid-September, 6 was back at North Eton, being used for navvy duties on the Mia Mia line. Seen outside the loco shed at Cattle Creek in September was a discarded Farleigh Mill Clyde cab, possibly for fitting to a Cattle Creek loco.

Racecourse Mill's new acquisition, Com-Eng 0-6-0DH FB3169 of 1963, was observed in mid-September fitted with new engraved brass-style *Oakenden* nameplates, although still in North Eton colours.

Farleigh's new loco from North Eton has also received its name, *Barcoo*, in this case on engraved steel-style nameplates. It likewise has remained in North Eton yellow. A number of boards have appeared at various locations on Farleigh's north coast line which read "CALL BASE FOR CLEARANCE". The results of the 12 July derailment at Constant Creek were very apparent two months later, with one Pleystowe bin visible upside down in the water beneath the bridge. Immediately to the south of the bridge, 15 Pleystowe bins were lined up in the mangroves at either side of the track. Many were upside down and still contained cane. Towards the end of October, Farleigh's two 16-tonne Com-Eng 0-6-0DM locos, *Richmond* (A1308 of 1955) and *Ashburton* (A1614 of 1956) began trials after having been fitted up for multiple-unit operation. On the north coast line, this double unit has been reported as capable of averaging 16kph, whereas the Clyde Model HG-3R 0-6-0DHs only average 11 km/h on this line.

Marian Mill suffered a misfortune on the night of 12 September, when a rake of loaded bins ran away from a siding on the Mt. Jukes line. They crossed the Bruce Highway at some speed, protected by flashing red lights, and then tried to negotiate the creek bridge immediately to the south, a timber trestle structure. Unfortunately, not only did they derail but in crashing into the creek, they also managed to demolish the bridge itself. The result was 45 bins

and their contents plus a jumble of bridge timber, rails and sleepers in the creek and one tramline severed with cut and burnt cane awaiting crushing. Within 48 hours, the creek was cleared, the cane picked up and sent to the mill for crushing, and the bridge replaced with culvert and embankment. In the meantime, E.M. Baldwin 4wDH rebuild 8860-1-8-79 of 1979 (originally 4529 of 1973) was transported by road to handle the bins on the Mount Jukes line, which were brought to a loading point for road transport to Farleigh's Leap line to enable the cane to be crushed at Farleigh. This locomotive also shunted ballast hoppers which were transported to the site by road also.

Marian Mill's Com-Eng 0-6-0DH from North Eton (FB3170 of 1963) has still retained its North Eton number, D5. It is believed that construction is proceeding for the Langdon extension, with a view to the line being finished this year.

MILLAQUIN SUGAR CO LTD, Millaquin Mill 610 mm gauge

(see LRN 72, p.14)

Clyde 0-6-0DH 4 (57-159 of 1957) came into collision with a car on the Walker Street level crossing following failure of the flashing lights at 1.30 pm on 6 August. The *Bundaberg News-Mail* of 7 August reported that the locomotive was knocked completely off the track by the impact and ended up at right angles to, and some distance from, the track. There were no serious injuries.

Durundur Railway Bulletin 9/89 via John Browning

NORTH COAST EQUIPMENT HIRE, Mackay Harbour 610 mm gauge

(see LRN 69, p.8)

When visited in mid-September there was no sign of the remains of Motor Rail 4wDM 21503 of 1953 formerly at North Eton Mill. Much other scrap seemed also to have been disposed of.

John Browning 9/89

PJ ENGINEERING, Mount Ossa 610 mm gauge

(see LRN 69, p.7)

Moved here from Strathdickie Smithy, is Motor Rail 4wPM 4199 of 1927. It is visible from the Bruce Highway when travelling north from Mackay. Also here are four baggage cars from Hayman Island. Reportedly, this equipment is still to be restored for use at Frankston Aquatic Centre, Bloomsbury.

John Browning 9/89

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOC. LTD 610 mm gauge

(see LRN 72, p.16)

Although Proserpine Mill took delivery of a new loco cab from Eimco earlier in the year, it had still not been fitted to a locomotive by mid-September. This work will probably be postponed until the forthcoming slack season.

On 15 September, Clyde 0-6-0DH 8 (65-443 of 1965) was derailed adjacent to the Shute Harbour road at Mount Julian when, hauling full bins towards the mill, it collided with a rake of empties which had been allowed to run onto the main line from a siding. The locomotive came to rest propped up on a cane bin which was in turn supported by a power pole. The weight on the power pole caused a domestic power line crossing the road to sag, with the result that it was snagged by a passing high vehicle, leaving the severed power line on the tramway. The Electricity Board workers had to be called out, and they were concerned that if the locomotive was lifted by a crane, then the power pole might spring back and the main power lines brought down. With another loco and cane waiting to be crushed trapped behind the derailment, there was every prospect of a long afternoon ahead!

John Browning 9/89

QUEENSLAND ELECTRICITY COMMISSION, Tully

Tenders for the construction of an exploratory tunnel 5.5 m in diameter and 1300 m in length have been called. The tunnel will run mostly in hard rock at a site 40 km west of Tully. Tenders closed on 30 August.

EMU BAY RAILWAY CO. LTD 1067 mm gauge

(see LRN 70, p.11)

The new 12 km Hellyer branch was officially opened on 10 April. From 1 May, a new working timetable was introduced which features as many as four trains in each direction each day, a contrast to the pattern of a few years ago when a single train was used. Two trains run between Burnie and Hellyer, one between Burnie and Primrose and one between Burnie and Melba.

ARHS Bulletin 10/89 via John Browning

HYDRO-ELECTRIC COMMISSION, King River Scheme 1067 mm gauge

(see LRN 57, p.13)

Completion of the tunnelling for this scheme, located near Crotty, was

completed in April. The track was to be lifted in panels and the locomotive and rolling stock to be overhauled by the HEC for use on the Anthony Scheme.

ARHS Bulletin 10/89 via John. Browning

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm & 1029 mm gauge

P.O. Box 288, Alexandra Vic 3714

(see LRN 72, p.17)

The Museum has been notified that the boiler of John Fowler 11885 of 1909 will be examined on 28 November. As the inspector has asked that the steam turret be dismantled, the opportunity is to be taken to resurface the mating faces and to fit the turret with new studs. These are being prepared by member Philip Thorne, who is also preparing new copper piping to replace the rather ugly collection of iron plumbing which presently services the steam blower and the injectors. The boiler will be emptied and dismantled for inspection immediately after the November running day.

Restoration work carried out recently has included the turning of new bearing lubricator caps for the John Fowler, the dismantling and clearing of the radiator of the Kelly & Lewis, the fitting of an engine bearer extension to Simplex 10058, and the replacement of the footrests and repainting of the broad-gauge ganger's quadricycle. Another Rubicon tramway bogie has been restored and returned to the rails.

After two years of restoration by Graham Lister, the engine of the Museum's vintage Fordson tractor was started recently for the first time in decades. The return of this unit to operating condition will allow a member's long-suffering Toyota Landcruiser to be retired from its duties at the Museum which have included rail reclamation and even shunting!

The roof of the new locomotive shelter has been completed, and the Shire has graded the new formation leading to this area. The old broad-gauge No. 3 road will now be lifted and relaid to 610 mm gauge. In preparation for the movement of relatively heavy locomotives into this area, the siding leading to the goods shed and shelter has been re-sleepered.

At the end of August, the Museum took delivery of a track sprayer constructed by the Rubicon SECV gang in their spare time under the direction of Ken Smedley. This unit is built on a Rubicon tramway bogie and fitted with an iron tank and electrically operated pump, and is painted green and orange.

Peter Evans 10/89

DEMPSEY MINE, Gaffneys Creek, gauge unknown

On 21 October, the machinery section of *The Age* carried an auction notice for the plant of "The Dempsey Mine" at Gaffneys Creek. The auction is set for 2 November and included in the list of items to be sold is a Gemco electric locomotive and a quantity of 20 lb rails.

The Age 21/10/89 via Colin Harvey

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(See LRN 71, p.18)

TIMETABLE: The 1989-90 (Sept 89 - Aug 90) timetable has a few changes to the previous years: Midweek trains, now two a day from October to April inclusive (previously one); Saturday, three trains a day in March and April (previously two); Midweek, school term holidays, three trains a day (previously four).

Public Night Trains will run on 9 Sept, 14 Oct. 11 Nov. and 9 Dec. at a cost of \$55 per head, which includes drinks on the train, and dinner at Nobelius Siding.

LOCOMOTIVES: The current (1 Nov 1989) position regarding all locomotives is:

"Sir John Grice" (Peckett 0-4-0ST). Work is currently underway to provide air-brake equipment so that this loco can return to mainline service. The equipment is being fitted to a separate vehicle. A kerosene marker lamp is also being fitted.

Climax. This was used on an LRRSA charter on 5 August (see tour report, page 3/4), a Buck's Night Special to Lakeside on 7 October, and a ballast and firewood train on 4 November.

3A. Still at Emerald, minus a few parts (like wheels, boiler, water tanks, cab, smokebox etc.).

6A. Still at Belgrave, minus a few parts (like driving wheels and boiler).

7A. In service.

8A. In service.

12A. The proposed colour scheme is VR "all-over" black, with white lettering on the Number and Marker plates, which will have a black background. Work is steadily continuing on its restoration, with the motion plate now fitted, and both pony assemblies ready for installation.. New cab side-walls have been made and fitted.

14A. This is currently in the Belgrave workshops. Two new axles have been machined at Emerald on the wheel lathe. One new wheel casting was

machined, and two others rebores. The boiler has been relagged.

G42. Work has been completed on removing fittings from the centre unit, and needle gunning the heavily built-up areas of rust. Unfortunately this revealed cracks in both pivot castings, and the arduous task of removing the 76 rivets which held these in place has just been completed, to enable them to be welded. 1988-89 was a record year for G42 fund-raising with about \$57,000 being raised, including \$17,000 from the Great Train Race Day. So far a total of about \$235,000 has been raised.

T.A.C.L. Tractor. Machining of the axleboxes is complete. New axlebox brasses are now being cast. An original builder's plate has been found, and this has been cleaned-up and sent off to have another cast. These are very impressive large plates. The existing wheels are to be retained, and the tyres re-turned.

"William Collis", (NRT 1. In service at Emerald as workshops shunter. D21. (ex TGR V 11). In service.

ROLLING STOCK:

91NQR has just been returned to service after extensive repairs and refurbishment, and 92NOR is now at Emerald for similar treatment

3 NBL. This (Mount Lyell) car is now well advanced in its refurbishment and the interior is now being refitted. The cost of the work carried out on this is estimated to be about \$50,000 by the time it is finished.

BELGRAVE STATION BUILDING: Work on the new building is progressing with the roof now fitted, and the brick-work well underway.

TRACK: Ballast trains are being run every week, concentrating on the section between the trestle bridge and Selby-Aura Road, which is the same section that the tamper PTT 11 is working. These trains are normally hauled by D21, and from 9 November will run on Thursdays departing Belgrave at 6.00 pm to make use of Daylight Saving. Only 500 sleepers between Belgrave and the trestle bridge need to be plated to finish the mainline. Rail anchors are now being fitted to stop rail creep.

RESTORATION BEYOND LAKESIDE: There will be a new level crossing about 350 yards beyond Lakeside station, for the road which runs across the new dam wall at the lake. Bureaucratic difficulties have delayed laying of further track towards Wright, as a signature is required on a document to make this all legal. Whilst this is considered to be a formality it involves several government organisations, which is slowing things down. Plans are now being considered for restoration beyond Wright. There were three trestle bridges in the Wright - Cockatoo section. The first one, which was fairly small will be replaced with an earth fill. The second, which was the biggest

on the line, will be bypassed with a deviation involving several three chain curves. This deviation was recently surveyed. Rebuilding this bridge would cost around \$500,000. The third bridge, over Cockatoo Creek, will be rebuilt as a bridge, but using steel girders.

Monthly News via Frank Stamford 11/89

LAKES ENTRANCE, various gauges

(see LRN 72, p.4)

Construction and maintenance tramways running along both sides of the channel at Lakes Entrance still exist half-buried in the sand and have been measured as 3 ft not 3 ft 6 in. A small 0-4-0PM locomotive operated on the line on the eastern side of the channel. This loco was solidly constructed and bears several "trademarks" of those built by DAY'S of South Melbourne - cast end frames, siderods, sprung buffers and drawbars pivoted from the centre of the locomotive frame. The loco was powered by the engine from a "Bullnose" Morris car, although it is not known if this was the engine originally fitted. The remains of the locomotive still exist on the foreshore, and several years ago an attempt was made to obtain it for preservation.

Permission to remove the locomotive was sought from and granted by the Lakes Entrance Harbourmaster who believed that it fell under his jurisdiction as the loco's last duties were in the maintenance of the channel walls as part of the facilities maintained and operated by the Ports and Harbours Department. He was pleased to know that the loco would be preserved. A steel sled was constructed and transported by boat to the location, and two days were spent digging the loco out of the sand and winching it onto the sled and chaining it down. However, when the owner of the kiosk on the foreshore was approached for the key to the gate to the beach so that the sled could be towed along the beach and the loco loaded onto a waiting trailer, he rang the then Department of Crown Lands in Bairnsdale who would not allow the loco to be removed as "everything on the beach dates from the 1890s (!!!!) and must not be touched". A sadder, wiser and poorer pair of light railway enthusiasts returned to Melbourne minus a seek of their annual leave!

When last visited both locomotive and sled were fast disappearing under the sand again, and it would seem unlikely that anything can be done to save it. Also on the foreshore are the remains of a vertical-boilered self-propelled steam crane. This is still sitting on a short length of track which is 5 ft 3 in gauge. To add to the variety of gauge even further, a short section of portable track was found which was measured at 2 ft !

Peter Evans 10/89

MELBOURNE & METROPOLITAN BOARD OF WORKS 762 mm gauge

82 Chifley Drive, Preston

(see LRN 71, p.19)

An auction was due to be held on 10 October which included two diesel tunnelling locos. These were Gemco-Funkey 4wDHs numbered 327 7012 and 327 7013, described in the sale catalogue as Lot 527, 8-tonne Gemco-Funkey locomotives. An additional item for sale was one four-wheel dump car.

(The roster published in LRN 24 listed four Gemco-Funkey 4wDHs, numbered 011 to 014. It would appear likely that the two mentioned above are:

012 4wDH Gemco-Funkey 2372/Pl.0455/L621/68 of 1968; and

013 4wDH Gemco-Funkey 2896/Pl.0474/L620/68 of 1968 - JB)

Also on the MMBW site were four rails arranged to make three tracks of approximately 1200mm gauge with four-wheel trollies to move items into and out of a large chamber, apparently used for sand blasting.

WESTERN AUSTRALIA

WEST AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC, Bennett Brook Railway, Whiteman Park 610 mm gauge

(see LRN 71, p.19)

The "Rally Australia" day held at Whiteman Park on 17 September 17 was an outstanding success, with 4000-5000 passengers carried.

This day saw the entry to regular service of the buffet car AV3273 and a third "R" wagon. The buffet car was originally Westrail goods wagon VW3273, which was received with no bogies, no vacuum cylinder, no handbrake and no rigging. Restoration took two years and cost an estimated \$10,000. One "R" wagon will be retained as an open passenger car, but the other two can also be used for a variety of service uses.

Regular services to Kangaroo Flats Station, built to serve the Rally site, commenced from 3 September. This station is 1.5 km from Central Station. Track alterations at Central had caused some disruptions to regular weekend services in June-July.

2-8-2 NG15 123 (Franco-Belge 2670 of 1951) received new firebars on 8 September, following the collapse of an original one the previous Sunday.

OVERSEAS

FIJI SUGAR CORPORATION, Labasa Mill 610 mm gauge

(see LRN 68, p.14)

A return visit to Labasa sugar mill was made in July 1989 after eight years absence. Changes to the tramway system since 1981 are not insignificant. Closure of the Tabia extension line (9 km) in 1983 has resulted in a greater proportion of cane transport by road and excessive delays (4-6 hours) are the order of the day for lorry drivers. Rails remain in situ on the Tabia line and the FSC has been seeking to encourage farmers directly served by the route to convert to rail transport, but without success.

Upgrading work on the mill includes installation of 84 inch mills: No. 4 in 1988 from Hawaii, and No. 3 (a new mill from Walkers) in 1989. This has lifted crushing capacity by about 20%. About 48,000-50,000 tonnes of cane is now crushed per week, with a new record of 50,559 tonnes being set during my visit. Between 45 and 55% of cane transport is by rail.

A start to upgrade the tramway network was made in 1988 when 9 km of track was upgraded from 35 lb to 60 lb rail. Two new storage tracks have been laid in the empties yard at the mill and new heavy-duty wagons are being delivered from Lautoka. Locomotive changes include No.3, a Baldwin 0-6-0DH exchanged with Rarawai for the bogie Baldwin, No.12, a Commonwealth-Engineering 4wDH former underround loco, and No.14, a new Hunslet 4wDH unit. The latter is B/No. 9284/1987 (not 9267 as previously advised by FSC). Baldwin No. 7 is rated the best performing loco by traffic staff, while No. 3 has been giving a lot of mechanical problems. The Com-Eng unit (No. 12), has generally been unsuitable for the track conditions at Labasa, suffering from many derailments and several broken axles. It is kept as the "spare" main line loco. The small Baldwin former underground locos (Nos. 5 and 6), however, continue to give good performance on short haul work.

The current locomotive register is as follows:

1	Clyde Eng	62-270	1962	0-6-0DH	Model DHI.71
2	Clyde Eng	64-319	1964	0-6-0DH	Model DHI.71; ex-Lautoka
3	EM Baldwin	4413-3-9-72		0-6-0DH	ex-Rarawai No. 11, 1982 in exch. for B-B DE loco No. 3
4	Clyde Eng	64-320	1964	0-6-0DH	Model DHI.71
5	EM Baldwin	3229-?-4-70		4wDH	Built for Atkinson-Holland to 762 mm gauge for use Thompson Dam, Vic; to Codfela for Suva tunnel project purchased Labasa mill and rebuilt 610 mm gauge with cab 1980.

6	EM Baldwin	3229-?- 4-70		4wDH	As for No. 5
7	EM Baldwin	9442-1- 4-81		0-6-0DH	Model DH.18
8	Baug-Drewry	2365	1950	0-6-0DM	68hp; yard shunter
9	Clyde Eng	DH1-8	1955	0-6-0DH	Model DH1.71; new engine 1988
10	EM Baldwin	5995.1	1976	0-6-0DH	Model DH.18
11	Drewry	2676	1960	0-6-0DM	71 hp; built for "Free Train" Lautoka; t'ferred Labasa, 1976; weighbridge shunter.
12	Com-Eng	HB.2765	1963	4wDH	ex-NZ Ministry of Works, 1983; formerly Utah Const. Snowy Mtns u'ground loco; conv. Labasa mill. "Simplex"; empty yard shunter
13	Motor Rail	11288		4wDM	
14	Hunslet	9784	1987	4wDH	12 ton unit.

Plasser Tamper Type KMX-06, No. 63, built 1974, also at mill.

Bob McKillop 8/89

MEETINGS

MELBOURNE: Video Night

With the aid of Peter Evans seemingly inexhaustible capacity to borrow equipment from his rmates in the TV industry the next entertainment meeting will be a video night.

Bring along your favourite VHS video (not those ones! !) and we will select two or three to show. In other words it will be a sort of high-tech slide night! Be sure not to miss it.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 14 December at 8.00 pm.

SYDNEY: Any member wishing to know details of the next meeting should call Craig Wilson on 02-484 7984

ADELAIDE: Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park. DATE: Thursday 3 August at 8.00 pm.

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

HEXHAM ENGINEERING PTY LTD, Hexham NSW

(see LRN 61, p.5)

On 12 October, it was announced that Hexham Engineering would be closing. It is understood that employees were terminated on 20 October. Hexham Engineering acquired the locomotive construction business of E.M. Baldwin & Sons Pty Ltd around the end of 1985.

Craig Wilson 11/89

GEORGE MOSS LTD, Osborne Park, WA

(see LRN 69, p.5)

"Cash starved mining and railway equipment manufacturer George Moss (Gemco) expects to formally relinquish control of its operations to suitor Futuris Corporation of December 20." Shareholders were told at the 1989 annual meeting "the company could not survive in its present form and there was little choice but to accept the three for four Futuris offer." In recent years Gemco has suffered trading losses and a severe shortage of working capital to expand its business. The proposed merger would provide this capital and could possibly create the biggest railway equipment supplier in Australia. Gemco had suffered a 14% sales drop last financial year and needed to reduce its product lines and become bigger to compete in the export market - which comprised 25% of turnover. There are presently seven ranges of products and 50,000 line items. The group's after tax losses for the last financial year, including extraordinary items, was \$1.49 million.

West Australian 25/11/89 via David Whiteford

TOUR REPORT

THE SECOND WOMBAT, WOODLINE AND WATER RACE TOUR

2-4-4 geared locomotive at Wombat Gully.

Photo: Peter Evans

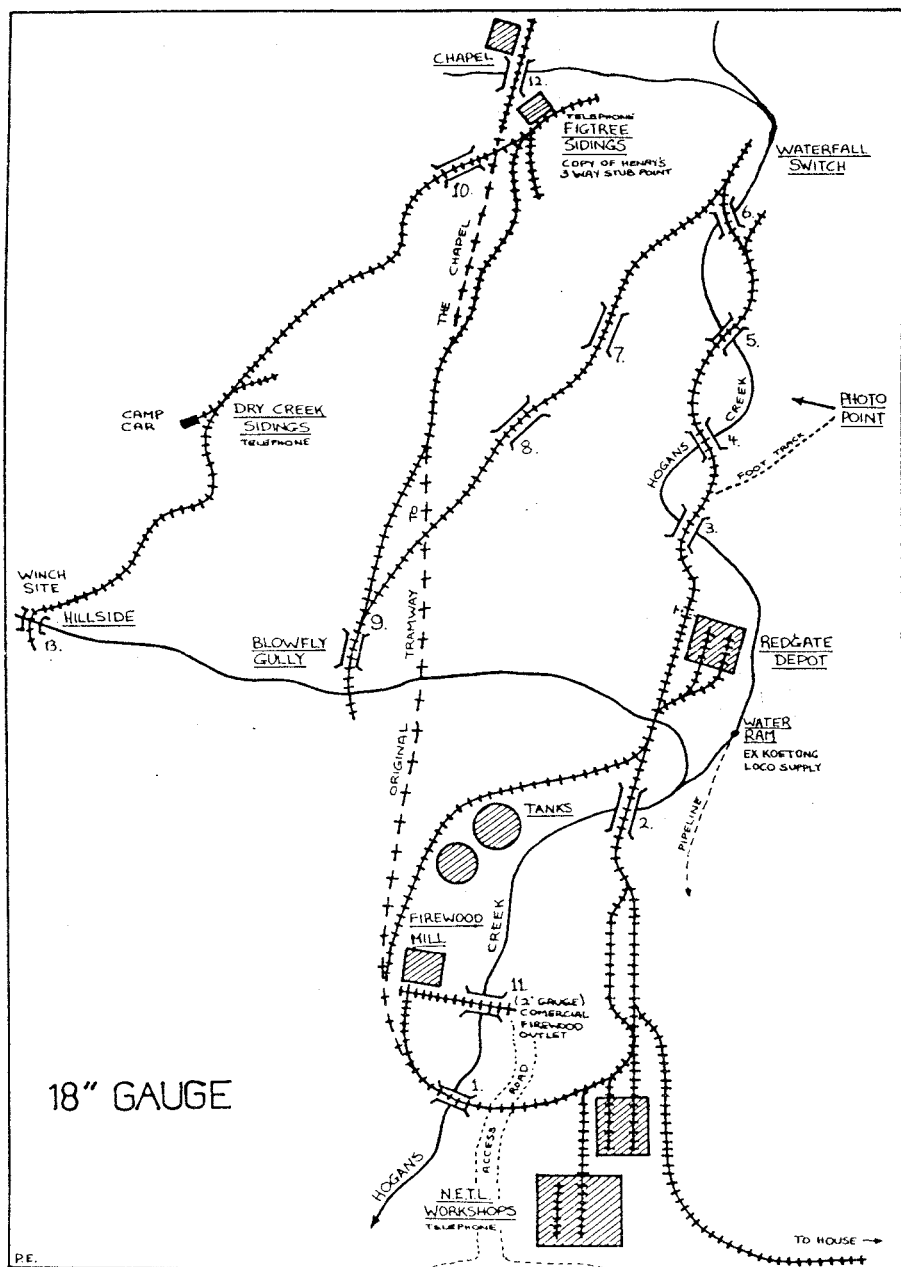

This tour was held in fine to hot weather on the weekend of 25 and 26 November 1989, and was a repeat of a similar tour held in 1987. Attendance on the tour reflected the popularity of the last tour, with a total of around 40-50 members, families and friends.

EIGHTEEN INCHES BETWEEN THE RAILS

First stop on the tour was the Wombat Gully Tramway on the rally site of the Border Steam and Oil Engine Club at Leneva, near Wodonga. This 18 inch gauge line has a large loop laid in 20 lb rail, and includes some sharp curves and steep gradients. A small museum houses relics of railway and tramway significance, and the site is surrounded by a collection of steam and oil engines in various stages of restoration. Of special significance are the side frames and a pair of driving wheels from "Meteor", a 2-4-0WT locomotive built by R. Stephenson in 1858 for the Melbourne and Hobsons Bay Railway Company. In 1878 this became the Victorian Railways "N" class No.244. Subsequently sold to a railway contractor in 1886, the locomotive ended its days as a stationary plant for the Exelsior Tin Mining Company at Koetong.

The engine for the LRRSA "special" was a 6 ton 2-4-4 geared locomotive built

HOGANS CREEK TRAMWAY

NOT TO SCALE

in 1984 by Alan Douglas and Denys Steinhauser. The boiler of this diminutive locomotive is from a 1912 steam tractor obtained from Condobolin, the engine is from a Glen Wills gold mine winch, and the whistle from a logging winch. This unit was a pleasure to watch, with its cranks spinning away madly as the engine proceeded at a sedate pace along the lightly laid track. After a couple of circuits as fireman, the tour organiser was offered the opportunity to drive the locomotive, and distinguished himself by not only stalling the train going uphill, but managed to repeat the performance going downhill (all of which was cheerfully recorded on videotape by Puffing Billy firemen Cliff Leigh and Bill Hanks)! The somewhat chastened trainee driver is returning to Alexandra for more practice where there are less mountains and fewer right-angled bends.

The last train for the morning was run by "Wombat" an 0-4-0PM locomotive built by Denys in 1961. Weighing 2 tons, this unit is powered by a Ford Prefect engine driving a Vanguard gearbox.

After a picnic lunch at Wombat Gully, the tour party moved on to Denys Steinhauser's property at Kiewa to inspect his Hogans Creek Tramway. This spectacular line is also 18 inch gauge, and is used to extract firewood from dead trees on the steep slopes above the property for commercial and domestic needs. The total length of the line is over 1 km, and it climbs 75 metres vertically with a maximum grade of 1 in 14. Between 2 and 20 tons of firewood are cut per week, depending on the season, and the operation has in the past provided full-time employment for two men. Firewood is cut into 2-3 metre lengths and made up into loads of 2 tons before being transported down the tramway to the petrol powered sawmill. The unique features of this line are that three sets of reversing points are required to gain the necessary elevation, and that it may well be Victoria's last working timber tramway.

After inspecting the loco depot, the tour party were given the opportunity to ride on Denys RM6, a 4w+4wPM railcar constructed on the chassis of a 1926 Essex and powered by a 1948 Ford 10 engine. A photograph of this remarkable unit appeared on the cover of LRN 69. After the expenditure of much film and videotape, the party proceeded to walk up the tramway to the terminus, followed by *Murra*, a 4wPM rail tractor built by Denys in 1980 using the frame and wheels of an ex-VR Way & Works unit. The tractor weighs 2 tons and is powered by a Wisconsin twin-cylinder petrol engine driving a gearbox from a 1938 Ford. This unit is used for all heavy haulage on the tramway. Also present on the line was a regauged ex-VR "RS" petrol-powered trolley which acted as a pilot engine.

The ecologically sound nature of this tramway was demonstrated when the roof of *Murra* came into contact with a young gum tree which has grown

a little too large for the passage of the loco. cut it down? - not Denys - the track was barred the necessary few inches to one side and the tree allowed to live on!

Once at the terminus, the tour party took a short rest and we refreshed ourselves from one of the several tanks containing spring water strategically located along the line for drinking and fire-fighting purposes. A load of wood had been prepared at the terminus, and Denys took this down to the sawmill behind *Murra* where it was cut into useable lengths.

After thanking Denys, we drove to Mount Beauty where the comfort of the local hotel proved enormously popular with most of the tour party after a hot but pleasant day spent touring the "one-foot six" of the Kiewa Valley.

Murra hauling load of timber on the Hogans Creek Tramway

Photo: Peter Evans

EIGHTEEN + EIGHTEEN = THIRTY SIX

At 9.30 am we met at the SECV Information centre at Mount Beauty where the party were shown a short videotape detailing the construction and operation of the Kiewa Hydro-electric scheme. This contained a great deal of historic footage, including some of the underground locomotives in operation, and an interesting method of emptying buckets of concrete dangling from a crane. The latter involved some fancy footwork of which Fred Astair would have been proud .

We then proceeded to the terminus of the 3 foot gauge Bogong Creek Tramway which is used by the SECV to patrol and maintain a water race feeding the Clover Power Station. Unfortunately the SECV were not able to provide a driver for us, however all items of motive power had been brought out of the shed for us to inspect. These included a Ruston & Hornsby 4wDM (296070 of 1950), a Motor Rail "Simplex" 4wDM (one of 8359, 7366 or 7369,

regauged to 3 ft), and a Wickham 4wPMR (5860 of 1950). The "Maximove" 4wBE normally used for patrols was not present, being away for major repairs after a derailment which caused considerable damage to its cabin. Apparently derailments of this nature are not uncommon, and the Wickham carries both "L" plates and a sign reading "this way up" after a recent mishap of a similar nature. Also at the terminus were many items of rolling stock, mostly built by the English firm of Robert Hudson, or built on Robert Hudson underframes. The latter includes a crew car resembling a garden shed on wheels, and fitted with gas heating and cooking facilities. (The tramway is located along the 700 metre contour line and snowfalls are common in winter.).

After inspecting the depot, we walked out along the tramway for a short distance which included two bridges, one of which was an interesting combination of steel girders supported by wooden pig-sties. Most of the line is laid in 40 lb rail, with a high proportion of concrete sleepers, and although almost level, has many sharp curves.

After a picnic lunch, many of the tour party went on to inspect other SECV facilities in the area before returning home. At the McKay Power Station, an amazing discovery was made, a whole fleet of Brunel electric locomotives, carefully stored in a compound enclosed by a tall chain-mesh and barbed-wire fence. This find was hotly disputed by some members who maintained that these were only SECV transformers sitting on flanged wheels on short lengths of 7 foot gauge track. We look forward to this argument being settled in a future edition of "Heavyrails" (a mysterious publication often distributed at the Victorian entertainment meetings).

The tour organiser wishes to thank on behalf of the participants, those people who made our enjoyable weekend possible. These include Denys and Peter Steinhauser, Alan Douglas, and the SECV staff at Kiewa - in particular Mr Bill Sutton who went out of his way to make the LRRSA visitors welcome.

Peter Evans 12/89; R. J. Graf 12/89

NEW SOUTH WALES

COAL & ALLIED OPERATIONS PTY LTD, Chain Valley Colliery Doyalson 1067 mm gauge

This colliery was visited on 19 October. There are three 4wDH diesel locomotives here, with two being observed on the surface. Livery is yellow with black dazzle stripes on the ends. The two locos observed were numbered 3410 and 3411, being E.M. Baldwin 10597-2-84 of 1984 and 10597-3-1-85 of 1985. 3411 was due to be transferred to Wallarah Colliery and replaced at

Chain Valley by a new Hexham Engineering locomotive.

Also observed on the surface were two battery-electric personnel carriers, painted white with red dazzle stripes on the ends. These were 2761, a Hexham Engineering 4wBER (678), and 2660, a Titan 4wBER (EMT 1009 of 1979).

Craig Wilson 11/89

E.M. Baldwin 4wDH 25-tonne mining loco 10597-2 of 1984 on the surface at Chain Valley Colliery, while Titan battery electric personnel car EMT 1005 of 1979 looks on from the shed.

Photo: Craig Wilson 19/10/89

NEWCOM PTY LTD, Cooranbong Colliery 1067 mm gauge

This colliery was visited on 18 October. It began production in 1982 and its sole function is to provide coal to Eraring Power Station. With the Great Northern Coal seam only 40 metres from the surface here, the colliery has drift access.

Six locomotives have operated here. BL 01 - BL 05 are Gemco 4wBE locos of the 25-tonne design and DL 03 is a 25-tonne Hexham diesel. The first three battery electrics were built in 1982 and were new for the opening of the colliery but following an accident on the opening day of operations, they were returned to George Moss for modifications, remaining until about 1984. BL 01 and BL 02 were returned directly to Myuna Colliery. Thus the current loco stock is:

BL 03	Debbie Low	4wBE	Gemco	3731.32.204.82	1982
BL 04	Veta	4wBE	Gemco		c.1984

BL 05	4wBE	Gemco		c.1984
DL 03	4wDH	Hexham	690	c.1988

The battery locomotives are painted orange with black dazzle stripes to frame height on the cab front. The diesel is white with red dazzle stripes.

There are also five battery personnel cars, E.M. Baldwin's Model 17BE as follows:

PC 04		4wBER	E.M. Baldwin	9981-4- 2-83	1983
PC 05		4wBER	E.M. Baldwin	9981-5- -83	1983
PC 11		4wBER	E.M. Baldwin	9981-1- 9-82	1982
PC 12		4wBER	E.M. Baldwin	9981-2-11-	1982
PC 13	Ginger Cat	4wBER	E.M. Baldwin	82 9981-3- 3-83	1983

These are painted yellow and PC 05 and PC 13 have black dazzle stripes. The diesel loco works mainly on heavy stone trains, and was observed on the surface standing at the head of three hydraulically operated side dump trucks. A fourth, not in use, was parked in the yard. Other rolling stock consists of two Hannaford passenger cars, a four compartment bottom dump wagon and four materials transporter flat wagons. One of these carries Hexham Engineering builder s number HE 687.

The drift was originally built by open cut, then framed and backfilled. It descends on a 1:20 grade. It was here that on the opening day one of the Gemco battery-electrics ran away, killing the driver.

A major maintenance problem at the mine is provided by the clayey floors which water causes to become boggy and swell considerably. Some sections of trackbed have been removed, dug out, levelled and replaced four times. The rail in use is 41 kg and the progressive replacement of wood sleepers by steel is being adopted. Rail transport is much more efficient than trackless in these conditions. Pod transport is used to give flexibility. Pods are steel material bins which can be easily conveyed on flat wagons and taken to sidings where ramps allow rubber-tyred vehicles to pick them up and carry them to the work face.

LRRSA NSW Div Research Bulletin No.5 (Craig Wilson)

PASMINCO LTD, North Mine, Broken Hill 610 mm gauge

(see LRN 71, p.9)

An auction was held here on Thursday 23 November and the following noted during a quick inspection on Monday 20 November:

For Auction:

4wBE 18 inch gauge B1 Greenwood & Batley.

For Auction?:

4wBE 2 foot gauge ZGM 01, BGM 3, ZGM 12

These locomotives were tagged with lot numbers but had been removed from the auction holding area and placed with the following locomotives:

4wBE 2 foot gauge ZGM 8. BGM 12. ZGM 6.

In Machine Shop Yard:

4wBE 2 foot gauge B15, 9C, HGM 10, BGM 15.

At Shaft (not in use):

4wBE 2 foot gauge D4

At Gatehouse Preserved:

4wBE 18 inch gauge, 2, Greenwood & Batley.

Locomotives (apart from the 18 inch gauge Greenbat locos) are believed to be either Gemco or Mancha products. The only locomotives noted with builders plates were 9C and BGM 15, both having Gemco plates. All other locomotives had modern replacement Gemco controllers.

Craig Wilson 12/89

PASMINCO LTD, ZC Mine, Broken Hill 610 mm gauge

(see LRN 71, p.9)

An auction was held here on Wednesday, 22 November and the following noted during a quick inspection on Monday, 20 November:

For Auction:

4wBE 2 foot gauge: ZGM 301, ZGM 303, B9, ZGM 24, BGM 9, B4, B20, B21, B25, B24, BGM 11, Z21, B18, Z23, ZGM 501, Z22, Z40.

4wBE 3 foot gauge: B32, B2, B29, B23.

At Workshops (not for auction):

2 foot gauge ZGM 25.

At Shaft (in service but not working during visit):

2 foot gauge Z27, ZGM 21

Craig Wilson 12/89

ROYAL AUSTRALIAN NAVY, Newington Armament Depot, Silverwater 610 mm gauge

ABC-TV's "Four Corners" on 27 November was about the possible move of naval facilities from Sydney to Jervis Bay. Some shots were taken inside the Newington Armament Depot and a modern-looking yellow locomotive with cab (reminiscent of a U-series "Simplex" as supplied to Fiji) was shown hauling 5 wagons. In 1978 this site was worked by battery-electric locomotives. Further details of this line would be welcome

John Browning 11/89

QUEENSLAND

AUSTRALIAN RAILWAY HISTORICAL SOCIETY (QLD DIV) 1067 mm gauge

(see LRN 50, p.6)

A100-4-2T No.6 (Neilson 1170 of 1865) has been removed from the Redbank Museum and dismantling work has taken place to ascertain whether it can be returned to operating condition. This locomotive was sold out of QGR service in 1896 and worked from then until 1965 on the Watawa tramline of Bingera Mill near Gin Gin. Its boiler was built by the Bundaberg Foundry in 1955.

The ex-Bulimba Powerhouse Baldwin 4wWE; 59549 of 1926 was taken from storage and delivered by road to Kunkala on the Rosewood Railway recently.

Supplement to Sunshine Express 12/89 via John Browning

BABINDA SUGAR LTD 610 mm gauge

(see LRN 73, p.7)

At a meeting on 29 November, 78% of Shareholders voted in favour of a takeover bid by Bundaberg Sugar. The bid was worth \$18m, and Bundaberg Sugar also promised to spend \$8m in improvements at Babinda. In voting in favour of the Bundaberg Sugar offer, the Babinda shareholders were also rejecting the overtures made by a consortium of co-operative mills, namely South Johnstone, Mulgrave and Mossman. Babinda Sugar Ltd was to become a wholly-owned subsidiary of Bundaberg Sugar on 8 December.

Cairns Post 30/11/89 via John Browning

BUNDABERG SUGAR CO LTD, Fairymead Mill 610 mm gauge

(see LRN 62, p.10)

Fairymead's lengthy bridge across the Kolan River at Booyan was found to be unsafe towards the end of October and was condemned. It is believed that it will be replaced by a concrete bridge for the 1990 season. In order

to service the cane areas of Littabella and Eucca until the end of the 1989 season, it was necessary to station two Clyde 0-6-0DH locomotives on the far side of the Kolan River. Rakes of bins were able to be pushed across the bridge but locos were not allowed on it. One Fairymead Clyde loco was taken across by road and a second was brought down from Mourilyan Mill in North Queensland. where the season had finished.

Bob James 11/89; David Mewes 11/89

BUNDABERG SUGAR CO LTD, Mourilyan Mill 610 mm gauge

(see LRN 73, p.7)

As recorded above, a Mourilyan Clyde 0-6-0DH loco was on loan to Fairymead Mill from around the end of October. In addition, it is believed that a Plasser KMX-12 ballast tamper (249 of 1982) and a Gemco sleeper replacement unit have been on loan at Mourilyan from Bundaberg area mills.

In mid-December a hearing was held by the Cane Prices Board to consider an application by 48 ex-Goondi growers wishing to transfer from Mourilyan to South Johnstone. These growers, with an assignment of 190,000 tonnes of cane, had been allocated to Mourilyan Mill by legislation when Goondi Mill closed rather than allowing the normal processes of the Cane Prices Board to take their course. It was stated that much of this cane would have to be transported by road. The judgement of the Beard was reserved.

*Bob James 11/89; David Mewes 11/89;
Cairns Post 13/12/89 via John Browning*

COSTAIN AUSTRALIA LTD, Cardstone

(see LRN 73, p.11)

The first tenders have been let in Connection with the Tully Falls hydro-electric power station. Costain has Commenced construction of the 1.3km exploratory tunnel which will eventually contain power cables. A second tunnel for access to the power Station Sate will be built later with work peaking in the 1993-5 period.

Cairns Post 9/12/89 via John Browning

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 73, p.7)

Owing to loco breakdowns, Victoria Mill's Baguley-built Drewry 0-6-0DM *Herbert* (2394 of 1952) was on loan to Macknade from 31 October to 23 November. It was only used on the first day of loan, and was kept in reserve thereafter. Sister loco *Seymour* (2392 of 1952) was on loan to Macknade on December 20 and 21 to assist in the clearing of debris from the Herbert River bridge behind the mill following a rise in the river. As the track in the cutting on the mill side of the bridge had been lifted for relaying, none of

the Macknade locos could get to the bridge, thus necessitating the loan of a Victoria loco from the other side. *Seymour* was stabled overnight in the cutting on the Cordelia side of the bridge.

Early in November, Macknade's E.M. Baldwin DH 20 (7070-4-4-77 of 1977) was fitted with a brake wagon radio control antenna and wiring to enable easy transfer of a brake wagon in the event of one of the brake wagon-equipped locos (14 - E.M. Baldwin 0-6-0DH 6-2490-1-7-68 of 1968 and 19 - E.M. Baldwin 7070-3-4-77 of 1977) breaking down.

Line car V1 (Hansen 78 of 1972) and its navy gang, which belong to Victoria Mill, were based at Macknade Mill for practically all the 1989 crushing season. In the past, this gang has been based at Halifax. Among its duties is the maintenance of the line to Lucinda, used by both mills for sugar trains.

Both Victoria and Macknade Mills were due to finish crushing late in the week ending 25 November. However rain intervened, and Macknade finished crushing on 23 November. From the next day, all Macknade cane able to be cut was sent to Victoria, which accepted cane until Thursday 30 November. Nearly 6000 tonnes of cane were sent to Victoria on the busiest day, 27 November, including a convoy of three trains late that afternoon hauled by Clyde 0-6-0DHs, namely 11 (65-383 of 1965) leading with 150 bins followed by 12 (65-434 of 1965) and 16 (DHL1 of 1954) each with more than 100 bins. During this night an unknown Victoria loco assisted with the shuttle of bins between the two mills. The next day saw E.M. Baldwin 14 take a rake of 176 fulls for Victoria across the Herbert River bridge in one hit and without assistance. Victoria Mill's Clyde 0-6-0DH *Canberra* (64-433 of 1964) did a return trip to Macknade during the day shift. Owing to more rain, the 29th and 30th saw only small amounts of cane cut and transported to Victoria. E.M. Baldwin B-B DH 19 took the last rake of Macknade cane across late on the afternoon of the 30th. All Macknade locos except yard loco 17 (E.M. Baldwin 0-4-0DH 6-1446-1-9-65 of 1965) had been in use for varying periods or cane transport this week.

Victoria Mill refurbished one of the ballast hoppers from Goondi Mill during the crushing season, and it was in use by mid-December. It is still painted yellow, but has been cut down to the same height as the other hoppers, bringing the total number in service to 12. The other ex-Goondi hopper is still in storage.

During the 1990 slack season the Macknade mill yard is to be automated, thus eliminating the need for a yard loco. Work had already started by the end of the year and includes extensive rearrangement of the pointwork at the mill end of the full yard.

Chris Hart 12/89

CSR LTD Victoria Mill

(see LRN 73, p.8) (See CSR LTD, Macknade Mill 610 mm gauge)

MACKAY SUGAR CO-OPERATIVE ASSOC. LTD 610 mm gauge

(see LRN 73, p.8)

A second major derailment this year at a low-level Pioneer River tramway bridge, this time at Pleystowe Mill, took place early on 15 November, about 24 hours before crushing was due to finish. Clyde 0-6-0DH *Palmyra* (63-273) was hauling a train of full bins which became derailed, leaving 18 bins in the Pioneer River, and the locomotive coming to rest precariously balanced across the bridge near the bank. It is believed that the loco was hauling 38 bins across when the driver lost control, jumping to safety before the crash occurred. An inspection later that day revealed seven smashed bins on the bank at the mill side and about a dozen others on the top of the far bank. The check rails appeared to have assisted keeping the loco on the bridge. Three locomotives were marooned on the northern bank until 6 pm.

Seen at the Pleystowe loco shed on this day was Farleigh Mill's Com-Eng 0-6-0DH *Pioneer* (A12358 of 1962). It was just one out of a number of temporary loco transfers which took place towards the end of crushing (all details of these movements are not yet to hand).

On 12 December, Bundaberg Foundry 0-6-0DM 6 (10 of 1953) was sent by road from North Eton to Marian Mill. Track repairs meant that the loco could not be driven between the two mills.

Five simple open passenger cars made up on cane truck frames were noted at the Pleystowe loco shed on 14 December, presumably for children's rides at the annual Christmas party at the mill.

At Farleigh Mill, Motor Rail "Simplex" 4wDM 21625 of 1957 was noted dismantled in the navvies' shed late in December. An industrial bin behind the loco shed contained its cab, which was badly corroded. Also in the navvies' shed was a new four-wheel passenger car with a metal body painted green.

At Cattle Creek Mill, loco 2 (Com-Eng 0-6-0DH AA1549 of 1961 rebuilt AN5849 of 1975) has been renumbered D2, after a Mackay Sugar logo was applied over the cabside number. Bogie Com-Eng Diesel 4 (NA59112 of 1977) had already been stripped for a major overhaul by the end of the year, believed to include re-engining with a Detroit diesel.

Track work for the 1990 season was already going ahead at certain locations by the end of 1989. The major part of 12 km of track from North Eton Mill to The Water on the Mia Mia line had been ripped up by the end of the year, with the only exceptions being those sections relayed during the 1989 slack

season. The trackbed was being regraded with earthmoving equipment before track was to be replaced.

New trackbed construction was well advanced for about a kilometre on the new Marian Mill line in the Mount Martin area by the end of the year. The trackbed for Marian Mill's Mirani Weir line had been pegged out.

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm & 1029 mm gauge

P.O. Box 288, Alexandra Vic 3714

(see LRN 73, p.11)

On Wednesday, 15 November, a deputation representing the Museum and the Shire of Alexandra met with the Minister for Transport, Mr Jim Kennan. The Minister was presented with a photo album detailing the efforts of the Museum members over the past few years, and a videotape outlining the history of the timber mills and tramways of the Rubicon Forest.

The meeting was amicable, but the Government representatives were adamant that the land would not be handed over to the Museum for nothing. Various avenues were explored, including:

- (i) A more realistic price for the land;
- (ii) A short term lease while the Museum raised the money for the purchase;
- (iii) A long term lease (eg. 45 years) at a mutually agreeable rental, with an option to purchase at the expiry of the lease.

No action on the matter was formally resolved at this time. However, on Thursday, 30 November, two officials from the Ministry of Transport made an unexpected visit to the Museum and later held talks with the Museum president and the secretary of the Shire, at which time the officials suggested a further avenue to resolve the matter. This was that the Department of Conservation, Forests and Lands be approached to take over the site from V/ Line as a heritage area, and appoint the Shire and the Museum committee to

manage and develop the site. This is the first official sign that the Government acknowledges the worth of the Museum and is anxious to see it continue to develop, and is most heartening to those who have continued to work on during the past two years while the future of the Museum has been in doubt. This alternative will now be actively pursued.

On a further heartening note, the boiler of John Fowler 11885 of 1909 has had its certificate renewed, with the maximum pressure remaining at 120 psi. This was subject to some minor welding to build up the area around the lower washout plug in the front tube plate. This has now been carried out, and the locomotive returned to service.

Peter Evans 12/89; Timberline No.2 via Ray Graf 1/90

AUSSIE-LAND ADVENTURE PARK, Stirling Causeway, Wodonga

It is understood this amusement park opened during November 1989 and an 18 inch gauge amusement line was noted through the fence on passing, returning from the Wombat, Woodline and Water Race tour. No locos or rolling stock were seen. Opening hours stated were 10 am-6 pm but on the day seen, the railway had closed by 5 pm. Perhaps some members have further details?

Ray Graf 1/90

STATE ELECTRICITY COMMISSION OF VICTORIA, Morwell-Yallourn 900 mm gauge

(see LRN 55, p.15)

Two SEC Bo-Bo WE locomotives have been painted silver and named, *Red Devil* and *Electric Blue*. A report on the now-truncated SEC System in this area is overdue. Surely one of our Victorian members could oblige?

ARHS "Bulletin" 12/89 via John Browning

WESTERN AUSTRALIA

BUILDING MANAGEMENT AUTHORITY OF WA, Perth

Tenders were recently called for "Registrations of interest ... for the supply of 8 railway carriages to the Building Management Authority by January 1990". Tenders closed on 21 September 1989 with the Contract Clerk, BMA (formerly Public Works Dept).

Enquiries with the BMA revealed that the Community Services Department was planning "family centres" in the new (northern) suburbs where traditional community centres such as halls etc. did not exist. The family centres would

be used for child care facilities and other community uses. At the time of the tenders, it was thought that ex-Westrail or other railway system carriages would be a cheap but effective way of supplying these services. Coaches from the "Flying Scotsman" train which were purchased from NSWGR by the WA operator of the tours were also considered. However the idea of using railway carriages has now been abandoned.

West Australian 16/9/89 via David Whiteford

CARNARVON LIGHT RAILWAY ASSOCIATION INC, Carnarvon 1067 mm gauge

(see LRN 72, p.18)

Previously known as the "Kimberley" Restoration Group, the above named association has now become an incorporated body.

Motor Rail "Simplex" 4wDM 9096 of 1955 has now been rebuilt and is almost complete. Running trials were conducted on Sunday, 10 December. Andrew Barclay 0-4-0T *Kimberley* (1754 of 1922) is now stripped and serious work on descaling the boiler was to start in mid December. The address for the group is c/- Mr W.M.C. Thomas, P.O. Box 417, Carnarvon WA 6701.

Mike Thomas 12/89

GOLDFIELDS REGIONAL MUSEUM, Kalgoorlie

The Goldfields branch of the Western Australian Museum was opened in 1989 and is situated at the eastern end of Hannan Street in a combination of new premises and the former British Arms Hotel. Some outside display items have been transferred from the Hainault Tourist Mine and include a former

Lakewood Firewood Company four wheel wagon frame with a portable office attached. Entry to the Museum is free. It is extremely well arranged and photograph displays include many of the Woodline, Kalgoorlie suburban rail and Kalgoorlie tram operations.

David Whiteford 11/89

LIONS PARK, Battery Road, Norseman

Among the small display of mining and other machinery are two battery electric underground locomotives and one hopper. Gauge appears to be 610 mm but unfortunately neither locomotive carries identification.

David Whiteford 11/89

Battery electric locomotive at Lions Park, Norseman. Identification from other members would be appreciated.

OVERSEAS

OK TEDI MINING LTD, Western Province, Papua New Guinea

(see LRN 49, p.14)

A photograph published in *The Australian* newspaper shows an adit with three Granby cars on what appears to be 2 ft gauge track. A small portion of what appears to be a locomotive appears in the bottom right hand corner of the photograph. Further details would be welcome.

The Australian 13/10/89 via John Browning

MEETINGS

MELBOURNE: WARBURTON 2

Mike McCarthy will be speaking on the later years of tramways and sawmilling operations in Warburton. Mike is currently writing the history of tramways operating in this area as a follow-up to Bellbrakes, Bullocks and Bushmen. The first segment of his presentation was given last February. Mike will continue the Warburton story and will speak in particular, about the mills at East Warburton, the Starvation Creek mills and tramway, the Federal Mill as well as the later days of operation of the Warburton tramway.

This will be a subject of interest to most members and will be supplemented with slides of the Warburton tramways. The area in question featured probably the most intensive use of tramways in Victoria. Be sure not to miss out.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove. Ashburton.

DATE: Thursday 5 February at 8.00 pm

SYDNEY: South Africa

Ross Mainwarring will give an illustrated talk on his period of temporary employment some years ago in the West Rand Gold Mines in South Africa.

LOCATION: Woodstock Community Centre, Church St Burwood

Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 28 February at 7.30 pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 1 February at 8.00 pm.

RESEARCH

South Australian member, Ian Back, is trying to prepare a list of all the known light railways and privately-owned locos in SA and would appreciate any information from members. He can be contacted through the SA News Editor, Arnold Lockyer (address above).

Editors 2/90

SITE REPORT

TREASURY PLACE TRAMWAY 610 mm gauge

A recent visit to No.2 Treasury Place in Melbourne has revealed a short but interesting tramway system in the basement. The building was erected in

1871, and it would appear that the tramway system was once more extensive than the short length which still exists today. Indications are that it may also have linked other buildings in the system, as turntables have been found in other buildings in the group, and one set of rails heads out of a door at one end of the existing tramway.

The section seen on this visit was 610 mm gauge, and is laid in rails of about 6 kg/metre set into the floor. Two turntables still exist in the line, however one does not seem to lead anywhere although it is situated opposite a doorway. The other serves a four-way intersection. One of these branches still exists and is around 15 metres long, ending at a wooden baulk set into the floor at the end of the track. One of the other branches seems to have been lifted, and a third leads behind a set of locked doors and was not investigated. The fourth branch comprises the longest section of tramway at around 80 metres in length, with the other turntable mid-way along it. The rail sections on the turntables are made of angle-iron.

The sole item of rolling stock is a hand-propelled four-wheel flat truck. The top (platform) section of the truck is of wooden construction and appears to be very old. The bottom section would seem to have once been the frame and wheels from a side tipping skip. The outside frame of this portion is made of channel iron and the wheels run in enclosed bearings. It would appear that when the wheels and axles of the original truck wore out that the skip frame was used as a substitute.

Of additional interest are several permanent marks set into the floor. These are calibrated in inches, and were once used for checking the calibration of surveyor's chains.

This small tramway system would make an excellent project for further research by an LRRSA member.

Peter Evans/Colin Harvey 1/90

NEW SOUTH WALES

BHP LTD, COLLIERIES DIVISION 1067 mm gauge

A variety of equipment was to be sold by auction on 30 November by Mason Gray Strange NSW Ltd including the following:

Appin Colliery:

Number 12 diesel locomotive chassis suitable for spares (probably Malcolm Moore 0-6-0DM 26-204 No. 12 of 1951/Drewry 2341 of 1950).

Nebo Colliery, Mount Kembla:

Two Joy shuttle cars located underground.

Tower Colliery, Douglas Park:

Four Moxon diesel man cars suitable for spare parts, five Fox diesel man cars, three 10-tonne Jeffrey battery locomotives (probably BHP built), two Joy 22 shuttle cars, a water tanker trolley and a "ballasting trolley". Also a quantity of fishplates and bolts, points, dogspikes, and sleepers. This colliery had nine Neil Moxon cars delivered new and numbered 128 to 136.

Brambles Yard, Newcastle (ex **John Darling Colliery**):

Three Titan Electric man cars Model MK2-FLP and three more suitable for spare parts. John Darling Colliery had three units (EMT 1010 to EMT 1012) delivered new in 1979. The other three were probably transferred from Wongawilli Colliery, which would make them EMT 1004 to EMT 1006, numbered 99 to 101.

R.J. Graf 2/90: John Browning

GOULBURN CITY COUNCIL., Goulburn Steam Museum 610 mm gauge

(see LRN 68, p.5)

Public steam operations resumed at Goulburn on 2 December 1989. The John Fowler 0-4-2T locomotive (16340 of 1924) acquired from Forbes in 1986 has been restored and fitted with new tanks. (Some identify this loco as Fowler 16339). The track has been relaid in heavier materials under a prisoner release scheme, and the rock cliff which caused tight clearances for road end rail traffic has been professionally removed. It is now planned to restore Krauss 0-6-0T *Stella* (3423 of 1896) to service, and it appears that a new smokebox and some mechanical work is all that is required. An official opening is expected to take place during the first half of 1990.

Railway Digest 1/90 via Chris Hart

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 70, p.5)

The restoration of former Corrimall Coal Company steam loco *Burra* 0-4-0ST (Hawthorn Leslie 3574 of 1923) is continuing. The driving wheels are at present having the drive pins reprofiled at a local engineering works. All valve gear and linkage has been restored and rebushed while a new eccentric strap has been machined in the Museum workshop to replace one of the originals fractured many years ago. The opportunity is being taken while this loco is being reassembled, to rebush all worn bearings, even those in minor duties. The required restoration has been completed on the boiler and it is now ready to receive new tubes.

Automatic knuckle couplings have now been fitted to all passenger cars and locos in regular public service. The completion of the installation of hand brakes on former Melbourne cable tram trailer No.430 means that all passenger stock in regular operation now have parking brakes.

After limited use, it was found that the Leyland Zinns loco No.3 regularly slipped under load and was uncomfortable to drive due to the very limited springing. During the latter half of 1989, radial suspension arms and springs were fitted to the axle boxes while the opportunity was taken to improve other mechanical aspects of this petrol loco. While its haulage and braking power have been greatly improved, our fitters are now investigating the possibility of fitting chain drive and sprockets which will convert the vehicle from a two wheel to four wheel drive.

Recent work on the Munro shay loco (Lima 906 of 1904 and 2097 of 1907) has concentrated on the restoration of the fuel bunker/water tank. While severe rusting has occurred in some areas, the problem had not advanced to the stage where complete reconstruction is required. Sections of the rusted plate have been removed ready for new pieces to be welded flush into position. A wheel heating ring fabricated at the Museum was used successfully to remove the tyres from the wheel centres on the shay bogies. This was necessary as some wheel sets were as much as 2" (50 mm) under gauge. Our signalling team has been busy extending rodding and signal cable around the main station yard. Signals and points at the western end of the station yard have been connected to the lever frame in the former Otford box while work is now well advanced in connecting the eastern end points to the frame.

The main station building, book shop and signal box were repainted prior to the summer holiday season. Work has commenced on the construction of the 6m x 6m meal room adjacent to the main workshop. By late January the steel framework and roof had been completed. Our Community Order workmen continue to provide appreciated service. In addition to the continual task of cutting old fence pieces to size for fuel, some are at work repainting the side brackets which support the trolley wire for the electric tramway. Another heavy task has been the laying of large concrete pipes in the drainage culvert along old Croom Road adjacent to the compound. When this project is completed the chain wire fence will be relocated to enclose a larger store area.

The external restoration of former Sydney electric tram "C" 95 is nearing completion. The only other major task is the restoration of some ribs and roof timbers along one edge of the clerestory roof. The worn and cracked side panels on this 91 year old vehicle have been replaced with marine ply while a

considerable length of window sill and most of the body ribs on one side had to be replaced. All windows have now been restored, six of the 18 required major reconstruction. The roof reconstruction awaits the completion of the new underframe which will lower the body onto a more accessible level. In the meantime work is progressing on the restoration and refitting of the saloon seats.

As with all the historic passenger rolling stock at Albion Park, "C"95 will be mounted on a new heavy steel underframe. Since March 1989 the ILRMS has been fortunate in having boiler makers as Community Order workers. Work is now well advanced on the construction of a new steel underframe 8 m long and 2 m wide. Two heavy bogies are being regauged for this vehicle. These are low slung units converted from 610 mm to 900 mm at some stage in the past. Work is now in hand converting these back to 610 mm. When the tram is mounted on the new underframe, the task of fabricating new end platform aprons to the original NSWGT design can proceed.

On 28 October 1989, the stationary machinery display building was named "The Arthur Moore Stationary Engine Display" as a mark of respect for the work carried out by our late member. Arthur's family moved to Wollongong in 1932 (on the day the Harbour Bridge opened) and from the 1950s he was employed as a loco driver at the Port Kembla Steel Works. In the late 1960s, poor health resulted in Arthur being transferred to the visitors centre as a co-ordinator and guide. After retiring in 1977, Arthur was able to spend more time at Albion Park as Operations Manager. As a result of his efforts, ground preparation, loco servicing, refreshment provisioning etc. were always ready for steaming days, while materials and tools were always on hand on major work days so that a full 8 hours labour would result from each member on the day.

Some years ago Arthur Moore was given Honorary Life Membership to mark the Museum's appreciation. His contacts through personal friendships and visitor centre introductions enabled the Museum to negotiate many services through local firms over the years. After taking ill during October 1988 and a slight recovery in January, Arthur passed away on 1 July 1989. His wife, Marie, unveiled an attractive plaque in the display area witnessed by a large gathering of members and friends, including the Mayor of Shellharbour and State Member of Parliament for Kiama, Bob Harrison. The ceremony in October, as well as an appreciation of Arthur's efforts at the Museum, were the subject of several major articles in the local press.

The public steaming days at the Museum continue to be on the second Sunday of each month, Saturdays and Sundays of long weekends and every Sunday in January (except New Years Day). Readers are invited to visit the

Museum on work days, which are held every Saturday and on most Tuesdays and Thursdays.

K. McCarthy 2/90

TIMBERTOWN. Wauchope 610 mm gauge

(see LRN 69, p.6)

When visited during the Christmas holiday season, Hudswell Clarke 0-6-0 1862 of 1953 was in service, and is usually used for holiday traffic. At other times, John Fowler 0-6-0T 12271 of 1910 is used. John Fowler 0-4-2T 17881 of 1928 apparently has been retubed, but being surplus to normal requirements, it is now said to have been sold to someone in Proserpine, North Queensland.

Len Heaton 2/90

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610 mm gauge (see LRN 72, p.10)

Work is processing with the restoration of John Fowler 0-6-0DM 18260 of 1929, with the motor now being reassembled, and most components having required an overhaul. The latest job to be carried out was for the main and big end bearings to be cleaned and the oil pump and oilways checked. Shortly, the work on this engine should be completed.

Durundur Railway Bulletin 1/90 via John Browning

AUSTRALIAN RAILWAY HISTORICAL SOCIETY Qld Div. 1067 mm gauge

(see LRN 74, p.9)

Restoration on A10 0-4-2T No. 6 (Neilson 1170 of 1865) is going ahead with the boiler tubes having been removed and a favourable mechanical inspection having been carried out.

Supplement to Sunshine Express 1/90 via John Browning

BILBROOK PTY LTD, Dittmer Gold Mine 458 mm gauge

(see LRN 40, p.7)

The Dittmer Gold Mine, operating under the management of the above company, has been closed and 25 employees made redundant. It had a 1 ft 6 in gauge tramline and had previously been operated by Buddha Gold Mines. The mine was owned by a joint venture and was closed by receivers so as to be able to "assess its profitability and to make sure it can be operated in a safe manner".

Mackay Daily Mercury 24/2/90, 27/2/90 via John Browning

BUNDABERG SUGAR LTD, Mourilyan Mill 610 mm gauge

(see LRN 74, p.10)

The unnumbered Clyde 0-6-0DH ex Goondi (56-93 of 1956) has had the cabside snail painted over. It was seen in mid-January in the mill yard with a Willison coupler fitted in the front buffer slot. This probably indicates it was the loco sent to Fairymead towards the latter part of the 1989 season. The four-wheeled Gemco sleeper replacement unit on loan from Bundaberg was also seen in the mill yard. The two additional steam locomotive chassis, from a Fowler 0-4-2T and Hudswell Clarke 0-4-2T, were observed. At Goondi, Motor Rail "Simplex" 10219 of 1950 was observed in the locoshed, which appears to be a navvy depot. The Goondi mill site has largely been levelled.

Chris Hart 1/90

CSR LTD Hambledon Mill. Edmonton 610 mm gauge

(see LRN 73. p.7)

A 2 ft gauge railway for the transport of visitors encircles the "Sugarworld" theme park built in the mill grounds. It has four stations, "Hambledon" (the main station), "Pyramid", "Mulgrave" and "Hap Wah". Five open four-wheel carriages are hauled by E.M. Baldwin 4wDH 9109-1-9-80 of 1980, painted in Hambledon yellow and green colours and with the name "Sugarworld Shuttle" on the side. The carriages are semi-permanently coupled together and to the rear of the loco with solid link and pin couplers without buffers. The front of the loco has a Willison coupler.

The mainline loco livery has been altered by the addition of an extra yellow band above footplate level. All mainline locos have "Visit Sugarworld" painted on the cab rear.

The cab roof from the 3 ft 6 in gauge "Simplex" loco and a home built four-wheeled poison sprayer were seen on a short length of remaining 3 ft 6 in gauge track. In the loco shed was seen a loco frame cut down to footplate level, apparently being rebuilt to form a brake wagon. The drawgear had been removed, but marks indicated that it had once been fitted with buffers and hook for 3 ft 6 in gauge rolling stock. It was not possible to examine this vehicle closely, but the likelihood appears to be that it is the remains of Drewry 0-6-0DM *Seaforth* (Baguley 2514 of 1954) which has been derelict at Kalamia Mill for a number of years.

Chris Hart 1/90

CSR LTD, Haughton Sugar Co. Ltd, Invicta Mill, Giru 610 mm gauge

(see LRN 62, p.9)

On the southern side of the Haughton River bridge was a long 16-wheel

"Bridge crane" (see LRN 34, p.11). It is painted green and was fitted with an Invicta Mill Willison coupler at the rear end. It had been in use lifting spans out of the bridge.

Chris Hart 3/90

CSR LTD, Kalamia Mill 610 mm gauge

(see LRN 61, p.16)

Drewry 0-6-0DM *Seaforth* (Baguley 2514 of 1954) has disappeared from its usual spot near the navy shed where it has been derelict for years, lending weight to the likelihood that it is the unit seen at Hambledon Mill being converted to a brake wagon.

Chris Hart 3/90

CSR LTD, Macknade & Victoria Mills 610 mm gauge

(see LRN 74, p.11)

During the 1990 slack season, the Victoria "A side" tippler is being converted to a double bin tip ("B side" is already double tip). Both will be converted to weighbridge tipplers. In addition, the output lines from the tipplers are being lengthened to accommodate 200 bins each. This, together with the installation of extra pushers in the full bin feed lines between the full yard and the tipplers, will mean that only one yard loco will be needed in future. It is believed that E.M. Baldwin 0-4-0DH *Albany* (6-1792-1-11-66 of 1966) will be made redundant while Malcolm Moore 0-4-0DH *Moore* (DH-112-GT-1 of 1956) will be retained to handle both fulls and empties.

A new Plasser rail jack (374 of 1989) has been delivered to Victoria, arriving in December or January.

Continuous crushing will be introduced to the two mill areas in 1990. This will involve some siding capacities being increased as well as some tramline extensions.

*Chris Hart 1/90; Herbert River Express
10/2/90 via Chris Hart*

CSR LTD, Plane Creek Mill, Sarina 610 mm gauge

(see LRN 72, p.12)

Local farmers are concerned at the threat of Rhodesian Sudan grass (wild sorghum) which it is claimed has been spread along tramways. Some sidings are choked with the grass and bins parked in them almost obscured.

Mackay Daily Mercury 15/1/90 via John Browning

GIBSON & HOWES LTD, Bingera Mill 610 mm gauge

(see LRN 62, p.11)

A head-on collision is believed to have taken place on the Wallaville

tramline towards the end of the 1989 season. A full locotrol train with two Baldwin bogie locos heading into the mill hit a train of empties headed by a Com-Eng 0-6-0DH which apparently had failed to stop at its designated crossing place.

David Mewes 12/90

MACKAY SUGAR CO-OPERATIVE ASSOC LTD 610 mm gauge

(see LRN 74, p.12)

Further details of the crash at Pleystowe on 15 November indicate that the accident happened when the loco was setting back a rake of full bins into the full yard at the mill. Unfortunately, the points were set for the wrong direction, and the rake was backed down the river bank in error, running away out of control.

The resulting closure of the Pleystowe bridge led to an interesting working to retrieve cane from the north of the Pioneer River. Road transport was used to haul loaded Pleystowe 6-tonne cane bins north to Narpi, the terminus of the Marian tramway, where they could be unloaded from semi-trailers. In the meantime, Pleystowe's E.M. Baldwin B-B DH *Mia Mia* (9815-1-10-81) took 40 Pleystowe bins via North Eton to Marian, from where it was piloted to Narpi by Marian Mill's E.M. Baldwin B-B DH 17 (9562-2-6-81 of 1981). A total of 120 loaded bins were then hauled back to Pleystowe in several trips. Marian had finished crushing 24 hours before, with the last 140 bins from Marian having been sent to Pleystowe for crushing.

Marian Mill's E.M. Baldwin B-B DH 16 (9562-1-6-81 of 1981) had been sent to Farleigh Mill via Pleystowe the day before the accident at Pleystowe, and worked there for the last three days of the crushing at Farleigh.

Substantial lengths of the old North Eton lines are being completely reconstructed. A distance of about 12 km on the main line from North Eton towards *Mia Mia* had largely been replaced by the start of March, although much tamping remained to be done. Activity was also intense in the *Mia Mia*-*Septimus* area, with long sections ripped up and work going ahead to replace the large timber trestle bridge at *Septimus* in concrete. All the new track is being laid using Bidim U34, a geofabric polyester material, underneath the ballast. It is understood that all growers supplying Pleystowe will be using the 6-tonne bins in the 1990 season.

At Marian, work in association with the installation of double crushing in the 1991 season has led to the removal of the tippler/weighbridge, which will be relocated, and yard track alterations will be carried out. Towards the end of the 1989 season, some loco crews from Marian Mill travelled to the Bundaberg area to familiarise themselves with the operations of locotrol

locomotives at Bingera Mill and of multiple-unit locomotives at Isis Mill.

At Cattle Creek Mill, Bundaberg Jenbach 6wDM 13 of 1954 had been repainted in an approximation of Marian Mill colours by early March, while Com Eng locos 1 (0-6-0DH B1724 of 1957) and 4 (B-B DH NA59112 of 1977) were stripped for overhaul.

Two KMX-12T tamping machines are on order from Plasser Australia at a total cost of \$800,000. They are due to be delivered in April and September. The three 40-tonne diesel hydraulic locomotives on order from Eimco are due for delivery in August and will cost approximately \$567,000 each.

Mackay Sugar is hoping to take over the Marian-Finch Hatton section of the QGR Netherdale branch soon. Sections of the line are expected to be rebuilt as 2 ft gauge tramway for the haulage of cane from Finch Hatton to Marian following the closure of Cattle Creek Mill at the end of the 1990 season. Meanwhile tenders have been called for the removal of rail and the disposal of sleepers and bridges between Finch Hatton and Boongana, a distance of 4.8 km, preparatory to a tramway being built on this section of ex-QGR trackbed. The remains of bridges will also be removed between Boongana and Netherdale.

QUEENSLAND PIONEER STEAM RAILWAY 1067 mm gauge

(see LRN 45, p.11)

Perry 0-4-2T *Kilrie* (265 of 1927) has been restored to working order and was steamed recently. This locomotive is on permanent loan from ANGRMS and last worked at Pioneer Mill.

Sunshine Express 2/90 via John Browning

TINBEERWAH MOUNTAIN RAILWAY, Arcadia, Cooroy 610 mm gauge

(see LRN 72, p.17)

As planned, the bush depot shed has been moved to a new position at the rear of the new depot near the main farm buildings, improving operations greatly.

On 18 March, it is planned to commence construction of the final 130 m of track to the summit of Mt Tinbeerwah. A new bogie ballast carrier, NBW1, recently built by Russell Savage at Mildura will be put into service. With a capacity of 1.6 cubic metres, it has air brakes and electrically operated discharge doors.

Russell Savage 2/90

TASMANIA

EMU BAY RAILWAY CO. LTD 1067 mm gauge

(see LRN 73, p.11)

North British 0-8-0DM 21, purchased in 1954 has been overhauled and repainted. It returned to service as Burnie shunter painted in the EBR light and dark blue livery but with yellow headstocks.

ARHS Bulletin 2/90

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC. 610 mm & 1029 mm gauge

P.O. Box 288, Alexandra Vic 3714

(see LRN 74, p. 13)

Two new exhibits have recently been made available to the Museum.

The first of these is a "Cletrac" diesel-powered crawler tractor last used by sawmiller Wm. Cook to haul logs to one of his mills in the Acheron Valley. The tractor is complete and has been stored under cover for many years. A shed has been built for the tractor next to the winch site at the Museum. As this type of tractor was instrumental in the closure of many logging tramways in Victoria, it was considered appropriate to construct the shed using lengths of old rail for the roof supports.

The second item provides a tangible link with the three Krauss 0-4-0WT locomotives which once worked on the Rubicon tramway. During the 1920s, one of the two smaller locomotives required a new boiler. This was built for the Rubicon Lumber and Tramway Company by the Newport Railway

Workshops. During construction of the boiler, three cast iron die blocks were made in order to press the throatplate, backplate and firebox crown. These die blocks were rescued by the ARHS during a clean-out of the boiler shops and have resided in their museum at Williamstown for many years. After a short negotiation, the ARHS have generously agreed to make the die blocks available on permanent loan to the Alexandra Museum in exchange for an ash-pit toilet from the Alexandra railway station. Arrangements are now being made to transfer these exhibits to Alexandra.

Peter Evans 3/90

AUSTRALIAN PAPER MANUFACTURERS LTD, Maryvale 1600 mm gauge

(see LRN 65, p.14)

It is believed that APM will be replacing its ex-VR T class units with Y class locomotives, which provide better visibility for driver-only operations. Clyde Bo-Bo DE T342 *The Little Yellow Machine* (56-123 of 1956) was at V/Line South Dynon on 2 September, and may possibly be scrapped. Sister loco T334 *The Pink Thing* (56-105 of 1956) was at Maryvale on the same day. Clyde Bo-Bo DE Y173 (58-593 of 1968) was withdrawn by V/Line on 16 August and transferred to APM on 18 August.

Rail Australia 12/89 via John Browning

ALSTERGRENS MILL, Upper Thomson, KIRCHHUBELS MILL, East Tanjil 914 mm gauge

Both of these old mills and their attendant tramway systems are located in areas which are under consideration for either logging or ash re-forestation projects. The Historic Places Branch of the Department of Conservation Forests and Lands has commissioned a survey and a report on the significance of these mill sites and tramway systems. The work is being undertaken by an LRRSA member and the report is expected to be completed in early March.

Peter Evans 2/90

MELBOURNE & METROPOLITAN BOARD OF WORKS 762 mm gauge

(see LRN 73, p.14)

An advertisement in *The Age* on 17/1/90 called for tenders for the supply of five diesel locomotives for tunnel construction in connection with the North Western sewerage project.

The Age via Ian Stanley

PILKINGTON ACI OPERATIONS PTY LTD, Dandenong 1600 mm gauge

The glassmaking plant was visited in late December. Wagons are brought in by V/Line but shunting is done internally by Pilkington's Whiting "Trackmobile"

road/rail unit, which is numbered 632.

Ray Graf 12/89

PUFFING BILLY PRESERVATION SOCIETY MUSEUM, Menzies Creek 915 mm gauge

(see LRN 52. p.17)

Privately owned John Fowler 3 ft gauge 0-4-2T 15989 of 1923 (see LRN 51, p.9) is reportedly dismantled at the Menzies Creek Museum for restoration.

Chris Hart 3/90

SOUTHERN PRIVATE RAILROAD 700 mm gauge

(see LRN 65, p.16)

It is reported that one of the two locomotives imported from Indonesia, a Hanomag 0-8-0T and an Orenstein & Koppel 0-4-4-0T, has been sold to a buyer the United States, although this requires confirmation.

Chris Hart 3/90

STATE ELECTRICITY COMMISSION, Kiewa 915 mm gauge

(see LRN 74, p.6 & LRN 63. p.15)

The possibility of converting the Bogong Creek tramway to tourist operation has been canvassed and the Minister for Tourism, Mr Steve Crabb, has responded enthusiastically. The tramway, visited twice on LRRSA tours in the last few years, is 8 km long and was built in 1950 to service the raceway attached to the Clover hydro-electric power station. Costs involved are estimated at \$1m for the purchase of rolling stock and the improvement of safety standards. A spokesperson for the Victorian National Parks Association viewed the proposal "with great concern".

The Sun 15/1/90. The Age 15/1/90 via Ian Stanley

WESTERN AUSTRALIA

WEST AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC Bennett Brook Railway, Whiteman Park 610 mm gauge

(see LRN 73, p.14)

The last public steam hauled train for 1989 was run on 19 November, but on 4 December, 2-8-2 NG15 123 (Franco-Belge 2670 of 1951) was in steam for the Australian launch of the Toyota Celica, which took place at Central Station. Whiteman Park was scheduled to be closed throughout February.

The Mallet locomotive wheels (from Orenstein & Koppel 0-4-4-0T 2609 of 1907) have had the flanges built up and tyres reprofiled by Western Mining.

A bulk diesel fuel tank has been installed to service locomotives. A tamping machine is under construction, which will be permanently coupled to, and powered by, the Ridley six-wheeled locomotive.

CHRISTMAS ISLAND STAMP ISSUE

A new Christmas Island definitive series traces various modes of transport used since the island was first settled. Part 1 in the series was issued on 18 April 1990 and comprises eight stamps, three of which depict items of light railway interest. The *Australian Stamp Monthly* describes these three stamps as follows:

3c - Railcar: The railcar depicted was unique to Christmas Island. Travelling from South Point to Drumsite, a distance of some 20 km, it was used to carry schoolchildren and residents on shopping trips

30c - Passenger Rake: A vehicle unique to Christmas Island, the Passenger Rake was first introduced on the inclined railway about 1914. It was winched up the 1 in 6.5 gradient using a side-wire and was equipped with an emergency hand-brake which is shown quite clearly on the stamp. Vehicle transport improved and pavement laid to permit motor vehicles to travel "up the incline".

\$5.00 - Steam Loco and Flat Car: The standard-gauge railway was an integral part of life on Christmas Island. The loco shuttled between the wharf and the foot of the incline coupled to the flatcar used to transport all building materials from the wharf area to the incline where it was winched to a second shunter and towed to the Drumsite workshops. Sadly, both locomotives have been buried "somewhere on the island".

Copies of these stamps, at face value, are now available at nominated

Australia Post Philatelic Sales Centres and by mail order from either The Philatelic Officer, Christmas Island, Indian Ocean 6798, or Freepost 9988, Philatelic Mail Orders, GPO Box 9988 Your Capital City.

PRIVATE TOUR ALONG THE OLD GHAN LINE

LRRSA member John Hasler is organising a tour by four-wheel drive along the abandoned formation of the Old Ghan to mark the 10th anniversary of the cessation of services on the line. The tour will visit most places on the line where relics may still be seen, and will include a visit to the Ghan Preservation Society site.

The trip is planned for late August or early September and is expected to take about two weeks with a choice of several options for the return route. Further details may be obtained by ringing John on 059 75 1144 during business hours.

Peter Evans 5/90

CHICHESTER RIVER GRAVITATION SCHEME, NSW

The *Transactions of the Institute of Engineers (Australia)* Vol. VII of 1925 contains a paper by E.T. Henning on the construction of this scheme, which was used to supply water for the Hunter Valley district. A concrete dam was built just below the junction of the Chichester and Wangat or Little river which impounded 5,000 million gallons of water drawn from a catchment of 106 square miles. The water from this reservoir was channelled through a main consisting of 9 miles of woodstave and 45 miles of steel pipe to the Buttai and Waratah service reservoirs, the latter situated close to and serving the city of Newcastle.

A quarry was situated close to the dam, and tramways were used to deliver rock to the crusher. The gravel produced was delivered to a mixing hopper by conveyor belt, and the mixed concrete transported by two Lidgerwood cableways to a hopper and chute system which placed it as required for

construction of the dam. The plant was worked by steam, and a large boiler house and several other buildings had to be constructed.

"All of the timber required for the construction of the buildings was cut in the area. A sawmill was erected for the purpose and, the country being very rough, a greater proportion of the mill logs were brought in by means of a log hauler capable of operating over a circle of about 3/4 mile radius. The mill logs were carted from the log hauler to the mill by means of a 2 ft gauge tramline and petrol motor.

Most of the pipes for the main were transported into position by motor lorries, although in the more hilly areas horse jinkers were used. However, "As it was impossible to take even a horse team over the Hexham and Woodbury swamps, a timber 2 ft gauge tramway track was laid along the formation for the pipe line, in the former case for a distance of 5 miles, the pipes were hauled over this track by means of a petrol locomotive. The locomotive pushed the full trucks out and hauled the empty ones back. The trucks were of light construction. Two were used to each pipe in the form of a double bogey (sic). When the pipe had reached its destination, it was supported by means of levers and the small trucks pulled out from under and passed along the bank behind the pipe to be taken back to the railroad."

The dam was filled to capacity for the first time on 25 June 1925.

The paper is illustrated by a small map and eight photographs, although the standard of reproduction of the latter is very poor. Perhaps a NSW reader would like to take this on as a research project, as no doubt more information exists in the files of the relevant Authority.

Peter Evans 3/90

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

BIOMASS ENERGY SERVICES & TECHNOLOGY (BEST) PTY LTD, Saratoga NSW

This small company undertakes research and development for appropriate technology in the energy field and is developing low-cost steam boilers and engines for industry and village applications in developing countries. The Editor of Light Railways was a guest to the second ever run of their new prototype double-acting single-cylinder uniflow steam engine at their Wamberal workshop (Central NSW Coast) on 2 March 1990.

The new engines offer a high-speed, efficient unit with a revolutionary poppet valve designed to allow variable cutoff in order to ensure that efficiency does not vary greatly when the engine is operated at partial speed. The 20 kW prototype unit is steamed from a vertical, water-tube boiler designed to utilise biomass materials (timber offcuts, rice husks, coconut husks etc.) and producing 250 kW @ 12 bar. Sufficient steam to operate the engine was generated within 20 minutes of initial firing.

The prototype engine will undergo extensive testing and modifications over the next six months. The aim is to produce a range of steam engines to 40 kW for application in developing countries, particularly the South Pacific Region. Small industrial applications, such as sawmills, and village electricity generation are envisaged. Your reporter was left pondering whether Australia

will be at the forefront of a new steam age with the generation of power for local industry and transport following new concepts of environmental sustainability?

Bob McKillop 3/90

EIMCO AUSTRALIA PTY LTD

(see LRN 71, p.5)

Eimco's first cane locomotive, fully imported, and constructed by Prof Engineering in Zimbabwe, has been delivered to South Johnstone Mill. Three more units are known to be on order and are under construction in Australia. Two are for Mackay Sugar and one for Bundaberg Sugar, and it is believed they are being assembled in Sydney. However, sheet metal fabrication work for cab and body panels is being carried out in Mackay.

John Browning 4/90

TOUR REPORT

GALLIVANTING AROUND GIPPSLAND ON MIKES MARCH MEANDER

The Society's first tour for 1990, attended by over 40 travellers, was held on the weekend of 24/25 March and was blessed with fine, warm conditions. On the Saturday morning our tour party assembled at Gembrook, next to the old VR water tank and were soon on their way south under the expert guidance of Tour Leader Mike McCarthy, towards Nar Nar Goon, paralleling for much of the way, the still discernible century old formation of the Melbourne & Beaconsfield Sawmill & Firewood Co's tramway, the earliest in the area.

From here a thirty minute drive took us to Yarragon and a quick "Cook's Tour" ("Mike's Meander" ?) of the amazing, still-visible-after-100-years, formations of three timber tramways which operated south from Yarragon station, high into the surrounding hills. These hills, once thickly forested, are now almost completely given over to open pasture and the various tramway routes are clearly to be seen high on the steep hills. A whole day could easily be spent in this area.

Next stop, the dam wall at Lake Glenmaggie, was ninety minutes drive away, and our lunch venue. Since your scribe's last visit many years ago, a display room has been opened illustrating the building of the dam, whilst down on the dam wall itself a 35 ft (approx.) gauge, split-level (one rail is higher than the other!) heavy railway for a travelling crane has been built. This is in addition to the 2 ft gauge line already existing on the wall. In the afternoon two walks were held along the route of the construction tramway which once ran from Heyfield station to the dam wall, and in a discovery akin to Columbus discovering the New World, the second walk was found to

include a zig-zag which certainly caused some animated discussion among the zig-zagologists! Did they build the line from each end, get to the middle only to discover a surveying error and resort to a zig-zag? For a construction tramway built in the 1920s, this line appears to be very well graded and engineered (except for the zig-zag!); not your usual short lived construction line.

From here, our party made their various ways to Yarram for our overnight stop. In an endeavour to wash the dust from their throat, some well known members (released by their wives for the weekend) resorted to helping Mr Bond out of his troubles!

Next morning, our tour of the Goodwood Timber & Tramway Co's 2 ft gauge line commenced with a trip along the route. Most of the line from Port Albert to the mill (some 32 km) is paralleled by road and in some places, is the road. Inspection was made of the probable spot where *Mona*, an 0-6-0T by Krauss blew up on 1 September 1914, just a few days after the outbreak of The Great War. (In view of *Mona's* Germanic origins and the anti-German sentiment prevalent at the time, was the boiler explosion purely coincidental?). Amazingly, *Mona* was later resurrected.

Some of the cuttings along the route have been partly obliterated, but much remains for the interested searcher. The millsite, deep in the Mullundung forest was our lunch stop and very pleasant it was beneath tall trees on a warm day amid amiable company.

The largest object here, apart from the substantial mill foundations, is the cladding from the boiler backhead off one of the three locos; most likely the legendary *Mona*, and it was accorded nearly as much veneration as the "Shroud of Turin"!

After lunch, another walk was held along a kilometre or so of the formation east of the mill on one of the log lines. Included were two bridges both of which still have substantial remains after seventy years. The first was about 100 ft long and 20 ft high. The second, comprising twenty-six 20 ft spans for a total length of 520 ft and a maximum height of 20 ft with several spans standing.

With time on the march, one more bridge site was visited to conclude a most interesting weekend before gallivanterers made their way home, some of whom had quite a way to go (such as Adelaide! - good to see the Croweaters over here).

Special thanks must go to Mike McCarthy who led the tour with distinction and produced a thick wad of tour notes to complement our gallivant around Gippsland! Thank you Mike!

"Herr V. Rayles" 4/90

FIELD REPORT

RUOAK TRAMWAY, Middle Range, Rubicon, Vic. 1029 mm gauge

This report describes the remains seen in late 1989 of the tramway operated by Ru oak P/L along the side of the Middle Range at Rubicon between 1940 and about 1950 by which time the tramway had been replaced by a road on a different alignment. It is part of a systematic survey of remains in the Rubicon Forest being carried out by members of the ATT&M and the LRRSA. This tramway was worked by the 1029 mm gauge Day's tractor now preserved in operating condition at Alexandra. Only the portion between the old No.4 mill and the junction with the 610 mm gauge tramway to Alexandra was investigated on this occasion.

Between the site of the old No.4 mill and the junction of the Rubicon and Royston Roads, the tramway is covered in thick blackberry making it impossible to follow. The only place that it could be located with certainty is at the crossing of the SECV Royston aqueduct where the remains of the bridge over the aqueduct can be seen on the uphill side, and a gap in the trees indicating the route of the tramway on the downhill side is fairly obvious.

From the road junction, the tramway formation is obliterated by the Royston Road for approximately 1 km. At this point the road falls away steeply and the tramway formation is easily picked up on the uphill side. After a short distance, the formation is once again obliterated by Le Brun Road. At this point on the tramway, a large bridge existed before the road was built. Le Brun Road follows the tramway for 150 metres before climbing steeply to the left, and the tramway formation is easily picked up below the road. Several hundred metres further on the tramway rises slightly to get around the remains of the unsuccessful lowering gear to the No.3 mill.

This was built to lower the timber down to an outlet road, but the grade on the incline was insufficient to operate it by gravity, and after trying first horses and later a steam winch to overcome the friction inherent in all balanced inclines, the incline was abandoned. A new length of tramway was constructed to take the timber out to the end of the Middle Range where another, steeper incline was built.

The abandoned lowering gear to the No.3 mill is still largely intact. The foundation of the gear is a huge tree stump which securely anchors the whole structure to the forest floor. To the top of this stump is firmly bolted to a pair of parallel logs in line with the formation of the incline, the other ends of which are spiked to a cross member resting on the ground. Because of the slope of the site, the bearer logs are horizontal. Across these logs the

drum of the lowering gear is mounted on large bearings bolted to the logs. The drum is similar in construction to a winch drum, and is approximately 1.3 metres wide and 1 metre in diameter. Several turns of cable would have

Sketch plan and elevation of the lowering gear at the unsuccessful incline above Clark & Pearce's No.3 Mill on the tramway built in 1939 (see text).

passed around this drum, reversing the direction of the cable by 180 degrees. On the left hand side of the drum (when looking down the incline) is a brake band about 1.5 metres in diameter which bears on the circumference of the drum which is about 15 cm wide at this point. The brake is operated by a large foot lever which is still connected to the brake band. On the right hand side of the drum is a screw-operated handbrake using two large timbers which can be locked onto the circumference of the drum as a "parking" brake. This device can still be operated using the threaded crank handle. After leaving the drum, the cable passed over a set of iron sheaves mounted on the front face of the stump to direct the cable down the incline.

The tramway here was once elevated on a timber staging, however no sign of this is now apparent. Unfortunately, time did not permit the exploration of the route of the incline on this visit.

After by-passing the lowering gear, the tramway resumed its steady fall towards Rubicon. Several hundred metres on is located a bridge of four spans. This bridge was about 15 metres long, and just past it the formation widened, indicating that a crossing loop may have been located here. The tramway now passed through a rocky area before crossing a "make-up" about 25 metres long.

The next bridge was very large - about 40 metres long and possibly 6 or 7 metres high. Unfortunately, it has collapsed into the gully, and all that could be discerned of its construction was that it was supported on several timber trestles.

A short "make-up" about 6 metres long was located a little further along, and as the tramway curved around a spur it passed through a small cutting about one metre deep. At this point the vegetation began to change from Mountain Ash with a thick understorey of prickly scrub to a more open aspect of Messmate with a much thinner understorey of bracken, and the formation of the tramway could be followed more easily. All along the tramway insulators and lengths of wire can be found, the remains of the telephone line to the No.4 mill. Hundreds of sleepers were also seen, many with dogspikes still in place indicating that the tramway was largely steel-railed.

The sound of rushing water heralded a major obstacle ahead. The bed of a creek at this location is used by the SECV whenever they need to release water from the aqueduct at the Rubicon forebay, and this has cut a deep channel into the hillside. The tramway crossed this on two large bearer logs about 8 metres long. At this point a short length of 30 lb rail was found, the first piece of rail seen on the tramway so far. Unfortunately, the bridge has partly collapsed, and the crossing of the creek proved to be quite difficult due to the steep nature of the banks.

Just around the next spur is the creek previously used by the SECV for the release of water, and here the highlight of the bushbash was located. This was a two-span bridge with one central trestle support and three bearers intact and complete with decking. The bridge is approximately 10 metres long and 4 metres high at the centre.

About 100 metres past this bridge the top of the incline was reached. On a siding off the main line to the right are the remains of a shed for the rail tractor. The line extended through the area once occupied by this structure to an inspection pit formed by two logs over a natural depression in the ground. Springs and a drive chain from the tractor were scattered around the area.

Adjacent to the shed was a long passing loop at the end of the locomotive-worked section, and on the left are the extensive timber foundations of the lowering gear. This was located on a knoll overlooking the SECV pipeline and haulage, and was right on the edge of the cleared area maintained by the SECV staff. The lowering gear was once covered by an extensive corrugated iron roof, but this is no longer standing.

The incline falls steeply away at this point in a north-easterly direction. The formation is drained by large ditches on either side parallel with the incline. The only item located on this section was a 30 lb check rail, obviously from the crossing loop. At the foot of the incline the tramway crossed the Royston River at right angles. No trace of a bridge was found, this probably was washed away many years ago as peak levels in the Royston River can be quite high in the winter and spring.

From here the tramway followed the Royston River for a short distance before turning east to cross the Royston Road and skirt below the site of some SECV houses. Shortly, the tramway swung back towards the west to the site of the transfer gantry and transom near the east bank of the Rubicon River. No sign now remains of this structure, nor of the 610 mm gauge branch line which crossed the Rubicon River below its junction with the Royston, at the site of the present road bridge. This branch tramway then climbed for a short distance to junction with the main section of the 610 mm gauge tramway to Alexandra.

Anyone wishing to repeat this walk from the Royston Road would be well advised to wear protective clothing as the undergrowth, especially on the upper section is thick and prickly. The undergrowth near the Royston River is very nearly impenetrable, and this section could be bypassed as there is very little to see. The total time for the trip was nearly 5 hours.

HISTORY OF THE TRAMWAY

Prior to the 1939 bushfires, the only way to get sawn timber out from the

mills on the upper reaches of the Rubicon and Royston Rivers was via a 1029 mm gauge wooden railed tramway built by Clark & Kidd in 1907. This tramway traversed steep rocky country and followed the valley of the Rubicon River to Clark & Kidd's No.1 mill. (This firm became Clark & Pearce in 1919 and Ruook P/L in 1938). Several more mills were built in later years, and tramways extended to serve them on the upper reaches of the Royston River and Snobs Creek. An excellent history of the timber mills and tramways of this district has been written by Frank Stamford and was published in Light Railways numbers 28, 36, and 44. Some of the information below was extracted from these articles. Information on the construction and operation of the inclines and tramways was provided by Ernie Le Brun and Ike Sims, both of whom worked in the Rubicon area at this time.

The 1907 tramway to Rubicon which carried all the output of the Rubicon and Royston valley mills was destroyed in the 1939 bushfires and was not rebuilt. A replacement tramway using a different route was constructed from a point on the ridge between the Rubicon and Royston Rivers. It may have been intended to construct this tramway before the disastrous fires as a portion of it is shown on an FCV map dated 1938. This tramway followed a steady falling grade to a point not far south of the No.3 mill where a balanced incline was laid down to the mill with the intention of taking the timber out with the output of No.3 along the Royston River. The incline and lowering gear were built by Sam Cherry, who was an expert bridge builder having built all of the original bridges on the SECV tramway nearby. However, in this case he miscalculated as he did not allow enough grade on the incline to overcome the friction losses inherent in balanced inclines, and the load had to be "started" by a team of horses. Assistance from the horse teams was later done away with when a steam winch was installed at the foot of the incline to provide motive power for the rope. This caused a great deal of inconvenience, as did the steepness of the newly constructed road along the old tramway formation below the No.3 mill which now had to cope with the output of both No.3 and No.4 mills.

As the No.5 mill was shortly to begin working again and would add to the timber to be carried on the tramway, the line along the eastern fall of the Middle Range was extended by 120 chains from the top of the unsuccessful incline in a northerly direction to a point close to the SECV pipeline and haulage. The line had a steady falling grade of 1 in 18 in favour of the load. At the terminus of this section a balanced incline was built down the end of the range so that the timber could be delivered to the 610 mm gauge tramway to Alexandra.

In mid 1940 an 0-6-0PM rail tractor built by Day's of South Melbourne was

purchased to work the line, displacing several men and horses. The tractor would take the loads of sawn timber out to the end of the locomotive-worked section near the SECV pipeline. Here the bogies were connected to a steel cable controlled by a braking system consisting of two large wheels placed horizontally, around which the cable passed in a figure "8" configuration.

The speed of the rope was controlled by large brake bands lined with wooden blocks forced against the outer rim of the wheels by a long lever. The incline had two rails for most of its length, but was divided into two tracks of four rails at each end, and in the centre of its length (this passing loop was known as the "frog"). The incline was 27 chains long and had an average grade of 1 in 2. At the foot of the incline the line crossed the Royston River where the load was detached and taken along a 28 chain tramway under the control of a brakeman to a point near the banks of the Rubicon River for transfer to the 610 mm gauge tramway to Alexandra. Transfer was accomplished using the gantry and transom also used for the transfer of timber from the 914 mm gauge tramway from the Snob's Creek area. The empty bogies were returned to the foot of the incline by a horse team. Here, the next descending load on the incline hauled the waiting empty bogies up to the top of the incline where the "Day's" tractor returned them to the bush mills.

In the mid 1940s an all-weather road was extended from the No.3 mill to near the old site of the No.4 mill, and the tramway north of here was dismantled, as was the incline. Timber was transferred to motor trucks using a gantry at the new terminus of the shortened tramway. The trucks now delivered the timber direct to Alexandra, sealing the fate of the 610 mm gauge tramway. The shortened section of tramway left for the Day's tractor to work was also closed when an all-weather road was extended to No.5 mill, thus ending about 40 years of timber tramways in the Rubicon Forest.

After the closure of the line in about 1950, the Day's tractor was transported to Alexandra where it is now preserved in running order at the Alexandra Timber Tramway and Museum. Not so lucky was the other item of motive power on the tramway, a petrol powered passenger vehicle used by the mill workers, which was last seen disappearing under the blackberries near the old No.4 mill site.

ISIS CENTRAL SUGAR CO LTD 610 mm gauge

(see LRN 65, p.7)

Major work is being undertaken to rebuild the track north from the mill up Cordalba Hill in order to make it suitable for the passage of loaded trains, which currently need to negotiate the circuitous route via "the Deviation" and through "Roma Street" in order to reach the mill from the south. Major earthworks will be required, and it is believed that this work is being carried out in association with the construction of a new mill yard.

David Mewes 5/90

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 75, p.8)

Much of the track construction work announced for the 1990 season does not appear to have been proceeded with. Work seems to have been concentrated on the maintenance of existing lines, reconstruction of the former North Eton lines west of North Eton, and the Langdon and Mount Martin extensions to Marian Mill lines west of Mirani.

At Farleigh Mill, Com-Eng 0-6-0DM locos *Richmond* (A1308 of 1955) and *Ashburton* (A1614 of 1956) were fitted for multiple-unit operation late in 1989. They can be worked back-to-back and each unit has dual controls.

Com-Eng 0-6-0DHs *Pioneer* (A12358 of 1962) and *Carlisle* (A13271 of 1964) are currently being rebuilt and will receive new Cummins 404 engines of 290 hp together with new torque converters (due in June), and will also be fitted with multiple-unit equipment. Clyde 0-6-0DH *Seaforth* (61-233 of 1961) will also be receiving a Cummins 404 engine. It is planned that *Richmond* and *Ashburton* will eventually be fitted with the Gardner engines from *Pioneer* and *Carlisle*, and that *Barcoo* (Com-Eng 0-6-0DH FB4383 of 1965) will receive the GM V-8 engine from *Seaforth*. Also at Farleigh, Motor Rail "Simplex" 4wDM 21625 of 1957 is dumped in the navy yard, with its engine partially dismantled.

At Marian Mill, all track access to the loco shed has been cut as a result of the construction work going on for a new tippler and weighbridge, and traffic and cane inspectors offices. All locomotives were isolated in the shed in April with the exception of 0-6-0DM 6 (Bundaberg Foundry 10 of 1953), 4wDH E.M. Baldwin 4529-?-1-73 of 1973, and 0-6-0DH 12 (Clyde 58-588 of 1958).

Mackay Daily Mercury 10/5/90; John Browning 4/90

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 74, p.12)

Seen heading north on a semi-trailer on the Bruce Highway north of Rockhampton on Saturday 28 April, was the new bogie locomotive for South Johnstone Mill. This B-B DH unit was supplied by Eimco and was manufactured by Prof Engineering in Zimbabwe. It was painted yellow and black.

John Browning 4/90

SOUTH AUSTRALIA

STEAMRANGER

After 30 years "in the driver's seat", Dean Harvey has decided to step down as the Director of SteamRanger. Dean will continue to help the Society in any way that he can, but feels that it is time for someone younger to have a go. Dean was a foundation member of the South Australian Division of the ARHS in the 1950s and when the new division decided to organise rail tours, became the Division's tours manager. It was from this early beginning that SteamRanger came into being. In 1981, his efforts in steam railway preservation and operation were rewarded by his being presented with the Order of Australia medal.

The Adelaide Advertiser 2/4/90; Arnold Lockyer 4/90

VICTORIA

AMRA MODEL RAILWAY EXHIBITION gauges HO, HOn2.5, N, Z, and 15 in

The LRRSA was once again represented at the AMRA model railway exhibition, held over the Labour Day weekend at the Camberwell Civic Centre. Over one thousand dollars worth of publications were sold by the Society volunteers who manned - sorry, "personned" - the stand over the four days of the exhibition. Several new members were also gained as a result of this effort. The stand displayed details of the aims and activities of the LRRSA, as well as several steam sawmill and tramway relics. The major item on display was a 15 in gauge mining skip mounted on "box" rails once used on the Black Rock to Beaumaris horse tramway, recreating the rolling stock and track used on the Benwerrin Coal Company's haulage incline in the Otways. This exhibit was loaned by the Alexandra Timber Tramway and Museum, as was a framed original general arrangement drawing of the Museum's Kelly and Lewis 0-6-0DM.

The Society has applied for a stand at next year's exhibition.

Peter Evans 4/90

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm & 1029 mm gauge

P.O. Box 288, Alexandra Vic 3714

(see LRN 75, p.10)

Easter 1990 saw the culmination of a project which has occupied the Museum's small workforce for the past year. This involves the erection of a skillion roof extension to the goods shed and the laying of the longest section of new track at the Museum since the "big curve" was completed in late 1986, enabling the last two of the Museum's locomotives presently in the open to be stored under shelter.

Regauging of the old broad gauge No.3 road was completed late on the evening of 15 April, and before ballasting was commenced John Fowler 11885 of 1909 gingerly shunted the Rubicon tramway's Kelly & Lewis 0-6-0DM down the 1 in 25 gradient into the new shelter. Early next morning, while the Fowler was being fired up, the track was ballasted using the Malcolm Moore 4wPM loco and three ex-SECV side tipping skips. The connection between the tender and locomotive of Hudswell Clarke 1098 of 1915 had been broken some days previously in order to take the tender out on to the main line to check clearances. The tender was now also shunted into the shelter. The arrival of a coach load of tourists put a temporary stop to the shifting of the

locomotive itself until a lull around lunchtime. Museum workers held their breath while the Fowler crawled up behind the Hudswell Clarke on 20 lb rail which had not seen a locomotive movement for many years. Several new sleepers had been put in for the occasion, but the light track still groaned and sank under the combined weight of the two locomotives. With connecting rods and part of the valve gear removed to prevent damage to the cylinders, the Hudswell Clarke was carefully drawn out to the security of the main line. The Fowler ran around the loop and the Hudswell Clarke was soon reunited with its tender under the shelter.

A survey is now being undertaken on the condition of the Hudswell Clarke so that planning can be commenced for its return to service. The first stage will be to strip the boiler for an official examination. When the locomotive was taken out of service as too heavy for the 30 lb rail then comprising most of the track at Alexandra, it had a current certificate for 150 psi, and it is hoped that this will be renewed.

The Museum would greatly appreciate it if the person who stole the turbo-generator from the locomotive several years ago would return it so that the locomotive can be fully restored.

To top the Easter period off, the three running days were financially very rewarding adding to the satisfaction of seeing two important exhibits stored safely under cover at last.

Peter Evans 4/90

AUSSIE-LAND ADVENTURE PARK, Wodonga 457 mm gauge

(see LRN 74, p.13)

A visit on 28 January, showed 5 *Jumbuk*, an 0-4-0PM, hauling two bogie toastrack cars, numbered 3 and 4, on a clockwise circuit. The loco has a Holden 121 engine and a mechanical gearbox. Also observed were a four-wheeled tank car numbered 46, and a trike numbered 42. Some other service vehicles were also noted in a closed-off area alongside the loco and carriage shed.

Ray Graf 4/90

OVERSEAS

JANAKPUR RAILWAY, Nepal 762 mm gauge

A visit to the religious city of Janakpur, on the Nepalese Terai, in November 1989, revealed that 29 km of the line to Jaynagar (Bizulpura) on the Indian border is still operational. It is the last railway still in situ. The all-steam railway is known to have operated two Garratts, but I was unable to confirm if these are still in service.

The railway station was visited in the evening of 12 November, to reveal a dilapidated collection of wooden carriages packed, inside and out, with hundreds of intending passengers. The outline of a typical British side-tank locomotive shunting in the yard was discernible through the dim lights. A timetable painted on the wall was translated from Nepalese as: "0645 DOWN; 0930 UP; 1010 DOWN; 1125 DOWN 1335 UP; 1510 UP, 1545 DOWN; 1745 UP". A return visit at 1100 next morning found large numbers of intending passengers but no trains. We were advised that "the engine has fallen from a bridge into a creek and they are now trying to recover it"! A small Robert Hudson personnel carrier packed with men and women headed off to survey the damage. This appears to be a common occurrence on the line which is in a very run down condition. With the trade difficulties between Nepal and India, coal (together with motor fuel) is in short supply, so the future of the railway is precarious. Anyone wishing to visit this museum relic should do so soon. The Welcome Hotel in Janakpur is recommended.

Bob McKillop 3/90

MEETINGS

MELBOURNE: THE GREAT TACL AUCTION

Frank Stamford will be running an auction of old TACL bits and other incredibly interesting and useful paraphernalia in support of the TACL restoration project. Films will also be shown to make it an evening of variety. Don't miss it. (See separate flyer in the last mail out)

LOCATION: Ashburton Uniting Church Hall. Ashburn Grove. Ashburton.

DATE: Thursday 14 June at 8.00 pm.

SYDNEY: SLIDE NIGHT

The Division's now traditional June Annual Meeting with business held to the absolute minimum to be followed by our member's slide night. Bring along a box of slides (or one or two only) and show us what you have been doing in the last year,

LOCATION: Woodstock Community Centre. Church St. Burwood Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 27 June at 7.30 pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-296 9455

LOCATION: 150 First Avenue. Royston Park.

DATE: Thursday 7 June at 8.00 pm.

NOTES, CORRECTIONS & COMMENTS

TWO DAYS IN ONE DAY or THE MYSTERY OF THE MISSING INCH AND A HALF

"Let's go for a picnic Dear, and get the kids away from the TV". "Oh, OK", I respond rather dubiously. But then the grey matter bursts into life. Why not go to Alexandra and visit the famous Alexandra Timber Tramway & Museum and check out the so-called 3 ft 4.5 in gauge Day's railtractor; but I'd better keep it quiet until we're on the road!

So early on the Queen's Birthday holiday, Monday 11 June, all are packed into the car together with picnic, dolls, puzzles, camera, coats and gumboots and off we go. Up the Maroondah Highway, past Lilydale,

"Better-half" pipes up, "are we going to Healesville Sanctuary?". "Nope!" Through Healesville, shrouded in fog, are we going to Maroondah reservoir? "Nope!". Over Blacks Spur, now in brilliant sunshine, "Are we going to the snow?" "Nope!". Right turn at the Marysville turnoff; "Bet we're going to Stevenson Falls!". "Nope!" Stop in Marysville, out with the tape-measure, over to their 3 ft gauge Day's tractor; "I might've known there would be an engine here!" "Mmmm. So there is!". Crawling around on hands and knees, I carefully measured the back-to-back distance between the wheels - 2 ft 8.5 in "All back in the car!" We're off again, towards Buxton. Silence and a confused look emanate from the front passenger's seat as we head back into the fog. Through Taggerty and Acheron, then the Alexandra sign appears. "Bet we're going to Alexandra!", comes the triumphant rejoinder. "But there's nothing here, is there?" We'll see!" Picnic lunch completed, we drive around town and suddenly in front of us, a Fowler 0-6-0T steaming past in the sudden sunshine, whistle blowing with Peter Evans driving! Kids are interested now! Steam train to ride on, Malcolm Moore 4wPM loco to ride in, Day's tractor (not stuffed and mounted like Marysville's) to ride on, carriages to hang out of, rusty boilers to peer into, old machinery to climb on, even some mud to

paddle in! - the list is endless. Look! - There's that character what's-his-name? Jack Stock! and his lads, James and Phillip. Hardly saw our kids for the rest of the day whilst I got on doing the important things; like having a drive of the various locos, drooling over old photos and maps and wonderful models of a sawmilling community, gasping at all sorts of high quality railway junkie and most importantly - out with the tape-measure to check the back-to-back measurement on the 3 ft 4.5 in gauge Day's tractor ex Ru oak Timbers Pty Ltd Mmmm, 3 ft and a quarter of an inch - that's three and three-quarters inches more than the Marysville loco; so add that to 3 ft gauge equals 3 ft 3.75 in not quite 3 ft 4.5 in, but fairly close. After all it is a bush tramway loco. Besides, in LR 44, Frank Stamford cites a Mr Tom Scheffer of Alexandra who actually built and maintained various Rubicon tramways. He states that wooden railed tracks were laid to 3 ft 4.25 in and steel to 3 ft 4.5 in Problem solved. Q.E.D.. Game, Set & Match!

Then, enter the Peter Evans theory. In the beginning, once-upon-a-time, timber men entered the Rubicon forests, said "This is the place for a tramway", telegraphed Melbourne and requested "Send bush tramway wheelsets". The foundry looked around their yard, saw a pile of wheels (3 ft 6 in gauge) loaded them into a "GY" and sent them north. Upon arrival at Alexandra Road/Lily/Rhodes/Koriella (depending what date it arrived) they were carted to the new mill, dumped on the ground and the workers then shoved a couple of bits of timber rail under them and nailed them (the rails) down. Upon measuring the distance apart they were found to be - surprise, surprise 3 ft 4.5 in The edict then went out "Build all tramways to 3 ft 4.5 in gauge!" - and it was done.

In other words, they just laid the rails a bit "tight". Refer LR 28 page 16 which quotes an accident. The rails are found to be, variously, 3 ft 4 in and 3 ft 3 in and the Forest Ranger comments that three inches difference is a bit much but one inch would have been acceptable. Also LR 36 page 19, top photo - note how tight the gauge is - the rails are hard up against the flanges. If the track in this photo is typical of the whole system then an inch and a half widening would have made for easier running and with those six inch wide treads there would be no danger of derailment. Remember, flanges are not to keep the wheels on the track but to stop the wheels falling off.

And so it came to pass that on a certain day 50 years ago when Ru oak ordered a Day's tractor someone raced outside, measured the gauge and wrote to Day's "3 ft 4.5 in" and Day's, knowing that the customer is always right even when he's wrong, built it accordingly. (Even though it hauled 3 ft 6 in gauge rolling stock.)

I'm now head for the dug-out before the bullets start flying! (As a matter of negligible interest the Day's at Marysville presently sits astride 3 ft 3.5 in

gauge tracks. No doubt, one day it will be described as a Metre gauge "Day's"!)

"Miss Terri Gage" 6/90

RESEARCH

ANOTHER MALCOLM MOORE RAIL TRACTOR - ALBEIT SOMEWHAT MODIFIED - SAVED

Some years ago, when the Waratah Gypsum Co ceased using railways to transport salt and gypsum at Stenhouse Bay, one of the locomotives had its "innards" removed, a window being fitted to the side of the engine cover with a display of various minerals where the engine used to be. It was then placed on display outside on a short section of track, together with a few side tipping trucks.

This locomotive, bearing a Vulcan Iron Works, Wilkes Barre, Pa USA, builders plate B/No. 4182 when I visited the works in 1947, was the Company's main line locomotive and their biggest. It was powered by a Caterpillar diesel and bore the identifying letter "H". On a subsequent visit, twenty-two years later in 1969, just after rail transport had ceased, it was found that the number had been changed from "H" to "301". It was also learnt during this visit that the Caterpillar diesel was the result of a rebuild. The loco appeared to be an 0-4-0 with outside coupling rods.

In May I was contacted by Mr Ron Fluck of the Port Dock Railway Station Museum for details of this loco as it had been offered to the Museum. Upon inspection the loco was found to be beyond restoration due to its being stored in the open near the sea. However while at Stenhouse Bay, Mr Fluck was shown another tractor type loco which had been stored in a shed and was in quite good condition. From his description, I identified this loco as being a Malcolm Moore, which between my visits in 1947 and 1969 had been rebuilt, with the original Fordson engine being replaced by a Deutz diesel. In 1947 the Company had three of these units numbered "J", "K" and "M". Although on the 1969 visit I was able to identify the "K" had been renumbered 113, I was unable to ascertain how "J" and "M" had been renumbered. One had been cannibalised whilst the other remained the only locomotive still in use, working on a small section of track, extending for about three-quarters of the length of the jetty, from the seaward end. Bearing the number 1514, it had been extensively rebuilt as mentioned.

In early June this locomotive was transported from Stenhouse Bay to Port Adelaide where I inspected it prior to its relocation at the Museum. It still bore the No. 1514 and the only parts that appear missing are the large cast

buffer-cum-cowcatcher-cum-multi-height couplings (both front and back). If any reader knows where two of these could be obtained, the Museum would be pleased to hear from them, preferably through me. This locomotive joins two others at the Museum that worked at Stenhouse Bay, both of which were built by Ruston Hornsby.

Arnold Lockyer 6/90

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

BOGAN IMPLEMENT CO, Queensland

This company, situated near Innisfail, is owned by Joe Camuglia & Sons. It supplies tramway wheels, wheelsets, cane bin components, complete cane bins, and other items of rolling stock to the sugar industry. It was recently presented with a gold-plated half size bronze tramway wheel by Bradken Consolidated to mark the 100,000th wheel they have supplied. The wheels are received from Bradken in rough cast form, and are machined to mill requirements at Boogan.

Boogan have recently supplied South Johnstone Mill with two ballast hoppers, and Tully Mill with a ballast plough.

The Island Coast & Tully Advertiser 22/6/90; John Browning 6/90

FIELD REPORTS

AUSTRALIAN NATIONAL BOGIE EXCHANGE, DRY CREEK - LRRSA S.A. DIVISION

On Saturday, 28 April, a party of 13 members, families and friends visited the Bogie Exchange at Dry Creek. Upon arrival, we were made very welcome by staff, who explained the operation of exchange and answered all our question whilst changing the bogies on a rake of trucks from broad to standard gauge. Free access was given to all of the Bogie Exchange buildings as well as to the adjoining freight yard and sidings. At the conclusion of the visit,

Arnold Lockyer who had made the arrangements with AN, personally thanked the staff for their co-operation. Mr Tom Milton, the Bogie Exchange Foreman, was also thanked for making possible such an enjoyable and interesting visit.

Arnold Lockyer 6/90

TRAMWAYS AT MACEDON, VIC

(see LRN 72, p.2)

A sawmill at Mt.Macedon, Victoria, with a log coming down a simple tramway from the forest, and sawn timber being loaded on a delivery dray. *Illustrated Australian News*, 25 February 1874. National Library of Australia.

Following the item in LRN 72, there has been an exchange of information between researchers from the MM&DHG and the LRRSA. Part of this information was a field report prepared by Colin Harvey after the 1983 bushfires. While the bushfires were a great tragedy in both human and financial terms, for a brief period afterwards a great deal of field work was

done by a number of members of our Society before the bush once again reclaimed old timber tramway formations. It was hoped at the time that this would eventually be published as a "Bushfire Book" - regrettably, it never eventuated. With some additional historical details provided by Mr Barney Hutton of the MM&DHG, Colin's report is now presented for the first time.

Fitzsimmon's "Devils Hole" Mill

Fitzsimmon's mill on the Willimigongon (Stony) Creek is shown on the 1866 map of the Gisborne Road District but was probably operating earlier. The mill had a tramline running near the Devils Hole Road through the northern border of "Sefton". The tramline is shown on the Lands Department plan M53 on allotment A of the parish of Macedon, and was most probably an incline providing an outlet for sawn timber. When the easily accessible timber around the Devils Hole Mill was cut out, an incline tramway was constructed over the ridge to extract logs from the Cockpit (Barringo Creek). This line was operated by an engine located at the summit. According to an employee, Mr Hackett, "when the log was on the truck in the Cockpit they blew a bullocks horn". The tram tracks were laid on logs and there were rollers at intervals to keep the cables off the ground. The mill and incline are believed to be those shown in the *Illustrated Australian News* on 25/2/1874 (see page 8). (See also *Sawing, Selling & Sons*, page 32.)

The land on which the mill was situated was brought by W. H. Langland and George Davis in February 1864 and was sold again in that year to J. P. Bear and Chas. McMahon. George Davis seems to have operated the mill after this date as he appears in a rate book entry for 1865 which states "extensive steam sawmill (very large concern), superior dwelling house and several cottages. Sixty men employed during summer and eight wagons on the road. Twenty five men at work at present at one time. Sixteen bullock teams also drawing timber; mill working night and day".

Bear and McMahon continued to own the land but "a party of Macedon hands" took over the mill, which they operated as the "Australian Steam Sawmill Company". These "old hands" were Henry Campey, William Kidd, James Gracie and Matthew O'Hare. They probably took over after 1865. The mill operated until 1873.

The last operators of the sawmill found the outlet tramway unsatisfactory, so they abandoned it in favour of a track around the side of the hill which was eventually taken over by the Shire Council and later named Sangsters Road.

Field Report 1983

The recently constructed New Willimigongon reservoir has removed all

trace of the mill site. The route of the outlet tram ("A") from the mill is through cleared private land ("Sefton") and no remains of this are evident.

The incline to the Cockpit climbed steeply up the hill behind the mill in an easterly direction and the formation has been cleared as a fire break. No earthworks are visible (or necessary) until approaching Barringo Road.

At about the middle of the climb the tramway is intersected by the route of a chute (12 metres south of the tramway at the track marked "B" on the map). This chute is very clear on the lower section with the impressions of the timber poles evident. Lying in the chute just east of point "B" is a broken iron tram wheel with straight spokes and a railway width tyre.

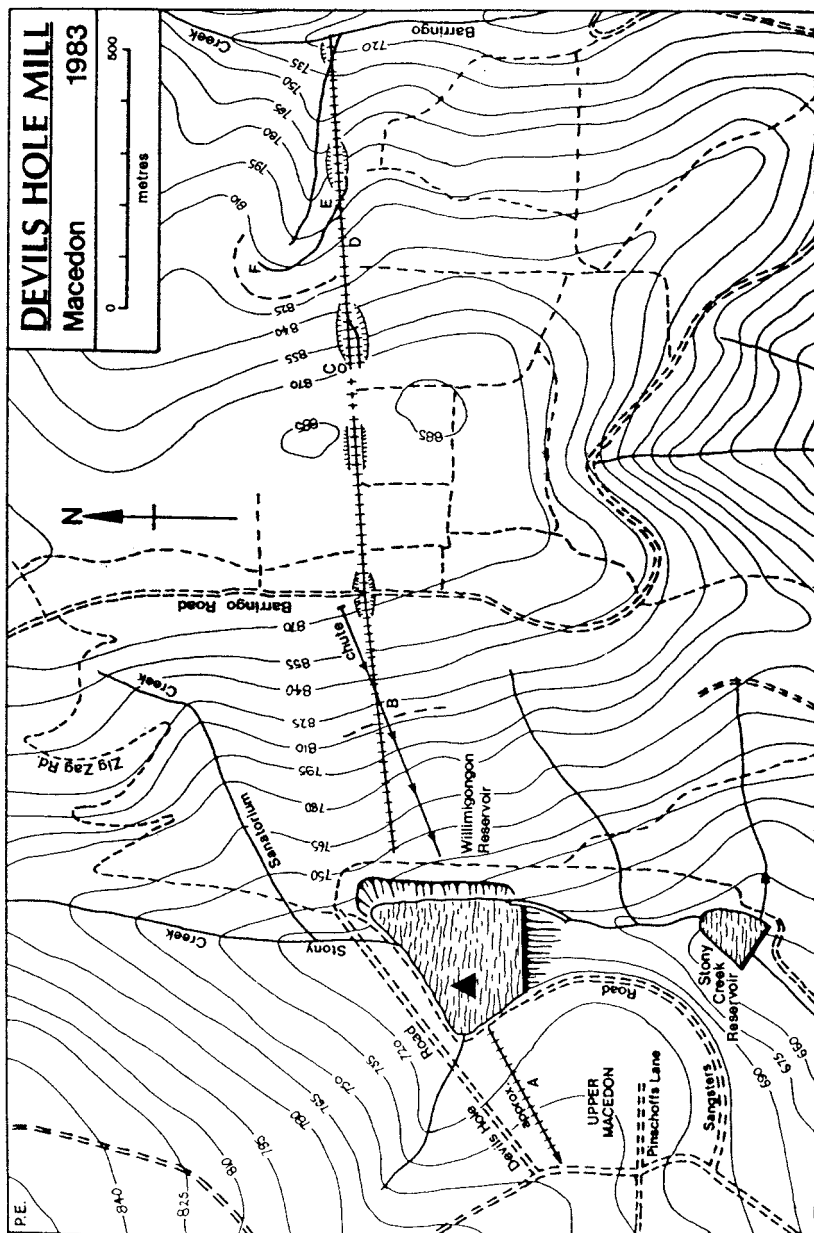

The grade eases to cross the relatively flat top of the ridge, and passes through a cutting about 1 metre deep; at this point Barringo Road is reached. Across the road the route is through fire-killed pine plantations. At the time of inspection, the 1923 plantation had not been fallen and the formation, consisting of a low embankment with a line of rocks on the south side, was completely clear. Sleeper impressions with a spacing of 1.3 metres were still visible.

Beyond the plantations the summit of the line is reached. This area has been cleared and levelled and no remains of tramway or winch can be seen. At point "C" on the map is a hole about 3 metres in diameter - possibly a tank for boiler water fed by a race from the north. From point "C" the tramway formation again becomes evident and- consists of a cutting about 1 metre deep, with another cutting parallel to it about 3 metres to the south. The second cutting is slightly shallower, and after about 30 metres joins the "main" line. For the remainder of the descent to the Cockpit the formation is clear and easily followed.

At point "D" are several broken tram wheels and clear sleeper impressions. The latter are spaced approximately 1 metre apart.

At "E" a formation comes in from the north-west; this is probably a log slide but may be a tramway. This formation originates at "F" where it is fed by a group of snig tracks, and terminates at a landing on the south side of the incline.

Numerous snig tracks lead down into the Cockpit, approximately paralleling the incline. After crossing a small creek and passing through a cutting the tramway terminates right on top of Barringo Creek. The remains of the stringers over the creek at the terminus could still be seen. These were spaced about 1.3 metres apart possibly indicating a gauge of about 4 feet. On the east side of the Cockpit are log slides and roads and/or tramways which have not been examined.

The whole tramway from Devils Hole to the Cockpit has lengths of rusting cable in proximity.

Historical research by Barney Hutton and Colin Harvey

Site investigation by Colin Harvey

Report collated by Peter Evans 6/90

NOTES ON THE MAP

This map was prepared from an original produced by Colin Harvey in 1983. The base map was an FCV map of 1962 entitled Mt Macedon - Mt Towrong. Contours are expressed in metres with an interval of 15 metres between adjacent contours. It is emphasised that anyone wishing to visit this site will find the vegetation much changed from that described in this report.

AUSTRALIAN CAPITAL TERRITORY

AUSTRALIAN RAILWAY HISTORICAL SOCIETY. ACT Division 1435 mm gauge

English Electric Australia B-B DE D25 has been purchased from BHP Slab & Plate Division, Port Kembla. It has been out of use for some years and will be restored for general shunting duties.

Rail Australia No. 14 via John Browning

NEW SOUTH WALES

BHP LTD, Sheet & Coil Division, Port Kembla 1435 mm gauge

(see LRN 71, p.7)

See BHP LTD, Slab & Plate Division, Port Kembla 1435 mm gauge

BHP LTD, Slab & Plate Division, Port Kembla 1435 mm gauge

(see LRN 76,p.11)

There is some confusion over the identity of one of the locos cut up in February. One report indicates that Bo-Bo DE D12 (English Electric Australia A012 of 1957) was cut up, not D16 as previously stated.

The Sheet & Coil Division CRM works (formerly Commonwealth Rolling Mills) will be closed in 1991-2, centralising operations at the Springhill works. This will lessen the requirement for locomotives as the transfer work between the two works will be eliminated.

Four locomotives are currently hired from the Slab & Plate Division, painted in Sheet & Coil Products yellow livery. Bodyside lettering is "BHP Steel Sheet & Coil Products". The three English Electric Australia B-B DE locos are named as

follows: D21 *zincalume*, D23 *colorbond*, and D24 *galvabond* (note lower case letters). Com-Eng Bo-Bo DE D7 remains unnamed.

A new livery is being adopted for steelworks locos. D32 was the first to be released to service, in late 1989, followed by D37. Bodysides are pale yellow and white, with dark charcoal green headstocks, running boards, cab roof and sides, and bonnet top. Bodyside lettering is "BHP Steel RAIL OPERATIONS".

Rail Australia No 14 via John Browning

DORRIGO STEAM RAILWAY & MUSEUM 1435 mm gauge

(see LRN 54, p.4)

It is reported that a split has occurred among those involved in the project. The SRA required the line to be operated by an incorporated body and lack of progress towards that objective led to the SRA withdrawing permission for trains to be operated from August 1988. Subsequent disagreement between members about the way in which the organisation should be controlled by the membership has led to action in the NSW Supreme Court.

Rail Australia No. 14 via John Browning

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 75, p.4)

The Museum was fortunate in obtaining a large Foster lathe from the Hamar Engineering plant during April. This unit is large enough to machine all sizes of 610 mm gauge wheel sets on locomotives and rolling stock. During mid-June the foundations for this lathe were prepared and the concrete pad poured.

On 15 June, the former NSWGR standard guage carriage (LFA code), which has stood since 1976 in the property area once used by the Model Engineering Society, was transferred to new foundations behind Yallah station. This car will be restored internally for use as a refreshment area while an external repaint will return the carriage to its 1950s appearance.

A new tube expander has been obtained for the retubing of Hudswell Clarke loco (1706 of 1939) "Cairns". All the tube holes have been cleaned and while this boiler work proceeds the regulator gear is being overhauled and some baffle plates in the tender water tank replaced.

Rusted portions of the saddle tank on Davenport loco (1596 of 1917) Kiama have been removed and replaced by sound plates and the tank is now ready for repainting. New hand brake rigging is being constructed for this engine.

The reassembly of Hawthorn Leslie loco (3574 of 1923) Burra continues. The overhauled driving wheels have been refitted to the chassis and the

side rod bushes have been remetalled. In recent years the cabin, fuel bunker and saddle tank have been rebuilt, leaving the retubing of the boiler as the only major part of the project to be completed before this engine can be recommissioned.

Former Melbourne cable tram trailer No. 430 reached its centenary on 17 June. This anniversary received favourable cover in the local press. During this century, the first 46 years were spent in service on the Melbourne cable tramways. The next 45 years saw the relic used as a farm shed at Mt. Taylor near Bairnsdale, Victoria. Restoration occupied two years and since 1983 the carriage has carried several thousand passengers at Albion Park.

Since February, the interior of the ninety-year-old former Sydney tramcar 95 "C" has been fitted out. Efforts are now being concentrated on the end platform canopy roof reconstruction. The new steel chassis has reached the stage where only truss rods remain to be fitted.

The 50 m x 45 m enclosed Museum compound area has been extended westwards for a further 18 metres. This will enable the 0-6-0 Hudswell Clarke standard gauge loco (297 of 1888) "South Bulli No.2" to be displayed in a new area clearing the northern boundary of the compound for a fabrication shop. The Museum has on hand 14 cast iron columns and wrought iron lattice girders, part of the former Darling Harbour goods sheds. Some of this material will be used in the construction of this new workshop.

K. McCarthy 6/90

LEYLAND BROTHERS WORLD. Tea Gardens 610 mm gauge?

This new theme park was due to open at Tea Gardens, north of Port Stephens, at the end of June. It features "an authentic sugar-cane train" which will traverse a 1.6 km "scenic tour" around the complex. A steam outline internal-combustion locomotive will haul four carriages seating 24 adults each.

Good Times (East-West Airlines) 6/90 via John Browning

SILVERTON TRANSPORT INDUSTRIES, Broken Hill 1435 mm gauge

The Silverton Tramway has purchased two 1067 mm gauge A.E. Goodwin Co-Co DE 830-class locomotives from ANR Tasrail. 857 has become Silverton 31 and 864 Silverton 30, and were shipped in January. In addition, the shells of 856 and 862, stripped of all useable parts, have also been purchased by Silverton.

Rail Australia No. 14 via John Browning

QUEENSLAND

BABINDA SUGAR LTD 610 mm gauge

(see LRN 74, p.10)

White appears to be the basic livery for the Com-Eng 0-6-0DH locos. Latest to be repainted is *Morrison* (AD1239 of 1960) which has red headstocks and rods, and green running board edge, grilles, sandbox lids and handrails. The E.M. Baldwin line car ex Goondi Mill was seen in the navy shed together with Malcolm Moore 4wDM 20 (1057 of 1943). However, the second Malcolm Moore 4wDM (1011 of 1943) was not present.

A substantial number of new large bins will be in use for the 1990 season. These appear to be of approximately 5 ton capacity.

John Browning 6/90

BUNDABERG SUGAR LTD, Fairymead Mill 610 mm gauge

(see LRN 74, p.10)

It is believed that the new Eimco B-B DH loco was delivered to Fairymead Mill in mid June. However by the end of the month, unconfirmed reports were circulating to the effect that this unit was overweight compared to specification, and that it might possibly be returned to the makers for modification.

John Browning 6/90

BUNDABERG SUGAR LTD, Mourilyan Mill 610 mm gauge

(see LRN 75, p.6)

Clyde 0-6-0DH 56-93 of 1956 has had its number (10) restored on the cab side. The original Mourilyan Clyde locomotives are having external battery boxes fitted on the walkway in front of the cab in the same style as the ex Goondi units. Motor Rail "Simplex" 4wDM 3688 of 1924 was noted dismantled in the shed. Wickham line car 8376 of 1959 is still at Goondi Mill site, in derelict condition. The Gemco sleeper replacement machine from Bundaberg is 521382002667-R585-87 of 1987 ex Millaquin Mill.

Chris Hart 5/90; John Browning 6/90

COSTAIN AUSTRALIA LTD, Cardstone 1067 mm gauge

(see LRN 74, p.10)

An exploratory tunnel some 1300 m long is being bored for the Queensland Electricity Commission on the lower Tully River below the Kareeya hydro-electric power station. The tunnel is being built to the site of the proposed

underground hydro-electric power station which forms part of the Tully-Millstream scheme, and is designed eventually to contain power cables. The scheme is currently being examined by the new state government in view of environmental concerns, and the works are under a strict embargo, with the site closed to the public.

About 400 m of tunnel has been built and two E.M. Baldwin 4wDH locos of approximately 12 tonnes which were purchased in Sydney are being used with Hagglund loaders, two of which come from Mt. Isa. One loco, numbered UL749 and painted white and blue, has been fitted with a canopy. The other is stated to be identical. Five four-wheel wagons purchased from QGR have been modified for a variety of special purposes such as concrete transporter, gantry car etc.

Rail is 40 lb purchased from Tully Mill, and points are 60 lb. The tunnel is scheduled to be completed around September 1991.

An aerial photo of the site showing the tunnel mouth and a train on the spoil tip was published in *The Weekend Australian* but this was reversed.

The Weekend Australian 16-17/6/90; John Browning 6/90

CQ SALT INDUSTRIES, Bowen 610 mm gauge

(see LRN 58, p.5)

The four diesel locomotives have disappeared from the shed where they were stored out of use for a number of years.

John Browning 6/90

CSR LTD, Hambledon Mill 610 mm gauge

(see LRN 75, p.7)

Further residential development between White Rock and Redlynch has meant that little cane land remains between the mill and the Barron River flood plain. The economics of the tramline which extends for some 30 km north from the mill as far as Trinity Beach must now be very questionable. Motor Rail "Simplex" 4wDM 10450 of 1954 is currently stationed at Redlynch for navy duties.

Clyde 0-6-0DH locos 5 (58-190 of 1958) and 9 (65-435 of 1965) have recently been repainted and have temporarily lost their numbers as a result. Progress on the construction of a new brake wagon on the chassis of Drewry 0-6-0DM *Seaforth* (Baguley 2514 of 1954) ex Kalamia Mill has not proceeded very far. The frame has been cut down and headstocks refitted but only a brake cylinder and basic brake rigging have been fitted to the bare frame so far.

The circuit of track inside the "Sugarworld" theme park is connected to the main mill tramway network, and each day at 3 pm the "Sugarworld Shuttle"

departs for a "Cane Field Excursion", a one-hour tour on the mill tramway, at a cost of \$4 for adults.

John Browning 6/90

See FESSL PTY LTD

FESSL PTY LTD

For approximately 10 years, slack season track maintenance at Pioneer Mill has been carried out by Fessl Pty Ltd of Townsville. On 16 June, two machines owned by Fessl were seen near the Bruce Highway. A Plasser ballast tamper was in use packing track. Nearby was parked a ballast regulator, Aresco Trak Chief Pty Ltd BR 230. These two units appear to have been acquired second hand from a government railway system. Also present was Pioneer Mill's small ballast tamper, Matisa 7686, which is believed to have been acquired from the Australian Army in about 1986.

John Browning 6/90

HENRY HILL, Wright Creek 610 mm gauge

Hambledon Mill's 7, F.C.Hibberd "Planet" 4wDM 3280 of 1948, was sold to this gentleman, who lives between Edmonton and Gordonvale, around 1988. The loco is reported to have suffered a seized engine after having been "hijacked" from the mill by joyriders one night, and it was not considered worthwhile to repair it for mill service.

John Browning 6/90

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 76, p.13)

At Cattle Creek Mill, all locos will be in new mill livery of green and yellow this year, as well as having their numbers replaced with names. Com-Eng 0-6-0DH B1724 of 1957 (formerly 1) has been named *Tannald*. Loco 4 (Com-Eng B-B DH NA59112 of 1977) is currently being rebuilt and will receive a new engine and torque converter which were due to arrive at the end of June. It will receive the name *Finch Hatton*. Other names will be *Pinnacle* ex D2 (Com-Eng 0-6-0DH AA1549 of 1961), *Dalrymple* ex 3 (Com-Eng 0-6-0DH AL4892 of 1965) and *Netherdale* ex 5 (Bundaberg Foundry 6wDM 13 of 1954).

Much track work still had to be completed at the end of June. Track still had to be laid in much of the Septimus area where the old North Eton lines are being reconstructed, and the link from Marian to Pleystowe through the

old North Eton Mill yard had also been lifted. At Marian Mill, there was still considerable disorder and little track in place in the area around the new tippler and weighbridge, although track had been reconnected to the loco shed.

John Browning 6/90

MOSSMAN CENTRAL MILL CO LTD 610 mm gauge

(see LRN 72, p.15)

Three steam locomotives are available for use on the Bally Hooley tourist services, all now coal fired. *Bally Hooley* (Bundaberg Foundry 0-6-2T 6 of 1952) and *Bally Hooley Too* (Hudswell Clarke 0-6-0 1838 of 1950) have been joined by *Bally Hooley* (Bundaberg Foundry 2 of 1952). This runs with a four-wheel tender. The commuter service in Port Douglas is normally operated by *Mowbray* / BALLY HOOLEY COMMUTER Baguley 0-6-0DM 3378 of 1954. All these locos are finished in a maroon livery with yellow lining.

From June to September, two steam tourist services operate five days per week, and only in February and March no tourist service operates. On 20 June, a train left Port Douglas Marina at 9.30 am for the mill, hauled by Bundaberg Foundry 6, and departed on its return from Mossman at 11.30 am, in the charge of Bundaberg Foundry 2. After its arrival at Port Douglas, the loco and three car train were stabled overnight in a siding at the rear of the Mirage resort. The first loco worked the return service from the mill to Newell leaving at 1.30 pm.

The commuter service in Port Douglas was in the charge of Com-Eng 0-6-0DH *Mossman* (B1719 of 1957) as *Mowbray* was under repair at the mill. Five return services per day originate from St. Crispins Station (formerly Lakeside) at 8.40, 10.55, 1.00, 2.45 and 4.00, travelling the 4 km to Mirage Marina via Mirage, and serving a variety of tourist destinations in between. One tourist car and the ex-Douglas Shire Council car previously preserved at Port Douglas were in use on this train.

John Fowler 0-4-2T *Ivy* (15947 of 1922) is still dismantled in the mill scrapyard, together with the ex-rail motor trailers and a Douglas Shire Council wagon, while Fowler 0-6-0T *Faugh A Ballagh* (8733 of 1900) with tanks removed, sits at the end of the track adjacent to the scrapyard.

Increased areas being put under cane on the Tablelands have given rise to further debate about the trucking of cane down the range. The suggestion of building a 2 ft gauge electrified rail line has been revived in the local press.

*John Browning 6/90: The Northern Sun (Mareeba)
Vol.5 No 15 via Chris Hart*

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 72, p.15)

The Mulgrave Rambler tourist service operates daily with an advertised starting time of 8.30 am but in fact the train leaves Gordonvale at approximately 9.15 am. A new shed has been built for stabling the train in "Siberia" at the southernmost part of the mill complex. John Fowler 0-4-2 *Nelson* (20273 of 1934) is in daily use, and there are no immediate plans to acquire a second steam locomotive, although enquiries have been made.

Another two Com-Eng 0-6-0DM locos have been converted to diesel-hydraulic: 7 (B1010 of 1956) and 8 (A1926 of 1958). Baguley 0-6-0DM 1 (3377 of 1953) has had its Gardner engine replaced by a John Deere diesel. E.M. Baldwin 4wDH 10 (6-881-6-64 of 1964) has been repainted in the current yellow livery with blue bonnet top.

John Browning 6/90

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 76, p.14)

The new 32-tonne Prof Engineering B-B DH loco, supplied by Eimco, is named *Nyleta* after a creek near the end of No.4 branch south of Silkwood. It bears machine type and serial number PSL.2501 and is dated 23.2.90. This loco is massive in appearance and much longer than previous types. Its cab is about one third of the way from the rear end and has offset doors and dual controls. The loco is yellow with a thick black line below waist level and black roof, bonnet top, frame and bogies. The headstocks are yellow with red dazzle stripes. It is powered by a Cummins engine of 600 hp and is said to have cost some \$500,000. Its couplers have had to be modified as in original form its overhang tended to drag bins off the line on curves.

The loco is a hydrostatic drive unit. The power from the engine to the bogies is not through cardan shafts but through hydraulic lines, driving a hydraulic motor on each axle, although the two motors on each bogie seem to be linked. It is stated that preliminary tests by the Sugar Research Institute have indicated an available tractive force of 14 tonnes, compared with 8 tonnes with a conventional unit.

On 23 June, *Nyleta* was receiving attention as one of the wheels had become loose on the axle. However, on 26 June, it entered service at the start of the crushing season. It is paired with new bogie brake wagon number 6, which was built at the mill with body fabrication being carried out by local company Tadesco Engineering. Cost of this unit is stated to be \$100,000. This brake wagon has bogies which came from a Baldwin locomotive and which

were made spare when Eimco supplied a pair of new bogies for E.M. Baldwin B-B DH Liverpool (10385-1-8-82 of 1982) in 1988.

Liverpool is based at Japoon for the crushing season, as it was last year. Com-Eng 0-6-0DHs 1 (AD1453 of 1962), 2 (AK3675 of 1964) and 3 (AD1452 of 1961) are all based at Silkwood. Number 3 was repainted during the 1990 slack season, and is yellow with black frames, red connecting rods and silver roof, radiator grille, steps and headstocks. Numbers 1 and 2 have been fitted with Eagle diesel engines.

Both remaining Drewry 0-6-0DM locos, 9 (Baguley 2395 of 1952) and 15 (Baguley 2520 of 1954) are being used by the navvies. Preserved Malcolm Moore 4wDM 17 (1060 of 1943) was seen parked near the tippler.

At least one new siding has been put in to the Nerada line to service an ex-Goondi grower reassigned to South Johnstone from Mourilyan.

The Island Coast & Tully Advertiser 22/6/90

Chris Hart 5/90; John Browning 6/90

TULLY SUGAR LTD 610 mm gauge

(see LRN 72, p.17)

The co-operative association was incorporated as a public company in 1990.

All except one of the Com-Eng 0-6-0DHs have now been rebuilt with a new cab, and repainted in the new red and yellow livery and carry the new chromed oval number plates. Most have been fitted with GM 6-cylinder engines. Details are as follows:

Number	Details	Year Refitted	Engine
No.10	AD1341 1960	1988	GM
No.11	AD1347 1960	1990	GM
No.12	AD1351 1961	1989	Rolls Royce
No.14	AK2663 1963	1988	GM
No.15	AK3574 1964	1990	Rolls Royce
No.16	AH4484 1964	1990	GM
No.17	AH52100 1966	1989	GM

Only No.18 (AD60113 of 1977) remains in the old maroon and yellow livery. E.M. Baldwin B-B DH No.7 (10684-1-4-83 of 1983) has been fitted with a GM 12-cylinder diesel and was also repainted this year. It normally works with the brake wagon rebuilt from the Clyde 0-6-0DH (DH1.4 of 1954). John Fowler 0-6-0DH 21912 of 1936 has received a Rolls Royce engine from one of the Com-Eng locos in exchange for its GM, but has not been repainted. Two of the three E.M. Baldwin 0-4-0DH locos of 1965 have also been repainted and

have become plain numbers 2 (6-1082-2-2-65) and 3 (6-1082-3-2-65), leaving only No.1 (6-1082-1-2-65) to be done.

Com-Eng Nos. 10 and 14 are fitted up to work in multiple as are Nos. 12 & 15. They generally work in "double-header" mode on afternoon and night shift.

A loco shed large enough for three locos has been constructed near the refuelling point near the mill entrance, and this will be extended to hold all the locos in the future.

A 3 km extension in the Syndicate area was built in the 1990 slack season, with a substantial concrete and steel bridge across Jarra Creek.

A number of long wheelbase four-wheel bins were seen in service. These appear to be double the standard bin size and so will hold approximately 8-10 tonnes of cane.

Chris Hart 5/90: John Browning 6/90

VICTORIA

ALEXANDRA - RUBICON TRAMWAY 610 mm gauge

During the 29th and 30th of May, the bridge over the Rubicon River on the Taggerty-Thornton road was closed for the replacement of the wooden decking with a surface of concrete slabs. Removed with the wooden decking was a length of 60 lb rail, once part of the tramway between Alexandra and Rubicon which shared the bridge with the road traffic. However, despite many applications of fresh tar over the years, depressions in the road surface caused by the rotting away of the sleepers under the road still march resolutely towards the northern approach to the bridge.

Peter Evans 6/90

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm & 1029 mm gauge

P.O. Box 288, Alexandra Vic 3714
(see LRN 76, p.14)

Some time ago the Museum purchased two old waiting sheds on the closed Tallarook-Mansfield railway from V/Line. Following a false start at Cathkin last year (abandoned due to the near collapse of the building and the near drowning of the workforce in pouring rain), the Cathkin shed was reinforced and on Saturday 5 May a serious and successful attempt was made to load, transport and unload the building at the Museum. The whole exercise took a little over two hours to complete. With Cathkin's transport successfully under our collective belts, the convoy moved out to Molesworth with high hopes

of repeating the exercise with similar ease. Unfortunately these hopes were dashed fairly early in the piece when the building decided not to co-operate. Instead of following the script, which required the building to move gently onto the low-loader in one piece, and without any distortion, this particular building decided to fold up in the centre and take on the shape of a fat boomerang.

Malcolm Moore 1049 shunts Simplex 10058 past the Cathkin building.

Photo: Peter Evans

After a little over two hours of underbreath mutterings, sweating and plain hard work, we finally managed to install the building on the low loader. The return to the Museum site was uneventful, although the building behaved like a huge jelly on the back of the truck, causing some alarm to those following by car. Then came the next great adventure: removing the building from the truck and placing it on its prepared concrete slab. Again the building failed to live up to its end of the bargain and so several more hours of toil, sweat, mutterings and anxiety were needed before the shed was finally jacked up off the truck, - which was driven out from under the building as gingerly as possible. With the building perched somewhat precariously on top of drums and blocks everyone retired for a well earned rest. Early next morning the job of lowering the building onto its slab was commenced and after two and a half hours it was safely installed, hopefully never to be shifted again.

A considerable amount of work will be needed to return these buildings to

their former "glory" (Molesworth is to become a workshop and Cathkin a way and works depot) and it is hoped that this can be completed over the winter months. Many thanks are extended to Daryl Hedger for the use of his low loader and his patience with the Museum crew during the day.

In another step forward, the goods shed has been connected to SECV power and the shed wired internally. With a much needed repaint of the overnight accommodation finished, this will add greatly to the comfort of the Museum's Melbourne based volunteers.

The AGM was held on 9 June 90, at which time long serving president Alan White stepped down due to increased family and occupational responsibilities. Alan has been responsible for overseeing most of the rapid development at the Museum over the past five years since the track circuit was completed, and was awarded a formal vote of thanks. Philip Thorn was elected as the new president. The meeting was followed by films of the early development at the Museum, a light supper and to cap the evening off, a night train behind the John Fowler locomotive. Lit only by kerosene marker lamps and moonlight on a still cold night, this train was a suitable end to a memorable night for all concerned.

Alan White/Peter Evans 6/90

CHEETHAM SALT LTD, Laverton 610 mm gauge

(see LRN 66, p.14)

No.1

(later L6) at Cheetham Salt Ltd's Laverton works shortly before its removal to Alexandra for preservation.

Photo: Peter Evans

In a surprise move, Cheetham Salt Ltd have reopened their tramway at Laverton and have just completed a harvest, employing an additional 12 casual staff for the task.

Minimal work has been carried out on the track, mainly in the form of weed control, and the main line appears to be still in a relatively good condition. New galvanised iron liners have been constructed for the bulk salt wagons to replace the old liners which were sent to South Australia several years ago. Thirteen sections were harvested, and the company have committed themselves to carrying out another and probably final harvest in early 1991.

Frank Kennedy undertook the return of the Ruston & Hornsby 4wDM/DH locomotives to active service. No.3 (283510? of 1949) which has a seized main drive was considered beyond repair for the duration of this harvest. However, it is intended to return this loco to service in time for the next harvest. Haulage duties on the main line were carried out by No.1 (252805 of 1949) and No.2 (283509? of 1949). (A notation inside the cover of a manual for these locomotives gives a delivery date ex Ruston & Hornsby Melbourne direct to the Laverton works for loco No.3 as 20-10-49, however in the same manual its builder's number is assigned to loco No.2! No.1 seems to be correctly identified in the manual as B.No.252805. As all the 30DL locomotives are missing builder's plates and have been re-engined, some confusion exists as to which is which.)

One of the main line locomotives broke a wheel flange during the harvest and had a wheel set replaced from loco No.3. Frank noted that "although it was a slightly different diameter from the other set and must have been slipping a bit, it didn't seem to make much difference to the performance of the loco!". Apparently the spirit of the bush tramway mechanic is alive and well and living at Laverton.

Loco No.4 (320555 of 1951, ex MMBW) which still retains its original engine and mechanical transmission took the least amount of effort to return to working condition and was used for shunting around the works. The short section of tramway from the salt stockpile to the works seems unlikely to be reopened and will be replaced by tyred transport.

The narrow gauge industrial tramway can no longer be considered to be extinct in Victoria, but must still remain high on the endangered list.

Peter Evans 6/90

STATE EXPLOSIVES TRAMWAY, Altona 610 mm gauge

A number of wooden-bodied 4-wheel wagons from this tramway were placed in the Apex Park on the Altona foreshore in about August 1968 (see LR 27, p.30). These wagons have been recently removed due to their

dilapidated condition. As their wheels were embedded almost up to the axles in concrete, they proved difficult to remove intact, and it is believed that most of them were broken up in the process. It is thought that one relatively intact wagon is held for safe keeping by the Altona Historical Society. An excellent photograph of several of these wagons in use on the explosives jetty appeared in LR 85, p.18.

Peter Evans 6/90

MEETINGS

MELBOURNE: ALSTERGRENS MILL - ERICA

Following our usual short AGM our attention will be transferred to Peter Evans who will provide us with an outline of his recent exercise regarding the site mapping of Alstergren's mill at Erica. Peter was employed by the Dept of Conservation, Forests and Lands to undertake this work with the assistance of a qualified archaeologist. Peter will be describing the process followed as well as the findings.

Be sure not to miss this night as there will be plenty to satisfy everyone.

LOCATION: Ashburton Uniting Church Hall. Ashburn Grove. Ashburton.

DATE: Thursday 9 August at 8.00 pm.

SYDNEY: MOVIE NIGHT

After our meeting last year when Jim Powe showed movies ranging from Mossman to Mt Lyell we had to have him back. New South Wales will feature plus anything else we can cram in before the 10 o'clock close. Not to be missed!

LOCATION: Woodstock Community Centre, Church St Burwood Note: Plenty of off street parking at the rear of the building and Bund station is only a 5 minute walk away.

DATE: Wednesday 22 August at 7.30 pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-2969488

LOCATION: 150 First Avenue. Royston Park.

DATE: Thursday 2 August at 8.00 pm.

NOTES, CORRECTIONS & COMMENTS

CHRISTMAS ISLAND STAMP ISSUE

(see LRN 76, p.2)

The second set of stamps in Christmas Island's new Transport definitive series was issued on 22 August. Of the eight stamps issued, only one this time depicts an item of railway interest, being the 2 cent denomination entitled "Phosphate Train". However the \$2 denomination depicts a traction engine and the 5 cent denomination a "Road Train"!!

Australian Stamp Bulletin No. 206 via Peg Hayes 8/90

BUNDABERG FOUNDRY ENGINEERS LTD

Bundaberg Foundry, currently owned by Bundaberg Sugar, signed a licensing agreement with Hunslet-GMT of Leeds, England on 14 August. The agreement covers the construction of locomotives and rolling stock for Australia and Fiji. It is understood that a 625 hp canefield bogie diesel hydraulic locomotive is to be built for the Bundaberg Sugar group for completion next year.

It was noted recently at the Foundry that one of the larger buildings that has been out of use has been cleared. This area, fitted with two 20-tonne overhead cranes, was being fitted out with a new concrete floor.

via Eric Lyon; Scott Jesser 8/90

JENBACHER WERKE A.G., Austria

Fessl Pty Ltd have become agents for this Austrian company which specialises in mining diesel locomotives. Jenbach locomotives were imported in the 1950s and 1960s for the Queensland coal mining industry, and in addition, some diesel locomotives of Jenbach design were built for mines and for the sugar industry by the Bundaberg Foundry.

Rob James 7/90

FIELD REPORTS

GOODWOOD TIMBER AND TRAMWAY COMPANY 610 mm gauge

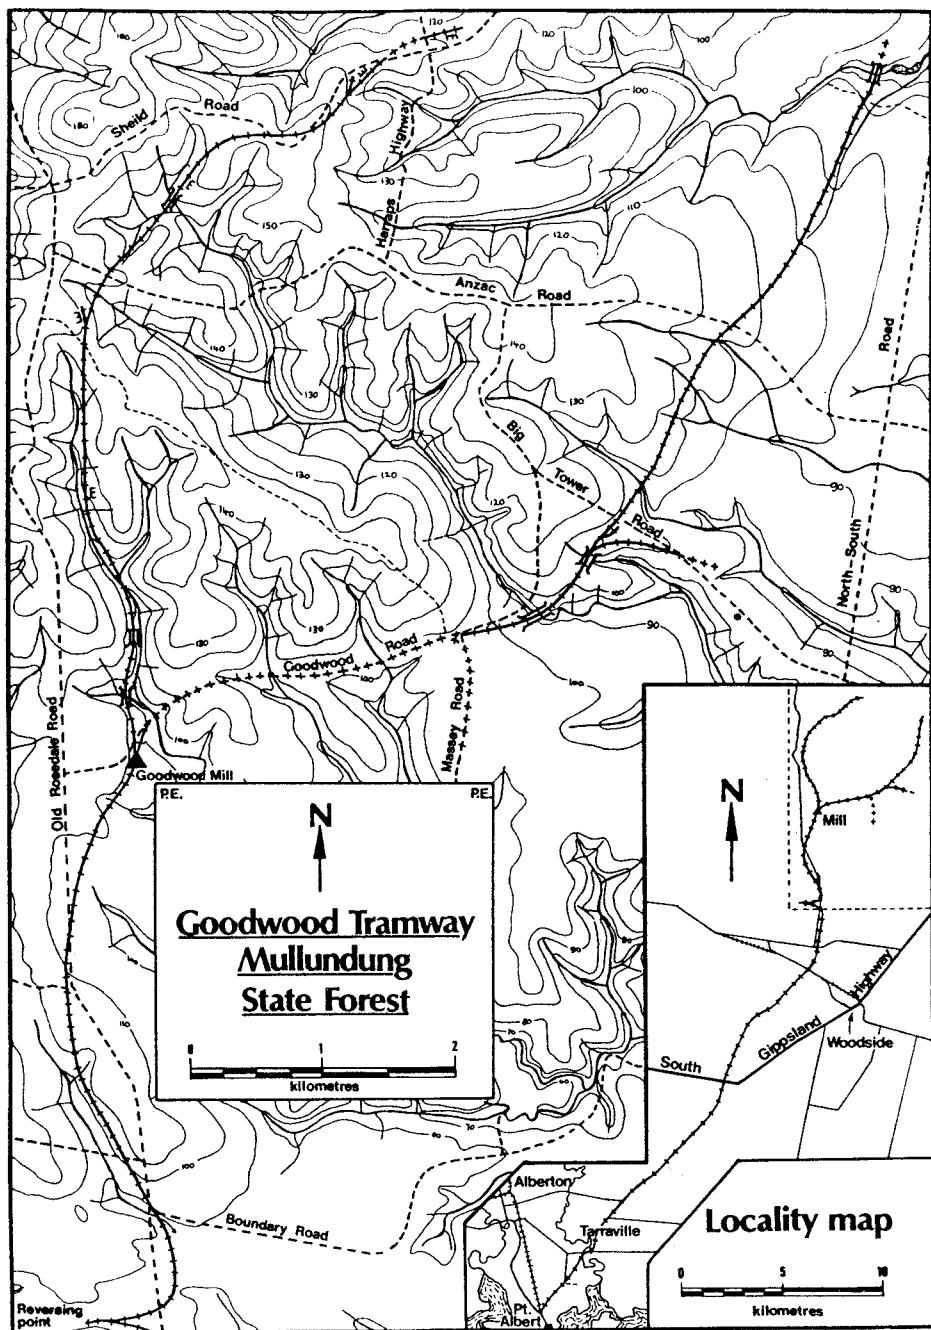

Back-head cladding from *Mona*, Mullundung Forest. L to R.: Bill Hanks (new President, LRRSA), Jack Stock (Honorary Secretary, LRRSA), Mike McCarthy (immediate past-president, prolific author and life member of LRRSA), and Norm Houghton (also prolific author and life member).

Photo: Peter Evans

Between 1910 and 1920, the Goodwood Timber and Tramway Company operated 32 km of 610 mm gauge tramway between Port Albert and a sawmill situated in the Mullundung Forest to the north east. The tramway was built to a high standard, and worked by a trio of small steam locomotives. These were Amy (Krauss 5947 of 1908), *Mona* (Krauss 6415 of 1910), and Lily (Orrenstein & Koppel 4756 of 1911). On 1/9/14, *Mona* suffered a boiler explosion which killed her driver, but was subsequently rebuilt. All three locomotives continued to work until the closure of the mill in early 1920. (Numbers are probable but not confirmed.)

Extensive and well laid log tramways were constructed by the company with the first being built to the north of the mill. The area around this tramway was cut out by August 1915. Over the following two months the rails were incorporated in a new line built to the east and north-east of the mill towards Kangaroo swamp. This line eventually stretched some eleven kilometres from the mill. Both of the log lines were locomotive worked.

The bush operations of the mill were extensive to say the least with eight

to ten men (mostly on contract) felling logs in the bush, a further eight to ten men engaged in driving bullock teams, anywhere between twenty-five and fifty men cutting sleepers, a train crew of two, and a small team of tramway maintenance workers.

Today, much of the area is covered by relatively open forest, some of which has been cut over a second time, and some of which is still being cut today. The only surviving maps of the tramway do not show features which appear on modern maps, making the preparation of accurate maps of the line a difficult task. Over the past decade, this area has been visited several times by groups of LRRSA researchers, starting with David Barry who walked part of the line, and finishing with a recent all-out effort by a small group in order that an accurate map could be prepared for an article on the line by Mike McCarthy.

All known branches of the logging tramways have now been walked. This field report describes the earlier logging line built northwards from the mill.

FIELD REPORT

The line leaves the mill site in a northerly direction, crosses a small timber culvert and the present-day Goodwood Road, and begins to climb a roughly 1 in 30 grade through open bushland. The formation is indistinct for the first few hundred metres, however as the line nears the adjacent creek it levels out and becomes more distinct. A side creek is crossed on a very long embankment broken only by a short gap where there was once a bridge or culvert. The line now passes through a shallow cutting never more than about a metre deep for a distance of around 80 metres before emerging on the edge of another creek gully entering from the west. The abrupt termination of the embankment and impressions in the ground seem to indicate that a bridge once stood here. This bridge would have had a span of around 15 metres and was probably about 2 - 3 metres above creek level.

The formation now begins to fall towards the valley of the main creek running in a north-south direction. An even downgrade is maintained through a short cutting to emerge only a metre or so above the level of the creek, which is crossed at an acute angle on a long low embankment almost at the level of the creek bed. Any culvert here has been long filled in by material washed down the creek. The line now enters a cutting parallel to the creek itself and begins to climb steeply again.

The cutting (which is over two metres deep in places and about 70 metres long), is never very far from the creek and is at almost creek level. A high ridge of earth is all that separates the tramway from the creek, and a description

of the line written at the time of its operation describes the situation exactly. The tramway emerges from the cutting and curves with the creek to head due north. The remains of a log loading ramp are located on the eastern side of the line as it begins a steep climb up the valley, gradually getting further from the creek until it crosses the ridge near a bush track. Just past this track a siding leaves the tramway on the western side of the line and another loading ramp was sighted.

The line now heads downgrade again, crossing a swampy area on a low embankment (still with its culvert intact) before crossing Anzac Road. The line becomes lost in another swampy area, but was soon picked up on the other side heading in a north-easterly direction. Another low embankment and culvert are crossed and the line begins to climb steeply once more. The formation now enters a long shallow cutting across a spur between two small creek valleys before falling again. Another bridge site is located here, however no remains of the bridge are to be seen. Still heading north-east, the line climbs steeply past another loading ramp and passes through a short and shallow cutting before levelling out at the top of the ridge and curving to head in an easterly direction. Sheilds Road is crossed and then recrossed as the tramway maintains an almost level grade for the first time. A siding is located on the north side of the line, with a log ramp on the main line itself. (Some time was spent investigating this siding to see if it became a branch line in its own right, however it did not appear to extend very far.)

The tramway crosses Sheilds Road for a third time before it was lost in an area which has recently been replanted with young eucalypts. This growth was very thick, and no attempt was made to follow it in this section. In contrast, the bush on the other side of Harraps Highway (an oddly grandiose name for a minor bush road) has been recently burnt and the tramway formation is clear and easy to follow. After about 200 metres the formation ends abruptly, with no sign of a passing loop. This position corresponds fairly well with the end of the line indicated on a map of the tramway during its operational years.

This northern log line is of a quite different nature to the later log line to the east. The builders of the line outlined in this report seem not to have been afraid of including some quite steep gradients and relatively heavy earthworks in their tramway, despite the operational difficulties these must have caused. By way of contrast, the eastern log line has almost no earthworks, maintains an almost level gradient, but contains some impressive bridges which must have been quite expensive to construct and maintain. One wonders at the reason for this change of policy - was it the expense of operating the old log line, or was it just that the new tramway was built by someone else who had

a different way of doing things?

8/90

MERRETT RIFLE RANGE TRAMWAY, Williamstown 580 mm gauge

A recent examination of the Merrett Rifle Range at Williamstown (which is under demolition) revealed the existence of a 300 metre long tramway, presumably used to transport target materials along the length of the butts. The 20 lb/yd rails are set in concrete, and a check made at various places seems to point to a gauge of 580 mm. Only one of the butts has a tramway system.

A single truck appears to be the only item of rolling stock on the line, which is straight throughout its whole length. A little to the east of the centre of the tramway was situated a shed, presumably used to store the truck and target materials. The process of reclaiming materials for reuse or scrap has laid waste to the

area, and it is difficult to determine the exact size and construction of this shed, save that it once had a gable roof. and that it spanned the tramway.

The tramway is located in a depression between a 2.25 metre high concrete wall protecting the target raising mechanisms and personnel manning them, and an 8 metre high earthen embankment protecting Port Phillip Bay from spent bullets.

This depression is drained by a ditch running parallel to the tramway, and is barely above high-water level.

The opportunity was taken to make accurate measurements of the structures still standing, as soon there will be very little left at the site. Even the earthen embankments are to be levelled, and the many tons of lead-in them from spent bullets is to be recovered. The tramway truck has been rescued almost intact, and after repairs are made it will be placed on display at the Alexandra Timber Tramway and Museum.

Peter Evans and Colin Harvey 8/90

NEW SOUTH WALES

AUSTATRAN, Murwillumbah 610 mm gauge

This company, which aims to operate steam hauled tourist trains between Murwillumbah, Byron Bay and Lismore, also intend to develop an extensive sugar museum at Condong Mill. With this in mind, locomotives and rolling stock have been acquired from the material used at Hayman Island until 1985 and are in store at Murwillumbah. The locomotives are Ruston & Hornsby 4wDMs 179872 of 1936 and 285339 of 1949.

Rail Australia 6/90: John Browning

BAULDERSTONE-HORNIBROOK / J.J. GARDNER CONSTRUCTION White Bay, Rozelle 610 mm gauge

These contractors and subcontractors are engaged in construction of a road underpass/overpass at the Victoria Road-The Crescent intersection at White Bay, Roselle, Sydney. Tunnelling has been carried out in a restricted area utilising a 2 ft gauge portable railway.

The rail is all 30 lb flat-bottom, welded onto 3 ft x 6 in x .25 in plate; lengths are mainly 15 ft, a few longer pieces being seen; also about a dozen individual rails up to 30 ft. The equipment and rails have been used in the removal of spoil between steel piles driven into the soil and rock, for access tunnels under what is a six-lane road at this point.

In use for the latter part of June and the first week of July, were two Eimco 12B hydraulic muckers and two 12 cu.ft. side-tipping skips. At the time of entry to the site on 10 July, one of the muckers was awaiting a new gearbox, the present one having been stripped.

At that time there were three tunnels, two at a level about 18 ft down from the road, and another 20 ft below them. As the tunnels progressed, steel beams were welded into position on top of the piles and other bracing added as necessary. These tunnels are 9 ft wide, up to 11 ft high, and approx 200 ft long.

During the first week in August a fourth tunnel was made under the roadway, at a deeper level. This measures 7 ft across and 12 ft high. Again, steel piles have been driven into the ground at this spacing, and the spoil removed from between them by utilising the track panels, one mucker and the skip. As the drive progresses under the road, pipes of a foot diameter are driven in parallel to the ground at the top of the piles. These form a "roof" to support the road. The skip is propelled by hand and cable haulage to the dump site outside the face of the cut, where a tracked crane fitted with a hopper collects the soil and dumps it into waiting trucks. When this

tunnelling is complete, the area between the four tunnels will be dug out utilising rubber-tired vehicles.

One of the muckers is numbered Z4203, out of service, no visible number was seen on the other, owned by Gardners.

While on the telephone to the site manager, a Mr C McFarlane, I was asked if members of the Light Railway Society, of whom he knew, were familiar with the Tuggeranong tunnel in Canberra back in the 1970s, and if there were any photos taken of the equipment used, especially of the Baldwin diesel locos and two rail-mounted drill jumbos, which are evidently unique. If anyone has answers or can supply photographs, please contact Len King, through the NSW branch PO Box 290, Burwood NSW 2134.

Len King 7/90; 8/90

OPERA HOUSE, Sydney

During a backstage tour of the Opera House, on 22 April, a privileged group of members of the Bennelong Club viewed the workings of the Opera House from below water level to high into the sails.

At the latter position, between the "sails" and the inner shell, after climbing many steps to a platform 90 feet above the main hall, a 3 ft gauge incline was seen. It rises from the front forecourt of the Opera House site, accessible behind maintenance only entrances. The line rises approx. 100 ft, at an angle of 1:1.2, powered by a 415 volt, 3-phase motor, with a three-position switch. A small trolley is anchored to a steel cable which passes around a winding drum connected to a gearbox mounted on the motor. The incline was used in the initial construction of the sails, carrying up the many thousands of tiles covering the surface. It is still used occasionally for maintenance on machinery and the building, carrying the supplies needed.

Len King 7/90

RICHMOND VALE PRESERVATION CO-OPERATIVE SOCIETY INC Richmond Vale Railway Museum various gauges

(see LRN 76, p.12)

The 1933-built 3 ft 6 in gauge Atlas 4wBE, believed to be ex number 3 from Elrington Colliery, on display at Miners Memorial Museum, Freemans Waterholes for a number of years, was moved to Richmond Main in the last few months (see LRN 36, p.5).

Craig Wilson 7/90

TOD WATSON, Moama 610 mm gauge

Decauville 0-4-2T *Frenchy* (246 of 1897) returned here in July after being

away for nine years. It was used at Canberry Fair in Canberra from 1981 to 1982, and is later believed to have been at Megalong Valley, Blackheath.

Ian Comrie 7/90

YIELDEX PTY LTD, Liddell Coal Mine, Ravensworth 1067 mm gauge

Items up for auction were inspected on 11 July and included many rail items including the following. (Identification shown in brackets is unconfirmed but based on John Browning's notes.)

Diesel man riding cars:

Lot 172	No.2687 No.34 <i>Debbie</i> Fox 14-man car. Engine removed. White (records indicate 383 of 1977)
Lot 177	No.2613 No.13 <i>Donna</i> E.M. Baldwin 14-man car. Yellow. (records indicate 3745-1-5-71 of 1971)
Lot 178	No.2618 <i>Carmel</i> E.M. Baldwin 14-man car. Body only. White. (records indicate 5737-1-11-74 of 1974)
Lot 182	No.2623 No.28 <i>Bunny</i> E.M. Baldwin 14-man car. White. (records indicate 6300-1-3-76 of 1976)
Lot 183	No.2617 No.17 <i>Joyce</i> E.M. Baldwin. White. Model 11DH Mk2 B/No. 5568-1-4-74

Diesel locomotives:

Lot 165	No.3403 MONICA 4wdH E.M. Baldwin. White 20 tonne loco with spare engine (records indicate 2426-3-7-69 of 1969)
---------	--

Also noted in yard was:

No.3408 *Barbara* A 4wdH E.M. Baldwin (records indicate 5556-2-6-75 of 1975 - 25 tonne)

Other lots included 21 assorted flat trucks (three built by Hexham Engineering withdrawn from sale) plus seven more chassis only, three Hexham side dump rail trucks, four pump filter tankers (ex Stockrington Colliery hoppers) plus one other not for sale, a 32-man transporter car, an air compressor truck, two ballast trucks, two rail jinkers and a "rail fire sub station". Also seen (but not in the sale) were three drop centre bogie flat wagons, Hexham Engineering numbers 703, 704 & 705.

Craig Wilson 7/90

NORTHERN TERRITORY

PEKO-WALLSEND OPERATIONS LTD, Gecko Mine, Tennant Creek

Rail transport is still used at this mine on two levels, using Gemco 5 and 8 tonne battery electric locos and Granby cars. Two Gemco outside frame battery electric locos without battery boxes were noted on site in early June. One 8-tonne loco was newly painted inside a compound, while a second of

similar size and painted pale yellow was numbered 15

Ray Graf 8/90

PEKO-WALLSEND OPERATIONS LTD, Peko Smelter, Tennant Creek various gauges

Three different track gauges were seen when this site was visited in early June. About 20 metres of 3 ft 6 in (1067 mm) gauge track was set in the ground, and a 4-wheeled pneumatic powered flat car complete with portable storage track was for sale.

About 20 m of standard gauge track was set in the ground with no equipment visible.

About 200 m of 3060 mm gauge track ran in a straight line from under the smelter in a westerly direction for slag transport. There was a bogie diesel slag transporter for sale. This was built by Davey Ashmond, with double flanged wheels and a single control cab.

Nothing of interest remains at the Peko Mine site, which is almost totally stripped.

Ray Graf 8/90

PEKO-WALLSEND OPERATIONS LTD, Warrego Mine, Tennant Creek 610 mm & 915 mm gauge

This mine had been closed at least six months when visited in early June. Main trackage is 2 ft gauge. Five 4wBE locos without battery boxes were noted around the pithead area. Four were outside frame possibly 8 tonne units (one numbered 408) and there was one yellow Gemco 5 tonne unit with inside frame, B/no. 2461-62/63/78. About 25 battery boxes were seen around the site, about half large (mainly end roll on type) and the rest smaller. There was also a large pile of pre-fabricated 2 ft gauge track.

Some rail equipment had been offered for sale, and underground locos had been mentioned in preliminary advertising, but had been withdrawn from sale. Equipment offered included scrap rail, some single and double-flanged steel wheels and some special fishplates for double-flange track.

Four 3 ft gauge trucks were offered for sale, which had been constructed by remounting 2 ft gauge granby cars on home built chassis.

Ray Graf 8/90

YARRAWONGA PARK AND ZOO. Palmerston 610 mm gauge

Opposite the township of Palmerston, approx 20 km south of Darwin on the Stuart Highway, there is a privately owned recreation park incorporating a zoo, called Yarrawonga Park and Zoo. One of the features at the park is a 2 ft

gauge railway, publicised as "The Yarrowonga Choo Choo".

Motive power is an 0-4-0 steam outline side-tank locomotive powered by a Holden motor car engine. The name of the original builder is not known and it has been extensively rebuilt, including being equipped with air brakes by the park after its acquisition. Rolling stock comprises three double bogie, roofed, open-sided passenger cars.

The railway, about 1000 metres in length, is single track and circumnavigates the park. Laid with concrete sleepers, it has no sidings or switches. Should any future expansion become desirable, they have enough track material (rails and sleepers) on hand for a further 500 metres of track.

The railway was purchased from "someone in Victoria" - the manager would not elaborate further - and was previously in use at Bullen's Lion Park. When received, it was in very poor condition. In keeping with its Victorian connection, the driver of the locomotive is a retired VR engineman.

Arnold Lockyer 8/90

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610 mm gauge

(see LRN 75, p.6)

Restoration work on the 5LW Gardner diesel fitted to John Fowler 0-6-0DM 18260 of 1929, Goondi No.1 has now been completed.

The Grover's bogie wagon has been fitted out with increased seating and an increased height safety rail, while attention has been given to the window frames of carriage PL111.

Foundations have been poured for the workshop building, and this will be followed by the erection of the uprights.

Durundur Railway Bulletin 7/90, 8/90 via John Browning

BUNDABERG STEAM TRAMWAY PRESERVATION SOCIETY Bundaberg Botanical Gardens 610 mm gauge

(see LRN 76, p.13)

Bundaberg Foundry 0-4-0T 3 of 1952 was operating the tourist service on Sunday, 2 September. Orenstein & Koppel 0-4-0WT *Germany* (6805 of 1914) was not at the time on site, but was being painted elsewhere, and was scheduled to join the Bundaberg Fowler in about one month. Following successful trials for the Orenstein & Koppel, the Bundaberg Fowler was then scheduled to go to the Bundaberg Foundry to receive a new firebox. Baldwin 0-6-2T *Felin-Hen* (46828 of 1917) is still stored off site and has not been re-assembled pending the resolution of problems concerning work done on it some years ago by the Bundaberg College of TAFE.

F C Hibberd "Planet" 4wDM 3919 of 1959, which was acquired by the Bundaberg City Council for possible use on this project, has never been on site here, and is assumed to be in store somewhere.

Ross Sadler 9/90: John Browning 9/90

BUNDABERG SUGAR LTD, Fairymead Mill 610 mm gauge

(see LRN 77, p.11)

The new Eimco B-B DH arrived at the mill on 21 June, and is very similar externally to the Prof Engineering loco delivered to South Johnstone Mill. It is finished in a bright yellow livery with black frame, bogies and bonnet top, red wheels and sandbox lids, white cab roof, and red/white dazzle stripes on the headstocks. A cast oval builder's plate on the cab side gives the builder's number L254 and date 1990. There are large cast EIMCO AUSTRALIA logos at either end. The cab has dual controls and is air conditioned. A Detroit 12V92TA engine is fitted, rated at 700 hp, driving through Voith L3r2 turbo reverse transmission to Eimco final drive boxes.

On arrival, the locomotive was found to be seriously overweight, and it was set aside pending a decision as to its future. It is believed that some investigations have been made into possible lightening options, but the loco was still standing at the mill unused and without couplers by the end of August. (see cover photo).

It is understood that the loco was to be used on the Littabella run, which involved crossing the Kolan River bridge at Booyal, a number of spans of which were replaced recently.

Possibly as a result of these problems, Millaquin Mill 2, E.M. Baldwin B-B DH 6104-1-8-75 of 1975 was transferred to Fairymead before the start of the crushing season in exchange for Fairymead 73, E.M. Baldwin 4983-1-7-73 of 1973.

A number of Fairymead locomotives have now been painted in a new livery to replace the traditional maroon and yellow scheme. The new colours are yellow, with black (or very dark grey) bonnet top and white cab roof. It appears that this livery may be adopted throughout the district. At Fairymead, the new livery is carried by:

55	Clyde	0-6-0DH	DHL6	1954
60	Clyde	0-6-0DH	60-219	1960
66	E.M. Baldwin	0-6-0DH	6-1576-1-8-66	1966
80	E.M. Baldwin	B-B DH	8988-1-6-80	1980

Of the remaining locos, E.M. Baldwin B-B DH 82 (10048-1-6-82 of 1982) has had the frames painted yellow and the dazzle stripes converted to white and red. Com-Eng 4wDH GA1148 of 1961 (formerly 7) has now reverted to being numberless. Ruston & Hornsby 4wDM 339211 of 1953 remains in yellow and has been fitted with a canopy.

All the main line locos have had a warning sticker applied reading: "DANGER HIGH VOLTAGE. DO NOT CLIMB ON VEHICLE UNDER ELECTRIC WIRES." as the QGR main north line in the area has been electrified.

*Scott Jesser 7/90, 8/90; John Browning 8/90;
Rail Australia 6/90 via John Browning*

CSR LTD, Macknade Mill 610 mm gauge

(see LRN 75, p.7)

The mill yard was automated during the 1990 slack season, doing away with the need for a yard loco. E.M. Baldwin 0-4-0DH 17 (6-1446-1-9-65 of 1965) has now been relegated to the role of a navvy-cum-spare unit. Pointwork in the yard was re-arranged during the slack season, but further changes had to be made after two weeks of crushing.

Chris Hart 7/90. 8/90

CSR LTD Victoria Mill 610 mm gauge

(see LRN 76, p.13)

Both the tippers at the mill were converted to weighbridge tippers during

the 1990 slack season, and one side tippler was converted to a double binner. The mill yard was partially automated, doing away with the former empties loco, which has been E.M. Baldwin 0-4-0DH *Albany* (6-1792-1-11-66 of 1966). This leaves Malcolm Moore 0-4-0DH *Moore* (DH-112-GT-1 of 1956) for both fulls and empties, assisted by the main line locos.

Preserved Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) was made available by CSR for passenger use on 26 June for an Apex family fun day.

*Chris Hart 8/90; Herbert River Express
14/6/90 & 13/6/90 via Chris Hart*

DITTMER GOLD MINE 458 mm gauge

(see LRN 75, p.6)

The name Larke Spur Mining Co.P.L. was seen on the office here at this non-operating mine when it was visited in mid-June. One 4wBE chassis was seen on the surface, numbered 1A, and is Gemco 12700/166/70. Another battery loco was in the adit. Two muckers were also noted on the surface.

Ray Graf 8/90

GIBSON & HOWES LTD, Bingera Mill 610 mm gauge

(see LRN 75, p.8)

Towards the end of last season, Com-Eng 0-6-0DH *Wattle* (FD4789 of 1965) was involved in a head-on collision with E.M. Baldwin 0-6-0DH *Manoo* (3875-1-7-71 of 1971). As a result of the damage, *Wattle* has been fitted with a new cab by the Bundaberg Foundry. This cab is rather unusual in design, for although it features the up-to-date outward sloping windows at front and rear, all the windows are rather smaller than is usual, so that the cab resembles a steel box more like the cab of a coke car than a locomotive in which shunting operations demand maximum visibility. The loco is believed to have also received new headstocks and bonnet. It has been fitted with a replacement expanded steel radiator grille, as have other Com-Eng 0-6-0DH locos observed here (*Tegege* FD4799 of 1966, and *Invicta* A1513 of 1956). Other Com-Eng locos are usually stationed at Wallaville.

E.M. Baldwin B-B DH *Oakwood* (5800-1-5-75 of 1975) has been given a black bonnet top. Only one Malcolm Moore locomotive remains in use, a 4wDH known as *Hydro*. This was seen in use hauling ballast hoppers for trackwork near Kolan South.

The main line locos have all been given rail electrification warning stickers.

Scott Jesser 8/90; John Browning 9/90

W. HECK & SONS PTY LTD, Rocky Point Mill, Woongoolba 610 mm gauge

For many years, growers have used tramway cane bins for infield use on trailers. The bins are placed on a short length of track for pick up by mill semi-trailers and placed on the line at the mill yard where they are shunted by tractors. Now the mill wants to eliminate this system by converting all growers to 20-tonne "multilift" containers for the 1991 season.

Australian Canegrower 4/6/90

MILLAQUIN SUGAR PTY LTD, Millaquin Mill 610 mm gauge

(see LRN 73, p.10)

Fairymead Mill's 73, E.M. Baldwin 4983-1-7-73 of 1973, was transferred to Millaquin before the start of the crushing season in exchange for Millaquin Mill 2, E.M. Baldwin B-B DH 6104-1-8-75 of 1975. The Fairymead loco is running in the old Fairymead maroon and yellow colour scheme.

Some of the Millaquin locos have been renumbered, possibly in an attempt to follow the Fairymead scheme which (approximately) relates to the year of construction. E.M. Baldwin B-B DH 1, 5317-1-11-73 of 1973, has become 731, while E.M. Baldwin B-B DH 3, 6456-1-11-75 of 1975, has become 75. Clyde 0-6-0DH 5, 65-441 of 1965, has had a small number "9" added to apparently become 59. E.M. Baldwins 731 and 75 have also been given black bonnet tops and exhaust stack covers, and white cab roofs and side framing, a similar style to the new livery at Fairymead.

The locos have been fitted with rail electrification warning sticks.

Scott Jesser 8/90; John Browning 9/90

MOUNT ISA MINES HOLDINGS LTD 1067 mm gauge

(see LRN 75, p.9)

A number of locomotives were seen on a quick visit to Mount Isa in early June (identifications in brackets from John Browning's notes). At the copper smelter, green 4wBE loco 53 (Gemco 52138P-41P-55 of 1967) together with a slag ladle was not in use. An unidentified yellow 4wBE with barrier car was in use dumping slag. A third 4wBE, number 38 (Gemco built 1963) was seen near the pithead.

The Walkers B-B DH (682 of 1971) was seen shunting at the mine, and both Com-Eng diesels were also seen (JA4282 of 1965 and E1017 of 1956). At Mica Creek, a QGR DH class B-B DH hydraulic was in evidence, possibly on hire.

Ray Graf 8/90

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 73, p.10)

Two large experimental 4-wheel cane bins were noted on trial at the mill in mid-June. One was a 10-ton unit which corresponds to two 4-tonne bins, and will therefore fit into the existing tippler. The second is a 20-tonne Sugar Research Institute bin which previously did trials at Farleigh Mill.

Ray Graf 8/90

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 77, p.14)

Nyleta, South Johnstone Mill's Prof Engineering B-B DH PSL.2501 of 1990 stands by the traffic office as it prepares to enter revenue-earning service for the first time on 26 June, the first day of the 1990 crush. It hauls a home-built bogie brake wagon.

Photo: John Browning

Prof Engineering B-B DH *Nyleta* (PSL.2501 of 1990) was observed on 15 August under repair at Japoonvale depot. The loco was up on blocks with bogies removed, and was being worked on by Eimco staff. A wheel had shifted on an axle and the loco could not be driven back to the mill due to the danger of derailment. This is not the same wheel which had shifted before the start of the season.

This loco is fitted with a Cummins KTA19L engine of 600 hp driving through

Sutherland hydrostatic transmissions to Eimco final drives. Although built in Zimbabwe, more than 55% of the value of the locomotive originated from Australia and all the final drive gearing was manufactured in Sydney.

E.M. Baldwin B-B DH *Liverpool* (10385-1-8-82 of 1982) was at Japoonvale yard assembling a rake of fulls for the journey to the mill. It was paired to brakewagon 6 and took a rake of 101 bins up the long climb out of Japoonvale.

At the start of June, the Johnstone Shire Council gave approval for the closure of a part of Formosa Road, Cowley, to enable the mill to construct a tramline passing loop.

*Chris Hart 8/90, Rail Australia 6/90 via John Browning;
The Cairns Post 9/6/90 via Ray Graf*

TINBEERWAH MOUNTAIN TRAMWAY, Arcadia, Cooroy 610 mm gauge

(see LRN 75, p.9)

In March the last 200 metres of track on the tramway were laid, ballasted and tamped. The track, in all welded rail, was laid with 50 tons of ballast and includes one switchback. The new ballast hopper built by Russell Savage was most successful. This work means that construction has been completed after almost ten years.

Currently under construction by Russell is a section car. Further plans are being made for a passenger carriage and a railmotor.

Russell Savage 7/90

TASMANIA

BUSH MILL TRAMWAY, Port Arthur 381 mm gauge

(see LRN 71, p.16)

Work on the construction of a Garratt locomotive to work on the passenger tramway at the Bush Mill tourist complex near Port Arthur on Tasman Peninsular is virtually complete and the engine will be in service for the summer tourist season. Although fully assembled, the engine has not been steamed as yet. This will be done when the builder, Lester Jones, returns from a trip to the UK.

The decision to build the Garratt loco, which is a scaled down version of K1, the first Garratt ever built, was made because of the build up of passenger traffic to such an extent that the 0-4-0 Vanderheiden loco "Sarah Kate" was barely able to maintain the service. The introduction of the Garratt will enable two trains to operate and additional passenger carriages are being constructed to cater for this service.

It is intended to make the introduction of the Garratt the highlight of a

publicity and promotion exercise. Until that occurs publication of pictures of the Garratt is being discouraged.

Ken Milbourne 8/90

LEES TRAMWAY, Smithton 1067 mm gauge

(see LRN 62, p.3)

Information to hand from Mr Glen Lee, who as a youth worked on the Thos Green vertical boilered locomotive "*Coffee Pot*", clearly indicates that this engine did not work on the tramway to the Trowutta sawmill. This line was wooden railed and the motive power was supplied by a "homemade engine called *Gadget*".

Mr Lee has also confirmed that *Coffee Pot* underwent considerable modification over the years and at one time was actually fitted with two funnels. The reason for this unconventional step may have been as an attempt to reduce the engine's tendency to start trackside fires. Another interesting observation from Mr Lee is that the engine's brake was only effective when the engine was at a standstill and then it served an essential role for if the brake was not applied, the locomotive had a tendency to take "a walk".

Ken Milbourne 8/90

SECOND RIVER TRAMWAY INC, Karoola 610 mm gauge

(see LRN 39, p.7)

Carriage A1 at Second River Tramway, February 1990

Photo: J.S.

The railway carriage pictured was originally built about 1898 in the Launceston Railway Workshops, shipped by sea to Strahan and transported by 3 ft 6 in gauge railway to Zeehan. It was the only completely first class carriage on the 2 gauge 30 km long Zeehan and North East Dundas Tramway. (See West Coast Railways and Tramways by Lou Rae for more details.)

When the Zeehan and North East Dundas Tramway closed in 1932, the carriage remained for some years in the carriage sheds at Zeehan. About 1965 it was seen in Burnie being converted into a mobile road trailer for use as a faller's camp in the bush. It was later neglected for many years on a farm near Burnie.

It was purchased at auction about 1985 and rebuilt over a period of 4 years by P.J. Martin and Sons at Devonport at a cost in excess of \$1500.

The carriage has been transported by road to the Second River Tramway at Karoola, refitted with original Zeehan and North East Dundas bogies and is now fitted with air brakes. It is a very popular item of rolling stock on the tramway.

P.J. Martin, Honorary Secretary, 7/90

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC. 610 mm & 1029 mm gauge

P.O. Box 288, Alexandra Vic 3714 (see LRN 77, p.16)

With the Cathkin and Molesworth sheds now fitted with new doors, track equipment and tools have been moved in and additional display space is now available in the goods shed. The engine from Kelly & Lewis 0-6-0DM 4271 of 1935 has been re-bored and new pistons have been constructed, and it will be shortly returned to Alexandra where re-assembly of the components will be commenced. Meanwhile, the cab of the locomotive has been stripped of all fittings ready for sandblasting.

Peter Evans 8/90

AUSTRALIAN PAPER MANUFACTURERS LTD, Maryvale 1600 mm gauge

(see LRN 75, p.10)

Vic Rail's Clyde Bo-Bo DE Y173 (68-593 of 1968) was repainted in yellow livery with black frame and bogies and black/yellow dazzle stripes on the headstocks at Bendigo workshops, where it was noted in March. It has been acquired by APM for driver-only operation at Maryvale.

Rail Australia 6/90 via John Browning

PUFFING BILLY PRESERVATION SOCIETY Menzies Creek Museum 610 mm & 762 mm gauge

(see LRN 75, p.11)

On 4 August, on the 2 ft 6 in gauge, Peckett 0-4-0ST 1711 of 1926 was in steam and was carrying out shunting duties around the Museum. It moved Orenstein & Koppel 0-6-0WT 12331 of 1931 to the pit on the siding alongside the main line, and then dragged Lima Shay 2550 of 1912 from its shelter for a quick photo before returning it to its position.

On the 2 ft gauge, Baguley built Drewry 0-6-0DM 3354 of 1951 was operating. The chimney of Hudswell Clarke 0-6-0 1863 of 1952 was being replaced. It is reported that this unit was in steam that night.

Ray Graf 8/90

W. TURNER, Echuca 610 mm gauge

This gentleman has acquired a number of different former sugar mill steam locomotives in recent years. Ex-Moreton Mill Fowler 0-4-2T *Petrie* (19930 of 1933) is believed to have been obtained from the Suncoast Pioneer Museum auction in 1985 (see LRN 49, p.10). Ex-Tully Mill Fowler 0-4-2T 5 (16341 of 1924) and ex-Bingera Mill Bundaberg Foundry 0-6-2T RALF (4 of 1952) are believed to have been obtained from the Lachlan Vintage Village auction in 1986. Ex-Qunaba Mill Andrew Barclay 0-4-0T 1419 of 1915, which had been in a park in South Bundaberg for about 30 years, has also been obtained in recent times.

Ian Comrie 7/90

WESTERN AUSTRALIA

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION Bennett Brook Railway, Whiteman Park 610 mm gauge

(see LRN 75, p.11)

Some difficulties have been experienced regarding the reliability of diesel locomotives suitable for passenger service, and a second large diesel is needed

The track upgrade for the main loop has been completed successfully, and the track is now up to a very high standard.

Work has recommenced on the rebuilding of 2-6-2 NG 11B (Henschel 24476 of 1938) with working parties meeting each Friday evening. The running gear, main bearings, pony truck bearings and cylinders have all been overhauled, and once the running side of the locomotive is completed, work will start on the boiler.

Rusty Rails Vol. 15 No 4 via John Browning

MEETINGS

MELBOURNE: MOVIES

Dave Mickle will be showing some of his extensive collection of railway movies compiled over many years. It has been some time since we have had a movie night so be sure not to miss it.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 11 October at 8.00 pm.

SYDNEY: Cordaux and Cataract Dams

Jim Longworth who works for the Water Board will speaking about the results of his research into the use of rail during the construction of the Cordaux and Cataract Dams. Both dams made extensive use of railways in their construction and also employed steam locomotives.

LOCATION: Woodstock Community Centre, Church St Burwood Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 25 October at 7.30 pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 4 October at 8.00 pm.

HO, HO, HO,....

Well, it's that time of year again - although it hardly seems possible! We would like to take this opportunity to wish all our readers and their families a very Merry Christmas and a safe, healthy and prosperous New Year. We would like to especially thank the other members of the LRN team, particularly John Browning, and all our contributors, for all their help and support throughout the year - it makes our job so much easier.

Geoff, Peg and Allison Hayes 11/90

NOTES, CORRECTIONS & COMMENTS

CALENDAR : 1991 - CANE TRAINS OF JAVA

We have received information and order forms from Mr Brain Pearce in Hong Kong regarding the above calendar which he is marketing. It is printed on high quality art paper with 13 large colour photographs from his forthcoming book and features 14 narrow gauge steam engines from 13 different sugar mills, representing 12 different European and American manufacturers, including a fascinating variety of articulated engines, Mallets, Luttermollers, Engerths, Klein-Lindner axles, Schwartzkopff Decapods etc. The price (sterling) including postage is 6 by Sea Mail and 7 by Air Mail. As we only have a limited number of order forms, we suggest anyone interested send a SSAE to us at the address on page 1 and we will forward an order form by return mail, on a first come, first served basis.

Editors 11/90

CANE RAILWAY SAFETY VIDEO

The safety video in preparation last year has now been made available to the industry. The mill tramline operations featured appear to be Macknade, Victoria, Tully and Millaquin. This is an informative and interesting professional production.

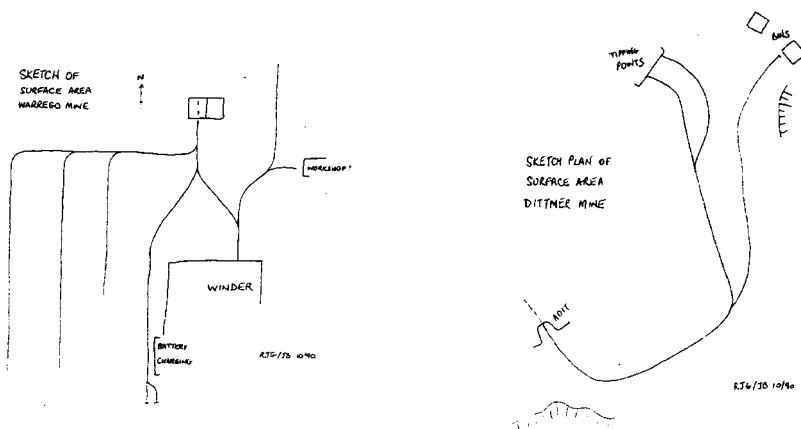

John Browning 9/90

CORRECTIONS

Apologies to Ray Graf over a couple of errors which crept into LRN78:

PEKO-WALLSEND OPERATIONS, Warrego Mine (p.11): The numbered 4wBE carried number 402, not 408. This mine site will remain in use as a concentration point for ore from other mines.

DITTMER GOLD MINE (p.14): The Gemco loco chassis observed on the surface did NOT carry any number. In addition, unusually, it has only two-wheel drive, and so should be described as 2-2wBE, not 4wBE.

PEKO MINE SITE AT TENNANT CREEK

Ray also points out that the Peko Mine site at Tennant Creek as a separate location from the Peko Smelter (p.10). The gauge of the track at Peko Smelter used with double flanged stock is given by the auctioneer as 3060 mm, but Ray believes this is measured across the outside of the rails. He understands that the track gauge at Gecko Mine (p.10) is 610 mm gauge, but was unable to confirm this by measurement.

We wish to thank Ray for his enthusiasm in providing reports of many rarely-visited sites, and encourage other members to report their sightings around the country.

Editors 11/90

HISTORIC SITES IN FORESTS

"To date there has been little systematic surveying of historical sites in forested areas."

This statement-appeared in *Heritage News* of August 1990 (and one wonders if the writer had ever examined the publications of the LRRSA - Ed.)

Norm Houghton has recently completed a list of 17 sawmills and tramway sites of historical significance in the Otways published by the State Department of Conservation and Environment in the Otway Forest Management Area Study: Statement of Resources, Uses & Values, 1990.

INTERPRETING ENGINEERING HERITAGE

The theme of the Fifth National Conference on Engineering Heritage, to be held in Perth on 3-5 December 1990, is "Interpreting Engineering Heritage". Among the papers to be presented are three of particular tramway interest: "Restoration of the Mason and Bird Tramway Bridge", L.F. Margetts; "Stannary Hills and Irvinebank Tramways in North Queensland", R. Kerr; and "A Preliminary Survey of the Literature on Industrial and Mechanical Engineering in Australia", D.A. Cumming and K. Leverett.

A "Trackmobile" road/rail unit was seen in the distance here on 1 July. It appeared to be large and possibly new, and carried the number 75 on the

side. More details would be welcome.

Ray Graf 10/90

WALKERS LTD, Maryborough, Qld

It is reported that a number of sugar mills are interested in a proposal to refurbish for cane haulage, redundant members of the QGR DH class of B-B DH locomotives built by Walkers in 1968 to 1974. These reports have emanated from a number of sugar mills, and relate not only to the obvious case of Pioneer Mill at Brandon which uses 1067 mm gauge, but also to use of these units on 610 mm gauge. Because a number of these machines are now surplus to QGR requirements, it is thought possible that a batch of locomotives could be refurbished in Maryborough at a considerable unit cost saving. The locomotives are fitted with a Caterpillar 465 hp engine and Voith hydraulic transmission, and weigh 26 tonnes.

John Browning 9/90

SITE REPORTS

FORT NEPEAN DEFENCE TRAMWAY, Grid Reference BT946578 approx. 670 mm gauge

The entrance to Port Phillip Bay is through a narrow strait, known as The Rip, three kilometres wide. The forts at Queenscliff and Point Nepean, on the western and eastern sides respectively, have always provided excellent positions from which to prevent naval entry into the Bay.

{bmc d:\lrrsa\lrrn\graphics\lrrn079d.bmp}

Fort Nepean was the major fortified area on Point Nepean from 1882 until 1945 and is significant in Australian history as it was from here that the first shots of both World Wars were fired. Because of its isolation at the very end of the Mornington Peninsula, the fort was supplied by boat from Queenscliff (which had been connected to Melbourne by rail in 1879). Supplies were then transported from the jetty to the engine house, barracks and magazines by tramway.

In 1988 the area occupied by the fort became part of the Point Nepean National Park and was opened to the public. Visitors can now travel to the fort from Portsea in a "transporter" (a sort of rubber-tyred Talgo) and inspect the remaining fortifications (bookings are advisable).

Although the jetty area has been badly eroded by the sea, tramway remains are visible in a number of locations. The best preserved remains are in the barracks area where almost all sleepers and dogspikes remain (section marked A to B on the plan). These sleepers are imbedded in concrete. Measurement

of these sleepers and the impressions of the rails on the concrete indicates a gauge of about 670 mm, possibly 2 ft 2 in

Just beyond the barracks area, the cliff has collapsed. This must have occurred before dismantling as some very corroded rails can be seen at various points down the cliff face. Entry to this area is not permitted due to the danger of unexploded ordnance. These are the only rails still on the site

From C to D, the tramway is an incline immediately east of a staircase. Some sleepers remain in this section. The foundations of the electric winch are located above the upper terminus. This terminus appears to have been either a skid plate or a turn-table. It is topographically possible that a tramway could have run north-west from the top of the incline to the No.6 gun magazine although no evidence was seen - and digging is not encouraged!

At the base of the incline, the jetty area has been washed away however sleeper and rail impressions in the concrete indicate the site of two sidings to the east - one of which has been built over. There is some evidence to suggest that there was originally 2 ft gauge on the sea wall, possibly for construction.

Outside the engine house the sleepers from two sidings remain embedded in the concrete. These sleepers have no dogspikes remaining and these sidings appear (from photographic evidence) to have been dismantled earlier than the line to the incline. The engine house originally had a coal-fired boiler to generate electricity for the search-lights. Kerosene engines were added in 1910. In both cases the fuel was brought from Queenscliff by sea.

(Warning for future archaeologists: some broad-gauge sleepers have recently been installed as retaining walls.)

Colin Harvey 10/90

SPARROVALE FARM

A visit was made to Sparrovale Farm (LR 73, p.6-10, July 1981) on 7/9/90 to examine closely the remnants of this once extensive tramway system. The present owners have been on site since 1952 and indicated that practically nothing of the tramway era survives today and nothing was visible when they bought the property.

The routes of the main farming tramways are mostly used as metalled roads and show no evidence of their former use. One solitary skip body lies in a tangled, rusty heap on the flats near the river. All the buildings except for the manager's house, one stable and the boiler house have been removed.

The levee bank is an extensive engineering work in its own right but no trace can be seen of the tramway that ran alongside it. The river has flooded so many times since 1916 that even a reasonable sized formation would have

been obliterated.

Norman Houghton 9/90

TOUR REPORT

TANJIL BREN TRAMWAYS TRAMP

Bridge No. 9 . Kirchhubel's Tramway.

Photo: Peter Evans

Sunday, 23 September, saw sixteen tramway trampers wend their ways eastward from Melbourne to Tanjil Bren, situated high in the Baw Baw Ranges. The appointed time was 10.15 am, and all who arrived found each other easily as Tanjil Bren consists of little more than a General Store and a handful of houses.

The area opposite the General Store was once occupied by the terminus of a Forests Commission tramway that began operating after the 1939 bushfires until its closure in the early fifties. It was built to transport fire killed timber that was hauled in from the bush mills over the 3 ft gauge tramway. The tramway headed in a northerly direction for about 5.5 km to the West Tanjil River, then north-west for another 1.5 km to Kirchhubel's sawmill. The line was worked throughout by two Day's tractors.

Everyone was accommodated into four 4WD vehicles and a venerable HQ Holden for the journey out to the West Tanjil River over the formation of the

West Tanjil Steel Tramway, which is now a road. We left the vehicles just before the first of fifteen bridges for the walk to the site of Kirchhubel's sawmill.

Bridge No.1 crosses the West Tanjil River at the top of a set of very impressive waterfalls. This bridge, whilst still crossable, has been somewhat vandalised by a bulldozer doing survey work! All bridges on the way to the sawmill are in fair to good condition, built either in a crib fashion, or of huge logs for clear spans of several metres. Bridge No.4 is the most impressive in this section, having a clear span over a creek of about 22 metres and about 8 metres high. Bridge No.5 was probably the most unusual, as it is really two bridges with a common abutment, which in this instance was a convenient boulder of huge proportions - the whole party being able to stand on top of the boulder!

We arrived at the site of the sawmill which abounded in relics, the largest being the foundations of the under-fired multi-tubular boiler which was fired on sawdust and edgings. The mill was capable of cutting 10,000 super feet per day and began operating in 1940. Many other relics were easily located: tramway wheels, the large cyclone from the mill, various buildings for the accommodation of employees and the inevitable sawdust heap.

During our stop for lunch at the mill site, it was very interesting to talk to our oldest tramper, Mr Tom Cornwall, who not only worked at the mill for two years, but also helped his father to build all the bridges on the tramway. He enlightened many of us as to the workings of the mill and what life at the mill was like.

After lunch we walked out along the log line for a short distance to bridge No.9 which is a crib construction and about 73 metres long. Bridge No.12 which we did not see this time, is interesting not just for its crib construction, but for the inclusion of two large convenient stumps in its structure.

We returned to the vehicles via the mill and also viewed bridges 2 & 3 which had been by-passed on the way in.

Having off-loaded day-packs and any other unnecessary gear, we headed off to the site of Downey's mill, along the now bulldozed formation for about 1.5 km. A fair amount of cable, crawler tracks and other assorted ironmongery were to be found. The sawdust heap at this site is very impressive, covering about 3-4 acres, and also afforded a great view of the West Tanjil River and the surrounding hills.

Return to the vehicles was via the same route and we also explored the site of Porta's mill, where a number of small relics were to be found.

With regard to the Tour Notes which filled a whopping 24 pages (doing our bit to support the paper industry), we express our sincere thanks to Murray Ferguson who seems to have spent years in the bush around Tanjil Bren, to Mike McCarthy for access to his research material and a big thank you to

Peter Evans for his very generous contribution.

FOOTNOTE:- During the early part of 1990, Peter Evans was employed by the Historic Places Section of the Department of Conservation, Forests & Lands to survey Kirchhubel's tramway and sawmill. Peter's excellent report, bridge drawings and sawmill drawings formed the major part of the Tour Notes.

Bill Hanks 10/90

NEW SOUTH WALES

COMMONWEALTH STEEL CO LTD, Newcastle 1435mm gauge

On Sunday 1 July, no sign was seen of the 1972-built Goninon 4wDE loco which works here. Possibly it was locked in the shed.

Ray Graf 10/90

TERRACO PETROLEUM, Port Kembla 1435mm gauge

Two SRA 70-class units (7010 and 7007), together with Goninon B-B DE JL3 (017 of 1962) ex John Lysaghts (see LRN 71, p.7) were observed here on 27 June. It is understood that these units were being prepared for shipment to Dorrigo.

Ray Graf 10/90

P. WARD CIVIL ENGINEERING PTY LTD 610 mm and 1143 mm gauge

An auction by Colliers was held on 11-12 September, and the following items including two diesel locomotives were offered for sale:

At Anthony Equipment, 17 Dunheved Circuit, St. Mary's

LOT S23	E.M. Baldwin 4wDH 6008-3-7-75 of 1975 (Model DH4T Mk.2) ex Melbourne & Metropolitan Board of Works (327 3043).
LOT S24	E.M. Baldwin 4wDH 6008-2-7-75 of 1975 (Model DH4T Mk.2) ex Melbourne & Metropolitan Board of Works (327 3042).
LOT S22	Eimco 12B mucker, 24 in gauge.
LOT S21	10 side dump rail skips 66 in x 48 in x 36 in, 24 in gauge.
LOT S20	50 lengths (20 ft each, approximately) 60 lb rail.

The locomotives were fitted with GM four-cylinder engines, and exhaust scrubbers for underground work

At 504 Pittwater Road, North Ryde —

LOT 179	Tunnel form 30 ft (5 ft x 6 ft sections) x 8 ft diameter with four concrete loading gates in each section and rail trolleys 45 in gauge.
---------	--

The trollies were of welded fabrication and very rough.

Craig Wilson 10/90

QUEENSLAND

BRAMPTON ISLAND PTY LTD 762 mm gauge

(see LRN 62, p.8)

On 25 September, F.C.Hibberd "Planet" 4wDM 3476 of 1950, finished in green paint, was busy hauling trains between the wharf and resort area. Hibberd 4wDH 3475 of 1950, painted red, was dismantled at the workshops, its rebuild of a few years ago not having proved to be particularly successful. Items of rolling stock observed in use were eight four-wheeled passenger cars and four flat cars. In a siding near the jetty was a green bogie low loader wagon, which might be used for moving heavy equipment unloaded at the jetty.

John Browning 9/90

BUNDABERG STEAM TRAMWAY PRESERVATION SOCIETY Bundaberg Botanical Gardens 610 mm gauge

(see LRN 78, p.12)

On 21 October, Orenstein & Koppel 0-4-0WT (6805 of 1914) re-entered service after restoration following more than 20 years in a park. Bundaberg Foundry 0-4-2T 3 of 1952 was also operating but will shortly be taken out of service to receive a new firebox.

Bob Gough via David Mewes 9/90

BUNDABERG SUGAR CO.

The Chairman of Bundaberg Sugar Company, Mr Roy Deicke, advised the annual general meeting that the Company had purchased the Bundaberg Foundry last November. A recent development was the signing of a license agreement between the Foundry and leading British-based manufacturer of narrow gauge locomotive, Hunslet-GMT. Beside the use of narrow gauge locomotives in the sugar industry, the Hunslet agreement could see the Bundaberg Foundry explore applications in the mining industry.

The Australian Financial Review 10/9/90 via Bob McKillop

CROYDON 1067 mm gauge

(see LRN 54, p.8)

The remains of ex-QGR 2-4-0 A10 202 (vulcan Foundry 802 of 1877 for Fairlie Engine Co.) were observed here in the park on 8 June, painted light blue.

Ray Graf 10/90

CSR LTD, Hambledon Mill 610 mm gauge

(see LRN 77, p.12)

The "Sugarworld Shuttle" which runs in the "Sugarworld" theme park at the mill departs at 3 pm daily for a "Cane Field Excursion". The usual loco is E.M. Baldwin 4wDH 9109-1-9-80 of 1980. On 10 June, this trip was an 8 km run out to Saw Mill Pocket and return, and a commentary was provided on the outward journey. This trip is recommended. (see cover photo)

Ray Graf 10/90

CSR LTD, Victoria Mill 610 mm gauge

(see LRN 78, p.14)

Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) and the Decauville carriage were in use giving rides in Ingham on 27 October on the occasion of the annual Maraka Festival.

Chris Hart 10/90

DITTMER GOLD MINE, Kelsey Creek 458 mm gauge

(see LRN 78, p.14)

The plant and leases of this operation were auctioned by Lex E. Simhauser of Brisbane on 25 October. KPMG Peat Marwick were receivers and managers for Provost Ltd, Wescorp Pty Ltd, Deputee Pty Ltd, and Service Nominees (WA) Pty Ltd

18 inch gauge rail equipment offered included:

LOT 111	1 Gemco "Trammer" 1-2 ton 2WD battery loco
LOT 112	1 Gemco "Trammer" 1-2 ton 4WD battery loco
LOT 106	1 Gemco battery box and two loco batteries

TONY GERMANOTTA, Mulei 610 mm gauge

(see LRN 72, p.17)

Perry 0-6-2T 2601.51.1 of 1951 was displayed in steam on a low loader at

Finch Hatton on 2 September. Plans to operate it on the Cattle Creek Mill tramway did not proceed, apparently because of difficulties with the level of insurance cover required by Mackay Sugar.

Len Heaton 9/90

ISIS CENTRAL SUGAR CO LTD 610 mm gauge

(see LRN 76, p.13)

The new line up Cordalba Hill is in use, and all the track on "the Deviation", "Roma Street" and "Adies line" had been pulled up by the end of October. A new line several kilometres long from the Doolbi area in the direction of Goodwood appears to have been constructed recently. This new line crosses under the Goodwood Road through a concrete culvert.

Bob Gough via David Mews 10/90; David Mews 10/90

LAPPA 1067 mm gauge

(see LRN 71, p.12)

Ex-QGR Walkers AIA-AIA diesel 1180, purchased for industrial use by a mining company, was observed still parked at the Bondary fence on the remnant of the Mt.Garnett line on 9 June, and does not seem to have moved since its delivery.

Ray Graf 10/90

MACRAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 77, p.13)

A number of locos seem to have been made available for use by navvies away from their home mill during the 1990 slack season. On 14 June, Ray Graf noted Pleystowe's Bundaberg Foundry 6wDM 6 (10 of 1953) still at Marian Mill (it did return to Pleystowe's North Eton depot for the crushing season) and Com-Eng 0-6-0DM *Septimus* (A2128 of 1958), also a Pleystowe loco, at Farleigh Mill.

All Cattle Creek's locomotives are now running in the new livery of green, red, yellow & white with nameplates fixed as follows:

<i>Netherdale</i>	6wDM	Bundaberg Foundry	13	1954
<i>Tannalo</i>	0-6-0DH	Com-Eng	B1724	1957
<i>Pinnacle</i>	0-6-0DH	Com-Eng	AA1549	1961
<i>Dalrymple</i>	0-6-0DH	Com-Eng	AL4892	1965
<i>Finch Hatton</i>	B-B DH	Com-Eng	NA59112	1977

In spite of some local opposition, Marian Mill gained access to the QGR trackbed between Gargett and Uruba on 8 October, when Cattle Creek

Mill sugar, previously carried by QGR, was placed on road transport for the remainder of the season. This enabled work to commence in regard to this section, and laying 2 ft gauge track to replace the 3 ft 6 in gauge QGR metals. 1200 m of track was removed in the Tannalo area on the first day, and a total of 3km of line is to be regraded, from Pinnacle to Tannalo, and on either side of the Cattle Creek bridge, near Gargett. Initial work was concentrated in the Tannalo area, where two storage loops able to hold 250 bins are to be built. By the end of October, a number of low wooden trestle bridges between Tannalo and Pinnacle had been replaced by culverts, and earthworks were in progress, while a nameboard had been erected at Tannalo. Total cost of the new connection is expected to be \$2.2m.

Already by early October, earthworks were well under way at Gargett, where the tramline was to be extended from its current terminus down the last few hundred metres of the former Owens Creek branch to gain the current QGR trackbed just east of Gargett station, and by the end of the month, the trackbed was complete.

In the 1991 season, it is expected that three locomotives will be stationed at an out-depot to be established at Tannalo to work Finch Hatton area lines. This will be necessary as current siding capacities are such as to require frequent visits by locomotives. It is possible that future increased siding capacities would enable locomotives based at Marian to service all the present Cattle Creek Mill area. The construction of an extension from Finch Hatton to Boongana has been deferred because of a lack of funds at this stage.

Four Cattle Creek Mill cane bins were observed in a Marian rake in October, indicating that trials are being carried out with these 3.5-ton capacity vehicles in preparation for the 1991 season. At the end of the month, six Pleystowe 6-tonne bins were seen in the Marian yard along with four new four-wheeled flexible wheelbase "big bins" built to the Sugar Research design.

The first of three 40-tonne Eimco B-B DH locomotives arrived at Marian Mill on Sunday 7 October, and was unloaded the following morning. This unit is said to be the most powerful 2 ft gauge locomotive in the world. Carrying builder's number L255 of 1990, it had no name or number on delivery, and was finished in Marian livery. The cab is slightly lower in profile than the standard design. Eimco locos are designed to haul cane short end leading, and on this unit the left hand side cab door (non-driving side when hauling cane) opens forward onto the running board rather than being in the cab side as is normal in cane locos. The spacious cab contains dual driving positions. The second loco, numbered 19, arrived on 29 October.

Two of these Eimco units will be equipped as Locotrol master units, and one

dual master/slave, while 16 & 17, the two E.M. Baldwin bogie locos currently at the mill (9562-1-6-81 and 9562-2-6-81) will be slave units. This will enable two locotrol trains to be in service between Marian and Finch Hatton at any one time, with one spare unit available for servicing. The three Eimco units are expected to be numbered 18, 19 and 20, and will be known as *Gargett*, *Narpi* and *Boongana* respectively.

A Plasser KMX-12T bogie tamping machine (375 of 1990) was delivered to Marian Mill on 3 September. This unit weighs 24 tonnes and was yet to be commissioned in mid-September. A second unit is on order for Pleystowe and Racecourse Mills. Marian Mill's KMX-06 tamper, Plasser 101 of 1975, expired with engine problems late in August. Racecourse Mill's Tamper 4375515 of 1975 was placed on loan to Marian for a couple of weeks to replace it.

Work on the new road/rail bridge over the Pioneer River at Marian has been progressing, with concrete girders laid on five spans by early October. The northernmost pier will not be built until the end of the crushing season, as it will be built on the trackbed of the existing tramline on the north bank. This bridge will be in use in 1991, and will require a substantial tramline realignment on the south bank. Meanwhile, it appears a high level road/rail bridge will also be constructed near Pleystowe Mill in the next few years, in conjunction with the raising of Dumbleton weir downstream.

At Farleigh Mill, Com-Eng 0-6-0DH *Barcoo* (FB4383 of 1965) has been painted in Farleigh livery after spending a year there in its North Eton livery. Com-Eng 0-6-0DM locos *Richmond* (A1308 of 1955) and *Ashburton* (A1614 of 1956) have been noted working in multiple (back to back) in company with the E.M. Baldwin brake wagon. Com-Eng 0-6-0DH locos *Pioneer* (A12358 of 1962) and *Carlisle* (A13271 of 1963) have been fitted for back-to-back multiple-unit operation for this season. They have been fitted with Cummins 404 290 hp diesel engines and raised cabs with side windows (but no doors, only a canvas blind). Clyde 0-6-0DH *Seaforth* (61-233 of 1961) has also been fitted with a Cummins 404 engine, although this one bears the Perkins brand name. This mill has been particularly short of loco power this season, and failures early in the season meant a short loan of Com-Eng 0-6-0DH *TannaLO* from Cattle Creek Mill, followed by Clyde 0-6-0DH *Racecourse* (65-440 of 1965) from Racecourse Mill.

Motive power shortages meant that an agreement was reached for Farleigh to trial Eimco B-B DH L254 of 1990. This loco had been delivered to Fairymead Mill in June but found to exceed specified weight limits. The 38-tonne unit arrived at Farleigh at the start of October and was soon put to work hauling cane two shifts per day on the north coast line. This involved picking up rakes of cane placed ready in loops by other locos, with shunting

kept to a minimum. Unnamed and unnumbered, it appeared to be working successfully in early October and approval was given for its purchase subject to satisfactory performance. By 28 October, this seemed sure, as the unit was noted carrying the name *Farleigh*.

Drawbar pull experiments seem to have been taking place at Farleigh with a weighted steel truck, fitted with strain gauge and TV camera, seen in the loco shed attached to E.M. Baldwin 4wDH 5-774-6-63 of 1963 in mid-September.

*John Browning, Len Heaton, Robert James,
John King 9-10/90; Ray Graf 10/90*

MOSSMAN CENTRAL MILL CO LTD 610 mm gauge

(see LRN 77, p.13)

Cane assignments on the Tablelands are expected to produce about 50,000 tonnes of cane annually by 1991, with seven cane farms currently operating to the north of Mareeba. However by 1992, assignments could be operating in areas south of Mareeba, and Mareeba Shire Councillors are concerned that this will mean cane being trucked through the town. This has led them to consider the possibility of a rail link between the mill and the area in the long term.

Australian Canegrower 30/7/90 via Chris Hart

MOUNT ISA MINES HOLDINGS LTD 1067 mm gauge

(see LRN 78, p.15)

The QGR DH class Walkers B-B DH loco on loan to Mount Isa Mines is number 14.

Sunshine Express 9/90 via John Browning

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 77, p.14)

Ray Graf visited the "Mulgrave Rambler" tourist operation on 11 June. He noted that the John Fowler 0-4-2 *Nelson* (20273 of 1934) and its two cars were attached to each other with two-piece bolted drawbars. The addition of the third car to the rake demands the splitting of the cars and the insertion of the third car between them. This necessitates the unbolting of the drawbars and the remaking of all brake and electrical connections. The drawbars bear on the carriage bogies so that any pushing back has to be done carefully. The balloon loop provided at each end of the line minimises this. This is a very impressive operation.

Ray Graf 10/90

PIONEER SUGAR MILLS LTD, Pioneer Mill 1067 mm gauge

(see LRN 77, p.13)

Clyde 0-6-0DH *Maidavale* (62-266 of 1962) was seen in the loco shed on 12 June, nearing the end of an overhaul including re-engining, which increased power by 50 hp. This unit had also been repainted, as had Clyde 0-6-0DH *Pioneer* (63-287 of 1963), with three colours of stripes on the headstocks instead of the old two-colour scheme.

Ray Graf 10/90

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 75, p.8)

Clyde 0-6-0DH locos 10 & 11 (67-569 of 1967 and 70-709 of 1970) have been fitted up for back-to-back multiple-unit operation. They seem to have been running together permanently in this configuration this season. Com-Eng 0-6-0DH D8 (FC3777 of 1964) has been repainted. The sky blue colour below waist height has been retained, but the cream above has been replaced by bright yellow. Ruston & Hornsby 0-6-0DH 9 (rebuilt by E.M. Baldwin 6-825-1-5-64 of 1964) has been fitted with new cab windows and the cab has been partially repainted in bright yellow. The line of miscellaneous items of rolling stock in the yard has been cleared out and out-of-use F.C.Hibberd "Planet" 4wDM 2333 of 1940 has joined Ruston & Hornsby 4wDM 6 (371381 of 1954) under a tree behind the loco shed. John Fowler 0-4-0DH 5 (18801 of 1927) is out of use in the loco shed.

John Browning 9/90

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge (see LRN 78, p.15)

During the slack season, Clyde 0-6-0DH 3 (58-195 of 1958) was fitted with the Eimco cab supplied in 1989. The new Tamper sleeper replacement machine was seen at work on the Gregory line adjacent to the Bruce Highway north of Proserpine on 27 September, and is builder's number 826029. At North Gregory, Plasser PBR-201 ballast regulator 243 of 1984 and Plasser KMX-12T tamper 222 of 1981 (not 227 as previously recorded) were at work upgrading track. A road truck was bringing ballast from a stockpile at the mill and tipping it on the track. The ballast regulator was then spreading the ballast and the tamper was lifting, packing and lining the track. The navvies here do not only have a large depot area in the mill yard, but also a large garage in a street on the mill perimeter. The garage contained a number of items of rolling stock including the Gemco petrol-hydraulic inspection car and the Com-Eng Aresco track jack (TJ 835).

An interesting observation was made just west of the mill where the QGR line passes over the mill tramline to Kelsey Creek and Crystal Brook by means of a concrete bridge. Immediately to the east of the bridge carrying the government railway over the tramline is a smaller concrete bridge, apparently built for tramline use, but seemingly never used.

John Browning 9/90

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 78, p.15)

Prof Engineering B-B DH *Nyleta* (PSL.2501 of 1990) was out of service on 3 September because of damage caused by a derailment the previous week, and on 24 September because of damage to the radiator and engine caused by a breakage of the fan. It is reported that there have been many problems with this unit and that availability has been poor.

Normal loads for the run up the Basilisk Range from Japoonvale to the mill appeared to be 100 bins for the 32-tonne Baldwin *Liverpool* (10385-1-8-82 of 1982) and 75 bins for the 24-tonne bogie Baldwins. E.M. Baldwin B-B DH 6 (7244-1-8-77) was seen on the less heavily graded section between Silkwood and Japoonvale with a rake of 218 bins on 24 September. *Liverpool* and E.M. Baldwin B-B DH 5 (6470-1-1-76 of 1976) were seen on the day shift hauling block loads of cane from Japoonvale to the mill. Loads coming into Japoonvale are either broken down or made up to rakes of 100 and 75 for haulage up the range. Baldwin 6 appears to spend part of the day shift to the east of Japoonvale and then in the afternoon breaks its rake down and heads to the mill with around 75. E.M. Baldwin B-B DH 4 (5477-1-8-74 of 1974) was noted at Pin Gin Hill on 3 September, so is assumed to operate on the Nerada line. Ex-Innisfail Tramway Baguley 0-6-0DM 10 (3390 of 1954) appears to be a spare loco.

Regular pairings of locomotives and brakewagons were observed as follows:

5	- Brakewagon 1 (Clyde, 1972)
4	- Brakewagon 2 (E.M.Baldwin 6575-1--76 of 1976)
6	- Brakewagon 3 (E.M.Baldwin 6575-2--76 of 1976)
<i>Liverpool</i>	- Brakewagon 4 (Hockey Engineering, 1982)
16 & 11 (multiple-unit Com-Eng 0-6-0DH A1102 of 1955 & C1125 of 1957)	- Brakewagon 5 (South Johnstone Mill 1986 - cut down 0-6-0DM Baguley 2396 of 1952)
<i>Nyleta</i>	- Bogie Brakewagon 6 (South Johnstone Mill, 1990)

This means that 4 & 5 have swapped brakewagons since the start of the season.

Chris Hart 10/90; John Browning, Jan Ryan 10/90

THE SUGAR BOARD, Mackay 1067 mm gauge

(see LRN 71, p.15)

Com-Eng 0-6-0DH *Alex T. Hamilton* (F1018 of 1957) has been completely dismantled down to footplate level. The frame is sitting by the track near the small loco shed where Com-Eng 0-6-0DH F1029 of 1958 is to be found.

John Browning 9/90

SOUTH AUSTRALIA

BHP LONG PRODUCTS DIVISION 1067 mm gauge

(see LRN 71, p.15)

Clyde Bo-Bo DE locos D.E.09 (65-430 of 1965) and D.E.05 (57-136 of 1957) were seen arriving at Whyalla with a loaded train around 1 pm on 31 May. A BHP employee stated that there was only a service of one train per day, but this requires confirmation.

Ray Graf 10/90

FRANKLIN HARBOUR HISTORY TRUST MUSEUM, Cowell 1067 mm gauge

T.A.C.L. 4wPM 46 (see LRN 65, p.2) was observed at the Museum on 31 May with two flat cars numbered 342 and 106.

Ray Graf 10/90

PORT DOCK STATION RAILWAY MUSEUM INC various gauges

(see LRN 70, p.10)

Perry 0-6-2T *Skipper* (1850.1.46 of 1946) ex Qunaba Mill is displayed in a well wagon in a broad gauge goods train which is all under cover. The loco looks to be in quite good condition although it does not appear that any major work has been done on it since preservation.

Ian Comrie 10/90

TASMANIA

BUSH MILL MOUNTAIN RAILWAY, Port Arthur 381 mm gauge

(see LRN 72. p.4, LRN 78, p.17)

The Garratt locomotive, No.3, was lit up for the first time on 19 October. The following day, test running was undertaken within the yard and on the main line as far as the reversing point (the Zig??). It is expected that this locomotive will be in regular service by Christmas.

Colin Harvey 10/90

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm & 1029 mm gauge

P.O. Box 288, Alexandra Vic 3714
(see LRN 78, p.18)

Recent projects completed at the Museum include the surfacing of the station platform (delayed for many months because of heavy rain during winter), the roofing of the winch site (undertaken in an authentic manner by timber workers from the tramway era, Ernie Le Brun and Ike Sims), security fencing around the Cletrac shed, ballasting of both locomotive sidings, and the provision of better oiling and water treatment facilities in the locomotive shed.

John Fowler 11885 of 1909 has passed its annual boiler inspection with the rated pressure unchanged. Once again, the opportunity was taken to further improve the arrangement of the external piping on the boiler while all the fittings were off, and the locomotive no longer resembles a plumber's nightmare!

The major step forward in recent months has been a burst of activity on Kelly & Lewis 4271 of 1935. The cab and bonnet have been sandblasted by the local SEC crew in their spare time and have been given a coat of paint. They are now both under cover on the platform of the goods shed. However the greater part of the new work has been done by Paul Simpson (proud owner of the now operational sister Kelly & Lewis loco to that at Alexandra). Paul stayed in Alexandra for two weeks of his annual leave, and during that time performed a great deal of work. The locomotive was jacked up to enable the wheelsets, axleboxes and springs to be removed. Repairs were made to the springs using spare parts obtained by Paul with his locomotive, brake rigging parts were straightened and repaired, and the wheelsets were cleaned and primed. The frame was cleaned to the stage where it is ready to be primed, and a new coupling was fitted to the rear casting of the locomotive. The security store in the goods shed was also cleaned out and now holds all the locomotive parts in the process of restoration. The other Museum members are very grateful to Paul for the concerted effort which he has put in, and we may yet one day see this historic locomotive returned to operation along a restored section of the Rubicon tramway.

Peter Evans 10/90

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 73. p.12)

RESTORATION BEYOND LAKESIDE: Amazing things have happened in the past few weeks. As at 25 October, Gembrook station site, which has been devoid of rails for the past nineteen years, now has a pair of 2 ft 6 in gauge points sitting on what used to be the passenger platform, waiting for eventual installation into the reconstructed Gembrook terminus. The right-of-way from Gembrook for most of the distance to Cockatoo had been cleared of trees and graded, whilst the small trestle bridge between Fielder and Gembrook had just been rebuilt.

All of this has been done as a result of an army exercise over the period 13-28 October by the Seventh Field Engineer Regiment, about 150 people with heavy earth moving equipment, graders, bulldozers, etc. Their work has not been confined to the Gembrook area alone - see below.

Work on the Gembrook restoration has shifted to the Gembrook end due to lack of willingness from the Shire of Sherbrooke to give approval for restoration of the two-mile section within their boundary from Lakeside to Cockatoo Creek, mainly because of the objections from about five residents in the vicinity of Wright, who seemed to be claiming that they were acting in the interests of the local wombat population. The remaining 4-1/2 miles from Cockatoo Creek to Gembrook is in the Shire of Pakenham, which is very supportive of the project.

Late in September Sherbrooke finally gave approval to proceed, but this was too late to take advantage of the Army exercise which needed much advance planning.

A significant change in the restoration is that all four trestle bridges are to be rebuilt. Previously it was intended to earth fill two, deviate around one, and replace the one which crossed Cockatoo Creek with a steel structure.

Despite this activity at the Gembrook end of the line, the target date for re-opening to Gembrook is 18 December 2000, the centenary of the line's opening. Probably the greatest challenge will be financing the reconstruction of the three bridges between Wright and Cockatoo.

OTHER ARMY WORK: The army team is also constructing a new island platform at Menzies Creek with each side capable of holding sixteen car trains, and rebuilding platforms at Selby, Nobelius Siding, Nobelius, and Emerald goods shed.

TIMETABLE 1990-91: The new timetable for the year ending 31 August

1991 shows one significant change. In the previous timetable, on weekdays from May to September inclusive, only one train was scheduled per day (outside school holidays when there are three). Now the only months which are limited to one train per day on weekdays are June to August inclusive, still with three in the July school holidays. This indicates growing mid-week patronage, including increased usage by overseas tourists - Puffing Billy is making its contribution to Australia's balance of payments problem.

NEW BELGRAVE STATION BUILDING: The new Belgrave station building was opened in July. It is a large two-storey brick structure built in the style of the 1920s or earlier. It is the sort of building the Victorian Railways would have built had they made this line a thriving tourist operation in the 1920s. It does not look like a fake or a plastic replica, but like an established building which has just been restored.

LOCOMOTIVES:

14A: A significant achievement by the workshops was the machining of a new wheel set for 14A. This involved turning new axles, wheel centres, and tyres, and fitting the whole lot together, a tricky operation which requires accuracy, and which had previously been contracted out to the Emu Bay Railway Company. Considerable ingenuity was needed due to the lack of heavy lifting equipment in the workshops.

7A: Following the success with 14A, a new set of tyres were fitted to this loco.

Climax: This has been used on a number of occasions this year, eg 19 May woodcut special, 11 August - tracklaying special for the installation of the turntable at Emerald - the Climax was the first loco to be turned on the turntable, 18 August - public special to Lakeside, 25 August - woodcut special. A new train - the "Commissioner's Special" - which is currently scheduled to run four times a year features Climax haulage as far as Menzies Creek. The Commissioner's Special, which appears to be open to the public, also features travel in the Mount Lyell cars, morning and afternoon tea served on the train, a visit to the Menzies Creek Museum, a guided tour of the workshops at Belgrave and Emerald, travel over the extension beyond Lakeside, a barbecue lunch at Nobelius Siding, and double-headed train (NAs) on the return journey. A very enticing package at an inclusive cost of only \$25.00! Scheduled dates for 1991 are 2 February and 4 May.

MUSEUM (see LRN 78, p.19): The Silverton Tramway W class locomotive in the Menzies Creek Museum is scheduled to be moved to the Pichi Richi Railway in November.

2 ft gauge Malcolm Moore 4wDM 1013 of 1943 is only awaiting a fuel

injection pump for it to be operational which, it is hoped, will be by Christmas. Stay work is required on the boiler of 2 ft gauge Perry 0-6-2T *Delta* (7967.50.4 of 1950) before reassembly can be commenced. This is a long-term project. The 3 ft 6 in gauge 2-6-0+0-6-2 Beyer Garratt from Australian Portland Cement, Fyansford (Beyer Peacock 6935 of 1938) is being painted in "builder's grey livery". A 3 ft gauge Fowler 0-4-2T formerly of Warburton Timber Co, and later of Mount Morgan Mines, is in the Museum awaiting restoration. It is privately owned, and has passed through a few partnership ownerships since leaving Walhalla in 1982.

Putting the Museum at Menzies Creek seemed like a good idea at the time it was established. Hindsight has shown otherwise. Potential customers do not like breaking their train journey to visit the Museum. It was proposed to move the Museum to Lakeside, but this idea has now been ditched in favour of Gembrook, where it is intended to reconstruct the timber tramway sidings as part of an operating display.

Frank Stamford 10/90; Bill Hanks 10/90, Peter Medlin 9/90

T.A.C.L. RAIL TRACTOR RESTORATION - PROGRESS REPORT

A Project to Restore the Climax's Little Brother!

(see LRN 73, p.12)

New axle-box brasses have been cast and machined. Various alternatives to the wheel-tyre problem have been investigated, and suitable replacement tyres have been found amongst a job lot of tyres purchased by the ETRB from Australian National (Tasmania). Fitting these tyres is a job for experts, not the TACL team amateurs. Once this is done, re-assembly can forge ahead. Until then opportunities for physical work on the beast are very limited, but fund raising activities over the past six months have brought in about \$1100, mostly through sales of odd railway garbage, and an Auction Night in June.

Donations are still very welcome, and I would like to acknowledge donations received this year from Bill Hanks and R.A. Christie.

In the long term it seems the TACL tractor will become an operating exhibit at the recreated timber tramway exchange sidings at Gembrook, an appropriate and suitable location.

Frank Stamford 10/90

ESSENDON STEAM & OIL ENGINE PRESERVATION SOCIETY 610 mm gauge

Perry 0-4-2T 9737.1.45 of 1945 (ex Millaquin Mill) has been displayed for some years in a display cage at Thompson's Reserve Essendon. Some restoration work had been going on when it was inspected in May, with all

the boiler fittings having been reconditioned and refitted. It is understood that this unit may be moved to Gisborne.

Ian Comrie 10/90

SOUTHERN PENINSULA RESCUE SQUAD HELICOPTER TRAMWAY, Sorrento

Grid Reference : CT027543 Gauge: 2.645 metres approx

The Squad operates a Bell Jetranger helicopter from a site next to The Esplanade, Sorrento. The helicopter is stored in a building adjacent to the helipad. To facilitate movement (shunting?), the helicopter is stored on a flat truck within the shed. A tramway connects the shed with the approximate centre of the helipad 21 metres away.

The track consists of approximately 20 lbs per yard rail set in concrete. The gauge measured at the shed door is 2.645 metres but narrows to about 2.63 metres at the helipad end. (This may be related to the "gauge" of the helicopter.)

When the helicopter is required, the truck is pulled to the centre of the helipad. Take-offs and landings are made directly from and to this truck. The use of the tramway enables the aircraft to be easily manoeuvred by one person (without tearing the rotors off in the doorway!).

Colin Harvey 10/90

SUNRAYSIA STEAM PRESERVATION SOCIETY, Mildura 610 mm gauge

(see LRN 65, p.16)

The Society is hoping to gain access to a disused section of 5 ft 3 in gauge trackbed on which to run Kerr Stuart 0-4-2T 742 of 1901.

MEETINGS:

MELBOURNE: FILMS AND SLIDES

Tramway monarch (of the street variety!) Keith Kings has kindly agreed to again share his extensive movie and slide collection with us. Those who have been priveledged to see Keith's earlier presentations will know that a variety of railway and tramway subjects will be featured some of scenes in the 60s or earlier. Not to be missed!

LOCATION: Ashburton Uniting Church Hall, Ashbum Grove, Ashburton.

DATE: Thursday 14 December at 8.00pm.

SYDNEY:

Any member wishing to know details of the next meeting should call Craig Wilson on 02 4847984

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 7 December at 8.00 pm.

NOTES, CORRECTIONS & COMMENTS

YARRAWONGA PARK & ZOO, Palmerston, NT

(LRN 78, p.11)

The steam outline locomotive at Yarrowonga Park & Zoo, Palmerston, NT is the one that was offered for sale by Ray McKinnon, Daylesford, in 1986 (see LRN 51, p.9).

John Browning 1/91

CHRISTMAS ISLAND STAMP ISSUE

(see LRN 78, p.2)

For one hundred years the mining of phosphate has been a dominating factor of life on Christmas Island. On 13 February, Christmas Island will issue a se-tenant strip of five stamps commemorating the granting of the first mining lease on the island. The stamps show various images of mining and changes in technology over the years. Of particular light railway interest are the 85 cent stamp showing a locomotive and one of the 43 cent ones showing loaded narrow gauge phosphate hoppers.

Australian Stamp Bulletin No. 208 via Peg Hayes 1/91

LRRSA WESTERN AUSTRALIA

On 20 November 90, five interested members met at the State Library in Perth to discuss arranging activities under the LRRSA banner in Western Australia. At this stage, the formation of an official branch is not occurring but it was agreed that a few outings would be arranged in 1991. There are presently 18 individual members of LRRSA in WA and welcome expressions of interest were received from some members unable to attend the meeting. An offer of a possible boat trip to explore the Eclipse Island lighthouse tramway (near Albany) came from one of the more distant members. We hope to involve people of other interests, eg bushwalkers and local historians

in some of our explorations and certainly to seek interest from the rail enthusiast fraternity. We hope that we will be able to stimulate research in light railway history and at least to contribute field reports to Light Railways or Light Railway News. Anyone interested in further information is welcome to contact David Whiteford, 102 Cohn Street, Kewdale, WA 6105, phone 362 1953 (h) or 427 3206 (w).

E.M. BALDWIN & SONS PTY LTD

(see LRN 61, p.5 & LRN 79, p.4)

It is reported that a 38 tonne 610 mm gauge diesel-hydraulic bogie locomotive has been ordered by Invicta Mill, Giru. (Baldwin is a subsidiary of Westfalia Pty Ltd not "Westfailia" as shown in LRN 79).

John Browning 12/90

EIMCO AUSTRALIA LTD, Alexandria, Sydney & Paget, Mackay

(see LRN 76, p.4)

This company delivered a 1067 mm gauge 20-tonne underground diesel hydrostatic locomotive to the Hilton Mine of Mt Isa Mines Ltd during the latter part of 1990. It was allocated builder's number L258 of 1990. The third 610 mm gauge bogie locomotive for Marian Mill (L257 of 1990) was delivered in mid-December.

The Eimco branch workshop in Mackay has been busy carrying out a variety of rail work recently. On 12 December, a new cab for Proserpine Mill was noted awaiting outfitting. (Another order for a cab has been received from Inkerman Mill.) In addition, outside was the upside down body/underframe of a yellow 1067 mm gauge mine personnel carrier - Fox 4wDHR B/n 322 ex Cook Colliery, Blackwater. This was derelict when observed at Cook Colliery in April 1983. Enquiries revealed that one similar vehicle had already been rebuilt here and that another was undergoing modifications at Wright's Sheet Metal Works nearby.

On 20 December, the workshop contained the vehicle which had returned

from Wright's Sheet Metal after having had a sheet steel section welded into the body to increase headroom. It was to be fitted with a new diesel engine and hydrostatic drive. The unit previously rebuilt had been returned to Cook Colliery painted yellow and fitted with a large number "1" on the bodyside.

Also present on 20 December was South Johnstone Mill's Prof Engineering B-B DH *Nyleta* (PSL.2501 of 1990), sitting outside without its bogies, which were inside the workshop. This unit was built for Eimco and was also allocated their builder's No. L253. It had been brought down to Mackay for a thorough overhaul following a number of difficulties experienced with it during the 1990 season, stated to be largely due to quality control problems during manufacture. When the overhaul is completed, it is planned to test the locomotive out under load on Farleigh Mill's north coast line.

It is reported that Eimco have put forward to BHP Long Products (Whyalla) a proposal for fitting its six Walkers DH class B-B DH locos with hydrostatic transmission. The main Eimco works are currently sited at Alexandria in Sydney, but there are plans to relocate to Brisbane in the next few years.

John Browning 12/90; Ian Wright (Eimco Australia Ltd)

WALKERS LTD, Maryborough

(see LRN 79, p.4)

It is reported that a 1067 mm gauge Walkers-built Queensland Railways DH-class B-B DH has been purchased by CSR Ltd for refurbishment and regauging to 610 mm for use at Victoria Mill. (These units were 36 tonnes as built, not 26 tonnes as stated in LRN 79.) It is thought that Walkers may carry out this work at their Maryborough works.

John Browning 12/90

FIELD REPORT VICTORIA

SECV GRAVEL SIDING, RUBICON TRAMWAY 610 mm gauge

The SECV hydro-electric scheme at Rubicon was commenced in late 1924 and completed in July 1928. Most of the materials used in the construction of the scheme were brought out from Alexandra on the Rubicon Lumber and Tramway Company's 610 mm gauge line. The equipment for the first dam and power station at Rubicon Falls was transported into place using Clark and Pearce's 1029mm gauge wooden railed tramway, as was the winding equipment for the SECV 610 mm gauge haulage. From this point on, all construction was carried out using the network of SECV 610 mm gauge tramways.

SECV skips on Rubicon Tramway, Thornton.

Photograph courtesy Denys Steinhäuser

Gravel for the concrete dams, aqueducts and for the foundations of the power stations was quarried locally where possible (a photo shows a short incline tramway at Rubicon dam to a quarry on the hillside where a crusher

was powered by an air-compressor to provide gravel for the construction of the dam). River shingle is a good source of gravel when crushed, but the beds of the Rubicon and Royston Rivers consist of large boulders rather than shingle. This is perhaps the reason that the SECV had to look further afield for a source of gravel for the construction of the power stations at the lower end of the system.

Alexandra resident Ernie Le Brun commenced work in the Rubicon Forest in 1927, and went on to become "bush-boss" for the Rubicon Lumber and Tramway Company. After World War II he was in charge of all non-electrical maintenance on the SECV system at Rubicon, including the tramway system. Ernie recently pointed out the remains of a little-known and short-lived siding used by the SECV to collect shingle from the bed of the Goulburn River near Thornton.

The formation of most of the siding was obliterated when a new road bridge was built over the river to replace the original bridge which carried both road traffic and the tramway. The approaches to the new bridge on the southern bank are higher than the old road, and the site of the tramway junction is now buried under a metre high embankment. To the east of this embankment is what appears to be a shallow cutting leading to a sizeable and definite embankment. This embankment leads down to a broad shelf of shingle, where the formation could be followed for a short distance before the effects of periodic high levels in the river have erased all traces. The arrangement at the terminus of the siding could not be determined.

A photograph exists of one of the Rubicon Lumber and Tramway Company's Krauss locomotives hauling a train of fifteen SECV side tipping skips along the Thornton-Taggerty Road at Thornton, presumably heading to the Goulburn River for another load of shingle. When full, this load must have presented quite a challenge for the tiny 0-4-0WT due to the steep grades on both the gravel siding and sections of the line between Rubicon "A" and Lower Rubicon power stations. It is believed that the Goulburn River gravel siding was dismantled shortly after the SECV hydro-electric scheme was completed in 1928.

Peter Evans 1/91

SIGHTINGS

On Tuesday 27/11/90, a large low-loader was observed heading north on the old Pacific Highway at Mt Colah at approximately 6.55pm. The trailer conveyed a narrow gauge diesel locomotive with "off-set" cab, very similar in outline to the locomotive shown on page [1 or 16] of LRN 78.

The locomotive was almost completely covered by tarpaulins, only the bogies and other details below footplate level were visible. A small gap in the tarpaulins revealed the bodywork to be painted a darkish green. The area below footplate level was painted shiny black - apparently brand new!

Can any reader assist with positive identification of this locomotive?

Wal Lane 12/90

RESEARCH

An ACT member has written asking for assistance with a modelling project he currently has underway. He would welcome any information on VR narrow gauge logging trucks/wagons, perhaps a plan or dimensional sketch or even a photograph or photocopy of an article. He will gladly pay costs and postage. If anyone can help, please contact Charles R. Schuster, 10 Pickworth Street, Holt ACT 2615.

Editors 12/90

BOOK REVIEW

COME MIDNIGHT MONDAY- by David Burke (1981, Ashton Scholastic, Sydney)

The re-opening of an abandoned tramway is an unusual event. Exciting news. The "Winnawadgery Tram" was no exception. Conflict cradles the proposal . Proponents of light rail on the one side, and vested interests behind (environmentally disastrous and socially divisive) road transport on the other. A group of young enthusiastic and idealistic valley children, are pitted against hard nosed, greedy and violent, self-centred city adults. The proposal is no new tourist railway, but for the haulage of ore from an "Oxfium" mine in the hills down the valley to river port.

This is an easily read children's novel, set around the re-opening of an old Council Tram (probably of 2 ft 6 in gauge, seemingly in Victoria's South East ranges). I recommend the book to those interested in narrow gauge, preservation, and as a present for children (late primary, 10-13 year olds).

Jim Longworth 12/90

NEW SOUTH WALES

KIZACO ENGINEERING PTY LTD, Broken Hill

This company now carries out major maintenance on Pasminco's locomotive fleet. Four battery electric locomotives were seen here on 12 November, all completely dismantled, but the gauge of each was not noted:

Running No.	Type	Builder	Battery Box No.	Solid State Controller No.
ZGM18	4wBE	Gemco?	BL901	SS8-1606
ZGM22	4wBE	Gemco?	-	
D4	4wBE	Gemco?	ND01

R.J. Graf 11/90

PASMINCO LTD, Broken Hill 458 mm, 610 mm, & 915 mm gauge

(see LRN 74, p.8)

Operations at Broken Hill between the South Operation (formerly the ZC Mine) and the North Operation (formerly the North Mine) are being consolidated. Most of the ZC mine buildings have been removed and the area is to become an open cut.

A major auction of plant was held on 14 November as advertised in the Sydney Morning Herald. An inspection was carried out on 12 November and the following items were observed:

Lot No.	Running No.	Gauge	Type	Builder	Battery Box No.	Solid State Controller No.	Notes .
To be auctioned, Southern Operation (ZC Mine)							
76	-	915 mm	2-2wBER	?			(1)
To be auctioned, Northern Operation (North Mine)							
129	BGM2	610 mm	4wBE	Gemco	BGL48	SS8-1487	
129A	BGM12	610 mm	4wBE	Gemco		SS8-14??	(2)
129B	ZGM6	610 mm	4wBE	Gemco		SS8-????	(2)

	9C	?	4wBE	Gemco ?	-	(2)(9)

Notes :

- * controller cover only
- (1) inspection car - chain drive
- (2) two motors
- (3) one motor with cardan shaft drive
- (4) 3.5 ton loco? (in 1989 auction)
- (5) builder's number 62465-66/3/61
- (6) 8 ton loco. Builder's number 2259/60/162/77
- (7) battery box painted "LEVEL 22 - GHOST TRAIN". Loco originally in sale as Lot 131C but taken out as solid state controller was wanted elsewhere. (Battery box never in sale)
- (8) no battery box; near pithead
- (9) located behind former maintenance building

Also included in the auction were approximately 100 Granby Cars, 610 mm and 915 mm gauge (Lot numbers 189-289), about five concrete kibbles, a number of loaders and various miscellaneous rail vehicles.

At the Northern Operation site, 46 additional battery boxes were seen near the former maintenance plant. Also seen were a number of eight-wheeled battery box carriers, one of which was powered (2-4w-2BE). This unit had flangeless end wheels and was named THE GREEK CORVETTE. At the Southern Operation site, only one battery box was seen, and no locomotives.

All loco maintenance is now done by outside contractors, Kizaco Engineering Pty Ltd (see previous item).

Ray Graf 11/90; Pasminco Ltd Annual Report 1990 via R.G. Graf

QUEENSLAND

RON AUBREY, Eumundi Range Railway 458 mm gauge

Mr Aubrey has obtained a lease over a 2 km section of the old QGR north coast line formation in the Eumundi (Blackall) Range and intends to build an 18 inch gauge railway on it. He plans to build a diesel-hydraulic locomotive using some components from Gemco 1.5 tonne "trammer" 4wBE locomotives acquired some years ago from Peko-Wallsend Operations, Warrego Mine, Tennant Creek NT (see LRN 78, p.11).

The line is intended to support children's charities and/or Christian based programmes for children in need, and it is hoped to involve underprivileged and disadvantaged young people in construction and operation.

Rail, including points, sufficient for a 2 km main line with two loops and two sidings is being sought, in weights from 14 lb to 25 lb, together with wheelsets of 12 in diameter or less. Anyone able to assist should contact Mr Aubrey at Main Camp Road, Eumundi 4562 (074) 42 8032.

Ron Aubrey 10/90

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610 mm gauge (see LRN 78, p.12)

Work has been completed on the rebuilding of the cab and tender of Hudswell Clarke 0-6-0 *Melbourne* (1701 of 1938). About the front one third of the tender frames have had to be replaced, and as the frames had been seriously buckled in a collision at one time or another, they also had to be straightened. Areas of the tender floor had been replaced and some holes patched. Cab parts have been completed and the roof sections were to be rolled to shape before assembly commenced. At Woodford, the boiler is being prepared for testing.

Workshop building construction has advanced with the erection of the uprights and the installation of the overhead crane.

The Durundur Railway will be operating on the following days in 1991 from 11 am to 4 pm: 20 January, 17 February, 10 & 24 March, 7 & 21 April, 5, 12, 19 & 26 May, 2, 9, 16, 23 & 30 June, 7, 14, 21 & 28 July, 4, 11, 18 & 25 August, 8 & 22 September, 6 & 20 October, 10 November, 8 December.

*Durundur Railway Bulletin 10/90, 11/90, 12/90
via John Browning*

BABINDA SUGAR LTD, Babinda Mill 610 mm gauge

(see LRN 77, p.11)

The new 6-ton bins are numbered in the 6000 series and are constructed

jointly by Boogan Implement Co, Mourilyan Mill and Babinda Mill. It is anticipated that an additional 300 of these bins will be assembled at Babinda for the 1991 season, half for Babinda Mill and half for Mourilyan. It is understood that a new bogie locomotive, to be built by the Bundaberg Foundry, will be delivered in 1991. In addition, 3 km of track is to be relayed.

*David Blakeley 11/90; John Browning 12/90
Innisfail Advocate 24/11/90 via David Blakeley*

BUNDABERG SUGAR LTD, Fairymead Mill 610 mm gauge

(see LRN 78, p.13)

The E.M. Baldwin bogie locomotives do the longer runs on this system, with the 0-6-0DH locos working closer to the mill, some starting out at 6 am, rather than the more usual 8 am. On the day shift in November, B-B DH Millaquin Mill 2 (E.M.Baldwin 6104-1-8-75 of 1975), on loan to Fairymead for the 1990 season, was working to Moore Park, two trips per shift. Two locos were working beyond Moore Park, over the new Booyan bridge near the Kolan River estuary. B-B DH 80 (E.M.Baldwin 8988-1-6-80 of 1980) was working to Littabella, the northern extremity of the system, one round trip per shift. B-B DH 82 (E.M.Baldwin 10048-1-6-82 of 1982) was working to Bucca in the west, one round trip per shift. This loco can bring 20 full bins at a time down Bucca Mountain. The former link to the Bingera system across the Kolan River at Abbotsford (on the former Bingera Invicta tramway) has been closed for some time. Clyde 0-6-0DH 55 (DHL.6 of 1954) was noted busy working on the Fairymead Estate lines and on the Qunaba ferry shunt.

Greg Morris 11/90

BUNDABERG SUGAR LTD, Mourilyan Mill 610 mm gauge

(see LRN 77, p.11)

Three large riveted steel bridge sections arrived at the mill in October, and it is thought these were purchased from the QGR Mount Morgan line. There is speculation that these materials will be used to construct a bridge across the South Johnstone River, either replacing the ex Innisfail Tramway Queensland Bridge on its current site, or on a new site behind the mill, connecting with a former Goondi Mill line at Wangan. It is reported that only about 2 km of track will be upgraded this slack season.

The new large bins are known as "jumbos" by mill staff and hold 6 tons each. The underframes for these bins are constructed by the Boogan Implement Company (see LRN 77, p.4). Steel for the superstructure is cut and punched by Mourilyan Mill and final construction is done by Mourilyan and Babinda Mills. Mourilyan appears to have received at least 150 bins numbered in the

7000 series during 1991 with another 150 (to be assembled at Babinda) to be added for the 1991 season. The jumbo bins have been used by relatively few large cutting groups, mostly in the original Mourilyan Mill area, which have the appropriate cane loading equipment.

Motor Rail 4wDM 3688 of 1924 has been partially reassembled and placed on an isolated piece of track near the mill entrance near derelict Malcolm Moore 4wDM 1001 of 1943.

At Goondi Mill site, much clearing up has been done with the main mill building largely demolished and the sugar bin and tippler the main fixtures remaining. However, some local controversy was caused when a quantity of old cane trucks, bin components, wheelsets and portable track from the Goondi Mill site was dumped near the south bank of the North Johnstone River where the tramline crosses from Mourilyan to Babinda territory, in an attempt to minimise flood erosion of the tramway formation.

Following the ending of the crush at Mourilyan, about 150 ex-Goondi Mill bins were painted with a blue cross and then taken over to Babinda on loan. They were returned to Mourilyan at the end of the Babinda crushing season.

*David Blakeley 11/90; Innisfail Advocate
15/11/90 via David Blakeley*

GIBSON & HOWES LTD, Bingera Mill 610 mm gauge

(see LRN 78, p.14)

Three locos continue to be based at Wallaville. Com-Eng 0-6-0DM locos *Sharon* (A1935 of 1959) and *Thistle* (A1207 of 1955) work ex Gin Gin Mill lines around Wallaville while the Ruston & Hornsby/E.M.Baldwin 0-6-0DH

(E.M.Baldwin 6-2179-1-6-67 of 1967) works the three cane transshipment points in the old mill yard on day shift.

Locotrol trains were operating between Bingera and Wallaville on the afternoon and night shifts. E.M.Baldwin B-B DH *Oakwood* (5800-1-5-75 of 1975) headed out from the mill shortly after 4 pm each day with up to 117 empties between it and sister loco *Givelda* (5800-2-6-75 of 1975) at the rear. The lead loco is manned by two drivers and the train proceeds direct to Wallaville. On arrival at Wallaville, *Oakwood* coupled up to 35 fulls behind and 65 in front and the crew then transferred to *Givelda* which was placed at the head of the rake to lead back to the mill. At the start of the day shift, these two locos worked separately to Wallaville and return. There is a very high bridge shortly out of Wallaville, and two severe climbs face the loaded trains on this ex-QGR route, between Drinan and Weithew, and between Bungadood and Goondoon.

Greg Morris 11/90

HAUGHTON SUGAR CO LTD, Invicta Mill, Giru 610 mm gauge

(see LRN 75, p.7)

Two Northcote farms in the Burdekin Irrigation area were auctioned in August, and it was stated that an undertaking had been given that tramline extensions to new farm areas would be undertaken in the future. It is understood that a 38-tonne bogie diesel locomotive has been ordered from E.M. Baldwin & Sons for delivery in the 1991 season.

Mackay Daily Mercury 31/7/90 via John Browning;

John Browning 12/90

ISIS CENTRAL MILL CO. LTD 610 mm gauge

(see LRN 79. p.11)

This mill tramway system has had big money spent on it, bringing it up to mini-mainline standard. Cane now arrives at a new large capacity five-track reception yard, and a double-track main line (left hand running) climbs from the mill to Cordalba Hill on a horseshoe curve. At Cordalba Hill is an underpass and deep cuttings, and there are a number of remotely-controlled points between here and Kowbi with colour light and strobe light point indicators. Siding accommodation is substantial. The line from Kowbi through Childers to Doolbi runs on former QGR trackbed, and the circuitous former tramway route, part of which once served the old CSR Childers Mill, has been abandoned. However, even the new line has several stiff climbs, both with and against the load. E.M.Baldwin B-B DH 10 (7267-1-6-77 of 1977) paired with Hexham bogie brakewagon 663 of 1986 was working the Farnsfield line, and E.M.Baldwin B-B DH 11 (10130-1-6-82 of 1982) paired with Hexham bogie brakewagon 684 of 1987 was working the Goodwood line. These radio-controlled brakewagons are fitted with a "pronger" device at the rear, two steel feet which drop down and dig into the trackbed to halt any breakaway. 24-tonne Clyde 0-6-0DH 9 (75-812 of 1975) paired with connecting-rod fitted E.M.Baldwin brakewagon 3 (10278-1-5-82 of 1982) was noted on the Childers run during the day shift. This loco was seen splitting its rake of full bins on the homeward run to negotiate the steep section west of Childers.

There are reports that Isis Mill is considering the purchase of a regauged ex-QGR DH class loco for the 1991 season.

Greg Morris 11/90

MACKAY CITY COUNCIL

The Mackay City Council sanitation depot now disposes of night soil for just two homes, which will go onto a septic system in the next few months. The

depot has a sophisticated disposal system using a rail track upon which runs a bulk hopper rather than the more usual system where each can is tipped into a trench, and is believed to date from the opening of the depot in 1962.

Mackay Daily Mercury 8/12/90 via John Browning

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 79, p.11)

Cattle Creek Mill, Finch Hatton, crushed its last cane on 8 November. The mill is to be dismantled and its equipment relocated to other mills in the group, or else disposed of. The mill tramline system is to be connected with that of Marian Mill. All locomotives have been absorbed into the Marian Mill fleet with the exception of Com-Eng B-B DH *Finch Hatton* (NA59112 of 1977) which was transferred to Farleigh Mill at about the beginning of December.

Very substantial track works are proceeding between Gargett and Uruba. The former QGR line between these points is being rebuilt to 2 ft gauge in order to interconnect the Marian and Cattle Creek systems. Most of this 8 km section has been removed completely in order to regrade the trackbed and replace culverts, but in two short sections west of Tannalo and west of Pinnacle, the 1067 mm gauge track has been regauged by moving the southern rail. However on these sections as many as one third of the sleepers need to be replaced. A 1.3 km section at the end of the old Cattle Creek line to Pinnacle, which runs parallel to the old QGR line, is to be retained as a branch. Another short branch of about 1 km is being constructed running south from Gargett station. At Uruba, a triangular junction to the old Cattle Creek tramway is being built, while to the west of Uruba, a section of the old QGR line has been removed. At Finch Hatton, large numbers of pegs in the old QGR yard indicate the likelihood of this area being relaid as a tramway yard. At Cattle Creek Mill, SimsMetal were at work in mid December breaking up old bins.

The third new Eimco B-B DH loco arrived at Marian Mill early in December. This carries builder's number L257 and is numbered 18, while number 19, delivered late in October, carries builder's number L256. It is believed that the first to be delivered, L255, will be numbered 20. During early November, locotrol trials with substantial train loads were conducted between Mirani West and Marian in preparation for its full scale use between Finch Hatton and Marian in the 1991 season.

Slack season track work has meant that certain items of track machinery have been moved between mills. Late in December, Racecourse Mill's ballast regulator (Tamper 1775577 of 1977) was noted at North Eton (Pleystowe Mill) while Marian Mill's sleeper renewer (Tamper 825998 of 1988) was noted

at Finch Hatton. Also seen at North Eton was the second KMX-12T ballast tamper to be delivered this year to Mackay Sugar, Plasser 376 of 1990. This unit is intended for the use of Pleystowe and Racecourse Mills.

Following the end of the crushing season, the low-level Marian tramway bridge was dismantled, and work began to complete the section of the new road and rail bridge which on the north bank is being built on the old tramway formation. The rail section of the bridge will be on the west side, separated from the roadway. Meanwhile it has been announced that work on a new high level Balnagowan bridge, also for road and rail use, will commence during 1991. This bridge will replace the existing low level Balnagowan road bridge and Pleystowe tramway bridge, about 1.7 km downstream from it. The bridge will be required because of the heightening of Dumbleton Weir downstream. Meanwhile at Pleystowe, the present empty bin yard is being extended to hold 400 bins. This is necessitating extensive road works and moving the main entrance of the mill from its current position.

At Farleigh Mill, the cab of Clyde 0-6-0DH *Seaforth* (61-233 of 1961) has been removed for replacement. This is the last of the Farleigh Clyde locos to have retained its original cab.

Further study has been done by Mackay Sugar to analyse the tramway of each mill, its transport scheduling, and its bin and loco fleet. This may lead to further rationalisation of locomotive allocations.

John Browning 12/90; Len Heaton 11/90; Mackay Sugar 12/90

MILLAQUIN SUGAR PTY LTD, Millaquin Mill, Bundaberg & Qunaba 610 mm gauge

(Millaquin Mill -see LRN 78, p.15; Qunaba - see LRN 62, p.14 & LRN 71, p.11)

Still in Fairymead Mill livery, B-B DH E.M.Baldwin 73 (4983-1-7-73 of 1973) was noted on the Elliott run, the south-western extremity of the Millaquin Mill tramline system, in November. It is reported that E.M. Baldwin B-B DH 731 (5317-1-11-73 of 1973) may be transferred to the old Qunaba Mill site for the 1991 season when 2, the Millaquin E.M.Baldwin bogie loco currently on loan to Fairymead (6104-1-8-75 of 1975) is returned to Millaquin. Locos at Qunaba haul Fairymead cane in the old Qunaba Mill area to the Burnett River ferry terminal. This was operating continuously for six and a half days from 8 pm on Sunday to 8 am Sunday.

*Greg Morris 11/90; Sunshine Express
11/90 via John Browning*

MORETON CENTRAL SUGAR CO LTD, Nambour 610 mm gauge

(see LRN 71, p. 15)

The section of track between Howard Street yard and the mill sees very intensive traffic. Each train of fulls arriving at Howard Street yard to the east of the town is broken up into rakes of about 50 which are taken up the centre of Howard Street and across Currie Street to the mill. In this street tramway section, each rake has a loco front and rear, with the push-up loco usually E.M.Baldwin B-B DH *Coolum* (5565-1-10-74 of 1974). This unit normally works three shifts a day between the mill and Howard Street yard only. It frequently takes empties to Howard Street yard and works the water sprinkler as well as handling the bins which come to Howard Street Yard by road.

The mill system has 48 bridges, six of which were repaired last slack season, mainly in timber. Concrete pipes are installed where possible as bridge timber life expectancy may be as little as seven years in this district .

Greg Morris 11/90

MOUNT MORGAN MINES LTD

(see LRN 7, p.8)

A total disposal auction held on 27-29 November marked the cessation of mining operations at this historic site. (It is believed that all rail operations finished some years ago - Ed.)

Sydney Morning Herald 27/10/90 via Ray Graf

PIONEER SUGAR MILLS LTD, Inkerman Mill 610 mm gauge

(see LRN 62, p.13)

Four Leichhardt Downs farms in the Burdekin Irrigation Area were auctioned in August, and it was stated that an undertaking had been given that tramline extensions to new farm areas would be undertaken in the future. A new diesel locomotive cab is on order from Eimco

Mackay Daily Mercury 31/7/90

via John Browning; John Browning 12/90

PLANE CREEK CENTRAL MILL. CO. LTD, Sarina 610 mm gauge

(see LRN 79, p.14)

It is reported that a relocation of the mill tramway north of Sarina to cross the QGR by means of an overpass is planned for the start of the 1991 season. This is likely to involve major engineering works and diversion of the tramline, which serves all areas south of Plane Creek. The advantage of an overpass is that it will significantly reduce congestion and delays caused to tramway operations when QGR trains operating in the vicinity of Sarina Station prevent

use of the current tramway/railway crossing. Boom gates will be constructed in Central Street and Anzac Street to protect the tramline, QGR main line, and a QGR passing loop under construction through the town.

Mackay Daily Mercury 18/9/90 via John Browning

QUEENSLAND PIONEER STEAM RAILWAY, Swanbank 1067 mm gauge

(see LRN 75, p.9)

Small Perry contractor's 0-4-2T loco *Kilrie* (265 of 1927) made its public debut recently, banking passenger trains from Box Flat to Swanbank. The locomotive has been converted back to coal firing and a bunker extension has been fitted to accommodate more coal. The original Perry short smoke stack has been restored. The loco is painted dark green with red trim. No air brakes have been fitted as yet, so *KILRIE* cannot handle passenger trains alone.

Durundur Railway Bulletin 12/90 via John Browning

ROCKHAMPTON CITY COUNCIL, Kershaw Gardens, North Rockhampton 1067 mm gauge (see LRN 67, p.10)

Several hundred yards of track were laid to enable the Purrey steam tram to operate for the second anniversary of the Kershaw Gardens at the end of September. The track runs parallel to the main Bruce Highway, and it is said will eventually circuit the gardens. The tram is normally stored away from the North Rockhampton site .

John Browning 10/90; Sunshine Express 12/90 via John Browning

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 79, p.15)

Prof Engineering B-B DH *Nyleta* (PSL.2501 of 1990) was observed out of service early in November on shop bogies with its own bogies nearby. By mid-December it had been brought down to the Eimco workshop in Mackay for a complete overhaul. It is believed that as a pioneering hydrostatic transmission locomotive, it is covered by Eimco with a three year warranty. The proponents of hydrostatic transmission for locomotives argue that it is intrinsically more efficient than the conventional torque converter.

A new double bin tippler is to be installed at the mill for the 1991 season, and associated work will include a new weighbridge and traffic office as well as alterations to the full yard. The Liverpool Creek bridge at Silkwood, currently limited to 24-tonne locomotives, will be strengthened to a 40-tonne standard by local firm Tedesco Engineering.

TASMANIA

EMU BAY RAILWAY CO LTD 610 mm gauge

(see LRN 75, p.10)

According to the Pasminco 1990 Annual Report, "The combined tonnage hauled and the tonnage shipped via the EBR system during the year increased by about 28% over the previous year. Significant expenditure was incurred on the main line track with the start of a five year plan to replace wooden sleepers with steel sleepers and the older railway bridges with modern structures.

The EBR have purchased two surplus 70-class diesel hydraulic locomotives from NSW State Rail, and these have been stripped in NSW for parts, engines and transmissions. The engines are Caterpillar V12s, and it is expected that EBR B-B DH 1004 (Walkers 641 of 1970) will be re-engined to bring it in line with the rest of the class, which have previously been re-engined.

CARNARVON LIGHT RAILWAY ASSOCIATION INC, Carnarvon 1067 mm gauge

(see LRN 74. p.14)

As at December 1990, the boiler of Andrew Barclay 0-4-0T 1754 of 1922 *Kimberley* was at Bunnings Timber Mill, Manjimup undergoing full restoration to working order. It has already passed a hydraulic test and although only needing 6 crown stays replaced, all are going to be done. The frame is almost fully restored and can be towed out of the group's shed at the former satellite centre by restored Simplex 4wDM 9096 of 1955. Jarrah wood window frames are to be installed in the Simplex cab. Continuous brake will have to be put on both locos and this is now being investigated with a Bagnall prototype likely to be used for *Kimberley*.

The group is hopeful of obtaining powers to relay the old jetty - town track with possible extensions.

Dr Mike Thomas asks anyone who has a strong interest in Barclay steam locomotives to contact him with the hope of exchanging knowledge, ideas, etc. useful for locomotive restoration. Please write to Mr W.M.C. Thomas at PO Box 417, Carnarvon. WA 6701.

Mike Thomas; David Whiteford 12/90

DENHAM 1067 mm gauge

In December 90, one of the two 4-wheel jetty trolleys was upside down in the sea at the end of the jetty. The other, with three Great Southern Railway axle boxes, was derailed and doesn't seem to receive any use along the short stub remaining of the former long jetty. A personal approach is being made to the Shark Bay Shire Council to urge preservation of the remains of the jetty railway and, therefore, the last such non-loco public jetty line to exist in WA's north.

David Whiteford 12/90

GLADSTONE 610 mm gauge?

Gladstone, at the top of Hamelin Pool and approx. 130 coast km south of Carnarvon, existed as a port for wood and other pastoral industry traffic in the late 19th/early 20th centuries. A long jetty with a tramway leading from a shed on the shore served the lighters. The skeleton of the jetty and foundations of the shed remain while a stone causeway connects the two. Rail from the tramway is scattered around the area with many badly corroded lengths finding use as frames for tents used by campers at the Carnarvon Shire Council controlled site.

David Whiteford 12/90

HOTHAM VALLEY TOURIST RAILWAY (WA) INC. 1067 mm gauge

(see LRN 63, p.14)

Tasmanian Get-Together! Photographed at Hotham Valley's Dwellingup depot in November 1990, ex Tasmanian Railways Drewry Diesel Mechanical locomotives V4 and V5.

Although they arrived from Tasmania together in November 1986, the 2 units had, until November 1990, been separated - V5 helping to work H.V.R.'s Dwellingup-Etmilyn Tramway service, while V4 at Pinjarra served as loco depot shunter following mechanical repairs.

The move to Dwellingup for V4 took place following the break-down of the third locomotive of this type, ex State Energy Commission unit. SEC 1.

Len Purcell 1/91

KEITH WATSON AND OTHERS, Perth 610 mm gauge

This group have acquired Perry 0-4-2T *Adelaide* (8967.39.1 of 1939) from Arch Dunn Memorial Park, Home Hill, Qld, where it was placed about 1966. This particular loco was built for Inkerman Mill as a copy of a Hunslet design. Permission to remove the locomotive was obtained from the Home Hill Rotary Club, the Burdekin Shire Council and Inkerman Sugar Mill. It is understood that it was removed in October. It may be necessary to replace the locomotive's boiler for it to be returned to running condition.

12/90; John Browning*

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION

Bennett Brook Railway, Whiteman Park 610 mm gauge

(see LRN 78. p.19)

A new diesel locomotive is under construction, based on a ballast regulator believed to have been obtained from WAGR.

The car rally day on 23 September was a very busy one for the railway with three passenger trains in service for the first time

Ex-WAGR distillate tanker JOA 12051 has been converted to 610 mm gauge and will become a water tanker, although it will be painted in the Shell colour scheme. A replacement cab front plate has been made for 2-6-2 NG 118 (Henschel 24476 of 1938) and a new cylinder casting has had to be manufactured for this loco. As the boiler received an overhaul as recently as 1978, it is hoped that this unit can be put into service soon. This will enable 2-6-2 NG 123 (Franco-Belge 2670 of 1951) to receive attention, including repairs to the foundation ring.

The boiler of Orenstein & Koppel Mallet 0-4-4-0T 2609 of 1907 is receiving attention from Western Mining at Kwinana. The cutting of tubes for fitting in this boiler has been done at Whiteman Park.

NOTES, CORRECTIONS & COMMENTS

YIELDEX PTY LTD, Liddell Coal Mine, Ravesworth 1067 mm gauge

(see LRN 78, p.9)

Craig Wilson points out that E.M. Baldwin 4wDH No.3403 *Monica* almost certainly is NOT B/n 2426-3-7-69. A unit bearing builder's number 2426-3-9-69 was at Hexham in August 1989 (LRN 72, p.7) and did not carry the other identifying notations mentioned. Craig suggests that the loco with builder's number 2426-3 may have been *Monica* at some time but that if so exchange of identity subsequently took place.

"SIGHTINGS"

(see LRN 80, p.6)

The locomotive seen at Mt.Colah on 27 November would have been Marian Mill's third Eimco B-B DH loco numbered 18 (L257 of 1990) which arrived in Mackay a few days after it was seen in Sydney (see LRN 80, p.12).

BOOK REVIEW

"A JOURNEY TO DESTINY" by John McNeill, AO, OBE.

1990 Australian Cement Limited, 64 pages, Card covers and Hardback. 11" x 8" glossy, photos, etc.

In the tour notes issued for the Society's Geelong & Queenscliff trip last year, it was mentioned that a centenary book from ACL was in the pipeline

(or "on the conveyor belt"!)). The wait has been worth it. This fine book, published by Australian Cement Ltd will be of interest to many industrial railway enthusiasts as it deals mainly with ACL's Fyansford cement works near Geelong.

For over seventy years, ACL and its predecessors made use of internal tramways and railways to transport limestone from their various Batesford quarries to the Fyansford cement works, three miles away. Commencing in the early 1890s with a horse-drawn tramway from the quarry to the nearest public road, this was followed by an aerial ropeway (1912-1931) fed at first by a network of narrow-gauge hand-pushed lines in the old quarry and later by steam locos from c.1923. Finally in 1931, a railway connecting the new quarry to the works commenced operations. This line ceased operations in 1966, being superseded by a conveyor belt.

The book is divided into eight chapters; the first two tracing the early (1799-1889) history of the McCann family (the driving force behind the company) and the events that influenced their final settling near Geelong. Chapter three looks briefly at the early years of the cement industry in Australia whilst the next four chapters are divided 1890-1912, 1912-1924, 1924-54 and 1954-1990, each chapter representing a change in cement manufacturing technology at Fyansford. The last chapter looks to the future (as any company must) and examines its place in the environment together with social and economic aspects. A nice selection of photos round out each section

This book is no company "puff". Its author, an employee for 47 years, commenced as an Industrial Chemist and retired as Executive Manager Special Projects. In his "spare" time he served in the CME, later the Army Reserve, for 30 years rising to Inspector General. One may quibble about lack of references or photo credits, however being a company book, company records almost certainly are the principle source of material although a bibliography would have made fascinating reading.

Die-hard steam fans need not bother obtaining a copy as loco photos are merely rescreened copies of familiar shots and hard loco information scarce. However, people who look beyond trains to the industry they served will find this a most interesting book and the Company must be heartily congratulated on publishing this work in what are tight economic times. It is well presented and very readable and interested persons may be able to obtain a copy from ACL's Head Office in Melbourne.

(Reviewer's copy courtesy of Mr Fred Dolder)

PFR 2/91

FIELD REPORT - VICTORIA

TRAMWAYS OF MT MACEDON - PART 2

(see LRN 77, p.5)

BARBER'S TRAMWAY AND CHUTE

Background:

Some unpublished notes made by Mr A.W. Grainger, Inspector of Forests, in 1933 refer to a chute, more than 3/4 of a mile long, on the western side of Mt Macedon. This chute, known as Barber's Chute, was said to be operational about the 1850s and was used to feed Barber's sawmill. (FCV file 33/2542)

Forests Commission survey plan OP.144 of 1922 shows an "old tram formation" near the head of Barber's Gully. An attempt to locate this tramway before the 1982/83 fires was unsuccessful.

A mill site near the foot of the mountain is shown on Lands Dept plan N60 of the Parish of Newham. This mill was located on allotment 22A which was owned by Robert Barbour (note different spelling).

Field Report 1983:

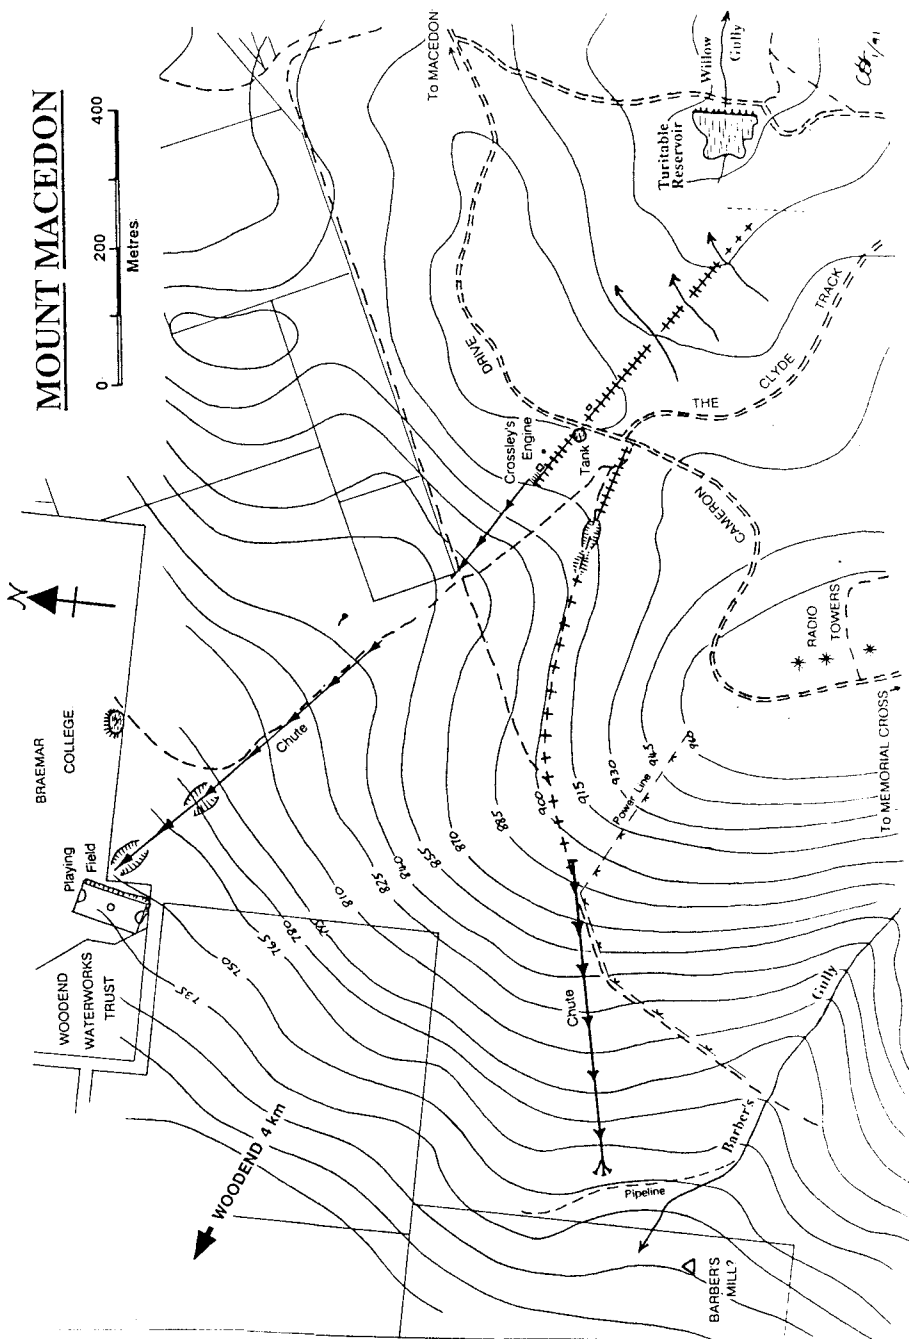

Following the fires, the formation of the tramway shown on the Forests Commission plan was easily located near the intersection of the Clyde Track and Cameron Drive, Mt Macedon (Grid Ref. BU858610). The formation at this point was so clear it was possible to measure remaining sleeper impressions (length 2.5 m at a spacing of about 0.8 m).

The tramway probably extended to the south-east beyond Cameron Drive along the route of the Clyde Track.

Beyond about 150 m west of Cameron Drive, the tramway has been converted to a vehicular track. At this point the formation descends on a fairly steep grade through a cutting about 1.5 m deep in rock. The cutting is immediately followed by an embankment.

The formation continues around the side of the mountain on a slightly descending grade to the top of a chute - presumably Barber's Chute (Grid Ref. BU850610). The vehicular track leaves the route of the chute just below its upper terminus. From this point the chute remains as a depression about one metre wide which is easily followed as it steeply descends the western face of the mountain. There are some remaining impressions of the positions of the poles on the lower section.

The chute ends, without much reduction in grade, in a "three-way junction" just before the edge of the forest. The mill site was located on adjoining

private property (site evidence suggests that it was on the opposite side of Barber's Gully). If the logs went to this mill it is not clear what method of transport was used.

CROSSLEY'S (?) TRAMWAY AND CHUTE

In addition to the mill site on allotment 22A, Lands Dept plan N60 shows the route of a tramway 44 chains long feeding a "shoot" 50 chains long. The point of transition between tramway and chute is marked "Crossley's Engine". (William Crossley was operating the "Victoria Steam Sawmills" in 1863 - comment from Barney Hutton, Macedon historian.)

Field Report 1983:

The remains of the chute were found after traversing the steeper part of the north-west face of the mountain for some distance - the actual location is to the south-west of the route shown on the Lands Dept plan.

The upper section of the chute starts on the north side of a log yard at the terminus of the tramway and descends initially very steeply but then eases to quite a shallow grade. The route at this point is not clear and there may have been another intermediate log yard here. There is some evidence of another, less well defined (earlier?), route of the upper section slightly to the south and on an alignment matching the lower section.

Below the relatively level area, the chute becomes very clear. To maintain the grade, several cuttings are used with sections packed with rocks between them. Numerous steel pegs and bolts were still in place along this section. The chute can be followed until the grounds of Braemar College after which the route has been destroyed by the construction of playing fields.

The tramway-starts from the south side of the log yard at the head of the chute; about 150m from Cameron Drive (Grid Ref. BU858611). Thirty metres from the start is a depression (2.5 m x 10 m) on the north side of the line which is probably the site of the engine. Sleeper impressions were evident along this section.

At the approach to Cameron Drive a concrete water tank has been constructed on the formation (the north side of the tank is on the tramway centre-line. The summit of the tramway is reached 30 m east of Cameron Drive. On the north side at this point is a possible hut or winch site (1.5 m x 3 m).

The formation descends on a shallow grade in a straight line crossing three small creeks before being obscured by ground disturbance at the Turitable Reservoir fence.

Colin Harvey 2/91

NEW SOUTH WALES

AUSTRALIAN PIONEER VILLAGE, Wilberforce 610 mm gauge?

This tourist attraction near Sydney features a short circuit of track of approximately 2 ft gauge with a steam outline 4-4-0 internal combustion loco numbered U 105, which is a reasonable copy of the NSWGR Baldwin of the same number. There are three bogie carriages. There are two substantial bridges on the line and the station is the goods shed from Kurrajong on the now abandoned Kurrajong extension line.

Craig Wilson 2/91

BHP LTD, Newcastle 1435 mm gauge

(see LRN 61, p.11)

On 2 June 1990, the Newcastle Steelworks celebrated its 75th anniversary with an Open Day, which included the running of inspection trains. In charge of these trains on the day was Goninon Bo-Bo DE 57 (057 of 1982) in a new livery of yellow with a dual black stripe on the hoods and black bogies and underframe.

Rail Australia No 17 via John Browning 3/91

BHP LTD, Slab & Plate Div., Port Kembla 1435 mm gauge

[Heading corrected in CD-ROM edition, originally read "Sheet & Coil Div."]
(see LRN 77, p.9)

Bo-Bo DE D37 (GEC Australia A238 of 1971) did not emerge as expected in the garish yellow, white and charcoal green livery given to D32 (Bo-Bo DE English Electric Australia A.088 of 1964). The new livery was apparently not appreciated by management (understandably). Instead, D37 was given a mid-blue and white livery with red and dark blue stripe and dark blue headstocks, bonnet top and upper cab.

Rail Australia No 18 via John Browning

CRA LTD, Southern Copper Smelter-Refinery, Port Kembla 610 mm gauge

This site is believed to be the old Electrolytic Refining & Smelting Company of Australia's premises (see LRN 28, p.6). The plant has been largely closed since 19 September pending the commissioning of a new smelter, and was resuming operations in March. It previously had a 2 ft gauge rail system using Hunslet 4wDM locos to transport materials around the site, and it is not known whether this has been eliminated as part of the company's \$155million modernisation scheme.

The Weekend Australian 9-10/3/91 via John Browning

LACHLAN VALLEY RAILWAY SOCIETY, Cowra

It is reported that this Society has been successful in tendering to run wheat trains between Woodstock and Cowra during 1991. This haulage would be done initially by ex-Australian Iron & Steel English Electric (Australia) B-B DE D9 (A.005 of 1956).

ARHS Bulletin 2/91 via John Browning 3/91

MR C. RICHARDSON, East Greta 1435 mm gauge

Two ex-South Maitland Railways 2-8-2T locomotives, numbers 10 and 17, were lit up at the former East Greta depot on 21 November and remained in steam until 24 November, attracting considerable local interest. Seven of these locomotives in all have been acquired by the local businessman named above. It is hoped that they will be moved to the Branxton-Rothbury Colliery line and eventually be available for operating steam hauled trains in the Newcastle area. Details of the locos are as follows:

10	2-8-2T	Beyer Peacock	5520	1911
17	2-8-2T	Beyer Peacock	5570	1913
20	2-8-2T	Beyer Peacock	5998	1915
23	2-8-2T	Beyer Peacock	6056	1920
26	2-8-2T	Beyer Peacock	6127	1922
27	2-8-2T	Beyer Peacock	6137	1922
30	2-8-2T	Beyer Peacock	6294	1925

THE COAL CLIFF COLLIERIES PTY LTD, Darkes Forest 1067 mm gauge

Coalcliff's 21, a Vale 4wBER seen at Darkes Forest on 18 February.

Photo: Craig Wilson

The Coalcliff Colliery (Coalcliff - Darkes Forest) was due to close on 31 March. Locomotives and man-riding cars, all Vale 4wBEs, are stabled underground at Darkes Forest. Two units were observed on the surface on 18 February. 21, a 4wBER, was returning from repairs, and 27, a 4wBE, was awaiting dispatch for repairs. Both units were painted white with red and white reflective stripping.

Craig Wilson 2/91

QUEENSLAND

STATUTORY STATUS FOR CANE RAILWAYS

From 1 January 1991, sugar mill "tramways" in Queensland received legal status as railways. This in effect means that road traffic must give way to cane trains at crossings whereas previously cane trains did not enjoy automatic right of way.

Robert James 1/91

BUNDABERG STEAM TRAMWAY PRESERVATION SOCIETY Bundaberg Botanical Gardens 610 mm gauge

(see LRN 79, p.10)

On 18 December, the partially-restored Baldwin 0-6-2T *Felin-Hen* (46828 of 1917) was moved from TAFE College storage premises to North Bundaberg. This unit had had a considerable amount of work done on it at the Bundaberg TAFE College some years ago, but the project had been discontinued. The Society now plans to complete the work. Also transferred at the same time were two partially built bogie coaches.

Sunshine Express 1/91 via John Browning 3/91

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 79, p.10 & LRN 78, p.13, 14)

The mill administrations of Victoria and Macknade Mills were integrated from December 1990, although this is unlikely to affect the status of each mill's locomotive fleet. However, some of Macknade's navy units were sent to Victoria, apparently for maintenance, during the slack season. The units concerned were Hansen linecars M1 (34 of 1973) and 2 (1112 of 1973), and Motor Rail "Simplex" 4wDM 10232 of 1951. Rumour has it that the regauging of a QGR DH-class B-B DH (see LRN 80, p.4) will be carried out for Victoria Mill at Townsville. Victoria Mill's Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) was used to give rides at the mill social club Christmas party on 15 December.

Chris Hart 2/91

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 80, p.11)

Flood damage caused by torrential rains in the period following Christmas will cost Mackay Sugar approximately \$1 million, with about \$350,000 being the damage bill at Marian Mill alone. Work has also been slowed on the construction of the new connection between the Marian and former Cattle Creek systems, with damage having been done to regrading work on the old QGR formation and severe damage having been done to the timber bridge across Cattle Creek at Gargett. At this site, seven spans were badly damaged, as well as the bridge approaches.

More than 2000 tonnes of rails from an 80 km north-west Victorian railway line have been purchased by Mackay Sugar for use at Marian and Pleystowe Mills.

The first of 900 new 6-ton bins were delivered to Marian Mill on 18 February, with half each to be constructed by local firms Vane Welding and Westhill Engineering. These bins are to the same design as the Pleystowe Mill bins of the same size, except fitted with Marian type buffers and link and pin couplings. On delivery of the new bins, 150 Marian bins will be transferred to Farleigh Mill.

Four new four-wheel "big bins" built to the Sugar Research design by NQEA in Cairns arrived at Marian Mill during the 1990 season, but the automatic handling equipment used in the yard does not suit these vehicles, so extensive trials have not taken place.

Each of the three new Eimco B-B DH locos at Marian have been fitted with dual master/slave controls and so will be able to lead or slave loco in Locotrol operation, with both E.M. Baldwin locos being slave only fitted.

*Mackay Daily Mercury 15/2/91 & 18/2/91
via John Browning; Len Heaton 2/91*

TULLY SUGAR LTD 610 mm gauge

(see LRN 77, p.15)

Early in November, the loco shed was in the process of being extended northwards and is higher than the original building. Inside was one of the E.M. Baldwin 0-4-0DH locos painted in oxide primer. This would appear to be No.1 (6-1082-1-2-65 of 1965) as 2 and 3 have already received the new livery. A number of long bins were seen in a rake of empties south of Tully.

Chris Hart 2/91

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC. 610 mm & 1029 mm gauge

P.O. Box 288. Alexandra Vic 3714
(see LRN 79, p.16)

The Museum has at last received an encouraging signal from the Victorian Government. This came in the form of a grant of \$2,500 from the Dept. of Conservation and Environment. The money is to be used for the rebuilding of the shed at the northern end of the station platform, which housed a lamp room and a valuable goods store. This building is presently in an advanced state of decay, having been attacked by ants who are much more attracted to the local timber from which this shed is built (messmate) than the jarrah which comprises most of the frame and floor of the station building proper. Some of the original material from which the shed is built can however be re-used, and the corrugated iron and some of the lining boards will go back into the new structure, which will be rebuilt in a manner as close to the original as possible. Demolition of the shed is already underway, and several of the local service clubs are willing to donate labour to re-erect the building. The target date for completion of this project is Easter. The shed will be used to house a sales area for souvenirs and light refreshments.

Painting of the Cathkin and Molesworth sheds has now been completed, and some re-stumping work has been carried out on the goods shed. On 27 February, the Museum site was used to launch a new tourism pamphlet produced by a number of the local tourist groups including the Museum. The event was covered by the local media, and videotape of the John Fowler locomotive appeared on the regional television news.

The wheels of the Kelly & Lewis 0-6-0DM have been measured to compare their profile with that shown on the original drawings prepared when the locomotive was constructed in 1935. (The Museum has been fortunate enough to obtain a full set of these drawings from Thompsons of Castlemaine.) Advice has been sought from the mechanical engineering branch of the Puffing Billy Preservation Society, which indicates that while the wheels cannot be turned in their present form, the flanges can be built up with weld to a thickness suitable for re-turning to an acceptable profile.

A Museum member has been able to obtain the front end of one of the steam and water drums of the now demolished Babcock and Wilcox W.I.F. boilers from the Powelltown sawmill, along with an almost complete set of boiler fittings. This is in the process of being set up to provide an interpretative

display of the operation of boilers used in the sawmilling industry.

With all of the progress and activity outlined above, it is indeed a pity to have to report that the number of regular volunteers working at the Museum has now declined to almost crisis level.

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 79, p.17)

Gembrook Restoration

On the weekend of 2-3 February 1991, Puffing Billy Preservation Society volunteers demonstrated in the most practical manner, their commitment to restoring the railway to Gembrook.

At 7.30 am on Saturday 2 February, the site of Gembrook station was already alive with activity. Crowded with numerous cars, trucks, a sleeper boring machine, generators, a few tents, and a large number of volunteers ready to move into action. The task at hand was relaying about 3/4 mile of track from the up-end of Gembrook yard to the main Gembrook Road level crossing, a stretch of track which provides superb long-range views to the north.

A short ceremony was held at 8 am with the PBPS President, John Robinson, and Pakenham Shire Councillor, Jack Russell, (a nephew of E.A.C. Russell of timber tramway fame) both giving appropriate speeches, and each driving a golden spike.

Then work commenced in earnest, with about 60 volunteers in about seven teams, each with its own special tasks. By about midday Saturday, John Shaw, who was in charge of the logistics of the exercise, was able to announce that work was going ahead of schedule. At this stage a considerable length of skeleton track had been completed, with only every third sleeper fixed in position so that alignment would be easier, and several push trolleys were already out on the track.

There was an air of religious euphoria about this event. Many of the participants had been involved in the restoration of the railway in the difficult period of the late 1950s, and comments such as "Did you ever think you would see this day?", were frequently overheard.

Nevertheless there is still a gap of about 5-1/2 miles to fill before the present head-of-line, about 800 feet beyond Lakeside, is joined to the new track. And three large trestle bridges to build as well.

That the Society is totally committed to filling that gap is obvious from the standard of track that was laid at Gembrook. Brand new sleepers, sleeper plates, and heavy rail of the same standard as the best of the Belgrave-Lakeside section is proof of that.

The next task will be laying points and track in Gembrook yard. I believe 6 April is the date for that to be commenced.

Why has the Society decided to proceed with the Gembrook restoration from both ends, rather than work progressively from Lakeside? One good reason is psychological - to demonstrate real commitment to the goal. Another is to prove to the Gembrook community - who are very supportive of this venture that the Society is serious about the project. The third reason is to use this stretch of track to run trains on, on Gembrook market days. In this way it is hoped to raise money to buy more sleepers.

Frank Stamford 2/91

LEISURELAND FAIR, Langwarrin 610 mm gauge

A Chance B-1-B steam outline loco, believed (from memory) to be numbered 134 was seen here on 11 January. The park opened at 11 am and closed at 4 pm. (This loco is believed to operate here, and is Chance builder's number 75-50134-24 of 1975 - Editor.)

Ray Graf 2/91

MELBOURNE & METROPOLITAN BOARD OF WORKS, Millers Road, Brooklyn 762 mm gauge

A poppet head (second-hand ex Sayers Road, Laverton) was noted under erection at this site on 11 January. This is the start of the North-Western Sewer, an 8-year project, on which construction work was due to start on 14 January.

Ray Graf 2/91

MELBOURNE & METROPOLITAN BOARD OF WORKS, Sayers Road, Laverton 762 mm gauge

(see LRN 79. p.20)

Two new Gemco 4wDM locos were noted on site on 11 January. These hydrostatic locomotives were undergoing commissioning trials, the first part of an order for the new North-Western Sewer (see above). They are 15-tonne hydrostatic locomotives of 93 kW, and are identified with a large metal number. Loco 6 is Gemco 287-90, while 7 is 288-90. Ray Graf 2/91

MEETINGS

MELBOURNE: SALT TRAMWAYS

Norm Houghton will be speaking on the results of some of his recent research efforts on Cheethams salt tramways in Victoria and South Australia. Most of his material has come from the files of Cheethams and some very interesting discoveries have been made. Be sure not to miss it.

LOCATION: Ashburton Uniting Church Hall. Ashbum Grove, Ashburton.

DATE: Thursday 11 April at 8.00 pm,

SYDNEY:

Any member wishing to know details of the next meeting should call Craig Wilson on 02-4847984

LOCATION: Woodstock Community Centre, Church St Burwood Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 24 April at 7.30 pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park.

DATE: Tuesday 30 April at 8.00 pm.

NOTES, CORRECTIONS & COMMENTS

Our short issue last time has brought forth an abundance of contributions this time to the point where we are in the happy position of having too much to fit into this issue! Therefore, please do not worry if your particular contribution does not appear this time, it's sure to turn up next issue, along with the report of our tour of some of the Moreton Central Sugar Mills cane tram system here in SE Qld on 20 April, that your Editor hasn't had time to write yet!

Editors 5/91

BHP LTD Port Kembla

The item headed "Sheet & Coil Division" on page 6 of LRN 81 should have been headed "Slab & Plate Division".

THE COALCLIFF COLLIERIES PTY LTD

Apologies to Craig Wilson for the editorial misinterpretation of his news item on page 7 of LRN 81. The two rail units observed by Craig were on the surface at Coalcliff, which provided the coastal transport portal for production from inland Darkes Forest, with the two access points obviously being linked underground. Craig adds that the mine complex is being maintained by a skeleton staff at present and future use would depend on expansion at Northcliff and/or Tahmor together with a decision to use the conveyor facilities from Coalcliff to the coast for coal transport.

WANTED TO BUY

Early issues of Australian Railway Historical Society "BULLETIN" up to and including 1968 with the exception of issues for 1961 and 1963 to 1966 inclusive. Contact Ken Milbourne, 11 Ruthwell Street, Montrose, TAS 7010.

RESEARCH

John Robin is building an On2.5 gauge model VR narrow gauge set up and cannot find any reference to the lengths of loops and sidings on the Beech Forest and Walhalla lines, nor of the distance between the various roads. He would also like to obtain detailed drawings of VR N.G. rolling stock the LRRSA drawings he has being only general overviews. If anyone can help, please contact John care of the Post Office, Meander, Tas 7304. He is prepared to pay for copying, postage etc.

Editors 4/91

FIELD REPORTS -

RAMINEA TRAMWAYS (Tasmania) 1067 & 1435 mm gauges

Following fairly recent fires on the plains inland from Port Esperance, much of the tramway network which served Chesterman's mill at Raminea has been exposed. Wayne Chynoweth, who has been researching the timber tramways of Huon Timber Company and other lines further south, has taken advantage of the clearance created by the fires to trace the Raminea system. His work has disclosed some interesting facts. It has also given rise to some intriguing queries.

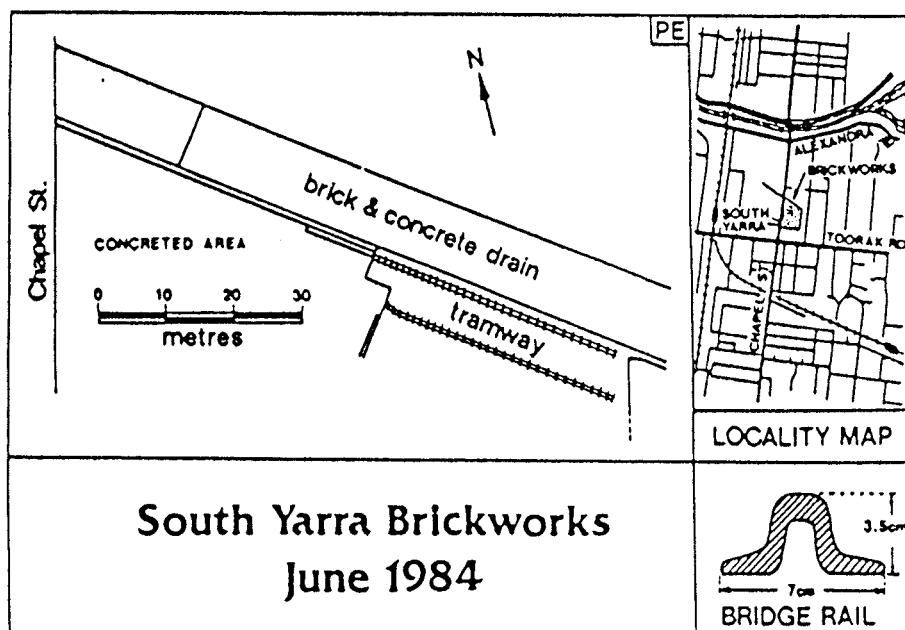

The discovery of a previously unrecorded wider gauge line running for at least five miles raises questions of ownership, dates of construction and operation and the means of haulage employed. At one location, Wayne has located an extensive three loop terminus for which there appears no justification. The total length of the system, which had three major branches, must have been twenty miles and some very interesting locomotives were employed.

Wayne intends to compile an account of the lines of the Geeveston, Dover and Southport areas for a future edition of *Light Railways*, It is pleasing that this area, largely neglected by railway historians for so long, is at last being researched. If there is sufficient support, an extended tour of these areas will be organised for Easter 1992.

Ken Milbourne 4/91

SOUTH YARRA BRICKWORKS (Victoria) 610 mm gauge

Melbourne's early brickworks were established on the south bank of the Yarra River and in the Prahran area following the first land sales in June 1837. However, the bricks from this area tended to crumble and weather easily. After 1846, heavier hard-baked bricks were being produced in Richmond,

and by 1849 new pits were opened in Hawthorn and Brunswick and a supply of quality bricks was then available. The Prahran brickfields were largely abandoned by the end of the 1850s. (Susan Priestly *Making Their Mark*, page 20.)

One specialist brickworks south of the Yarra which however prospered was producing refractory materials. Their firebricks, stamped on one side with the words "AR & FB Co." or simply "SOUTH YARRA" will be familiar to all bushbashers who have visited any but the most remote sawmilling or mining sites. These light, friable but heat resistant bricks were essential for the brickwork forming the boiler setting for any one of the many industries which drew their power from steam.

The brickworks existed for many years hidden behind its untidy corrugated iron and timber facade fronting on to Chapel Street, South Yarra. While clay was most probably drawn from the site during its early years, later supplies were brought in from elsewhere as the local supply was exhausted. It was still possible to purchase firebrick as late as 1974, by which time demand for the product must have been reduced to a very low level indeed. In early 1984, the site was levelled to make way for the prestigious "Como" development.

A chance visit in June 1984 revealed the remains of what may once have

been a more extensive network of 610 mm gauge tramways serving the site. Two tracks still remained in situ. These were on the south side of, and parallel to, a drain running in a north-westerly direction to eventually empty somewhere into the Yarra. This drain (now covered) continued under Chapel Street and gives Kenilworth Court its direction.

The rail was flat-bottomed in section with a weight of about 12 kg/metre, laid on timber sleepers 950 mm x 150 mm x 50 mm spaced at around 760 mm. Both tracks (which were in a quite good condition) were visible for about 36 metres before they disappeared under a concreted area bordering Chapel Street. The direction of the southernmost track seemed to indicate that it junctioned with the other one a short distance on under the concrete. For most of their course, the centre lines of the two tracks were separated by a distance of 6.5 metres whilst the northernmost track was separated from the drain by a distance of 1.8 metres. A small length of light bridge rail was found in the retaining wall next to the drain, and several pieces of cable tram rail were noted embedded in some of the foundations.

Today no trace of the brickworks remains. Should any reader know any further details of the layout of the works or of its operations and history, I would be very pleased to hear from them.

Peter Evans 4/91

TOUR REPORTS

ARHS TOUR TO PORT KEMBLA, 23 March 1991

An ARHS tour on 23 March, visited a number of lines in the Illawarra area and the Port Kembla steelworks (see LRN 77 p.9 & LRN 81 p.6).

Green painted 4901 led four cars and a van from Sydney (Mortuary platform) to Wollongong Inner Harbour Coal loop via the flyover back onto the southbound main to Wongawilli and thence to Wongawilli Mine (passing enroute D6 and D7 at Unanderra Exchange Sidings and D16 shunting nearby). Wongawilli Colliery was visited, and details appear later in this issue.

From Wongawilli Mine, the train proceeded direct to Wongawilli Junction and thence to Unanderra Exchange Sidings. Here we found D7 and D20 waiting for us. After some consultation, 4901 ran around the train and D7 (leading) and D20 coupled onto the train. Proceeding on to BHP trackage, at the freeway overbridge we photographed our train with D6 (dead) on a siding leading off to the east and D37 (light engine) crossing our train. Near Spring Hill Road overbridge, we passed the locomotive "ready" roads with 9 units standing here (D17, D26, D30, D36, D37, D39, D40, D44 & D45) thence

through the steelworks, reversing four times.

On the third leg, we crossed Five Islands Road on the steel viaduct and ran past the coke ovens where we saw coke locos 4 & 5 working with 3 on standby, and D38 working nearby. We then saw D19 & D33 near the blast furnace and D21, D23 & D24 at Coated Products (in the distance), D18, D33 & D27 at the Slab Yard, D16, D43 & D29 at the Open Hearth, and D31 & D33 at No.4 dump.

We then ran past Cringila Railway Station and the Exchange Sidings and onto the BHP main line and out to Kemira Colliery (deleting a visit to Nebo Colliery) arriving here with D34 some 50 yards behind us (on empties) to find D38 loading. D34 went into the run around loop after photos and we proceeded downhill to Cringila where D32 (light engine) and D36 & D38 (both working) were nearby. Our units D7 & D20 then cut off (from the rear of our train) and 4901 continued on, hauling us past Port Kembla North Station and anti-clockwise around Port Kembla loop back to Port Kembla North. Here a dirty 4605 was waiting for us near the Port Kembla yard control tower. It then coupled onto the front of our train and hauled us to Wollongong Station passing enroute D37 & D17 shunting near the gas holder, D16 shunting near Cringila Yard, D21, D23 & D24 at Coated products and D25 & D43 at the slab store. After a delay at Wollongong waiting for a guard who was waiting at Port Kembla, we departed for Sydney.

Ray Graf 4/91 (courtesy Craig Wilson BHP loco sighting details)

LIMESTONE, LOGS & LOCOMOTIVES

A warm and sunny Sunday, 3 March, saw almost fifty members and friends meet at Lilydale for the Society's half-day tour of remnants of David Mitchell's standard gauge firewood tramway which operated from his quarry at Cave Hill, Lilydale into the foothills at the northern end of the Dandenong Ranges, 30 km east of Melbourne. The large turnout, no doubt inspired by Ralph Alger's "Reminiscences of the Cave Hill Tramway" in LR 111, were keen to see the few remaining traces of this unusual gauge (for Victoria) steam-operated line.

At the quarry some buildings dating back to 1888 were seen. These structures, now company offices, used to be butter and cheese factories, as Mitchell used the spare acres surrounding his quarry for dairy farming.

In the quarry, the old inclined skipway still exists. This appears to be a four-railed balanced incline as the tracks widen to allow a passing loop half-way down (or half-way up depending on where one stands!). This incline was used to raise skips of limestone to the works and dates back to c.1930.

A short car trip took us to the southern end of the company's property

where the overburden and waste dumps are situated and a short walk through some paddocks brought us to the tramway formation where the new and old lines meet (see photos LR 111, p.8, 11 & 13) at the western end of the 1920s short-cut. The 1:20 grade through the cutting on the new "straight" line is quite severe and must have taxed the Phoenix engine being as it is, against the load.

Away to the east, across the newly created Lake Lilydale, lay our next objective, Mitchell's weir, used to divert the waters of Olinda Creek into a two kilometre long aqueduct to provide water to the limeworks (photo LR 111, p.9). Unfortunately it is not cared for and unless recognised and preserved, the century old construction will be lost as water undermines the stone and brick walls.

Prior to visiting the weir, a sacred site was inspected. This consists of two sleepers situated 100 m north of Hull Road, in the middle of a low lying area. What the residents of the new housing estate nearby thought as 20 cars arrived and fifty people tramped into a dried-out marsh, heaven only knows!

Our last stop was at the end of the appropriately named Tramway Road in Mt Evelyn. Timekeeping seems to have gone out the window by this stage and the other Sunday traffic on the roads made it hard to keep up with the convoy. Hopefully the organisers will arrange a helicopter next time!

Our walk at this last spot was about 3 km return along the tramway formation. The first part is through the Mt Evelyn Recreation Camp, where another sleeper was seen, then past the site of the trestle bridge and along Olinda Creek. With one o'clock near, and hunger pangs setting in, a return was made to the cars to conclude an interesting morning.

An afternoon optional post-tour visit was made to the Belgrave South property of Mr Colin Rees where two ex-West Melbourne gasworks locos were inspected: Coulliet 861/1886 which was extensively modified by Ron Kain for the abortive Walhalla & Thompson River Steam Tramway in the 1970s; and Coulliet 986/1890 in beautiful original condition and still sporting its "Whistle Stop" amusement park livery. Also seen were Henschel 25427/1956, an 0-6-0T ex Thailand and the "Clarkat" petrol-engined four-wheeled "thing" ex-"Whistle Stop". (All these 2 ft 6 in gauge locos are on private property and can only be inspected by prior arrangement with the owner.)

All in all a most enjoyable day and grateful thanks are extended to both David Mitchell Ltd and Mr Colin Rees for helping to make it so.

"Kaye Vhill" 3/91

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

E.M. BALDWIN & SONS PTY LTD, Rooty Hill

(see LRN 80, p.3)

In LRN 79, the takeover of this company by Westfalia Pty Ltd was noted. This company is the Australian subsidiary of a German multinational supplier of mining and other industrial equipment.

Not then known was that Westfalia Pty Ltd had already (on 30 June 1990) purchased the remaining assets of the locomotive business of Hexham Engineering Ltd. This business had itself originally been purchased from E.M. Baldwin during its period in receivership during 1985. These events have left E.M. Baldwin in a position to aggressively pursue sales of new equipment as well as continuing the repair work to which it had been limited from 1985. A number of new orders have subsequently been placed.

First to be delivered from the works will be two manriding cars for South Bulli Colliery. These were noted on 1 March, one almost complete and the second slightly less so. Also well advanced was an order of bogies for a new Invicta Mill brake wagon. The mill is believed to be undertaking the construction of the balance of this vehicle. The bogies are distinctive with larger diameter wheels than previously used on a low set frame, and are noteworthy as they incorporate dump brakes (the first use of these in the sugar industry), a crossover from mining technology.

To accompany the brake wagon for the forthcoming season was the main item under construction, the new 720 hp bogie locomotive for Invicta Mill. Visible work on this had just commenced. It will follow the traditional end cab designs previously marketed by Baldwins but if the size of the cab is any indication (on which fabrication had just commenced), it will be bigger than any previous units. Advice was given that it will be a 32 tonne loco, which can be ballasted, if required, up to 40 tonnes.

A significant amount of repair work for collieries was also in evidence. The demise of Hexham and Vernier have opened up this market and the following units were noted. (Details in brackets were not noted, but are supplied from editorial records.)

2A	4wDHR	Fox		South Bulli
5A	4wDHR	Fox		South Bulli
D2	4wDH	E.M. Baldwin	(2047-2-10-68 1968)	South Bulli
139	4wDHR	(Vernier)		Cordeaux
69	4wDHR	E.M. Baldwin	(4199-4-11-71 1971)	Metropolitan

2629	4wDHR	E.M. Baldwin	8899-1-12-79 1979	Liddell?
2630	4wDHR	E.M. Baldwin		Chain Valley

South Bulli's personnel carrier 3A was reported to have already been returned following repair.

The most exciting find of the day was ex-Lithgow Valley Colliery 4wDH E.M. Baldwin 6-2350-1-6-68 of 1968. Nothing had been heard of this 16-tonne locomotive since it disappeared from Lithgow in the mid seventies. Baldwins had purchased it from Yieldex Pty Ltd Liddell Colliery, last year for stripping prior to eventual scrapping. If its external condition was any guide, it had not been in use for many years. In design, it bears a definite family resemblance to the Coal & Allied Industries 20-tonne locomotives which followed it, with single cab and shunter's steps.

Craig Wilson 4/91

EIMCO AUSTRALIA LTD, Alexandria, Sydney & Paget, Mackay

(see LRN 80, p.3)

South Johnstone's 2 ft gauge Prof Engineering B-B DH *Nyleta* (P.S.L.25.01 of 1990) was progressively overhauled at Mackay during the first fifteen weeks of the year. Towards the end of this period, its headstocks and steps were painted silver in line with other South Johnstone locos. In mid-April it was sent to Farleigh Mill for trials under load, and while there was fitted with "Supplied by Eimco Australia" plates, showing serial number L253 of 1990. It was expected to return to South Johnstone Mill shortly afterwards.

On 3 April, two 3 ft 6 in gauge 4wDHR mine personnel carriers arrived at Mackay from Cook Colliery, Blackwater. One of these, painted yellow, was number 1, the Fox unit which had been rebuilt by Eimco in 1990 and which had suffered collision damage underground requiring the replacement of a large part of one of its driving/passenger compartments. The second unit was numbered 9 and carried the identity HE707, indicating it originated with Hexham Engineering. This modern-looking unit was painted white with fluorescent red dazzle stripes on each end and was to have its hydraulic transmission replaced by hydrostatic. The Fox/Eimco unit was completed by the end of April and is believed to have been returned to Cook shortly afterwards, while work was continuing on the Hexham unit.

Two cane locomotive cabs were observed in the workshop at the end of April, one red and yellow one for Proserpine Mill, and one yellow with a green stripe for Inkerman Mill.

John Browning 3-4/91: Ian Wright (Eimco Australia) 4/91

VERNIER ENGINEERING PTY LTD, Wollongong

(see LRN 16, p.1)

This company, which constructed mining personnel carriers from at least 1977, is believed to have ceased operations in the fairly recent past. A personnel carrier is thought to have been delivered to Cook Colliery, Blackwater, as recently as 1989.

Craig Wilson 4/91; John Browning 4/91

WALKERS LTD, Maryborough

(see LRN 80, p.4)

Two ex-QGR DH class B-B DH locomotives are being refurbished and converted to 2 ft gauge at Maryborough for sugar mill service.

Isis Mill will receive Walkers 602 of 1962 (ex DH20) while Victoria Mill will receive Walkers 605 of 1969 (ex DH23). Both units will be fitted with a speed limiter and Willison couplers as well as being repainted in the appropriate mill livery. Isis Mill's unit will have a reduced height cab roof, lowered cab floor, cab isolation and flange lubricating equipment fitted. Victoria Mill's unit will have air conditioning, a raised cab roof profile and electrical conversion to 24V.

Delivery for both units is expected to be in June. These were the only two DH refurbishment orders for sugar mills held by Walkers in April.

Jerry Jirasek (Walkers Ltd) 4/91

NEW SOUTH WALES

BHP COLLIERIES, Cordeaux Colliery

A 2 ft gauge coal skip, recovered from the old Corrimal Colliery workings in December 1990, will be set up at the front gates of Cordeaux Colliery as a memorial to the miners of the past.

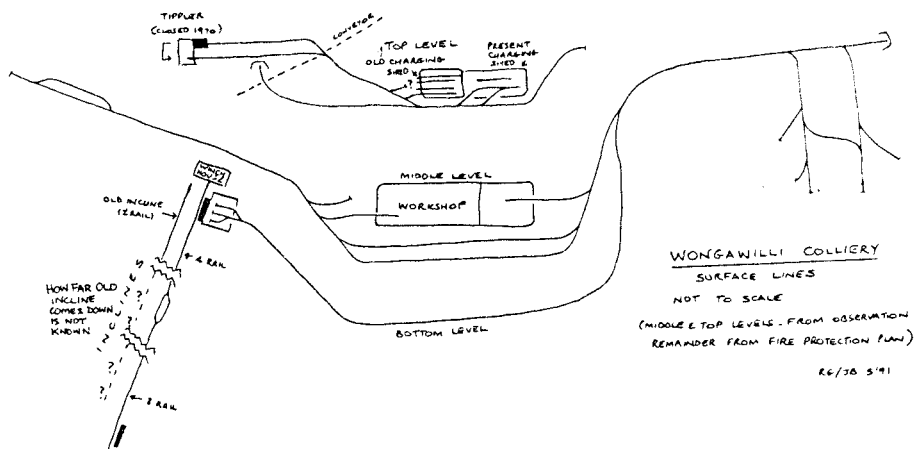

Coal News Jan/Feb 1991 via Ray Graf

BHP COLLIERIES, Wongawilli Colliery 1067 mm gauge

(see LRN 62, p.5) The ARHS tour to the Illawarra mentioned earlier, visited Wongawilli on 23 March. Passengers travelled up the incline to the mine. The incline has three rails at the bottom and four at the top with a passing loop. Operations are single sided with passenger cars on the east side only. Three cars are on this track with controls in the first and third car. They are balanced by two work flats on the other track. The rope is continuous with a winch at the top and a rail mounted "floating" dolly at the bottom. Five disused incline

passenger cars were noted at the incline bottom.

A white painted Gemco 4wBE numbered 2 (Type 12 - 25 tonne) was parked under cover at the miners' platform adjacent to the incline top platform. This is the mine trackage bottom level; there is also a middle and top level. The charging shed is on the top level where 4wBE loco 23 and battery box "M" were inspected (EME type 113). Also present were battery boxes A, F, N, U & V. A roster board indicated that another seven battery boxes (D, J, L, Q, R, S & W) are available for use. The tippler on this level (last used in 1970) was inspected.

At the workshop on the middle level, 4wDHR personnel car 110 was noted (and was later used to give the Tour train crew a ride). Also noted inside the workshop was personnel car 112 and in the yard at the rear were numbers 109 and 119. Out of service alongside the workshops without battery boxes were 4wBE locos numbered 30 & 74. A roster board indicated that personnel cars at the mine were numbered 97, 98, 99, 100, 101, 107, 108, 109, 110, 111, 112, & 118. Nearby, number 2, an 0-6-0D with Domino Industries name attached was seen by Jeff Moonie. (Could this be a Malcolm Moore re-engined vb Domino Industries? - Ed.)

(Editor's note - the 4wBE locos are believed to be units built by BHP Newcastle between 1947 and 1949, while all personnel cars noted are believed to be Vernier units. However 97 to 101, also noted on the Wongawilli roster, are Titan battery-electric personnel carriers.)

Ray Graf 4/91

COMMONWEALTH STEEL CO LTD, Waratah 1435 mm gauge

(see LRN 79, p.9)

The 35 tonne Goninan 4wDE (030 of 1972) was seen on 24 March alongside the fence. It was painted yellow with black stripes and blue side panels with "Comsteel" name.

Ray Graf 4/91

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 77, p.10)

The renovation of the interior of former NSWGR car 449 has been completed. This body is located at "Yallah" station in a back road situation. Work is now being directed on constructing several new wooden window frames and external repainting. On completion, the refreshment area will be transferred from the station building to this carriage.

The new office and members' meal room were completed in mid April. With imitation wooden panels up to waist height the new accommodation resembles a "gentlemen's club". The new office will enable working drawings, files and archives to be readily accessible.

The fitting of a new tool post and cross slide to the large Foster lathe in April cleared this unit for regular work. The capacity of this lathe will enable wheel sets up to 75 cm diameter and a maximum of 5 ft 3 in gauge to be reprofiled. The machine is situated in its final position under a water proof lean-to which will form the end of a proposed number 2 workshop. No sooner was this lathe installed on its concrete base than a third unit, with a capacity slightly smaller than the Foster, arrived at the Museum! This new lathe has a large milling attachment.

At the close of 1990, the Museum received a large vertical 2 cylinder compound open crank steam engine from Wollongong University. This unit was constructed by Sisson c.1954 and has been powered at the University by compressed air as a dynamometer test power source.

Efforts continue on general track maintenance and re-sleeping. With the conclusion of the meal room construction work commenced on the electric tramway extension on 13 April when a new junction was pegged out which will give the electric vehicles access to a new non-steam loco shed. During

September 1990 the Museum dismantled a six bay building once used by the Albion Park Bush Fire Brigade, donated by Shellharbour Council. This will form the basis of the new loco shed.

Loco Tully No.6 (Perry 7967/49/1 of 1949) is the main traffic engine while

"Kiama" (Davenport 1596 of 1917) is on stand by. Steady progress continues to be made on the restoration of former Corrimall Coal Company loco "Burra" (Hawthorn Leslie 3574 of 1923). A new drain plug boss was welded to the boiler barrel in December leaving the retubing as the only major work to now be carried out on the boiler. Wheels and main bearings are now in place and by mid-April the right hand drive and connecting rods were in position.

During late 1990 the Davenport loco received a new ash pan while a more efficient hand brake was fabricated and fitted. Loco work is now focussed on "Cairns" (Hudswell Clarke 1706 of 1939). New lower smokebox sides have been fabricated and welded into position and work is progressing on overhauling the main steam regulator valve. The tender's water tank has been cleaned and repainted and new boiler tubes are being prepared for fitting.

The body of former Sydney "C" type saloon tramcar No.95 was lowered onto its new steel 2 ft gauge chassis on 16 October. The frame was grit blasted and undercoated by Shannon Anti-corrosion Engineers before fitting. During the summer months the end platform floors and new metal end aprons were manufactured for this vehicle. Since then the roof has been covered with Malthoid and a start made on the final painting and line work.

During January, the 2 ft gauge Gemco tunnel loco, which collects power at Albion Park from overhead wire through a conventional trolley pole, was rewired. This has removed the problem of uneven acceleration experienced in recent months.

The remains of former Melbourne cable trailer 110 arrived at Albion Park from Goulburn on 8 February. This vehicle, which is identical to restored car 430 at the Museum, was constructed in the Nicholson St shops of the Melbourne Tramway and Omnibus Company in 1886 for the opening of the Collins St to North Fitzroy cable tramway.

Car 110 and 131 were sold in the late 1920s and housed under cover at Rushworth until the mid 1960s when they were "discovered" for preservation. Car 110 was obtained by the Marsden Museum at Goulburn and arrived from Rushworth on 23 August 1970. The carriage was converted to a 2 ft gauge bogie vehicle and was available for Museum service from 30 April 1971. Due to severe "flats" on the N.E. Dundas Tramway bogies on which this car was mounted, the body soon deteriorated, being in a sorry state when replaced by the locally built saloon car in 1981. By September 1983, car 110 was positioned on blocks at Goulburn, the roof showing an extreme lean due to fractured body posts. All body posts are beyond repair and the roof is now sitting on the floor at Albion Park. A start has been made on the construction of new components and this 105-year-old car will receive full attention when 95 "C" is completed in a few months time.

By 1976 former Melbourne cable car 131 was noted at the Lachlan Village Museum awaiting restoration and conversion to 2 ft gauge. This was not performed and by 1980 the cable trailer had been transferred to Orchard Hills near Penrith for attention. Unfortunately no work appeared to be carried out on this car and it disappeared around 1983. The Museum's old work horse, the Fiat tractor, has returned to service after a thorough motor and chassis overhaul. This will relieve the Meadows fork lift unit of many and varied yard duties.

Ken McCarthy 4/91

QUEENSLAND

BUNDABERG SUGAR LTD

(see LRN 79, p.10)

This company, which operates six sugar mills, the Millaquin sugar refinery and the Bundaberg rum distillery has been at the centre of a hostile \$290 million takeover bid by the British sweetener giant, Tate and Lyle. The original bid of \$3.70 a share was raised to \$4.10 a share. In the period since the launch of the original \$3.70 bid on 19 March, the target stock has surged 40.4 per cent. Bundaberg Sugar's chairman, Roy Deicke, said directors met to consider the increased offer, but found it failed to reflect the full worth of the group.

*Sunshine Coast Daily 21/3, 28/3, 23/4
& 10/5/91 via Editors 5/91*

BUNDABERG SUGAR LTD, Mourilyan Mill 610 mm gauge

(see LRN 80, p.10)

Three locos were in use on navy trains in late April, the unidentified Malcolm Moore 4wDM, and both Motor Rail "Simplex" 4wDM locos ex Goondi, 3668 of 1924 and 10219 of 1950. The old Fowler steam loco frame which had the crane built on it (believed to be Fowler 15916 of 1921) has gone from its usual spot.

Chris Hart 4/91

CLAIRVIEW 610 mm gauge

(see LRN 30, p.6)

The sawmill site here has been cleared leaving John Fowler 4wDM 21914 of 1937 standing on its own on a short length of track. This most interesting unit is a rare type and the only one to come to Australia so it is well worthy of preservation even though its gearbox has been removed.

John Browning 4/91

COAL RESOURCES OF QLD PTY LTD, Cook Colliery, Blackwater 1067 mm gauge

(see LRN 34, p.12)

Two old Fox 4wDH locos are retained here for surface shunting duties. In early April, yellow painted Fox 006 of 1976 was seen in use, with 004 (of 1973?) standing by the workshops. Underground haulage duties are now carried out by Hexham Engineering 4wDH locos. DL7, Hexham HE685 of 1985, was noted on a flat wagon adjacent to the workshop with one wheelset removed. DL8, Hexham HE697, is believed to have been underground. A third Hexham loco was also said to be underground. It was said to have been purchased in 1990 "second hand". It may well be a unit alleged to have been present at Hexham when Hexham Engineering closed down, and the original order cancelled, possibly HE702.

There are a number of 4wDHR personnel cars as follows: Three old Vernier units (one, numbered MC6, was noted on the surface). One Vernier unit, new in 1989. Two Fox units rebuilt with new engine and hydrostatic transmission by Eimco in Mackay in 1990-1. One is numbered 1. One unrebuilt Fox unit, fitted up as an emergency car. (The above three units are believed to be 323 & 324 of 1972, and 346 of 1975.) Hexham HE707, numbered 9, purchased in 1990, and currently in Mackay being converted to hydrostatic. This unit is also thought to have been present at Hexham on closure and it is believed that its construction was completed by another builder.

Two other Fox 4wDH locomotives (005 of 1976 and 007? of 1976?) appear to have been disposed of. No rolling stock was observed at the closed Leichhardt Colliery, which is the washery site.

John Browning 4/91; Craig Wilson 4/91

CSR LTD, Hambledon Mill 610 mm gauge

(see LRN 79, p.10)

E.M. Baldwin 4wDH 8002-1-8-78 (ex Goondi Mill in 1987) has at last been repainted, in Hambledon green and yellow livery but still carries no number. The brakewagon which was built using the frame of Baguley/Drewry *Seaforth* (2514 of 1954) from Kalamia Mill apparently was completed in time to see some use during the 1990 season. It is painted green and yellow, has a Harz motor and chevron springs but does not carry a number. The coupling rods have not been retained.

The northern terminus of the mill tramway is a loop siding on the northern side of the Kewarra Beach road. This area has been affected by urban development, with no cane growing in sight to its north or for about

2 km to the south. It would appear likely that this section will be cut back before long. A set of points leading into a very short stub has been installed between Edmonton and the mill. These points are electrically powered and signalled, and appear to be remotely controlled from the locos. They appear to be catch points to intercept any breakaways before they reach the Bruce Highway in Edmonton. Nearer the highway is an older, manually operated set of points with a longer stub, which appear to have been there since the early 1970s at least with a similar purpose in mind.

Chris Hart 4/91

STOP PRESS

Early in May, CSR Ltd announced that Hambledon Mill will close at the end of the 1991 season. Further details in next issue.

John Browning 5/91

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 81, p.8)

It appears that CSR has split the district rail system and its maintenance away from the two mills it serves, although the bin fleets and cane locomotives appear to be still under mill administration.

The railway section seems to be concerned with rail construction and maintenance, so all navvy operations are to be unified under the one administration. The line car numbering is to be integrated into one system, but details of this are sketchy at present.

The floods over the Christmas period did much damage to track, and closed the Herbert River bridge at Macknade because of damage in the south side approach cutting. The reduced crop means that there will not be continuous crushing this year.

Because of the bridge closure, track repairs on lines which serve Macknade on the south side of the Herbert River have been done by a Macknade based crew temporarily shifted to Victoria. They have used Victoria Mill's Baguley/Drewry 0-6-0DM *Seymour* (2392 of 1952) as well as Macknade's Motor Rail "Simplex" 4wDM 4 (10232 of 1951).

At Victoria Mill, the "Simplex" ballast plough conversion (Motor Rail 4wDM 10381 of 1953) has had the original motor, gearbox and radiator removed, leaving only the end weights and the hydraulic motor and associated equipment above footplate level. E.M. Baldwin 0-4-0DH *Albany* (6-1792-1-11-66 of 1966) is being used on truck shop duties although Motor Rail 4wDM 11255 of 1964 is still parked by the truck shop.

At Macknade, E.M. Baldwin B-B DH 20 (7070-4-4-77) is receiving a thorough

overhaul of engine and transmission and is getting new tyres. The old overhauled low geared final drive has recently been put back into Clyde 0-6-0DH 18 (DH1.5 of 1954) as the high geared final drive it had for a while never fitted properly.

Chris Hart 4/91

MACKAY SUGAR CO-OPERATIVE ASSOC. LTD 610 mm gauge

(see LRN 81, p.8)

Dry weather in March and April has enabled satisfactory progress to be made with the construction of the new Marian-Cattle Creek link between Gargett and Uruba. Bridge repairs appeared to be complete, and new track was being laid on concrete sleepers in a number of locations by the end of April, although no ballasting work appears to have been done. Marian Mill's sleeper replacement machine (Tamper 825998 of 1988) was noted on a section of regauged 3 ft 6 in track near Tannalo, where it had been engaged in replacing rotten ex-QGR sleepers. Other sections of regauged track were noted near Pinnacle and Gargett, where both rails had been moved inward, unlike at Tannalo where only one rail had been moved. Concrete road crossings were installed at Gargett and Pinnacle in late April. A job completed by the end of March was the removal of the gauntletted 3 ft 6 in gauge track from Mirani Station to Mirani West including the large rail bridge across the Pioneer River, leaving just the 2 ft gauge track in place.

At Marian, the new Pioneer River bridge had its tramway decking in place on the western side of the roadway by the start of April. (This is reserved track not incorporated in the roadway.) However, a month later, no trackwork had been done, and the construction of rail access to the bridge on the south side did not seem to have commenced. Extensive tracklaying as part of the remodelling of the Marian mill yard was well in progress, however.

At Marian Mill, the fixing of names to a number of the locomotives had been completed by the start of April. The locos will still carry numbers as follows:

12	<i>Nellie</i>	0-6-0DH	Clyde	58-188	1958
14	<i>Hampden</i>	0-6-0DH	Clyde	61-235	1961
15	<i>Melba</i>	0-6-0DH	E.M. Baldwin		1985
17	<i>Langdon</i>	B-B DH	E.M. Baldwin	9562-2-6-81	1981
19	<i>Narpi</i>	B-B DH	Eimco	L256	1990
20	<i>Boonganna</i>	B-B DH	Eimco	L257	1990

Eimco L256 has been renumbered from 18, so it is assumed that Eimco L255, which still carried no other identity by early May, will be numbered 18.

The other main line locomotives are expected to receive names by the start of the season.

Marian Mill's Com-Eng 0-6-0DH FB3170 of 1963 ex-North Eton Mill is receiving a complete overhaul and repaint and was largely in pieces in red oxide at the start of May. By this time, *Tannalo* (Com-Eng 0-6-0DH B1724 of 1957) had been transferred to Marian by road.

At the Cattle Creek Mill site at the start of May, Com-Eng 0-6-0DH *Pinnacle* (AA1549 of 1961 rebuilt AN5849 of 1975) was being fitted with a new GM Series 92 engine, while Bundaberg Foundry 0-6-0DM *Netherdale* (13 of 1954) had its engine removed.

At Farleigh Mill, some of the items of navy equipment appear to have been overhauled. Pacific 2-2wPMR 1046 of 1976 has been repainted, and named *Bumble Bee*, while Plasser ballast regulator 247 of 1982 has also been repainted and has gained the rather alarming name of *Stallion Crimmo*. The new cab for Clyde 0-6-0DH *Seaforth* (61-233 of 1961) is being fitted and in profile resembles the cabs fitted to early E.M. Baldwin cane locos. Modifications being carried out on Com-Eng B-B DH *Finch Hatton* (NA59112 of 1977) ex Cattle Creek Mill, include new steps and extended running boards as well as fitting with suitable couplers. South Johnstone Mill's Prof Engineering B-B DH *Nyleta* (P.S.L.25.01 of 1990) was here for trials in April after receiving attention at Eimco's Mackay works.

Track work to extend Pleystowe Mill's yard has involved removal of the mixed gauge link to the QGR at Pleystowe Siding. It appears that this link may not be restored.

The 220 m long new Balnagowan high level bridge near Pleystowe will cost \$3.2m. It will be 7.5 m wide and a cane train track will share one lane of the roadway. Traffic signals will be used at either end of the bridge to prevent road vehicles using the bridge while a train is crossing. The bridgework will include cane tramway extensions of 130 m on the southern bank of the river and 340 m on the northern bank.

John Browning 2/91, 5/91; Mackay Daily Mercury 5/4/91, 29/4/91

MOSSMAN CENTRAL MILL CO LTD 610 mm gauge

(see LRN 79, p.14)

Baguley 0-6-0DM *Mowbray* (3378 of 1954) was noted in use on the Port Douglas commuter passenger service late in April. The Port Douglas-Mossman tourist passenger service is due to resume in June. Bundaberg Foundry 0-6-2T *Bally Hooley* (2 of 1952) was on blocks at the mill loco shed undergoing maintenance. Chris Hart 4/91

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 80, p.14)

A press report indicates that the mill tramway is to cross under the QGR line in Sarina, involving the construction of a 3 km semi-circular loop. In April, track from the mill loco shed through the crossings of both Central and Anzac Streets had been lifted, and there were signs of engineering works commencing in "the Flat" area north of the town, where bin storage loops would be ideally sited.

John Browning 4/91; Mackay Daily Mercury 2/5/91

ROTARY CLUB OF BLACKWATER, Mackenzie St, Blackwater 458 mm gauge

(see LRN 34, p.14)

Measurement of the track here indicates that gauge is 1 ft 6 in, not the 2 ft gauge previously recorded. Blue Jenbach 4wDM 196 of 1953 named *Rotarylander* and approximately 10 passenger cars were stabled in the corrugated iron shed/tunnel. Track and rolling stock appear to be in good condition.

John Browning 4/91

TULLY SUGAR LTD 610 mm gauge

(see LRN 81, p.9)

The locoshed extension has been completed and includes a lean-to over the adjacent-track, making it a two line shed. Com-Eng 0-6-0DH No.12 (AD1351 of 1961) has been fitted with a GM engine, which means that No.15 (AK3574 of 1964) may well have received the same treatment.

Chris Hart 4/91

TASMANIA

BUSH MILL MOUNTAIN RAILWAY. Port Arthur 381 mm gauge

(see LRN 79, p.16)

The new Beyer Garratt 0-4-0+0-4-0T loco was ready for service in December, having been built on site over a three year period. Painted dark green, it shares duties with the original loco, 0-4-0T SARAH-Kate built by William Van der Heiden in Rotterdam, Holland, operating a 4 km route seven days a week.

The Mercury (Hobart) 13/12/90 via Ray Graf 4/91

VICTORIA

CARIBBEAN GARDENS. Scoresby 610 mm gauge

(see LRN 37. p.13)

A ride was taken on the 2 ft gauge line that circles this market centre. The operating 4wD locomotive had a transverse diesel engine with a "streamlined" cover vaguely suggestive of a VR B Class. It hauled an 11 coach train made up of ex-sugar cane wagons with streamlined tangerine coloured fibreglass bodies with end cross seats. Every third wagon was braked. I was impressed by the practicality of the conversion, although the ride could only be described as rough. A ride here represented good value at 70c. In storage in an open ended shed stood a spare rake of 11 coaches with a red Malcolm Moore loco at the head. A builder's number could not be found.

John Peterson 4/91

CHEETHAM SALT LTD, Laverton 610 mm gauge

(see LRN 77, p.18)

On Friday, 12 April, I was given a tour of the Cheetham Saltworks at Laverton as the guest of the company's managing director, Dr Max White, for working on the company archives.

On the day of the visit, harvesting was in full operation using technology in what may prove to be the twilight on the rails. Four years ago, the former management team closed the field and began dismantling the tramway but retained the refinery. Raw salt was trucked from Lake Tyrrell at Sea Lake in northern Victoria for processing at Laverton. A new management team under Dr White reviewed the economics of this procedure and decided to reopen Laverton as a producer last season. Some \$250,000 was spent on recommissioning the main harvest tramway spine, locos, trucks, tippler and stacker. Several facilities had been dismantled and could not economically be replaced so the existing harvesting techniques represent a skeleton of what formerly was on the site.

Laverton has 40 crystallisers but only 19 are currently accessible to the tramline as long sections of the lines were lifted, in an apparently random fashion, to provide rails for renewals at Geelong. The 21 inaccessible crystallisers now serve as brine storage ponds for the productive crystallisers. Current production of the field is 14,000 tonnes. A permanent staff of 23 is employed on the site.

Four locos in running order are at the site (see LRN 66, p.14). The harvest is carried out using three sets of trucks of 2.5 tonne capacity (eight per rake), two

mainline locos and one light shunting loco at the tippler. The arrangement is to have one rake unloading, one rake of empties returning to the crystallisers and one being loaded.

The track liftings of previous years have taken out all the balloon and passing loops so the passing of the trains is carried out by the empty trains reversing into one of the four spurs off the mainline. Traffic control is by radio as all staff carry walkie-talkies. These passing procedures result in a certain amount of idle time as there is a delay in between the full trains leaving the harvester, passing the empty train and then the empty train drawing out of the spur and reversing down to the harvester. At the tippler the mainline loco shunts off and attaches to the waiting rake of empties for the return trip. The loco couples to the refinery end of the rake and runs in reverse to the harvester. A cable draws the loaded trucks into the tippler and from here the shunter loco makes up the rake of empties.

During my visit one loaded truck derailed at the tippler. At first the tippler operators tried to rerail the truck with wooden blocks and a lever but this was unsuccessful so the salt stack front end loader was brought around to do the job. Staff told me this giant front end loader is used to shift heavy equipment in its bucket.

During the first part of the visit we rode on two locos (standing on the side boards) to get down to the harvest area and here we spoke to one of the senior employees about the field and tramways in days of old when 80 employees worked there. After this we caught a ride back to the tippler on the last train for the day with your scribe shoe-horning himself into the cab beside the driver.

After regular traffic had ceased the foreman put on a loco and bogie flat top truck for a tour of all the operable lines. We moved down the main line to the former Y junction at the end of Section 2, and proceeded around the Y to the point where the rails had been removed. The train reversed to the main line and moved a short distance to the next junction where it proceeded down the branch to No.8 Pumphouse. Proceeding back to the mainline, the train reversed again and travelled non-stop along the entire length of the 11 crystallisers in Section 48, passing three crossing spurs en route. The journey terminated near the remains of the bridge over Skeleton Water Holes Creek.

Here the foreman explained in particular about the line that went right down to Port Philip Bay. This line was used to transport sand for reconditioning the crystalliser floors after the harvest. Three Cheetham made Ford 10 light locos were employed exclusively on this work. The light locos drove onto the crystallisers by means of light, sectionalised track panels. Further details were given on how the harvest conveyers are unloaded from their special

The tram will continue to operate probably for the next two to three seasons but after that, who knows?

On the following day, Cheetham hosted tours of its Moolap salt pans as part of Heritage Week and your scribe attended one of these. Harvester to

stack transport is by road vehicles but a lengthy system of tram track remains in use at this site along the 50 crystallisers for transporting conveyors and for the road truck stacker feeding off the harvest conveyors. The only operable rolling stock observed was two conveyor transfer bogies, so presumably road vehicles provide the motive power. Portions of the track have recently been renewed with good secondhand rails, new bolts and dog spikes .

As with Laverton, there is no tramway technology surviving to enable the Moolap crystalliser floors to be reconditioned so management is currently looking at a solution involving balloon tyre vehicles.

Norm Houghton 4/91

GLENMAGGIE WEIR, near Maffra 610 mm gauge?

A very short length of 2 ft gauge (approx) line exists on the weir wall. The rail consists of square steel with welded chairs on the concrete. Two presumably hand propelled vehicles were seen with an i.c. motor winch on each. They seemed to be for opening and closing the spillway gates.

John Peterson 4/91

OVERSEAS - NEW ZEALAND

TAWHITI BUSH TRAM MUSEUM 762 mm gauge

A 762 mm gauge private railway serving a new museum at Tawhiti, near Hawera, was opened on 15 December 1990. The museum, located in a former cheese factory, depicts how the people of Taranaki lived and worked. The bush railway commences just inside the museum gates and winds for about a kilometre across the paddocks to the rear of the museum building. Lineside displays depict an engineering workshop, a camp for railway sleeper cutters and a bush settlement. At the end of the line, a reproduction of an old sawmill houses the interpretative centre, containing dioramas showing the timber industry from bush to sawmill in one-twelfth full size models. Two of these show bush tramway scenes. The railway is operated by diesel locomotive built in Hawera by Nigel & Partners. It hauls passengers around the museum complex in an open carriage on four-wheel bogies.

NZ Rails 5/91 via Bob McKillop 5/91

MEETINGS

MELBOURNE: CASSILIS GOLD MINING CO.

John McCutchan will give an illustrated talk on the 1897-1916 activities of this company. which included a 2500 ft long gravitational tramway, and was probably Victoria's first significant hydro-electric scheme.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 13 June at 8.00 pm.

SYDNEY:

Any member wishing to know details of the next meeting should call Craig Wilson on 02- 484 7984.

LOCATION: Woodstock Community Centre, Church St., Burwood. Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 22 June at 7.30 pm

ADELAIDE:

Contact Arnold Lockyer for details

LOCATION: 150 First Avenue, Royston Park.

DATE: Tuesday 25 June at 8.00 pm.

NOTES, CORRECTIONS & COMMENTS

EDITORS NOTE:

Readers with keen observation skills may have noted that this months issue looks slightly different. It is because we have acquired a new computer and this issue has provided me with a crash course in familiarising myself with both it and the software! If anyone would like to send future contributions by disk (accompanied by hard copy is helpful), please do. The computer is IBM compatible with both 5.25 in and 3.5 in disk drives and the word processor used is Letter Perfect (also compatible with Word Perfect).

WALKERS LTD

(LRN 82, p.8)

Both DH class locos mentioned were built in 1969.

CSR LTD, Hambledon Mill

(LRN 82, p.13)

Chris Hart points out that the Hambledon brake wagon is painted plain yellow, and has a Hatz motor.

Commonwealth Steel premises

(LRN 82, p.10)

Ray Graf points out that the former Commonwealth Steel premises are now owned by Bradken. The loco there is yellow with blue cabside panels.

Corrimal Colliery

Ray also points out that the gauge of the Corrimal Colliery skip (LRN 82, p.9) is not given in the source he contributed (it was assumed from other evidence - oops! - Editor.)

AUSTRALIAN SOCIETY OF SUGAR CANE TECHNOLOGISTS

At this year's annual conference, a paper was presented by R.A. James, G.A. Kent and W. McWhinney on the subject of "Canefield Locomotives - Present and Future". This paper is published in the "Proceedings of the Australian Society of Sugar Cane Technologists" and provides a useful review of current locomotive practice and possible future directions. The main types reviewed are diesel hydraulic, diesel hydrostatic, diesel electric, electric (both straight and battery), and steam accumulator (fireless). The paper makes interesting reading.

TOUR REPORTS

MORETON CENTRAL MILL TRAMWAY TOUR, Nambour, Queensland

E.M. Baldwin 0-4-0DH *Valdora* (6-1258-5-6-65 of 1965) with our "tour train" on the return journey. 20/4/91

Photo: Robert Bremner

Approximately 45 LRRSA members, families and friends congregated at the Moreton Central Mill marshalling yards at the eastern end of Howard Street, Nambour on the morning of Saturday, 20 April for what was to be a great day touring some of the Mill's extensive tramway system. We were treated to a typical Queensland autumn day full of sunshine and clear skies. Motive power for the day was E.M. Baldwin 0-4-0DH *Valdora* (6-1258-5-6-65 of 1965), and our rolling stock consisted of two classes: "peasant class", being two flat cars immediately behind the loco with seating arranged "toast rack" style by the clever positioning of sleepers "wrapped in plastic"!; and "luxury class" complete with dining facilities, using one of the navvys' wagons, bringing

up the rear. Most travellers were happy to be “peasants” and enjoy the lovely open air ride through the lush canefields.

We left the marshalling yard at approximately 10.30 am and headed up the Bli Bli valley, noting the relatively new Nambour by-pass overbridge beneath which the line now passes. We made our first stop at Deepwater in Bli Bli where the opportunity was taken to have morning tea and to inspect an old canecutters’ barracks. We were fortunate in having Fred Perren, a local identity who has lived in the area for many many years, on board and he was able to treat us to his reminiscences of what it was like on the mill system in the past.

From here we moved on through Bli Bli, up the steep grade to the deep cutting where the tramline passes underneath Bli Bli Road. Numerous photo stops were had along the way but this one proved quite popular. We then proceeded to the Dunethin Rock picnic area on the banks of the Maroochy River which provided us with a great location for lunch. Just before arriving at the picnic area however a short stop was made to remove a cow from the line - a farmer, not expecting any traffic in the off season, had tied the cow to the rail!

During the lunch break, our driver took the train a little further down the line and ran the loco around the train ready for our return journey. On the way back we visited one of the two drawbridges on the system which passengers took the opportunity to inspect and photograph.

We arrived back at the marshalling yard by mid-afternoon, all agreeing it was a really great day. The last time the public was allowed on the system was on the ARHS Qld Div’s first tour in October 1957 - 34 years ago! On that occasion the Shay was the motive power. One member of our group was also on that trip and was able to tell us about it. As reported elsewhere in this issue, it is hoped the Shay will be restored to running order and perhaps we can then repeat the trip with the preferred loco! We would like to extend grateful thanks to George Hadley who provided liaison with the Mill and without whose help we would not have been able to organise the tour. On completion of the tour, George told us of the plans to restore the Shay. A collection had been made, by way of passing the hat around, for our driver, Jim Attewell, who donated his time to make our trip possible. However he declined to accept it saying he had enjoyed himself very much, so it was decided to pass on the money raised to George Hadley, as the first donation in the Shay Restoration Fund.

Peg Haves 7/91

RUBICON & ALEXANDRA TOUR, Victoria

Malcolm Moore 0-4-0PM (complete with snowplough!) at the Royston Power Station , SEC Rubicon Tramway.

Photo : Peter Evans

The weekend of 23/24 March promised to be great from the outset. The sun was shining to start with, as forty-two Light Railway tourists gathered at "Tin Hut", now known as the Rubicon Power Station.

The opportunity was taken to view the SECV's haulage beside the pipeline that feeds the power station. The only vehicle used on the haulage had been left out for us to inspect and photograph. This haulage is about 1100 m long and rises on a gradient of approx. 1:3, to connect with the raceline tramway at the top.

We all then headed off to the Royston Power Station to inspect the tramway, its equipment and the power station itself. The tramway operates a Malcolm Moore locomotive used occasionally for the carting of heavy materials. Two bogies once used on the Alexandra-Rubicon tramway are sometimes used for this purpose. To patrol the raceline from the Rubicon Dam to the Royston Power Station a yellow 4wBE rail car of dubious parentage is used. The SECV had kindly provided two of their employees, who arranged the rolling stock for us to view and to talk to us about the tramway, the power system and their activities.

The tramway which is several kilometres long includes a number of high curved trestle bridges. The original bridges were destroyed in the 1939 bushfires, rebuilt and have been renewed once since then, during the 1960s. The bridges are once again being rebuilt as their timbers decay, the work

being carried out by the Rubicon staff. Another interesting feature of this system is an electrically powered sawmill, whilst only small it provides most of the SECV's local needs. It also provided a good place in the sun for us to have lunch.

That afternoon, we headed off to walk a very interesting section of Clarke & Pearce's tramway along the eastern flank of the Middle Range. Along the way, many interesting relics were observed. Apart from the usual sleepers and dogspikes, there were the remains of five substantial bridges. One of these was at least 50 metres long, whilst another still completely intact was 10 metres long and 3 metres high. Also seen were the remains of two sets of winding gear at the top of inclines, the second of which we descended for about 800 metres. This section of tramway had prior to this tour been impassable, but much hard work by a small bank of dedicated but insane bushbashers who toiled in 40 degree heat to clear a path, was much appreciated by the rest of us. At the top of the second incline was the remains of the loco shed that once housed the "Days" tractor that now operates at the Alexandra Timber Tramway & Museum. Scattered around were a number of springs, drive chains and other parts that had been used on the "Days". The descent of the incline was made fairly quickly, some being quicker than others by choosing a sideways rolling method which is also useful at clearing some of the undergrowth. Once at the bottom of this 1:3 incline, it was a short stroll back to the "Tin Hut".

For Saturday night, a local hall had been hired to screen an excellent audio/visual presentation of tramway and logging in the Alexandra and Rubicon area by Peter Evans. After this Allan White of Alexandra showed some of his movies taken during the early days at the Museum.

On Sunday morning a number of us took the opportunity to stroll along the remains of the Rubicon Tramway at Alexandra while others were getting steam up in the "Fowler" at the museum.

The ATT&M people made us most welcome to their establishment. Just about everything that was moveable had been brought out for us to view. They have ten different locomotives. two steam, seven internal combustion and one

"Armstrong" powered. Also in use were a number of mining skips, flats and two carriages for the tourists to enjoy a leisurely trip behind the Fowler. The static displays of light railway items were also of great interest, many of which had been well restored and displayed. The models of a bush sawmill and other associated buildings provided an insight into life at mill settlements. Also on hand was the maker of these models, Mr Ernie LeBrun, who has lived and worked in the Alexandra/Rubicon area most of his life.

A BBQ was provided for lunch, upon which the ravenous horde descended. After lunch we were treated to the sight of a train made up of eight side tipping hoppers and a flat top hauled by the Fowler.

By mid afternoon it was time for most people to move off having enjoyed a great weekend of light railways adventure.

A. GONINON & CO, Newcastle 1435 mm gauge

(see LRN 79, p.4)

The standard gauge Whiting Trackmobile previously observed at this site is an 0-4-0D with central jackshaft drive and carries the number 75. Also noted on site was a rail mounted crane.

Ray Graf 4/91

NEW SOUTH WALES

BULLENS AFRICAN LION SAFARI, Warragamba gauge unknown

To be auctioned on 20 April by P.R. Masters & Co. were items from this attraction, including a "safari train with five carriages" and 1 km of track. Perhaps a member can provide information as to whether this was a miniature or a narrow-gauge railway.

Sydney Morning Herald 13/4/91 via Craig Wilson

COSTAIN AUSTRALIA LTD gauge unknown

(see LRN 77, p.12)

This company has advertised for a young mining engineer or tunnel surveyor "for a tunnelling project in the Blue Mountains", giving an 047 phone number. It might be supposed this job will involve rail transportation.

The Weekend Australian 29-30/6/91 via John Browning

MINES RESCUE STATION, Boolaroo, Newcastle 1067 mm gauge

Observed here on 29 April was a 4wBE loco with square ends, dumped in the grass, possibly intended for preservation on site. The loco was numbered 23 and had a battery box numbered 4.

Ray Graf 4/91

NSW STEAM TRAM & RAIL PRESERVATION SOCIETY, Parramatta Park 1435 mm gauge

(see LRN 72, p.9)

Beyer Peacock 1308 1620/1877 has been stripped down to the frame. This has been grit blasted and spray painted by the two coat process and new horn cheek slides are being made. 103A steam tram motor Baldwin 11676/1891 is still at the RAM Thirlmere. It has been steam trialed several times, experiencing problems with vacuum brakes and linkages and the bedding in of new brake shoes. The refurbished body was delivered in May and the unit should be returned to the Park by October. Robert Stephenson 2994/1899 was recently steamed after lying idle in the shed for 18 years. It was found the regulator would not close off. The dome was removed and regulator inspected and found more than badly worn. New parts are now in the process of being made. 1022 Vulcan 2505/1916 has had all the workload of steaming with KA778 or 1918 tramcars during the absence of 103A. Our steaming days are still third Sunday of the month in the afternoon and Monday public holidays. Renovation of the exterior of the CPH 5 rail motor has commenced, taking it back to original match stick sides and crown light windows. This work is being performed by out of work apprentices attached to B.A.T.L. Purcell replica steam tram has had a reconditioned Bedford 350 diesel and Turner gearbox fitted.

When joining this Society some five years ago, I found the state of the trackwork in an almost untrafficable condition and offered to become ganger. Most of the main running track has been lifted out of the ground, resleepered and ash ballasted. All light rail has been replaced by 60 lb/30 kg rail and new 1, 2, and 3 roads have been installed. Work is in progress replacing rail in 4, 5, and 6 roads. This work could not have been achieved without the assistance of some 12 community service workers.

Laurie McCulloch 6/91

PHILLIP HOLZMANN A.G., North Head 762 mm gauge

(see LRN 53, p.6)

To be auctioned on 28 May by Colliers International was equipment used on construction of the Ocean Outfall tunnel. This included six electric locomotives and 20 assorted rail trucks and cars including concrete agitators, form carriers, and personnel cars.

Sydney Morning Herald 18/5/91 via Ray Graf

Noted here on 29 April were two battery boxes, probably from narrow gauge battery electric locos. One carried No.4 (painted in red lettering on a faded orange body) and the second No.20 (painted in orange lettering on a

white body). Also noted was a standard gauge heavy duty flat car made from the remains of a SRA 47 class B-B DE loco.

Ray Graf 4/91

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway Woodford 610 mm gauge

(see LRN 80, p.9)

Inspection has revealed that the front tubeplate of Hudswell Clarke 0-6-0 *Melbourne* (1701 of 1938) needs to be removed, either for repair or for replacement. It appears that the bottom section of the tubeplate has been overheated at some time in the past, presumably in connection with an accident. Meanwhile work is proceeding on other aspects of the restoration of this locomotive, with the cab and tender steelwork repairs completed.

Pointwork has been underway to allow the connection of track into the new workshops area. Two sets of points are complete with one more to be constructed. The workshop building has been progressing well, with roof materials currently being cut to size.

A submission has been made to the Caboolture Shire Council for the relocation of the former D'Aguilar Station building from the Caboolture Council Depot to Woodford, and the installation of toilets inside.

Survey work is in progress in preparation for the granting of an easement through Catholic Church property at Woodford to enable an extension of the railway. This is parallel to a section of ex-QGR trackbed which is not available to the Society and which will allow access to State Forest beyond, in which the railway can regain the old railway formation.

Durundur Railway Bulletin 1/91, 2/91, 3/91, 4/91, 5/91 via John Browning

AUSTRALIAN RAILWAY HISTORICAL SOCIETY, Qld Div 1067 mm gauge

(see LRN 75, p.6)

A10 class 0-4-2 No.6 (Neilson 1170 of 1865) has been fully restored to working order and was officially recommissioned on 26 May. It went to Cairns on a well wagon at the start of June to take part in the centenary celebrations of the Cairns Railway. This locomotive was sold out of QGR service to Gibson & Howes in 1896 for use at their Bingera Mill and was returned to the QGR for the 1965 centenary celebrations, after which it was placed in Redbank Museum. It has been finished in a deep red livery and its return to service is a great achievement for all the volunteers who took part in the work.

Supplement to Sunshine Express 5/91 & 6/91 via John Browning

BHP GOLD MINING - DEVEX, Hall Road, Monkland, Gympie 610 mm gauge?

This mine, at the former West of Scotland shaft, had twin battery electric locomotives (see LRN 69, p.5 [sic]). Track gauge on the surface appears to be around 2 ft Two Gemco 4wBE units were seen on the surface in mid May, with grey frames and orange battery boxes. One unit carried metal numerals on the frame, and was apparently numbered 66. This was fitted with a battery box crudely numbered 1. The second unit, with battery box, 2 appeared to have the number 56 on the frame.

John Browning 5/91

BUNDABERG STEAM TRAMWAY PRESERVATION SOCIETY Bundaberg Botanical Gardens 610 mm gauge

(see LRN 81, p.8)

Rebuilt O & K 0-4-0WT 6805 of 1914, *Germany*, on the day of its official return to steam (see LRN 79, p.10)

Photo : Bob Gough

Orenstein & Koppel 0-4-0WT 6805 of 1914, *Germany*, was observed at work on 19 May. The locomotive has been very pleasingly restored in a deep red livery and makes a pleasing picture as it hauls its little train around the circuit of track .

The Society's two other steam locomotives are also at the Gardens site but both are dismantled. Bundaberg Foundry 0-4-2T 3 of 1952 has had its boiler

removed for the fitting of a new firebox, while Baldwin 0-6-2T 46828 of 1917, *Felin-Hen*, requires much work to be done before reassembly can begin.

The Gardens are being expanded and there is some thought that the tramway may be extended. Nearing completion is the magnificent Fairymead House, which has been relocated here. This comes from the original Fairymead Plantation.

John Browning 5/91

BUNDABERG SUGAR CO LTD 610 mm gauge

(see LRN 82, p. 12)

The takeover bid by British sugar refiners Tate & Lyle has been successful with them gaining a controlling interest in Bundaberg Sugar on 28 June. The six sugar mills in which Bundaberg has a controlling interest are Moreton, Millaquin, Fairymead, Bingera, Mourilyan and Babinda, and it also owns locomotive builder Bundaberg Foundry Engineers.

John Browning 6/91

BUNDABERG SUGAR CO LTD, Mourilyan Mill 610 mm gauge

(see LRN 82, p.12)

A land corridor for a future Bruce Highway Innisfail by-pass scheme has been proposed. This corridor crosses three former Goondi Mill tramlines. One is to the south of Innisfail, north of Mundoo, and two are west of Innisfail, near Shaw's Corner.

David Blakeley 4/91

GRAHAM CHAPMAN. Murrumba Downs 610 mm gauge

(see LRN 65, p.6)

Another locomotive was observed at this private preservation site during May. This is a Purcell 0-4-0PM (believed to be 999A of 1922) which was built for Moreton Mill. This unit is believed to have been rebuilt by the mill a number of times from the 1940s. It has been rescued from the site of the Buderim Zoo & Koala Park where it had been on display in the open for a number of years.

John Browning 5/91

CSR LTD, Hambledon Mill, Edmonton 610 mm gauge

(See Mulgrave Central Mill Co. Ltd) (see LRN 82, p.2 & 13)

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 79, p.14)

As was announced in LRN 82, CSR has announced that Hambledon Mill will close from the end of the 1991 season. Mulgrave Mill will purchase

Hambledon's tramway system and rolling stock (possibly with the exception of 300 bins), together with some mill equipment. From 1992, former Hambledon cane will be crushed at Mulgrave, where it is expected that continuous crushing will be in operation. Mulgrave has around 160 growers and Hambledon has 154, and the position of the former Hambledon growers in the Mulgrave co-operative is yet to be finalised.

There has been no decision taken as yet as to the future of CSR's "Sugarworld" tourist attraction, although there has already been speculation that it may be linked to the Mulgrave Rambler steam service operating from Mulgrave Mill.

The Mulgrave Shire Council has stated that it hopes the merger of the two tramline systems will enable the crossing of the Bruce Highway in Edmonton to be relocated to a place where it would be less of a traffic bottleneck.

*Cairns Post 9/5/91, 10/5/91, 21/5/91
via John Browning; Chris Hart 5/91*

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 82, p.13)

Victoria Mill received its new locomotive on Friday, 21 June, when Walkers B-B DH 605 of 1969 arrived from Maryborough, having been regauged and modified by Walkers. (It had spent the previous night on a low loader parked in the main street of Sarina.) The loco is finished in Victoria Mill yellow with a wide green line at waist level, white running boards and steps, and red/white dazzle striped headstocks. The cab height has been raised by around a foot, enabling a large window to be fitted above the hood. This makes its height about 2 ft above conventional cane railway locomotives. The single builder's plate is to be found on the headstocks at the long hood end. It was expected to enter service in early July.

The loco is believed to weigh almost 40 tons, so bridges between Victoria Mill and Lucinda have been strengthened to take it. It is expected to be used exclusively for bulk sugar haulage on this line, where it will haul about 1000 tonnes, or 95 sugar boxes. Suggestions that it will also haul Macknade bulk sugar are unconfirmed. Reports suggest the unit will be named *Clement*, after Clem McComiskie, a Victoria Mill loco driver who was killed in a shunting accident in the Mill yard on 19 June.

The arrival of the Walkers loco will enable E.M. Baldwin B-B DH *Wallaman* (6400-3-4-76 of 1976) to be released from bulk sugar haulage to cane train duties.

*Bob James, John Browning, Chris Hart 6/91
Herbert River Express 25/6/91 via Chris Hart*

CSR LTD, Kalamia Mill 610 mm gauge

(see LRN 75, p.7)

A 5.5 km section of former Pioneer Mill 3 ft 6 in gauge trackage from Kilrie to Macdesme has been relaid in 2 ft gauge as part of the Kalamia system.

John Browning 6/91

CQ SALT INDUSTRIES, Bowen 610 mm gauge

(see LRN 77, p.12)

The four locos which were out of use here for quite some time are said to have been sent to a Cheetham Salt site in Victoria. Four salt skips are on display near the front entrance to the works.

John Browning 6/91

GIBSON & HOWES LTD, Bingera Mill 610 mm gauge

(see LRN 80, p.10)

Plasser KMX-12T tamping machine 249 of 1982 was noted parked at Weithew on 18 May, alongside E.M. Baldwin 0-6-0DH *St. Kilda* (reb.6-2179-1-6-67 of 1967), which carries its name on the right hand side only. These units were involved in track upgrading works on the line between Bingera and the former Gin Mill site at Wallaville. At Wallaville, a loco compound has been constructed in which to stable locos securely, and inside it was observed the mill's Malcolm Moore 4wDH (believed to be 1025 of 1943).

Ruston & Hornsby 4wDM 387893 of 1955, rebuilt by the mill as a grass cutter hauler in 1973, has recently been converted to an unpowered ballast plough. It was noted in the yard in red oxide paint, attached to a train of ballast hoppers.

John Browning 5/91

HAUGHTON SUGAR CO PTY LTD, Invicta Mill, Giru 610 mm gauge

(see LRN 80, p.11)

The pair of E.M. Baldwin brake wagon bogies were sitting outside the workshop at the mill in mid-June. Inside, only the bare frame of the brake wagon has been fabricated. This might well reflect the likely delivery date of the new E.M. Baldwin loco, thought not to be before the start of August.

ISIS CENTRAL SUGAR CO LTD 610 mm gauge

(see LRN 80, p.11)

A large new loco shed has been built at the north-west of the mill site. All the track has been removed from the headshunt which was built in a deep cutting to the south of the mill as recently as 1976. The road bridge over the

mill yard, which once spanned four tracks, now has only one track passing underneath it.

State government approval has been given for the excision of a small area of a timber reserve along 500 m of Plath's Road to enable the mill to construct a tramline.

Isis was expecting the delivery of its regauged ex QGR Walkers B-B DH (602 of 1962) in time for the commencement of the crushing seasons.

*John Browning 5/91; Australian Canegrower
6/5/91 via Chris Hart*

MACKAY SUGAR CO-OPERATIVE ASSOC 610 mm gauge

(see LRN 82, p.14)

The new Marian - Cattle Creek link between Gargett and Uruba was practically completed by mid June, with a few minor jobs to be completed at the Finch Hatton end. Ballasting had been completed from Gargett almost to Tannalo with Com-Eng 0-6-0DH *Tannalo* (B1724 of 1957) in charge of a pair of ballast hoppers. The new branch to the south of Gargett was being extended to a total of 2 km, with tracklaying in progress.

On the former Cattle Creek Mill tramway, the junction of the Owens Creek line with the old Cattle Creek main line was being altered to face Marian, with the track to be realigned on the south bank of Cattle Creek. The old QGR yard at Finch Hatton had been largely regauged, with a new road crossing in Finch Hatton township to connect 2 ft gauge track into it at its eastern end.

On the new high level bridge at Marian, track was laid during the last two weeks of June, and extended across the Eungella Road. The rails were connected to Marian Mill's lines on the north bank of the Pioneer River, but only preliminary earthworks were in progress south of Eungella Road. However, a 2 ft gauge crossing had been put in across the Marian-Eton road to the south of the government line at Marian Station. In the Marian loco shed, Com-Eng 0-6-0DH FB3150 of 1963 was receiving bodywork modifications prior to repainting, while a new cab manufactured at the mill awaited fitting. The cab was already painted in the mill's yellow, red and green colours, and carried the name *Eton* and the number 5. (The number is supposed to be 25, but number 2s are out of stock!) Eimco B-B DH *Narpi* (L256 of 1990) had had its bogies removed for modification. At Pleystowe Mill, Clyde 0-6-0DH *Habana* (60-215 of 1960) was receiving a repaint, and was said to have swapped engines with Clyde 0-6-0DH *Te Kowai* (56-103 of 1956). In the navvy yard, Motor Rail "Simplex" 4wDM 9577 of 1953 was found dumped in a dismantled condition.

On Pleystowe's North Eton line, track realignment work was well under way

in mid-June to take out a bad reverse curve at Mount Vince where a number of derailments have taken place in recent years. In addition, earthworks had commenced on the south bank of the Pioneer River for the new Balnagowan high level bridge.

At Racecourse Mill, a number of Clyde 0-6-0DHs have had the cabs remodelled with new ergonomic seating, new console, and an air parking brake control to replace the unwieldy old brake column. Com-Eng 0-6-0DH *Oakenden* (FB3169 of 1963) remained in North Eton yellow livery at the end of June, in spite of its repaint in Racecourse yellow & green having been programmed for this slack season.

At Farleigh Mill, Clyde 0-6-0DH *Seaforth* (61-233 of 1961) was the last of Farleigh's Clydes to receive a new cab. It was also the mill's first loco to be painted in a new livery of yellow and peppermint green. This consists of yellow above waist level and green below, with a thick green yellow line just below waist level. Eimco B-B DH *Farleigh* (L254 of 1990) has also received the new colours, although this has been done merely by painting the green over the existing yellow. A third loco, E.M. Baldwin B-B DH *Foulden* (7220-1-6-77 of 1977) was also about to be repainted at the end of June.

John Browning 6/91

MORETON CENTRAL SUGAR MILL CO LTD, Nambour 610 mm gauge

(see LRN 80, p.13)

It is reportedly planned to restore preserved 4w+4wTG *Shay* (Lima 2091 of 1908) to running order as part of the Moreton Mill centenary celebrations in 1997. This historic locomotive went on display at Mapleton in 1987, but afterwards returned to the mill and is once again on display at the main entrance to the mill yard.

Clyde 0-6-0DH *Moreton* (63-289 of 1963) was noted with its old cab removed when the mill was visited on 17 May, in preparation for the fitting of a new cab which was under construction nearby. Com-Eng 0-6-0DM *Yandina* (B1112 of 1956) was noted in very indifferent condition behind the loco shed. It is reportedly waiting to be fitted with a new engine.

PIONEER SUGAR MILLS LTD, Inkerman Mill 610 mm gauge

(see LRN 80, p.13)

E.M. Baldwin 0-6-0DH *Carstairs* (6-2715-1-9-68 of 1968) has been fitted with the new cab supplied by Eimco and has been painted yellow with a wide green stripe at waist level and green trim.

A number of new bins which appeared similar in design to the Victoria Mill 4-ton bins were observed in service.

John Browning 6/91

PIONEER SUGAR MILLS LTD Pioneer Mill 1067 m gauge

(see LRN 79, p.14)

A 3.5 km new line has been constructed west from the mill to the entrance to CSR's Lochinvar Station on the Bruce Highway.

A ballast tamper and ballast plough were observed off the track near the mill. These are suspected to be the units owned by Fessl which are used for contract maintenance at the mill (see LRN 77, p.13).

A number of ex-government railway vehicles used for maintenance purposes were observed around the mill. These include a bogie carriage used as a mess car, five ex QGR VTS ballast wagons, and a TE ballast plough.

John Browning 6/91

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 82, p.16)

In mid-June, the construction work for the new formation required for the underpass of the QGR by the mill tramway was inspected. The tramline concerned currently crosses the QGR and Bruce Highway on the level on the north side of Sarina and thereafter extends for about 30 km south to Koumala and Turnor's Paddock. The underpass is about 1.5 km north of the existing crossing and involves deep cuttings on either side of the QGR. The line will cross the Bruce Highway at the same point as now. The earth works were substantially complete on either side of the QGR, but the undercutting of the government railway had not yet been done.

John Browning 6/91

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOC LTD 610 mm gauge

(see LRN 79, p.15)

Clyde 0-6-0DH 6 (62-272 of 1962) was observed in mid-June, stripped down and ready to be fitted with the new cab expected from Eimco in Mackay. However, with the crushing due to start on 17 July, it appeared unlikely that this work would be completed on time.

A new tramline bridge has been constructed over Myrtle Creek during the slack season and some sections of tramline have been relaid.

John Browning 6/91; Mackay Daily Mercury 18/6/91

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 80, p.14)

Prof Engineering B-B DH *Nyleeta* (P.S.L.25.01 of 1990) is believed to have returned here during May after having received attention at Eimco's Mackay works. It now carries an Eimco plate with their number L253.

A steel and concrete bridge carries the tramline across the South Johnstone River on a line linking Kalbo and Floriana. The previous bridge here was washed out by Cyclone Winifred and its replacement was paid for with insurance money.

David Blakeley 4/91; John Browning 5/91

MR TAIT. Old Clare Road, Mirrigan, Ayr 1067 mm gauge

Hunslet 0-4-2T *Pioneer* (642 of 1898) has been removed from the former Endeavour Foundation School in Ayr (see LRN 41, p.4) to this site, where its new owner seems to be a steam machinery enthusiast. Currently, the loco is standing in the open, looking somewhat weathered after 25 years of "preservation" in the open air.

John Browning 6/91

VICTORIA

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 81, p.10)

Gembrook Restoration

The second Gembrook work weekend took place on 6/7 April when one set of points and most of No.1 road was laid. About 100 tons of ballast has been placed along No.1 Road, and about another 150 tons is piled in Gembrook yard ready to be distributed along the mainline. Much of the track laid on the mainline is still only in skeleton form, i.e. only one in three sleepers are in place. Another work party is scheduled for 18/19 May when the sleepers will be completed, and further ballasting will occur.

The Andrews Foundation, a charitable trust associated with the Pakenham Blue Metal Group, has donated \$60,000 towards the Gembrook restoration. Another useful grant recently received is \$4,000 towards restoration of the Water Tank At Gembrook. This came from the State Government Metropolitan

Area Improvement Programme.

The Taxation Department has ruled that the Puffing Billy Railway in its entirety is a public museum. This means that donations to the Gembrook restoration (and any other projects associated with the railway) are now tax deductible to the donor.

Traffic

Despite the economic downturn, passenger figures for February and March set all time records, and the figures for April will exceed budget. There are probably two reasons for these good results, better marketing and publicity, and Melbourne residents are not travelling so far for their entertainment.

Locomotives

12A: This has been in Belgrave workshops undergoing a major rebuild for a long time. The frames have now been fitted with its wheels and work is progressing on the valve gear.

Climax: This failed in service on a ballast train early in April, due to Westinghouse air compressor problems. It was scheduled to work a "Commissioner's Special" on 4 May, and another on 1 June.

14A: Late in April this was temporarily out of service having broken boiler stays around the firebox repaired.

G42: Work is continuing on the centre frame unit, which has been primed and painted.

Puffing Billy Railway Monthly News via Frank Stamford 5/91

T.A.C.L. RAIL TRACTOR RESTORATION - PROGRESS REPORT

A Project to Restore the Climax's Little Brother!

(see LRN 79, p.19)

On Sunday, 21 April, the centres were cut out of four ex-TGR wheels at Emerald, so that these tyres can be fitted on to the existing T.A.C.L. wheels. The next task is to work out how that little job will be done.

Frank Stamford 5/91

K & G DIXON, Coburns Road. Melton gauge unknown

To be auctioned on 23 February was a quantity of horse gear, antiques and sundry items. Included was "amusement train (new), 3 carriages (Honda engine) on rails." Perhaps a member can provide information as to whether this was a miniature or a narrow-gauge railway.

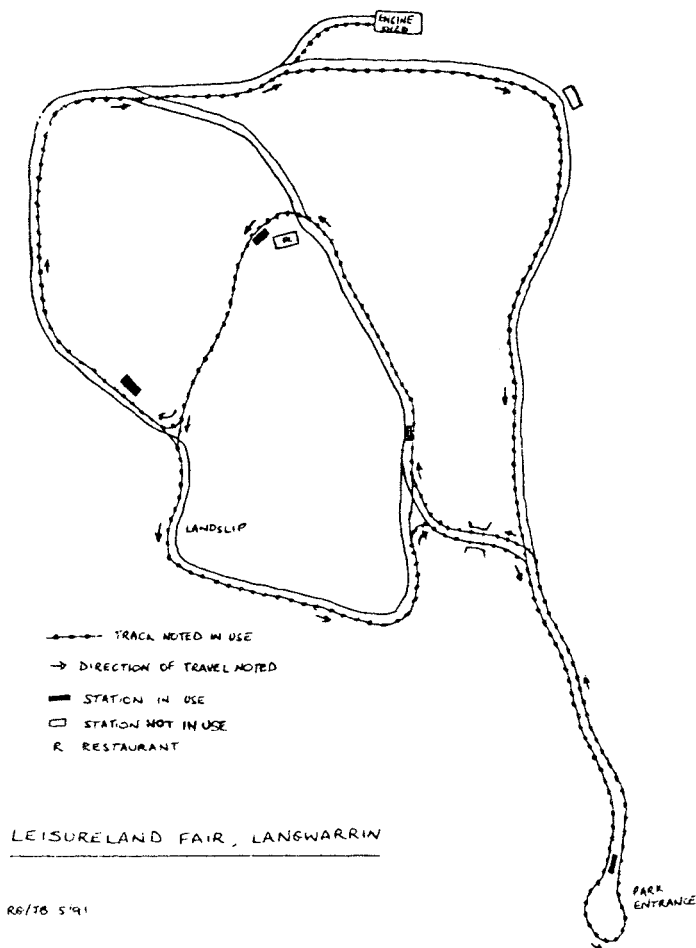

The Weekly Times 20/2/91 via Ray Graf

FIRST NJP INVESTMENTS PTY LTD, Leisureland Fair, Langwarrin 610 mm gauge

(see LRN 81, p.11, LRN 68, p.2 & LRN 39, p.9)

Visited on 2 February, only certain lines of the elaborate track layout appeared to be in regular use, as shown on the following plan. This information was determined by examining which rails were shiny! Chance B-B DH steam outline loco 134 (75-50134-24 of 1975) was seen in use, and the other two locos with their trains were in the engine shed.

Ray Graf 4/91

WESTERN AUSTRALIA

BUSSELTON 1067 mm gauge

At various times, the Busselton jetty preservation group collects a fee from users of the jetty, the funds helping the extensive restoration work on the 2 mile jetty. Access has been restored to the end of the jetty, previously isolated due to a fire, but there is still much work to be done. At the shore "depot" are three home made wagons using channel iron and trolley wheels. The wagons are used to convey rail and materials to work places on the jetty and one carries a winch. Two are 4 wheel and one is a rigid base 6 wheeler. The preservation group is trying to obtain more rail to replace rail lost on damaged sections of the jetty. There are no definite plans yet to provide a tourist service by rail on the jetty but it will come under more serious consideration when repairs are more progressed.

David Whiteford 6/91

YARLOOP 610 mm and 1067 mm gauge

The Bunnings (formerly Millars) Timber Mill at Yarloop appears to have ceased using rail to consign timber from the mill to the Bunnings distribution centre at Kewdale. When seen on 24 May, the zig-zag line from the mill to the WAGR yard bore many signs of dis-use.

The Historic Mill Workshops development at Yarloop features a number of items of railway interest. The old workshops last saw extensive use in the 1970s and managed to survive long enough for a major conservation and restoration project with Government support to commence in the late 1980s. The 1067 mm gauge mill railway from Yarloop siding to the Bunnings Mill goes through the workshops complex and a few trolleys are at rest on the line. The former locomotive workshops are being restored to operational condition and it is hoped that restoration work on steam locomotives will be undertaken in the workshop during the summer non-steam running season. The development also includes a "steam room" which will operate along the lines of the Dover steam museum, Tasmania. A large boiler will feed steam to various engines that will be placed in operation. To feed the boiler, a short 610 mm gauge trolley line is under construction and will possibly be no more than 15 metres in total length.

David Whiteford 6/91

OVERSEAS

CHINESE ROLLING STOCK

One of the organisers of the China Wood '91 international exhibition, to be held in Beijing in September 1991, is the China National Forestry Machinery Corporation. In the publicity material produced for the exhibition, it is stated that the Corporation produces the following logging equipment:

"762 mm wheel spaced steam and diesel locomotive on forest railway, cargo transportation cars, oil tanks, passenger cars and all kinds of railway carriages;..."

This is followed by other items such as road trucks, winches and diesel machinery. It's good to see that they have their priorities right!

Colin Harvey 5/91

NOTES, CORRECTIONS & COMMENTS

CARIBBEAN GARDENS, Scoresby

(see LRN 82, p.16)

The working loco here is believed to be a conversion from a 2.5 ton Motor Rail "Simplex" 4wPM, and was rebuilt by V. Masters, Southport, Queensland, according to a plate it carries. It and its carriages worked at a couple of Gold Coast tourist attractions from 1959 before going to Victoria in about 1966. The only two known candidates for this are 1859 of 1919 (ex Chichester River Gravitation Scheme? - see LR 112, p.31) and 3711 of 1924 (ex CSR Victoria Mill). The Malcolm Moore 4wPM has been identified as 1092 (of 1943?).

John Browning 9/91

FOUND!

CSR Fiji Lautoka Sugar Mill's No. 21, Hudswell Clarke 0-6-0 (1664 of 1936) is listed in LRRSA's Australasian Locomotive Builders Lists as "OOU 1970s; scrapped" however she appears to be alive and well and living in California! An ad has appeared in the magazine "Locomotive & Railway Preservation" (issue date unknown) for the sale of this locomotive by L.F. or Ann Rothwell, Rancho Rinconada, 5300 Oakdale Avenue, Woodland Hills, California 91364. Included with the locomotive for sale are: "Two exact copies of Fiji 'free train' open cars seating approx. 32 persons each car; also two closed coaches, copies of Welsh narrow gauge coach."

Bruce Belbin 9/91

STUFF OR JUNK

Someone once said, "To me my junk is all good stuff, but to others my good stuff is just junk! What will happen to it all when I die?".

All too often articles, in our case, of light railway history are lost when the collector passes on. Families and friends often fail to appreciate the full

value of photos, slides, films, documents, etc., collected over the years by the departed railfan. Once you no longer have any use for your collections, they can continue to provide enjoyment and often be valuable research material to others in the future.

So we ask you to consider inserting into your Will, an appropriate provision for the proper disposal of your collection. Whilst the LRRSA does not have any formal archives to accept such material, we do recommend that you bequeath your valuable collection to the State or local Library in respective home state.

Please give it a thought.

Bill Hanks 5/91

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

EIMCO AUSTRALIA LTD, Paget, Mackay

(see LRN 82, p.8)

During July, Eimco moved to new premises adjacent to their previous location in Elvin Street. The new workshop is about double the size of the previous one. The remains of Fox 4wDHR 322 of 1972 were part of the move, and this unit was once again placed upside down in a corner of the yard outside the workshop.

John Browning 7/91

SITE REPORT - VICTORIA

POINT LONSDALE INCLINE 610 mm gauge?

(Grid ref. BT906592)

During the Second World War, a concrete gun emplacement was constructed on the top of the sand dunes at Point Lonsdale overlooking Bass Strait and the entrance to Port Phillip. A two-rail incline tramway about 100 metres in length was used for access. This emplacement is now used as a public lookout.

The last (top) pair of rails remain in position as the ends are embedded in concrete. These are about 20 pounds per yard and indicate a gauge of about 2 ft (they have moved slightly).

Inscribed in the concrete of the emplacement is:

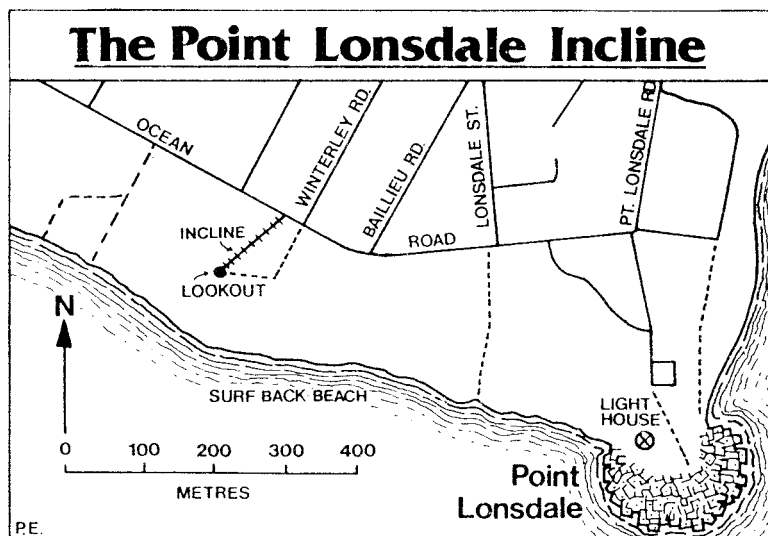

THIS GUN EMPLACEMENT
WAS BUILT BY
No.1 SECTION

21 ARMY FIELD COY
MARCH 194x

The last figure of the date of construction is not clear, but the year appears to be 1942.

The gun was mounted on a circular rail set in concrete. This has a diameter (gauge?) of 6.9 metres.

Colin Harvey 8/91

AUSTRALIAN CAPITAL TERRITORY

AUSTRALIA POST, Canberra

Australia Post is the major user of a 3.6 km dual track external/internal mail electric railway system at the Federal Parliament House buildings complex in Canberra. Does anyone have any more information on this system?

Post Journal July 1991 via Peg Hayes

NEW SOUTH WALES

APPRENTICES STEAM CLUB, HMAS Nirimda, Quakers Hill 610 mm gauge

A visit to this establishment during August revealed that 0-6-0T *Invicta* (John Fowler 11277 of 1907) is in operating condition on a length of track

constructed within the grounds. The side tanks have received radical surgery and although full length are now only about half as deep as those carried at Qunaba Mill, which has a fairly dramatic effect on the locomotive's appearance. It also makes prominent another modification, the uncovered wooden boiler lagging, enhancing a somewhat "Heath Robinson" type appearance.

Ian Comrie 9/91

BHP LTD, Newcastle 912 mm & 1435 mm gauge

(see LRN 81, p.6)

Standard gauge Goninon B-B DE loco 32 is preserved at Morando Sidings near the adjacent level crossing. (This unit was the first diesel-electric loco to be used at the Newcastle Steelworks, and was allocated builder's number I/S1001 of 1954 - Ed.)

On 3 August, an open day for present and retired employees only was due to be held. It was expected that the 3 ft gauge rail system, closed since May, would be in operation.

Ray Graf 7/91

BHP LTD, Port Kembla 1435 mm gauge

(see LRN 77 p.9, LRN 81 p.6, & LRN 82 p.5)

A breakdown of the O'Brien's Drift conveyor system in late May meant that output from Appin, Cordeaux and Tower Collieries, amounting to 18,000 to 20,000 tonnes per day was diverted from BHP rail transport to road trucks which travelled down Mount Ousley at the rate of at least 20 per hour. This naturally caused some concern to Wollongong residents.

LAMBTON COLLIERY 1067 mm gauge

During an official ARHS (NSW Div.) walking tour over the new Redhead Estate and Coal Company's railway between Adamstown and Belmont (south of Newcastle NSW), a diversion was made to inspect the surface workings of Lambton Colliery. This is the only remaining active colliery in the area and the only source of traffic on what is left of the Belmont Railway.

The inspection of the Colliery revealed two 1067 mm gauge battery electric locomotives having their batteries recharged. One, a Gemco, carried

the number 3440 on the front and both sides, the numbers being made up of individual cast fixtures attached to the loco body. The second, slightly smaller locomotive, had no indication of its builder visible and carried only the painted number 61 on each side.

A man riding car without visible identification was standing in the open. This vehicle did not appear to be self propelled.

Wal Lane 8/91

A.J. MAYR ENGINEERING, Greenleaf Road, Newcastle 912 mm gauge

Four 3 ft gauge bloom transport cars from the Newcastle Steelworks were noted at these premises. These vehicles are heavy duty bogie flat cars.

QUEENSLAND

BABINDA SUGAR LTD, Babinda Mill 610 mm gauge

(see LRN 80, p.9)

Babinda's new "Bundaberg Hunslet" B-B DH was due to be delivered late in August. It had been anticipated that this unit would be demonstrated at Racecourse Mill, Mackay, on 26 August, for the benefit of those attending the Annual Meeting of the Sugar Research Institute. However, last minute hitches prevented its dispatch from Bundaberg on time.

On 25 August, multiple-unit Clyde 0-6-0DH locos 5 *Goondi* and 6 *Daradgee* (55-56 of 1955 and 56-90 of 1956) were noted stuck on greasy rail on the northern approach to the mill with highway and railway blocked. The problem was caused by the cutting out of the motor on one of the Clyde units, and resulted in the hurried dispatch of a Com-Eng 0-6-0DH from the mill to assist, making the train a triple header.

Bob James 8/91: Chris Hart 8/91

BUNDABERG SUGAR CO LTD, Fairymead Mill 610 mm gauge

(see LRN 80, p.9)

Fairymead's new "Bundaberg Hunslet" loco was apparently delivered to

the mill during August but was returned to the Bundaberg Foundry for some fine tuning following trials.

Bob James 8/91

CSR LTD Hambledon Mill, Edmonton 610 mm gauge

(see LRN 83, p.2 & 9)

E.M.Baldwin 0-6-0DH 1 (4413-2-8-72 of 1972) works with the brakewagon constructed from the frames of Drewry 0-6-0DM *Seaforth* (Baguley 2514 of 1954). All the brakewagons at Hambledon have elaborate guards fitted to the beacons because of the endemic vandalism which occurs along the line which runs through the Cairns suburbs.

It is reported that the "Sugarworld" park at the mill is only in operation on weekends. E.M.Baldwin 4wDH 9109-1-9-80 of 1980 was observed parked in the main station platform in mid-August.

The Hambledon north coast line now crosses beneath the Cook Highway north of Cairns through a pre-existing drainage culvert.

Scott Jesser 8/91; Chris Hart 9/81

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 83, p.9)

Ex QGR 2 ft gauge Walkers B-B DH 605 of 1969 with brake wagon and sugar boxes at Victoria Mill, August 1991.

Photo: Ian Comrie

The Walkers B-B DH 605 of 1969 did its first sugar run to Lucinda on 30 July after doing a light loco run the previous day. The delay in entering service was at least partly due to the need to carry out certain electrical modifications. During that week, the Walkers loco shared the sugar duties with E.M.Baldwin B-B DH *Callahan* with Com-Eng brakewagon 2. The Walkers loco had still not received its nameplate by late August, and local opinion varied as to the exact name to be given. Some siding alterations on the Lucinda line had had to be made to suit it. In mid-August it was observed hauling a load of 88 sugar boxes.

From 20 July, E.M.Baldwin 0-6-0DH *Hobart* (4413-1-7-72 of 1972) was on loan from Victoria Mill to Macknade. This was ostensibly to replace Macknade's E.M.Baldwin B-B DH 19 (7070-3-4-77 of 1977) which failed when a universal joint broke, allowing a cardan shaft to go through the bottom of the converter. However, it was predicted that *Hobart* would remain at Macknade and that a smaller loco would be sent to Victoria in exchange. However, this swap did not eventuate and *Hobart* returned to Victoria on 31 August.

Victoria Mill's Drewry 0-6-0DM *Seymour* (Baguley 2392 of 1952) was on loan to the Lucinda Bulk Sugar Terminal for a few days around the end of July. Victoria's Drewry 0-6-0DM *Herbert* (Baguley 2394 of 1952) was on loan to Macknade on navy duties from 14 to 16 August and from 21 August.

The anticipated renumbering of Hansen 2w-2PMR linecars to unify the mill fleets has commenced. The former Macknade Mill M1 (34 of 1973) has become L CAR 5, while 1112 of 1973 (Macknade TROL2 ex Victoria V1) became L CAR 4.

Chris Hart 7/91, 8/91, 9/91: Scott Jesser 8/91

GARY CUTLER, Magnetic Mango, Horseshoe Bay, Magnetic Is. gauge unknown

A disused tramline from Horseshoe Bay lagoon to what appears to be a disused goldmine which last operated in the 1930s has been discovered at this mango farm tourist attraction.

Townsville Bulletin 9/7/91 via Chris Hart.

TONY GERMANOTTA, Kuttabul 610 mm gauge

(see LRN 79, p.11)

It is reported that the three locomotives owned by Mr Germanotta may shortly be sold for use on a projected tourist railway on Fraser Island. The locomotives are: 0-6-0T Perry 201.51.1 1951 4wDM Gmeinder 4574 1949 4wDM Windhoff 452 1940

Ian Comrie 9/91

HAUGHTON SUGAR CO PTY LTD, Invicta Mill, Giru 610 mm gauge

(see LRN 83, p.10)

The new E.M.Baldwin B-B DH loco was delivered on 23 August. Painted in Invicta's standard yellow colours, it appears similar to previous Baldwin bogie locos, with the angled cab windows seen in the most recent examples at Fairymead and Tully. It is reported that this loco will be receiving the name *Strathalbyn*.

Scott Jesser 8/91; Chris Hart 8/91

ISIS CENTRAL SUGAR CO LTD 610 mm gauge

(see LRN 83, p.10)

The new locomotive, the regauged Walkers B-B, DH 602 of 1969, was seen in use at the start of August. The unit is painted yellow and cream and is numbered 1. The main modifications noted appeared to be the removal of the buffers and drawhook, and the fitting of Willison couplers. The former number 1 (John Fowler 0-6-0DM 20776 of 1935) is still to be seen dumped behind the old sugar shed. The other Fowler, number 2, (0-6-0DM 4110019 of 1950) was noted in the new loco shed and appeared to be serviceable.

Scott Jesser 8/91

RON LEONARD Trinity Beach 610 mm gauge

(see LRN 35, p.10)

Rod Leonard hopes to soon launch a tourist passenger service utilising a section of Hambledon Mill's track. Four end loading passenger carriages have been constructed, and these appear to be quite wide by 2 ft gauge standards. An E.M.Baldwin underground loco has been acquired and refurbished with a Bedford diesel engine and air brakes for passenger haulage. Hudswell Clarke 0-6-0 1653 of 1935 has been stripped down and is reportedly to receive a new boiler. Rod also owns F.C. Hibberd "Planet" 4wPM 3570 of 1952.

Ian Comrie 8/91

MACKAY SUGAR CO-OPERATIVE ASSOC. 610 mm gauge

(see LRN 83, p.10)

The 10.1 km \$2.2m Marian - Cattle Creek link line was completed in time for the commencement of the crush in late July. 4.2 km was new track on regraded QGR trackbed and 5.9 km was regauged QGR track resleepered as necessary. New siding accommodation included four 250 bin loops at Marian, two 250 bin loops at Tannalo, a 250 bin loop at Lumburra, a 120 bin loop at Finch Hatton, and an extension of the Mirani West loop to 250 bins. Six sets of road crossing flashing lights were installed.

The tramline link from the new high level Pioneer River bridge to Marion runs adjacent to the QGR, crossing it just east of Marian station.

Marian Mill's Eimco B-B DH 255 of 1990 had received its name *Gargett* by early August.

The 900 new 6-tonne cane bins have been delivered to Marian and 150 Marian bins transferred from Marian to Farleigh. It is reported that the six-tonne bin will be the largest in use by Mackay Sugar before the year 2000.

The Pioneer River Improvement Trust will carry out repair works on Oak Creek near Oakenden, where flood damage after Cyclone Joy caused damage to a Racecourse Mill tramline. Mackay Sugar will assist by providing old cane bins to be filled with rock to stabilise the creek bank.

Tenders were called in July for a new Racecourse Mill tramline bridge across Sandy Creek at Homebush consisting of seven 15 metre spans.

Problems at Marian Mill have resulted in the temporary transfer of some Marian cane to Farleigh and Pleystowe mill, with some Pleystowe cane going to Racecourse. Some Marian cane will continue to be crushed at Farleigh until the end of the season. Tramline interconnections between the Mackay Sugar mills enable adjustments to be made in cane delivery according to need.

Mackay Daily Mercury 5/7, 15/7, 17/7, 21/8, 28/8, 4/9, and 7/9/91; Australian Canegrower 1/7/91 via Chris Hart;

Mackay Sugar 7/91; John Browning 7/91; Scott Jesser 8/91

Eimco B-B DH 18 *Gargett* (L.255 of 1990) hauls cane towards Marian Mill. August 1991.

Photo: Ian Comrie

MOURA 610 mm gauge

A small circuit of track is to be found behind the football ground at Gill Park, situated in McArthur Street. Very light prefabricated track is used, making up about 200 m in all. A shed forming a "tunnel" over the track contains a Jenbach 4wDM loco fitted with an ornate canopy, and ten small cars, one fitted with a canopy. It was reported in 1977 that Jenbach 1191 of 1954 had been sold by the Burgowan Coal Co. for use on such a line at Moura (see LRN 2, p.6).

It is believed that this line is used at least once per year at the annual miners festival. Three small yellow tipping skips, numbered 1, 2 & 3 sitting on the ground inside the circle of track are believed to be used in a skip filling competition at this festival.

John Browning 8/91

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 83, p.9)

Changes have been made in the mill yard with the double bin tippler being resited at below ground level. Two automatic tracks, one from each of the main full and empty yards descend in a cutting under the road to the north of the mill, which has been raised to provide the necessary clearance. After going through the tippler, bins are moved to the adjacent empty line by means of some kind of traverser. Bins requiring attention in the shop are lifted to the truck shop line at ground level after passing through the tippler.

The "Mulgrave Rambler" service has been changed with a morning run in the Highleigh area, and the Mulgrave Valley trip operating in the afternoon only. It now operates as a return trip rather than using a bus, for one direction as before. The combination of earth ballast and a low ground clearance on the Mulgrave Rambler carriages are reported to create somewhat of a dusty ride in dry periods.

Chris Hart 8/91

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 83, p.12)

During July, the new underpass under the QGR was in use and the old crossing on the level disconnected. It is reported that three diesel locomotives currently out of use at the mill will be offered for tender at the end of the year. These units are:

5	0-4-0DH	John Fowler	18801	1927
6	4wDM	Ruston & Hornsby	371381	1954
-	4wDM	F.C.Hibberd	2333	1940

John Browning 7/91; Tony Wells 7/91

Formerly of Plane Creek Mill, 2 ft gauge John Fowler 4wDM 21914 of 1937 at Clairview, March 1991.

Photo: John Browning

QUEENSLAND SUGAR CORPORATION, Lucinda Bulk Sugar Terminal 610 mm gauge (see LRN 64. p.12)

For a few days around the end of July, the sugar terminal's Com-Eng 0-6-0DH (G1023 of 1958) was unavailable for use because of a breakdown. During this time 0-6-0DM *Seymour* (Baguley 2392 of 1952) was on loan from Victoria Mill as a substitute.

Chris Hart 8/91

SIGNAL PACIFIC LTD, Dawson Valley Colliery, Baralaba 661 mm gauge

This underground mine, formerly owned by the Mount Morgan company, (2 ft 2in gauge was also used at Mount Morgan) closed in 1969. Still to be found on the surface near the derelict headframe is yellow-painted E.M.Baldwin 4wDH 6-2245-1-3-68 of 1968. Also discovered at a far corner of the property, were six small steel bottom dump four-wheeled hopper cars, two of which were apparently complete. A display in the village store gives more information about the history of this interesting town and its coal industry.

John Browning 8/91

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 83, p.12)

It is reported that a tourist passenger service is now operating from the mill

on No.6 branch through South Johnstone township. Further details would be welcome.

David Mewes 8/91

TULLY SUGAR LTD 610 mm gauge

(see LRN 82, p.16)

Cardwell Shire Council have made a submission to the State Government about a proposal to provide direct transport access into the Murray Valley area. This would involve the construction of a cane tramway including a road/rail bridge across the Murray River, and would foster agricultural development.

Work on the refurbishment of E.M.Baldwin 0-4-0DH 1 (6-1082-1-2-65 of 1965) was almost completed by mid August.

Herbert River Express 20/6/91 via Chris Hart; Chris Hart 8/91

TASMANIA

HYDRO ELECTRIC COMMISSION, Tullah 1067 mm gauge

Tenders have been called by the above Commission for sale of rail tunnelling plant located at Tullah on Tasmania's west coast. The plant is in operation until September 1991 and tenders close on 30 September 1991. Among several items of light railway interest listed are: Granby type side dump 12 m capacity muckcars, 3x8 car trains and Gemco 25 tonne 150 kw diesel/hydraulic locomotives (5 off); flatcars, 7 off 6 m x 1.8 m, 2 off 3 m x 1.8 m; 18 seater mancar module; 10 seater Baldwin motorised mancar; 3 off Muhlhauser electric rotation concrete transit mixer cars; and a quantity of rail, sleepers, dogspikes etc.

Engineers Australia 26/7/91 via Greg Stephenson

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm & 1029 mm gauge

P.O. Box 288, Alexandra Vic 3714

(see LRN 81, p.9)

Work commenced in October 1990 on the restoration to running order of Kelly & Lewis diesel locomotive 0-6-0DM 4271 of 1935. During the period 9-21 October 1990, Paul Simpson and Grahame Lister had jacked up and lifted the frame of the loco onto pigsties. This enabled the wheelsets to be removed for inspection, cleaning and painting in primer. The axle spring sets

were removed and three of the six replaced because of broken springs, the grease nipples were replaced with new types and holes cleaned.

One of the axleboxes (6) was found to be broken in half and will be repaired if possible, by Ron Stephenson Engineering of Alexandra, who will also manufacture some of the missing brakegear parts and straighten some bent parts etc.

The loco cab had been removed previously and had been returned cleaned and painted by the SECV crew at Rubicon.

Whilst the loco frame was up on the blocks, Doug Lister cleaned it down with a high pressure water unit generously loaned by Jan Radford's husband.

This October, another two weeks of concentrated activity on the Kelly & Lewis loco will take place and a working bee will be held on the weekend of 19/20 October. All interested persons are invited to get their hands dirty as the loco is reassembled and hopefully, can run under its own power.

Since last October, various work has been carried out off-site, in NSW. Paul Simpson has manufactured a new sandbox lid, bonnet support legs, overhauled the starter motor, and repaired the switches/ammeter unit for the control panel. While in Alexandra, new member Brian Slader and David Creighton of SECV Rubicon are working on cleaning and reassembling the Dorman 70 hp diesel motor. As previous reports had stated, the four pistons in the motor were seized, but these were removed and a Melbourne engineering company re-sleeved the motor to suit new pistons and rings. New gudgeon pins were bought to suit the piston rods. The engine has now been re-assembled and the bearings are being bedded in. Stampings on the engine appear to indicate that this is a composite engine of No.1 and No.3 (an inventory of Ruook Timbers lists 2 diesel locomotives and one spare engine for same). It is expected that the engine will be running shortly.

The wheelset flanges have been built up using low temperature pulsed-metal transfer to slightly larger than their original profile. This work has been undertaken by Paul England and Staff Pty Ltd The wheelsets are now being moved to the Puffing Billy workshops for an appointment with their new wheel lathe. When the wheelsets were being cleaned last October, some markings in white paint were observed on them: "R.T.L. AXR. URGENT ?-9-48". It would appear from the condition of the wheels that the work done on them was the replacement of the crankpins and it is assumed that they had been sent to Kelly & Lewis Springvale to be repaired, and returned to Alexandra in September 1948, Therefore it appears the loco was still working during 1948.

The reconstruction of the northern outbuildings of the Alexandra Railway Station has now been completed, and the buildings are once again in use

to display memorabilia of the district. A local resident has recently donated an 18 in gauge mining skip from one of the Alexandra gold mines to the Museum. Other acquisitions include a 2 ft gauge Robert Hudson side tipping skip from a quarry once owned by granite merchant the late W. Thomas, and one propellant and two cordite drying trucks of 18 in gauge from the Maribyrnong Explosives Tramway. These are on long term loan from Museum member Peter Evans.

The John Fowler locomotive was recently turned by crane to equalise flange wear. This has meant that a new inspection pit has had to be constructed on the second entrance road to the goods shed. This work has now been satisfactorily completed.

With the exception of No.2 road, all of the broad gauge track work in the Alexandra yard has been lifted, and with the recent purchase of a truck load of 6 in x 4 in red gum sleepers, track upgrading of the Museum's loop is about to recommence.

Paul Simpson 8/91; Peter Evans 8/91

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm Gauge

(see LRN 83. p.13)

Gembrook Restoration

Friday 19 July 1991 saw the first 2 ft 6 in (762 mm) gauge loco at Gembrook since 3 August 1953, when ETRB loco NRT 1 (Ruston & Hornsby 296058 of 1951) was unloaded from Emerald for the weekend. Ballast trucks 91 NQR, 103 NQR, 125 NQR and 186 NQR were also there. NRT 1 would haul two trucks to the ballasting site and then push them back to Gembrook yard. Meanwhile the other two trucks were filled by front end loader in Gembrook yard. Sufficient track has been laid for No.2 road to allow trucks to be changed over.

Peter Medlin 7/91

PUFFING BILLY PRESERVATION SOCIETY MUSEUM, Menzies Creek various gauges

(see LRN 80, p.16)

0-4-OST *Sir John Grice* (Peckett 1711 of 1926) travelled on the Puffing Billy Railway between Menzies Creek and Belgrave on its way to the Belgrave Workshops to have air brakes fitted on Monday 1 July. It is hoped that once air brakes are fitted it will operate a few runs between Belgrave and Lakeside before going to Gembrook near the end of the year to run shuttle trips on the isolated section.

0-6-0 Macknade No.9 (Hudswell Clarke 1863 of 1952) is progressively being repainted into its Prussian Blue colour scheme in between steamings on the 2 ft (610 mm) track.

0-4-2ST Pleystowe No.4 (Hudswell Clarke 1559 of 1925) is back in service after a minor overhaul.

4wPM Malcolm Moore tractor from the State Rivers & Water Supply Commission of Victoria at Redcliffs, which arrived at the Museum on 20 March 1977, has now been positively identified as builders number 1015 of 1944? It was originally delivered to the Army on 3 March 1944 prior to going to Redcliffs. Copies of operating instructions and parts lists for the Malcolm Moore (10xx) Ford V8 railtractors have also been acquired by the Museum. The other Malcolm Moore railtractor (1013 of 1943/4?) is still waiting for a fuel injector pump (as mentioned in LRN 69).

0-6-0DM (Baguley 3354 of 1951) is being prepared for repainting in the near future.

Plans are underway to move ex ANR 0-6-0DM loco V 9 (TGR 1 of 1959) closer to the front fence of the Museum, to where *Justin Hancock* was located. This is to be done to allow more room for the display of rail trolleys and further 2 ft gauge wagons currently not on display.

Restoration is continuing on static displays, 0-6-0WT *Sub Nigel Ltd* No.3 (Orenstein & Koppel 12331 of 1931), Shay No.14 (Lima 2550 of 1912), 2-6-0+0-6-2 Garratt No.2 (Beyer Peacock 6935 of 1936). Mount Lyell No.5 (North British 24418 of 1938) has been "smoking" lately in an attempt to dry out the boiler lagging after the loco has been sitting in the open for over twenty years. This is done without any pressure being held in the boiler. With new volunteers available work has recommenced on the restoration of *Delta* No.1 (Perry 7967.50.1 of 1950).

The Museum will be a hive of activity until Sunday 13 October, preparing for the Puffing Billy Railway in association with the Historic Commercial Vehicle and Fire Engine Association of Victoria, "Olde Time Festival" displaying vehicles dating prior 1962. An estimated 2000 participants are expected and it is hoped that all the Museum's operational exhibits will be available on the day.

The Puffing Billy Preservation Society Steam Museum is open every Saturday, Sunday and Public Holiday from 10 am until 5 pm.

Peter Medlin 7/91

SECV RUBICON AQUEDUCT TRAMWAY 610 mm gauge

(see LRN 70, p.14)

The horseshoe shaped Lubra Creek trestle bridge has been successfully

replaced by the SECV crew using traditional methods and materials. This only leaves the "15,000 syphon" and "Beech Creek" bridges to be replaced to complete the third renewal of all the bridges on the system since its opening.

Peter Evans 8/91

STATE EXPLOSIVES TRAMWAY, Altona 610 mm gauge

The wagons once used on this tramway have been removed from the park on the foreshore as reported in LRN 77, page 19. These have recently turned up, albeit in a very decrepit state, at Alan Stebbing's property at Belgrave South. It is understood that Alan has undertaken to restore one of these and hand it over to the Altona Historical Society.

Peter Evans 8/91

ALAN STEBBING, Belgrave South, various gauges

This private site was visited in March, and a number of items of rail interest were noted. Apart from two 3 ft 6 in gauge line cars, one a Fairmont, and the other ex-ANR purchased from Lou Rae in Tasmania, some items from private and industrial railways were seen.

One is the remains of a rail tractor loco believed to be from Lees Timber in Tasmania. It appears to have run most recently as a 4wPM or 4wDM, but seems to have been rebuilt from a 6w unit. The second is a short wheelbase 4w loco chassis which was lying upside down. The third unit is Peter Evans' 2 ft gauge 4wDM Motor Rail "Simplex" (7351 of 1938) from Cheetham Salt.

This site is on private property and cannot be visited without prior arrangement.

Ray Graf 7/91

WESTERN AUSTRALIA

KEITH WATSON & PETER LEDGERWOOD, Perth 610 mm gauge

(see LRN 80, p.19)

A complete account of the construction of *Annie*, a 2 ft gauge 0-4-2T locomotive by these gentlemen appears in "The Narrow Gauge" No.130 (Narrow Gauge Railway Society - UK). Announced in LRN 73 (p.2), construction took only eight months. The locomotive resembles the Bagnall prototype but incorporates a Briggs boiler (100 man hours construction time) and Walschaert's valve gear as well as many other concessions to the workshop facilities available and modern technology (such as polyurethane springs). Steam trials of the locomotive took place on the Bennett Brook Railway in April 1990.

It is suspected that a Brooks boiler will be constructed for Perry 0-4-2T *Adelaide* (8967.39.1 of 1939) which was rescued from a Queensland park last year.

John Browning; The Narrow Gauge No.130 via John Browning

WEST AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC, Bennett Brook Railway. Whiteman Park 610 mm gauge

(see LRN 80. p.19)

F.C. Hibberd "Planet" 0-4-0DM (2150 of 1938) is being fitted with a GM engine and semi-automatic transmission removed from an ex-WAGR track regulator. Repairs to the boiler of 2-6-2 NG 123 (Franco Belge 2670 of 1951) have been undertaken at Willis Engineering, Rivervale, and it is hoped to have this unit back in service soon. At the same time, work has continued on 2-6-2 NG 118 (Henschel 24476 of 1938), with hydrostatic boiler testing well underway, and the reassembly of running gear, motion and running boards taking place. Ruston & Hornsby 4wDM 404982 recently returned to service after the overhaul of injectors and fuel pumps.

Rusty Rails Vol.16 No.2 via John Browning

MEETINGS

MELBOURNE: Rebuilding the Climax

Perhaps the most exciting achievement in recent years in the preservation scene in Victoria was the rebuilding of the FCV Climax that formerly operated on the Tyers Valley Tramway. Apart from providing the Society with its emblem, the superb finish of the restored locomotive and sheer delight of it in operation has captured the imagination of Victorian members. Hugh Markwick and Graeme Daniel were central figures in the restoration project and will share their experiences with us at the October meeting. Be sure not to miss it.

SEASONS GREETINGS !

Once again the festive season is just around the corner and we would like to take this opportunity of wishing all our readers and their families a very Merry Christmas and a safe, healthy and prosperous New Year. It also seems like a good chance to thank once again all our contributors for the past year - keep up the good work, your support is very much appreciated.

Geoff, Peg and Allison Hayes 11/91

RESEARCH

Chris Hart has sent in an extract from *Millaa Millaa - A Pictorial Record from 1910* (published 1988) which pictures a quarry at Millaa Millaa Falls in the 1920s with wooden rails and loader skips.

NOTES, CORRECTIONS & COMMENTS

Chris Hart has pointed out a few gremlins which affected his report in LRN 84 (p.6). Hansen line cars are 4wPMR with both axles powered. Hansens 1112 of 1973 never carried the number TROL2. *Hobart* was on loan to Macknade from 24 July. There was also a mistake on p.11 - Tully 1 is E.M. Baldwin 6-1082-3-2-65 (although its builder's plate reads 6-1064-4-2-65 - J.B.)

A mix-up between John Browning and the Editor (probably involving a Fax machine) resulted in a "nonsense" item being published under the heading "RICHMOND VALE PRESERVATION CO-OPERATIVE SOCIETY LTD" on p.5 of LRN 84, as well as the omission of some other items. The correct Richmond Vale item and the other omitted material is published in this edition. Apologies to the contributors concerned. Once again we have run out of space for all the contributions received so have had to hold some over. If you don't see your item, it's bound to turn up next issue!

TASMANIAN DIVISION L.R.R.S.A.

It is with much pleasure that I am able to formally tell you of the formation of the Tasmanian Division of the Light Railway Research Society of Australia Inc.

At a meeting held in Tasmania on 30 August 1991, it was agreed to provisionally form the Division and once certain matters are clarified with the Council, it will become regularly constituted. The formation of the Division has been ratified by the Council and negotiations are underway to get everything organised.

Congratulations to David Beck who was elected chairman, to Ken Milbourne who was elected secretary/treasurer and to all other Tasmanian members for their efforts to establish the Division.

It has long been the view of Council that Tasmania is a gold-mine of light railway history waiting to be dug up. Hopefully enough interest can now be generated, with more people being motivated to carry-out research and to publish articles in *Light Railways*. Good Luck.

Bill Hanks 10/91

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

BUNDABERG FOUNDRY ENGINEERS LTD

(see LRN 80, p.3)

This works was visited on 19 September, where the new 32 tonne bogie locomotive, of very European appearance, for Fairymead was in the erecting shop receiving a few modifications after trials at the mill. The loco is builder's number 001 of 1991. It carries a rectangular brass engraved builder's plate on one cabside only, stating that it was built under license from the Hunslet Engine Co. In fact the bogies are fully imported, having been built in Leeds.

The loco was built to negotiate a specified minimum radius curve, the tightest on Fairymead's cane lines, but it was forgotten that the curve to the locoshed (and fuel bay) was considerably tighter. This required modifications to the bogies and running gear to be carried out. In addition, shock absorbers were being fitted to the bogies and the bottom cab step removed to improve clearances. Driver controls in the large cab are dual fitted, with throttle levers duplicated at each driving position, and with vigilance control also a feature. Cab air-conditioning is fitted. A particular innovation is that the couplers are fitted to the bogies with the bottom of the headstocks on the mainframes about 610 mm from rail level. Colour scheme is light yellow with black bogies and white/red dazzle stripes on headstocks of both main frame and bogies.

Another innovation is that the name, "Bundaberg", is not carried on the usual upper case lettered metal nameplate, but in a script style in gold lettering on a black panel on each cab side. This is also carried on the long hood end.

John Browning 9/91

TOUR REPORT - VICTORIA

"BLACK DIAMONDS" - WESTERN PORT & WONTHAGGI WANDERER - 15 SEPTEMBER 1991

In contrast to the rainy weather encountered on the "dry" runs for this tour, fine conditions greeted the forty or so travellers who met on Sunday morning at Anderson. From here a short drive brought us to the outskirts of San Remo, where, on "Deepadown" farm the owners allowed us to walk in their bull paddock (!) to see the formation of the Western Port Coal Mining Co's line which used to run from Kilcunda on the south Gippsland coast to Griffiths' Point (now San Remo) intermittently from 1874 until 1888. This line started as a wooden-railed horse drawn tramway and was reconstructed for locomotive haulage in the early 1880s.

Despite the mine at Kilcunda overlooking the sea, output was transported to the nearest safe shipping port, Griffiths' Point, some eight miles distant. During reconstruction for locomotive haulage contemporary reports mentioned deviations being effected, mostly minor, with one large one near Anderson. On "Deepadown" we discovered one of the very minor regradings. The later line was well graded and included some sizeable cuttings and embankments, mostly now on private land.

From here we retraced our route to Anderson, the formation being visible at several places from the road. At Anderson we walked southward along the trackbed of the former VR Wonthaggi line to see the place where the WPCMC formation was cut by the later VR line. Our next stop was overlooking the valley leading down to Kilcunda, where, from near the road, good views may be obtained of both the WPCMC and VR formations.

A bit further down the road, on the cliff top at Kilcunda, the mine site was visited. Now overgrown by coastal grasses, the railway formation is still visible together with a turning triangle, presumably used by the 0-4-2 tender locomotive.

Following lunch in Wonthaggi, we visited the Eastern Area of the former State Coal Mine where the Dept of Conservation & Environment run tours down the mine at giveaway prices. Taking almost an hour, one walks about

250 m down an inclined tunnel (the ventilation heading) and after a tour around the No.1 bench (53 m below ground) which includes a very patient pit pony attached to a skip (which some thought was stuffed until it blinked its eyes!), one returns to sunlight by being hauled up in a rake of 2 ft gauge trucks by cable winch up the main coal haulage tunnel.(See also Victoria News Report).

To complete the day, we visited the sagging remains of No. 5 Brace building which was the receival point and screens for several cable haulage tramways, the McBride tunnel entrance, and finally the Western Area mine site. At these sites, member John Knight, a former Assistant Director of the Geological Survey with an intimate knowledge of the Wonthaggi mines, provided explanation of the remains and an insight into how it all worked. The Organisers would like to sincerely thank Colin Harvey and John Knight for their invaluable assistance with this tour.

(Members wishing to obtain a copy of the tour notes should keep an eye on the Sales List).

Phil Rickard 10/91

NEW SOUTH WALES

GOULBURN STEAM MUSEUM 610 mm gauge

(see LRN 75, p.4)

Goulburn Steam Museum was closed by the Goulburn City Council in December 1990, but was subsequently leased and reopened by the Goulburn Traction & Vehicle Restorers' Association. F.C. Hibberd "Planet" 4wDM 2388 of 1941 re entered service on 31 May. John Fowler 0-4-2T (16340 of 1924) was undergoing tube renewal, and it was hoped to have it in service by the end of the year. Krauss 0-6-0T *Stella* (3423 of 1896) is dismantled, and a dispute about its ownership has made restoration work impossible at this stage.

Railway Digest

HUNTLEY COLLIERY PTY LTD, Dapto 1067 mm gauge

(see LRN 71, p.9)

Equipment was due to be auctioned at the closed colliery site on 12 to 14 November. Rail items to be auctioned included four Gemco battery electric personnel carriers, two Gemco battery electric locomotives, flat top wagons, ballast skips, and a quantity of rail, points and accessories, as well as continuous miners, loaders and shuttle cars.

Sydney Morning Herald 20/10/91 via Craig Wilson

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 82, p.10)

During February the ILRMS reaches its 20th anniversary. The Museum was established as a result of a public meeting held in December 1971 and the first general meeting following in February 1972. In addition to the normal steaming days on the second Sunday of each month, the Museum will operate on every Sunday in January. In addition, inspection parties and individual visitors are welcome every Tuesday, Thursday and Saturday.

Students attending the 18 weeks course at the local TAFE under "Skillshare" have been gaining practical experience in fencing at the Museum. The original post and wire fence along the Tongarra Road boundary has been replaced by a park rail fence, existing pipe rail fences have received concrete nib walls, and a metre high pipe and cyclone wire structure has been erected to mark the boundary between the Museum's leased area and the vacant SE adjacent land.

Standard gauge 0-4-0 Hawthorn Leslie 2988 of 1913 (ex Steel Works loco) *Wallaby* is being cosmetically overhauled. Rusted cab panels are being replaced and a new roof is being constructed. This unit stands at the main entrance of the Museum and as Tongarra Road will be widened in the near future, the loco will be moved a short distance to a new location. This work is being carried out through a dollar for dollar State Heritage Grant which includes the erection of an open sided display shed.

During the October Labour Day weekend (in NSW), the ILRMS participated in the annual model railway exhibition at Liverpool. The main items displayed were a Hudson side tip wagon obtained from a limestone roasting plant on the Gundy road near Scone during August 1973 and "Lloyd Harnett" rail car constructed by member Bob Hague in September 1972 for rail retrieval at Corrimall Colliery. Both units were fully overhauled and repainted for this successful display.

During January 1973, the ILRMS received the Drewry cane inspector's car from Victoria Mill. This was stored in Sydney until November 1976 by which time siding space was available at Albion Park. Its restoration has been a drawn out task, mainly due to the special expertise required and the pressure of other projects. During the later 1970s the bent chassis was straightened and the single cylinder petrol engine (possibly McEwan) rebored and completely overhauled. In the mid 1980s a new body was constructed for the unit based on the rotten remains of the original. During this year, Paul Simpson and Rob Osborne have worked on the assembly of the engine unit in the chassis and

the project has now reached the stage where the gear change rigging and ancillary items are being refitted. It is fortunate that detailed photos were taken of the chassis layout when the decayed body was removed. This has greatly assisted the reassembly of this interesting vehicle. It was planned to conduct engine tests in early November.

All 114 new tubes have been fitted to 0-6-0 loco *Cairns* (Hudswell Clarke 1706 of 1939) and the work of flaring these tubes against the rear tube plate was close to completion in late October. The boiler has been painted with heat resisting aluminium paint and the fitting of new insulation and the cladding will commence shortly.

Former Corrimal Coal Company loco *Burra* (Hawthorn Leslie 3574 of 1923) now has wheels, main bearings, connecting and drive rods in place. New die blocks are being currently made for the Stephenson valve gear quadrants while a quantity of white metal and sal-ammoniac has been obtained to remetal the eccentric straps.

By mid October the ceilings and one longitudinal seat on former Sydney "C" type electric tram No. 95, had been stained and varnished, leaving the second seat and the internal end bulkheads, as well as some floor repairs, to complete the restoration of the car body. The new bogies for this vehicle have been completed but some further reprofiling of the wheel flanges must be undertaken so that standard brake shoes can be used. When the bogies are fitted only the construction of the four platform steps and the fixing of knuckle couplers will be required to complete the restoration which has taken 34 months. Old NSWGT tramcar records reveal that "C" 95 received its last major overhaul in Randwick Workshops between August and November 1914! The restoration of the 1889 vintage former Melbourne cable tram trailer No. 110 will be the next major passenger car project.

Steady progress is being made on the construction of a set of points in 45 lb rail which will enable the Gemco unit and cars to reach the future non-steam unit shed. The routine task of track maintenance and resleepering is continuing. Many of the wooden sleepers on the yard tracks in the Museum compound have now been replaced with steel units.

Ken McCarthy 10/91

LEYLAND BROTHERS WORLD, Tea Gardens 610 mm gauge?

(see LRN 77, p.11)

The locomotive at this location is understood to be the one previously at Wyndham Estate, Branxton (see LRN 16, p.2). This was described as a 2-4-2PM built by John Dunlop.

Bruce Belbin 11/91

**NSW STEAM TRAM & RAILWAY PRESERVATION CO-OPERATIVE SOCIETY
LTD, Parramatta Park 1435 mm gauge**

(see LRN 83, p.6)

On the Parramatta Park tramway, Purcell 0-4-0DM 936 of 1921 in steam motor guise as 133A on navy duties, 28 July 1991.

Photo: Ray Graf

The Purcell 0-4-0PM locomotive (936 of 1921) originally built for the Metropolitan Water Supply and Drainage Board's Ryde pumping station, has been fitted with a diesel engine and a steam tram motor body and looks very convincing in deep red livery and numbered 133A. It was observed on navy duties on 28 July.

Ray Graf 7/91

**RICHMOND VALE PRESERVATION CO-OPERATIVE SOCIETY LTD,
Richmond Vale Railway Museum, Kurri Kurri 1435 mm gauge**

(see LRN 78, p.9)

On 6 and 7 July, standard gauge 2-8-2T 25 (Beyer Peacock 6126 of 1922) was in use on a push-pull service using three cars to near Pelaw Main and return. Ex-BHP Newcastle Bo-Bo DE 34 (Goninon 3/S1003 of 1954) was in use on a work train at Pelaw Main on both days. Clyde 0-4-0ST (462 of 1938) was being prepared for an imminent boiler *Marjorie* inspection.

Ray Graf 7/91

STEAM TRAINS PTY LTD, c/- Rail Transport Museum, Thirlmere 610 mm gauge

(see LRN 54, p.5)

Ex-Fairymead Mill Baldwin 0-4-2T 10533 of 1899 is now being restored to working order after years of storage by the Belbin family at St Ives. The work is largely being contracted out, with major work being contracted by the RTM, where progress to rolling frame stage had been made by October. A varnished red cedar cab is under construction, and the spark arrester stack and headlight have also been painstakingly hand built. It is anticipated that the locomotive will be back in operating order in the first part of 1992.

Bruce Belbin 11/91

TIMBERTOWN, Wauchope 610 mm gauge

(see LRN 75, p.6)

It appears that John Fowler 0-4-2T 17881 of 1928 did spend some time in Queensland last year, but has returned to Timbertown after only a short time away, and was observed there in August.

Ian Comrie 9/91

ZIG ZAG RAILWAY CO-OPERATIVE LTD, Lithgow 1067 mm gauge

(see LRN 64, p.9)

Outside the shed at Bottom Points on the Zig Zag Railway is Malcolm Moore 0-6-0DM 26-204 No.11 of 1951, rebuilt with high cab for service here, and similar loco, 3 (26-204 No.3 of 1948) in original condition, 8 September 91.

Photo: Ray Graf

Two vintage Malcolm Moore underground diesel locomotives built for Australian Iron & Steel's Nebo Colliery have been acquired. Observed outside the shed at the bottom points on 8 September, was Malcolm Moore 0-4-0DM 11 (26-204 No.11 of 1951) in yellow livery and rebuilt with a raised cab to enable it to be used as a shunting locomotive. Parked nearby was Malcolm Moore 0-6-0DM 3 (26-204 No.3 of 1948) in its original condition with low-profile cab.

Ray Graf 9/91

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge

(see LRN 83, p.7)

Because of the additional boiler work required on Hudswell Clarke 0-6-0 *Melbourne* (1701 of 1938) it has been decided to return John Fowler 0-6-0DM No.1 (18620 of 1929) ex Goondi Mill, to full operating condition as a backup loco. Following the already-completed engine restoration, repairs are needed to the clutch assembly, main wheel bearings and superstructure before final painting. The new workshop building was roofed during July. Two panels of track have been prepared for concreting into Peterson Road when road works commence soon as part of a nearby development.

Durundur Railway Bulletin 6/91 7/91 via John Browning

BABINDA SUGAR LTD, 610 mm gauge

(see LRN 84, p.5)

The new Bundaberg Foundry bogie locomotive passed through Mackay on 12 September, where it was displayed for a couple of hours at Racecourse Mill, and was delivered probably the next day at Babinda.

Bearing builder's number 002 of 1991, it was noted in service at Babinda in early October and appears similar in most respects to the unit built for Fairymead. Like the Fairymead unit, it carries its name "Babinda" in a script style of lettering, in this case painted on the cab side. It also has the "Bundaberg" name on the long hood end. Livery is light yellow with black bogies and white/red dazzle stripes on headstocks of both main frame and bogies.

Len Heaton 9/91; Tony Wells 10/91

BULLENS AFRICAN LION SAFARI & ZOO, Yatala 610 mm gauge

(see LRN 58, p.4)

This site has been completely cleared with the exception of boundary fences and entrance buildings and there was no sign of the steam outline

locomotive and carriage last recorded here in 1987.

John Browning 9/91

BUNDABERG SUGAR CO LTD, Fairymead Mill 610 mm gauge

(see LRN 84, p.5)

The new Bundaberg Foundry bogie locomotive, Bundaberg, (001 of 1991) was returned to the mill from the Foundry after modification, being seen in use at the mill by Ray Graf in October. Baldwin B-B DH 6104-1-8-75, numbered 2, and transferred from Millaquin Mill for the 1990 season, was seen in use at Fairymead in September, but it is thought it was returned to Millaquin after the acceptance of the new loco.

Com-Eng 4wDH GA1148 of 1961 has been repainted in Fairymead yellow & black livery and has been numbered 72. Gemco self-propelled sleeper replacement machine 521382002667-R855-87 of 1987, delivered to Millaquin and transferred to Mourilyan in 1989, was also noted at Fairymead in September 1991.

John Browning 9/91

COSTAIN AUSTRALIA LTD, Eagle Farm 1067 mm gauge

The locomotives and some specialised tunnelling equipment used at Cardstone (see LRN 77, p.12) have been returned to Costain's Brisbane depot and were observed there in storage about the end of September. There are two almost identical 4wDH locos, one numbered 748 and the other UL749, painted white and blue and fitted with canopies. Also in evidence are two loaders and four shuttle cars. The loaders bear the numbers 3003 and 3019 in a style which suggests they came from Mount Isa.

A close examination of the locomotives has shown them not to be Baldwin units, in spite of them being described as such. Photographic evidence shows that 748 is a unit that was noted on the Codelfa Melbourne underground project in 1978-9, being numbered at that time 26-7, while it would appear likely that UL749 was 26-6. These units appear to be of Plymouth design, and probably originated with the Snowy Mountains Scheme, although evidently frequently rebuilt since then.

(In October, Ray Graf observed one of the locomotives receiving mechanical attention near the workshop on site.)

John Browning 9/91

CQ SALT INDUSTRIES, Bowen 610 mm gauge

(see LRN 83, p.10)

The four diesel locomotives which are alleged to have been sent to Victoria

have not been successfully traced. It is suspected that if they did go south (probably around 1988), they may have been scrapped at a time when Cheetham's

management was determinedly anti-rail. Although this management policy has since been reversed, it appears to have been too late for the tramway at Bowen and its historical locomotives, Ruston & Hornsby 4wDMs 174142 of 1935, 285343 of 1949 and what was believed to be 285340 of 1949, and Motor Rail "Simplex" 4wDM 8653 of 1941.

Norm Houghton 7/91, 8/91; John Browning

CSR LTD, Herbert Valley Mills 610 mm gauge

(see LRN 84, p.6)

Victoria Mill's preserved Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) was in use hauling passengers for the annual Maraka Festival on 26 October. Drewry 0-6-0DM *Herbert* (Baguley 2392 of 1952) was returned to Victoria Mill from Macknade on 5 September. Similar locos *Victoria* (Baguley 2404 of 1953) and *Dalrymple* (Baguley 2391 of 1951) were removed to off line storage at Victoria Mill in September-October.

At Macknade Mill, E.M. Baldwin 0-4-0DH 17 (6-1446-1-9-65 of 1965) received a much needed overhaul during the crushing season. The Gardner diesel in the old tramway mower was sold in September, and the Fowler locomotive radiator fitted to it was subsequently acquired by Chris Hart.

Chris Hart 10/91

CSR LTD, Kalamia Mill 610 mm gauge

(see LRN 83, p.10) . .

It is reported that this mill will possibly be obtaining a regauged ex QGR Walkers B-B DH for the 1992 season, this enabling the transfer of an old Baldwin B-B DH to Inkerman Mill.

Tony Wells 9/91

DEVEX, Monkland, Gympie 610 mm gauge

(see LRN 83, p.7)

This site was visited by Ray Graf in October and he discovered that there are another eight battery locomotives present apart from the two previously reported. Four units are underground, and can only be brought to the surface with great difficulty. There are also four other derelict units on the surface "out the back", two believed to have come from Tasmania, and two from Kalgoorlie. The two units previously reported are believed to be ex Zinc Corporation, Broken Hill, and are numbered 5C and 6C, not as previously

recorded. It is understood that BHP sold out its interest in the operation from 30 June 1991.

Ray Graf 10/91

DREAMWORLD PRODUCTIONS PTY LTD, Coomera 610 mm gauge

(see LRN 66, p.10)

The "Enchanted Forest Railway" concept has been revised to a fairly level route, and a connection to the main line railway is available, although spiked over. The dummy loco and powered tender concept has also been scrapped. What was the powered tender has become the loco and it has been fitted with the LITTLE PUFF bodywork discarded from the dummy unit. This unit is in fact the chassis of Ruston & Hornsby 4wDM 218002 of 1943, which has been rebuilt incorporating the original engine. It now chugs around the circuit quite happily with a female driver.

On the main line, Baldwin 4-6-0 45212 of 1917 has this year been fitted with a new steel cab, which resembles the previous timber one, and as a consequence has lost name and number. It was in use hauling four cars on 21 September. Motor Rail "Simplex" 4wDM 21543 of 1956, used on navvy duties, appears to have received a new coat of yellow paint and was observed in the works area. Perry 0-6-2T 5643/51/1 of 1951 is reported to be serviceable.

John Browning 9/91

HAUGHTON SUGAR CO PTY LTD, Invicta Mill, Giru 610 mm gauge

(see LRN 84, p.7)

E.M. Baldwin/Westfalia B-B DH *Strathalbyn* was observed in use at Invicta Mill in early October. Builder's number is reported to be 13863-9-91, and the model number DH32C, both modifications of previous Baldwin numbering. It has large cab windows, full width at the cab rear, and sliding cab doors. Twin radiators are fitted at each side of the hood end, and a large fan is mounted horizontally above, across the top of the hood. This leaves the hood end plain but with a "fridge door" giving access to the interior. Cab airconditioning is fitted. Livery is yellow with white running board sides and red and white dazzle stripe headstocks. During trials it is said that the unit reached a speed of 52 km/h running light.

Tony Wells 10/91: Chris Hart 10/91

ISIS CENTRAL SUGAR CO LTD 610 mm gauge

(see LRN 84, p.7)

Regauged Walkers B-B DH 1 (602 of 1969) was seen on 19 September easing a load of 55 full 6-tonne bins down Cordalba Hill into the mill yard,

paired with Hexham Engineering bogie brakewagon 663 of 1986. This unit has a very tight clearance under the roadbridge at the top of the hill, and the cab side windows are covered by a safety grille to prevent injury to crew. Adies line, to the east of the mill, is still in use and handles road cane brought down the Bruce Highway from the Booyal area, about 15 km further east.

John Browning 9/91

S.W. KELE & CO. LTD, Mount Etna 610 mm gauge

Hudswell Clarke 0-6-0ST 496 of 1898 has been acquired by this Rockhampton company as recorded in LRN 65 (p.11). It is now stored on the site of the old water treatment works about 30 km north of Rockhampton, which it is hoped will be developed into a tourist theme park. The locomotive is intended to be a static display item if this plan goes ahead.

Ian Comrie 10/91

GARY LYNCH, La Bella Vista, Wanora 610 mm & 495 mm gauges

(see LRN 28, p.9)

Equipment purchased for possible use as a tourist project at this nursery garden near Fernvale is reported to have been sold during 1990 to a location further up the Brisbane Valley at Coominya. The equipment is believed to be as follows:

Ruston & Hornsby	4wDM	183064	1937	610 mm gauge
Ruston & Hornsby	4wDM	387822	1955	495 mm gauge
Drysdale, Woodridge	4-2-0PMR + trailer		1977	610 mm gauge

John Browning 9/91

MACKAY SUGAR CO-OPERATIVE ASSOC. 610 mm gauge

(see LRN 84, p.8)

Cane transfers reported in LRN 84 continued throughout the season. Racecourse Mill appears to have taken Pleystowe cane from Draper's line (to the south of North Eton). Transfers of cane from Marian to Pleystowe in 6-tonne bins via North Eton continued on a daily basis, Marian being responsible for haulage to North Eton and Pleystowe the remainder of the journey. Farleigh is believed to have taken Marian road cane from the area around Mount Ossa.

On the Marian Mill system, it was noted that a passing loop had been constructed at Boldon, on the old QGR formation which is paralleled by the mill tramway between Boldon and Mirani. 6-ton bins were noted in use east of Gargett with 4 ton bins beyond on the old Cattle Creek lines.

Some problems with the ex-Cattle Creek Com-Eng 0-6-0DH locomotives

stationed at Finch Hatton meant that various locomotives had to be transferred from Marian at times during the season. These included Clyde 0-6-0DH 12 *Nellie* (58-188 of 1958) in mid-September, and Com Eng 0-6-0DH 25 *Eton* (FB3170 of 1963) in early October. Bundaberg Foundry 0-6-0DM *Netherdale* (13 of 1954) sat at the back of the locoshed at Finch Hatton all season.

A locotrol train heading west at night with empties on around 8 October had a few problems which led to 74 4-tonne bins going into Cattle Creek at Gargett.

By 13 October, the other mills had ceased crushing, and with E.M. Baldwin B-B DH 14 (9562-1-6-81 of 1981) in the shed with a broken axle and Com-Eng 0-6-0DH 25 *Eton* at Finch Hatton, Marian had an opportunity to loan other mills' E.M. Baldwin B-B DH locos to help out. Pleystowe Mill's *Mia Mia* (9815-1-10-81 of 1981) and Farleigh's *Hampden* (6706-1-5-76 of 1976) were both in evidence on cane haulage duties.

Also at this time, the new Eimco B-B DH locos were hauling good loads of 4 tonne bins in from the west. On the afternoon of 13 October, 20 *Boonganna* (L257 of 1990) was noted hauling 235 full bins through Boldon. Later the same day, 19 *Narpi* (L256 of 1990) brought 112 fulls across Cattle Creek at Gargett and then following a crew change at Harvisons (the old Marian terminus near Gargett) returned to bring over another 106. Once at Harvisons, a train of 236 full bins was made up to be taken to the mill.

At Farleigh Mill, Motor Rail "Simplex" 4wDM 7369 of 1939 Incas been refurbished using part from Motor Rail 4wDM 21623 of 1957). In September Pleystowe Mill's Plasser KMX-02 packing machine 112 of 1976 (originally delivered to North Eton Mill) was noted at Farleigh where it has joined similar machine 90 of 1975. On 16 September, Com-Eng B-B DH *Finch Hatton* (NA 59112 of 1957), originally of Cattle Creek Mill, was noted powering through Surprise on the Farleigh north coast line with 120 full bins.

Trackwork on the north bank of the Pioneer River at Balnagowan, to connect with the new high level road rail bridge under construction there, were well advanced by October. This bridge will be in use for the 1992 season and will replace the old low level bridge behind Pleystowe Mill.

On 17 September, a breakdown at the mill meant that cane harvesting was suspended early in the day. By 2 pm the last load of cane was ready to be hauled from Victoria Plains to the mill with E.M. Baldwin B-B DH *Shannon* (7126-1-5-77 of 1977) at its head. The normal shuttle loco which brings loads over the Mount Vince bank from Victoria Plains to the mill is E.M. Baldwin B-B DH *Mia Mia* (9815-1-10-81 of 1981), and after it delivered some empties to Victoria Plains, it was decided that this unit would double-head *Shannon* with

its 88 6-tonne full bins over Mt Vince. Thus a very unusual sight of double-headed bogie Baldwins was witnessed.

It appears that the spare loco at Pleystowe this year has been Com-Eng 0-6-ODM *Septimus* (A2128 of 1958).

John Browning & David Mewes 9/91; Tony Wells 10/91;

John Browning 10/91

MILLAQUIN SUGAR PTY LTD, Millaquin Mill & Qunaba 610 mm gauge

(see LRN 80. p.13)

The small E.M. Baldwin 4wDH used at Qunaba (4529-?-1-73 rebuilt by Baldwin 8860-2-8-79 in 1979 and by Millaquin Mill in 1980) has received a trailing axle to improve ride, making it a 4w-2DH. It appears that this modification was carried out some years ago, possibly as long ago as 1985. This unit may have been relegated to spare by now, for Ray Graf reported seeing the former Millaquin 2 (6104-1-8-75 of 1975) in the Qunaba area in October. This unit was at Fairymead from the 1990 season until the acceptance of the new Bundaberg Foundry unit at Fairymead.

Millaquin Mill has converted entirely to 6-tonne bins.

John Browning 9/91

MOSSMAN CENTRAL MILL CO. LTD 610 mm gauge

(see LRN 82. p.15)

During September, Malcolm Moore 4wDM 1042 of 1943 was noted in the locoshed repainted in the mill's current lemon and blue livery. Bundaberg Foundry 0-6-2T *Bally Hooley* (2 of 1952) was in use on the tourist run to the golf course north of Mossman running without its four-wheel tender. Hudswell Clarke 0-6-0 *Bally Hooley Too* (1838 of 1950) was in use on the Port Douglas run, while the second Bundaberg Foundry 0-6-2T *Bally Hooley* (6 of 1952) was in the locoshed.

Tony Wells 9/92

MOUNT MORGAN 1067 mm gauge

Two Hunslet. 0-4-OST locomotives formerly to be seen in different parts of Mount Morgan were due to be moved to the restored station during September where it is planned they will be displayed on a siding. One locomotive has been displayed in the town area on a median strip, while the other has been at a picnic area by the lake.

(Accounts of their identification differ. There were originally three of these engines at Mount Morgan, Nos. 1-2, 796 and 797 of 1902, and No. 3, 854 of 1904. According to C.S. Small writing in 1964, 796 was converted to an electric loco while the other two were out of use after 1954, and so are presumably

the units still in existence in Mount Morgan - John Browning)

Ian Comrie 10/91

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 84, p.9)

Operating times and prices for the "Mulgrave Rambler" steam hauled excursions every day of the year except Christmas Day are as follows:

9.30 am - 12 noon: Sugar Experience Steam Tour (including audio-visual presentation, mill tour, 40 minutes return train ride and Devonshire morning tea).

2.30 pm - 5.10 pm: Tropical Rainforest Steam Excursion (including Orchid Valley tour, afternoon tea, and 100 minutes on board).

Each tour is priced at \$27 adults and \$13.50 children, with pensioner and family concessions available. Coach connections with Cairns are available.

A diesel locomotive may substitute for the steam loco, John Fowler 0-4-2 *Nelson* (20273 of 1934), during January and February, and the itinerary is subject to weather conditions.

Chris Hart 10/91

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 84, p.10)

A Plasser 2w-2PMR line car which was delivered to Kalamia Mill in 1982 (builder's number unknown) was noted at Plane Creek Mill on 17 September and the following week was being fitted with new wheels.

John Fowler 0-4-0DH 5 (18801 of 1927), Ruston & Hornsby 4wDM 6 (371381 of 1954) and F.C. Hibberd "Planet" 4wDM 2333 of 1940 left Sarina in October. The Fowler was reported to be going to Graham Chapman's "Steamworks" (see LRN 83, p.9), while the two small locomotives were reported as going to a buyer in Hornsby, NSW.

John Browning & David Mewes 9/91; John Couchman 10/91

SEA WORLD, Main Beach, Southport 610 mm gauge

(see LRN 58, p.7)

Steam outline 0-4-2DH No.6 in light blue livery, built by Seaworld in 1975 as a scaled-down QGR A10, was noted in operation hauling four passenger cars in late September. The similar locomotive in red livery which carries no identification, was seen outside the shed, receiving mechanical attention with its rear axle removed.

John Browning 9/91

SOUTH JOHNSTONE MILL LTD, 610 mm gauge

(see LRN 84, p. 11)

South Johnstone Mill's Malcolm Moore 4wDM 17 (1060 of 1943) at the head of the "Turtles Express" outside the mill offices, 22 September 1991.

Photo: Chris Hart

Malcolm Moorer 4wDM 17 (1060 of 1943 has been painted turquoise and silver and was noted in September and October coupled to a turquoise bogie passenger carriage which carries the title TURTLES EXPRESS. This vehicle may possibly be one of the old bogie navy vehicles rebuilt with corrugated roof, rolldown transparent blinds, and padded seats. This makes up a tourist train but its route or other details of operations are unknown at present. However, it is understood that a station has been constructed in South Johnstone township.

Prof Engineering B-B DH *Nyleta* (P.S.L.25.01 of 1990/Eimco L253) is reported to have had a successful season after receiving attention at Eimco, Mackay, in the slack season. It was reported to have suffered only one breakdown by mid-October, while the South Johnstone-built bogie brakewagon 6 had been out of service almost continually. This meant that *Nyleta* was paired with brakewagon 5 (built by the mill in 1986 out of what was 0-6-0 Baguley 2396 of 1952). *Nyleta* was noted hauling 91 fulls up the Basilisk Range, running without its central pair of engine compartment doors.

During the slack season, the yard at Japoonvale was substantially reconstructed, and the new locoshed in the mill yard has been extended.

Chris Hart 10/91

TANAWHA COUNTRY MARKETS & LEISURE PARK Old Bruce Highway. Tanawha 305 mm gauge

This park was formerly the site of the "Big Dinosaur" and has recently reopened as a Sunday country market with the usual stall holders and some children's amusement type rides. Whilst operating as the "Big Dinosaur", there was a miniature railway with a "railmotor" and carriages. Ron Aubrey (see LRN 80, p.8) now leases the existing loop track, which is approximately half a mile in length (with some very steep grades), and the original carriages, to operate his 12" gauge half size replica of a Fowler 0-4-0. The two-year-old locomotive carries John Fowler "builders plates" and the No. 15910 and is one of two built in Sydney by Colin Wear. The other is at the Cockington Green tourist attraction in Canberra. The loco has a Briggs boiler and is coal fired. The Tanawha Country Markets & Leisure Park is open every Sunday from 8 am to 4 pm and tickets for the train ride are \$1.50 each.

Peg Hayes 11/91

YANDINA GINGER FACTORY 610 mm gauge

(see LRN 66, p.13)

Krauss 0-6-0T *Moreton* (4687 of 1900) has been moved to the rear of the factory where it has been stripped down by Ross Robertson, who operates paddle boat cruises on the Maroochy River from the Ginger Factory. A tender is being built for it which will contain a diesel engine and a hydraulic pump. This in turn will power a hydraulic motor under the firebox to drive the loco's rear axle. Nothing is being done which could jeopardise an eventual return to steam operation.

A one kilometre circuit of track will encircle the factory with a projected extension of 1.3 km to the river to connect with the boat cruises. This project could be in operation in 1992.

Ian Comrie 10/91

TASMANIA

AUSTRALIAN NEWSPRINT MILLS, Boyer 610 mm gauge

Due to the closure of the woodmill plant here, the plant was to be auctioned on 20 November, including Gemco 5 tonne battery electric locomotives. {A Greenwood & Batley 5 ton 4wBE loco was delivered here in 1967 - J.B.)

Sydney Morning Herald 20/10/91 via Craig Wilson

HYDRO ELECTRIC COMMISSION, Anthony Scheme 1067 mm gauge

(see LRN 84 p.11)

Some more detail of the equipment for sale has been obtained. The Gemco 4wDH locos are 27 tonne hydrostatic units with fully enclosed cabs, and are numbered P311, P312, P313, P314, and P315. Two will be available in November and the other two in February. The Baldwin mancar is a Model 6DHS Mk2 4wDHR with a Perkins engine, and is possibly fitted up for emergency use. It is numbered P3244 and will be available in February. (This Model number indicates it is one of a batch of five built to serial 2130 in 1967 for Coal Cliffe and Buchanan Borehole Collieries - J.B.)

There are also 24 PTA four-wheel 25-tonne muckcars (numbered P321 to P3224), 7 PTA 6.0m flatcars (numbered P3231 to P3237) and 2 PTA 3.0m flatcars (P3238 and P3239), with a 6.0m personnel car body for placement on one of the flatcars (P3245), and 3 SIG 6.1 cubic metre concrete transit cars (P3246P3248). 20 of the muckcars are available November, with the rest of the rolling stock available in February. Willison. couplers are fitted throughout. There is also a rail mounted jumbo (drilling rig), loaders, utility jumbo, face loading jumbo, sliding floor, scissor platform, cable drum spinner and muckcar tipper.

HEC 10/91 via John Browning

VICTORIA

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 84. p.13)

Restoration beyond Lakeside

Weekend work parties have occurred each month since July. In October a four day work session was held from 17 to 20 October. The ballast tamper and NRT1 (Victoria's least offensive diesel locomotive) were both there for the full time, while the Peckett 0-4-OST was working there on ballast trains consisting of two NQR wagons - on Saturday and Sunday. With NRT1 working as the yard shunter, and the tamper and Peckett out on the line, Gembrook was alive with activity. Several hundred tons of ballast were laid, and the track was lifted and packed. This section of track has been designed for Very Fast Trains - 25 mph! In VR days the maximum permitted on narrow gauge lines was 20 mph, but only 15 on the Gembrook line.

The November work session will include more ballasting and tamping

operations, and possibly the construction of an engine shed.

In September a trial passenger service was run using NRT1 on the day of the monthly Gembrook market. With a fare of \$2 for the one kilometre trip, the trains filled every time.

In 1992 work will shift to the Lakeside end of the line, the intention being to lay one kilometre of track from the present end of track to Wright Road level crossing. In terms of manpower resources, this should not be difficult. At the same time I would expect that a very strong assault on the challenge of fund raising will be made, so that funds are available in 1993 to commence the expensive work on trestle bridges beyond Wright Road.

As part of the fund raising exercise, a very attractive certificate has been designed for issue to donors. These are available in denominations of \$20.00, \$50.00, \$100.00 and \$1000.00. Each certificate is numbered and personalised. These donations are tax deductible. For \$20 you finance one foot of track!

Timetable 1991-92 The new public timetable for the 1991-92 year shows several significant changes:

- It finishes at 30 June 1992 so only covers 10 months.
- Table E which operates at the height of the summer and Easter holiday season, is now scheduled on 21 days in Dec/Jan (previously 14), and four days at Easter (previously two)
- Table E now has six trains (previously five).
- On weekdays in June there was previously only one train. There are now two, but the afternoon train terminates at Menzies Creek.
- The map of the line now shows the full distance to Gembrook, with the section beyond Lakeside shown as "Railway under reconstruction".

The new timetable reflects increasing patronage, booked tour parties making up a significant part of this. Traffic is now heavy throughout the week, with seats being at a premium on the first train of the day. This is now frequently double-headed. Because much of the traffic is pre-booked, loadings are good even on days of poor weather. Overseas tourists now make up about 15% of the customers, including many from Japan and south-east Asia.

Locomotives

12A: Work is now progressing rapidly on this. The boiler and smokebox have been fitted, and the valve-gear is being assembled. It is expected to be released to traffic in March next year. It entered the workshops in 1982 for total rebuild.

8A : The boiler of this will be 10 years old next year, and will require major

inspection. For this purpose it will be taken out of traffic when 12A is back in service.

G42 : Work is progressing steadily on this. Once 12A is completed, G42 is expected to become the major focus of attention at Belgrave workshops.

Peckett *Sir John Grice* : This has now been fitted with air-brake equipment to enable its use on the mainline.

Climax : The only regularly scheduled train on which this operates - the "Commissioners' Special" - has proved to be very successful. These will operate on 14 March, 11 April, 9 May, and 13 June. It features Climax haulage as far as Menzies Creek, travel in the Mount Lyell cars, morning and afternoon tea served on the train, a visit to the Menzies Creek Museum, a guided tour of the workshops at Belgrave and Emerald, travel over the extension beyond Lakeside, a barbecue lunch at Nobelius Siding, and doubleheaded train (NA's) on the return journey. A good package at a moderate cost.

KOALA RAILWAY COMPANY, Phillip Island 540 mm gauge

To many young people, their only experience with light rail is a ride on a circuit of track in an amusement park. One such line is located at the Koala World Caravan Park, as one approaches the town of Cowes on Phillip Island.

The line's sole motive power is a petrol driven diesel look-alike locomotive, which pulls two 8-seater, roofless, 4-wheeled carriages. Wheel arrangement of the loco is as a 4-2-0, with the front bogie having 130 mm diameter wheels on a 320 mm wheel base. Power is from a Morris or Prefect engine, driving 280 mm diameter wheels.

During an inspection of the line in August, I was informed that it is for sale. The present owner has no use for it as the line does not fit into his plans for future development. He described it to me as "a good little earner - you should see the kids' faces". Anyone interested?

MELBOURNE WATER, Chifley Drive, Preston 610 mm gauge

(see LRN 73, p.14)

An auction sale from 11 November to 13 November included a "BEV locomotive". (This could well be one of three Wingrove & Rogers "BEV" 4wBE locos MMBW numbers 004, 005, and 006 - see LRN 24, p.13. - J.B.)

Sydney Morning Herald 20/10/91 via Craig Wilson

RUSTON AND HORNSBY LOCOMOTIVE 610 mm gauge

On 29/10/91, a 4wDM Ruston and Hornsby locomotive was viewed in the grounds of a youth camp at Tynong North in Victoria. This locomotive is believed to be Builders No. 223725 of 1944, and was formerly in residence at the Yangardook Tramway at Toolern Vale. The loco was on a short length of track with a flat top wagon coupled behind. The bogies of the flat top are both of Kelly & Lewis origin and are probably from the Rubicon tramway. The loco appeared to be in an operable condition, but at this stage its intended use is unknown. More inquiries are being made.

Bill Hanks 10/91

SECV, Yallourn-Morwell Interconnecting Railway 900 mm gauge

(see LRN 80, p.16)

The Eastfield deviation is now operating, including the signalling and fire service systems. These were not complete when the trackwork was cut-in for use.

The old track is being removed to make way for the conveyor systems being extended and the start of overburden and coal excavation in 1992, around April/May.

The ICR will need a further deviation in a few years to allow excavations to continue. As yet, there has been no announcement about the future of the briquette factory and the ICR, although the long term future is being questioned.

Gary Ryan 10/91

STATE COAL MINE, WONTHAGGI 610 mm gauge

(see LRN 49, p.12)

The state government's Dept of Conservation and Environment operate a museum and underground tours at the old Eastern Area coal mine in Wonthaggi. One of the highlights of the hour long tour is being hauled to the surface from No.1 bench (about 55 m underground) in a train of small mining skips which operate up the main haulage tunnel. This inclined tunnel has two tracks of 2 ft gauge and a gradient of 1 in 4.6. Until recently only the right-hand side (looking down the incline) track was used for the skip train, however, following extensive re-sleepering and the expenditure of several thousand dollars on second hand rail, operations have been switched to the left-hand track.

At the same time, the old converted short wheel-base skips have been replaced by specially built longer wheel-base trucks that seat eight as against the previous four persons. The old trucks, which now sit out of use on the surface, are thought to be the same ones that operated briefly on a circuit of track which was laid near No.5 Brace, (3 km distant from Eastern Area) during Easter 1976 and 1977 on an earlier abortive "historical park" venture. To realign the winch cable to the new track, a pulley arrangement has been installed at a point between the winch house and tunnel entrance.

Also represented at this site, is a 3 ft gauge track which may be seen in the smaller (ventilation) inclined tunnel and a preserved "Lizzie", a 4 ft 8.5 in gauge 4-wheeled cable-hauled waste disposal truck which operated on temporary tracks up the extensive waste heaps.

TOD WATSON, Echuca 610 mm gauge

(see LRN 78. p.91)

Decauville 0-4-2T *Frenchy* (246 of 1897) is reported to have been leased by Brian Pine, and to have been kept by him at Keith Duncan's Megalong Valley site at Blackheath. It is believed that some boiler repairs will be necessary

before this locomotive can be operated again.

Ian Comrie 9/91

WESTERN AUSTRALIA

HOTHAM VALLEY TOURIST RAILWAY (WA) INC 1067 mm gauge

(see LRN 80, p.18/19)

On Thursday, 12 September 1991, Hotham Valley Tourist Railway celebrated 15 years of steam operation. Accent for the day was on steam haulage and the Society had 4 locos rostered to run from Perth to Etmilyn.

Most recent addition to the Hotham Valley fleet, PM class Pacific No.706 (North British 26550 of 1949) ran a Riverland class train (ex South African coaches) on the Perth-Pinjarra and return segments. For the climb across the scarp into the Darling Range, W class steamers 920 and 908 took over. No. 920 was the Society's first operational engine and it ran the first steam excursion, Pinjarra to Dwellingup on 12 September 1976.

After alfresco lunch in the station picnic ground at Dwellingup, and the necessary VIP speeches, passengers transferred to the Etmilyn forest train where they took up all the space in the four ex Tasmanian saloon coaches and three open tour cars provided.

With the much larger than normal load to be handled, G class loco No. 123 (Dubs of Glasgow 3507 of 1897 was helped by former Tasrail V class diesel mechanical unit No. 4.

Coinciding with the anniversary of its 1976 inaugural outing with Hotham Valley, W 920 was just 2 days away from celebrating the 40th anniversary of its introduction into WAGR service. It is interesting to note that the loco has spent more than one third of its lifetime as a preserved work horse.

Len Purcell 10/91

MEETINGS

MELBOURNE: ROUND THE WORLD WITH TED!

Ted Stuckey will be presenting a selection of film and slides collected from his trips overseas. This will include Welsh Narrow Gauge, English railways in general as well as American narrow gauge. Be sure not to miss it.

LOCATION: Ashburton Uniting Church Hall, Ashbum Grove, Ashburton.

DATE: Thursday 12 December at 8.00 pm.

SYDNEY:

Any member wishing to know details of the next meeting should call Craig Wilson on 02 484 7984

ARHS "Bulletin" August 1991 via Ray Graf; John Browning

TOUR REPORT - VICTORIA

WEST OTWAY WANDERER

On Saturday morning, 16 November 1991, 46 rigged-out excursionists assembled in Colac at 10 am for the start of a two day tour of railway and tramway sites in the West Otways. Barely had Tours Committee Supremo Jack Stock finished his welcoming address than down came the rain. Everyone felt at home, for what is the Otways without rain?

Tour leader, Norm Houghton, and seven year old junior Assistant, Norman III (fully kitted out with rubber boots, webbing belt, umbrella in pouch, machete and water bottle) then set off on a roundabout drive to Birnam, pointing out the narrow gauge railway formation in the Eliminyt area.

The rain had cleared by then and all participants began a one hour walk along the railway formation back towards Barongarook. After struggling up the 1 in 38 grade for several hundred metres, the group stopped to view the remains of the railway water tank foundations and then continued up the 1 in 30, past the line's original ballast siding and quarry until halting on a horseshoe bend where a notice proclaimed the existence of a tunnel. The tunnel was in fact a large concrete culvert under the railway embankment. Tour leader and junior bravely scampered down and walked through the watery tunnel but there were no followers, all pleading lack of rubber boots, or courage, or both. The culvert is in very good condition but it must be the breeding place for every mosquito and midge in the Otways.

Returning to the cars, the tour proceeded to Gellibrand for lunch and over the meal, several photo albums appeared from members' cars and were passed around amid much comment. The children in the group were having a great time on the playground equipment and at 2 pm, departure time, several parents were seen trying to sneak away for a quiet afternoon but anguished juvenile shouts put paid to that idea.

The first inspection after lunch was a portion of Armistead's tramway (1921-1928) in the Lardner Creek Valley. The group walked along 600 metres of the formation and noted in one section, a near complete set of sleepers spaced at 2 ft 6 in centres. The walk ended at a bridge site where dense undergrowth barred further progress.

The next stop for the day was Hitt's tramway (1934-1938) on the Wonga Road at Lovat. This steeply graded tram was tractor worked. The tour leader led the group to an acacia thicket and plunged through, blithely assuring everyone they were walking on the tram. After 150 metres, the formation finally became evident as it swung onto the side of a slope and a clearly

defined bench was underfoot. A couple of well preserved sleepers were noted.

The formation continued to rise steeply and there was much twig snapping, stumbling, huffing and puffing through the scrub until finally the tram became obliterated at a cleared paddock. Here a conference was held, where the steep nature of the grade was discussed as well as the perils the tractor driver had to contend with sandwiched between a motor and petrol tank to the front and a stack of timber on the bolster behind. .

After this it was all hands back to the cars via alternative routes as few elected to try the tram again and then into Colac for a meal. At 8 pm most reassembled at the Wesley Church Hall for an interesting slide show of 200 plus images of railway and tramway scenes along the Crowes railway that Norm Houghton has collected. Peter Evans supplied a super-duper sound system so there was no excuse for not hearing the speaker.

Next morning the group formed up at Gellibrand at 9.30 in glorious sunshine and departed for an "all stops to Beech Forest" run alongside the old railway. Stops were made to view Hitt's Lardner Creek tramway across the valley, the Banool station site, Wimba and its water tank site and McDonald's loading point before halting for 45 minutes at McDevitt. Here the group walked along the formation back towards Wimba to see if the original siding could be located. A couple of likely looking lay bys were inspected and discussed but no firm conclusions were reached. Moving onto Dinmont, a pause was made at the extant railway water tank (now a Shire watering point) before the final uphill climb was made to Beech Forest. Here lunch was taken in glorious sunshine at the Tourist Information Shelter. The shelter contains an interesting selection of historic railway and tramway photos. After lunch the more energetic roamed what is left of the township and inspected the balloon loop earthworks.

At 1.10 pm the group moved off to Knott's No.1 mill site at Ferguson down the end of Phillips Track. From the car park near the mill a short diversion was taken to view the spectacular Triplett Falls on Young Creek before the tour leader escorted the group along a very muddy and leech and stinging nettle ridden track to the mill site. It was hard to tell whether the shouts, squeals and yells were those of delight at reaching an LRRSA sacred site or simply shock at finding a shoe full of mud and leeches and a hand covered in welts. Here the well defined earthworks and bits and pieces of rusting machinery, including a boiler (just off the site) were inspected.

Leaving the gloomy confines of the mill, the group walked along Young Creek Road, noting the site of the large bridge on the log line, until coming to a sapling alongside the road marked with a "T". The leader assured the group

that this was where the tram had been but he wouldn't reveal the evidence as the going was too rough in there, so a further uphill plod around the corner for 150 metres was made. A drainage cut provided the access to the tram and a short distance off the road revealed the low cuttings of the log line literally laced over with fallen trees and limbs. No one volunteered to follow the tram back to the "T" sapling, not even the leader who said that once was enough.

The children were wearying and a few of the adults were flagging under the hot sun so all were glad to be seated in the cars and setting off at 2.45 pm for Wyelangta.

The tour notes provided a description of where the railway ran in relation to present day reference points so there was much reading out aloud and hand waving by co-drivers and back seat drivers as the convoy motored along the ridge.

A short pause was made at Wyelangta to indicate the site of the busiest station on the Crowes extension. One curious local was intrigued to see a long line of people all staring towards the grass in the middle of a paddock.

The tour continued to Crowes, arriving at the station site at 3.05 pm. The palm tree (or its progeny) planted by Station Master Norman Blackie in 1916 as part of a prize winning garden was pointed out and then the group walked around to the buffer stop project. A length of 2 ft 6 in gauge track, a NQR flat top, a name board, a 139 mile post and a restored buffer stop have been installed by the Otway Scenic Circle and Puffing Billy. Bob Whitehead kindly explained the project and after suitable photographic poses with a number plate off Garratt G41, courtesy of Ian Barkla, the tour concluded at 3.45 pm. Participants judged the tour to be most interesting and very successful and Norm Houghton promised to lead more excursions to other sites along the ridge. President Bill Hanks thanked all those involved in organising and running the tour and this signalled a stampede to the nearest ice cream and cool drink shop in Lavers Hill.

I.C. Longlegs, a.k.a. the Lavers Hill Loper

SITE REPORT - VICTORIA

KINCAIDS TRAM, Stalker

During the period 1911 to 1939, a tramway system running north west from the Stalker railway station on the Beech Forest to Crowes narrow gauge railways served the three sawmills of the Western Timber Co. The three mills are locally known as that of Robins' and Kincaid's.

Robins' mill operated from 1911 to 1919 at the base of an incline in Chapple

Creek North. The plant was moved by Bill Kincaid 400 metres west to an adjoining spur and a new incline and access track laid down. The mill worked here until about 1927 when it was shifted north west over to the next spur, the Mt McKenzie Ridge, and drew logs from along the Sandy Creek area.

Aerial photographs and one survey plan enabled me to plot portions of the track and accurately fix the mill sites but much tramway detail remained unknown. The area is not easy to explore. The country is extremely steep and broken and no all-weather roads run near the tram sites. A dirt road, the Mt McKenzie Track, follows the high ground and intersects the tram at two places as it is the main access point. During rain the track becomes a river and over this quagmire, a 4 km hike is required to reach the lower tram sites. Add a 1 or 2 km bash through the bush and one has to contend with a round trip hike of up to 10 km and taking three to five hours just to check the tramways at Stalker .

“Walking” the tramlines and spurs is a misnomer. Imagine a non stop session of bush aerobics involving high stepping, side stepping, ducking, crawling, climbing, sliding, clutching, arm waving, jumping and slashing through permanently wet vegetation for two hours until lurching back onto the track with bursting lungs and legs like jelly, and the reader will appreciate what is involved.

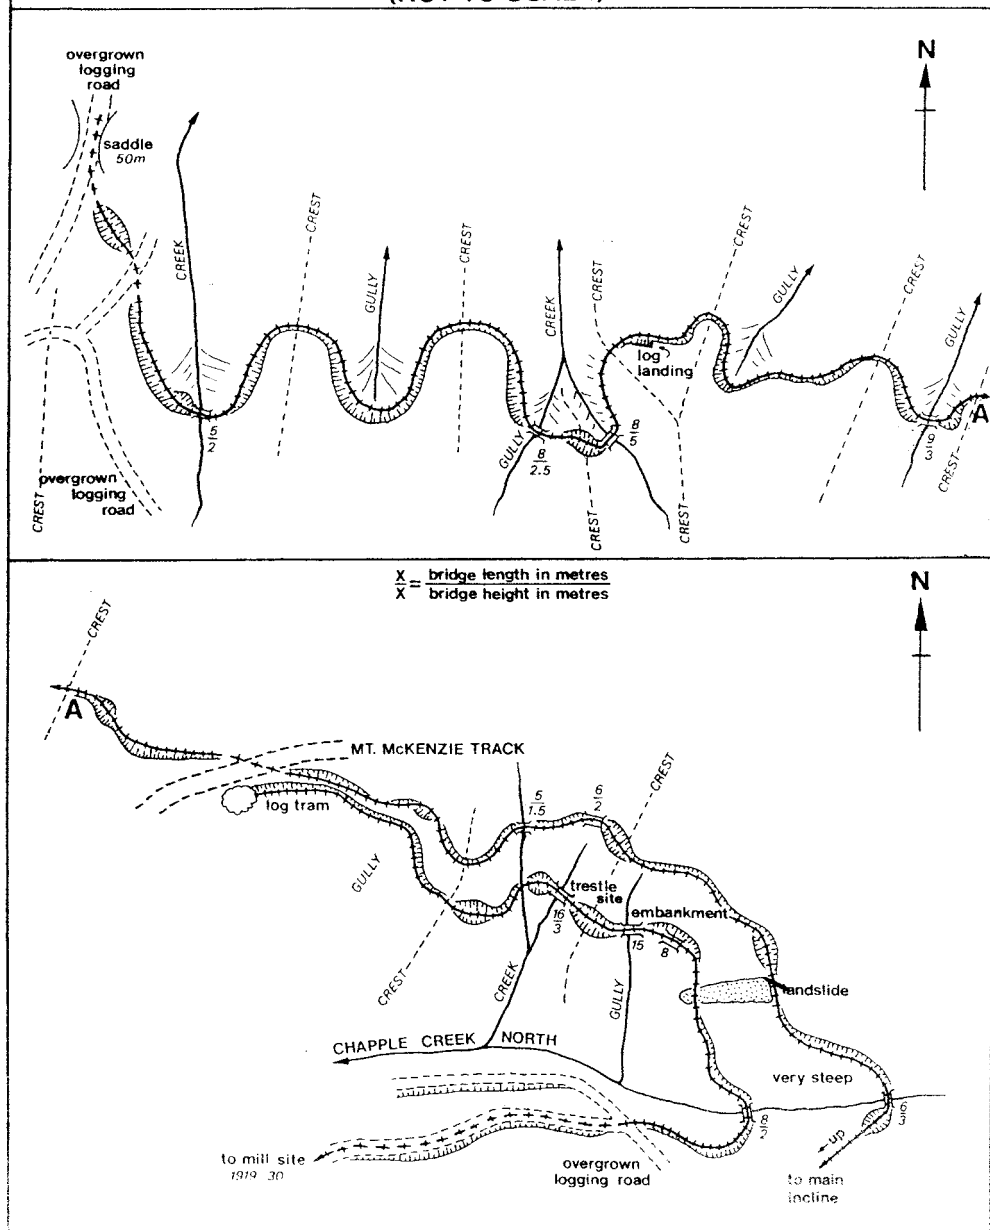

On 7/7/91, an LRRSA survey party comprising myself, Bill Hanks, Peter Evans, Mike McCarthy and Jack Stock, set out to unravel the tramway mysteries at Stalker. It was a confident and cheery group that marched 4 km through the squelching mud along a waterlogged Mt McKenzie Track until reaching a point opposite the ridge where the lower mill was situated. Our aim was to map the log tram north from the mill track where it met Sandy Creek and south from the mill to where it crossed the ridge and joined the original tramline. A trackside reconnaissance on the way down failed to locate any sign of the tramway alignment, so it was a case of setting the compass bearing and plunging into the scrub to find the mill and pick up the tram from there.

Down we went into a deep, stinking, dank gully and then north-east up the other side in a panting effort to the mill ridge. An hour was spent marching to and fro until energies ran out way down a north facing slope. No sign of the mill or tram but plenty of evidence of logging two decades ago. Had bulldozers destroyed most of the evidence? Perhaps so but where was the sawdust heap?

Our time limit for the inward leg of the walk was over so we turned back and made straight up the ridge to the track where a tree was blazed for future reference. While walking along Peter Evans speculated on where the

REDRAWN - P. EVANS

(NOT TO SCALE)

tram would most likely cross our path (as it had to) and, sure enough, in the notional spot, Bill Hanks spotted the formation on the north side of the track. It was then too late to do anything about the discovery but the site was noted with a "T" blazed on a tree.

One week later I returned to the spot with a companion to complete, so I thought, the task of pinpointing the mill and where the log tram ran further north.

The tram formation crossed the track at this point on a fairly level grade. We stepped onto the formation and proceeded west. The track follows the north face of the slope and for most of the way is cut into the slope by an easily defined bench with some cuttings here and there. The track generally trends downwards at a very shallow angle following the contours so that the route is a continuous series of curves.

Four bridges were noted along the route, all on curves over watercourses. The bridges were all single span, made from two long bearer logs. The bridge bearers have survived but all have collapsed into the gullies. One log landing was found on the up side of a steep hill. The landing had been set back into the side of the hill by means of a deep cut-away at the eastern end. Presumably the logs were hauled down the slope and lowered or slipped onto the landing from the western end.

The formation made for a very picturesque walk, especially when the sun peeked out from the clouds, and after 1200 m of progress the mill spur was reached. Here the track dips at a steeper angle along the east side of the spur, high above the gully floor. The formation became difficult to follow in this section because the ground had been disturbed by modern logging operations .

After proceeding approximately 80 m from the last bridge, the track finally disappeared under an overgrown modern logging road and landing. Great piles of earth and prostrate trees obscured the natural lie of the land and after half an hour of zig-zagging every which way, we finally admitted defeat for the day. The mill site refused to be found. Our time limit was up so we turned around and marched straight up the ridge to the track at the top, coming out near where we had the previous week.

Once back home I rechecked all my sources and co-ordinates and satisfied myself that on both visits we had got within 100 metres of the mill. The bearing on the tram when we lost it seemed to indicate we were on that part of the ridge right where the mill was.

On Saturday, 20 July, I set out a third time. I walked down the Mt McKenzie Track and headed east to where I had picked up the tram the previous week, intending to plot the tram east around to the bottom on the incline that took

the line up to the Stalker station. At the saddle where the tram crossed the track, I plunged south off the track and almost immediately stepped onto the tram formation. The track is very easy to follow and would on a sunny day be a delightful walk through glades of tree ferns as it hugs the steep slope by deep side cuts. But on this day it was pouring rain. The formation runs down at a very shallow grade in a series of continuous curves trending southeast, with three bridges all having their bearers intact. The first bridge encountered is a very low make-up across a depression and the second a 2 m high construction across a dry gully. Just beyond the second bridge, the line enters into a long and deep cutting and emerges as a side cut clinging to the slope of a very steep valley with a creek at the bottom. I came across one solitary sleeper in this section. The track heads towards the creek (80 degrees E) and crosses it at an acute angle (130 degrees E) by a high bridge.

The formation was getting close to the point where on the adjoining spur the main incline track came down from the railway station, so I was expecting the line to swing around onto the other side of the creek and continue west and south around the contour.

The bridge bearers had collapsed at one end but I was able to walk across the downstream one and heave myself up a slippery, stinking wall of wet clay to re-emerge on the other side of the creek. But I was not standing on the formation. The tram had vanished.

I walked up the creek checking each side but located nothing. I returned to the bridge site and after a search, found a re-entrant cutting coming down at a steep grade on a bearing of 230 degrees S. a most unexpected angle. I followed the cut up out of the creek valley for 40 m until losing it under a tangle of vegetation and fallen trees left after logging in recent times. The tram could not have worked as a grade line on this steep alignment so it looked to me that the grade line finished at the creek and the incline ran on from there up the spur at 230 degrees S to the crest where a bend would be needed to connect with the main incline that ran at a bearing of 150 degrees.

The grade would have been awfully steep if the tram had taken off the bridge at 45 degrees and headed south straight up the hill on a bearing of 180 degrees, and I could imagine fast moving bogies or runaway loads plunging straight through the bridge at the sudden change of grade. The southern bank of the creek is almost sheer so it would have been very difficult to build a grade line along it.

I tried to cross the debris blocking the formation but despite careful probings with a machete I still managed to fall into a hole so I backed off. I could not get around on the down hill side as I would have slid into the creek 15 m sheer down, and on the uphill side debris stretched away to the

horizon. Up until reaching the last bridge I had kept relatively dry thanks to my waterproof gear and an umbrella but the previous 15 minutes of scrabbling and sliding about on all fours had let down my defences. My notepad had transformed itself into a shapeless glob of papier mache, my writing implements refused to function, my compass could hardly be read through the thick smears of glutinous clay adhering to the instrument and my boots were full to the brim with water. It was time to retreat so I turned around and walked back along the grade line.

On the way in, I had noticed another alignment on the downhill side and climbed, or rather slid, down for a look. This formation drops away at a slightly steeper gradient and proved to be another tramline. I followed it back to my starting point and noted that it passed 4 m below the crest of the saddle that the other line crossed over and continued west. This tram was probably a log line of an earlier date coming from the second mill.

Further explorations would have to wait for another day. I turned back to the track and squelched my way up hill all the way to the bitumen where a welcome change of clothes and footwear was waiting.

I returned to Stalker on 14 August with the intention of mapping the lower log line. After last time's note book disintegrating saga, I now provided myself with a stack of small pocket size white heavy cards for recording the day's discoveries. I walked 2.6 km down the track to the saddle where the access tram crosses, turned south and slid down to the top line and further continued the slide to the lower log tram.

Once on the tram I began walking east. The slope of the creek valleys along which the lower tram traverses is very steep so the route is more interesting than the tram above it. The lower tram has more pronounced side cuts, cuttings and embankments. The disadvantage of this route is the number of landslips and fallen trees across it.

The line is an endless series of curves and cuttings trending south-east. About 100 m from my starting point is the site of a substantial trestle bridge across a dry gully. This bridge was approximately 16 m in length by 3 m high in the middle. No woodwork remains but the marks in the ground 4 m apart where the centre pair of supports were bedded, can easily be seen.

On the other side of the bridge is a very long and deep cutting at the end of which is a long embankment over another shallow dry gully. A little further on the valley slope becomes steeper still and in order to negotiate an almost sheer face, the tram is carried on a pair of very low bearers, not quite a bridge, but serving the same function. The going along here was fairly tough owing to the number of fallen trees, some quite large, lying across the tram at the same angle as the slope. The occasional landslip also blocks the formation

and just beyond the low make-up I encountered a very large slip running from the top tram (way up above) down to the lower tram formation and spilling over the edge onto the creek side.

The roar of water could now be heard and another couple of bends on the tram brought me to a bridge site over Chapple Creek North. This bridge was approximately 8 m long. The bearers have survived and have fallen into the creek at one end. I crossed on one of the bearers and followed the formation along the other side of the creek, heading west this time.

After 50 m, the formation disappeared under a chaotic jumble of earth and trees. I climbed around this mess but the tram was gone, bulldozed out of existence by a longing track heading down towards the creek.

The tram could not have followed this bulldozer cut so I continued west and found another road coming down from the east that levelled off and continued west. I scouted up and down the slope but found no trace of the tram. The dozer road seemed suspiciously level and well graded and my impression was that it followed the tram formation. I followed this road, with difficulty as it is very overgrown and full of prickly bushes, for 200 m to get some bearings and then turned back. My hands were scratched and cut to ribbons and it wasn't worth the discomfort to follow a mere road, a tram yes, but not a road. I walked back to the tram and followed it around to the big landslip where I climbed up to the other tram to re-check the area I had so much trouble with on the last visit.

I followed the top tram around to the bridge at the start of the incline. The sun was shining when I reached the bridge and I had no difficulty in seeing where the tram continued. I crossed the creek and walked up the tram cutting to the pile of debris I had fallen in last time. I crossed the debris without incident and followed the formation for another 30 m until it disappeared under the by now familiar ground disturbance caused by logging. While scouting around I stumbled out of the scrub onto another logging road built right on top of this narrow spur. A compass check showed it to be on the same bearing as the incline down from the Stalker railway station. The entire spur has been logged, cleared and re-sown at some time over the past 15 years so there was no point in pursuing the search for tram remains.

I walked back to the Mt McKenzie Track and tried to locate the westward extension of the lower log line. Near the track the formation is buried under a natural landslip and roadworks earth movements, but I carefully traversed the obstacles on the same level and ploughed straight through bushes to the nearest line of regrowth hard woods where I hoped to find something. I was out of luck even though there are plenty of large tree stumps around that were cut in Kincaid's time. I then walked 50m west along the track and

traversed south way down the slope, west along the slope and then north up to the track again, but could not see anything that even looked like a tram formation.

My time limit and physical condition for further bush bashing had both expired by then so with heaving lungs and jellied legs I turned around and walked back to the bitumen.

I had still to find the mill and the first stages of its log tram, so another expedition was planned for the next weekend. In reviewing my lack of results on the mill-ridge, I came to the conclusion that on all three previous visits I had not found the narrow north-south sloping neck that divided the spur and led along to the flat area where the mill was situated. I felt I had crossed this neck in an east-west direction on at least two occasions but had not recognised it for what it was due to ground disturbance from logging and the thickness of the scrub and wire grass and that is why I always ended up in the gullies on the west side where I dissipated my energies in fruitless searches along the steep slopes.

In order to gain a clearer appreciation of the terrain, I used a photocopier to enlarge a standard survey plan of the area and carefully marked in multicolours all the gullies and ridges, complete with compass bearings and distances. Armed with this map I plunged back into the bush once again.

I used coloured paper tapes tied on branches to mark a straight line as I proceeded down the ridge, just keeping east of the centre line. I kept on my course for well over an hour acting like a Nijinski in the bush with much arm waving, tying tapes, looking at my compass, slashing with a machete and juggling an umbrella (it was raining as usual), until finally the ridge ran out above what appeared to be a creek running in an east-west direction. I couldn't fathom the forward terrain at all at this point as I had followed the ridge line without deviation and kept the north-south creek in sight on my right. The contours behind me and to my left matched the survey plan. The only forward area to approximate the plan was where the ridge ran down to Sandy Creek proper but I didn't think I had walked that far. I had no intention of walking into gullies today so I turned around to head back up the centre-west line of the ridge for a further reconnaissance. Not far back I found an overgrown formation that looked like a tram and followed it west around the contour for 100 m. The track opened out and proved to be an old logging road. I plotted it for a while then reversed my footsteps and followed the road back. Just east of the ridge centre line the formation disappeared under 50 cm of wire grass and fallen trees. This made me think my task was hopeless. If I had walked over a 3m wide logging road without noticing it then how could I find a tram formation? But the road looked very tram like so I followed it

south along the creek to a bridge site where the road swung around into the next ridge. The rain had stopped and the walk along the level road had raised my spirits but before I could cross the bridge the wind suddenly picked up and began howling through the tree tops. I can tolerate most discomforts the bush has to offer but strong winds are a different and dangerous matter so I thought it prudent to leave by the nearest exit, i.e. straight up the gully to the Mt McKenzie Track.

Once back home I plotted my wanderings for the day and found that the logging road was the same road I had encountered on the western side of the spur on previous visits. I could now use this road as a reference contour and know that no tram was likely to be found above it. The jig-saw was finally falling into place.

The weather over the next week was unusually windy and wet but by Saturday conditions were calm so I headed into the bush again. There were numerous trees lying across the track and I came across more fallen ones in the bush itself. I made for the point where I had been forced to terminate my explorations the previous week and from where, on paper at least, I could pick up the access tram and follow it to the elusive saddle. I found the logging road and followed it north before heading north-east down the slope at an angle to the tram below. The tram was about 40 m below the road, not a great distance on the flat, but when side stepping and sliding across the face of a 50 degree slope littered with fallen trees, it seems like 40 km.

I came out on the tram near the bridge and followed it north until losing it under a logging track. I had been here twice before so I was prepared this time not to lose the alignment and to keep heading north. I marked the tram bearing with paper tapes on branches and crossed the disturbed area with a line of markers as a guide and, sure enough, picked up the alignment further on. The tram was in a cutting at this point, still on the east side, but the cutting was filled with tree tops and logging debris.

I skirted the cutting on the uphill side and there straight ahead was a slight rise. The ground fell away on either side of where I was standing so I knew I was right on the saddle. I marked the saddle with a line of tapes across it, which wasn't a big job as the saddle is less than 10 m wide, and continued north up to the knob ahead. According to my reckoning the mill was on or near this knob and walking around I could see why, as it is the only relatively level area for hundreds of metres in any direction. The fall off the knob is fairly steep so it would be an easy matter to tip the sawdust over the edge (on the south-west side according to aerial photographs).

Right on top of the knob was a modern log landing and as a consequence the surface in every direction has been disturbed. I searched down the slopes

right around the knob, way below any tram alignment, but logging had preceded me wherever I looked and would have wrecked any mill and tram remains. I couldn't even find the sawdust heap but this is a job for a line of searchers, given the density of the ground cover.

A fair amount of scrub and small trees had grown up all over the site so it was fairly tough going and the mats of wire grass are thick on the ground and up in the bushes, making proper investigations hard to do. I came to the conclusion that I would have to be satisfied with a guesstimate of the tram route down to Sandy Creek as I wouldn't find anything under these conditions.

I made a note to re-visit the site in 10 to 15 years time when the tree canopy is fully developed and the ground cover is suppressed and then turned around to head out. I walked back to the Mt McKenzie Track uphill along the tram and found that the route fell at a much sharper angle than I had thought on my first walk along it in the downhill direction several weeks ago,

Hindsight is a wonderful thing and I couldn't help thinking how easy it was today to find the saddle and why I failed to pick it up on previous visits. But armchair bushwalking is easy and not to be compared with standing, teetering on wobbly legs half way down a steep slope in the rain staring at a wall of wire grass and trying to gain an appreciation of the terrain. The repeated expeditions down Mt McKenzie Track had vastly improved my leg and lung condition and today I was able, for the first time, to walk all the way uphill to the bitumen without stopping for breath.

Unfortunately I have no photographic record of my exertions in the bush, as, being a mere mortal, I could not overcome nature's laws on Otway photography and tramway exposition.

For the readers' information, these little known laws state that substantial tramway relics occur only on south facing slopes away from direct sunlight at the bottom of the deepest gullies and under the densest tree cover and when focussed light rays from a photographic instrument fall on the relics they react by initiating cloud shadow and rain at the precise interval between the focusing of the said instrument and the releasing of the shutter.

Norm Houghton 8/91

QUEENSLAND

QUEENSLAND SUGAR INDUSTRY CORPORATION

From 9 July 1991 the Sugar Board and the Central Sugar Cane Prices Board were amalgamated as the Queensland Sugar Industry Corporation. The new

Corporation has taken over from the Sugar Board, the sugar terminals and their rail installations at Mourilyan (see LRN 55 p.13), Lucinda (LRN 84 p.10), Townsville (LRN 72 p. 16) and Mackay (LRN 79 p.16).

Mackay Sugar July 1991; John Browning

CSR LTD, Hambledon Mill, Edmonton 610 mm gauge

(see LRN 84 p.6)

Hambledon Mill completed its final crushing on 28 October 1991 but formal "closure" will not occur until 1 March 1992. Cane assignments and tramline system will then be transferred to Mulgrave Mill.

Portions of the mill yard are being lifted, and track materials and other items have been removed by CSR, as well as at least one locomotive, E.M. Baldwin 4wDH 7 (8002-1-8-78 of 1978), to Victoria Mill. It is understood that all except about 350 Hambledon bins will be retained by Mulgrave and fitted with link and pin couplers.

Durundur Railway Bulletin 10/91; Chris Hart 12/91

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 85 p.2 & p.9)

E.M.Baldwin 4wDH 8002-1-8-78 of 1978, built originally for Goondi Mill, was transferred from Hambledon Mill to Victoria Mill in mid-December. A quantity of material has been received from Hambledon, which closed at the end of the 1991 season. This includes track panels, concrete sleepers, and new loco tyres, which have been delivered to Macknade, and 45 lb turnouts and fishplate nuts and bolts which have gone to Victoria. It is rumoured that 150 bins from Hambledon are to go to Macknade and probably a few hundred to Victoria, with Mulgrave Mill to retain the remainder. Victoria Mill's Walkers B-B DH 605 of 1969 has received the nameplates *Clem H McComiskie*.

A quantity of 42 lb rail was received at Macknade and Victoria in December, thought to be from the Oakley area. Poison spraying on the lines of the two mills has been integrated, with both poison units working together in November and December, first doing all the Victoria lines and then going on to Macknade. The Victoria poison unit was hauled by Victoria Mill's V5 Hansen 4wPMR 1920 of 1978) and the Macknade unit by Macknade's 5 (Hansen 4wPMR 34 of 1973).

Victoria Mill has another Hansen car in use, V2 (56 of 1972), and two in store, numbered V2, formerly V3, (12 of 1972), and TROL2 ex Macknade Mill (78 or 1972). Macknade also has a second Hansen car in use, numbered 4 (1112 of 1973). The current whereabouts of the original Macknade Number 1 (90 of 1973) is unknown. Victoria Mill's Clyde linecar of 1965 remains derelict

in the Victoria Mill yard area near Palm Creek.

Clyde 0-6-0DH *Lucinda* (65-436 of 1965) became the Victoria Mill yard locomotive during the 1991 season and has been fitted with the appropriate accessories: air operated couplers, sidelights, and a drawbar for hauling out the wire haulage rope. Malcolm Moore 0-4-0DH Moore (DH-112-GT-1 of 1956) has been retained as spare yard loco.

Two extensions are being built to Victoria Mill tramlines during the 1992 slack season. One is a 2.5 km line at Kirkwood's Road, Blackrock, and the other is at the end of the East Kandeer branch at Abergowrie.

Chris Hart 12/91

CSR LTD, Kalamia Mill 610 mm gauge

(see LRN 85 p.9)

It is reported that this mill has purchased DH18 (Walkers B-B DH 600 of 1968) from the Queensland Government Railways for regauging and use on the mill's tramline.

David Mewes 12/91

TONY GERMANOTTA, Kuttabul 610 mm gauge

(see LRN 84 p.7)

In spite of favourable press comment with regard to the possible establishment of a tourist tramway on Fraser Island, utilising former logging tramway trackbeds, no further action has taken place with regard to the sale by Tony Germanotta of his locomotive foreshadowed in LRN 84.

Tony Germanotta 12/91

ISIS CENTRAL SUGAR CO LTD 610 mm gauge

(see LRN 85 p.10)

An ex-QGR DH class loco (DH67 Walkers B-B DH 654 of 1970) has been purchased from Simsmetal Ltd for spare parts, and arrived at the mill in December. In addition, it is understood that the mill is purchasing its second DH class locomotive for cane haulage, and that this is being regauged by Walkers or the Bundaberg Foundry. John Fowler 0-6-0DM 2 (4110019 of 1950) left the mill on the same truck which delivered DH67 from Simsmetal for storage in Brisbane before forwarding to its new owners in Western Australia.

David Mewes 12/91; Robert James 12/91

MACKAY SUGAR CO-OPERATIVE ASSOC. LTD 610 mm gauge

(see LRN 85 p.11)

Farleigh Mill's E.M. Baldwin B-B DH *Foulden* (10123-1-5-82 of 1982) was

involved in an accident near Calen on 15 September when someone changed a set of points and the loco entered a loop with its load, running off the end of the tractor loading ramp, crushing a tractor and haulout trailer, thankfully without causing injury. Damage caused was estimated at \$100,000, but the loco was back in operation the following day.

At Marian Mill, locotrol was used successfully during the 1991 season. On weekdays, locotrol trains operated between Tannalo and the mill on afternoon shift and night shift, usually headed by Eimco B-B DH 19 *Narpi* (L256 of 1990) with E.M.Baldwin B-B DH 16 (9562-1-6-81 of 1981) in the rake. At the weekend, the locotrol train operated between Kuttabel and the mill during the day shift.

The \$5m high level Marian bridge was named the George Leonard Vickers Bridge and opened for road traffic by the State Minister for Primary Industries, Ed Casey, on 14 December, having been open for cane rail transport from the start of the 1991 crushing season. The \$2.5m high level Balnagowan bridge near Pleystowe was opened for road traffic by mid-December, and tramline connections over it were nearing completion. Work was also proceeding on the construction of a new concrete tramline bridge at Homebush (adjacent to the old Homebush mill site).

A special train for growers was recently operated by Farleigh Mill. Carrying 30 growers, 4 hours was taken to travel the 63 km from the mill to Wagoora, with a refreshment stop on the journey. Another 30 growers travelled back from Wagoora to the mill, stopping for lunch on the way.

All 1880 bins in the Pleystowe fleet are having special C-brackets fitted to their Willison couplers to prevent excessive movement in the coupling shank under braking which is thought to have been the cause of a number of serious derailments in the past. The total cost of this exercise is estimated at \$103,000.

Three out of the four ex-Cattle Creek Mill locos stationed at Finch Hatton in 1991 were noted at Marian Mill for slack season maintenance in mid December, as follows:

Tannalo 0-6-0DH Com-Eng B1724 1957

Pinnacle 0-6-0DH Com-Eng AA1549 1961 reb.AN5849 1975

Netherdale 6wDM Bundaberg Foundry 13 1954

The Marian locoshed and navy depot were full but still locos had to be parked in the open air.

Durundur Railway Bulletin 9/91; *Mackay Sugar* 11/91;
Mackay Daily Mercury 27/12/91; 2/1/92: John Browning 12/91

PIONEER SUGAR MILLS LTD, Pioneer Mill, Brandon 1067 mm gauge

(see LRN 83 p.12)

Two ex-QGR DH class locos are reported to have been purchased for use on the mill's tramway. These are:

DH10 B-B DH Walkers 592 1968

DH60 B-B DH Walkers 647 1970

It is believed that these units may receive attention at Walkers Maryborough, before being delivered to Pioneer Mill.

David Mewes 12/91

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 85 p.14)

A short extension of 1.5 km is reported to be under construction to eliminate the need for road haulage in part of the mill area.

Robert James 12/91

TULLY SUGAR LTD 610 mm gauge

(see LRN 84 p.11 & LRN 85 p.2)

It is reported that ex-QGR DH66 (B-B DH Walkers 653 of 1970) has been purchased for regauging and use for cane haulage. It is not known whether the main work involved will be carried out at Tully or elsewhere.

David Mewes 12/91; Robert James 12/91

TASMANIA

EMU BAY RAILWAY CO. LTD 1067 mm gauge

(see LRN 80, p.15)

According to the Pasminco 1991 Annual Report, annual tonnage hauled on the EBR increased from 590,000 tonnes to 676,000, as a result of the extra traffic generated by Aberfoyle's new mine at Hellyer. A program of track upgrading has continued, and work was well advanced on the construction of new workshops at Burnie.

Extensions to the mine tailings disposal system at Rosebury necessitate a rerouting of the EBR, for which earthworks were in progress.

Pasminco Ltd Annual Report 1991 via R.G. Graf

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm & 1029 mm gauge

P O Box 288, Alexandra Vic. 3714
(see LRN 84 p.11)

After four years of living under the constant threat of eviction, the future of the Museum would now appear to be assured. The Ministry of Transport has agreed that the land presently occupied by the Museum should maintain its museum status. The Shire of Alexandra is now negotiating for the title to the land (no mention of cost has been made at this stage). The Shire have stated that once they have title to the land they will pass over the full operating rights to the Museum committee. It is believed that the Shire will continue to hold the title to the land. This is very welcome news to the members who have maintained their faith and effort in the venture during the period in which its future was most uncertain.

The good news continues! In early October, the engine of Kelly & Lewis 4271 of 1935 roared back into life amidst a cloud of thick white smoke. Once this initial cloud dissipated, the engine settled down to running very smoothly, and Paul Simpson reports that it sounds exactly the same as the engine of his locomotive. After a few minor water leaks were seen to, electrical services to the engine were reinstated by Paul, and a new cab floor built by Ernie Le Brun. Thanks must also go to Ernie who generously bought and donated a new battery for this loco (12 volt). Although the locomotive is still waiting for wheels (which have yet to be turned), it is once again possible to stand in the cab, press the electric starter, engage a gear, depress the clutch pedal and watch the jackshaft revolve!

Sanders have been refitted along with head and marker lamps and a new horn; The original seats will be fitted although only the left hand side is on site. Paul Simpson will supply one ex the sister loco in Sydney. The bonnet curtains are to be rebuilt, replacing 20% of the original ones (4). Work progresses on the axleboxes by Ron Stephenson. The broken one has been repaired and now has to be re-whitemetalled and machined. The newly made brake column has been installed, but the brake gear will be fitted after the wheels are fitted into the frame. New brake shoes are to be cast and should fit the new profile on the wheel flanges. The only item missing from the cab now is the small flange mounted oil pressure gauge, which is being traced back to when repairs were made to it and not returned.

The work to date is a tribute to NSW member Paul Simpson, who has

done most of the work on the locomotive, and to local member Brian Slader who rebuilt the engine to "as new" condition with the assistance of David Creighton.

The working bee on 19 October resulted in many trees being planted around the boundary. A quantity of rail was also recovered from the old line formation for use on the next section of main line replacement.

Paul Simpson 11/91; Peter Evans 12/91

COAL CREEK HISTORICAL PARK, Korumburra 762 mm gauge

Future plans for this park call for the establishment of a working 762 mm gauge railway featuring equipment owned by Colin Rees (see tour report LRN 82 p.6 and cover photograph LRN. 84). The locomotives concerned are Couillet 0-4-0T 986 at 1890 (ex-"Whistle Stop", Frankston), Henschel 0-6-0T 25427 of 1956 (ex Thailand), and Couillet ?-4-?ST 861 of 1886 (ex-Walhalla and Thompson River Steam Tramway - the rebuild of this locomotive is apparently to be completed, as too many changes have been made for it to be returned to its original condition.

Estimates of the project run into hundreds of thousands of dollars, with the line to take a scenic route through the park, passing over creeks and through cuttings. Rails have been donated, and the possibility of using treated pine sleepers is being investigated. The survey has been completed, and plans have been drawn up. The search for a suitably qualified driver is also underway. The carriage used at "Whistle Stop" is already at Korumburra and has been refurbished.

Coal Creek Gazette 8/91

via Lionel Rickard/Phil Rickard/Peter Evans

(Treated pine sleepers were laid on the 910 mm gauge Bogong Creek Tramway operated by the SECV at Kiewa during November 1967. These proved to be a failure due to the dogspikes working loose in the timber which was too soft to hold them. The timber itself has lasted quite well! The SECV is now using concrete sleepers for all replacements both at Kiewa and at Rubicon. The locomotives to be used at Coal Creek are much heavier than the light inspection cars normally used at Kiewa, so the loose dogspike problem would be expected to be worse at the tourist location. PE)

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm Gauge

(see LRN 85, p.16)

The Puffing Billy Olde Time Festival was due to be held on 13 October in association with the Historic Commercial Vehicle and Fire Engine Association

of Victoria. The railway was to be closed off from normal access for the day and trains operated amid vintage, veteran and classic cars, buses, trucks, fire and service vehicles. Climax hauled passenger trains were to be operated as well as the normal NA class hauled trains.

The Plasser packing machine purchased by the railway in 1988 is designated as Type PTT 116 and carries builder's number 361.

ARHS "Bulletin" supplement 8/91 & The Trader 9/10/91 via Ray Graf

Knight Renounces Title as Marketing Ploy

Sir John was seen to be fuming as he travelled in the back of his huge white chauffeur driven vehicle from Emerald to Gembrook. Sir John was late for a very important date. But this was not a display of anger.

Sir John Grice (Peckett 0-4-0ST) was being transported in steam to run a local passenger train service along the kilometre of track which has been relaid at Gembrook. The date was Saturday, 30 November, Gembrook market day. Whilst the market had got into full swing by 8 am, due to problems with lowloaders, passenger car NBH 10 and the Peckett were not on site until about 10.30 am. Volunteers were then called for, to hand shunt some NQR trucks, and the train was running by 11 o'clock. It consisted of one NQR truck (empty) and NBH10.

As the Gembrook market normally closes at about midday, this was a bad start. It was due to inadequate testing of new low-loading procedures.

No chances were taken for the following Gembrook market, on 21 December. The Peckett was brought up the previous afternoon, and a tent set up alongside it for the benefit of its volunteer security guards. Sir John Grice's brass nameplates were temporarily covered with new nameplates reading Peter Peckett, a name which was considered to be more appropriate for this operation.

By 10 am three trips had been run, with an increasing number of customers on each trip. By the third trip not only was NBH10 full, so was the NQR wagon!

The Gembrook market is normally held on the first Saturday of the month, and it is intended to run the Peckett at each of these in 1992 (excluding January). Well worth a visit, it is a good market, and there are some excellent photographic opportunities.

Peckett main-line trips

On the first two Saturdays in December, the Peckett ran trips from Belgrave to Lakeside and beyond to the end of the track, for the benefit of rail-fans. The train consisted of a canopied NQR truck and NBH10. The turntable at Emerald was used in both directions so that the loco faced funnel first on most of the

grades. About nine photo-stops were provided This was a wonderful leisurely trip. Nevertheless, there was not much support from enthusiasts, and quite a number of normal passengers were carried on both occasions.

The air-brake equipment on the Peckett consists primarily of a portable petrol-driven compressor hanging off the back of the Peckett's cab. Whilst it makes rude objectionable internal-combustion type noises at times when the train is standing at a station just prior to departure, most of the time its noise is not intrusive.

Train operations

Passenger loadings continued to be very high. As an example of peak season operations, on 29 December, six trains were run with about two thousand passengers. With the exception of the first train, all were fully booked prior to departure. All usable passenger rolling stock was in service to make up three trains, one of which was only eight cars. This one included two Mt Lyell cars and two canopied NQR trucks, these being the two last vehicles on the train. The ETRB no longer insists on having a guard's van at the end of a train, but those trains which were graced with NC guard's vans had an overflow of passengers riding in the vans.

Shortage of passenger cars is acute, particularly closed vehicles for cold weather. A concept design has been drawn up for a new type of vehicle which has the appearance of being a stretched version of the original NB platform ended cars, but with a more sensible internal seating arrangement for 34 passengers. In the meantime the Emerald Carshop Volunteer Work Group are undertaking the restoration of the original 2NB.

Gembrook Restoration

The next work weekend is proposed for 22-23 February at Lakeside. It is hoped to lay 823 metres of track on that weekend.

Frank Stamford 12/91

SECV, Yallourn 900 mm gauge

(see LRN 85 p.18)

On Mondays 5 August, during an extended visit to Yallourn power station, the following was noted:

Workshops - 0-6-0 200 hp and 0-4-0 Malcolm Moore mill shunter (yellow) "Red Devil" and one other electric under repair.

Loco Service area - 0-6-0 200 hp shunter, plus 3 electrics (inc. old German locos 101 & 104 - banned a/c very crude cab conditions).

Only five electrics remain in regular service, i.e.-121-125. These are 62 tonne

1000 hp, some German and some Japanese.

The CTC panel at control (not the one which predated the VR CTC) was not in use while circuits are being modified following three kilometre diversion around future "East field" extension to open cut. The safeworking is TRAINSTAFF! Staffs are tubular stainless steel type, made into square, circle, triangle, and diamond with the section they apply to painted in white on a coloured background. They measure about 20 x 20 cm.

Two trains are running at a time, taking under an hour per run, and crossing in the middle at 8 loop. This requires trains to carry two staffs at a time as there are three loops.

Trains haul the loaded wagons to Morwell and then propel the 13 empties back. "Tinklers" hanging from the hoppers warn people that the train is about to run over them, and the driver cannot see very much at all.

Points at loops are trailable to the left. The track is heavy, but extremely rough. The future of the line is rumoured to be between one and five years.

"Aust Railway Exploration Assoc" newsletter 10/91 via Peter Evans

YANGARDOOK TRAMWAY 610 mm gauge

(see LRN 57, p.13)

Major motive power changes have taken place at this privately owned line since it was visited by the LRRSA in September 1989. Although Ruston & Hornsby locomotive 223725 of 1944 has now departed to Tynong North (see LRN 85 p.18) under the new ownership of Bruce Weatherhead, Jim Baines' locomotives (Simplex 9979 of 1953 and Malcolm Moore 1090 of 1943} have been joined by a pair of scale replica trams. One of these is owned by Richard Youl and is a copy of a Bendigo Burney car, and the other, owned by Barry Nielsen, is a copy of a Los Angeles toastrack car. Between them, Richard and Barry have electrified most of the nearly 1 km long Yangardook tramway, and Jim Haines reports that the tram replicas move along at a very respectable speed in comparison with the internal-combustion locomotives. Much work has also been done to clean up the property with the removal of all of the old car bodies, rendering a journey along the tramway a much more scenic affair.

Richard (03 306 2063) and Barry (03 390 9536) are on the look out for passengers for their trams. Jim Baines may also be contacted regarding a visit on 03 746 1208. The Yangardook tramway is located at 424 (formerly lot 78F) Chapmans Road, Toolern Vale 3337. Please telephone or write before visiting this location.

Peter Evans 12/91

WESTERN AUSTRALIA

WEST AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC Bennett Brook Railway, Whiteman Park 610 mm gauge

(see LRN 84 p.15)

On 11 August, 2-6-2 NG 123 {Franco Belge 2670 of 1951} re-entered service, as did the re-engined F.C. Hibberd "Planet" 0-4-0DM 1 (2150 of 1938). The "Planet" has had its cab and engine compartment raised to accommodate the higher mounted GM engine and to provide driver headroom.

Work has continued on 2-6-2 NG 118 (Henschel 24476 of 1938) with a new spindle having been made for the regulator valve and new cab sides fabricated.

Trackwork at Mussell Pool depot has been given a high priority with the completion of 6 road and the construction of 7 road as well as general repairs being necessary. This work will reduce the amount of shunting necessary on running days and make available more storage for wagons as they are converted to 2 ft gauge.

Rusty Rails Vol 16 No 3 via John Browning 12/91

MEETINGS

MELBOURNE: WESTERNPORT COAL

Those who took part in the recent tour to Kilcunda and Wonthaggi will be familiar with the remarkable remains of the Westernport Coal Mining Company tramway between San Remo and Kilcunda. Mike McCarthy will speak on the history of this concern and will bring to light some interesting recent discoveries in relation to the mine, the company and the tramway. He will also describe the operations of the Victoria Coal Mine at Cape Patterson which will also include some new material recently uncovered.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 13 February at 8.00 pm.

SYDNEY: Any member wishing to know details of the next meeting should call Craig Wilson on 02 484 7984

LOCATION: Woodstock Community Centre, Church St Burwood Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 26 February at 7.30 pm

ADELAIDE: Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park.

FOR SALE

2 ft gauge steam outline diesel with GM 4-cylinder engine, rebuilt from a rare Caldwell Engineering locomotive. For further details, see news item on Sea World, Queensland.

HEXHAM ENGINEERING

John Browning has obtained further information about two Hexham Engineering built units at Cook Colliery, Qld, referred to on pages 8 & 12-13 of LRN 82.

25-tonne 4wdH diesel Hexham HE702 of 1979 had been ordered from Hexham by parent company Coal & Allied for its Liddell Colliery, but this order was cancelled with a rationalisation of Coal & Allied's mining operations. The unit became a stock order. Following the closure of Hexham, it was disposed of by Coal & Allied to Cook Colliery after some modifications had been carried out.

Diesel personnel carrier Hexham HE707 had been ordered by Cook Colliery and was to be the prototype of a new modular Hexham design. When Hexham closed, this unit basically consisted of a kit of unassembled parts. It is now believed that assembly was undertaken by Hawker Noyes Pty Ltd in Newcastle.

MOUNT MORGAN

(LRN 85 p.13)

John Knowles writes to point out that when he visited the mine in 1957, the

two Hunslet 0-4-0STs to be seen were numbered 2 & 3, while the third had been converted to an electric loco. This indicates that the two locomotives seen by Ian Comrie were numbers 2 & 3. (In fact the unit which was sited near the lake does carry a cast plate signifying "MM LD 3' [see cover] - JB)

ISIS CENTRAL MILL

(LRN 85 p.10)

John Knowles also points out the error made in the report on Isis Mill when Adies line and Booyal are wrongly described as being to the EAST of the mill, when in fact they are to the WEST.

CSR HERBERT MILLS HANSEN CARS

John Browning managed to mix up the identities of two of these units on p.13 of LRN 86. Macknade Mill's 4 is builder's number 78 of 1972, while TROL2 in storage at Victoria, is 1112 of 1973. Apologies to Chris Hart who provides such excellent coverage of northern mills, particularly Victoria and Macknade (and to all who try to keep accurate records!).

RESEARCH

The coastal strip on the far south coast of NSW extending from the Shoalhaven River, south to the Victorian border, is an area little written up by railway researchers. An initial survey has identified 20 lines and 5 proposals - there are probably more. Members are invited to share in opening up this unmined resource. ANY information or leads are sought. Perhaps a Victorian researcher might like to extend his interests north across the border? LRRSA (NSW) member, Jim Longworth, is co-ordinating research into the region. Jim can be contacted at 2 The Boulevard Cheltenham NSW 2119, or by phoning (02) 876 4369 {AH}.

REQUEST

Several years ago Ken McCarthy of ILRMS read a brief account dealing with the Drewry Company in the early years of this century. This possibly appeared in the *Industrial Railway Record* which is the magazine of the British Industrial Railway Society. In addition, the ILRMS account of the running gear of Krauss locomotive 2179 being used to construct the "Leyland Krauss" unit by Newbolds Ltd appeared in *Industrial Railway Record* issue No.95. Unfortunately the Museum does not have these two issues in its archives. The ILRMS would be grateful if any reader with this material could perhaps make a photo copy of the relevant parts and forward to Ken McCarthy, c/- ILRMS Ltd P O Box 244 Albion Park 2527. Any expenses would be reimbursed.

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

WESTFALIA BECORIT PTY LTD, Rooty Hill

(see LRN 82 p.7)

Westfalia, builders of E.M.Baldwin locomotives, have merged with Kloeckner Becorit, the European mining equipment concern, and are offering a wide range of equipment, including mining and sugar industry locomotives. A branch office has recently opened at Mackay. Locomotive work done recently includes work for Newcastle Wallsend Coal Pty Ltd for whom a new rack diesel locomotive has been built, and an existing Baldwin loco converted from conventional to rack. This rebuild is thought to be of Baldwin 8179-1-3-79 of 1979, a Model DH24M 4wDH, for Ellalong Colliery.

SITE REPORT - VICTORIA

NO.6 MILL LOGGING TRAMWAYS, SNOBS CREEK 914 mm gauge?

PART 1:

JUST WHEN YOU THOUGHT YOU KNEW IT ALL (OR MOST OF IT ANYWAY!)

A chance remark during an interview with Rubicon Forest timber worker Norman "Ike" Sims brought to light the existence of a hitherto unmapped tramway in the Snobs Creek valley. Ike had worked at Rubicon at the foot of the incline leading from the Snobs Creek mills. When a road was pushed up the Snobs Creek valley and reached the No.6 mill by Easter 1944. it made the outlet tramway and incline redundant. Ike then moved to the No.7 mill at Snobs Creek where he drove the timber trucks loaded with sawn timber on the remaining length of outlet tramway between No.6 and No.7 mills. While discussing logging operations at these mills, Ike mentioned a logging tramway running north from No.6 along the side of Mt Torbreck. This tramway is not shown on the 1944 FCV map which shows other log lines and the outlet tramway. This meant that it was probably the last NEW tramway built in the Rubicon forest. Both off the Snobs Creek mills closed in 1948, so the tramway was thus limited to operating sometime during the period 1944-48.

The tramway was built to tap a patch of fire-killed timber on the eastern side of Snobs Creek, but apparently some green timber was also cut. Most of the tramway was operated by horses, with the rise from Snobs Creek to the No.6 mill taking the form of an incline operated by a steam winch situated in the log yard. The tramway crossed the Snobs Creek road on the level, and

No.6 Mill Log Tramway - Snobs Creek

A

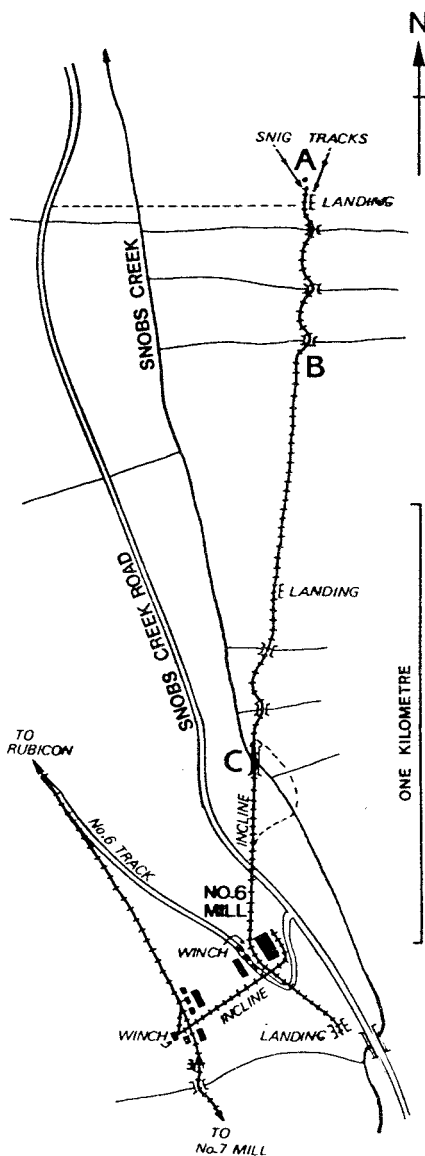

B

C

PE

someone from the mill had to go down and check that the road was clear before trucks laden with logs could be hauled up the incline or empty bogies let back down again. Ike believed that the tramway “went up towards the Snobs Creek falls somewhere”, but had not actually been along it himself. There was no alternative but to go and have a look in order to draw a map with any accuracy.

PART 2:

IT’S GOT TO BE DOWN THERE SOMEWHERE’

On the first of December 1991, with the bushbashing season drawing to a close for the summer, LRRSA Secretary, Jack Stock, and myself loaded our cameras and sharpened our machetes and pencils, and drove to the site of the No.6 mill at the intersection of the No.6 track and the Snobs Creek road. The mill site is today marked by a stand of wattles with an understorey of blackberry, its proximity to the road ensuring that very few relics remain.

Following Ike’s directions to “walk north for a couple of chains”, we dived off the road through a suitable gap in the blackberries to try to find the remains of the incline. It was soon evident that the incline would have been laid flat on the ground and that there was no chance of finding it in the thick scrub. A little lateral thinking saw us heading directly for the creek above where the tram would have to cross it, the intention being to pick it up downstream on the other side. The creek was gingerly crossed sitting astride a skinny log - no mean feat loaded with day packs, cameras, machetes and drawing equipment. Once on the other side, we made our way downstream for about a hundred metres and dropped back down towards the creek, walking well apart to double our chances of picking the tramway up. Twin shouts of joy emanating from the thick scrub announced the discovery of the tramway only metres below the remains of the bridge over Snobs Creek.

Of the bridge itself, only a small portion remains. A large granite boulder in the middle of the creek had been used for a support, with a large cross log complete with iron spikes and bolts still sitting triumphantly on top of it. The other end of this cross log rested on the eastern bank of the creek. The remains of three stringers of the bridge were also identified. Having sketched and photographed the remains, we set off north along the tramway, which climbed gently as the creek fell away below it.

PART 3:

WE SHOULD HAVE WAITED UNTIL AFTER A BUSHFIRE

The scrub at first was thick, but thankfully the last of the blackberries had been left behind at the road. The tramway headed up a small side valley

which it crossed on a low bridge on a slight curve. A section of this bridge was still intact with a length of wooden rail along one side, and was fully decked, confirming that the tramway was operated with horses. On the other side of the bridge the tramway resumed its northerly course, and the scrub got thicker.... and thicker.... and thicker! After a short time the tramway crossed another bridge, this one a low "make-up" some 40 metres long and again fully decked. After passing through a shallow cutting, a substantial log landing appeared on the right. Just past this were the foundations for a logging winch, with some of the decking on which the driver had stood, still intact. The tramway, still heading north through a discernible gap in the trees, was now a little easier to walk, but only marginally! Several sleepers still sporting nails to hold down the rails were seen along this section. No fastenings for steel rails were seen anywhere along the tramway, and at no point could the gauge be verified.

After a quick stop for lunch, we resumed our painfully slow progress along the old formation of the tramway. The tram crossed three bridges in quick succession: the first was a "make-up" 20 metres long on a sharp curve to avoid a large granite boulder; the second, a long wreck, the structure of which was impossible to determine; and the third must have once been a large trestle bridge some 30 metres long and about 5 metres high but now totally collapsed. Just past this last bridge the formation widened as we arrived at a second landing. Substantial trees grooved to take strops for bullwheels and formations cut by crawler tractors suggested that the bush here had been worked by both crawler tractor and steam winch. Relics at this site included lengths of wire rope and a solitary short section of steel rail. All sign of the tramway was lost only metres past the landing.

PART 4:

ALL IN THE INTERESTS OF ACCURACY

It was now late in the afternoon, four hours after leaving the bridge over Snobs Creek which could still be faintly heard far below us. The distance we had travelled was impossible to accurately estimate - even the normally bushbasher-friendly FCV inch-to-the-mile map was of little help on this occasion. One thing was certain - on the opposite side of the valley was the Snobs Creek road - but how far along it had we come? Compasses in hand, we plunged down the hill on a direct westerly course. Direct is something of a misnomer - it was only possible to sight on a distinctive tree and head for that before taking another bearing and zig-zagging through the dense undergrowth to the next objective. The final section near the creek was near vertical, and a very tired and sweaty pair of bushbashers, scratched and

bleeding, stumbled along a log across the creek for a short rest and a drink of refreshing icy creek water

PART 5:

NOBODY SAID ANYTHING ABOUT A SWAMP!

Resuming our westerly course, we soon found ourselves ankle deep in a stinking swamp, criss-crossed with small streamlets. Many trees, toppled from their insecure footings by recent high winds, blocked our path. After what seemed an interminable time, the ground abruptly rose and we were back into thick scrub. A short distance further on we stumbled thankfully out onto the road, marked the spot and trudged southwards back to the vehicle. We had been four hours on the tramway and six hours in the bush in total.

Subsequent checking with the vehicle odometer revealed that in our four hour struggle along the tramway formation we had covered the grand total of....one mile!

Peter Evans 12/91

NEW SOUTH WALES

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

February 1992 marked the twentieth anniversary of the establishment of the ILRMS following a public meeting held at the close of 1971. By April 1972, work parties and item retrieval had commenced, but not until 1974, when the Albion Park site was leased, did full development gain momentum.

By 1975, open days were being conducted at irregular intervals using internal combustion units as motive power and in 1979 regular steam operation commenced. An anniversary ceremony and barbecue was planned for Sunday 9 February and the Museum Society received valuable publicity during the lead up week in the local press, radio and TV. Unfortunately, as so often happens in this high rainfall area, the heavens opened up for that weekend with near record rainfall. The ceremony was conducted in the engine-carriage shed with Shellharbour Mayor, Cec Glenholmes, State member for Kiama, Bob Harrison, and Federal member for Throsby, Colin Hollis, participating as guests. In spite of the poor weather, over forty members and visitors crowded into the running shed and an afternoon tea in the new meal room-kitchen replaced the barbecue.

Two restored items were recommissioned on this occasion: the Drewry Cane Inspector's petrol driven rail car from Victoria Mill, Ingham NQ and the former Sydney 1899 vintage saloon tramcar "C" 95.

Although the history of the Drewry car is not clear, it seems to be of c. 1920 vintage and is powered by a single cylinder petrol engine with dual control for bi-directional operation. This vehicle, and an insulated four wheel meat delivery wagon, was purchased from the mill for \$1 in 1973. Both arrived from the store site at the end of 1976 and from time to time work has progressed on the Drewry. These tasks included professional engine overhaul, chassis restoration and straightening, and more recently, the fitting of a new body to replace the rotting original which arrived in very poor condition. During 1991 Rob Osburne and Paul Simpson worked on the mechanical components and the unit's engine operated for the first time in possibly 40 years on 8 December. The car still requires the end tool box seats and the middle bench reversible seat back made and fitted, while the original sprocket ratio on the drive chain moves the vehicle too fast for Museum service! This last problem may require an additional countershaft to provide a double reduction ratio final drive

The other item included in the \$1 deal of 1973, the insulated meat wagon, is now in the carpenters' shop receiving attention. The tongue and grooved timber sides have been removed and work at present is concentrated on rebuilding the timber body frame.

The 1988 former Sydney tramcar took exactly 3 years to restore, being completed on 1 February. The restored body was lowered onto its permanent 610 mm gauge bogies on 14 December. The last job undertaken on the trucks was the fitting of roller stabilisers and out rigging. The battery electric "Mancha" loco then hauled the new car around the Museum main line for track and clearance tests. During January, the last of the cracked glass in the end bulkheads was replaced and general varnish and paint "touch up" completed.

When the ILRMS was formed, the Museum Committee agreed that industrial railway equipment must be retrieved and restored, and in this regard the Museum has open as well as enclosed bogie cross bench man transporting cars available for operation. More attractive cars of historical significance however would be required to form trains behind the larger Perry, Hudswell Clarke and Davenport locos while family groups may hesitate using the austerity mine cars.

As a result, the Museum now has five full height, comfortable and attractive bogie passenger cars:

- **Car 1** Steel car, built by ILRMS, upholstered seats. open sides between window sills and roof edge letter board. End loading saloon.
- **Car 2** Short former International bus body of c. 1918 vintage, enclosed end loading saloons Longitudinal wooden slat seats.

- **P 119** Former Queensland Railways narrow bodied, enclosed, end door rail motor trailer. Upholstered seats.
- **Car 430** Former M.T.& O. Coy Melbourne cable tram trailer, built 1890. End loading enclosed saloon. Wooden longitudinal seating with pierced veneer seat backs.
- **Car "C" 95** Former Sydney tramways end loading saloon which entered service in 1899. Longitudinal seats of wooden slats. Withdrawn from tramway service in 1922.

All of these cars, with the exception of No.1 and P119, have clerestory roofs. They are carried on substantial channel or RSJ underframes and coupled with auto knuckle couplings. The former wider gauge vehicles are fitted to their chassis which would not prevent easy transfer of the bodies back to their original gauged trucks or underframes.

When asked by reporters as to the next carriage project, they were directed to the wreck under a tarpaulin in the museum yard. This is 105-year-old Melbourne cable trailer No.110 which will eventually be restored as an identical running mate to car 430.

On 15 February, a team from Prime TV, the network which relays Sydney channel 7 to the SE area of NSW, returned to the Museum for the day. During a six hour period material was filmed for a future documentary showing all facets of the Museum's operation in a typical working day - preparing locos

Former Sydney 1899 vintage "C" class electric tram trailer, No. 95 upon restoration completion at ILRMS Albion Park. 1 February 1992.

Photo: Ken McCarthy

for service, making up trains, service operation, non-steam working, as well as a review of rolling stock, workshop facilities and the stationary engine display.

In addition to all the preparation for the 20th anniversary ceremonies, maintenance and restoration work has continued:

- *Cairns* Hudswell Clarke 1706 of 1939 - Regulator machining completed. Overhauled injectors installed, blast pipe refitted with new built up base, timber boiler insulation being fitted and metal clothing preparation to cover the boiler is being prepared.
- *Tully* 6 Perry 7967/49/1 of 1949 - Steam turbo generator repaired, paint "touch up", right hand drain cocks overhauled.
- "*Leyland Krauss*" 2179 of 1889 - Fuel system cleaned and petrol engine retuned.
- *Burra* R & W Hawthorn Leslie 3574 of 1923 - Work continues of rebushing and refitting valve gear. Ruston Diesel - Injectors cleaned, new fuel filters fitted, engine tune up.
- *Wallaby* R & W Hawthorn Leslie 2988 of 1913 - Static standard gauge loco. Replacement of rusted panels and footplate pieces completed. Ready for repainting.
- John Fowler 16089 of 1923 - Initial planning is taking place for a roofed enclosure to be constructed over the loco for ease of inspection in the main station back road.

Other activities and progress include:

- Completion of meal room, kitchen, adjacent office - These additions resemble a "gentlemen's club". Imitation timber wainscoting up to wall waist level, painted gyprock above, suspended false ceilings with recessed fluorescent lighting. Several large plan cupboards in the office mean that loco working drawings are now easily accessible
- Picnic area - Picket fences fitted around the two merry-go-rounds, five new barbecues bricked in, seats, tables, summer houses repainted.
- Electric tramway extension - Points constructed at the Museum from 45 lb rail fitted at NE corner to provide access to proposed new electric and internal combustion loco shed.
- Stationery Engine Display Area - A new steel fence has been installed around part of the perimeter.
- Otford Signal Box - Electrical wiring has been extended to provide exterior illumination.
- NSWGR car 449 - Interior work has been progressing which will permit this car body to cater for refreshments adjacent to the main "Yallah" station. These resemble those fitted to Sydney suburban steam stock

during the early years of this century. With the members' amenities facilities transferred to the new meal room and the public area located in the Horizontal window bars have been fitted for security reasons. former railway carriage, the "Yallah" station building can revert back to the original use of waiting room and ticket office.

When forming the ILRMS, the Museum Committee gave heavy consideration as to whether or not this action should proceed. By 1972, most of the working steam locos from the cane fields had been scrapped, sold or donated to preservation groups and six groups in NSW already possessed steam locos and were some way along the road to operations. Fortunately the Museum Committee decided to proceed with its aims and objectives.... of those six, only two have achieved success!

K. McCarthy 2/92

NSW STEAM TRAM & RAIL PRESERVATION SOCIETY, Parramatta Park 1435 mm gauge

(see LRN 83 p.6)

Steam tram motor 103A (Baldwin 11676 of 1891) has been returned to service after a \$70,000 overhaul at Thirlmere. It has been fitted with a replacement boiler discovered at Lismore Hospital. The refurbished unit should be seen in action each third Sunday of the month, when running days are held.

Sydney Morning Herald 23/12/91 via Ray Graf

STEAM TRAINS PTY LTD, c/- Rail Transport Museum, Thirlmere 610 mm gauge

(see LRN 85 p.7)

By the end of 1991, work was continuing satisfactorily with the restoration of Baldwin 0-4-2T 10533 of 1899. Construction of the timber cab had almost been finished, the boiler retubed, studs replaced, and a new dome top and smokebox front and door supplied. Only the welding of mudhole doors was required to complete the boiler work.

Bruce Belbin 1/92

QUEENSLAND

BUNDABERG SUGAR CO LTD & SUBSIDIARIES 610 mm gauge

(see LRN 83 p.8)

Parent company Tate & Lyle PLC will spend \$20m on Bundaberg Sugar in the next 12 months. \$6m of this will go into the Millaquin Refinery, and the

other \$14m will go into the group's sugar mills, plantations, the Bundaberg Foundry, and other interests. Bundaberg Sugar owns the Moreton, Millaquin, Fairymead, Bingera, Mourilyan, and Babinda Sugar Mills.

Mackay Daily Mercury 6/3/92 via John Browning

BABINDA SUGAR LTD 610 mm gauge

(See LRN 85, p.8)

The new "Bundaberg Hunslet" B-B DH (Bundaberg Foundry Engineers 002 of 1991) arrived on 13 September and entered service on 18 September. It can pull about the same load as the two Clyde 0-6-0DHs working in multiple, but much faster, with maximum speed about 30 km/h. It can maintain speed up a grade easily, but has difficulty starting a load up a grade. During October the unit spent a few days out of service when an oil filter in the transmission system collapsed. The 1992 season is expected to see the elimination of two crews per shift as a result of the arrival of this unit.

The tramline running south from Babinda has been relocated to the west because of the construction of a new section of the Bruce Highway. The line now runs along the western side of the highway all the way into Babinda from Pawngilly. Two new concrete bridges with the rails fastened directly onto a flat concrete deck have been included on the new deviation.

Tom Porritt 1/92; Chris Hart 2/92

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 86 p.12)

By early February, about 110 ex-Hambledon bins had been delivered to Macknade Mill yard, together with a weighbridge tare weight truck. On 6 February, two bins converted to navvy use by the addition of roofs also arrived from Hambledon .

Hambledon bins were also in evidence at Victoria Mill, where the old coal stage was being demolished late in February.

At Macknade Mill, the 1968 built Clyde petrol linecar was moved to the scrap dump near the river bank around the start of 1992.

Work on Macknade Mill's Anabranche bridge was done during February, using the massive bridge crane vehicle last noted at Invicta Mill (see LRN 75 p.7). This arrived at the bridge site by semitrailer on 19 February, and was used for lifting out the spans the following day. Motor Rail "Simplex" 4wDM 10232 of 1951 was used to move the bridge crane, which has the name *Dino* painted on it, and the date of last painting, 1986.

Chris Hart 2/92

MULGRAVE CENTRAL MILL CO. LTD, Gordonvale 610 mm gauge

(see LRN 85 p.13)

By January, a new 250 m section of track consisting of a long S bend had been built to make connection between the Mulgrave and former Hambledon Mill systems near Wrights Creek. (This had been the site of a previous connection - J.B.)

At Mulgrave, all the mail line locomotives from Hambledon were to be found, together with brakevans. The brakevans had lost their identity, and the locomotives appeared to have been renumbered by the simple expedient of adding 10 to the previous number, thus creating numbers 11, 13, 14, 15, 16, 18. & 19. They were all still in Hambledon green however.

Also seen at Mulgrave was a collection of navy gear including the Hansen car, four ballast hoppers and an old poison tank. However, the Motor Rail "Simplex" units and tamping machine were not seen.

At Hambledon, no rolling stock was in evidence except numbers of bins. The only track remaining at Hambledon in the main line through the yard, four full yard lines, what is thought to be the old empty line, and a siding into the navy area.

Chris Hart 2/92

PIONEER SUGAR MILLS LTD, Pioneer Mill 1067 mm gauge

(see LRN 86, p.15)

The two ex-QGR DH class B-B DH locos DH10 (Walkers 592 of 1968) and DH60 (647 of 1970) were delivered direct to Pioneer Mill, and were noted there in October 1991.

Ray Graf 1/92

QUEENSLAND SUGAR INDUSTRY CORPORATION, Mourilyan Harbour 610 mm gauge

(see LRN 86, p.12)

240 tonnes of 63 lb rail line, points and turnouts were advertised for sale in January. Inquiries revealed that this did not signify any massive track alterations or removal. The rail was simply surplus material which had been lifted at Mackay some years ago, and which had been sent to Mourilyan for possible further use.

Mackay Daily Mercury 10/1/92 via John Browning

SEAWORLD, Main Beach, Southport 610 mm gauge

(see LRN 85 p.13)

The red steam outline 0-4-0DH was built by Seaworld in 1984. and is

identical to the A10 "replica" No.6, built in 1975. No.6 recently received its first engine rebuild since construction in 1975, and had all wheels and hydraulics replaced at a cost of approximately \$10,000.

The steam outline 4wDM locomotive, rebuilt by Seaworld from a Caldwell Engineering locomotive in 1976, is reported to be for sale. It is fitted with a GM 4 cylinder engine and comes complete with "tender". Inquiries should be directed to Robert Borg at 075 88 2222.

Robert Borg (Seaworld) via John Browning 2/92

TASMANIA

BUSH MILL RAILWAY, Port Arthur 380 mm gauge

(see LRN 82 p.16)

Bush Mill Railway, No.3, Garratt, leaving Bush Mill Station on the downgrade, 9 November 1991

Photo: John Stichbury

For the special train tour by the Railway Enthusiasts Society (NZ) party on Saturday 9 November 1991, the superb BMR No.3, The Garratt, was attached to what appeared to be the whole fleet of BMR's carriages. The 11 month old loco, in perfect order, found the load of 5 carriages a simple task. The loco weighs 4 tonnes, is 16 ft 5 in long, 3 ft 9.25 in wide and 5 ft 9.5 in high. It has a 2' wheelbase, 4 cylinders with 8 in stroke and 5.5 in bore, and Walschaert's

valve gear with inside admission piston valves of 2.5 in diameter. The boiler is 6 ft 2 in long and 27.5 in in diameter with 3.5 sq ft of grate area. 47 tubes of 1- 3/8th inch size give 97 sq. ft of heating surface for the coal fire at a working pressure of 150 psi. It. was built by Lester Jones at Bush Mill and closely resembles the first Garratt locos built. The line features excellent track, a 4 km ride each way, 3 stations, and superb curves and wooden trestle bridges, all in a most scenic bushclad hillside location.

John Stichbury 1/92

ERIC HOWE, Tarleton 610 mm gauge

It is reported that during 1991, Orenstein & Koppel 0-6-0T 4241 of 1910 was purchased from a Mr Weatherall at Wodonga, Victoria (see LRN 61 p.13) and trucked to Melbourne for shipment to Eric Howe at Tarleton, near Devonport. Further details would be welcome.

Ian Comrie 1/92

IDA BAY RAILWAY, Lune River 610 mm gauge

(see LRN 68 p.9)

(About 110 km south of Hobart, 10 km beyond the end of the Huon Highway,)

Operated by Malcolm Moore 4wDM locomotives, this 6 km line is well worth a visit. In fact, the whole area is full of interest with Caseys Steam Museum at Dover (a great operating collection of marine and mill steam engines), timber and apple museums, and the new Timber Museum at Geeveston. From photos on display, the area once supported numerous trams. This tramway was built to haul sawn timber from the mill (sic) to the wharf in deep water opposite Southport. Track and equipment are excellent but "top" of the permanent way leaves something to be desired. However, the scenery and interest is so great, one enjoys every minute of the trip in the various passenger vehicles. At the station called Ida Bay, there is a motel and shop plus much of railway interest. On a fine day, the scenes as the line curves around the beautiful bays with their deep blue cold water, is worth every cent of the fare. The Railway Enthusiasts Society (NZ) party of 38 voted both this line and the Bush Mill Railway very highly indeed.

John Stichbury 1/92

WEE GEORGIE WOOD STEAM RAILWAY INC., Tullah 610 mm gauge

(see LRN 67, p.14)

The RES part visited this historic line on 6 November 1991 when the lively Wee Georgie Wood did several round trips of the 2 km route. A local school

party also joined in the enjoyment on a fine sunny morning. The loco is J. Fowler (Leeds UK) No.16203 of 1924 and is an 0-4-0WT with 22 in driving wheels and a wheelbase of 42 in. The loco weighs 5.5 tons, carries 200 gallons of water, and is coal fired. A train of flat top wagon behind the loco and two carriages was packed by the 38 strong party who also literally "bought out" the souvenir shop!

Normal fares are \$2.00 adult and \$1.00 child, and on operating days, trains run from 12 noon to 4 pm. In 1992, running days are 23 February, 8 March, 22 March, and the season ends on 19/20 April (Easter). Further enquiries to Mrs A Drake PO Box 55 Rosebery TAS 7470.

An isolated but delightful little railway was the "Kiwis" verdict!

John Stichbury 1/92

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC. 610 mm gauge

P O Box 288, Alexandra Vic 3714

(see LRN 86 p.15)

In January, the rebuilt Dorman diesel engine originally fitted to Motor Rail "Simplex" 4wDM 7351 of 1938) was cranked and spluttered into life, enabling Motor Rail "Simplex" 4wDM 10058 of 1948, to which it is fitted, to be driven a short distance around the track by its owner, Peter Evans. It is hoped that this locomotive will be completed to go into service at Alexandra in April. A new "Simplex" radiator, complete with fan and water pump, is required for this unit, which currently uses the tank of its rail-washing apparatus for cooling purposes.

The next project to be tackled by Peter will be the restoration of his small Cheetham Salt 4wPM locomotive, with efforts then to be put towards Motor Rail 7351. This is in very poor condition, and current indications are that it will be restored to a non-operating exhibit.

Peter Evans 2/92

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 86. p.17)

Climax Saves The Day

The public timetable for Saturday, 18 January called for four trains. Due to very heavy traffic, the first train of the day was to be 16 cars double-headed as far as Menzies Creek, where one loco and the leading five cars would detach

and return empty to Belgrave.

The third train of the day, departing Belgrave at 1.30 pm, was to be double headed and made up of 17 cars as far as Emerald. This included three Mount

Lyell cars and a van which were to be detached at Emerald, and subsequently pushed to Nobelius Siding. These cars were occupied by a party of 72 people attending a wedding reception which was being held in the Nobelius Packing Shed. This group were receiving the full "Night Train" treatment. The wedding party were scheduled to depart the Packing Shed for return to Belgrave at 7.15 pm.

This schedule would require all three working NA locos, but on 15 January, 8A failed with broken firebox stays, and on 17 January, 14A failed with boiler tube problems.

Feverish work was undertaken on 14A to try to get it back into service as early as possible on Saturday, and the Climax was prepared for service on the wedding train if necessary.

The first train of the day was double-headed with D21 (ex-TGR 0-6-0DM) and 7A, with the diesel leading. At Menzies Creek, 7A and the five leading cars were taken off and returned empty to Belgrave. D21 took the remaining 11 cars to Lakeside, and then returned to Belgrave, more or less on the normal schedule. D21 is not normally rostered to take more than 8 cars as it is difficult to maintain the NA schedule with heavier loads. 7A took the second down train of the day to Lakeside.

If 14A was not available in time it was planned to put D21 and the Climax on the 1.30 train; with the Climax and Night Train section coming off at Emerald. The rumour was that if 14A was available in time, it would doublehead the diesel, taking the place of the Climax on the night train - thereby subjecting the normal passengers to the mercies of the wretched diesel on the return trip. The logic behind this was that the Climax was too slow and would create havoc with the schedules.

14A was ready in time - just - but the diesel was not used. The Climax and 14A, coupled bunker to bunker, and with the Climax leading, made a magnificent sight leaving Belgrave, with the Climax's bell ringing to add to the atmosphere. The Climax was doing most of the work, for 14A was still not 100%. On seeing the train on the 1 in 30 Emerald bank, one observer said, "The Climax was really barking, it's the only time I've ever heard it bark, it's usually so quiet".

Departure from Belgrave was delayed about 12 minutes, due to some tardiness on the part of the wedding group, but the train maintained the normal 30 minute schedule to Menzies Creek, which means the Climax must have maintained a steady 7-1/2 to 8 mph for the whole distance. Its natural

cruising speed is said to be 4-1/2 to 5 mph.

The day's schedules were not seriously disrupted. The 1.30 pm train ex-Lakeside arrived Belgrave 11 minutes late at 2.34 pm. This train crossed the Climax/14A-hauled train at Menzies Creek. The 3.00 pm train ex-Lakeside hauled by 14A arrived at Belgrave 33 minutes late at 4.26 pm. This delay was mostly due to time taken shunting at Emerald on the down journey, and problems with 14A.

The last regular train of the day, 4.30 pm ex-Lakeside - hauled by 7A arrived at Belgrave at 5.44 pm, 26 minutes late. Judging by the way the passengers then went on a wild spending spree in the Souvenir Shop, most were not at all put off by the late running.

Failure of 14A

On 17 January, 14A completely failed near the site of the landslide while hauling the 3 pm train from Belgrave to Lakeside - the last train of the day. After placing detonators on the track to protect the train, one of the crew walked forward to Menzies Creek, taking the train staff with him. This train was supposed to cross 7A on the 3 pm train ex Lakeside at Menzies Creek. 7A was taken off this and ran light-engine to the disabled train. It then hauled 14A and train into Menzies Creek. Here 14A was side-tracked and 7A took the train onto Lakeside. This left the Belgrave bound passengers temporarily stranded at Menzies Creek.

The staff for the section was taken by road to Belgrave, and on its arrival D21 was run up to Menzies Creek where it picked up the disabled 14A and the train and brought them back to Belgrave. The final train of the day, now hauled by 7A, got back to Belgrave at about 6.10 pm, 52 minutes late. Smooth handling of disruptions like this is greatly facilitated because many of the volunteer staff are multi-skilled, many station masters have safe-working experience and vice-versa. 14A is now being retubed.

Gembrook Market Day - we were wrong!

The Gembrook Market is held on the last Saturday of each month, not the first as stated in the last issue.

Gembrook Restoration

On the weekend of 22/23 February, it was planned to construct 823 metres of track from the present end-of-track beyond Lakeside to the Wright Road level crossing. By the end of the Saturday, about 75 volunteers had already completed 745 metres, within sight of Wright Road; The track was in skeleton form, with only every third sleeper laid, and not ballasted. Sunday

was occupied laying the remaining 78 metres and fitting the intermediate sleepers on the sharp curves.

On the Saturday afternoon, NRTI pushed two NQR wagons over about the first 500 metres of new track, the first train to pass that way for 38 years. This section runs through forest, and includes one three chain radius curve and a long straight section on a grade of 1 in 45 falling towards Cockatoo.

The latest issue of the PBPS's Journal Narrow Gauge indicates that work on the Gembrook project will probably now shift back to the Gembrook end, and that it is possible trains will be running between Gembrook and Cockatoo (four miles) before Cockatoo and Wright are linked, because of the three trestle bridges that have to be built in this section.

WESTERN AUSTRALIA

HAINAULT TOURIST MINE, Kalgoorlie various gauges

(see LRN 26 p.14)

The Hainault Tourist Mine in Kalgoorlie-Boulder closed at the end of January 1992, the site being in the "super pit" expansion plans for open cut mining. The Hannans North Gold Mine was expected to open in February as the replacement for this important surface and underground tourist attraction and preservation site. Hainault's surface displays included ex Lake View & Star "Planet" loco 2011 of 1937 and Malcolm Moore built hoppers with numerous small skips and trolleys. Below ground, well-worn rails remained set in the drive floors with skips visible in the closed off tunnels. The surface equipment is to be transferred to the Hannans North site during 1992 and there are plans to put an operating "electric locomotive" (sic) and carriages underground.

Holiday Stopover 1/92 via David Whiteford

PILBARA GOLD MINES

Equipment from the Normay Minesite in the Pilbara was to be auctioned by Arrow Auctioneers on 14 November 1991 in Port Hedland. Included were 2 x Gemco 1.5 ton battery locomotives and 2 x tilt trucks. (Gauge unspecified, and not noted whether 'tilt trucks' are rail or road.)

West Australian 2/11/91 via David Whiteford

ROTTNEST ISLAND 1067 mm gauge

An essential component of developing Rottnest Island's military history as a major tourist attraction will be the rebuilding of the Oliver Hill railway to take passengers from the Army jetty (south of Thomsons Bay settlement),

past Kingstown (former Army barracks) and the airport, through the centre of the island and up to Oliver Hill for the guns tour. Most of the railway is intact but requires almost total rebuilding. The railway was built to serve the defences during WW II and surviving guns and underground tunnels have already become important historic and tourist features.

OVERSEAS NEW ZEALAND

DRIVING CREEK RAILWAY, Coromandel 380 mm gauge

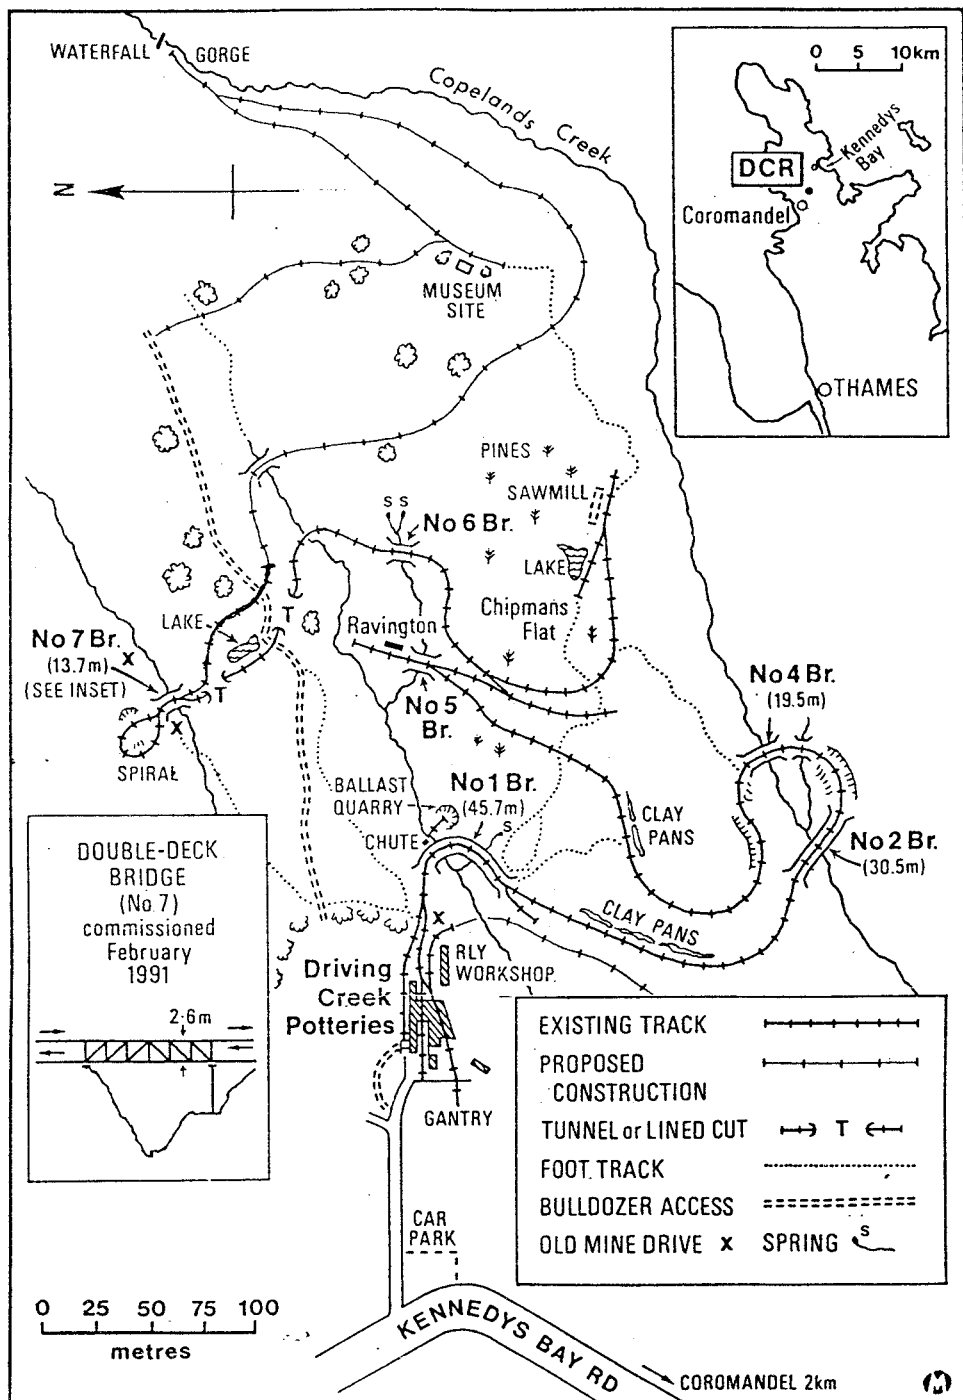

(200 km east of Auckland by road - much closer by sea!)

Driving Creek Railway's Ford driven double-bogie diesel locomotive at the end of the line, November 1991.

Photo: John Stichbury

Owned and operated by Pottery Proprietor, Barry Brickell. Barry has built most of the line and its equipment by himself. Operated by a double bogie

diesel locomotive with two or three carriages, this line is worth a visit. Situated on a 70 acre hillside bush block, the line has an average grade of 1 in 22 and now extends for 1.3 km, with work on further sections underway.

As well as horseshoe curves, a switchback section, and a branchline, the railway is notable for its well made steel bridges. No.1 on a curve, is 45.7 m long and No.2 is 30.5 m, but No.7, whilst only 13.7 m long, is unique in being a "double deck" rail bridge, the two levels forming the entrance and exit to a complete loop. A most unusual spiral layout, perhaps the only one in the world! The two decks are 2.6m apart. Maximum grade on this line, which carries both passengers and freight, is 1 in 18 and the bridges exceed 10m high.

The original loco was powered by a 7 hp Kubota diesel with 4 wheel chain drive. At present a Ford powered shaft drive is used to the two four wheeled, rather like Hiesler, bogies. Parts of this loco were built by Fitzroy Engineering in New Plymouth but the other rolling stock and an 0-4-2 steam loco under construction, have all been built in the DCR's own workshops.

MEETINGS

MELBOURNE: Gembrook and The Ghan!!

What's the connection?. Not much; except they are both on the agenda for the April Meeting, Hugh Markwick will start proceedings with an update on the relaying of Gembrook yard and environs as part of the extension of the former VR narrow gauge line to that township.

Following Hugh's contribution John Hassler will provide what promises to be a very interesting view of the "Old Ghan". John travelled on the last trip of the old narrow train and recently revisited relics of the line. He will be able to provide some fascinating "before and after" views and comments

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 9 April at 8.00pm.

SYDNEY: Any member wishing to know details of the next meeting should call Craig Wilson on 02 484 7984

LOCATION: Woodstock Community Centre, Church St Burwood Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 22 April at 7.30 pm

SUGAR RESEARCH PROPOSAL FOR IRAN

Mackay-based Sugar Research Ltd is currently involved in a \$5m proposal to assist in a proposed sugar industry development in Khuzestan, Iran. Part of the project is the design and development of a rail transport system to serve the 7 projected sugar mills to be constructed in the region. It is understood that the proposal is for a track gauge of 610 mm and for the use of long wheelbase "big bin" technology for cane haulage. Successful application of

new technology in Iran will provide a valuable testing ground for its adoption by the Australian sugar industry.

TOUR REPORT - VICTORIA

MARIBYRNONG EXPLOSIVES FACTORY

Our first tour for 1992 consisted of a series of half-day excursions over two Saturdays (29/2 and 14/3) to the Explosives Factory Maribyrnong (EFM). With each tour restricted to twelve members, places were at a premium for what may be our only chance to see this industrial nirvana.

Brief History

By way of background, readers may be interested in the following very brief account of EFM. Situated 9 km north-west of Melbourne, and now surrounded by suburbia. EFM's history commences not long after Federation.

In 1907, the Department of Defence, acutely aware of Australia's reliance on overseas supplies of all military explosives except small arms ammunition, arranged for their Chemical Adviser, Mr C Napier Hake, to visit England to investigate, among other things, the feasibility of establishing a factory in Australia to manufacture cordite.

Following extensive inquiries, particularly at the Royal Gunpowder Factory Waltham Abbey, Hake recommended that a factory be built to produce Cordite Mk.1 or Cordite M.D. The expected cost was £65,000. By 1909, planning was under way; some 356 acres of land being acquired within a horseshoe bend of the Maribyrnong River. A.E. Leighton was appointed Manager and the next two years saw the site, which mainly comprised the old Maribyrnong racecourse transformed with some 30 buildings, many of which were connected by some 2 km of narrow (probably 18 in) gauge tramway.

It would seem that the original Cordite Factory was built using drawings acquired from Waltham Abbey and this "borrowing" extended to the gauge of the tramways and the design of at least some of the rolling stock.

The first cordite was produced in June 1912 (by the dry process), and was followed by Fulminate of Mercury in 1915, Detonators in 1926, TNT in 1928 and Naval cordite by the wet process in 1935, together with dozens of constituent chemicals and components required in all of these. Each development saw an increase or alteration to the tramway system and an increasing variety of rolling stock to handle the various traffic.

The tramway system track "mileage" probably peaked during World War II, when over 16 km were in operation, however it was not all inter-connected. For example, Detonator section was originally a series of five separate lines each around 100-200m long, (presumably as a safety measure - one didn't want two trucks with Fulminate of Mercury coming into contact!), yet at some time four of these lines were connected leaving only the Wet Fulminate

DETONATOR SECTION

Another intriguing aspect of EFM was that great Australian tradition - a multitude of gauges! Probably originally 18 inches; within ten years it had been eased to 18.5 inches, this revised gauge being shown as such on many drawings. In addition there was a short 2 ft 8.5 in gauge system and a 4 ft 8.5

in track (of which a 10m section of dual gauge 18.5in/4ft 8.5in still exists).

Over the years other interesting features have included an incline, a wharf line, a wagon lift, small tunnels through mounds, double-track sections and hundreds of wagon turntables. Where two double-track sections crossed each other, it sometimes resulted in a nest of four turntables.

The system has always been manually operated, one person pushing one truck; however, no doubt inspired by developments at Waltham Abbey, battery-electric locomotives were planned in the twenties for the High Explosive section. All rolling stock seems to have had gunmetal tyres and many had a water tank designed to drip water on to the wheels as an added precaution against sparking.

The Tours

Each tour group was met at the main gates by the Safety Officer and escorted to a tea-room where a small display of maps and photos had been set up and refreshments made available. Following suitable warnings about the site and attendant risks, we were taken through three sections: Propellant, High Explosive and Detonator.

In Propellant, the manufacturing process of cordite was followed in reverse from the Vertical Propellant Press building to the Paste Drying sheds which had eight tracks full of the remaining yellow coloured four-wheeled Cordite paste drying trucks which thankfully have been saved for preservation. From here a short walk along the tracks brought us to the Paste Sheeting building where a slurry [of Nitroglycerine (NG) and Nitrocellulose (NC)] was made into sheets (not unlike paper making), then to the Tundish building where a device mixed the NG and NC together. The Tundish received NG in a rubber tyred truck which ran along the NG Truck Track, a concrete pavement with parallel grooves formed in it for the NG Truck to follow on its trip from the NG Washing House to the Tundish (gauge 2 ft 0 in).

From the Washing House we visited the Nitrating House where the Nitroglycerine was made by the batch method, possibly the last place in the world where it was done this way.

From here we passed into the High Explosive section where shell filling used to be carried out. Not a lot of the tramways remain here, however a stretch of double-track was seen although it had long ago had the grooves concreted in to provide a "cleanway" for the rubber-tyred BEV's that superseded rail transport.

Last "port of call" was the Detonator section where the kindly Foreman took us along the route of the original tramways (prior to any expansion of facilities), explaining the processes from making the Fulminate of Mercury

Cordite Paste Drying Truck outside the Drying House, Propellant Section, EFM (470 mm gauge). These trucks have gunmetal tyres, rubber buffers, water drip system onto wheels and have two removable doors on the side opposite the camera. They are presently painted yellow and have room inside for 48 removable aluminium trays on which the cordite paste sheets were laid for several days drying.

Photo: Ray Graf 14/3/92

(FM) to the final product - Detonators. Most tramways in this section have been removed or concreted in, however the course of the Wet FM tramway was followed through a sheep paddock, its way denoted by the row of sleepers and dogspikes, to a road crossing where it briefly dual-gauged with the 4 ft 8.5 in track, then into a grassy area with a few lengths of rail remaining.

Following our tour of Detonator, we returned to the tea-room for another cuppa before being escorted from the site. No doubt all would have loved to have stayed longer as the factory covers a vast area and we only saw a fraction of it. At its maximum, EFM had over 800 buildings and structures - about 450 remain today.

Demolition of buildings commenced several years ago and is still continuing methodically; the Federal government's ultimate aim being to dispose of the cleaned up site for the biggest financial return. Meanwhile, EFM management have generously permitted a small group of members to research the factory's records, which although fragmented, date back to its establishment. Hopefully the fruits of this research will ultimately be published by the Society.

The Society would like to express their sincere thanks to EFM management for their permission to allow these tours.

Tours Committee/ EFM Research Group via Phil Rickard 4/92

FOUR WHEELED HAND-PUSHED TRUCK - PROPELLANT SECTION

Based on Drawing X-19915 MUNITIONS SUPPLY BOARD

FAI MINING LTD, Lambton & Stockton Borehole Collieries 1067 mm gauge

An auction was held at Lambton Colliery, Redhead, on 25 March and included underground equipment and rail. It would appear that material from Stockton Borehole Colliery was also included in the sale, which was stated to be due to mine closure. Both these collieries were formerly owned by BHP Ltd

Sydney Morning Herald 7/3/92 via Ray Graf

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 87 p.7)

As a result of publicity generated by the 20th anniversary ceremony in February, high visitor numbers were experienced at the March and April steaming days. On 8 March, four bogie cars were required on the regular train providing seating for 100 passengers.

Although available for traffic, some minor construction still needs to be completed on the Victoria Mill, petrol powered, Drewry inspection car.

During late March, new toolbox-seats, which are located at each end of the vehicle, were completed. The two final tasks to be carried out to complete the project are the manufacture of the missing “flop over” main seat back and mechanism, and the metal frame and pivot for one of the windscreen frames. Possibly as a result of some early collision, the original uprights etc. on this end had been replaced by angle iron and the windscreen permanently closed.

As a result of our requests for information on this inspection car several appreciated responses were received from LRN readers. Richard Horne was able to supply these details from the Baguley-Drewry records held in the Staffordshire County Council Records Office: The Victoria Mill inspection car was constructed in 1924 as serial number 1338. The records also reveal that the car is powered with a Baguley petrol engine, 1 cylinder 105 mm x 120 mm; chassis 7 ft ‘6 in long x 4 ft wide carried on 18 in wheels. The car was supplied on order number 1955 with an extra wide body to accommodate 3 passengers on the main centre cross seat.

At that time similar vehicles were supplied to:

1337		to Macknade Mill, NQ
1340	of 1925	to Rarawi Mill, Fiji
1447, 1448, 1449	of 1925	to Labasa (1), and Goondi Mill Qld (2)

Finishing touches were carried out on former Sydney tramcar “C” 95 of 1899 during March. These included construction and fitting of wooden “ship rail” cappings on the top rail of the end aprons; caulking and painting around the roof access platform to fix a minor leak; replacement of some worn floor cleats: and the laying of malthoid on adjacent floor areas.

Steady progress has continued on the Victoria Mill meat wagon. Most of the tongue and groove external boards are in position and the diagonal inside timber lining pieces are being prepared for refitting.

The following work has been carried out on the locomotives during March and April:

Cairns Hudswell Clarke 1706 of 1939 - Newly constructed ash pan fitted under the fire box.

Burra R & W Hawthorn Leslie 3574 of 1923 - New lower side plates formed and fitted to the boiler smoke box. Final painting of the saddle tank, cab and fuel bunkers is progressing.

Wallaby R & W Hawthorn Leslie 2988 of 1931 - Start has been made on repainting this static exhibit.

Track laying has commenced from the new NE point on the electric tramway used by the Gemco loco towards the site of the future non-steam loco shed.

Periodic visits by the local “Workskill” team have resulted in further perimeter

fence construction. A substantial wooden paling fence, constructed on tubular steel fence posts, is now in position at the eastern property boundary of the Tongarra Road end of the electric tramway, while a pipe rail fence has been provided along the adjacent tramway southern boundary.

K. McCarthy 4/92

NSW RAIL TRANSPORT MUSEUM, Thirlmere 1435 mm gauge

(see LRN 61 p.10)

The Railway Museum is open daily except Christmas Day and Good Friday. Train rides are available the first and third Sundays of the month from 1 March 1 to 7 November.

Ray Graf 4/92

NSW WATER RESOURCES COMMISSION, Burrinjuck Depot 914 mm gauge

(LRN 35 p.7)

The Armstrong-Holland 0-4-0PM locomotive with Fordson engine, built for Wyangala Dam in 1930 or 1931, and transferred to Burrinjuck in 1937-8, was noted in the compound near Burrinjuck village. It appears complete except for the lack of a seat.

Ray Graf 4/92; ARHS Bulletin 9/89 & 10/89

PASMINCO LTD, Broken Hill 610 mm gauge

(LRN 80 p.7)

A small part of the operations at the former North mine has been closed down in an attempt to cut costs. The areas affected are the 27 Level Timber Stopes, and the Freeman's Shaft.

Sydney Morning Herald 22/1/92 via Ray Graf

PERISHER SKITUBE JOINT VENTURE, Bullocks Flat, Jindabyne 1435 mm gauge

(see LRN 76 p. 12)

A visit in late April revealed that Tulloch 001 of 1958 has been rebuilt with hydraulic transmission to become an 0-4-0DH, and is now fitted with a Detroit V6 engine with Allison transmission coupled to the original final drive. This rebuilding has seen the engine hood extended almost to the front buffer beam, which has been replaced in heavier material. The former Perspex engine cover doors have been replaced in more conventional metal, and the front ballast weights have been shifted to near the rear axle. Although no draft gear box is fitted at the front, a "link and pin" coupler socket allows the temporary coupler bar to be fitted to stock, to enable the loco to propel into the yard. Previously the loco could only tow and so was consequently trapped in the yard by rolling stock. To enable the unit to move through the points, the backs of the wheels were turned down to reduce back-to-back measurements. This measure only succeeded in proving that the springs fouled. which was cured by removing two leafs from each spring.

Cab doors have been fitted which will come in useful on the 1 am shunt when falling snow was all too often a discomfort to crew as it drifted in one side of the cab and out the other. The hood and cab doors remain to be painted as the loco was urgently needed to be returned to traffic following its rebuild. These and other finishing touches are expected to be completed.

The yellow Toyota LWB double cab ute has a "rear" axle fitted to each end. Drive is by hydraulic pump mounted on the engine and chain drive to a transverse shaft carrying a single rack wheel, just behind the front axle. There is no drive to the rubber tyred wheels. Brake callipers operate on three of the rubber tyred wheels and on a disk on the rack drive shaft, A compressed air parking brake also operates on the rack wheel shaft. The vehicle has been turned to face downhill for safety reasons, and is being fitted with rear coupler pockets for maintenance equipment. Rolling stock is always placed uphill of the power source.

A standard Toyota SWB diesel troop carrier is being fitted with Hi-rail equipment to enable it to operate as an emergency or relief vehicle.

Skitube passenger operation has been changed to enable the descending train to assist the powering of the ascending train through regenerative braking. Electric trains depart from each terminus simultaneously, on the hour. The maintenance shut-down next season will probably be from mid-October to December, so visitors should check in advance.

Ray Graf 4/92

RICHMOND VALE PRESERVATION CO-OPERATIVE SOCIETY LTD, Richmond Vale Railway Museum 1435 mm gauge

(see LRN 85 p.7)

Regular running days are both days of the first full weekend in the month and on the third Sunday of the month, in addition to special events. The Museum opens at 10 am and trains run hourly from 10.30 am, with the round trip approximately 40 minutes.

Ray Graf 4/92

ZIG ZAG RAILWAY CO-OPERATIVE LTD, Lithgow 1067 mm gauge

(see LRN 85 p.9)

A number of items were acquired from Coalcliff Colliery in October 1991, comprising two Vale Engineering battery personnel carriers, two battery chargers, one personnel trailer, and four side tippers. The Vale 4wBERs date from the early 1980s and are numbered 23 and 26, being similar to the one pictured in LRN 81 (p.7). They have a passenger capacity of 14 plus driver. The personnel trailer is one of the 8-10 man loco hauled units used before

the advent of the battery personnel carriers, and will be modified to carry tools or a mower. The 6 cubic metre side tippers will require to be fitted with new couplers and a tipping mechanism before entering service at Zig Zag. (In colliery service, the bodies were simply tipped by a crane or loader.)

An unconfirmed report suggests that the two personnel carriers are currently on hire to Newcom Pty Ltd at Angus Place Colliery (see LRN 72 p.8).

This is a subsidiary of the NSW Electricity Commission, which is now trading under the name "Pacific Power".

MACKAY SUGAR CO-OPERATIVE ASSOC LTD 610 mm gauge

(see LRN 86 p.14)

A decision has been taken to implement a uniform locomotive livery at all four Mackay Sugar mills. The livery will be similar to the current Marian colours of green, red and yellow, incorporating red and white dazzle stripes on headstocks and a silver reflective stripe on running board sides. There was no evidence of this livery being applied during April.

The new Racecourse Mill bridge at Homebush was completed by Easter. The bridge is pre-stressed concrete and replaces the old timber bridge which was built across Sandy Creek adjacent to the old CSR Homebush Mill, which closed at the end of the 1921 season. The new bridge is 280 mm higher than its predecessor, reducing the grade on the approaches.

The new Pleystowe Mill road/rail bridge across the Pioneer River at Balnagowan was named the John Cook Bridge and opened by Ed Casey, Member for Mackay and Minister for Primary Industries, on 24 January. Rail connections have been completed, and red flashing lights will prevent road traffic from crossing while a train is using the bridge.

Track work in the Marian Mill area has included the upgrading of track sections on the former Cattle Creek Mill Owens Creek line and between the mill and Narpi, involving resleepering with concrete sleepers and the replacement of two bridges with concrete culverts.

Because of a poor crop, continuous crushing at Marian and Farleigh mills will not operate during the 1992 season. Five day crushing will be used instead, with weekends being used for maintenance. Pleystowe and Racecourse Mills are expected to operate on continuous crushing.

CONFERENCE ON RAILWAY ENGINEERING 1993

The National Committee on Railway Engineering of the Institution of Engineers, Australia, is sponsoring a conference with the theme "Contracting Railways" - Safety, Standards and the Surroundings, to be held in Newcastle NSW from 17-20 October 1993. Further information can be obtained by writing to the Conference Administrator, AE Conventions, The Institute of Engineers Australia, 11 National Circuit, Barton ACT 2600.

A FIREMANS LOT

The phone rang and the cheery voice of Graeme Daniel (Puffing Billy driver and part-time fireman's roster officer) said, "We need a fireman for the Peckett." "Yes", I said, "Where and when and what for?" "It's a doubleheader with the *Climax*, past Lakeside on the new extension." "Great, I'll do it." Light up time for the Peckett is 5 am for a departure at 7 am, hmmm, not so great! It's worse for Graeme, he has to light up the *Climax* at 4 am - he must be crazier than I am!

So at 5 am on Saturday, 16 May 1992, I arrive at a dark, cold, and gloomy Belgrave loco depot, where Graeme already has a nice fire going in the *Climax*. The Peckett is securely locked away in the workshops, so we open up the place, crank the diesel, D21, into life and pull the Peckett out into the light drizzle, so I don't smoke out the workshops. Finally I get a fire going in the Peckett and proceed with my loco preparations. I oiled around the engine

and then I walked around it again, thinking that I had missed some oiling points. It was then I realised how little a loco it is beside an NA (crikies, an R class must take a while to get around!). At about 6 am, my driver for the day, Don Marshall, arrived. "Should still be in bed", he says - and he's had more sleep than me!

At 6.30 am, it's time to get moving. Graeme's got the *Climax* rolling and makes up our small train of an NQ, an NM and an NC van. We hook the Peckett up to the front of the *Climax* and join the photo line (f1.8 at a fortnight!!). At 7 am we trundle out of Belgrave and at first it seems quite intimidating having the black bulk of the *Climax* towering over the Peckett only a few feet from our backs. The strange mechanical noises emanating from the *Climax* were very noticeable, as were the spinning gears, twirling shafts and flailing rods, as we rolled towards the trestle bridge. I start to prepare the fire for the climb to Menzies Creek as per NA practice with 10 cars. Don calls across to "take it easy and let the *Climax* do the work, its got two firemen, take a seat.". Now I know the true reason for those extra sacks of coal on the foot-plate. Remember that the *Climax* only does about 5 mph.

After what seems like an eternity we pass Ming River, express at that, if I dare use the term, and on to Clematis to drop off the NQ and NM for the woodcut boys. A spirited run was made up the 1 in 30 to Emerald and then a casual roll down to Lakeside.

Here were four ballast wagons, two for the *Climax* and two for the Peckett. The day was spent taking turns at running out ballast on the new extension. Easy for a 20 ton *Climax* but a bit of a test for a 7 ton Peckett. Altogether seven trips were made on the extension, running out about 200 tons of ballast and picking up four trucks of wood.

As the sun sank rapidly in the west, we made up the train. The man in charge said that we had to go or the Night Train would be held up. "But we haven't got full steam", wail the two firemen on the *Climax*. "We're OK", say Don and I, "Let's go." The Peckett performed magnificently up the 1 in 40 to Emerald, which goes to show what can be done with a great engine and a great crew. Over the top we went, down the Emerald bank to Clematis, to drop off the four NQs of wood and pick up the NQ and NM of sawn light-up wood.

Unfortunately for the crew of the *Climax*, the Peckett's smoke stack is lower than the cab roof of the *Climax* and when drifting along, the cab filled with smoke. I wondered why they were hanging so far out of their cab and coughing their lungs out.

By now it was completely dark and our kero head lamp, aided by the driver's torch, showed the way ahead. Sometimes the headlight was actually brighter than the moon. The run back to Belgrave was rather chilly as the

Peckett cab is open at the back. Finally we crawled back into Belgrave yard at 7.15 pm, unhooked the Peckett and proceeded to put it to bed. The *Climax* was still shuffling about the yard (Graeme loves shunting), when I finally left for home at 8 pm.

It was a long 15 hours on deck for me, even longer for others, but a truly memorable day on the narrow-gauge with a pair of rare, historic locomotives.

W.L. Hanks 6/92

RESEARCH

MELBOURNE ZOO TRAMWAY gauge unknown

(see LRN 6 p.11)

Reprinted from *The Age* - Fifty years ago 13 April 1942:

"A youth was killed and a number of others injured yesterday afternoon when a carriage of the popular miniature train at the Zoo became uncoupled and overturned. The passengers were thrown against the fence surrounding the track."

The Age 13/4/92 via Peter Evans

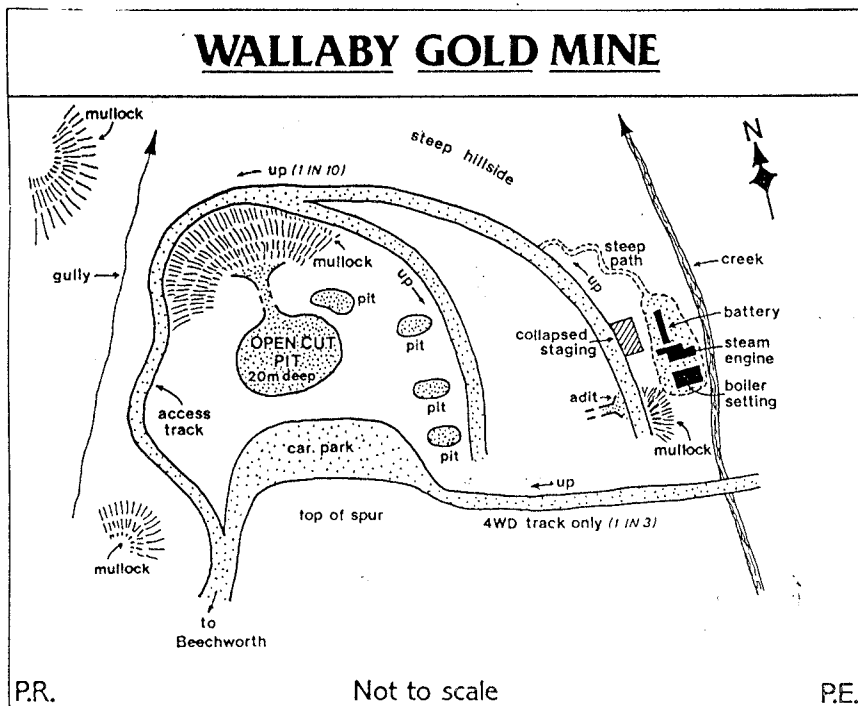

FIELD REPORT - VICTORIA

WALLABY GOLD MINE, Hurdle Flat near Beechworth

A brief visit was made to this abandoned mine site in early December 1991. It is now under the control of the Dept of Conservation & Environment who have upgraded the access track, created a carpark and put up some signposting.

Situated on the west side of a very steep creek valley, the principal attraction is the 12 head stamps and disused machinery. The site is dangerous with many open cut mines dotting the hillside together with shafts and adits. Rail transport was confirmed by the existence of the remains of at least two box-type skips of differing size. Gauge could not be determined due to wheels being missing however they appeared to be sub-2 ft. A track descending around the hillside from the largest open cut to the battery may have been a tramway. (Alternately there could well be tunnels straight through the hill.) A morning visit is most rewarding to take advantage of the light. Due to encroachment of bracken and blackberries, possession of some gardening implements is desirable, however take extreme care of the very deeeeeep holes in the grounds.

Phil Rickard 6/92

NEW SOUTH WALES

GRAEME & PHIL BELBIN, c/- Rail Transport Museum, Thirlmere 610 mm gauge

(see LRN 87 p.10)

As the company Steam Trains Pty Ltd has now been sold, this title is the correct one for ownership of Baldwin 0-4-2T 10533 of 1889 (not 1899), which is under restoration at Thirlmere.

Jobs recently receiving attention have included the completion of the riveted water tank/bunker and the straightening of the rear sub frame members, following which the boiler will be reunited with the frames, and the wheels fitted. Other jobs still to be done include the casting of replica builder's plates, steam dome cover top and base, and mounting brackets and tray for the headlight. The reversing lever has to be rebuilt from the eroded remnants of the original.

The cab has been completed and looks superb in varnished timber, and the headlight has also been finished. It is hoped that the locomotive will be completed within the next few months.

Bruce Belbin 5/92

COAL & ALLIED LTD, Balls Head Coal Loader, Waverton 508 mm gauge

(see LR 99 Jan 1988 and LR 102 October 1988)

Coal loading activities ceased at the Ball's Head coal loading facility at Waverton, Sydney on 17 April 92 when the ship "Bel Ombre" was filled with export coal for Japan.

The facility was manufactured by Mead Morrison Co. of Chicago USA in 1920 as manufacturer's number 17748. A total of 33 bogie hopper cars, each of four tons capacity, linked a large sandstone shore bunker with jetty facilities which permitted the coal to be dumped through chutes to ships moored alongside.

The cars were hauled by an infinite cable system, identical to cable tramway technology. The grip mechanism and coal dumping were operated automatically by trip systems.

The haulage cable was 3.25 in circumference and powered by a 125 hp General Electric 450v DC motor. The entire rail circuit amounted to 1 km.

Railway operation of this facility ceased at 3.08 pm on the afternoon of 4 April 1976 when hopper wagon No.27 delivered the last load of coal to the ship "Lunar Venture", also destined for Japan.

From 1976 to 1992, the cable railway task was replaced by a conveyor belt system.

Car No.6 is on display at the loading facility, while wagons 24 and 31 were donated to the Illawarra Light Railway Museum Society during August 1976 and converted from 508 mm to 610 mm gauge.

A detailed account of this light railway, accompanied by detailed drawings, appeared in the Sydney Tramway Museum magazine, *Trolley Wire*, in December 1975 and June 1976.

K. McCarthy 6/92

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 88 p.8)

Work on replacing the sleeper edging at the platform of the main Museum station with modular bricks was completed in late May. This work is now continuing along the rear dock road.

Internal repainting of former NSWGR car 449 now approaches completion and the fitting of counters and refrigerators etc. will soon enable full canteen services to be available in this vehicle. It is intended to repaint the carriage in the 1940s/50s livery.

The renewal of roof guttering and down piping on the former Yallah station

building has been completed as part of the general station area improvement project.

By mid June two lengths of heavier, prefabricated track mounted on heavy duty steel sleepers were ready to be laid on the overhead wired industrial tramway section along the northern boundary of the Museum compound. The light rail along this 40 metre straight has been lifted and the road bed rebalasted for the new plant.

During June the mezzanine floor covering an area of 6 m x 3 m was erected in the 6 m x 7 m carpenters' shop. The racks provided enable timber to be conveniently stored and easily identified while additional frame structures will be erected to safely store rebuilt items for current projects.

A 2 m high metal wall has been erected as a security measure along 18 m of the carriage annex building which fronts the compound yard. Although this facility is provided with burglar alarms and is within the chain wire enclosure, the Museum Committee felt that this added precaution was required to protect the growing number of restored rolling stock in this shed.

The following progress has occurred in rolling stock restoration during May and June:

Cairns Hudswell Clarke 1706 of 1939 - New regulator valve has been machined for refitting to the boiler dome. Work is now well advanced on replacing the rivets around the smoke box/front boiler tube plate area. *Wallaby* R & W Hawthorn Leslie 2988 of 1931 - The footings for the edge of the new plinth, on which this cosmetically restored standard gauge loco will stand, have been excavated. The unit has to be moved 4 m as local road widening may result in an adjustment to the Museum's Tongarra Road boundary.

(To Be Named) John Fowler 16089 of 1923 - The chassis area and moving parts have been oiled and the side tanks, boiler and cabin sections are currently being prepared for painting.

Inspection Car Drewry-Baguley 1338 of 1924 - The body work restoration on this former Victoria Mill (Ingham Qld) petrol inspection car, reached completion during May. The second tool box/bulkhead seat was fitted, the remaining windscreen frame and hinge mechanism attached and a new main seat back and tip over mechanism constructed. It is intended to place this unit on display at the Labour Day long weekend Model Exhibition at Liverpool NSW in early October. The body will be repainted and further linework added prior to this event.

Meat Wagon This four wheel "enclosed box car" was obtained from Victoria Mill (Ingham Qld) during 1973. Reusable external tongue and grooved boards have been refitted to the new body frame and the redressing of new

boards to the original size has enabled the two end walls to be completed. Work will now move on to the lower areas of the side walls.

Man Car The four wheel enclosed cross bench "Man Car" (Miners' transportation carriage) is receiving maintenance attention. The rusted metal roof has been removed and a replacement plate is being prepared.

Since the start of regular monthly steaming days in February 1979, the annual riding figures have fluctuated between 9,000 to 16,000. This is a healthy result considering the Museum has only 16-18 regular open days each year, with additional non-steam school visits. Over the last 13 years in excess of 150,000 visitors have been carried on the Museum railway.

NSW STEAM TRAM & RAIL PRESERVATION (CO-OP) SOCIETY, Parramatta Park 1435 mm gauge

(see LRN 87 p.10)

Work is slowly progressing on Beyer Peacock 1308 1620/1877 to enable the wheel sets to be reunited with the frame. The trailing axle boxes have been refitted and the radial axle is nearly reassembled. Eccentrics and sheaves are being measured ready for refit. It is hoped to refit the wheelsets to frame later in the year.

Vulcan Iron Works 1022 2505/1916 continues to provide yeoman's service in partnership with S truck and KA778 Hudson Bros Granville of 1891.

Robert Stephenson C.P.C. No.2 2994/1899 has been steamed on several occasions. On the most recent it was found that one axle box bearing was shedding brass. On inspection it was found that all under parts were clogged with hard cement dust from its use at the Portland Cement Co. at Portland NSW where it worked for 57 years before being donated to the Society in 1965. The RTM Thirlmere have been asked for a quote to repair the wheel bearings and axle boxes only, and alternatively to overhaul the whole locomotive.

Baldwin Steam Tram 103A 11676/1891 has been steamed on several occasions since its return to the Park in Nov 1991, and apart from some fine tuning with the motor's big ends, is proving very popular with crews and the general public. It has had one headlight fitted to the leading end. The electric wiring can be completed as soon as the other headlight is received.

Following the Council elections of September 1991, the Society made representations to a new Parramatta City Council to resolve the protracted negotiations regarding a new museum building and trackwork which was proposed for Parramatta Park in the various Plans of Management since 1980. The Council as trustees of the Park, have agreed unanimously to recommend to the NSW Minister for Lands to allow a new building to be built over the present one - we are awaiting a reply.

Work is still in progress replacing rail and sleepers in the yard trackwork

An overhead water tank has been erected ensuring one extra trip per hour when loadings are heavy. With 27 steaming days for the 1991/92 year, the Society staffing is now stretched to the limit. More qualified drivers and firemen or those willing to become qualified, are badly needed.

Would any reader have a photo of the Purcell 0-4-OPM 936/1921 (see LRN 85 p.6) in its original condition? The unit is presently fitted with a diesel engine and steam tram motor body No.2, built at Randwick Tramway Workshops in 1957. This replaced the body of 1A, which was mounted on a tractor and used in the Waratah Spring Festival processions from 1957 to 1973. No.2's body was given to the Society in Oct 1975 and appeared in Parramatta Foundation Week parade on 2/11/75. The body was fitted to the Purcell on

18/10/83. Laurie McCulloch 6/92

WATER BOARD, Berkeley Close, Berowra 760 mm gauge

(see LRN 72 p.7)

Introduction

Today the only use of light railways on civil engineering construction works is in the driving of tunnels. Independently steerable vehicles with rubber tyres, have replaced light rail as a transport medium on all other construction works. The fixed route of railway systems and specialised equipment are seen as impediments to flexible site management. However when working in small bore tunnels, having vehicles remain on a fixed route is desirable. Vehicles must stay within the narrowly defined operating envelope, otherwise accidents are likely to occur in the highly confined space of the excavated tunnel.

Until the mid seventies, tunnels driven by the Water Board (Sydney) were excavated by the traditional method of drill, blast, muck, and load. Spoil was removed in side tipping skips hauled by 2 ft gauge Gemco storage battery locomotives. A tunnel boring machine (TBM) had been tried in the Pressure Tunnel (1914-1925), but had proven to be a total failure. The machine was simply unable to cut through Sydney's hard Hawkesbury Sandstone.

In 1972, a Robins TBM was trialed (MofM 7/6/72) but was withdrawn as unsuitable, requiring excessive pressure to be exerted on the tunnel's sandstone walls. An Atlas Copco Australia Pty Ltd Model FF1524 Mini Fullfacer tunnel boring machine, was also trialed, on Section 3 of the Woronora Sewer Carrier (MofM 13/11/74). This type of machine proved very successful.

Conventional TBMs, cut circular tunnels by crushing the rock at the face, through a massive thrust on the small contact area of the cutting tools.

However the Atlas Copco TBM, cuts a non-circular tunnel, by a rotating head pivoting up and down. As the head rises, the rotating cutters undercut the rock which breaks away in large pieces. This reduces the thrust required at the face, and the amount of rock that is actually cut by the cutting tools.

Benefits of the mini mole technology over traditional drill and blast tunnelling methods in the Sydney region, have been identified as:

- avoiding claims of damage to private structures from blasting vibration
- reduced fracturing of the surrounding rock from blasting, so reducing the need to line sections of the tunnel with thick structural concrete;
- minimising overbreak in the tunnel bore, so minimising the volume of spoil to be removed, and the volume of concrete needed to backfill unwanted voids;
- minimal need for support timbering of the bore, which becomes largely self supporting;
- greater speed of working, so minimising cost of borrowed money; and
- reduced number of men required in the operating gang.

However, on tunnels less than about 500 m long, a drill and blast tunnel can be cheaper than a TBM tunnel because of the:

- lesser capital investment in plant
- cheaper site establishment costs
- lower standard of access road to the portal sites;
- reduced electrical requirements;
- smaller portal worksites; and
- more flexible spoil disposal options.

Five units making up the typical TBM are the:

1. Cutter unit;
2. Power Trailer (with drivers cabin);
3. Elevator Conveyor;
4. Bunker Car; and
5. Shuttle Car.

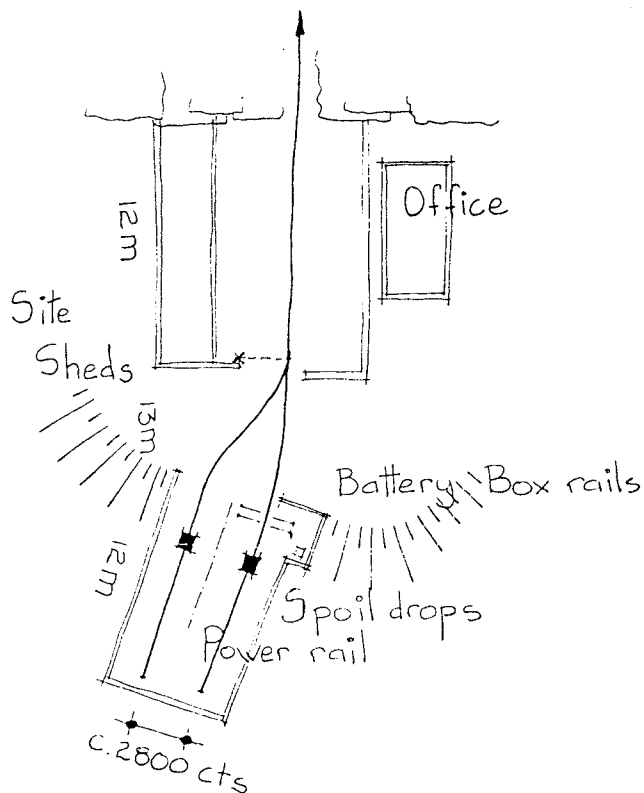

Spoil cut by the Cutting unit, is passed back under the power trailer on a flight chain conveyor, for elevation on the elevator conveyor. The elevator conveyor elevates the spoil from under the power trailer, to be dumped into the bunker car for storage, until the material is unloaded and transferred onto the shuttle car, for removal to the surface, and subsequent dumping. Both the bunker car and shuttle car are equipped with flight chain conveyors in their beds for moving the spoil.

Berkeley Close Carrier

One tunnel driven during the early months of 1992, was a 1,256 m long

sewerage carrier under the Berkeley Close area of Berowra, one of Sydney's northern suburbs. The tunnel was 1.5 m wide by 2.4 m high. When I visited the line on 19/3/92, 250 m had been bored. Progress was being made with one shift per day, at 110-115 mm per two minutes (the cutting head movement cycle time). Access to the tunnel is off Joalah Crescent. Excavation of this tunnel is by an Atlas Copco TBM. Two, 760 mm gauge, Atlas Copco shuttlecars (Plant Nos.106195, 112545), are available to remove spoil from the TBM's bunker car to the surface. At the surface, the shuttle car unloads its load of spoil in an elevated dump shed, through a hole between the rails, onto a pile under the building. A front-end loader loads the dumped material into trucks for removal. Spoil is being used to resurface local firetrails, through an agreement with the local Council.

to Joalah Cres.

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway. Woodford 610 mm gauge

(see LRN 88 p.12)

The workshop building now has a concrete floor with track in place, which will soon be connected to the main line points.

The former D'Aguilar Station building was due to be moved to its new position at Woodford on 13 June. Preparatory work included the removal of a number of trees and the positioning of concrete posts. Work has also been done on the building in the Caboolture Shire Depot where it has been used since the closure of the original railway line.

Running days for the remainder of 1992 will be as follows: 2, 9, 16, 23, 30 August; 13, 27 September; 11, 25 October; 15 November; and 13 December.

Durundur Railway Bulletin 4/92. 5/92

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 87 p.11)

The arrival of E.M. Baldwin 4wDH 8002-1-8-78 of 1978 from Hambledon Mill late in 1991 has apparently inspired some loco livery changes at Victoria Mill. Clyde 0-6-0DH *Lucinda* (65-436 of 1965) now has a wide green band, similar to that formerly seen at Hambledon Mill, on the sides and end. In addition E.M. Baldwin B-B DH *Gowrie* (7135-1-7-77 of 1977), and at least one other bogie Baldwin, has had its existing narrow green band at waist level widened,

although to no more than double the previous width. The bogies of *Gowrie* have also been painted black, which is a departure from the trend for bogie locos at Victoria to have silver bogies.

In the mill yard at Victoria, Line 18 (which receives cane from the Bambaroo line) has been extended for this season. It is reported that Victoria Mill received a total of 400 bins from the closed Hambledon Mill.

The rail bridge crane which had been used to remove the spans of the Anabranche bridge at Macknade was returned to Invicta Mill at about the start of May, and returned to Macknade on 8 May. On 26 May, it was transferred back to the Anabranche area by road, and had replaced the bridge spans there by 5 June with Motor Rail "Simplex" 4 (10242 of 1951) providing the motive power. By this date the bridge crane had been taken away, possibly to a bridge on Victoria Mill's Bambaroo line.

Macknade's E.M.Baldwin brakewagon BV2 (7065-5-6-77 of 1977) has been fitted with a solar panel to recharge a battery which powers its radio control electronics. This renders the electronics free from interference previously caused by the alternator and the rest of the electrical system.

During May and June, both poison spraying units were used to cover the entire district's lines. As usual they were powered by Hansen line cars V5 (1920 of 1978) and 5 (34 of 1973). The reason for the use of these units is that they are fitted with electrical connections for controlling the spray solenoid valves. In addition, a speedometer is fitted to V5 and a rev counter to 5 to ensure that correct ground speed is maintained during spraying.

Chris Hart 6/92

CSR LTD, Kalamia Mill 610 mm gauge

(see LRN 88 p.12)

The new locomotive, extensively rebuilt by Bundaberg Foundry Engineers from ex-QGR B-B DH DH50 (Walkers 632 of 1969), arrived at the mill in early May. To be named *Kilrie*, the unit is painted yellow with green long hood top, red and white dazzle stripes on the headstocks, and silver bogies. The original DH class long hood remains intact, but a new large cab and a new short hood containing a fuel tank replaces the remainder of the original superstructure. One cab door opens onto the footplate on the left hand side of the long hood, and the other cab door opens onto the opposite side of the short hood. There are no side cab doors. Dual controls are fitted and the cab is air conditioned. The Walkers builder's plates have been removed and on each cab side appears an engraved plate stating:

38 TONNE LOCOMOTIVE
EX QUEENSLAND GOVERNMENT RAILWAYS
SERIAL No.DH50
CONVERTED TO CANE HAULAGE SERVICE
for
CSR LTD KALAMIA MILL
by
BUNDABERG FOUNDRY ENGINEERS LTD
1992

The former *Kilrie*, an E.M.Baldwin B-B DH, has been transferred to Inkerman Mill.

John Browning 6/92

CHRIS HART, Cordelia 610 mm gauge

On 8 May, The Macknade Mill Clyde linecar (a 2-2wPH) was moved to Chris Hart's home, having been purchased from the mill. Built by Clyde Queensland in 1968, it is in poor condition, having been out of use at the mill for some years.

Chris Hart 6/92

HAUGHTON SUGAR CO PTY LTD, Invicta Mill, Giru 610 mm gauge

(see LRN 85 p.10)

The bogie brake wagon built at the mill in 1991 and incorporating bogies supplied by Westfalia Baldwin, has been fitted with the nameplate MULGRAVE, which is the name of one of the new lower Burdekin irrigation areas. It was noted in the mill workshops on 26 June. As a result, Westfalia Baldwin B-B DH *Strathalbyn* (13863-9-91 of 1991) was running without it, and was paced hauling 148 full bins at 30 km/h. E.M.Baldwin B-B DH *Burdekin* (10215-1-7-82 of 1982) was noted with one of the smaller brake wagons constructed from a locomotive chassis hauling 208 full bins.

Com-Eng 0-6-0DH *Haughton* (AH3878 of 1964) has been fitted with a new hood of which the sides and front consist of a heavy gauge expanded mesh.

John Browning 6/92

It is reported that the main spans of the Haughton River bridge are removed each slack season to avoid possible flood damage. (The main tramline crosses the Haughton River about 3.5 km upstream of the mill.) This explains the stationing of CSR's massive bridge crane here when it is not required for use elsewhere. Apparently two of the locos are left up country each slack season (possibly at Clare), and many of the bins are stored inland.

Chris Hart 6/92

LIONS CLUB OF BRANDON 1067 mm gauge

(see LRN 8 p.6)

Avonside 0-6-0T 2043 of 1930, ex *Airdale* of Pioneer Mill, was to be seen in a playground close to the Bruce Highway in Brandon for many years. Unfortunately, it had become a hazard to children and was removed in about May 1992. It is understood that the boiler may have been sold and that the remainder of the locomotive was disposed of for scrap.

John Browning 6/92

MACKAY SUGAR CO-OPERATIVE ASSOC LTD 610 mm gauge

(see LRN 88 p.12)

Farleigh Mill appears to be the first to paint one of its locos in the new Mackay Sugar corporate livery, which is in fact the Marian Mill livery. Late in June, E.M.Baldwin *Foulden* (7220-1-6-77 of 1977) was observed in the paint shop at the loco shed, almost completely repainted in the new colours.

John Browning 6/92

NATIONAL TRUST OF QUEENSLAND, Zara Clark Transport and Folk Museum, Charters Towers 508 mm gauge

A 20 inch gauge four wheel ore truck is part of a small mining exhibit here. The small inside framed iron tipping truck is described as a "kibble trolley" and sits on track inside a short "tunnel".

John Browning 6/92

PIONEER SUGAR MILLS LTD, Inkerman Mill, Home Hill 610 mm gauge

(see LRN 83 p.12)

The prototype E.M.Baldwin B-B DH locomotive (4498-1-7-72 of 1972) has been transferred from Kalamia Mill. It has been painted yellow with green trim and has received the name *Iona*. Yellow with green trim is now the standard colour scheme at Inkerman, and all the locomotives bear it with the exception of the original *Iona* (Clyde 0-6-0DH DH1.2 of 1954) which is sitting in the locoshed out of use with its nameplates removed.

Ballast tamper Conquip 11 of 1971, transferred from Hambledon Mill late in 1991 was also observed, as was sleeper replacement machine Tamper 825817 of 1987, which had been on loan to Plane Creek Mill at Sarina in 1989-90.

John Browning 6/92

PIONEER SUGAR MILLS LTD, Pioneer Mill 1067 mm gauge

(see LRN 88 p.13)

Ex QGR B-B DH DH10 (Walkers 592 of 1968) has been converted at the

mill for cane haulage and carries the name *Jardine*, which is the name of one of the new lower Burdekin irrigation areas. The Walkers builder's plates have disappeared. The unit is painted yellow with a green body stripe and orange and yellow dazzle stripes. It has been extensively modified including receiving a new cab profile.

A new remotely-controlled brake wagon has been built at the mill for use with this unit. It has been constructed from a railway bogie wagon and is ballasted up to 37 tonnes.

Ex QGR B-B DH DH60 (Walkers 647 of 1970) is receiving attention as part of its conversion to cane haulage. Many parts have been removed, including the Walker's builder's plates, and much work remains to be done. The name *Taipan* has been roughly painted on this unit. A Plasser Type VT06-16 tamping machine with builder's number 41 of 1973 was observed in the navvy area. This is believed to be the unit owned by Fessl Pty Ltd (see LRN 77 p.13). The Aresco Trak Chief ballast regulator BR 230 was also present.

About 19 km of track extensions have been built in recent years to serve new irrigation farms in very flat country to the south west of the mill.

John Browning 6/92

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 85 p.13)

A pair of Com-Eng 0-6-0DH locos have been fitted up with hydraulic connections for back-to-back multiple unit use during the forthcoming crushing season. These are 7 (FC3776 of 1964) and D8 (FC3777 of 1964). This follows the successful multiple unit use of Clyde 0-6-0DH locos 10 (67-569 of 1967) and 11 (70-709 of 1970) which were converted in 1990.

Hansen petrol line car 1314 of 1974 has been dumped out of use behind the loco shed.

John Browning 6/92

SOUTH AUSTRALIA

MOBIL'S ADELAIDE REFINERY, Port Stanvac 600 mm gauge

As part of its aim to improve safety and efficiency in its marine operations, this refinery embarked on a project to move the berth for crude ships a further 2 km offshore. The new berth will be in 24 m of water as against 21 m at present. This will enable vessels of 150,000 D.W. tonnes fully laden to unload at Port Stanvac.

To extend the underwater fixed 36 inch pipeline, a contract was let to Transfield Ltd to assemble and fabricate 6 lengths of concrete-coated

pipeline, each length comprising 28 x 12.2 m sections.

It was decided to launch and tow these six lengths as one continuous string of pipe to their new location to join up with the end of the existing submarine pipeline 1.3 km offshore. A decision was made to build a railway on vacant land on the southern side of the Refinery for the purpose of launching the six fabricated lengths into the sea. In September 1991 construction started on building SA's newest and possibly shortest lived railway to connect the fabrication area of the pipeline with the sea shore at the base of the cliffs 61 m below.

As each individual pipe weighed in at 12 tonnes, the railway, by necessity, had to be well engineered. The gauge chosen was 600 mm and is 764 m long. The rail was 40 kg/m with sleepers cut to 1.2 m and spaced at 300 mm intervals. The railway descends the cliff to the sea-shore, a cutting having been excavated, easing the grade to 1 in 4. The track bed was graded and laid on a compacted base of 150 mm with 150 mm of dolomite sand laid as ballast.

The unusual feature of this railway is that it employs no locomotives - two large winches are employed to lower the 2 km long pipeline into the sea. Rolling stock comprises 60 specially constructed 4 wheel trucks to support the pipe. As there are no curves in the railway, the tyres on the trucks have been machined to a flat profile. The anticipated axle load is 9 tonnes.

The pipeline was scheduled to be launched into the Gulf by the end of the first week in April and, under the terms of the contract, at the conclusion of the exercise, the rail line was to be demolished and the land returned to its natural state thus ending the story of SA's shortest lived and least seen railways.

The Recorder 4/92 via Colin Harvey

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC. 610 mm & 1029 mm gauge

PO Box 288, Alexandra Vic 3714
(see LRN 87 p.14)

The Alexandra Shire Council has recently undertaken some burning-off activities near the former terminus of the Rubicon Lumber & Tramway Co's tramway at Alexandra. This included the area once used as a dam for the supply of water for the locomotives. The fire has cleared the undergrowth sufficiently to uncover some interesting relics. Included amongst these are

two funnels and 3 smokebox doors discarded from the Krauss locomotives used on the tramway between 1912 and 1935. It would appear that the fitter in charge of the locomotives and rolling stock was in the habit of throwing all discarded metalwork into the dam as a way of disposing of it. Other items found in the dam include broken bogie axleboxes and many broken springs.

One of the funnels has the remains of a conical spark arrester and the other has a simple horizontal cap and gauze mesh arrangement. The latter is in sufficiently good condition for it to be restored along with the best of the smokebox doors. This will be set up as a display at the Museum in order that visitors can contrast the size of the tiny Krauss locomotives with the steam locomotives currently in use at the Museum.

Peter Evans 5/92

Work on the Kelly & Lewis 0-6-0DM B/N 4271/1935 continues behind the scenes in NSW. So far four new brake shoes have been cast and delivered to the Museum site. New sand valves have been made for the sandboxes. New cast wingnuts have been made to replace those missing from the side curtains.

A new starting handle bracket has been fabricated and painted, and is ready to be fitted when delivered to Alexandra. Four new sand delivery pipes have been made for the sandboxes thus completing the sanding arrangements for the loco.

In January, the driver's seat frame from Kelly & Lewis B/N 5957/1936 was delivered to the Museum site and when fitted will complete the fitting-out of the cab.

Paul Simpson 7/92

AURORA GOLD MINE, Bonang

According to a brochure advertising Bonang (97 km NNE of Orbost), the Aurora Gold Mine has been partially re-opened and offers tourists a journey into the Mine. Photographs seen indicate rail transport is used, passengers being conveyed in small box skips. The intriguing thing is that rails appear to be timber and the skips appear to have outside flanges. Can anyone confirm or deny this?

Phil Rickard 12/91

BRIGHT & DISTRICT HISTORICAL SOCIETY MUSEUM

(see LRN 63 p 12 & LRN 66 p.14)

A visit to this location on 1 December 91 enabled closer examination of the two mining skips previously noted. Both are of 20 inch gauge and came from goldmines around Bright, the actual mines being unknown. The small

skip is of standard box-type end-opening/tipping type, however the other is somewhat larger and of deep and narrow V-shape, side-tipping design.

Quartz reef mining commenced in the hills overlooking Morse's Creek and Growler's Creek (Bright and Wandiligong) in 1858 and, apart from the usual underground tramways, many mines utilised surface tramways, often incorporating inclines, to transport the gold-bearing quartz to the various batteries. For the story of the Bright and Wandiligong goldmines see "Bright Gold" by Brian Lloyd and Kathy Nunn (Histec Publications, East Brighton, 1987).

Phil Rickard 12/91

FRED CROWS, Wrightley near Tatong

This gentleman has a farm astride the Tatong-Toombullup Road, some 12 km south of Tatong. In the paddock on the eastern side of the road, lie four 3 ft gauge timber tramway wheelsets of usual size plus a much smaller set. Interestingly, several of the wheels have been re-treaded and re-flanged, by the simple expedient of bolting new pieces to the old - bush craftsmanship at its best! Mr Crowe bought the wheels from George Bell about 1935. Bell had a timber mill and tramway in the upper reaches of Holland's Creek, 4 km SE of Mr Crowe's farm (see LR 101). The re-treading had been done prior to purchase by Mr Crowe, who planned to use the wheels on his own intended timber tramway. However, he soon decided to use bullocks and motor trucks instead and the wheelsets have since lain unused. In Mr Crowe's western paddock, may be seen the formation of the Spring Creek - Mt.Samaria Tramway (LR 93). This timber tramway was partly built along the Tatong-Toombullup Road but the road hereabouts has been realigned sometime, leaving the formation 200 m distant from the present road.

Phil Rickard 6/92

ELDORADO HISTORICAL MUSEUM

Situated on the banks of Reedy Creek, some 20 km ENE of Wangaratta, Eldorado, together with its better known neighbour Beechworth had its origins in extremely rich alluvial goldfields. Today Eldorado only has a population of several hundred and is often visited by tourists to view the huge gold dredge, operated by Cocks Eldorado Gold Dredging Co from 1936 to 1954, which lies in a dredge hole to the west of town.

Next to the State School, in the old school building, is an historical museum and lying outside is a variety of agricultural machinery and a Marshall portable No. 20455 from Howlong, NSW. Also on display is an 18 inch gauge mining skip of end-emptying, box-type from the McEvoy mine, one of several deep

lead mines that worked the Reedy Creek valley near Eldorado.

Phil Rickard 6/92

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 87 p.14)

Peckett on regular train

On Friday, 27 March, the regular 2.15 pm Belgrave Lakeside train was doubleheaded as far as Menzies Creek, with the Peckett 0-4-0ST *Sir John Grice* leading 8A on a train of six cars. At Menzies Creek, *Sir John Grice* was detached, and later hauled a special train to Emerald. This consisted of an NBH, an NAC underframe, a 35 ft test vehicle (underframe only), and an NQR wagon, which was the trailing vehicle. This was a long train for *Sir John*, with a total weight of 29 tons. At Emerald, the Peckett was put on to a lowloader and taken up to Gembrook, to run passenger trains on the following Saturday (market day), and Sunday. This was the first time passenger trains had been run on the restored track at Gembrook on a Sunday. Traffic was light. The Gembrook Market Day service was again run in May, when almost 300 passengers were carried.

Locomotives

8A is completely dismantled, whilst it undergoes its ten year boiler examination.

Work on rebuilding 12A is continuing but it is not likely to be in service until late in the year.

NRT1, the small Ruston Hornsby diesel loco (builder's No.296048 of 1949) which the Puffing Billy Railway rescued from a life in the sewers, has suffered a major breakdown. The bearings in the engine are the problem, and apparently are not worth fixing, so a new engine is needed. NRT1, *William H. Collis*, went into service in September 1983 as Emerald car-shops shunter, but has had quite a number of interesting assignments in its career. For a few years it provided a Total Fire Ban Day service with two NBH's between Belgrave and Menzies Creek. Double-heading with the Peckett, it has run at least three trains: a revenue train on a Great Train Race day when there was a shortage of serviceable NA's; a Committee of Management special; and the LRRSA 25th Anniversary Trip. More recently it has been used for ballasting and other track work on the Gembrook restoration, and was the first loco to provide a passenger service on the restored track at Gembrook.

Rolling Stock

During 1992 it is intended to build two new NQR wagons, and a prototype of a new passenger coach. The design of the new passenger vehicle looks

like a stretched NB platform-end car, but with bigger windows. All four NQR wagons which were at Gembrook have been shifted back to the "western division".

Gembrook Restoration

On 11 April, diesel loco D21 was used to run ballast trains from Lakeside along the newly relaid track towards Wright Road. As this was also the day that the "Commissioner's Special" ran, a proper (i.e. steam) loco was not available for the ballasting work. This was not the case on 16 May when both the Peckett (*Sir John Grice*) and the *Climax* were used on ballast trains, so for the first time in almost 39 years, steam was again active on this part of the railway. Sir John and the *Climax* double-headed a short train from Belgrave consisting of NM cattle van and NC brake van, with the NM being dropped off at Clematis. Sir John was in the lead, and the pair arrived at Lakeside at about 9.10, where 4 NQR wagons were waiting, to form two ballast trains of 2 cars each. The *Climax* and Sir John took turns on each train; whilst one train was out in the forest, the other was being loaded at Lakeside. This was no problem for the *Climax* but the Peckett struggled occasionally to get the train moving but otherwise performed very well.

At one stage, 14A (on the regular passenger train), the Peckett and the *Climax* were lined up near each other at Lakeside making a wonderful sight. Later in the afternoon, the Peckett had attracted quite a crowd of onlookers at Lakeside. The final run of the day was the most interesting. The Peckett with 2 NQR wagons was about 100 metres up the track towards Lakeside. The NQR wagons were loaded with firewood and tree prunings. The *Climax* went down to join the Peckett, so the consist for the train back to Lakeside was *Climax*, NQR, NQR, Peckett, NQR, NQR, and NC.

On Saturday, 13 June, ballast trains were run using 7A and D21. This was the first time an NA had used this section of track in 38 years. On the way back to Lakeside 7A put on a spirited performance, showing the NA's superiority in terms of speed to all the other locos, and giving three long triumphant whistle blasts. The last train of the day consisted of 7A, NC van, 4 NQR trucks, and D21 trailing, and ran to within a couple of feet of the end of track at Wright Road.

Work on clearing the site of the first trestle bridge beyond Wright has been completed, and the remains of the original piles are now clearly visible. Clearance of the second bridge site is about to commence, and survey and design work on the replacement bridges is under way.

Work on relaying track between the main-road crossing at Gembrook and Orchard Road - about one kilometre - is scheduled to start in September.

Gembrook operations

Operating days for the rest of this year at Gembrook are scheduled to be the weekends of 26 and 27 Sept, 31 Oct and 1 Nov. 28 and 29 Nov. and 19 and 20 Dec. The Saturdays are Gembrook market days.

Frank Stamford 6/92

T.A.C.L. RAIL TRACTOR RESTORATION - PROGRESS REPORT

(see LRN 85 p.17)

A project to Restore the *Climax's* Little Brother!

Work on turning the new tyres, and preparing the existing wheels to fit them has commenced at Emerald car shops.

Frank Stamford 6/92

GISBORNE STEAM AND ENGINE SOCIETY 610 mm gauge

(see LRN 80 p.15)

In May 1992, Perry 0-4-0T 9737.45.1 of 1945 ex Millaquin Mill, Bundaberg, was inspected during the steam rally. The boiler was almost ready for its hydrostatic test, and it is hoped that the loco will be in steam for the 1993 rally. Only about 50 metres of track have been laid to date, but the hope is that eventually a complete circuit of the rally grounds will be constructed.

Ian Comrie 7/92

LAKES ENTRANCE DISTRICT The Entrance Construction and Maintenance Tramway

(see LRN 73 p.13)

A visit to the eastern side of The Entrance in early December 1991 found the remains of the previously noted 0-4-0PM still in situ on its steel sled but sitting above sand level. The various relics are part of the sights to see on the Dept of Conservation & Environment's walk around The Entrance. The DCE have erected an information board on the Cunninghame Arm side of The entrance briefly detailing the history of the cutting of the man-made entrance to the Gippsland Lakes. Included is a photo taken on the tramway which ran alongside Mississippi Creek to the north of Lakes Entrance to convey granite from a quarry to a wharf at the head of navigation on North Arm to be shipped to The Entrance. An internal combustion loco (of Day's looks) is featured hauling wagons.

Phil Rickard 6/92

LAKES ENTRANCE DISTRICT Mississippi Creek Tramway 1067 mm gauge

(see LR 11 p.14)

Spurred on by this photograph, a visit was made to several sections of this

tramway. At the wharf site may be found a short length of track, a substantial, if frail, buffer stop, a vertical boiler lying on its side and a pile of granite "chunks" weighing many tons each.

Further north, where Uncles Road crosses the creek, the DCE have established a walking track along the tramway formation for a couple of kilometres. Several sleepers were found, discarded to one side, and being complete with dogspikes, enabled the gauge to be determined at 3 ft 6 in. This of course means that at least two I.C. locomotives worked in the area, one on 3 ft gauge at The Entrance and one on 3 ft 6 in gauge at Mississippi Creek. According to Adams (The Tambo Shire Centenary History, 1981), the Mississippi Creek line started out with steam haulage in 1914, however he also infers the line was in operation much earlier. The many tramways of the Lakes Entrance district (contractors, jetties, timber mills, quarries, etc.) are fertile ground awaiting research and recordings

Phil Rickard 6/92

JOHN NORRIS, Lake Goldsmith, Beaufort 457 mm gauge

The loco incorrectly reported under the heading "Tom Mulcahy" in LRN 88 (p.14) is in fact owned by John Norris. It was constructed by Clarrie Hall in Mildura in about 1952 and was run at Mildura Hospital. After this, it ran at the then Mile End Museum in Adelaide before being moved to Lake Goldsmith (in Western Victoria) in about 1982. An 0-4-2T based on the 3.5 in gauge "Juliet" design, it has been reboilered by its current owner.

Ian Comrie 7/92

WESTERN AUSTRALIA

CARNARVON LIGHT RAILWAY ASSOCIATION INC, Carnarvon 1067 mm gauge

(see LRN 80 p.17)

On 11 June 1992, Andrew Barclay 0-4-0T 1754 of 1922 was steamed for the Dept of Occupational Health Safety and Welfare inspector and successfully passed the examination. *Kimberley* has moved along the short shed track with the Simplex 0-4-0 diesel (dead with brakes on) as a load with a "mere whiff of steam".

Mike Thomas 6/92

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOC. INC.
Bennett Brook Railway, Whiteman Park 610 mm gauge

(see
LRN
87
p.17)

John Fowler 0-6-0DM (4110019 of 1950), still in the guise of Isis Mill 2, on a trial run at Kangaroo Flats Station shortly after its arrival at Whiteman Park.

Photo: Ken Watson

The latest locomotive to arrive at Whiteman Park is 0-6-0DM John Fowler 4110019 of 1950, formerly Isis Mill (Qld) No.2. The loco was purchased in December 1991 and left the Isis Mill the same month, arriving at Whiteman Park on 20 January 1992. The loco is powered by a GM 671 series motor, with an Allison torque converter and a Weisman gearbox. It was rebuilt in 1954 by the Bundaberg Foundry, is approx. 130 hp with a maximum speed of 25 km/h, and an axle load of 5 tonnes. The middle wheels are flangeless and it has dual controls. Air brakes and mini-knuckle couplers have now been converted to vacuum brake and WA standard "Jones" couplers. No.2 becomes the third mainline diesel locomotive on the Bennett Brook Railway. The loco has undergone light engine trials and one passenger service trial and could be in regular service during July.

David Whiteford 6/92

2-8-2 118 (Henschel 24476 of 1938) has been undergoing a very thorough overhaul prior to its return to service, including attention to minor inner firebox wrapper cracks. Fitting out of the plumbing underneath the boiler casing has been proceeding, and it is likely that a new upper cab will be

fabricated. The locomotive will be finished in a brick red livery.

Western Mining has continued to make progress with the boiler of Orenstein & Koppel 0-4-4-0T Mallet 2609 of 1907. Eight patches have been welded on the boiler and fitting mountings were to be refaced before retubing commenced.

April 5 was a very busy day at the park with 18,000 people in attendance for a Classic Car show. This meant that trains were packed. Operations were generally smooth with three locomotives in use on the two train service: F.C.Hibberd "Planet" 0-4-0DM 1 (2150 of 1938), Fanco-Belge 2-8-2 123 (2670 of 1951), and Gemco 4wDM 27 *Wyndham* (built 1964).

Central Station has been renamed Whiteman Village Junction Station.

Freudenstein 0-4-0T 217 *Golden Ridge* (217 of 1905) was in use operating the Mussell Pool-Whiteman Village Junction service on 4 July.

MEETINGS

MELBOURNE: AGM AND MEMBERS SLIDE NIGHT.

Yes, its on again! Bring any slides which might be of historical or of general interest to light rail enthusiasts (maximum of 20 slides each).

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 13 August at 8.00 pm.

SYDNEY: QUIZ NIGHT

For our August Meeting we are trying something new with our first quiz night. A mixture of entertainment and general knowledge questions, it should be a good evening.

LOCATION: Woodstock Community Centre, Church St Burwood

DATE: Wednesday 26 August at 7.30 pm

ADELAIDE

Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150

First Avenue, Royston Park.

DATE: Tuesday 25 August at 8.00 pm.

BOOKS

Ray Graf has drawn attention to two books which may be of interest to members: *Cobar Copper Centenary 1869-1969* (available for \$5 from Cobar Regional Library). *Coal Mining in Newcastle* by J.W. Turner (Newcastle History Monographs No.9) published by Newcastle Region Public Library, 1982.

RESEARCH

CARSONS TRAMWAY, Ravensdale

A display of pioneer timber milling photographs is contained in the small Yarramalong Manor and Cellars, Yarramalong, north of Sydney and west of Wyong on the NSW Central Coast. Among them is a picture of Carson's Tramway, at the nearby settlement of Ravensdale. The picture shows typical timber tramway bogies, loaded with a large log, on a reasonably steep grade. The line appears to be either a haulage, or partly worked by horses. Is anything known of Carson's Tramway? Would it be the closest traditional timber tramline to the city of Sydney? A visit by car disclosed remains of an old mill (on private property) above the road, on a steep hillside.

David Burke 8/92

NATIONAL LIBRARY OF AUSTRALIA AERIAL PHOTOGRAPH COLLECTION

The Map Section of the National Library of Australia maintains a large

collection of aerial photography of Australia numbering around 700,000 prints flown by Federal agencies between 1928 and 1983, and hence of interest to persons undertaking historical research.

The collection consists of black and white stereoscopic verticals with some TRIMETS and is arranged according to the 1 mile (1:63,360) topographic series sheet numbering system. Where possible, all photos have been matched against flight diagrams now available on microfiche from the Australian Surveying and Land Information Group (AUSLIG). A graphic index is available showing holdings and automated bibliographic records are available through the Australian Bibliographic Network (ABN) database. The photographs are complemented by an extensive collection of both imperial and metric topographic maps as well as orthophotomaps and photomosaics.

A TOPCON stereoscope with 6x binocular head is available to view the photographs in the Reading Room of the Map Section. The photographs are not available for loan either to individuals or libraries. However photographic orders of prints may be placed through AUSLIG on forms available in the Section. The Map Reading Room is open between 9 am and 4.45 pm weekdays. The Map Curator may be contacted by phone on (06) 262 1280, or fax (06) 257 1703. Correspondence should be addressed to: Maura O'Connor, Map Curator, Map Section, National Library of Australia, PARKES ACT 2600.

SITE REPORT - VICTORIA

MARCHBANKS TRAMWAY, Pile Siding 914 mm gauge

PART I

J. Marchbank & Son established a sawmill near Pile Siding on the VR 762 mm gauge railway to Crowes in December 1933. An outlet tramway was laid into the siding yard and a log line was laid below the mill along Camp Creek, a tributary of the Carlisle River. In 1935 the mill was shifted further north, with the log line becoming part of the outlet tramway. A zig-zag enabled the line to maintain a maximum grade of 1 in 14 against the load, and in 1936 a Malcolm Moore rail tractor was purchased to work the tramway. A second tractor of the same type was purchased in 1938. The mill was burnt down in 1939, and the site was abandoned in favour of a new mill on the previous site. In 1934, the mill was sold to Keith King who used motor trucks for transport. The mill closed in 1953. (Further details are available in *The Beechy* by Norm Houghton which should be available soon - if you haven't ordered a copy, why not do so now!)

As part of the research for *The Beechy*, Norm invited several LRRSA members for a weekend trip to investigate this area. On 6 June 1991, in company with local farmer Cliff Tann, we picked up the tramway just beyond the cleared farmland below O'Brien's Mill (this mill was from a later period). No remains of the bridge over Camp Creek were seen, but the formation was very clear as it curved around the hillside to assume an easterly heading. The hillside was steep, and a small cutting was seen as the tramway rounded the spur. A small washaway in the track indicated a possible small bridge site, but again no remains were seen. The tramway swung sharply north and crossed a tributary of Camp Creek at right angles. This bridge would have been about 20 m long and 6 m high, but only a few rotted timbers were seen. (This was possibly the bridge shown on page 37 of "West Otways Narrow Gauge" in LR45.) A short distance further on was a two metre deep cutting and then three more bridges, one of which was substantially intact with some decking remaining.

The tramway was lost for some time on a flat area topping the ridge where relatively recent pulp logging operations had taken place. Just beyond the limit of the disturbed area, were several very large stumps and standing trees, one of which (still living) had a cut in the trunk to take the wire strop for a bull-wheel. A deep snig track was seen near this tree, these remains indicating part of early logging operations. After some difficulty, the tramway was picked up again on the other side of the ridge.

The very even downgrade continued in a north-easterly direction until a

junction was reached. The upper tramway was investigated first, and proved to be a spur leading through a long cutting about one metre deep to a winch site. Several parallel depressions two metres apart and four metres long indicated where bearer logs had rotted away, and a small section of iron pipe was found.

We returned to the lower of the two tramways, and a snig track leading towards the winch site but filled in by the tramway formation proved that the lower line was the more recent of the two. A short distance further on the top of the zig-zag was reached. An earthen mound at the end of the formation may have acted as a "buffer-stop" in the event of a runaway. The zig-zag was not investigated in full, and a set of by now well-dripping bushbashers (it being typical Otway's weather), set off in a southerly direction intending to walk out straight up the hill to the cleared farmland rather than retrace our steps along the tramway.

"Up hill" in the Otways (and in you correspondent's experience, the Rubicon Forest), means any angle greater than 40 degrees, and we were soon reduced to crawling on all fours following an old snig track. This position, with our noses close to the ground, meant that the ground surface was closely inspected, and it was with surprise that we found ourselves following another tramway. This proved to be part of Pettit's incline which operated between 1915 and 1917.

After much exertion we struggled out through the obligatory clump of blackberries and through cleared farmland back to our vehicle. A tired but happy group of bushbashers, after a nice hot shower, relaxed for dinner at the Gellibrand Pub to plan our next day's activities (see LRN 86, p.5 for a report on this excursion). Norm later returned to investigate the zig-zag and the mill at the bottom, and he now takes up the story.

Peter Evans 8/92

PART II

On Friday, 1/11/91, I walked down to the mill site. I had two companions this time, Cliff Tann and Ian McDougall, both Weeoprounah farmers who expressed great interest in joining me. Ian's 4WD made access a little easier and saved a lot of walking getting down to the tramway site, 2 km from the bitumen road.

We left the vehicle at the tree line and headed west along a gully to a bridge site and began our walk at this point. We proceeded along the tram to the zig-zag site without stopping (as we had previously traversed this route) and began our mapping in earnest after this.

We checked the route of the snig track coming down from Pettit's incline and noted where it crossed Marchbank's tram at the end of the zig-zag.

MARCHBANK'S TRAMWAY

1991

Below the zig-zag, the ridge gradually levels out and turns into a narrow saddle before rising up to a wide flat knob where the mill was situated. We followed the tram from the zig-zag for about 400 m until losing it along the level piece due to the tram's minimal earthworks and the amount of ground litter. We fanned out as we approached the mill and eventually located the formation about 100 m from the log yard. The mill site is quite evident with several bearer logs intact and all the imprints of the vanished logs obvious. The sawdust pit has a few ferns growing in it. A water tank and a saw blade were the only metal items we located.

Three snig tracks run north from the log yard as does one tram. We lunched at the mill and then began our return trek. Just south of the mill on the west side of the ridge we came onto a wide formation heading south. We followed this, initially regarding it as a log tram, but as we went on I expressed my doubts. The formation minimum width is 2.13 m, it is mostly 3 m, and in parts 3.6 m. It looked to me like a typical logging road of the 1960s but neither I nor my companions had any knowledge of logging roads coming out of Marchbank's mill.

We pushed on and soon came to a switchback which we followed north and came back under the mill site and then west around to a clearing. Turning back we rejoined the main formation and continued south along this snakelike formation that runs way below the crest of the ridge we had walked down.

My companions, who had not ceased talking since the walk began, began ribbing me that I couldn't recognise a tram, even when walking on one but I was not convinced as yet. Marchbank's formation on the main tramway up to Pile Siding was generous, usually 1.5 to 1.8 m wide, but this one was ridiculously generous. We passed over several bridges and culverts but not sufficient woodwork remained to determine their width. Two main bearers would indicate a tram bridge and three a road bridge. On and on we plodded. By this stage, even my companions professed a lack of local knowledge as to our exact situation, but we were generally heading south so it didn't matter.

A large tree 3.4 m in diameter, growing in the middle of the formation convinced me the formation was not built 30 years ago, but more like 50 years. Not far past here, the formation turns east through a very wide cutting (3.6 m) and right through the cutting are very clear impressions of sleepers. So the formation was a tram. The track headed east along a gully and about 50m from the cutting, we came across the substantial remains of a long, low bridge that had slipped sideways from its supports. It was definitely a tramway bridge.

We speculated on why the formation was built so wide in the period 1933

to 1939 and came to the conclusion that the shovel men were probably hired on a daily rate rather than a contract rate and were in no great hurry to finish the job, given the unemployment levels at that time. The lie of the land did not seem to explain the obvious solution that soil from the wide excavations in the cuttings was used to fill in the dips.

We kept on east until the formation ended near the head of the gully about 700 m from the mill. The tram may have continued west across the gully, but it didn't look like it and we decided not to explore the other side especially as our way out was all uphill and our legs were a bit wobbly by this stage.

Keeping east, we walked up the slope, crossing a snig track, until meeting the main tram below the zig-zag. This enabled us to get a rough fix on the lower tram and it finally became clear to us where we had walked since leaving the mill.

After a chat and a breather, we set off south along the tram towards Pile Siding. We followed the formation right through to near O'Brien's mill site, noting several sleepers here and there and some bridge remains. Along the section near Pettit's winch point we saw two tiger snakes sunning themselves and although we left them alone one of them reared up and hissed in a very aggressive manner. This episode brought on a discussion about snakes and their behaviour and, if I believed all the tales my companions told, then I reckon I should have seen a hundred snakes in the last few months of walking, trodden on twenty and been bitten by five. In fact, I had seen three.

We arrived at the vehicle four hours after entering the bush, feeling flush-faced and jelly-legged. The going was not all that tough (by Otway standard) but we had falls due to tripping on unseen obstructions and I ended with a pair of bruised knees. In addition, I lost my measuring tape when a pocket was snagged and the stitching loosened, allowing the tape to fall out. This was par for the course, as I usually lose, rip, puncture or tear an item of clothing, footwear or equipment on each Otway trip and end up with some scratches and bruises.

It was a very successful day enabling more pieces of the jig-saw to be set in place but I estimated another two trips would be needed to complete the picture.

Norm Houghton 8/92

NEW SOUTH WALES

BLOOMFIELD COLLIERY P/L, Taralba Colliery, Stockton Borehole & Rathluba Colliery, East Maitland 1067 mm gauge

Due to the closure of the Rathluba underground operation, a quantity of equipment was to be auctioned on site on 3/9/92 by Colliers. Among the items listed for sale were three "Joy" 12CM3 continuous miners, five "Joy" shuttlecars (22SC & 10SC), 2.4 km of 94 lb rail and 3,000 wooden sleepers.

Listed for sale from the Taralba Colliery, Stockton, were four diesel "Fox" 14 man rail transport cars.

(Can anyone provide detail on name changes, closure and ownership changes associated with Hunter Valley colliery rationalisation over recent years? - Ed.)

The Age 22/8/92 via Colin Harvey; Sydney Morning Herald 29/8/92 via Ray Graf

BROKEN HILL (SES Area, Crystal Street) narrow gauge

(see LRN 73, p.6)

This site, seemingly used for storing possible museum items, was inspected again in June. This visit confirmed the presence of the narrow gauge skips, 2 ft gauge Ruston & Hornsby 4wDM loco, and two 4wBE locos (Gemco?) previously reported. However, a new addition was another 4wBE loco, numbered TB2 (painted) with battery box numbered TB1.

Ray Graf 8/92

COBAR SHIRE COUNCIL, Cobar Regional Museum 1435 mm & 610 mm gauge

On display outside the Museum were observed the remains of the standard gauge 4wWE locomotive ex Great Cobar Copper, which was converted for use as a brake van at Hebburn Colliery (who can supply maker's details? - Ed). There is also a 2 ft gauge mucker (compressed air operated).

In a new underground mining gallery inside the Museum, is a short length of 2 ft gauge track on which is displayed a mucker, three square underground ore trucks, and a 4wBE loco with battery box. The loco is badly wasted and appears to be an early Greenwood & Batley. It carries number 4 (in welded metal), and is fitted with a Mancha controller. There are lights in the gallery which may be turned on by staff if a photograph is required, but fill-in flash is recommended.

Ray Graf 8/92

DELPRATS MINE, Broken Hill 610 mm gauge

Visitors to this tourist mine descend approximately 120 m to the No.4 level and view not only a working rock drill (noisy even at 50 psi instead of 90 psi), but a working compressed air driven mucker. Other rolling stock on view underground includes a four-wheeled truck used as a display platform (ex pit prop transporter), a four-wheel transformer truck, and an inoperable 4wBE loco, which carries no identity. Photographs on display on the surface show that the loco was in working order when the tourist mine opened, but this is definitely not the case now. Tours normally depart at 10.30 am weekdays and 2 pm Saturdays.

Ray Graf 8/92

JOCKS PLACE, White Cliffs narrow gauge

Two narrow gauge trucks were noted here dumped outside with other "preserved" equipment and machinery.

Ray Graf 8/92

MOUNTAIN HIGH RAILWAY Tumut - Batlow 1435 mm gauge

(see LRN 76 p.11)

Expressions of interest for the future use of the Tumut-Batlow railway line were being sought by State Rail in the second half of May 1992. No mention of the Mountain High Railway was made in the advertisement.

Sydney Morning Herald 13/5/92 via Ray Graf

NSW STEAM PRESERVATION CO-OPERATIVE SOCIETY LTD Campbelltown Steam and Machinery Museum, Menangle 610 mm gauge

(see LRN 72 p.8)

Council has finally approved the site Development Application, after some three or more years waiting to proceed. Work started on the civil works and the right-of-way has been graded and a creek crossing made using concrete pipes and a curved embankment made towards the main station area and shed.

On the weekend of 20/21 June 1992, track laying commenced and approximately 200m of track has been completed. 30 lb rail is to be used throughout and 4 ft x 8 in x 4 in sleepers used (new hardwood) dipped in sump oil (for termites). Construction of some points is required, but at present one set of points is complete, while several others have to be altered to obtain a larger radius curve through the turnout.

Curves on the railway will be a minimum of 132 ft radius which will ease wear and tear on the flanges of the rolling stock.

Work continues on Robert Hudson, Hudswell Clarke 0-4-0WT 1423 of 1922. Two new well tanks had been made and delivered, both have been hot dip galvanised. The driving wheels have been re-profiled and the driving pins turned. New bushes have to be made for the coupling rods. New axle bushes have been cast and machined and require to be fitted to the axles.

The new shed site has been cleared and levelled and a short length of track constructed. The two bogie carriages have now been moved to the new track and the loco moved closer to the crane, also to be swung 90 degrees to its new track location.

The first stage of reconstruction of the railway will see a point to point operation with a run-around loop at each end of 0.5 km of track. More new sleepers will be required to be bought for the 2nd stage.

One of the original builder's plates for Robert Hudson B/N 1423 has come into the possession of its current owners and location of the other plate is sought to adorn the restored loco.

Paul Simpson 7/92

SILVERTON GAOL MUSEUM various gauges

A visit here revealed about 10 assorted narrow gauge mining trucks and skips. Also here is one narrow gauge battery electric loco, numbered TB1 (painted) fitted with battery box carrying the metal number TB2. The motor is removed, but it drove the second axle via a cardan shaft, with chain drive to the other axle.

Ray Graf 8/92

SILVERTON PIONEERING COLLECTION narrow gauge

Two small narrow gauge trucks are to be found here.

Ray Graf 8/92

THE SILVERTON TRAMWAY CO LTD Broken Hill 1435 gauge

(see LRN 77 p.11)

A Queen's Birthday ARHS excursion from Sydney to Broken Hill featured Silvertown locomotives on a couple of occasions. On the afternoon of 7 June ANR 874 led Silvertown A.E. Goodwin Co-Co DE locos 30 & 31 (formerly ANR 864 & 857) on a run to Cockburn (S.A.), while later that same day, A.E. Goodwin Co-Co DE locos 28 (83827 of 1961) & 29 (83828 of 1961) were used for a tour of the mine lines. This tour visited the Pasminco-North lease, the Minerals Mining & Metallurgy lease, and the Pasminco-South lease.

The Silvertown conductor was dressed in traditional uniform with silver piping (borrowed from the Sulphide Street Museum), while other crew

members wore the current uniforms.

It was noted that the Menindee Road crossing lights were activated by a hand held infra-red remote control device used by the conductor.

Ore from the North lease is brought by the STC to an unloading facility in the old Zinc Corporation area in former NHLF trucks. Twenty of these wagons were obtained, but one was crushed by the loading plant on the first day of operation.

Ray Graf 8/92

WALLACE & McGEE Dubbo 915 mm gauge

The site of the Wallace & McGee sawmill is now mostly cleared. However still to be seen are a large boiler and three seasoning kilns. A short piece of 3 ft gauge track is visible in one kiln but no other rail or any rolling stock is visible.

Ray Graf 8/92

WATER BOARD, Berkeley Close, Berowra 760 mm gauge

(see LRN 89 p.8)

A visit was made to this site on Tuesday, 1 September. The two Atlas shuttle cars were seen. On one unit, plant number 106195 is carried on an engraved metal plate welded onto the body. On the other unit, plant number 112545 (?) is welded onto the body panels, with the penultimate numeral being ambiguous (possibly a 9). Also on site was a Gemco battery electric "hauler" with no plant number visible but carrying a builder's plate showing the following information:

Number 12705.03/98/70
2/4hp - 60V - 700 lb DBP

This unit is to be used for "shotcreting" work. Can anyone supply the plant number.

Ray Graf 9/92

QUEENSLAND

BUNDABERG CITY COUNCIL, Tomlinson Street, East Bundaberg 610 mm gauge

P.C. Hibberd "Planet" 4wDM 3919 of 1959 is stored in the Council Works Depot. It has been sandblasted and painted in red oxide paint. It was reportedly donated by Gibson & Howes some five years ago (see LRN 62 p.11) for possible use at the Botanical Gardens, but there are no plans to use it there. This unit is a Simplex type machine, and may be available for disposal.

John Browning 8/92

BUNDABERG SUGAR CO, Fairymead Mill 610 mm gauge

(see LRN 85 p.8)

Bundaberg Foundry B-B DH 001 of 1991 has received the running number 91, denoting its year of construction.

John Browning 8/92

CANNONVALE 610 mm gauge

(see LRN 69 p.6)

The ex-Hayman Island rail equipment, consisting of four-wheel passenger cars and flat cars, appears to have been removed from the former Airlie Cove caravan park site.

John Browning 8/92

CANNON VALLEY 610 mm gauge

Near the Riordanvale turnoff on the Proserpine-Airlie Beach road, an ex-Hayman Island passenger car in blue and white livery was noted. It can easily be seen from the road and is sitting in the dirt alongside the Proserpine Mill tramway which runs parallel to the road.

John Browning 8/92

CRACOW 457 mm gauge

Down a back street behind the hotel can be found a variety of pieces of mining equipment from the old Golden Plateau mine, in an advanced state of decay. Under a tree, lie five narrow gauge ore trucks with wooden frames and steel bodies.

John Browning 8/92

CRACOW MINING VENTURE 457 mm gauge

This company operates an open cut mine on the site of the former Golden Plateau underground mine, and displayed outside the mine office is a single narrow gauge ore truck.

John Browning 8/92

CSR LTD Herbert River Mills 610 mm gauge

(see LRN 89 p.10)

With an increase in crop estimates, weekend crushing was introduced at both Victoria and Macknade Mills as the season progressed, and continuous crushing is seen as inevitable next year.

A number of loco breakdowns at Macknade Mill have resulted in a few changes to normal routine. In particular, Clyde 0-6-0DH 12 (65-434 of 1965)

was on sugar haulage duties in early August, running for most of this time with brakewagon 1. Loco 12 has retained the brakewagon radio control gear in case of future transfers. E.M.Baldwin 0-4-0DH 17 (6-1446-1-9-65 of 1965) was in use hauling cane all day shift on 7 August. E.M.Baldwin 0-6-0DH *Hobart* (4413-1-7-72 of 1972) was on loan from Victoria Mill from 11 to 21 August.

Proposed cane expansion in the Wharp's Holding area is reported to have been shelved because of lack of government funding for subdivision.

Chris Hart 8/92

MILLAQUIN SUGAR PTY LTD, Bundaberg 610 mm gauge

(see LRN 85 p.12)

E.M.Baldwin B-B DH 6104-1-8-75 of 1975 was noted at Qunaba in mid-August, and is numbered 751. It was on loan to Fairymead Mill during 1990-1. Also still at Qunaba was Com-Eng 0-6-0DH AH2967 of 1963. The E.M.Baldwin 4w-2DH (rebuilt by Millaquin Mill) is now stationed at Millaquin as spare loco.

At Millaquin E.M. Baldwin B-B DH 4983-1-7-73 of 1973 has been painted in the standard Millaquin/Fairymead livery of yellow with black bonnet top, and now carries the number 732. E.M.Baldwin B-B DH 6456-1-11-75 is now numbered 752.

John Browning 8/92

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 87 p.11)

A number of loco failures have been experienced this season. Com-Eng 0-6-0DH 8 (A1926 of 1958) had new pistons and sleeves fitted after dropping a valve and damaging the piston. Ex-Hambledon Mill Clyde 0-6-0DH 18 (64-379 of 1964) had two clutch failures involving the breaking of the shaft to the torque converter.

On 7 August, with number 18 out of service on the second occasion, a head on smash between ex Hambledon locos took place on a slight curve in Russell Road Gordonvale at about 3.15 pm. E.M.Baldwin 0-6-0DH 11 (4413-2-8-72 of 1972), heading cab first to the mill with fulls from Redlynch, met Clyde 0-6-0DH 13 (64-316 of 1964) coming hood first from the mill with empties. It is believed that the crew of one loco had jumped clear seconds before the impact, but that the other crew were injured and required hospitalisation. Both locos suffered significant damage.

11 was running with its brake wagon next to the loco and it is reported that both loco and brake wagon had the buffers pushed in about 100 mm. The loco's V8 engine's bellhousing was cracked, and an exhaust manifold and pipework broken. A broken buffer went under the loco and brake wagon and

damaged the loco's transmission oil reservoir which is also a heat exchanger, as well as bending up brake rigging. It is reported also that the loco's frame is cracked, although this may possibly have been the case before the accident. A spare Rolls-Royce 6-cylinder engine will probably be installed in this loco, while the brake wagon is having its end plate replaced.

13 was driven back several metres by the impact and its GM V8 engine broke loose, sustaining serious damage. The spare 6-cylinder Rolls Royce engine was tried for size in 13, but did not fit well. A new Cummins V8 diesel has been ordered for this loco, and was expected to be delivered by the end of August.

As 13 and 18 are two of the low cab locos for working north of Redlynch, 19 was the only one left available for this duty for a time, which made things difficult. Com-Eng 0-6-0DH 9 (FC3433 of 1964) has been fitted with control gear to enable it to work with the brake wagon normally used with 13, and it has been placed on the Redlynch run. Starting out from the mill at 8 am, two hours later than 19, it meets with it at Redlynch depot where a crew exchange takes place, allowing 19 to return to the area beyond the low-level bridge beneath the QGR just north of Redlynch before returning to the mill.

To cover the loco shortage, Baguley 0-6-0DM 1 (3377 of 1953) was taken off the "Mulgrave Rambler" tourist train standby and put onto cane haulage until 18 returned to service. It has been used subsequently to cover other breakdowns.

With the many disruptions to "normal" operating which have occurred this season, and the use of a loco fleet virtually double the previous size, loco runs have not kept to regular patterns, making life interesting for loco crews.

Cane coming from the Redlynch area is hauled by locos travelling hood first over the notorious Brimsmead Range section, requiring the use of a brake wagon at the rear. On arriving at Hambledon Mill yard, the loco runs around the rake to head cab first into Mulgrave, with the brake wagon next to the loco. Track changes are planned next year to allow through running.

There is a second link between the Mulgrave and former Hambledon systems. A connection at Morellini's (Kamma) makes a more direct route to the Green Hills and Pine Creek area than the connection at Meoli. The two routes can be used as large loops for one way traffic to and from Hambledon at busy times .

The "Mulgrave Rambler" service has been re-organised and trains now run twice daily only as far as Ways loop, where a triangle has been built at the Fairweather branch, just past the scenic Ross & Locke area in the Mulgrave Valley. Departure times are 9 am and 2 pm, with diesel haulage possible in February/March. Visiting enthusiasts are welcome to contact LRRSA member

Tom Porritt, a loco driver at the mill, on (070) 56 1083.

SOUTH AUSTRALIA

COBDOGLA IRRIGATION MUSEUM 610 mm gauge

(see LRN 68 p 9)

The Cobdogla Irrigation Museum has obtained Motor Rail "SIMPLEX" 4wDM 7369 of 1939 from Farleigh Sugar Mill in Queensland. They intend to use it to pull their passenger consist during week days when their Bagnall 0-4-0ST ! (1801 of 1906) is not in steam. The "SIMPLEX" will also be used for work trains as their track is extended.

The "SIMPLEX" is basically complete except for pistons and connecting rods for the two-cylinder 2DWD Dorman diesel engine. Should anyone be able to assist the Museum in obtaining these or a complete engine, they should contact Robbie Osborne, 8 Bahnisch Avenue, BERRI SA 5343.

VICTORIA

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 89 p.16)

Gembrook Restoration

On 18 July, ballasting of the newly laid track to Wright Road crossing was continued. D21 was used, hauling four NQR trucks, but with only three filled, two trips were run, by which time ballast spreading was complete. D21 then ran two trains to take felled trees from along the track back to Lakeside where they could be burnt.

Work also commenced on Wright Road crossing. The old cattle pits were removed, and one new pit excavated, using a mechanical digger. On 22 August this work was continued. The second pit was dug, the rails were put in place across the crossing, and one of the cattle pits was constructed. A section of track in skeleton form was also laid, terminating just at the commencement of the platform at Wright station. Crossing Wright Road marked the completion of the work covered by Stage 1 of the permit issued by the Shire of Sherbrooke, and the commencement of Stage 2. As this was considered an auspicious occasion, 7A, rather than D21, ran the works train. The day was completed with 7A pushing its train over the crossing, with the

loco standing on the crossing itself. Stage 2 of the permit covers the section to Cockatoo Creek, and includes three bridges. Beyond Cockatoo Creek the railway is in the Shire of Pakenham. This Shire has a better understanding of the value of this project to the local community.

On completion of the Wright Road crossing, work will shift back to the Gembrook end. During the remainder of 1992 it is hoped to construct the main Gembrook road level crossing, then lay 850 metres of track to Orchard Road.

Gembrook water tank: The old corrugated iron water tank was removed during August, and rotted timber work in the tank stand was replaced. The old tank, which could no longer hold water, was found to contain an amazing variety of things, including a 6 ft oak tree!

Bridges: The PBPS has bought a long 5 ft 3 in gauge bridge near Balranald for a very modest price, and now has enough material to provide horizontal bearers for the three bridges which have to be reconstructed. This has considerably lowered the estimated construction cost of these bridges.

Thirtieth Anniversary Triple-Header

To mark the thirtieth anniversary of the re-opening of the railway between Belgrave and Menzies Creek, a special 12-car train was run between those stations on Saturday 25 July 1992 for members and volunteers. The loco was 7A and the driver Ian Barkla, the same loco and driver to run the first revenue train in July 1962. A "second division" of five cars was also run hauled by D21. To avoid being visually offensive to the crowds at Menzies Creek (or possibly to get it out of the way), D21 then ran empty cars to Emerald. At Menzies Creek, special events included the Climax on a five car train running two push-pull trips to the site of the landslide, and the Peckett, Sir John Grice, running a three car train to Clematis and back three times. Sir John, running funnel-first towards Belgrave, put on a really excellent performance working up the grade into Menzies Creek, all its trains being very heavily loaded.

Encouraged by this success, Sir John then headed a packed 17 car train back to Belgrave, an amazing performance for a 7 ton 0-4-ST, (though admittedly the Climax, and 7A, both bunker first, as the second and third engine on the train may possibly have done some of the work!). D21, which had previously returned its empty cars back from Emerald to Menzies Creek, returned to Belgrave as second engine on the last regular passenger train of the day, which was hauled by 14A.

Menzies Creek Station: The station building has been extended at both ends with a verandah on both sides. A small goods shed and a lamp room have been built on the platform. This work has been done within "Heritage" guidelines in the style of VR stations of the 1920s. A particularly attractive

feature of the station is two brick chimneys and fireplaces. One of these is in a new passenger waiting room.

Locomotives

3A: Sleeping peacefully at Emerald

6A: After 12A is back in service, 6A will go into the workshops for complete restoration. This work is expected to take 15 months. Increasing traffic has created an urgent need for more motive power. 6A has been out of service for about 10 years after its boiler failed a test and is presently sitting at Belgrave without driving and coupled wheels, and without boiler.

8A: is being reassembled after its major 10-year boiler examination. It is expected to be back in service by the end of August. The boiler was removed, many stays replaced, the shell ultrasonically tested, and all tubes were replaced with steel tubes with copper ferrules in the firebox which is hoped to control tubes "letting go" or leaking in the firebox. The boiler is back in the frames, cab and water tanks have been repainted, the cab floor replaced, and the cab is now back on the locomotive.

12A: Work continues on its rebuilding. It is expected to be back in service by the end of this year. Connecting and side rods are now fitted, work has commenced on the valve gear, and pipework for the boiler and injectors has been fitted. The boiler is nearly ready for a steam test.

NRT1: Despite what was said in the last report, the existing engine of this will be repaired, with some parts having to be obtained from overseas. While it is out of service, the Peckett has been assigned to yard pilot duties at Emerald.

G42: Work is continuing slowly. The reversing gear mechanism is nearly completed, having had many parts made up and machined due to the originals missing from the locomotive. Additional full time labour is to be taken on to speed up this work, but its completion will be some years away.

7A, 14A, Climax, Peckett, D21: All in service.

Rolling stock:

Guards van 2NBC has been overhauled, the walk through door at the end of the vehicle has been restored, and painted inside and out, and reissued to traffic on 12 August. Passenger vehicle 4NBH is in the Emerald car shops for a repaint, while 10NBH is undergoing a major rebuild, with a new floor and side panels fitted and doors to be fitted. A new open sided passenger vehicle 222NQR, is under construction and is 75% complete, while the materials for 223NQR are in stock.

T.A.C.L. RAIL TRACTOR RESTORATION - PROGRESS REPORT

A project to Restore the Climax's Little Brother!

(see LRN 89 p.17)

On 24 August, tyres were successfully fitted to two of the TACL's wheels. It took four hours to heat the first tyre to expand it sufficiently. That was a big learning experience for our team, and our technique improved so much that the second tyre took only 75 minutes. Ron Gunn's expert assistance at the critical time of actually fitting the tyres was essential to our success, and was greatly appreciated by the team. Failure to get the tyre on correctly at that stage would mean cutting it off with an oxy torch and making a new tyre. We hope to fit the remaining two tyres early in September. The wheel sets will be sent back to Emerald to have the profiles turned to ETRB standard, and to have a new journal fitted to one axle as the previous journal had been worn to a very pronounced oval shape.

Frank Stamford 8/92: Hugh Markwick 8/92

MONT PARK MENTAL HOSPITAL TRAMWAY, Bundoora 610 mm gauge

(Located on the eastern corner of Kingsbury Drive and Plenty Road.

Grid Ref: CU275235 Melways Ref: 19F5)

About 1910 the Yarra Bend Mental Asylum was relocated to Mont Park 15 km north of Melbourne. The new hospital incorporated extensive farming facilities. To transfer fodder, a two foot gauge tramline was used in the milking sheds and stables. This tramway consisted of light rails (about 14 lb/yd) on pressed steel sleepers set in paving and incorporated a turntable.

In the 1960s the farm area was incorporated in the grounds of the Latrobe University and the remaining farm buildings occupied by the University's Central Stores.

During August 1992 the remaining buildings and the tramway were demolished. All rails and the turntable have been removed for scrap.

Similar tramways were used at other Victorian Mental Hospitals (e.g. Heatherton, Sunbury). Any further information on these tramways would be appreciated.

Colin Harvey 8/92

SUNBURY MENTAL HOSPITAL TRAMWAY

The Age on 6/6/92 (page 2) made mention of tramway remains at the Sunbury Asylum. The article noted that the tramway was "possibly used to carry sewage and compost to the vegetable gardens. It was drawn by horse or even patients."

WESTERN AUSTRALIA

ROTTNEST ISLAND 1067 mm gauge

(see LRN 87 p.17)

At an estimated cost of \$60,000 per kilometre, the proposed resurrection of the Rottnest Island army railway as a tourist railway is close to going ahead. With monetary pledges from various sources and promises of labour and materials from Westrail, the Army, and State Government, the Rottnest Island Authority calculated that the line could pay its way within two years of completion. The plans envisage a terminal at the Thomson Bay Settlement from which visitors could take the train to Oliver Hill gun emplacements via Kingstown (former army barracks). This would involve the former Army Jetty to Settlement tramway which was separate from the Army railway. Vegetation which has grown over the Army railway is being cleared in places and it is even possible that one of the former Army locomotives could be reconstructed. Also under consideration is former Westrail Perth suburban railcar stock.

Rottnest Islander 6-7/92 via David Whiteford 8/92

MEETINGS

MELBOURNE: North American Lumber

Large three truck Shays, Heislars and Climax's all featured prominently in the massive operations what characterised the timber industry of North America. Ted Stuckey has long held a strong interest in the logging methods and transportation systems that were pioneered in this part of the world but which were exported to other countries, including Australia. Ted will be sharing his knowledge with us at the October meeting

NOTES, CORRECTIONS & COMMENTS

AUSTRALIAN FOREST HISTORY SOCIETY

Australia's Always Changing Forests: Second National Conference on Australian Forest History will be held at Creswick, Victoria, from 3-5 December 1992.

Aust Forest History Soc Newsletter No.8 1992

COBAR SHIRE COUNCIL, Cobar Regional Museum 1435mm & 610mm gauge

(see LRN 90 p.8)

Great Cobar Ltd (owners of the mine from 1906) had three 4-wheel electric locos, all built by W.G.Bagnall of Stafford, England. They were not given builders numbers in Bagnall's loco list, but had General Order Nos. 54/1907 (the first two) and 550/1908 (the third). Electrical equipment was by British Westinghouse. Two were sold after 1920 to Hebburn Ltd who proposed to electrify their colliery line. They never did this and one was converted c.1940 to the brakevan now preserved.

Richard Horne, Surrey England 10/92

ENGINEERING HERITAGE CONFERENCE

The Institution of Engineers, Australia, held the Sixth National Conference on Engineering Heritage, 1992 "Conserving and Recording Engineering Heritage", in Hobart from 5-7 October 1992. Three of the papers presented of interest to Light Railway enthusiasts were: "Not only the Hardware but the

Software Too" (about railway museum information needs); "Heritage Talking" - A Semiotic Analysis of a Major Railway Museum; and "The Ballarat Railway Station and Yards".

Jim Longworth 10/92

SUGAR RESEARCH LTD, Mackay

(see LRN 72, p.16)

The development of a driver training simulator for cane railway locomotives is being investigated. The cost of a full video simulator in mock-up cabin would be too expensive (and not useful enough in view of the multiplicity of locomotive types and variations in use). However, it would be quite possible to write a program which enables different locomotives to be "driven" on particular mill lines, using a PC. Could this become a popular new computer game for NG enthusiasts?

John Browning 10/92

BOOKS

PIONEERS OF THE COLLIE DISTRICT 1880-1930

N.S. Coote, Literary Mouse Press 1991

This book by Coote, a former Collie Shire Councillor, covers the history of this coal mining and timber town in the Northern Jarrah Forest, including the development of the Collie Estate, a very large track of land owned by the Salvation Army. The book conveys Coote's intimate local knowledge of the various sawmilling and railway contractors operating in this region from the 1880s onward.

TOUR NEWS

WARBURTON WANDERINGS

Due to inclement weather and incessant rain for the last several months, the Society's planned tour to Warburton on 18/10/92 has been postponed until next year. It was considered too dangerous to attempt the descent of the inclines. Watch mailouts for advices as to the new date!

Jack Stock & Phil Rickard 10/92

SITE REPORT - VICTORIA

By now we should have received *The Beechy* back from the printers and members who have ordered copies should receive them soon. If you have not ordered a copy, you should do so soon as sales already made indicate that the initial (hand cover) print run will sell out quickly.

We continue Norm Houghton's fascinating series of site reports which indicate the intensity of the field work carried out for the preparation of this, his latest book.

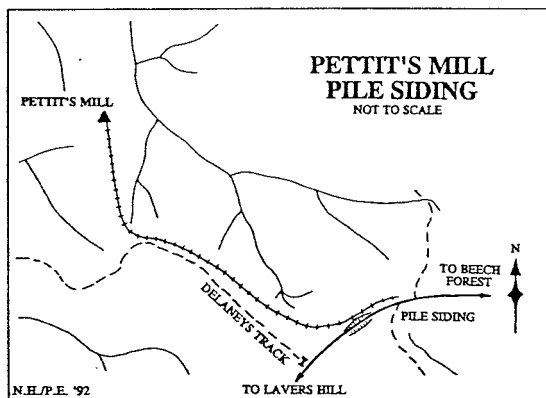

1. PETTIT'S MILL, Pile Siding
2. SMEDLEY'S MILL, Olangolah
3. HITT'S WONGA TRAMLINE, Gellibrand

1. PETTIT'S MILL, Pile Siding

On Friday, 17 May 1991, a visit was made to Pettit's mill site at Pile Siding. The mill operated from 1924 to 1929, when destroyed by fire. The press reported an arson attack during the 1929 timber strike, but local information has it that the weekend caretaker was irresponsible in allowing a small

accidental fire to catch onto the mill building.

This mill was powered by a former VR "O" or "B" class loco boiler (see p.36 West Otways Narrow Gauge). Pettit's leasehold and freehold timber sites were taken over by Jim Marchbank in 1933, but Marchbank did not use the Pettit mill. The boiler was cut up for scrap metal, but

just about everything else was left on site to decay.

In 1985-86, logging tracks were made into the area and much of the mill site was destroyed by the loggers who, because of the dense undergrowth, were not initially aware that they were right over the mill. Remaining tramline was torn up and the mill surrounds churned over by heavy equipment.

Regrowth and dense wire grass have swallowed up the site again, and after an hour of going around in circles with two local guides, the spot was found. Leaning against a tree is the smokebox front plate and door from the mill boiler, placed there by the loggers. Nearby is a square pit that does not seem to be part of the mill (possibly a toilet pit) and around about are some horseshoes and bricks. The actual mill building-site closer to the gully edge could not be found as we were unable to see the ground, let alone walk on it, due to the tangle of vegetation.

The mill saw-blades were removed by forest rangers in 1986 to forestall vandals and souvenir-hunters, and are now at Gellibrand. The visit was not in vain however, as an accurate fix of the mill site was able to be made.

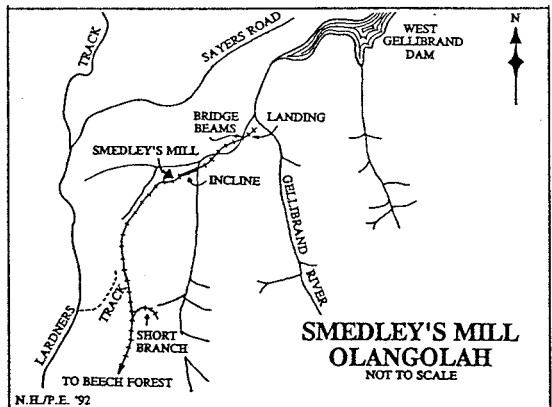

{bmc d:\lrrsa\lrn\graphics\lrn091b.bmp}

2. SMEDLEY'S MILL, Olangolah

On the following Friday, 24 May 24, an exploratory visit was made to Smedley's mill site at Olangolah following a local tip about a log-line out from the mill.

Smedley's Mill operated at Olangolah during the 1920s. Sawn timber was trucked to the Beech Forest railway station, 10km west, along the tramline originally installed by the nearby Box Mill. A local informant had come across the far end of a tramline but did not follow it back to its source. When plotted, this sighting seemed to indicate it was probably a log-line from Smedley's Mill.

On the day, I drove 500m down Sayers Track and parked. After setting a compass bearing due south, I plunged into the dank, dripping undergrowth, down a 45 degree slope to the creek where the tram supposedly was situated. Needless to mention, the tram was not there, and after further explorations

and scrabbling up the other side of the creek, I eventually located the road-bed way above the creek, heading east on the level.

A small cutting on a slight curve brought the tram out into a level clearing, but blackberries 3m high completely filled the clearing. A detour was made on the uphill side, and on traversing back to where the tram should be, a straight and deep cutting trending north-east and dropping away at a fairly steep grade, was found. I first thought the cutting was a snig track, as it seemed awfully narrow, but after following it down to a creek coming in from the south, it was shown to be a tram cutting as the remains of a tram bridge were on the bank.

After crossing the side creek, the tram levelled out, with the main creek on the north side a few metres away, and continued east for 150m where the main creek was crossed again. Here the tram closely followed the creek (to the south) through a gloomy, dank, muddy zone of tree-ferns and decaying logs for 100m and crossed the creek again. The bearers for the bridge are still in place, but I did not fancy crossing these slippery examples, and forded the creek nearby.

On the other side the formation opened out and the going was much easier. About 50m on, the formation became very wide, and remains of a log landing could be seen on the south, so presumably there was a loop-siding here. A little further on, perhaps 50m, the line ended at another intersecting creek. Down in the creek was a set of wheels that were measured at 3ft gauge.

I checked the other side of the creek but could not see any obvious signs of a formation, so turned around and followed the tram back. By this stage, the pervasive wetness from the vegetation and my own bath of perspiration had led to the disintegration of my notebook, so I abandoned any further efforts at recording and trudged along trying to enjoy the very dank scenery. It was too dark for ordinary photography, and even though I had a flash, none of these attempts came out satisfactorily.

Back at the bottom of the incline, I decided to walk up the cutting but after a bit had to climb out because the footing was too slippery. Up on the slope above the cutting was another tram wheel set. I wondered how it came to be there, but didn't realise that I had crossed the log line and was almost below the mill site (where the wheel set would have rolled from). I was so busy looking down and scrambling over fallen logs that I failed to notice a gigantic, frozen cascade of sawdust until I walked onto the bottom of it at creek level. The sawdust heap must be 30m high. I climbed out of the creek on all fours to the top of the heap, intending to inspect the site and see where the tramline came into the mill but another fern, blackberry and scrub jungle barred the way.

The day was getting on, so I called it quits and, setting a compass bearing for Sayer's Track, plunged down the slope and up the other side in another gut-heaving effort. Back at the car I changed out of my wet clothes and burnt off a couple of leeches.

Having found the mill site and log-line relics the hard way, I determined to come back via an easier route next time. That chance came one week later. I had plotted a route to the main access tram from an old aerial photo that showed the area when it was farmland, before resumption for water supply purposes.

I parked the car 1.5km down Lardner's Track and headed due east along a track into the old farm. I was looking for two Cypress trees near the site of the long-gone farmhouse to gain a fix, and after 150m, came across one of the trees to the left of the track. The track veered to the north-east down through a former cleared paddock. I left the track and proceeded east-south-east through the scrub, crossed a creek and climbed up onto a flat-topped ridge between two creeks. I came across the tram road bed almost immediately because I had climbed out of the creek into the clear area under a large fern canopy. The faint earthworks could easily be followed north and south but once out from under the ferns it was not so plain because of thick ground cover. I followed the route by compass-bearing, so I knew the line went dead-straight to a large clearing (that I had wrongly assumed earlier to be the mill site). Photographic evidence indicated two routes out from the clearing, but these could have been snig tracks. I followed the route to the clearing, and not surprisingly, found the clearing to be full of blackberry bushes, but only 1.5m tall and small by Otway standards.

After skirting the blackberry tangle to the east, I picked up the tram on the other side and followed it with difficulty for another 150m or so until satisfied that this was the mill access route. Retracing my steps to the clearing, I scouted the north-east corner where "something" should be found. The landscape on this side of the ridge is danker and the vegetation thicker than on the other side, so I spent a long period thrashing around the scrub without finding anything of interest. I eventually found myself standing on a 4m section of what looked like a very low embankment with nothing on either end.

I followed the gully contour around to the south-east and came across what looked like a small cutting, again completely isolated. Pressing on for a few minutes, following a blind compass-route (as there was nothing visible on the ground), I eventually found a length of bench that ran into a dead-end cutting on a gully overhang. I checked all around the site for a bridge or a zig-zag down to the creek bed but found nothing. The compass-bearing for the dead-end matched the aerial photo, so I presumed I had located the branch

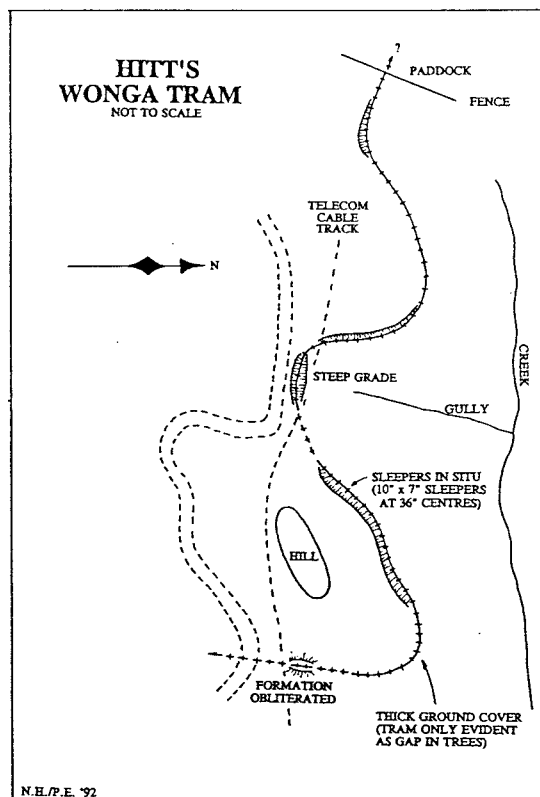

out of the clearing. This branch was short, about 150m, and its purpose mystifies me. I found no traces of a landing or winch site.

By now I had had enough of bush bashing through blackberry vines as thick as ropes, and headed back to the farmhouse track. Once on the track, I followed it north-east to its end in a grassy paddock, gradually disappearing under bracken fern, and noted for future reference that the mill access tram was in the trees across the creek from where I stood.

3. HITT'S WONGA TRAMLINE, Gellibrand

Once back at the car I changed my sodden clothes and checked for leeches (none today as I had liberally painted my boots and sock-tops with kerosene) and drove to Gellibrand to continue a reconnaissance of Hitt's Wonga tramline in the dry forest region where the slopes are only 35 degrees. This line worked from 1934 to 1938 and used a home-made tractor for motive power.

On several trips I had been attempting to plot and map this line, especially where it came off the top of the ridge, and to determine how it negotiated

the steep fall down to the Gellibrand River. Shire records were either contradictory or Hitts had altered their original intentions, as the bottom end of the line was not where it was supposed to be. I knew from aerial photographs and a fragmentary municipal plan, where the line was supposed to descend from the top of the ridge to the Gellibrand River flats, but had not so far found any reasonable length of road bed to confirm this. On previous occasions I had concentrated on the route near roads, but today I decided to ignore my preconceptions and head to the top of a small hill that I knew the tram had to pass below. I walked straight down the hill, and after a couple of

minutes came across the road bed running in an east-west direction.

The formation was quite clear and included some sleepers, approx. 10 inches wide by 7 inches deep, spaced at 3 foot centres. I walked east, following the line as it veered slightly south. The wattle scrub undergrowth became very dense at this point, and as the terrain flattened a bit the formation became indistinct. I could trace the line only by referring to the gap in the trees. My compass told me the line swung through a 100 degree turn to face south-west as it dipped down towards the road, and I came out of the scrub near the road and stood, to my chagrin, exactly on the spot where I had been several months previously, with a plan in my hand and been unable to locate the tram because of Telecom's ground disturbance works.

On the downhill side of the road, was a thick mass of fallen trees and scrub that made following the line difficult, so I retraced my steps and walked back along the formation, intending to follow the route right to the top of the ridge away to the west. I walked back to my starting point and continued west, following the alignment until losing it near where the tram brushed the road. The route has been severely disturbed here, and no trace could be found until hopping up onto the slope to the west where a shallow cutting and steeply-rising formation was located 4m from the road. The tram parallels the road on top of the rise for 40m and then swings north, still rising. A gradual turn to the north-west to follow a gully contour brings the tram into relatively clear bushland, and here the formation can be seen without its usual overlay of vegetation. The track continues westwards, rising all the time until disappearing under a confused tangle of greenery and fallen trees at the end of which is a property boundary and a cleared paddock. Clearing operations have destroyed all traces of the formation, but I was able to fix the probable route by reference to a clump of trees and a hay-shed, and pencil-in the likely route from the top of the ridge.

(see LRN 85 p.6)

According to a TV report, this attraction is in receivership and is currently for sale. Vendors are the Commonwealth Bank of Australia.

"60 Minutes" 20/9/92 via John Browning

CENTRAL PARK RAILWAY, Forresters Beach, Gosford

(see LRN 47 p.4)

On Monday, 21 September 1992, the Central Park (Forresters Beach), near

Gosford, 610mm gauge railway of approximately 1.2km, closed for good, with the disposal of the six diesel locomotives to Menangle, 6.4km south of Campbelltown. Several items of rolling stock joined the engines, while other vehicles found new homes or the scrap merchants' yard. The Central Park Railway was laid down in 1974, and was operated by Kevin Rubie, who also operated a putt-putt mini-golf course and several other attractions. The railway operating concept was to service the various forms of entertainment, but never lived up to expectations. The line was laid in various weights of rail, from 20lb through to 50lb; sleepers were a mixed bag, mostly half-round logs, with very small spikes to hold down the rails. (The size of the spikes was a major factor in the rails frequently spreading and twisting.) There were five points.

On Tuesday, 8 September, Kevin Rubie phoned Len King in Sydney to reiterate the promise that if and when the locomotives became available for sale, first offer would be made. (The original offer was made back in the 70's when the Belbin collection of steam locomotives and carriages were removed to Kurrajong.)

An inspection of the site at Forresters was carried out on Saturday, 12 September, in the company of Paul Simpson and on behalf of Rob Osburne, all three people now being the owners of the diesels. The locos are:

Fowler 16830, built 1926, approximately 10 tons; Gardner engine, 5 cylinders, LW6A E4933. Ex CSR Condong sugar mill, Murwillumbah.

Simplex 11023, built 1955, 6 tons; model 3L750. Ex Condong sugar mill, Murwillumbah.

Four Ruston & Hornsby size 20 class DLU; Nos. 304453, 304455, 304460, and 304457, 3 tons each. Used on Eastern Suburbs Railway construction. They are part of a batch of locomotives built in 1950-51.

Kevin Rubie bought the Fowler and Simplex direct from CSR in the early part of 1975. The Fowler never saw a great deal of use, owing to its weight and cost of operation! The Simplex saw extensive service on weekends and school holidays for several years.

The Rustons were bought from a scrap dealer's yard at Lilyfield, near Maitland, in 1978, but only one, No. 304457, saw extensive use and travels. It spent over a year at "Canberry Fair", Canberra, in the early 1980s, on the tourist railway as part of an historic village reconstruction. While there, it acquired a new cab and bonnet, and a change of colour (maroon). The colour reverted to yellow on return to Forresters Beach when the leasing agreement expired and "Canberry Fair" ceased to trade.

For the past five years the railway hardly saw any use, and the locomotives deteriorated through vandalism, weather and salt air - the railway basically

being surrounded by sand dunes. The many converted cane wagons (bodies built on them to carry up to six people each), also became more dilapidated and vandals let many run away down the property and derail. Several ex-ballast wagons were also wrecked.

Monday, 14 September, saw Paul Simpson and Rob Osbourne travel to Forresters Beach and make the decision to purchase all locomotives. At this time, because of the condition of the Rustons (very rusty and missing parts) and the Fowler (head and other parts off the engine), it was decided to try and start up the Simplex. After about an hour and a half's work, the engine spluttered into life, and allowing for a leaky radiator and water pump, the loco was able to work again after years of idleness. A general grease and oil around was carried out, water topped up, and as the engine warmed up, so the move from Forresters began.

Meanwhile many inquiries were being made as to the cartage of the locomotives to the Menangle site, and costs were found to be extremely high for cranes. Late that Monday afternoon, a tilt-tray truck arrived to deposit a container for Kevin Rubie. Within an hour and a half that truck was on its way with two Rustons on board. Agreement had been reached that all locos could be transported to their new home over the next week - there was extreme urgency to remove equipment from the site, as the new owners were to take over the property and all it contained on Tuesday, 22 September. (Already a local scrap metal dealer was on site, moving materials.)

Friday, 18 September, saw Len King and Paul Simpson again at Forresters, to prepare to remove the other 4 locos. Till the truck and its crew arrived at 8.20am, preparations were made - Paul Simpson's car was used as a shunter to move two wagons from in front of a Ruston to enable the truck to back up to it. The Simplex was started up, checked over, and moved another Ruston along the line ready for loading. But at 9.10am the truck became bogged as a "short cut" was taken and the rear axle sunk into soft ground. After digging around the tyres and making ramps of timber, the truck was moved out and loaded the next Ruston. The load departed at 10.35am. Between then and 4.15pm, when the truck arrived back to take out the Simplex, attention was paid to the Fowler in preparation for its brief tow down the track. The Simplex performed several shunting operations to line up two bogies, several converted cane wagons and the Fowler. After the Simplex was winched onto the truck deck, it was learnt that no arrangements had been made to remove the Fowler - but after advice from the scrap dealer, a drive to Erina Heights saw negotiations go ahead with a local company for a larger tip-tray to carry out the job.

Saturday, 19 September, saw the Simplex arrive at Menangle. The Rustons

were placed in a large privately-owned shed as they arrived. That afternoon the Zinn's loco from Albion Park (now owned by Paul Simpson) was placed on the engine shed track.

Sunday saw Paul return to Forresters to supervise the loading of his Fowler, along with the two bogies. Negotiations were also held with Kevin Rubie and he donated several converted cane wagons to the three men. These travelled from Forresters to Menangle on Monday, 21 September. So ended an era of 2ft gauge operations on the Central Coast. Because of the time factor and cost, nothing could be done to remove at least even the points, for all rail would be going to scrap.

Len King 10/92

NSW STEAM PRESERVATION CO-OPERATIVE SOCIETY LTD, Campbelltown Steam and Machinery Museum, Menangle 610mm gauge

(see LRN 90 p.8)

See CENTRAL PARK RAILWAY, Forresters Beach

WATER BOARD, Berkeley Close, Berowra 760mm gauge

(see LRN 90, p.10)

The Gemco hauler is probably Plant No. 105 (my records give B/N as 12705.06/98/70). P/N 105 is one of two locos converted from 2 ft to 2 ft 6 in gauge, to be used in conjunction with Tunnel Boring Machines. Not many B/N's of Water Board Gemcos are known. Fifty locos have been identified - what details are known were published in LRRSA NSW Division's Research Bulletin No.9, August 1992.

Jim Longworth 10/92

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610mm gauge

(see LRN 89 p.10)

The former D'Aguiar station building arrived on site at Woodford on 21 June and restoration will be assisted with a \$12,000 grant from the Caboolture Shire Council. Toilets are being installed in this building.

The David Brown tractor engine on F.C.Hibberd "Planet" 4wDM 2566 of 1942 has been under overhaul by a community service worker. Community service workers have also stripped a RM coach (P110) ready for rebuilding, and have removed necessary ironwork from the two VTS ballast hoppers in

preparation for gauge conversion.

Durundur Railway Bulletin
6/92, 7/92, 8/92 & 9/92 via John Browning

BABINDA SUGAR LTD 610mm gauge

(see LRN 87 p.11)

The Bundaberg Foundry B-B DH locomotive Babinda (002 of 1991) is normally used on an express run from Garradunga to the mill, picking up a rake of cane there made up by locomotives operating in the former Goondi Mill area. It is reported that there have been difficulties with the microprocessor operating this unit's engine management system, causing occasional engine shutdowns.

Two 0-6-0DH locomotives, *Fishery* (Baguley 3387 of 1954) and *Russell* (ComEng A2027 of 1958) have been relegated to spare this season, and appear to be in poor external condition, although still housed in the loco shed.

Malcolm Moore 4wDM 20 (1057 of 1943) has been displaced from the navy shed to stand in the yard in rather sorry condition. However it is reported that the other Malcolm Moore 4wDM (1011 of 1943) is in the mill's garage, where it is receiving an extended overhaul.

A new tramway underpass is under construction at the north end of the mill in connection with reconstruction works on the Bruce Highway. The new highway alignment is on an embankment under which the tramway to the east will continue to run on its present alignment.

John Browning 10/92

BUNDABERG SUGAR CO LTD, Mourilyn Mill 610mm gauge

(see LRN 83 p.8)

See QLD SUGAR INDUSTRY CORP LTD, Mourilyan

QLD SUGAR INDUSTRY CORP LTD, Mourilyan Bulk Sugar Terminal 610mm gauge

(see LRN 87 p.12)

A rather surprising development at Mourilyan Mill has been the acquisition of Walkers 0-6-0DH 570 of 1956 from the Sugar Terminal. This unit was used by Walkers as a demonstrator at several mills in the 1950s including Goondi, North Eton and Bingera, before being sold to the then Sugar Board in 1960. Its lack of success as a demonstration unit might shed some doubt as to its suitability for main line cane haulage some 35 years later! A number of modifications have been carried out, and repainting of the headstocks had commenced by Saturday 3 October, but it had already been used on several

occasions for cane haulage by that date, including that morning. Crew reaction might not be too ecstatic, judging from the chalked inscription LOCO MADNESS on the cabside.

Mourilyan Mill's Clyde 0-6-0DH 10 (56-93 of 1956) was noted shunting ex-Innisfail Tramway HH & HHB class 20-tonne sugar box wagons at Mourilyan Harbour on the same date, so it is assumed that these duties are now to be regularly carried out by a mill locomotive.

Goondi Mill is still apparently used as a navvy depot. The many steel cane trucks and other ex-Goondi equipment stored in the yard here (including Wickham 2-2wPMR line car 8376 of 1959) have been cleared out, and their place taken by at least 50 or 60 ex-Innisfail Tramway H class 12-tonne sugar box wagons, many with the sugar boxes holed.

The cab of Clyde 0-6-0DH 4 (62-288 of 1963) was noted outside the loco shed, so it can be assumed that this unit has received a soundproofed cab during the past slack season.

Mourilyan Mill had a number of steam locomotive frames used as heavy duty wagons around the mill, although these have seemed to be largely out of use in recent years. One frame, that of Fowler 0-4-2T 12025 of 1909, used as a crane chassis, appears to have disappeared. However, two steam loco chassis were seen, one of Krauss 0-4-0WT 3267 of 1895, used as a mill roller carrier, and the other, 0-4-2T Hudswell Clarke 1556 of 1925, almost covered with junk. Three other 0-4-2T chassis were also here in the past, those of Fowler 12967 of 1911, 15916 of 1921 and 20713 of 1935.

The Sugar Research Institute is planning to develop a hand-held remote control unit for cane locomotives, and hopes to trial the prototype at Mourilyan Mill. This type of development could prove very useful during shunting operations.

COAL RESOURCES OF QUEENSLAND LTD, Cook Colliery, Blackwater 1067mm gauge

(see LRN 88 p.12)

The announcement of the closure of Cook Colliery on 27 November was made in September. This is believed to be the only underground coal mine in central Queensland using rail transport.

Mackay Daily Mercury 26/9/92 via John Browning

CSR LTD, Herbert River Mills 610mm gauge

(see LRN 90 p.11)

At Victoria Mill, Clyde 0-6-0DH *Centenary* (64-381 of 1964) is now the yard

loco. It has its hood top painted green, and is fitted with a blue flashing beacon to distinguish it from other locos at night. E.M.Baldwin B-B DH *Wallaman* (6400-3-4-76 of 1976) is the second Victoria bogie loco noted as having a thick green band at waist level.

Malcolm Moore 0-4-0DH Moore (DH-112-GT-1 of 1956) has generally been used by the navvies this crushing season, and was at Macknade for about two weeks at the end of September, even hauling cane there on 18 September. Another Victoria loco, E.M.Baldwin 0-6-0DH *Hobart* (4413-1-7-72 of 1972) was also on loan to Macknade, in mid October.

Drewry 0-6-0DMs *Dalrymple* (2391 of 1951) and *Victoria* (2404 of 1953) are derelict in the scrap yard at Victoria Mill, with *Dalrymple* having lost its engine. Drewry 0-6-0DMs *Seymour* (2392 of 1952) and *Leichhardt* (2393 of 1952), and E.M.Baldwin 0-4-0DH *Albany* (6-1792-1-11-66 of 1966) were all noted sitting in the "rotten row" near the locoshed in early October.

At Macknade, Clyde 0-6-0DH 12 (65-434 of 1965) has continued to be used for intermittent periods on sugar haulage duties, each time displacing E.M.Baldwin 0-6-0DH 14 (6-2490-1-7-68 of 1968) and with brakewagon 1 being transferred from loco 14 to loco 12 on each occasion.

Clyde 0-6-0DH DHL2 of 1954 from Inkerman Mill arrived at Macknade Mill on transfer on 29 October.

John Browning 10/92; Chris Hart 10/92

HAUGHTON SUGAR CO PTY LTD, Invicta Mill, Giru 610mm gauge

(see LRN 89 p.11)

Following the last wet season's flood in the Haughton River, one of the bridge piers on the Haughton River tramway bridge commenced sinking. This bridge carried almost all of the cane conveyed to the mill, and by Saturday, 3 October, the problem had become of sufficient concern for temporary repairs to be carried out. Consequently, a heavy crane was at work placing steel piles in the river bed along side the bridge, to which horizontal girders were to be attached in order to support the spans. As weekend crushing was taking place, this work had to be carried out between the passage of trains. The temporary piles appeared likely to restrict clearances on the bridge thus necessitating a severe speed restriction.

A new branch approximately 7km in length has been built just south of Clare township, along Mulgrave Road and Mitchell's Road. This is only the second branch line built off the mill's 90km main line to Dalbeg, and further branch extensions seem likely in view of the enormous potential for cane growing in new irrigation areas currently being developed and still to be opened up.

John Browning 10/92

ISIS CENTRAL SUGAR MILL CO LTD, Cordalba 610mm gauge

(see LRN 86 p.14)

It is understood that the mill's second regauged ex QGR DH-class Walkers B-B DH entered service during the 1992 season, but details need confirmation.

John Browning 10/92

ROD LEONARD, Trinity Beach 610mm gauge

(see LRN 84 p.8)

Rod Leonard's plans to run a tourist passenger service on mill tracks north of Cairns, under the name "Marlin Coast Railway Co." have met with a setback. Sale of the Hambledon Mill tramway to Mulgrave Mill at the end of 1991 has resulted in conditions being imposed upon operation which Rod has found prohibitive.

E.M.Baldwin 4wDH 4660-1-8-72 of 1972 has been restored to running order, fitted with a cab and painted in green and red livery. It carries the name "Rod's Rocket". A second identical unit (4660-2-8-72 of 1972) remains in unrestored condition. These two are 8-tonne tunnelling locomotives built for Pearson Bridge and sold at auction by Cementation Ltd in 1986 (see LRN 52 p.8). They are reported to have been purchased from the Newcastle area of NSW.

Four passenger cars approximately 11m long have been constructed, with two not yet fitted out internally. These are designed to have seating arranged lengthwise and facing inward along each side of the vehicle. A quantity of rolling stock was acquired from the closed Hambledon Mill, including cane trucks and two navy mess cars.

John Browning 10/92

MACKAY PORT AUTHORITY, Mulherin Park, Mackay Outer Harbour 610mm gauge

On 14 November, expressions of interest were sought from parties interested in the acquisition and restoration of John Fowler 0-4-2 17683 of 1927 which was built for Racecourse Mill. This unit has been in the Harbour Park since 1971.

John Browning 10/92

MACKAY SUGAR CO-OPERATIVE ASSN LTD 610mm gauge

(see LRN 89 p.12)

Some 7116 tons of harvested cane were diverted from Proserpine to Farleigh Mill after a circuit breaker fire on 10 September, led to Proserpine Mill being put out of action for 6 days. Cane was hauled by tramway from

Proserpine to Elaroo and then piggy-backed by road transport to Wagoora where it was unloaded onto rail to be hauled to Farleigh, a total distance of 129km. Some difficulties were experienced with couplings, and modifications were required at the Farleigh mill yard and tippler.

Farleigh Mill plans to run a passenger train for interested growers over the full length of its Wagoora line following the end of crushing in November. A similar trip last year proved very successful. Motor Rail "Simplex" 4wDM 7369 of 1939 has been disposed of to the Cobdogla Irrigation Museum in South Australia (see LRN 90 p.13).

Pleystowe Mill's decision last year to equip its 1880 bins with coupling C-brackets has proved effective, with derailments during the 1992 season down by 70%. The brackets are fitted to the miniature Willison couplers and restrict movement of the coupling shank under braking. The brackets have also enabled longer rakes of empty bins to be hauled down grades.

Racecourse Mill advertised for a Cane Railway Engineer on 3 October. The advertisement indicated that the mill has 195km of cane railway and 22 bridges.

Lack of cane in the Marian Mill area has meant that locotrol operation with the Eimco bogie diesels was not necessary this year. This was probably also the reason why only one locomotive was based at Finch Hatton this season. It travelled out there from Marian at the start of each week, and returned for the weekend. The E.M.Baldwin 4wDH tunnelling loco conversion (4529 of 1973 rebuilt 8860-1-8-79 of 1979) used for navy duties at Marian is being fitted with a new Cummins 4-cylinder engine.

*Mackay Sugar 11/92 & Mackay Daily Mercury 16/9/92 & 3/10/92
via John Browning; John Browning 9/92*

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610mm gauge

(see LRN 90 p.11)

Troubles with locomotives continued during the 1992 season. A new Cummins 6-cylinder engine was fitted to Clyde 0-6-0DH 13 (64-316 of 1964) but it was then discovered in early September that axlebox and bearing damage in its head-on collision with loco 11 had been more extensive than first thought. The axleboxes had to be crowbarred out of the frames when it was attempted to drop them. The locomotive re-entered service on 6 October, but its reduced engine size meant it could only haul 45 full bins over the Brimsmead Range, whereas previously, fitted with a V8 engine, it could haul 60. However, adjustment of the governor on this machine to increase maximum revs from 1500 to 2500 has increased haulage capacity to 56 fulls. All the work on this unit has produced a very smooth ride. This unit has been

running with brake wagon 19, which was observed out of service in early October.

Clyde 0-6-0DH 15 (58-190 of 1958) was in trouble late in August when cane trash on the brake blocks burst into flames. The ensuing fire did enough damage for the loco to be out of service for two days.

On 23 September, Clyde 0-6-0DH 18 (64-379 of 1964) suffered its third clutch failure for the season involving the breaking of the shaft to the torque converter. This unit was out of service for two days while repairs were carried out, but when the shaft broke for the fourth time on 7 October, the unit was placed out of service.

Meanwhile, E.M.Baldwin 0-6-0DH 11 (4413-2-8-72 of 1972) was dismantled and its frame was placed in the "Mulgrave Rambler" shed, where frame damage was being worked on by the boilermaker in early October. By the end of October it was back in service fitted with a Rolls Royce 6-cylinder engine. This necessitated the continued use of Baguley 0-6-0DM No.1 (3377 of 1953) as the mill's only available spare locomotive. The former blue areas on this had been painted in a deep green colour as spare loco for the "Mulgrave Rambler" service. This locomotive hauled some "Rambler" trains this year in February and March, but consideration is being given to closing down the operation in these "off season" months in 1993.

On 2 September, brake wagon 11, which had also been damaged in the head-on smash, was returned to service coupled with Clyde 0-6-0DH 19. The original Mulgrave Mill North Queensland Engineers & Agents brake wagon was unused, sitting outside the loco shed. Brake wagon 13 has continued to be used with Com-Eng 0-6-0DH 9 (FC3433 of 1964).

Two ex-Hambledon Mill Motor Rail "Simplex" 4wDM locos in green and yellow livery were noted in the Mulgrave fleet in early October. Six-ton machine 10450 of 1954 was stationed at the Redlynch depot, while 4-ton 2090 of 1922 was in the navy compound at Mulgrave Mill, adjacent to Mulgrave's 4wDM "Simplex" 4207 of 1929, which has been dumped here dismantled for ten years.

Ex-Hambledon equipment which was not seen, and may very likely have been sold for scrap, includes two other Motor Rail "Simplex" 4wDM locos (including 3748 of 1925), and Hansen linecar 1516 of 1976. This equipment had not been operational at the time of Hambledon's closure.

The Hambledon Mill site is rapidly being cleared, and may be redeveloped. Even the remaining mill yard trackage may be gone next year, for there are plans to divert the Redlynch and Sawmill Pocket lines to connect directly with the line leading from the mill site to Edmonton.

John Browning 10/92; Tom Porritt 10/92

PIONEER SUGAR MILLS LTD, Inkerman Mill, Home Hill 610mm gauge

(see LRN 89 p.12)

A Tamper STM XLC tamping machine is reported to be on order for delivery in early 1993. Clyde 0-6-0DH DH1.2 of 1965, formerly IONA, was transferred to Macknade Mill at the end of October.

*Bob James 9/92; "ARHS Bulletin" 11/92
via John Browning; Chris Hart 11/92*

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOC LTD 610mm gauge

(see LRN 83 p.12)

Some 7116 tons of harvested cane were diverted to Farleigh Mill after a circuit breaker fire on 10 September (see Mackay Sugar for further details.)

Clyde 0-6-0DH 5 (60-218 of 1960) was observed in early October fitted with a new Eimco cab. It was hauling a rake of empty bins with a double length rigid wheelbase 4-wheeled bin marshalled next to the locomotive.

The mill's two Baldwin brake wagons were noted stored out of use in the navy shed. These units were purchased for use with the mill's two bogie Baldwin locos, but are obviously not being used currently.

Mackay Sugar 10/92 & Daily Mercury 16/9/92 via John Browning*

RAILCo, Atherton 1067mm gauge

Ex-QGR Walkers A1A-A1A DE 1180 (568 of 1958), purchased for industrial use at Lappa (and possibly never used - see LRN 79 p.11), has been acquired by Railco (Ravenshoe - Atherton Insteam Locomotion Co.) for use on its projected Ravenshoe-Atherton tourist railway. Current operational base is Ravenshoe, and trains operate as far as Tumoulin.

Tom Porritt 10/92

SOUTH JOHNSTONE MILL LTD 610mm gauge

(see LRN 86 p.15)

E.M.Baldwin B-B DH 5 (6470-1-1-76 of 1976) has been fitted with a Cummins diesel engine and can haul 80 full bins up the Basilisk Range. Prof B-B DH NYLETA (PSL.25.01 of 1990) can haul 110 full bins up the range. Com-Eng

0-6-0DH 11 (C1125 of 1957) was noted in the loco shed on 2 October without its engine. This unit normally runs permanently coupled with Com-Eng 0-6-0DH 16 (A1102 of 1955).

John Browning 10/92; Chris Hart 10/92

TULLY SUGAR LTD 610mm gauge

(see LRN 86 p.15)

Com-Eng 0-6-0DH No.18 (A060113 of 1977) has been outshopped in the

new red and yellow livery, the last of the mill's locomotives of this type to be so treated, although unlike the other, older units, it retains its original cab. It is currently fitted with an 8-cylinder GM engine.

Ex-QGR Walkers B-B DH DH66 (653 of 1970) has been stored in Maryborough during 1992 pending a decision on its future. It is believed that a second locomotive of this type will shortly be purchased from the QGR, and that both will be regauged and refurbished at Walkers before the start of the 1993 season. Plans are believed to include the provision of a completely new cab, and modified transmission and brakes more suited to sugar mill service.

Two radio controlled bogie brake wagons will be constructed at the mill for use with the new locomotives, and two FJS wagons have already been purchased from the QGR for this purpose.

An incident is believed to have occurred this season when a locomotive and rake of empty bins ran away while the driver was changing a set of points. The runaway travelled a fair distance before encountering a loaded train, which had been alerted by the traffic office and was endeavouring to reverse its direction of travel to minimise the impact. This was only partly successful and some damage was done in the collision.

John Browning 10/92

WHITE MINING LTD, North Goonyella Mine gauge unknown

An underground coal mine is currently being developed in the Mackay hinterland which involves construction of two tunnels, one 570 m and the other, 2000 m. Rail is being used on the tunnelling work, which was due to be completed in November, but no locomotives are in use. No rail transport will be in use when mining operations commence during 1993.

MILANG RAILWAY STATION MUSEUM

On 4 October, Dame Roma Mitchell, the State Governor, opened a new

railway museum on the site of the old Milang railway station and yard.

LRRSA SA Group Minutes 10/92

SEMAPHORE, Port Adelaide 457mm gauge

Last summer, the Port Dock Railway Station Museum ran its 18" gauge steam locomotive "Bub" on a trial service along a short temporary track laid on the foreshore at the nearby beach of Semaphore. The success of this venture has led to a substantial grant of Federal funds to the two municipalities responsible for the area, to establish a permanent line.

The track commences adjacent to Jetty Road, the former terminus of the notable street section of the suburban branch line. It runs for some 3km south, through the lawns just below the Esplanade roadway. It will terminate in the grounds of Fort Glanville, a restored 19th century military site. It is expected that the line will act as a focal point for visitor interest and help to revitalise the popularity of the area as a resort.

Construction is to be customary high standard of the Museum's works, with very heavy section rail. The site of the running shed has been laid out at the northern terminus. Haulage duties will be shared between "Bub" and a new 2-4-0 tender locomotive of American style, due soon from Willis Engineering in Western Australia.

CHEETHAM SALT LTD, Moolap and Laverton 610mm gauge

(see LRN 82 p.17)

The 104-year-old Moolap salt works closed down on 11 November, with only a few minutes' notice to its 40 employees. Cheetham's Laverton operation also closed that day. Cheetham Salt Ltd, which merged with the Ridley Corporation last year, has seven other salt works across Australia, including plants at Avalon and Sealake in Victoria. The AWU warned of

possible industrial action at all Cheetham's remaining operations, following the closures.

Geelong Advertiser 11/11/92 & 12/11/92 via Norm Houghton

CHELTENHAM PLATEWAY, Cheltenham

Due to roadworks, the last remnants of the Cheltenham plateway along the north side of Centre Dandenong Road, have been removed.

For many years a single line of "plates" could be clearly seen in situ on the very edge of the bitumen, for a few hundred metres. On 3 November, the "plates" that had been removed could be seen on the south side of the road against the boundary fence of the Moorabbin (Henry Hawker) Airport. This site has previously been recorded by the Victorian Archaeological Survey. Fortunately a plateway wagon complete with "plates" is on display in the Puffing Billy Museum at Menzies Creek.

The precise use of this "plateway" is not known to this author, but as this area was largely covered by market gardens, it could be assumed that it was used to carry the produce of these gardens.

Gembrook Restoration

On 5 September, 7A ran a works train to Wright. On that day the remaining cattle pit at the level crossing was finished.

On the weekend of September 19/20, the level crossing over the main Gembrook road, about three-quarters of a mile from Gembrook township, was installed. Preparatory work was done on Saturday, including the preparation of a 135ft long panel of track. On Sunday morning the road was closed from 8am to midday whilst the road was dug up and track was slid into position, with about 40 volunteer slaves spread out along two ropes hauling it into position. Two weeks of steady rain had made conditions very muddy. This mud, helped by intermittent rain during the morning provided effective lubrication to assist the heaving operation!

This level crossing was a sacred site as the original rails were still in position buried in the road, the only remnant of the original rails between Lakeside and Gembrook. A mechanical excavator made short work of breaking up the bitumen and removing the old rails, some of which were very brittle.

Closure of the road necessitated a 16km detour for motorists. Unfortunately the Gembrook Uniting Church was separated from the town by the crossing,

so the PBPS provided a shuttle car service for locals attending the church.

On 17-18 October, a further work party was held. The level crossing was connected to the existing track, and sufficient track was laid on the Cockatoo side of the crossing to hold a short train. The cattle pit on the Cockatoo side was also completed. The other cattle pit could not be installed due to an unexpected problem with a nearby burst water-main, and temporary crib work was built up under the track with sleepers. On Sunday, 18 October, the first train for 39 years crossed the Gembrook main road. Victoria's least offensive diesel, NRT1, had the honour, and it was hauling two NQR wagons. Uncharacteristically, NRT1 was not performing well, and stalled on a number of occasions due to fuel line problems.

Gembrook Operations

On Saturday, 26 September, the Peckett, *Sir John Grice*, ran a service in conjunction with the Gembrook market. Traffic was heavy until about midday when the market closed down, all trains being fully loaded. Edmonson card tickets were issued, reading Gembrook to Main Road - 218 adult and 250 children's tickets were sold. The train consisted of an NBH car and an NQR truck fitted with seats made out of an up-market type of wooden pallet. It was nice to see that this "Super Grott" class accommodation was generally preferred to the NBH. *Sir John* was acting under his alias "Peter Peckett" and was wearing a smiling face headboard. Not something that I would want to encourage, but this one was rather well done and looked quite amusing. As usual, *Sir John* performed perfectly.

On the following day, 345 passengers were carried. This was an excellent response considering Sunday is not a market day. By the end of the day the Peckett had run out of coal, and wood was scrounged to keep it going.

Locomotives

8A: Returned to service on 4 September. On the following day it double-headed with 14A on the 10.30am passenger to Menzies Creek, then took the Commissioner's Special. It is reported to be running very well.

NRT1: Now back in service, the original engine has been repaired.

Peckett: was rostered as workshops shunter at Emerald during NRT1's indisposition.

Frank Stamford 10/92

TACL RAIL TRACTOR RESTORATION - PROGRESS REPORT

(see LRN 90 p.15)

On Saturday, 5 September, the remaining two tyres were successfully fitted

to the wheels at Belgrave, and then taken to Emerald carriage workshops to have the tyres turned down to correct profile.

Frank Stamford 10/92

COAL CREEK HISTORICAL PARK, Korumburra 762mm gauge

(see LRN 86 p.16)

On Saturday, 31 October, Peckett loco (0-4-0ST 1711/26) was driven onto a low loader owned by Colin Rees, to begin its journey to Coal Creek, via Gembrook! At Gembrook, the Peckett carried out its Market Day duties, running shuttle trips from the market to the Main Road crossing every 20 minutes. (The level crossing has now been reinstated and rails extend about 50 metres on the Up side.) About 300 people were carried for the day.

While this was happening Colin was kept busy shuffling narrow gauge vehicles around. He had already taken an NBH carriage from Emerald to Gembrook, an NQR from Gembrook to Emerald, then the Peckett from Emerald to Gembrook. He then had to take the "Coal Creek Tug" (the Clarkat ex-Whistle Stop, which is now painted yellow with green lining and sign writing) to Coal Creek, return to Emerald empty to pick up carriage 5NBH and take it to Coal Creek. It should be pointed out that this day was cold, wet, miserable and with mud twice ankle depth. Colin finally made it to Gembrook to pick up the Peckett and departed at about 7.45pm for Korumburra, arriving at about 9.45pm. Needless to say the Peckett spent the night on the low loader.

Sunday, 1 November, dawned overcast but dry. The Peckett was steamed up by fireman Chas Bevan and slowly eased off the low loader by driver Ron Picking, to become the first locomotive to operate on the Coal Creek Railway.

By noon the sun had begun to shine as the masses assembled at the lower end of the line for the official opening of the railway. After the speeches, presentations, etc., the railway and train were blessed by a minister of the cloth (the Peckett has often been cursed, but this was the first time it had ever been blessed!), then the ribbon was cut by the Minister for Transport and the first train departed with the official party aboard. For the rest of the day the train puffed up and down carrying many delighted people. At the finish of train running, the Peckett was loaded onto Colin's low loader for the trip back to Emerald, arriving well after dark, to be rolled back onto its own railway and put away in the Emerald carriage shops. On 3 November, Colin once again travelled to Coal Creek to pick up 5NBH and return it to Emerald.

Presently the track at Coal Creek is only about 250 metres long and mostly on a 1 in 40 grade, but will be a 1.6km loop in the near future. Planning is also underway for an extension of about 2km. Decauville/Couillet locomotive, 986/1883, is currently being overhauled to operate at Coal Creek. It is being

fitted with air brakes to make it fully compatible with Puffing Billy equipment, a number of boiler stays are being replaced and other minor repairs carried out.

WESTERN AUSTRALIA

CARNARVON EXPRESS 1067mm gauge

(see LRN 80 p.17)

The "Carnarvon Express" rail service on the Carnarvon mile jetty appears to be out of use. A very quick view of the jetty depot are on 6 October revealed overgrown and sand covered tracks leading from the train shed to the jetty. Some of the former Public Works Department depot track at the jetty has been removed in the past year, and remaining rolling stock has been bunched together at the town end of the old yard. The former rail bridges over the Gascoyne River "delta" between the town and Babbage Island are again open to the public - barriers at the town end have been removed.

David Whiteford 10/92

CARNARVON LIGHT RAILWAY ASSOCIATION INC, Carnarvon 1067mm gauge

(see LRN 89 p.18)

The Association recently advertised for a "Co-Ordinator - Historical Railway Restoration Project". It is a six-month appointment at a "salary" of \$14,000 to \$20,000, depending on qualifications and experience, commencing 19 October 1992. The appointee needs leadership and team work skills, well developed skills in project implementation and evaluation and ability to relate well to both disadvantaged youth as well as adult project support workers and the project management support group.

[photo]

Ex WAGR suburban carriage AYF 706 and brakevan Z480 were stored adjacent to Carnarvon's Bell Freight yard on 6 October and could be destined for future use on the railway.

Northern Guardian 7/10/92 via David Whiteford; David Whiteford 10/92

DENHAM 1067mm gauge

(see LRN 80 p.18)

When inspected on 5 October, there was no rolling stock on the remaining stub of tramway on the Denham jetty. The 4 wheel trolley reported in the sea at the end of the jetty in December 1990 was not there and the other

trolley, with its three Great Southern Railway axle boxes, was upside down at a nearby boatshed.

David Whiteford 10/92

MOUNT MAGNET

(see LRN 72 p.19)

An open air mining and pastoral museum has been set up adjacent to the Great Northern Highway in the Mount Magnet townsite. Since this was last seen in July 1989, some mining railway equipment has been added but detailed inspection was not available. Seen through the perimeter fence were a bogger, ore truck and a small battery electric locomotive with no visible identification. Gauge could not be determined but would have been less than 610mm. Also on display are a former WAGR ADF ("Wildflower") railcar power unit and an ADU carriage which were used as accommodation units at a mine near Mount Magnet in the early 1980s.

NOTES, CORRECTIONS & COMMENTS

AUSTRALIAN FOREST HISTORY SOCIETY Second National Conference, Creswick - 3 to 5 December 1992

(see LRN 91 p.2)

The LRRSA was represented at this Conference by Peter Evans and Norm Houghton. A group of more than 40 foresters, botanists, archaeologists, historians and higher degree students assembled to give papers, exchange views and gain insights into the diverse world of forests. Nineteen formal papers and seven informal expositions were presented on silviculture, fire regimes, survey techniques, history sources and methodologies, logging techniques and community and cultural perceptions.

The overwhelming impression of the papers was the desirability of a cross-disciplinary approach to each research project being undertaken. The forest is such a complex web of botanic and human interaction that the botanist, the practising forester and the historian each needs to be aware of his respective strengths and limitations and be prepared to draw on other disciplines. Feedback from participants showed the profile of the LRRSA to be high due to its research and publishing activities. This was reinforced by the number of LRRSA publications on sale at the Conference book stall.

Peter Evans gave a paper describing the methodology used to assess the heritage value of historic sawmill and tramway sites in the central forest management area of Victoria. The outlines of this method were initially published in LR 116 and have been further developed to meet Australian Heritage Commission guidelines. Peter's lecture was supported by a stunning series of colour slides depicting relics still in the bush.

Norm Houghton used overhead transparencies to describe the methods and techniques employed by him to locate, plot and map the sawmills and tramways in the Otway Ranges located on private land.

A session on the future direction of the AFHS was held and it was re-affirmed

that the Society remain focussed on forestry rather than environmental issues and that national conferences continue to be held. LRRSA members should keep this in mind and consider offering papers to future conferences.

BOOKS

AUSTRALIAN BLUE ASBESTOS, Wittenoom

Blue Murder by Ben Hills the book dealing with the blue asbestos mine at Wittenoom in the Pilbara and the terrible health problems which have affected some of its former workers, features a few mentions of the tramway operations at the mine, and one photograph shows a battery electric locomotive.

Ray Graf 12/92

BEECHY SALES

The Society's latest publication, *The Beechy*, was released just prior to Christmas 1992 and immediately generated huge demand. 250 copies were delivered to Colac and Beech Forest as part of the pre-publication offer and this merely whet the Otway appetite. Blane's Newsagency in Colac ordered 100 copies, then three days later ordered another 200 copies. This outlet was selling 40 copies a day in the last shopping days to Christmas.

Author, Norm Houghton, spent half a day at Blane's autographing copies for customers and was also interviewed on local radio. After Christmas, the author was interviewed on Geelong FM radio and ran an Otway slide/sales night at the Blackwood Gully Tea Rooms at Lavers Hill. By the end of January, the author's autographing arm had developed RSI and his car's motor had not cooled down once, such had been the number of delivery and promo trips done.

Following is the first instalment of the last site report in a series of articles outlining some of the field work undertaken as part of the research for the book (severe lack of space precluded its full inclusion here and it will therefore be continued next issue complete with maps). Readers should be aware that the hard cover edition of this book is almost sold out and if you wish to purchase a copy you should do so now. Copies are available from LRRSA Sales, 21 Temple Road, Belgrave South Vic 3160.

Peter Evans 1/93

SITE REPORT - VICTORIA

DRIVER'S TRAMWAY, Arkins Creek

(Part I)

Two tramways operated out of the Kincaid railway station between 1911 and 1928, those of Jack Kincaid and Reynolds Driver, the latter on behalf of the War Service Home Commission. Kincaid's operation (1911 to 1919) was mostly confined to the southern side of Arkins Creek, while Driver's (1921 to 1928) operation was on an extension of Kincaid's line way down the creek. The West Otway's steepest incline, a spectacular 1 in 1, was sited here.

I knew from plans and aerial photographs, where portions of the tram went but did not have a complete picture, so some site investigations were needed,

On 26/10/91, I headed off to Kincaid and walked down Delaney's Track for 1500 m until reaching the point where the tram came within 200 m of the track. I plunged into the bush and experienced easy going all the way down to the creek but once I crossed the creek, I found myself in a head high jungle of cut grass, ferns, dogwood, vines and blackberries interspersed with an occasional tree. The vegetation formed a thick mat of mostly horizontal scrub and I found myself walking above the ground. If the formation had been underfoot, I would not have seen it. The going was extremely tough and the lower bush was a wet, slimy, putrid, decaying, cutting swathe of dark green. A small tree toppled over and hit my right shoulder when I grabbed the trunk to support myself as I tripped over yet another unseen obstruction underfoot. I wear a safety helmet in the bush but have no desire to test its capabilities and would prefer the hit to be on the upper body than the head. My face and neck were a mass of cuts and scratches from the sharp edged grasses.

I returned to Delaney's Track and re-assessed my search strategy while sitting on a log soaking up the sun with the lizards and snakes. I decided to move further north to the main ridge where the incline down to the mill began. The formation at that point had appeared on 1940s aerial photographs so I reasoned that the earthworks should be detectable.

I walked 500 m north along Delaney's Track and turned roughly west along the centre line of the incline ridge. I set a compass bearing to take me straight to the end of the ridge and down, if necessary, to Arkins Creek itself. I knew that somewhere (approx. 700 m in) at the end of the ridge I would have to meet the tramway. The terrain is quite gentle on the top of the ridge so it was quite easy walking, apart from ploughing and hacking my way through the

clumps of dogwood and blackberries.

After 200 m, the rubbishy scrub ceased and the tall forest began. The undergrowth is mostly immature ferns sprouting from a very deep ground litter of bark and leaves. I had counted out 700 paces (about 600 m allowing for the usual deviations) before I came to the edge of a very steep slope overlooking what appeared to be a creek. This did not seem right to me and I debated whether to go on ahead or turn off and go around. If I turned aside I might walk off the ridge without ever meeting the tram and if I went ahead I would have to climb back up that awfully steep slope. I decided to keep on ahead as I hadn't gone far enough to meet the tram, and literally slid down the slope. At the bottom, I found the creek was not a creek at all but a flat depression and once over this the ridge slope eased off.

I kept walking, on and on, as the ridge seemed to progress forever until I stepped straight onto the tramway formation. The formation was very faint but the ground was flat underfoot so this had to be it. I checked each way and confirmed that this was the tram and began plotting it to my right.

The earthworks are absolutely minimal comprising a depression about 8 cm deep with a low mound on the downhill side. The photo on page 17 of West Otways Narrow Gauge accurately depicts this situation. The amount of ground litter is unbelievable and this together with the low ferns and fallen trees made tracking difficult. I followed the tram to the north east for about 80 m until coming to the start of what looked like an incline. The roadbed was quite distinct, dropping away at a shallow angle down to a flat piece of ground and apparently up a slight rise. This did not look like the Otway's steepest incline to me so I returned to the tram at the top and continued my plot. About 10 m further on I came to another formation that could have been an incline or a snag track. On the downhill side the formation proceeded north down to the flat ground for about 40 m and disappeared in the soft earth.

I walked back up the formation and noted that the earthworks appeared to run back into a deep dead end cutting with a clearing at the end. I found a large metal spike embedded in a tree to one side. A search on the other side of these earthworks revealed nothing so I reasoned that this was where the incline commenced. I would not walk down the incline today (as it would be a major expedition) but was content to find the incline starting point and plot the tram back from here.

I turned around and retraced my steps along the tram route for about 100 m until losing the track under the immense cloak of ground litter. Time was getting on so I thought it advisable to break off and head out of the bush. I had no idea where I was in relation to the ridge centre line except that the

uphill trend was over my left shoulder so I set a compass bearing that would take me up the slope towards Delaney Track. Just off the tram route were the marks of a road or track coming down the hill heading south west. I more or less followed this route back up the hill for a while until losing it while deviating around a fallen tree. Still keeping on up the grade I was surprised to come across an overgrown but well defined road-like formation, 2.4m wide, that snaked along the south side of the ridge. I followed this interesting piece of engineering along side cuts, through cuttings and across two bridge sites right down to the flats across Arkins Creek. I came up out of the creek thinking this route was the ideal way to get in and out of the tramway site until walking into one of the longest blackberry clumps I have ever seen. The berry growths completely occupy a former clearing at least 400 m long by 70 m wide. I was forced back along the creek and after a short distance decided to head straight up hill to Delaney's track. I plodded up the slope through and around two more gigantic berry clumps until breaking out into the sunlight on the track not far from where I had entered the bush.

I later mentioned to a local farmer about the very long bridge over Arkins Creek and the "road" I had walked along and was told I had traversed the tramway as no road had ever gone through there. I found it hard to believe a tramway would have been built so lavishly as to be taken for a road but the local farmers would know the facts. Their view was that the tram and bridges were built by the Commonwealth Government with generous purse strings. Two farmers wished to see the long bridge so on 1/11/91, I returned to the bridge site where we carefully went over the remains. We measured the bridge to be 3050 mm wide at the top deck, 75 m in length (13 sets, 5.5m apart plus approaches) and higher at the western end. It was certainly a big bridge and we estimated it to have been at least 18 m to 20 m high over the centre of the creek. A portion of the decking survives at the western end although displaced to one side, and on clearing away the layers of mud and leaves, we found a line of nails still sticking up where the rails would have been. The nails were a little over 3 ft (913 mm) apart. This discovery confirmed the bridge as a tramway bridge.

The locals said that high tramway bridges had to have wide decks otherwise the horses would not walk over them. The high bridge on Knott's No.1 long line at Ferguson was also 3050 mm wide so there appeared to be confirmation for the belief.

We walked west along the formation for about 50 m to confirm the width of the road bed and at a cutting 2.4 m wide, found another narrower cutting 2 m wide on the outside curve. None of us could explain the two cuttings and as it was time to leave we left the question hanging.

TOUR REPORT - NSW

LRRSA NSW DIV TOUR TO MOUNT VICTORIA

On Sunday, 8 November, 15 members of the NSW Division met at Mt Victoria Railway Station, high in the Blue Mountains west of Sydney. On the agenda was a day's outing exploring the remains of the inclined tramway once operated by the Mt Victoria Chert Road Metal and Timber Co Ltd in the mid 1920s.

This tramway featured in Light Railways No. 63 (January 1979) in an article prepared by F. John Reid. In the early 1920s a deposit of chert, a hard volcanic rock which was used at the time for metalling roads, was discovered at the base of the Blue Mountains escarpment below Mt Victoria. A company was formed to exploit it, and spent £15,000 building an inclined tramway down the escarpment, opening up a quarry and sawmill at the bottom terminus, and a crusher and loading bins at the top, adjacent to the main Sydney-Bathurst railway. The Company's optimism was not matched by their business sense or by the demands for their products, and by 1931, the tramway was out of use and, presumably, dismantled.

NSW Division President, Jeff Moonie, organised the tour and preparations included tour notes, and securing permission from local land-owners to cross their properties. Our group travelled a short distance east of Mt Victoria to the site of the top terminus of the incline. The site of the standard gauge siding was easy to see. It was about 200 m in length on a falling grade, and no doubt empty trucks shunted into the siding would have been gravitated under the loading bins as required. Alongside the siding was a level area formed from what looked like ash, coal chitter and soil filling. A massive concrete base with two concrete walls about a metre high each, was the dominant and only relic in the vicinity. It was orientated at right angles to the line of the inclined tramway and some 50 m from it. Its function was not immediately apparent, but the most common view held that it was the base for the steam winding engine which may have also powered a rock crusher.

After some searching through the bush, which luckily was quite open and user friendly on these exposed sandstone tops, the formation of the incline was picked up. Initially it was only a narrow, straight foot trail on a compass heading of 200 degrees, going down the steepening hillside. Soon we began to pick out the odd buried sleeper as the trail became a shallow creek gully.

As the slope got steeper, the sleepers became more frequent, some even with dogspikes still in them. Approaching the edge of cliffs, the incline entered a deep gully, finally ending at a dramatic ledge on the very edge of a sheer vertical drop. This was the site where according to reports of the time some 20,000 tons of sandstone rock had to be blasted away to clear a suitable route for the incline. The support timbers and sleepers were still intact in this last 20 m section, preserved from bushfires by the permanent moisture of the gully. Dogspikes still in situ proved that the incline had 3 rails forming 2 tracks. Other relics seen in the vicinity included 2 or 3 of the original telephone posts which carried the line from top to bottom, and a sleeper with part of a cable roller mount still attached.

The faint-hearted in the group (all 14 of us) decided not to climb down to the very brink of the precipice where by leaning out, one could see the remains of the timber trestle supports down below. Not only was the way down very slippery, but the drop was getting longer each time we risked a glance. Common sense and the topographical map said it was probably only 50 m or so; primal instinct said it was 10,000 m down and increasing! Instead, we retraced our steps back up the incline to the top terminus. It was immediately apparent that it is 10 times easier walking down inclines than it is climbing back up them. Murphy's Law also states that it is much longer going back up.

After a lunch break at Mt Victoria, where some courage was re-installed to the faint-hearted, we car-convoyed down the main highway through Victoria Pass and turned off along Cox's Road on the way to the bottom terminus.

Passing through private property (by prior arrangement), we left the cars about 500 m from the base of the escarpment. A pleasant walk alongside a small gurgling creek brought us to the site of the bottom terminus and the sawmill.

The bottom terminus of the incline was situated in a 1.5 m cutting about 20 m in length, alongside the site of the sawmill. Traces of an approach road next to the cutting suggested that wagons from the chert quarry could have been driven along the cutting and their contents tipped or shovelled directly into inclined tramway trucks. Some 8 or 9 old logs laying parallel to the cutting suggested that this was how timber was loaded onto the incline as well. At the sawmill site were some old brick foundations and a solid concrete base about 0.5 m high, function unknown.

We searched for the site of the chert quarry, Williamson's Quarry, but with no luck. It was probably not too far from the bottom of the terminus, but the surrounding vegetation was fairly thick, and we had no luck. We then turned our attention to the formation of the incline, and forgetting the lessons of the

morning (going up inclines is 10 times harder than coming down), the more active members decided to try and reach the bottom of the cliffs.

Crossing a 10 m deep gully immediately adjacent to the sawmill site on a now vanished trestle bridge, the incline formation headed uphill at a very steep angle. On the left of the formation was a deep valley, on the right was an even steeper hillside. Regular sleepers with dogspikes left no doubt that this was a tramway formation. Small embankments alternated with shallow cuttings to keep the grade even. About 200 m up we found a home made point lever complete with sandstone block counterweight, point rodding and signal wire. There were remains of trestle timbers in the right of way, suggesting that the main tramway was carried over this flat area on an inclined trestle. However, as 3-rail inclined tramways do not need point levers for passing loops, we conjectured that this may have been the site of the short lived coal mine, with a tramway siding to it. On the way back down, we explored this area more thoroughly and found a small quarried area next to the flat, with a narrow track heading uphill from it. Though this track was obviously manmade, there were no traces of rails or sleepers on it.

Continuing upward, the gradient got steeper, and the sun got hotter. We reached the site of the large trestle bridge which had brought the tramway down from the top of the cliffs overhead. It was a scramble to get past this section of steep hillsides and cliff. Panting and perspiring, we reached the base of the cliff, to a welcome patch of shade with water dripping down from above into small pools below. After recovering our breath, we began to look around. High above was the brink of the gully where we had been that morning. Protruding from holes bored into the cliff faces, were the remains of the trestle support timbers.

This trestle must have been a minor engineering miracle, and must have needed good men with very good heads for heights to build it. From what we could see, horizontal girders were driven into the cliff face with the outer ends being held up by vertical piles. Diagonal timbers were used to brace each set, and some of the taller vertical piles had two or more horizontals to lock them in place. The longitudinal girders which supported the incline tramway sleepers were bolted onto the horizontal girders. This whole structure was built at an angle of about 45 degrees, was about 150 m long and about 30 m high at the highest point.

Starting back down, we discovered something missed during the hot and tiring climb up - two wheel sets. They were some distance down one side of the incline, near the lower end of the trestle, and looked like the result of a runaway and derailment. Running a tape measure over them confirmed the gauge as 2 ft 6 in. The wheels were 15 in diameter with 3 in wide tyres. The

lack of any other ironwork around indicated that the tramway trucks were probably wooden framed and wooden bodied.

By this time legs were getting weary and the sun and the steep slopes had taken their toll. No further discoveries were made, and we reached the bottom of the incline again without incident. A pause for breath and a final look around before the short walk back to the cars. It had been an enjoyable and interesting day.

Ian McNeil 12/92

NEW SOUTH WALES

BHP LTD, Port Kembla 1435 mm gauge

(see LRN 84 p.4)

Rumours seem to be fairly persistent of redundant ex Mt Goldsworthy Iron English Electric Co-Co DE locos being transferred from the Pilbara to Port Kembla.

Ray Graf 12/92

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 89 p.6)

Shellharbour Council has accepted the Albion Park airport from the Commonwealth Government and as a result, various changes and improvements will be undertaken.

The ILRMS lease has been renewed for a further 5 years together with a small property extension to construct the loco turning triangle on the NE corner of the 4.6 ha site. The Council has informed the Museum that a 10 year lease would be considered in future with a property expansion permitting a main line extension of over 1 km. The Council has also received a grant of \$157,000 to construct a new passenger terminal together with an aircraft museum at the airport.

The model exhibition and museum displays held at Liverpool NSW during the NSW Labor Day weekend in October proved most successful. The ILRMS display included a working model of the Museum main line with "0" gauge rolling stock running on "HO" gauge track. A narrow gauge loco based on the design of former Corrimall Coal Company "Burra" (R & W Hawthorn Leslie 3574 of 1923) hauling a model of former Sydney tramcar 95 "C" ran the circuit.

A back drop of poster size photos illustrated ILRMS progress accompanied by several story boards showing loco retrieval and restoration over the years. The Victoria Mill Drewry Inspection Car (1338 of 1923) was also a prominent

display piece at the exhibition.

A 32 page Museum Exhibits Guide was produced for the October Exhibition. This deals with 29 main items including all locos: steam, internal combustion, battery and trolley wire; passenger and mine transport cars; many of the industrial vehicles; and the Otford Signal Box and Yallah Station.

All photos have been computer enhanced and the material printed on high grade art paper. This Guide is available for \$3.50, which includes return packing and postage from Brad Johns, Hon. Treasurer ILRMS, PO Box 244, Albion Park NSW 2527.

Zinns Loco

On 19 September, the four wheel petrol mechanical loco built by the late Albert Zinns, transferred from Albion Park to the Menangle Steam Museum. This unit had been purchased from ANGRMS and arrived at Albion Park on 20/11/87. Trial running took place on the following day.

By April 1988, the loco was available for limited operation having received major repairs to the Leyland engine, a new fuel pump and compressor for the air brakes.

This had been obtained to operate trains during mid week workings as a heavier loco than the existing non steam units was needed at Albion Park. A number of major problems emerged - only one axle was powered, the two axles were not parallel, nor was the chassis sprung.

Most of these problems were corrected and although the fitting of a chain linkage between the front and rear axle would have prevented slipping, this major work could not be justified due to the general performance of the loco. These problems will not be critical at Menangle due to the much lighter rolling stock.

Cairns Hudswell Clarke 1706 of 1939.

New boiler cladding is being rolled for this loco's boiler and a local paint firm is colour matching. When these two items are delivered and applied, this steam engine will be again available for regular operation.

Wallaby R & W Hawthorn Leslie 2988 of 1913

This standard gauge steam loco was positioned by crane on 8 December, onto the new track and plinth at the front of the Museum. The unit has been painted and again presents an attractive appearance at the Museum entrance.

John Fowler 16089 of 1923.

Good progress is being made on repainting this former Kiama Quarry loco. It is hoped that this engine will be available for cosmetic display and dead unit operation around Easter 1993.

Inspection Car Drewry 1338 of 1924.

Prior to its display at the Liverpool Exhibition, additional linework was painted onto this vehicle and "Drewry" name plates fitted at each end of the body in the 1912 italic lettering style.

Man Car

Except for some seat reconstruction, the restoration of the coal mine man transporter car Metropolitan Colliery No.2, has been completed. The three transverse seating cars at Albion Park have been identified as:

- Metropolitan Colliery No.2
- South Clifton Colliery No.?
- Huntley Colliery No.4

All have been converted from 1067 mm to 610 mm gauge.

Car No.1

The repainting and linework application to passenger car No.1 (built 1978) were completed on 22 September. It also now carries a prominent No.1. "ILLAWARRA LIGHT RAILWAY" letter boards have still to be prepared and fitted to this vehicle.

The ILRMS was pleased to receive a large milling machine recently from a local workshop. The Museum workshops now have the machinery to carry out most engineering work with the exception of rolling heavy gauge metal.

Due to generally fine weather on steaming days, as well as several publicity press and TV items released during the year, it seemed by the end of November that the Museum would come in with riding figures of about 12,000 for 1992. This restores patronage to the mid to late 1980s levels.

K. McCarthy 12/92

LEYLAND BROTHERS WORLD, Tea Gardens 610 mm gauge?

(see LRN 91 p.8)

Receivers for Leyland Brothers World have accepted an \$800,000 offer after the park was passed in at a liquidation auction at \$739,000 on 26 November, well below the \$2 million reserve. The new owner, Mr Peter Grey of Girvan, near Stroud, who also owns several Hunter Valley service stations, plans to maintain it as a "family-style theme park" and upgrade the roadhouse to a

"food and fuel" stop for motorists and truck drivers with possibly a motel and animal park being added. No mention was made about the railway or monorail.

"Prime TV" Channel 7, Sydney 9/12/92; via W. Roger Persson 12/92*

MARSDEN WEIR STEAM MUSEUM 610 mm gauge

(see LRN 85 p.4)

Goulburn Steam Museum appears to have been renamed as above. The Museum is open every day from 10 am to 5 pm, and the Appleby Beam Engine works on the first and third weekend of each month.

Trains are also understood to operate on these weekends and on all public holidays. The locomotives available to work the service are John Fowler 0-4-2T 16340 of 1924 and F.C.Hibberd "Planet" 4wDM 2388 of 1941. The Fowler returned to service in January 1992. Krauss 0-6-0T *Stella* (4323 of 1896) is still dismantled and the Board which formerly operated the Museum and which retains technical ownership has been asked to pay rent, remove the locomotive, or enter into a long-term lease.

*Rail Australia 22 via John Browning; .
This Month on the Road to Gundagai 9/92 via Ray Graf*

SCENIC RAILWAY, Katoomba narrow gauge

This popular tourist attraction was built as a coal haulage incline into the Jamison Valley. Following the end of mining in 1945, what had been a sideline - the carriage of passengers - became the main business. There are two cars lowered by a winder and these are connected by two drawbars, which move in the vertical curve only, to a maximum gradient of 52 degrees. A third car is to be installed soon, increasing capacity from 56 to 84 per trip.

Preserved in the complex, which includes the Skyway cable car and the track for the "Orphan Rocker", a so far abortive roller coaster type ride, are a bucket from the former shale ropeway and a 2 ft gauge wooden truck presumably from a local mining operation.

Ray Graf 12/92

ZIG ZAG RAILWAY CO-OP LTD, Lithgow 1067 mm gauge

(see LRN 88, p.11)

Noted at Clarence in October were four low profile four wheel gondola cars, stacked two deep. These were numbered 84, 22, 68 and 65, and were painted white with blue welded on metal numbers. (Presumably the four side tippers from Coalcliff - see LRN 88 - Ed.)

Ray Graf 12/92

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge

(see LRN 91 p.10)

On 15 November, Mike Loveday's two locomotives were removed from the Woodford site and transported to Graham Chapman's "Steamworks" at Murrumbah Downs. These two units are Krauss 0-6-2T 6854 of 1914 and Jung 0-4-0WT 1052 of 1906. The Krauss is ex Buderim Shire Tramway and Bingera Mill, and the Jung, which is frame only, is ex South Johnstone Mill and Bill Frost, Mossman.

On the same date, the boiler from Hudswell Clarke 0-6-0 *Melbourne* (1701 of 1938) was transported to Boilerland in Brisbane for repairs, which are likely to include two tube stays and a new smokebox shell. With the track into the workshop building laid, the chassis of *Melbourne* was placed inside on 15 November.

Work is progressing on the old D'Aguilar railway station building - the toilets have now been installed and connected to the local sewerage with a new roof yet to be put in place.

Durundur Railway Bulletin 11/92 via John Browning: Bob Gough 12/92

BUDERIM GINGER FACTORY, Yandina 610 mm gauge

(see LRN 85 p.15)

Krauss 0-6-0T *Moreton* (4679 of 1900) with carriage, prior to completion of the conversion of motive power.

Photo: Bob Gough

A tourist tramway commenced operation at this site on 26 December. The 1 km track encircles the factory with large balloon loops at the northern and southern ends. The loco being used is Krauss 0-6-0T *Moreton* (4679 of 1900). The tender has been rebuilt to house a diesel motor and hydraulic pump which powers an hydraulic motor under the firebox driving the loco's rear axle. There are two carriages, based on ex-Burrinjuck Dam flat cars, each carrying 32 passengers, with wheel chair access. They have been built to resemble the passenger carriages on the original Nambour to Coolumberr tramway. A date has yet to be set for the official opening of the tramway but it is expected to be sometime in February. Entrance to the Buderim Ginger Factory complex is free, cost of the tram rides is unknown at this time.

Bob Gough 12/92: George Hadley 1/93

COAL RESOURCES OF QUEENSLAND LTD, Cook Colliery, Blackwater 1067 mm gauge

(see LRN 91 p.11)

A visit on 21 December showed most rail equipment on the surface, although three personnel carriers and one locomotive were still underground. The mine had closed as planned, but was being kept in operating condition in the hope that a buyer may be found.

Fox 4wDH locomotives 4 (004 of 1973) and 6 (006 of 1976) were both in yellow livery and operational for surface work only. Hexham 4wDH locomotives DL7 (HE685) and DL8 (HE697) were also noted on the surface, painted white with fluorescent red dazzle stripes at each end.

Five 4wDHR personnel carriers were also noted. Two were Fox cars rebuilt by Eimco in Mackay in 1990 with hydrostatic transmission. In yellow livery, these are numbered 1 and 2 and also bear plates MC001 and MC002. They are believed to be Fox 323 and 324 of 1972. Number 2 was without its engine.

Two Vernier cars were noted, numbered 7 (MC007) and 8 (MC008). 7 is one of three older type Vernier cars, and it appears to have been refurbished recently. It is painted white. 8 is a more modern 2-speed model (series D15) and appears to have been built in 1985 according to an inspection plate in the cab. This unit is painted Yellow.

Manrider car 9 was found out of use in the scrap disposal area. This is the unit designed by Hexham Engineering and completed by Hawker Noyes in 1990 after the demise of Hexham. It carries Hexham plate HE707 (of 1989). It had been observed receiving attention at Eimco's Mackay works in 1990 and 1991.

Quite a number of four-wheel flat cars were observed, and a number

carried limestone pods for dusting underground. The largest vehicle was a bogie shearer transporter built by Hexham (HE699) upon which sat the 70-tonne coal shearer.

It is believed that the units still underground were 4wDHR personnel cars 4 (believed to be Fox 346 of 1975, fitted up as an emergency car) and 5 & 6 (both believed to be Verniers), and 4wDH loco DL9 (Hexham HE702 of 1989).

Three large four-wheeled unpowered yellow man-riding cars were observed. These were for use on the 650 m long drift. One (numbered TC002) was observed hitched to the dolly car at the top of the drift. TC003 was on the surface and TC001 was in the scrap area. The yellow dolly car (numbered DC1) is attached to the winder cable, and its operator controls the winder by radio, a wire aerial extending down the tunnel with a running contact from the dolly car attached to it. It also has a variety of auxiliary braking systems fitted, as has the man rider.

DEVEX, Monkland, Gympie 610 mm gauge

(see LRN 85 p.10)

Activity is likely to be stepped up with the announcement of plans to develop a 25,000 ounce per year mining operation based on the West of Scotland shaft which has been the scene of exploration over the last few years.

Sydney Morning Herald 25/9/92 via Ray Graf

ISIS CENTRAL SUGAR CO LTD 610 mm gauge

(see LRN 87 p.2)

Five members of ANGRMS stayed overnight on Tuesday 11 August, at the historic Cordalba Hotel run by Zig Zag member, Philip Smith. Wednesday morning, a phone call to the traffic office at the mill advised we were in the area and asked the movements of the locos.

Ex-QGR DH20 Walkers B-B DH 1 (602 of 1969) and one other loco start at 6 am, with shift changes at 2 pm and 10 pm. All others start at 8 am with shift changes at 4 pm and midnight. DH 1 worked the Farnsfield line, or Soldiers Settlement area, on the first run of the day with 660 tonnes plus brakewagon however mill employees said 600 tonnes is the maximum load because of the hill.

Two additional ex-QGR DHs (one reported to be DH67) are to be converted to 2 ft gauge by Walkers of Maryborough, as well as having the drivers' cab shifted to make driving a lot cooler and to give better vision for points and the points person. They also have 2-way radios. One employee stated that

the three DH locos cost the same to buy and convert to running order as one of the new Eimcos at other mills.

Two of the older 0-6-0 Clyde locos have been coupled together with the cab being removed from one for better vision when running the slave unit first with empties. The locos always work radiator leading, or towards the mill, with loaded trains.

The mill uses 42 lb rail and manufactures its own sleepers in concrete, expecting a 30-year life compared to 4 or 5 from wood. The sleepers are made in the off season by the loco crews, producing 300 per day.

Bob Gough 12/92

Coupled 0-6-0 Clyde units with cab removed from slave unit, and brakewagon at Isis Mill on 12/8/92.

KOLAN SHIRE COUNCIL, Wallaville 610 mm gauge

(see LRN 65 p.8)

The unidentified 0-6-0T, believed to be German-built, supplied by agents Arthur Koppel to Gin Gin Mill in 1897 is reported to be up for sale.

Sunshine Express 11/92 via John Browning

MORETON CENTRAL SUGAR MILL CO LTD, Nambour 610 mm gauge

(see LRN 83 p.11)

Minimum maintenance only is to be carried out during this year's off season. E.M.Baldwin 0-6-0DH *Bli Bli* (6-1257-6-7-65 of 1965) is to have its

motor replaced by the one out of E.M.Baldwin B-B DH *Coolum* (5565-1-10-74 of 1974), with a new engine being purchased for *Coolum*. After two axle failures in E.M.Baldwin 0-6-0DH *Petrie* (6-2300-1-6-68 of 1968) during crushing, all axles in *Petrie* are to be replaced. During the past crushing season, advantage was taken of some of the wet weather to repaint several of the locos. Those receiving new coats of paint were: *Coolum*; Com-Eng 0-6-0 DH *Dunethin* (H1022 of 1958), E.M.Baldwin 0-4-0DH *Valdora* (6-1258-5-6-65 of 1965); E.M.Baldwin 0-4-0DH *Maroochy* (6-1064-1-11-64 of 1964); and Clyde 0-6-0DH *Moreton* (63-289 of 1963). Livery remains unchanged except for the bonnets now being painted in a flat black to try and reduce glare in the drivers' eyes.

Bob Gough 12/92; George Hadley via Peg Hayes 1/93

TINBEERWAH MOUNTAIN RAILWAY, Arcadia, Cooroy 610 mm gauge

(see LRN 78 p.16)

Tinbeerwah Mountain Railway's latest line car, numbered G.C.3 and built by Russell Savage in 1990.

Photo: Russell Savage

In December 1991, an 18 ft turntable was constructed and installed next to the storage depot to enable stock to be turned. Most of the sharp curves on the line have now been replaced, and the ballast wagon has been fitted with a heavier plough with pleasing results.

A new 4wPM track inspection trolley was put into service in September 1990. built by Russell Savage in Mildura, and numbered G.C.3. It is fitted with

a 9 hp Wisconsin engine with forward and reverse gearbox and sanders for both directions. It has proved to be very successful.

Ex AN/SAR switch stands have been installed at three places on the main line and incorporate markers to indicate point settings

Work has commenced in Mildura on the construction of a passenger rail motor. Construction is expected to take 12 months.

Russell Savage 12/92

TASMANIA

IDA BAY RAILWAY, Lune River 610 mm gauge

(see LRN 87 p.13)

A visit to this Railway in May 1992 noted two locomotive frames on timber framed bogies. One has "1800's Vintage Steam Loco's - Awaiting Restoration" painted on the frame. With the cylinders shapes similar to the former Magnet Tramways No.1 Mallet (O & K 882 of 1901), it was initially thought that it was this loco. However recent viewing of photos taken during May seem to suggest that it may be another loco (or 2 locos). Can any reader supply any further information?

Peter Medlin 1/93

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm & 1029 mm gauge

P O Box 288, Alexandra Vic 3714

(see LRN 89 p.14)

By the end of November, almost all of the mainline at Alexandra had been relaid in 60 lb/yd rail and new red gum sleepers. Only the short section at the points remains to be done. Materials for this are on hand and the work will be carried out next winter.

The Museum wishes to express its sincere gratitude to the Puffing Billy Preservation Society for undertaking to bend the rail with their hydraulic rail-bender. The actual work was carried out by Tom Kilner who gave up a day to come to Alexandra and operate the machine. His expertise in this matter was demonstrated when the rails were once again bolted together to form perfect curves. The small group of Museum members who relaid the track wish it known that the words "drill", "dogspike" and "sledgehammer" should not be said in their presence for some time.

Motor Rail "Simplex" 10058 of 1948 was used extensively for work trains during this exercise. It performed well, and had its first real test hauling a train of side tipping skips filled with ballast.

John Fowler 0-6-0T 11885 of 1909 underwent a boiler examination during October and was once again passed to operate at 120 psi. However, the boiler examiner has indicated that pitting in the tubes has reached a state where some consideration should be made for their replacement in the future.

By the time this is printed, the wheels of Kelly & Lewis 0-6-0DM 4271 of 1935 should be back at Alexandra. A most reasonable quotation for their reprofiling has been received from the Puffing Billy Preservation Society and the work was scheduled to be carried out during January 1993.

While waiting for the return of these wheelsets, work has continued on stripping the boiler of Hudswell Clark 0-6-0 1098 of 1915 in preparation for a hydraulic test. Many of the studs on the backhead were badly "necked" and are being replaced as the work continues. The backhead fittings have all been checked and polished in preparation for reinstatement.

The picket fence around the station platform has been completed and provides a neat "frame" for the station building which is beginning to look more like its original self.

During the heavy spring rains much effort has been expended in keeping the grounds tidy and the grass under control. This has kept Doug Lister and the Museum's small fleet of ride-on mowers very busy as the growth has been most prolific. A model of two tramway bridges built by Ernie LeBrun has been added to the Museum's Timber Industry Room.

As a result of the main line up-grade, sufficient reusable red gum sleepers were released to enable the access track to the goods shed to be re-sleepered during early January. The original sleepers in this track were obtained from Cementation Pty Ltd with the 30 lb rail and by late 1992, had deteriorated badly.

Peter Evans 12/92; Timberline via Ray Graf

CENTRAL DEBORAH GOLD MINE, Bendigo narrow gauge

This tourist mine, which appears to feature hand tramming of skips underground and on the surface, is open daily from 9 am to 5 pm.

Ray Graf 12/92

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge (see LRN 91 p.17)

Gembrook Restoration

The gap between the two railheads at Wright and Main Road Gembrook is

now five miles. Relaying of track from Main Road Gembrook to Orchard Road, a distance of 600 metres, was scheduled for late 1992. This has been delayed until 1993 for a number of reasons - e.g. the sleeper cutting contractor could not get into the forest due to floods in northern Victoria.

The PBPS has purchased Yanga Creek bridge near Balranald from V/Line for dismantling. This bridge will supply some of the materials for the three replacement trestle bridges between Wright and Cockatoo.

The new bridges will follow the design of the original bridges with two notable exceptions. Firstly the piles will not be driven into the ground but will be attached to concrete foundations just above the ground surface. Secondly the bearers or girders will be steel, not timber. These two changes have been made to reduce long term maintenance costs. Use of steel girders does not fall outside the railway's heritage standards, as these were used on many of the bridges on the Walhalla railway.

Restoration work planned for 1993 includes: dismantling Yanga Creek bridge and moving reusable materials to Emerald (currently scheduled to begin in February), completion of concrete foundations for small Wright trestle bridge (scheduled for late Summer/early Autumn when there is not too much mud about), laying 600 metres of track from Main Road Gembrook to Orchard Road (scheduled for March-June), completion of the small Wright trestle bridge (could be completed by September). On completion of this bridge it is intended to lay track to the site of the big Wright trestle bridge.

All of this work is subject to the availability of funds.

Achievements in 1992 were completion of one kilometre of track between Lakeside and Wright - ballasted and tamped to mainline standards, installing level crossings at Wright Road and Gembrook Main Road, clearing of formation from Wright to site of big bridge, designing of replacement bridges, purchasing Yanga Creek bridge, and restoring Gembrook water tank stand.

Belgrave-Lakeside Operations

Passenger numbers since September have been disappointing. This is believed to be due to the incessant rain. During the September school holidays four trains were scheduled each day. On one particularly wet, cold day the last train of the day left Belgrave with no passengers.

Gembrook Operations

Since October, Gembrook operating days have also coincided with wet weather. Nevertheless passenger numbers averaged about 230 on each day, the exception being the Sunday before Christmas when only 71 travelled.

Locomotives

Work still continues on 12A. It is now hoped to have this back in service in

January, but this will depend on how much maintenance work is needed on 7A, 8A and 14A. From 26 December to 17 January six trains are scheduled each day, and these three locos will be needed every day to provide that service.

Frank Stamford 12/92

PUFFING BILLY PRESERVATION SOCIETY MUSEUM, Menzies Creek various gauges

(see LRN 84 p.13)

The Puffing Billy Museum is to cease being a "Museum in an enclosure" in the future, with the proposed establishment of a timber tramway and sawmill at Gembrook, with additional displays "along the line". Not all the exhibits will be required for this new venture and it is proposed to rationalise those items not required for the "theme" once a more suitable home can be found for them.

Peter Medlin 1/93

SECV, Yallourn 900 mm gauge

(see LRN 86 p.18)

The only remaining section of the SEC rail network, the Yallourn-Morwell Interconnecting Railway, is expected to close about March 1993 and be replaced by road haulage. The Walhalla Goldfields Railway is hoping to acquire and re-gauge one of the diesel shunting locomotives (see item elsewhere this issue).

The railway is currently only used to transport briquetting coal from the Yallourn loading station to the Morwell ditch-bunker with trains returning empty. Locomotives are coupled to the Morwell end of trains, i.e. empty trains are pushed.

On 18 December 1992, two 13-wagon trains were in operation hauled/pushed by locomotives 122 and 125. Each trip takes about 1 hour return and trains cross at the loop on the north side of the Morwell River bridge.

The State Electricity Commission of Victoria has issued a request for tenders for "The demolition, removal & purchase of part (approx. 14 km) of the 90 cm gauge, interconnecting railway line between Yallourn & Morwell open cut mines."

C. Harvey/P. Rickard 12/92; The Age 19/12/92 via Darryl Grant

STATE COAL MINE HISTORIC RESERVE East Area Mine, Garden St, Wonthaggi 610 mm gauge (see LRN 85 p.19)

Underground tours run daily between 10 am and 3.30 pm, and last about

40 minutes. This is one of seven historic mine sites which are part of the State Coal Mine Historic Reserve.

Ray Graf 12/92

WALHALLA GOLDFIELDS RAILWAY gauge (to be) 762 mm

P.O. Box 1576, Traralgon Vic 3844

On Friday, 8 January 1993, work commenced on the restoration of the railway line between Thomson and Walhalla on the former Moe to Walhalla (Victorian Railways) 762 mm gauge.

This enthusiastic group have been together for approximately 12 months and in that time have obtained a \$55,000 grant from the Federal Government to initiate the restoration and become Incorporated as the Walhalla Goldfields Railway under similar conditions to the Puffing Billy Railway.

The initial base for operations is Thomson and work is planned in various stages, the first to be the section of approximately 1.5 miles from Thomson north towards Walhalla which will require restoration of the 309 foot long Thomson River Bridge, a 15 foot long, 6 foot high, 3 span, trestle bridge and include a temporary terminus with run round loop about 0.5 miles prior to Walhalla. Stage 2 is across 6 trestle bridges varying from 10 feet to 32 feet high into the former Walhalla Station Yard. Stage 3 is approximately 2 miles south from Thomson to Platina across 2 large trestle bridges and the long term plan is a further 3.5 miles to Erica via the horse-shoe bend and 2 more trestle bridges. It is hoped to eventually operate steam locomotives on the Railway.

It is believed that rails, a Fowler 0-6-0 diesel loco, and 10 ballast wagons from the nearby SEC Yallourn open cut mine (due to close rail operations in March 1993 - see SEC item elsewhere this issue) have been promised to the Railway. The rolling stock will require conversion from 900 mm gauge to 762 mm gauge to suit the gauge chosen.

The initial workdays on January 8/9, saw the area near the Thomson River bridge cleared of foliage to allow the bridge to "dry out" and the railway bridge can now be fully seen from the nearby road bridge. Considerable work will be required to restore this bridge including the building of 5 timber piers and repairs to the iron work, with decking and rails to be placed after. Meanwhile work continues on clearing the road bed from the Thomson River Bridge towards Walhalla.

As with all groups, the Railway could use additional assistance and interested people should write to the Secretary at the above address. Membership of the group is available at \$20 for individuals, \$15 for concessions and \$30 a family.

Peter Medlin 1/93

WESTERN AUSTRALIA

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION Bennett Brook Railway, Whiteman Park 610 mm gauge

MEETINGS

MELBOURNE: LONGWARRY

Until the turn of the century Longwarry was arguably the busiest station on the Gippsland mainline. From 1881 thousands of tons of timber were despatched from this somewhat obscure town 80 kms east of Melbourne. From that year until 1932 timber tramways provided the means by which timber was carried to the railhead and supplies were despatched to the mills.

Mike McCarthy, who has researched the history of the mills and tramways in this area as part of a West Gippsland book, will be speaking about the light railways of Longwarry at the February meeting.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 14th February at 8.00pm.

SYDNEY:

Any member wishing to know details of the next meeting should call Craig Wilson on 02-484 7984

LOCATION: Woodstock Community Centre, Church St Burwood Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 24th February at 7.30pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park.

OBITUARY

KEN McCARTHY - ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD

It is with deep regret that we have to announce the passing of Ken McCarthy, on Saturday, 23 January, at the age of 58 years, and following service to ILRMS spanning twenty one years

Ken was a founder member of the Illawarra Light Railway Museum (No 4), and a number of other similar organisations He held the position as first Chairman for four years, and later was Secretary for two years, until his illness overtook him.

He was a prolific writer, and apart from producing the ILRMS Review for a number of years, he wrote a number of books and pamphlets on trams, narrow gauge railways, and like matters These were always well researched, and have become classic textbooks in their fields

Whilst being a devoted family man (and High School Principal in later years), he found time for photography, Scouts, trams (through S. P. E. R.) and of course, the Museum. None of these jobs were skimped; Ken always did things thoroughly

He not only provided administrative help in the form of assistance to obtain grants etc, he had a string of restoration projects to his credit These include International bus bodied car, Melbourne cable car, various wagons, Sydney "C" type tram and his last crowning glory, the Cane Inspector's car ex-Victoria Mill

Ken was also responsible for the restoration of an old-time petrol pump, and two pump trolleys in co-operation with his students at the High School. These were carried out as part of the curriculum and are now resident at Albion Park.

Ken was a great friend to know, as he had a great command of the English language, and was not afraid to tell you if you mis-used it! He would always respond positively to requests for information about his beloved tramways

and narrow gauge railways, particularly if they were in the Illawarra or its environs.

Ken would not suffer fools gladly, and again, would very soon let anyone know should they transgress a particular point of historical accuracy! We have lost a good friend and mentor, a marvellous historian in his field, and a very active restorationist. However, his legacy of writings will live on, to remind us of his dedication, and we must endeavour to continue the work Ken so ably started and steered through its early and difficult years.

VALE KEN MCCARTHY

Dave Merrifield 1/93

RESEARCH

DEFENCE TRAMWAYS

During research being undertaken into the tramways of the former Explosives Factory Maribyrnong, details of a number of other tramway systems used for explosives transport or associated with defence production have been discovered. These are listed below and any member intending to conduct research in these areas should contact the Secretary for further information.

LOCATION	APPROX. LENGTH	GAUGE	NOTES
Acetate of Lime Factory, Bulimba Qld	-	2 ft	
Ballarat Explosives Factory, Vic	440 m	2 ft	
Bendigo Ordnance Factory, Vic	2.25 km	2 ft 6 in	
Bundamba Explosives Store, Qld	-	?	(1)
Derrimut Magazine, Vic	13.6 km	2 ft	(2)
Footscray Ammunition Factory, Vic	5.5 km	16 in, 2 ft & ?	(3)
Mulwala Explosives Factory, NSW	2.2 km	3 ft, 4 ft 8.5 in	(4)
Salisbury Explosives Factory, SA	-	2 ft	
Smithfield Magazine, SA	-	2 ft	(5)
St Marys Magazine, NSW	14 km	2 ft	(6)
Swan Island, Vic	-	2 ft 6 in	
Ulverstone Flax Mill, Tas.	15 0m	?	
Villawood Explosives Factory, NSW	600 m	2 ft	
Woodman Point Magazine, WA	-	2 ft ?	(7)

Notes:

- (1) In mine tunnel.
- (2) Probably used battery-electric locos.
- (3) Some of 16 in gauge was "electric tram".

- (4) Also 1.8km of 5 ft 3 in gauge siding worked by diesel loco. 4 ft 8.5 in gauge worked by battery-electric locos. May be 2 ft gauge here also. Factory still operating.
- (5) Probably loco worked.
- (6) Interchanges with 4 ft 8.5 in.
- (7) Existence inferred. Can anyone confirm?

EFM Research Group 2/93

NOTES, CORRECTIONS & COMMENTS

CHANGE OF ADDRESS

If you have changed your address in recent times, it is either by good management or good luck, that you are still receiving LR and LRN. If you have informed us of your new address, it's your good management. If you haven't, then it's your good luck, as we have picked up your new address on the bush-telegraph. (The bush-telegraph is a marvellous invention but not 100% reliable.) To keep both you and us happy, please inform our Membership Officer promptly of your new address, to ensure that you continue to receive LR and LRN. Any correspondence relating to membership matters should be directed to the Membership Officer LRRSA at the address shown on the cover. Requests to purchase our publications should be sent direct to the Sales Officer LRRSA, 21 Temple Rd. Belgrave South Vic 3160. All other correspondence should be directed to the Secretary LRRSA, at our usual address, P O. Box 21, Surrey Hills Vic 3127. Your cooperation will assist us to provide a better service to you, our members.

W.L. Hanks, President LRRSA 2/93

ILRMS MUSEUM EXHIBITS GUIDE

(see LRN 92 p.9)

The price of this Guide was incorrectly quoted in LRN 92 as being \$3.50 post paid, which is in fact the price if it is purchased over the counter at the Museum. The correct mail order price including postage and packing is \$4.70.

Dave Merrifield 2/93

ABC RADIO

The final episode of a program called "Reading the Labels on Jam Tins" was broadcast by Radio National on Sunday, 31 January. This program talked about life in the sawmills of SW Western Australia and quite a lengthy segment of it was occupied with the memoirs of a man who was a loco driver on the timber lines of the SW. He spoke of the engines, track, accidents, log trains, etc. Tapes of these programs are normally available from the ABC and may be

of interest to some readers. The presenter (or producer?) of the program was Bill Bunbury.

David Burke 2/93

SITE REPORT - VICTORIA

DRIVERS TRAMWAY, Arkins Creek -

Part II

(see LRN 92 p.3)

Investigations over the next few days revealed that Jack Kincaid also ran a bridge across Arkins Creek from a mill near the big bridge. So there were two bridges and tramways. I returned to the site on Sunday, 10/11/91, with the aim of locating the two trams.

I walked to the site of the big bridge and clambered up to the tram route at the western end, making for the twin cuttings. I carefully measured the smaller cutting and at the eastern end located earthworks, holes and pieces for a bridge. This bridge had to be that of Kincaid's. It was built with two piers sunk into the ground every 6 m and topped by 25.4 cm square bearers. One of the piers, 3.9 m high, is still in place but most of the bridge had disappeared. Sufficient fragments and pieces of ironwork remain to determine the bridges' construction methods.

I crossed to the eastern side of the creek and checked the ground for evidence. At the eastern end of the bridge I located eight sets of post holes, 6 m apart and set 2.4 m across. One upright support, 3.9 m high, is still in position as are three other shorter uprights and some charred beams remain on the ground. I estimate the bridge to have had 12 or 13 sets to give an overall length of at least 75 m and a height at the creek of at least 18 m.

The tram route ran off the bridge along a level grade for a short distance until disappearing under the gigantic blackberry clump previously mentioned.

{bmc d:\lrrsa\lrn\graphics\lrn093b.bmp}

I retraced my steps across the creek up to the tram and began walking west. Along the route beyond the double cuttings, the roadbed is 2.4 m wide so it looked to me that the W.S.H.C., had rebuilt Kincaid's tram and used part of it. I came to another bridge across an intersecting gully and noted it to be about 10 m long. one of the bearer logs remains. I pushed on to where I had met this formation on my first trip before pulling out my survey implements and marching west into a rain shower. A solitary length of wooden rail still with a line of nails set 25 cm apart was the only relic in evidence. I soon came to a horseshoe bend and turned north across the face of the ridge. The

earthworks became lower and less noticeable but for most of the way the tram route is obvious. The ground cover is mostly fern plants 60 cm high that act as a blanket and hide the smaller fallen trees and limbs as well as the tram route where the earthworks are less than 20 cm high.

I ploughed on through the sodden ferns, passed a very wide cutting on a bend until coming to a level spot with numerous marks on the ground and what looked like a snig track heading down the slope. This was a winch site and log landing but I didn't stop to determine this at the time. I lost the tram just past the landing and spent the next 20 minutes circling and zig-zagging about before satisfying myself that it ended where it did.

When turning back towards the landing, which was somewhere south and east of me, I recognised to the north and up slope, the very steep drop that I had come down on my first trip to this area and instantly regained my bearings. I wandered east until I found the landing and thoroughly checked the site. The ground marks were the impressions from a log landing. The wood work had vanished in its entirety (probably through the 1919 bushfire) so the landing was a very old one and in my view, the terminus of Kincaid's line.

I now knew that Driver's tram was downhill from here and wondered why I had not seen the junction of the two lines way back near the horseshoe bend.

I set a bearing and moved downhill in a straight line and after about 50 m stepped onto Driver's tram almost on the same spot as on my first trip. Later that night when I had plotted my findings, I realised how unlucky I was on my first trip as I had blindly walked through the narrow gap between the end of Kincaid's line and the start of Driver's incline and stumbled onto one of the worst defined lengths of Driver's line.

I walked north to the incline to secure a fix in relation to Kincaid's line and turned back. My purpose today was to find a route to the incline as I intended to explore it on my next trip. I had been in the bush for over three hours and was wet through so it was time to retire in any case.

I walked back along Kincaid's line looking for Driver's junction but failed to find it and kept on until emerging from the bush along Delaney's Track.

Two weeks later I returned with the aim of walking down the incline to the mill. This was to be a major expedition because of the steep terrain and the nature of the vegetation so I enlisted some local help and had an experienced search and rescue bushwalker accompanying me, Mr Cliff Tann. We were able to drive along Delaney's Track to the walk start and this saved our legs and energy a 2 km hike.

We walked into the bridge site and followed the tram around to Kincaid's landing. At the horseshoe curve we began a careful search along the downhill

side of the formation looking for the junction point of Driver's line. We had no luck until coming near Kincaid's landing when Cliff spotted a landing and snig line about 20 m south-west of Kincaid's and a formation heading away to the north.

The imprints of the landing were distinct and on poking around, we found a length of 1.5 in (38 mm) wire rope and a tree stump with two wheel pedestals driven into it to act as guides for a cable. We also found a beer bottle near the stump, the second one we had come across on the spur. Several locals later told me I should have found more than two bottles.

The formation from the landing was difficult to follow to the north but this didn't matter as we were only about 60 m from the start of Driver's incline. In this small area of say 150 m square, there are three grade lines, three landings, two winch sites, one incline and four snig lines. It was certainly a locality of much activity.

At the top of Driver's incline we walked a little way down the snig track running north to confirm it was a snig line. We returned to the top and followed the other snig track and incline, which start at the same point. The snig track heads away from the incline at a shallow angle, through a small depression, across a bog and then off to the south. In one of the depressions we found a spike, lever support and a length of half inch (12.5 mm) wire rope (probably the whistle rope as it seemed rather small for the tail rope).

We then walked sideways for 10 m to the incline track and began our descent. But the descent wasn't much to talk about at first as the track is on a very gently grade just off the centre line of the spur. The earthworks are minimal and this together with the amount of ground litter made tracking difficult. After 550 m, the tram route began a pronounced dip and we came across a log landing with a winch site alongside. The winch bearer logs and bolts are intact. We re-confirmed the compass bearing and kept on down what was by now a steep grade, the start of the celebrated 1 in 1 we presumed. Unfortunately, we lost the track near a creek crossing and spent the next 25 minutes zig-zagging up and down the creek.

The creek sides are part of the 1 in 1 and in sections are steeper, so we expended a fair amount of energy going up and down the sides. Cliff ended up to the west on the other side and found what he thought was a long length of formations. I initially made my way to the other side but after finding nothing walked down the creek, a steep sided dry gully really, and noted that the gully had a consistent bearing that almost matched the tram bearing so I reasoned that the tram had to be to the right (north). So once again I heaved myself up the creek side to the top of the spur and had a further look and sure enough was lucky enough to stumble on the formation alongside a hollowed

out flat that was probably a hut site.

I yelled to Cliff and he came across the creek with the news that he was about to call me to say he had found the tram, but his line was either a log line or the mark left by a fallen tree that had decayed. The point where I found the tram was just above the small creek where it turned into Arkins Creek. We followed the formation down a very steep grade for about 50 m until coming to a bridge site. The bridge had long since gone so it was a case of sliding down the vertical creek side to the bottom and clambering up the opposite bank where the formation continued as a well defined side cut on the south side of Arkins Creek. We thought the going would be relatively easy from now on. The formation remained level for a short length and then began dipping to the north west until coming to another bridge site at the junction of two creeks and a gully. The wide flat area at the creek junction was choked with fallen trees. We clambered over, under and along these obstacles for 100 m and carried on down the creek. We could see no sign of the tram and in fact it had carried high over the depression by a long bridge (but we didn't know that then) and blithely continued towards the mill in the creek itself as the alignment appeared to be heading this way.

The creek is very scenic along here with its black/grey rocks and pebbles, crystal clear bubbling water and fish. We came across two 3 ft (914 mm) tram wheels lying on the side of the creek. We reasoned they must have gone "over the edge" from the tram higher up although there were indications of a ledge along the creek. We continued down the creek a bit further until coming to a waterfall. So now we had to climb out of the creek straight up the vertical sides. Once up on top of the spur we had to pause and in between the sounds of our heaving breaths and pounding heart beats, we detected the rush of another creek. I knew from aerial photographs that the mill was sited in the "V" between Arkins Creek and a small branch coming in from the south-west and as well the spur centre line bearing matched the mill spur so we began walking up the spur. After about 60 m we walked into the sawdust heap, 2-1/2 hours after entering the bush.

We stopped for lunch on the dust heap and after refreshments, we inspected the mill site. When the mill closed in 1928, all the gear was stripped out and sold at auction at Kincaid so we didn't expect to find anything of interest. The earth works and impressions, engine bedlogs and sawdust hole are quite evident. The only metal work at the site is a very heavy pair of power take-off rollers on a bent shaft. One snig line running north from the log yard was quite obvious and no doubt there are more but we didn't look for them. Cliff had to get back to milk the cows so we couldn't afford to dally.

We commenced our walk back to Delaney's Track at the terminus of the

tram on the north side of the mill and proceeded south east around to the creek, high above the water where we had walked into the site. The reasonably level formation is cut into the side of the steep slope and was easy going for about 250 m until we met the three way creek junction. It now became clear as we stood at the edge of the vanished bridge site that a very long viaduct ran across the area, but for us there was no such luxury. It was back to hard slogging across the ooze and fallen trees. We picked a landmark over the way where we estimated the bridge terminated and plunged into the mess below us, but when we got to the other side there was no matching formation. The bridge must have gone off at an angle or was much higher than we thought (in fact it probably had a bend in it as my plots later showed). We searched with no result and eventually ended up in a gloomy fern lined gully, which we marched along for a short distance as it was heading the right way. We stopped for a conference to the accompaniment of mosquitoes and the grey mud up to our calves and, after considering our position, both health-wise and navigation-wise, decided to climb straight up the side to the right (south) and, sure enough, at the top was the tram.

Once on firm ground we made good progress back to the creek at the end of the 1 in 1, then it was down into the muck again and up the other side. This time it was a true vertical climb involving the cutting of steps and using palm frond ropes to get up to the edge where the slope was "only" 45 degrees. We thought we could pick up the short piece of formation that I had found on the way down but we missed it because we drifted to the north. By the time we realised this we were too far up the slope so we plodded on through the bush looking to the right (south) just off the ridge centre line but found nothing. We were not to sight another piece of tramway formation for the rest of the walk.

Way up the slope we came across one of the snig tracks originating from the top of the incline which we followed for a while until it changed direction. Thinking this track was the southerly one, we crossed it, but it was the northerly line so we unknowingly walked past the top of the incline on the north side and carried on up that side of the spur. One hour after leaving the creek at the bottom of the 1 in 1 we staggered out of the bush on buckling legs onto Delaney's Track, drenched in perspiration, our faces crimson red and our hearts thumping like jackhammers, having walked 1500 m and climbed 240 vertical metres in the interim.

So we had walked down and then back up the route of the 1 in 1 and lived to tell the tale! Our verdict was that the old timers' tales were exaggerated. The true 1 in 1 was a vertical drop of 80 m over an incline that was 1500 m in length with an overall vertical drop of 250 m at an average grade of 1 in 6.

I suppose the tales about the 1 in 1 were due to it being on an access tram, not a log tram, and more people had first hand experience of it. On paper, the Arkins Creek incline was the longer of the extremely steep grades in the West Otways but sections on the Northern Timber Co. line at Lavers Hill and Devitt Bros at Dinmont were just as steep although over shorter distances.

My cerebral opinion is that the Lavers Hill tramways of the Northern Timber Co are the toughest to walk and my body's opinion agrees. The Arkins Creek expedition only caused aching muscles for one day whereas the Lavers Hill walks stopped me for two days afterwards.

I still had more mapping to do on the site, namely to sort out all the lines, tracks and marks at the top of the incline and follow the tramway east from the big bridge to Kincaid Siding (insofar as the blackberries and swamps would permit).

So once more it was time to pull on my big boots and shoulder my pack and head back to Arkins Creek on Saturday, 30/11/91 for another bout with the bush and the slopes. I was unable to drive in so had to hike 2 km along Delaney's Track from the bitumen before getting to the take off point.

My aim was to see if I could make sense of all the marks on the ground at the head of the incline. In this I was only partially successful due to the fact that between Kincaid's landing (on the high ground) and the incline, the terrain is flat and wet so the trams were probably laid on the surface with minimal earthworks.

I traced the northern snig line back to the landing below Kincaid's and here it seemed there was a winch just below the tram and south of the upper landing. The ground is relatively flat here so there would have been plenty of room to stack and manipulate the logs. Another snig line ran almost due south. The logs were loaded onto the bogies in an uphill direction, say a rise of 3 m, hence the cable guide (made from tram pedestals) alongside the cutting. The width of the cutting now made sense as there was probably two tram tracks through it to serve the winch and landing and park the empties.

I then returned to the head of the incline to see what I could make out. There appeared to be both a snig line and incline taking off from the same point but the snig line changed sides 40 m down without obviously showing it. This seemed to indicate that Driver's incline was built over one of Kincaid's snig lines. The ground has been cut away on the left of the incline at the top and my view is that this was where the tramline builders obtained the soil to form the road bed across the snig track.

I had a look for the incline winch bed logs up behind the head of the incline but failed to locate them due to the heavy ground cover. The incline track ends clear of the northern snig line and doesn't foul it. Instead, it forms a

switchback arrangement, with the grade line heading off at an angle back towards the incline and then swinging to the south around to join Kincaid's line. Despite searches on three visits I was unable to find the junction. There are no obvious lead-offs on Kincaid's tram and all I could locate was a slight widening near the horseshoe bend and some bearer marks. If this was the Junction then an inclined wooden ramp was used to make the change of grade between the two tramlines.

As mentioned before, the entire site is almost featureless because of the complete ground cover of thigh length ferns and I found I just about had to be standing on the ground marks before seeing them. I now knew enough to draw a general arrangement and this was sufficient for my purposes.

When I had finished here I walked back to the bridge sites, crossed the creek to the end of Kincaid's bridge and began a search for Kincaid's mill site.

Local information suggested that the mill was "near" the bridge. Kincaid's tram disappeared under the blackberries at the end of the bridge so I could not follow the track. I picked out a tree way down the blackberry clump and decided to make for it via the sides of the berries. A small gully came in from the right (south) so I zig-zagged along it looking for bridge or mill marks. There were some promising marks here and there but on closer inspection I discounted them.

The vicious blackberries kept forcing me down into the gully and it was just as well, as otherwise I would not have found the mill by trying to follow the tram. About 150 m from the end of the bridge a small watercourse came in from the left but it looked too uniform to be natural so I walked closer and found some rusty bolts sticking up out of a collapsed bearer. This was the mill site, almost engulfed in blackberries. The site has two dust holes, bed log marks and in the middle, a line of bolts where the engine was. I debated whether to continue walking east but the blackberries seemed to go on forever, or at least until meeting the swampy thickets that I had such a hard time in on my first reconnaissance, so I turned back to the bridge and made my way up to Delaney's Track by my usual route.

I tripped over a couple of times and to me this was a sign of tiredness, so I wouldn't have had much energy left for further explorations. The wearying factor in Otway bush bashing is the constant high stepping and climbing over obstacles, whether fallen trees or the land forms, followed by the resistance encountered in pushing through thick vegetation. Three hours of this is about my physical limit. Lugging a back pack, camera, waterbottle, umbrella, machete and having a pair of very heavy boots hanging off the end of my legs doesn't help energy conservation either but is necessary for safety and comfort.

I would rate the Arkins Creek site as one of the most interesting in the West Otways and certainly worth all the sweat generated in mapping it.

Norm Houghton 12/92

NEW SOUTH WALES

BHP LTD, Port Kembla 1435 mm gauge

(see LRN 92 p.8)

Mt Goldsworthy locos 3, 5, 6, 7, 8, & 9 arrived at Port Kembla on 23/11/92. Loco 9 was taken away immediately for washing. It may be some time before locos enter service as most require a lot of work as well as repainting.

Don Drysdale (Loco Driver BHP/AIS) via Harry Wright 2/93

CHERYL CHRISTIANSEN, Melaleuca Station, Chinderah

This tourist attraction being established near Murwillumbah is supposedly going to feature a steam train.

Australian Canegrower 11/1/93 via Chris Hart

MULWALA EXPLOSIVES FACTORY, Mulwala 610 mm gauge

(see LRN 63 p.6)

As part of the upgrading of the factory, it is intended that the existing tramway system will be relaid and rolling stock refurbished. Trucks are to be fitted with roller bearings and Willison couplers.

A. Maggs, I.S. Photios 2/93

NEW SOUTH WALES CO-OPERATIVE SUGAR MILLING ASSN LTD Condong Mill 610 mm gauge

(see LRN 40 p.5)

Ruston & Hornsby 4wDM 371969 of 1953, previously on display near the mill, was removed some time ago to the mill workshop for restoration by mill apprentices. Unfortunately, this project currently seems to be in abeyance, and the locomotive remains in pieces. Some items of rolling stock previously displayed with the diesel loco remain in their original position but in a state of some disrepair.

Harry Wright 2/93

QUEENSLAND

BABINDA SUGAR LTD 610 mm gauge

(see LRN 91 p.10)

It is reported that Babinda Mill has proposed to the Queensland Sugar Corporation that its raw sugar should be transported by tramline from Babinda

to Mourilyan Harbour instead of by road transport to Cairns. Savings would be expected to be in the order of 30%. (Sugar could be transported entirely on the tracks of the Bundaberg Sugar group, via Goondi and Mourilyan Mill - Ed.)

Australian Canegrower 2/11/92 via Chris Hart.

BUNDABERG SUGAR CO LTD, Mourilyan Mill 610 mm gauge

(see LRN 91 p.10)

It is reported that multiple-unit equipment is being fitted progressively to Mourilyan locomotives as they are refurbished. It is thought that Clyde 0-6-0DH 4 (63-288 of 1963) was the first unit to be so treated, during 1992. Work being done to develop locomotive remote control capability is understood to be associated with a possible move to driver only operation of cane locomotives.

(see PIONEER SUGAR MILLS LTD, Pioneer and Inkerman Mills)

PIONEER SUGAR MILLS LTD, Pioneer and Inkerman Mills 1067 mm & 610 mm gauge (see LRN 91 p.14)

Inkerman Mill, Home Hill, 3 ft 6 in gauge Hunslet 0-6-0T *Inkerman* No.1 (1119 of 1913) sits "preserved" in the mill yard, 13/9/92.

Photo: H.J. Wright

Further extension of CSR group tramways is anticipated to continue for the 1993 season, with new construction expected for Inkerman Mill, Pioneer Mill and Invicta Mill in line with district industry expansion. There is also talk of some sections of Pioneer Mill track (1067 mm gauge) being dual gauged with 610 mm gauge to enable Kalamia Mill stock to work up river of Macdesme into what is now Pioneer Mill territory, as a move towards more flexible crushing arrangements.

Bob James 1/93

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 91 p.11)

Quite a number of locomotive changes took place at Macknade Mill during the latter part of the 1992 season. E.M.Baldwin 0-6-0DH 14 (6-2490-1-7-68 of 1968) returned to service on the sugar run to Lucinda from 12 October and remained there for the end of the season. Victoria Mill's 0-6-0DH *Hobart* (4413-1-7-72 of 1972) was on loan to Macknade from 15 to 28 October, and would have stayed longer had not its final drive failed. It was towed back to Victoria by Macknade's E.M.Baldwin 0-4-0DH 17 (6-1446-1-9-65 of 1965) on 28 October. 17 was placed on cane haulage at Macknade from 28 October to 2 November, replacing much more powerful locomotives. It usually worked on the Hawkins Creek line, and was able to haul a maximum of 122 bins when its sanders were operable. Inkerman Mill's Clyde 0-6-0DH DHI.2 of 1954 (formerly *lona*) arrived at Macknade on 29 October, and its torque converter was successfully transferred to Clyde 0-6-0DH 12 (65-434 of 1965). It is reported that 12 will get a new converter and that *lona* will have its converter returned so that it can be transferred to Victoria Mill for use as a yard loco.

Victoria Mill's preserved Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) was used for passenger rides at the Maraka Festival on 24 October and at the mill social club Christmas party on 12 December. Just before Maraka, *Homebush* was painted in a new yellow and green livery. The green replaces the grey and the yellow has been extended to a lot more of the trim including the coal rails.

The two Hansen linecars currently in use at Victoria were renumbered during the season. Hansen 56 of 1972 (formerly numbered V2) was renumbered LCAR 2, and Hansen 1920 of 1978 (formerly V5) was renumbered LCAR3.

Victoria's Walkers B-B DH *Clem H McComiskie* (605 of 1969) was out of service from 20 November with a seized gearbox. After Baldwin B-B DH *Darwin* (6171-1-9-75 of 1975) took over the sugar run for one day, *Wallaman* (6400-3-4-76 of 1976) returned to its former duties and remained there until the end of the season.

Of the smaller Victoria locomotives, E.M.Baldwin B-B DH *Albany* (6-1792-1-11-66 of 1966) does not seem to have seen use since the 1992 slack season, and its former slack season job, truck shop shunter, has been taken over by E.M.Baldwin 4wDH 8002-1-8-78 of 1978. This unit remains unnamed, but is referred to as "Hambledon" or "Hambledon loco". Malcolm Moore 0-4-0DH *Moore* (DH-112-GT-I of 1956) has remained with the navvies.

The Sugar Research institute carried out strain gauge tests on various Macknade locos in the last week in October. A small four-wheeled vehicle was marshalled between the loco and its load for these tests to be carried out and a mountain of electronic gear filled the loco's cab. The vehicle had a cane truck type frame, and had a Willison coupler at one end and a hook and ring at the other. It was weighted with the weight from the former Hambledon Mill's tare weight wagon.

The ex-Hambledon Mill sugar hopper and the existing one at Victoria have been moved to a new site across Forest Beach Road. The sugar loading area will be served by a short new branch line from the Lucinda/4 Mile line which will cross the 4 Mile Road.

The 1993 crop will be enormous, with nearly 4 million tonnes of cane to crush in a projected season of continuous crushing of 21.5 weeks. Some cane is already harvestable. This will require extra loco shifts and it is planned that 300 bins of cane per day will be transferred from Victoria to Macknade. To make this easier, the two bin fleets are to be integrated, with Macknade bins being upgraded accordingly. At Macknade, more work is being done on the automated yard, while another loop is being put in the Victoria yard.

Another 40-tonne Walkers B-B DH loco (ex QGR), plus a brake wagon, is understood to be on order by Victoria Mill, and bridges on the Bambaroo line are being strengthened to take the new loco.

*Chris Hart 12/92 & 2/93; Herbert River Express

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 90 p.13)

A residents' meeting was held on 27 January to discuss the proposal of Mackay Sugar to construct a new tramline through the Habana area. This line is intended to replace the steeply-graded existing north coast line built more than 30 years ago to carry cane from the Calen and Wagoora areas to Farleigh Mill. At this time, the Habana area was served by Pleystowe Mill, so the possibility of a more easily graded line through the area was not entertained. Now the formation of the Mackay Co-operative has made such

an idea feasible, but local residents, concerned about the effect on amenity and land values are voicing opposition, and a local committee has been formed to pursue the matter. Although construction is not likely to proceed for a number of years, it appears that Mackay Sugar is active in obtaining easements for the line. There is already a tramline network in the Habana area which previously served Pleystowe Mill, and is now connected to the Farleigh tramline network.

Mackay Daily Mercury 27/1/93: 28/1/93: 24/2/93: John Browning

MULGRAVE CENTRAL MILL LTD 610 mm gauge

(see LRN 91 p.13)

On 28 October, a leaking firebox stay rivet was detected on the fireman's (left) side of Fowler 0-4-2 *Nelson* (20273 or 1934), and the locomotive was withdrawn from "Mulgrave Rambler" service for repairs. Duties on the tourist train were taken over by Baguley 0-6-0DM No.1 (3377 of 1953). Two new stays were manufactured in the mill workshop and welded into position. *Nelson* returned to service on the afternoon run on 7 November.

Brakewagon 2, built for Mulgrave Mill by North Queensland Engineers & Agents in 1972, is not fitted with radio control, and is used for a few hours each day when loco 2 (Com-Eng 0-6-0DM A1001 of 1955) does a run on the steep "bump" line to the north west of the mill. The brakewagon unit has a rollback device for when it is behind empties, and is connected to the front of the loco, with a direct air connection, for auxiliary braking power when coming home with fulls. From about 12 November, as the crushing season neared its end, loco 2 and its brakevan were used in the Green Hill area. This meant that two locomotives had to be used together on the bump line, where a runaway would cross the Bruce Highway after derailing at catch points.

Sunday 22 November was the last day of operation for the "Mulgrave Rambler" for 1992, with crushing finishing in the early hours of the next day. The "Mulgrave Rambler" will commence operations again in June 1993.

Tom Porritt 12/92

OAKBRIDGE LTD, Cook Colliery, Blackwater 1067 mm gauge

(see LRN 92 p.12)

It was reported in the press that Cook Colliery was sold on 6 January 1993 to Oakbridge Ltd It was not made clear if the colliery was to be kept in operation.

AUSTRALIAN NEWSPRINT MILLS, Boyer 610 mm gauge

(see LRN 88 p.13)

The ANM house magazine *Newsprint Log* for December 1992 reported that the Boyer woodmill was being demolished under contract by Hazell Bros. Demolition commenced in October 1992 and will result in the mill being removed to ground level. Under the terms of the contract all salvaged equipment and material is sold by the contractor (although some of the profits from these sales are returned to ANM).

In an article on the history of the mill, it was stated that new employees would start out as "mule boys" working the small train which carried the billets from the Woodmill to the Groundwood Mill.

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm & 1029 mm gauge

P O Box 288, Alexandra Vic 3714

(see LRN 92 p.16)

The last of the freshly re-profiled wheelsets for Kelly & Lewis 0-6-0DM 4271 of 1936 were returned to the Museum on Saturday, 13 February. The Museum

is most grateful to the Emerald Tourist Railway Board which undertook this work at a very reasonable cost. Trial fitting of axleboxes and bearings to the wheelsets is now underway in preparation for re-wheeling the locomotive. The Museum also wishes to thank Alan Stebbing for the loan of his heavy duty trailer to transport the wheelsets.

Peter Evans 2/93

CARIBBEAN GARDENS, Scoresby 610 mm gauge

(see LRN 84 p.2)

Caribbean Gardens is open to host markets each Sunday and Wednesday. The railway operates each Sunday, and also on Wednesdays during school holidays.

John Browning 1/93

CHEETHAM SALT LTD, Laverton 610 mm gauge

(see LRN 91 p.20)

The processing site at Laverton has been retained by Cheetham Salt Pty Ltd for the time being. However, the salt harvesting area has been sold to become part of a new dual purpose development. The artificial wetlands of the brine concentrating system are to be retained for water birds and will eventually be handed over to Melbourne Water for management. This section contains the remains of the tramway used to obtain sand from the beaches of Port Phillip Bay to re-line the crystalliser pans. This will be left in situ.

The crystalliser pans will become part of the housing development. Cheetham retain the right to remove the rails from this section, but so far little has been done in this regard.

The Laverton Saltworks has a high industrial heritage value, and on this basis, Gary Vines of the Living Museum of the West has made an approach to the developer to retain a part of the system.

The proposal is to retain a section of tramway, the No.3 pump house and two crystalliser pans as part of the public open space in the development, as well as the route of the main "spine" of the tramway. The plan has met with cautious approval in principle, but many details will need to be resolved before it can be implemented.

Peter Evans 2/93

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 92 p.17)

Gembrook Restoration

Dismantling of Yanga Creek bridge, near Balranald, was scheduled to start

in February. This has now been deferred to April as the area is still flooded. This bridge will provide parts, particularly steel beams, for the three replacement bridges between Wright and Cockatoo.

Locomotives

12A returned to service on January 14 when it double-headed with 8A on the 10 am train. It has been out of service since 1982 when it entered Belgrave workshops for a total rebuild. The work was undertaken by ETRB staff and volunteers. It turned out to be a long operation because of more urgent work involved in maintaining the other locos. One of the first tasks was straightening the frames.

On 15 January, it made its first solo commercial run hauling the 11.15 am train and the 3.35 pm train from Lakeside. It has since continued in daily service. 12A had made a trial run to Emerald on 12 January, hauling just an NBC van. From all reports, 12A is performing excellently, with very few teething troubles. It is said to have the sharpest, loudest exhaust of the four NAs, and steams as well as the best of them. 12A is painted overall black. Like 8A, it has a high gloss finish.

On Friday 29 January, 8A and 12A double-headed the first train of the day, both working funnel first towards Gembrook.

12A was built in 1912, working initially on the Beech Forest line. It worked on all the narrow gauge lines, although only spent five months on the Whitfield line in 1920. It worked on the Gembrook line in the late 1940s before going to Moe. It went into storage at Newport in 1954, miraculously surviving until 1972. In that year it went to Ballarat North workshops for an overhaul. It arrived at Belgrave in 1973, with a number plate reading NA12. This was replaced by a traditional style number plate in 1977. In the late 1970s it ran with red lining around the water tanks and cab sides. In 1981 it starred in the television serial *Come Midnight Monday*, having the honour of carrying the excellent name of Wombat. (See *Steam on the Two Foot Six* by Peter Medlin for a complete life history of all the NAs, and other Victorian 2 ft 6 in gauge locos.)

14A was taken out of service briefly during the busy Christmas-New Year period with a broken firebox stay. It was repaired in the evening and was back in service the next day. No other major failures occurred during the busy period.

Frank Stamford 2/93

ICI AUSTRALIA OPERATIONS PTY LTD, Deer Park 762 mm gauge

Consulting engineers Hardcastle and Richards Pty Ltd are undertaking a feasibility study into the reconstruction of the tramway system used at ICI's

Deer Park Explosives Factory. This system is believed to use diesel? locomotives running on 20 lb/yd rails. One of the reasons for the reconstruction is the occurrence of derailments at points, which are not surprising as the locomotives have been found to have a gauge about one inch wider than the trucks.

Colin Harvey 2/93

MELBOURNE WATER 762 mm gauge

(see LRN 85 p.18)

An auction was to be held on 16/17 March 1993 at 82 Chifley Drive, Preston. Included on the second day was a quantity of mining locomotive equipment.

The Age 27/2/93 via Colin Harvey

MET BURWOOD TRAMWAY EXTENSION (standard) 1435 mm gauge

A new extension to Melbourne's tramway system is under construction along Burwood Highway. Of particular interest to this Society is a small "locomotive" used to haul a welder along the track, as the track is assembled, prior to being set in concrete. The "locomotive" is a small diesel dump truck of the type commonly seen in plant nurseries, and has been fitted with flanged wheels. The steering has been disabled and drive is to the axle on the dumping end of the body only. It is not known if the differential of the dumper is locked or not.

The generator/welder set retains its rubber tyres and trailer style ball joint connection to the dumper. The tyres rest in an aluminium frame fitted with four flanged wheels of small diameter. The whole unit is painted green, and from the fresh paint on the dumper, it would appear that it has been modified expressly for this job by its owners, Burnson Plant Hire.

Peter Evans 2/93

SECV, Yallourn & Morwell 900 mm gauge

(see LRN 92 p.18)

The above establishments were again visited early Saturday, 30 January. At the time of making the necessary arrangements, we were informed that the railway was operating 24 hours a day, seven days a week, but that no guarantee could be given that there would be trains running when we visited. Such proved to be the case as the Morwell Briquette Factory, which is run by the Coal Corporation of Victoria, was operating at only 25% capacity due to most of the presses being under repair, so, despite a general shortage of briquettes, the factory was unable to utilise the railway's carrying capacity and trains were at a standstill.

Despite the "outage", we were given a tour of the railway by being driven along the road which parallels the line, from Morwell to Yallourn and back. First stop was at the Morwell Ditch Bunker, overlooking the vast Morwell open-cut, where the trains dump their load and conveyors remove the coal to the nearby briquette factory.

A kilometre away, on the north side of the open-cut, another stop was made to inspect the remains of a derailment which occurred on Christmas Eve (someone in a hurry to get home?). It appears that an empty train being propelled back to Yallourn derailed after entering No.11 loop. Several wagons derailed and a fifty metre length of the 94 lb/yard track was somewhat mangled and twisted. Wagon Nos. 751, 789 and 791 were noted at the trackside minus their bogies which were lying nearby. The overhead was also damaged as the derailing wagons turned some of the wooden poles into "toothpicks". Needless to say, this loop is now out of use!

Four kilometres further on we crossed the Morwell River and reached No.9 loop. Two trains were found here: loco No.125 (Hitachi 102/1967) on a Morwell-bound full and loco No.123 (Henschel 29857/Siemens-Schuckert 6110/1962) on a Yallourn-bound empty. As empty trains usually need to wait here a while for the cross, it appears the drivers take the opportunity to top up the sand boxes judging by the amount of sand around.

A short distance to the north of this loop, we veered eastwards along the recently laid track around the east Field. This deviation was measured at 4.8 km and was laid to allow coal to be won by extending the existing Yallourn open cut (see LRN 86 p.18).

The track here appears very good having deep ballast, new sleepers and is very well laid. It makes a contrast with the track along the original sections which is quite rough, the rail joins in particular need packing and re-ballasting. The CTC was noted out of use and we were advised that train safeworking is by staff.

At Yallourn a quick visit to the new loco depot revealed one of the John Fowler 0-6-0DMs in the shed and quite a number of derelict electric locos, some partly cannibalised. Rows and rows of out-of-use wagons combined to create a rather sombre scene.

After a visit to the Coal Loader, we moved on to the workshops, unfortunately locked-up. Another of the Fowler diesel-mechanicals was standing outside. Carrying builder's No. 4210049/1951, it had the No. "30L/12" in large painted lettering on the side. According to LR 84 this builder's number is allocated to loco No.13. Can anyone advise when the re-numbering took place, or explain this apparent discrepancy?

According to local sources, the SEC plan to replace the railway with an 18

metre wide heavy-duty road on the existing railway formation, with huge trucks, run by contractors, each carrying 90 tonnes of coal. By comparison the existing 700 series rail trucks are about 32 ft long, 9 ft wide and 10 ft 6 in high and carry 33 tonnes, so one can imagine how big the road trucks will be!

Amongst the unanswered questions at the moment are, how does the SEC propose to transport the coal to Morwell after the railway is closed and before the private road is built? and when will the railway close? Local opinion on the latter question is sometime mid-year, thus bringing to an end over one hundred years of rails among the brown coal. Should any readers be able to answer any of the above queries please let us all know via these pages!

Colin Harvey & Phil Rickard 2/93

SOVEREIGN HILL, Ballarat 610 mm & 458 mm gauge

Mine tramways at the site are 1 ft 6 in gauge and can be found both on the surface and in the underground tourist "mine". The firewood line serving the boiler house is 2 ft gauge, and two firewood trucks were noted.

John Browning 1/93

WESTERN AUSTRALIA

MOUNT MAGNET 610 mm gauge

(see LRN 91 p.20)

Greenhill Electrical in Kalgoorlie advertised near new condition Gemco, 1.5 ton underground locomotives complete with batteries and rectifiers for \$6000 or near offer. The locos came from Western Mining's Mount Magnet workings (possibly the Hill 50 Mine) but also did a few months underground work under contract in the Kalgoorlie area. The locos were bought by Greenhill Electrical at an auction of mining equipment.

West Australian 12/12/92 via David Whiteford & C.B. Morris 1/93

YARLOOP 610 mm & 1067 mm gauge

(see LRN 83 p.15)

Further to the report in LRN 83, Bunnings have ceased consigning timber from their Yarloop mill by rail and Westrail has closed the Yarloop siding to traffic. The mill diesel loco (Clyde?) is now preserved in the Historic Mill workshops.

The short 610 mm track serving the Historic Mill Workshops' "steam room" main boiler is now in use with one four wheel trolley for taking in firewood to the boiler.

David Whiteford 11/92

Bunnings (formerly Millars) Yarloop mill Clyde diesel preserved in the Historic Mill Workshops, 22/11/92. The loco was introduced into service in 1973 and last worked in either 1991 or 1992.

MEETINGS

MELBOURNE: THINGS IN THE BUSH

With the results of an intensive survey of the Rubicon bush at hand Peter Evans will be speaking of his work in contributing to the Register of the National Estate. In particular, he will focus on how this register applies to timber tramways. Peter will be showing much of his collection of slides depicting remains in the Rubicon bush to illustrate the points raised in his presentation.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 8 April at 8.00 pm.

SYDNEY: VICTORIAN INDUSTRIAL RAILWAYS

At our April Meeting Peter Charrett will show slides of the varied, but not well known, industrial railways that have operated in Victoria. Tunnelling operations predominate with the Melbourne Underground construction, MMBW and private contractor tunnelling as well as the more conventional surface tramways.

LOCATION: Woodstock Community Centre, Church St Burwood Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 28 April at 7.30 pm

ADELAIDE: Contact Arnold Lockyer for details. Phone: 08-296 9488
LOCATION: 150 First Avenue, Royston Park.
DATE: Tuesday 27 April at 8.00 pm.

OBITUARIES

PHIL BELBIN

Phil Belbin, railway painter and preservationist, passed away on 9 April, after a long illness. Phil painted many railway subjects, and my favourite a copy of which (cut from a calendar) hangs on my wall, is of one of the world's first Beyer-Garratt locomotives crossing the Montezuma Falls bridge on the 2 ft gauge North East Dundas Tramway in Tasmania. It is full of atmosphere and excitement and takes me back to a bygone era. Phil passed on to his sons, Bruce and Graeme, an interest in steam locomotives and the family owned a number of 2 ft gauge locos from Queensland at various times, having hoped to have their own operating railway. The most precious item was a Forney patent Baldwin 0-4-2T which had been brought out from the USA in 1889 to Fairymead Mill at Bundaberg. Phil and Graeme obtained the remains of this machine, which had deteriorated greatly from being preserved in a park close to the ocean, from Bruce Macdonald, who had saved it in the first place, and I well remember seeing parts of it carefully stored in various parts of the Belbin house and garden in St.Ives in 1978. Restoration of the Baldwin began in 1990, and Phil was determined that no expense should be spared in "doing the job properly", and the magnificent timber cab, the riveted tank and the working box headlamp are three of the more obvious fruits of this policy. Seeing the Baldwin in steam seemed to have become his main ambition in his last months of life and indeed he lived long enough to see it in steam on 27 March. The completion of the Baldwin's restoration was the final achievement of a life filled with achievements. All who see the locomotive, or even photographs of it, will agree that Phil Belbin has left behind him something of great value to us all, which will no doubt provide enjoyment to many. My personal memories of Phil are of a true gentleman who welcomed my wife and myself to his home and was more than happy to share with us the excitement and affection he felt for the railway locomotive, and to do so

with all modesty with respect to his own talents and achievements live on in his artistic work and in the locomotives he helped to save.

John Browning

SPENCER GEORGE

It is with deep regret that we record the death of LRRSA member Spencer George. Spencer had been an active member of this Society since 1980, and was a regular at the Victorian entertainment meetings and attended most tours, especially those which involved bushwalking. Bushwalking and running were two of Spencer's favourite activities. He was one of those people who always seemed to appreciate the positive in life, and his cheery smile and ready conversation were a prominent element of his personality. Spencer had also been an active volunteer on the Puffing Billy railway for the past seven years regularly taking on the role of conductor, assisting with garbage patrols, and taking part in the Gembrook restoration. He also assisted with the administration of the "Great Train Race". On several occasions he had taken place in the race itself. He decided to participate again this year, but collapsed and died during the event. He will be sadly missed. The LRRSA wish to express our sincere condolences to Spencer's family.

Peter Evans 5/93

NOTES, CORRECTIONS & COMMENTS

SECV. Yallourn 900 mm gauge

(see LRN 93 p.17)

The loco list given in LRN 32 (p.12) shows John Fowler 4210049 as being numbered 12. The list in LR 84 is in error, with the identities of numbers 12 and 13 transposed.

IDA BAY RAILWAY, Lune River 610 mm gauge

(see LRN 92 p.15)

In 1975, John Browning inspected two steam loco frames stored at an Evandale property. He understood that they were owned by the Van Diemen Light Railway Society. It was his belief that these were both from 0-4-0WT locos, the first Orenstein & Koppel 718 of 1901, from the Magnet Tramway (No.2), and the second John Fowler 17732 of 1927, from the Tullah Tramway. One might surmise that these are the loco frames observed by Peter Medlin.

PURCELL LOCO, Hicks Bay, New Zealand.

Chris Hart draws attention to an article in *The New Zealand Railway Observer*

No.212, Summer 1992-3 about a 3 ft gauge 0-4-0PM loco supplied in 1923 by Purcell Engineering, Auburn, NSW.

AUSTRALIA POST - STAMPS

(see LRN 80 p.2)

A new 45 cent definitive stamp issue is to be released by Australia Post on 1 June 1993. The theme of the issue is "trains" and there will be six stamps in the set both normal gummed and peel and stick (booklets). The actual trains depicted are unknown at this stage.

Australian Stamp Bulletin No. 219 via Peg Hayes 4/93

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

BUNDABERG FOUNDRY ENGINEERS LTD, Queensland

(see LRN 85 p.3)

It is reported that an ex-QGR Walkers DH class B-B DH loco has been obtained for conversion to 2 ft gauge, possibly "on spec".

Bob James 4/93

EIMCO AUSTRALIA LTD, Broken Hill, NSW

(see LRN 90 p.3)

Eimco have shifted their Broken Hill branch premises to 2 Kananadah Road from the temporarily rented site used previously. It is reported that no rail equipment is on site.

Ray Graf 3/93

TOUR REPORT - VICTORIA

WYELANGTA WEEKEND WANDERER

The Society put on its second West Otway tour on the weekend of 21 and 22 November 1992 to look at the significant tramway and mill remains on Knott's line at Arkins Creek. It was a wet miserable welcome to the 25 excursionists who assembled at 10 am in the Beech Forest Tourist Information Centre in anticipation of two days of tramway walking. As the rain tumbled down tour leader Norm Houghton announced a change of plan for the Wyelangta portion due to logging operations taking place in the intended walk area. The Saturday tour would include a look at the Arkins Creek tramway and possibly parts of Kincaid's tram at Stalker while the Wyelangta segment would be looked at on Sunday. The rain refused to abate and after waiting

for an hour, the group voted to begin the tour regardless. The group then drove 6 km to Delaney's Track at Kincaid and turned through the gate (kindly opened for the tour by the Gellibrand staff of DC&NR) for the final 2 km to the jumping off point. Multiple layers of water proof clothing were pulled on, umbrellas unfurled and after a brief historical introduction from the leader, the group plunged into the wall of sodden, leech encrusted foliage on the downhill jaunt to Arkins Creek.

At the creek level, the group picked its way along the edge of what is arguably the world's largest clump of blackberries (350 m x 120 m) until arriving at the site of the twin bridges built for Kincaid's and Driver's trams in 1911 and 1920 respectively. Fragments of the bridges were located, including one intact pylon still in a vertical position.

After this, the group wove a path along the blackberry edge and down into a watercourse until coming to Kincaid's mill site (1911-1919). Twin sawdust holes, woodwork, bolts and ground impressions clearly mark the site. The tour then retraced its steps to the bridge sites, crossed the creek at Driver's bridge and clambered up the steep bank where at the top could be seen a section of decking. A short distance to the west downhill, some more remains of Kincaid's bridge were sighted including another pylon with a bolt attached. The group speculated on the height of both bridges and the general consensus was about 20 m above the centre of the creek.

Then began a 600 m walk along the Kincaid/Driver formation cut into the side of the spur. One solitary piece of wooden rail was sighted en route. After rounding the tip of the spur, the group ploughed through the dripping ferns until coming to Kincaid's winch site. Various relics were observed, such as wood fragments, bolts, wire rope, beer bottles and tramway wheel pedestals. The rain had not eased at all and as the remains at the head of Driver's incline are barely discernible under the ferns at the best of times, the leader turned the group around and all headed back the way they had come in. After another 40 minutes of rain drenched plodding the group staggered up the slippery slope to the ridge top and out along the level ground to Delaney's Track. It was decided to have lunch undercover at Beech Forest and most made their way to the tourist shelter.

An intended walk along part of Kincaid's tram at Stalker was abandoned and with half the group calling off the rest of the tour, the remaining few adjourned to Colac. More than 25 mm of rain fell that day. The planned entertainment meeting was cancelled but a few hardy souls gathered in a motel room that evening and viewed Norm Houghton's revised batch of West Otway railway and tramway slides.

Next morning a dozen hopefuls assembled at Ferguson for the Wyelangta

tour to look at the remarkable remains in and around Knott's No.3 mill. The mill closed in 1928 and there has been no logging near it since then to disturb the remains and earthforms. Light, intermittent rain was falling but this had cleared by the time the walk commenced on the ridge top above the No.3 mill site, 3 km south east of Wyelangta.

The tour leader crashed his way through the scrub in a hairy downhill 500 m off-course meander along a stinking gully until coming onto the lower log tram near the mill site. The leader explained his misdirected navigation as a zealous over-correction to miss a particularly nasty gully on the left. Once on the log line, the group marched north to the bottom of the incline over two bridge sites across slippery "V" shaped creeks and up to the tramway interchange point. Here an inspection was made of various ground marks, earthworks, metal fragments and twisted iron rails.

A brief, stand-up lunch break was taken before heading south across the main creek to the mill itself. The substantial remains of the double width bridge were inspected and then the mill site was gone over. Of particular interest were the three concrete foundation blocks for the boiler, engine and flywheel. The site offers an easy interpretation and presents itself as a very professionally laid out mill.

Then began the walk along the upper log line, slipping and sliding down the gully sides at the bridge sites and panting pulls in the greasy mud up the other side. The three children on the tour enjoyed the slides immensely.

Soon all walkers were smeared to a dirty brown colour from chest to boots. A 20 m knotted rope lugged all the way by the leader was gratefully used. The leeches were very active so a leechwatch procedure was put in place to observe each other's head, face and neck for the presence of these loathsome nasties. Every few minutes of the walk was punctuated by a "Have I a leech on my ...?" query. On and on plodded the little group along the perfectly defined and completely intact formation perched at a dizzying height way above the creek. Then it was through the top of the spur via a deep cutting and down the incline to the two log landings, over more stinking slippery gullies, around huge trees blocking the way, until reaching the terminus. Clearly defined earthworks and metal fragments indicated the site's main function.

This incline arrangement was highly unusual in that the winch was placed on the opposite downslope with the wire rope routed upslope for 40 m to the cutting before dropping down the incline which was in the shape of a reverse "S" with hardly a straight piece in it at all.

After a short pause and mutterings about slave driving, the group reversed in its tracks and slipped, slithered and jerked its way back to the top of the incline. By this stage the little ones were tiring (and some of the adults were

too) so it was decided to head straight back to the mill via the lower log line along the creek. After a short walk along the upper line to the first projecting corner overlooking the creek, the group literally plunged over the edge and slid down a hair-raising 1 in 1 slope for 70 m to the lower log line.

At the bottom there was a creek crossing and this rounded off the pasting for the day as those with dry feet soon lost this comfort. The tram was followed until the next bridge site whereupon the leader called a rest to enable the children to play dam builders for a while and recover some energy for the final haul up the western slope to the road.

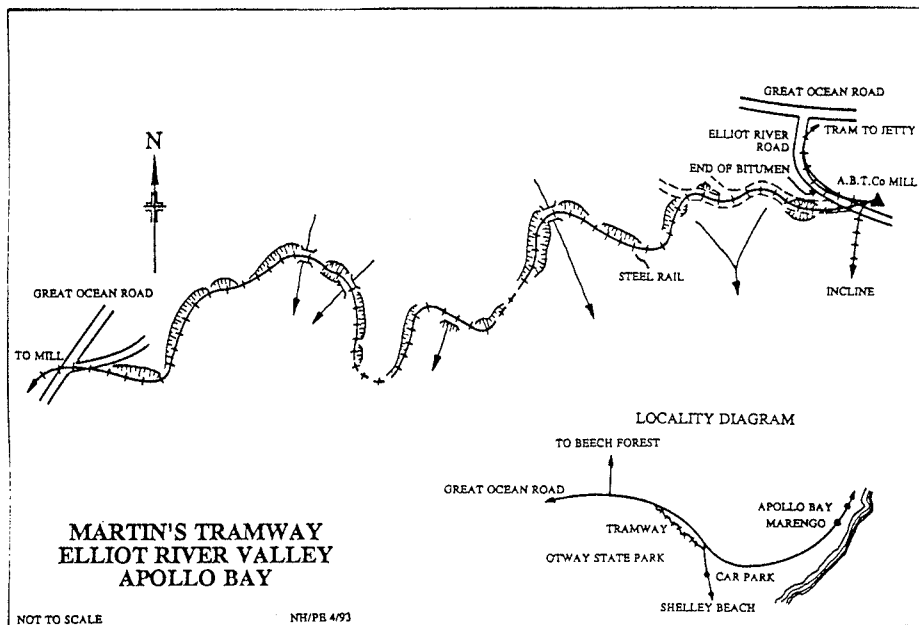

Then it was but a short hike back to the mill and a slow steady plod up the western log line route and the bush until bursting out of the scrub onto the road near the cars. The walk had taken five hours and was exhausting but all agreed it was a tremendous experience to visit the west Otways' most intact mill and log line site.

Mudlark 2/93

SITE REPORT - VICTORIA

MARTINS MILL, Apollo Bay 1067 mm gauge

Martin's Mill, 12 km north west of Apollo Bay, operated from 1912 to 1920 and used a 3 ft 6 in (1067 mm) gauge tramway to gain access to the Apollo

Bay jetty. Martin's line ran 3 km from the mill to connect with the 8 km Apollo Bay Timber Co line. I spent January and February 1993 bashing and hacking my way through the snake infested Elliot, Cleary and Parker River valleys looking for the A.B.T.Co log lines. As a relief from this largely unrewarding exercise (after finding just 100 m of severely eroded tram after five trips and 30 km of scrub bashing I went for a side jaunt on 14 February, on Martin's tram. I knew the location of the tram so the outing was almost a picnic stroll. Even so, it took me 1-1/4 hours to walk, plot, map and photograph 1300 m of the surviving remains. Modern logging has destroyed sections of the line but the route, although completely overgrown, is quite obvious otherwise. The tram runs alongside the Great Ocean Road, so readers passing that way may wish to stretch their legs for an hour or so along the route. Enter the Otway State Park via the Elliot River Road, proceed 200 m to the end of the bitumen and then walk to the right along the bulldozed and level track (which is the tram). I didn't see any snakes along this route because, to my reckoning, the hills are far too steep even for the snakes to crawl up from the valley floors. The route is level, so "happy walking".

Norm Houghton 4/93

NEW SOUTH WALES

EQUIPMENT IN TRANSIT 1067 mm gauge

Early on the morning of Friday, 19 March, a semi-trailer loaded with approximately twelve 3 ft 6 in gauge underground flat cars and bulkhead flat cars was seen heading westbound, approaching Mount Victoria. The cars appeared to be ex-Coalcliff Colliery. Can someone identify the destination of this equipment?

Ray Graf 3/93

GRAEME & PHIL BELBIN, c/- Rail Transport Museum, Thirlmere 610 mm gauge

(see LRN 89 p.5)

The two and a half year restoration of Baldwin 0-4-2T 1 *Fairymead* (10533 of 1889) reached its climax on Saturday, 27 March, when about 30 guests and visitors gathered by the loco shed at Thirlmere to witness the little engine's first run in steam since 1956. (see photo front cover)

At 11.40 am the fire was lit and, in just under an hour, the pressure gauge needle rose from its stopper. Forty minutes later, the pressure reached 140 p.s.i., the safety valve lifted, and the "crew" prepared to move off.

Graeme Belbin took his place at the throttle, Phil Belbin manned the whistle

cord and Bruce Belbin took charge of the bell rope.

At 1.28 pm, with a loud hissing from the drain cocks, number 1 at last moved off along the dual-gauge track, as a large group, reminiscent of a steam excursion photo line, recorded the event on film and video.

Where number 1 will go from here is uncertain at the time of writing, though a couple of possibilities are presently being investigated

Bruce Belbin 3/93

BHP LTD, Newcastle 912mm & 1435 mm gauge

(see LRN 84 p.4)

Two Goninan Bo-Bo DE standard gauge locomotives were observed derelict on 27 February. These 75-ton locomotives were 47 (011 of 1960) and 52 (016 of 1961).

Ray Graf 3/93

BHP LTD, Port Kembla 1435 mm gauge

(see LRN 93 p.11)

A blue and white painted diesel numbered D51 (ex K203, Goldsworthy 9) was seen from the freeway at approximately 4.30 pm on 17 March heading light engine towards Nebo and Kemira. The Mt Goldsworthy locos are to be renumbered as follows: GML3 - D46; GML5 - D47; GML6 - D50; GML7 - D48; GML8 - D49- and GML9 - D51. It is expected that 50-51 will work the Wonga run in multiple.

Ray Graf 3/93; Don Drysdale via Harry Wright 4/93

BULAHDELAH LOGGING RAILWAY 610 mm gauge

(see LRN 68 p.5)

The railway was visited on Saturday, 23 January. Perry 0-4-2T 7 (2714.51.1 of 1951) was in operation, but was running only on the top leg of the zig zag. Inclement weather had delayed the start of operations until about 1 pm. The line is laid with rail acquired from Timbertown Wauchope

Ray Graf 3/93

COALEX PTY LTD, Clarence Colliery, Newnes Junction 1067 mm gauge

A TV report on an industrial dispute here seen on the evening of 24 March showed a 3 ft 6 in gauge dolly car, with two passenger cars attached, entering a drift. Rail trackage was seen in other views but no locos or rolling stock.

Ray Graf 3/93

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 93 p.4)

Visitor attendance figures over the summer holiday period and the monthly running days up to and including Easter, have been considerably better than for the same periods during the last few years. This, along with pre-planned budgeting, put the Society in a much more secure financial position than for some time past.

The ILRMS operated a stand at the Sydney "N-Gauge Society's" exhibition at Miranda, with the pleasing results of raising more funds for the Museum from souvenir sales and in spreading-the-word about the Museum and its easy reach from Sydney's southern suburbs. Results of this publicity appeared on succeeding running days with the visit of numbers who had learned of the ILRMS at the exhibition.

The Museum has had the use of a 30-year old Fiat tractor for many years, after overhauling it and fitting a small lifting boom on the rear end, operated by the tractor's own raising/lowering mechanism, and a scraper blade on the front worked via a system of pulleys and cable from the same source. It all served its purpose, after a fashion, fifteen years or so ago, but fell into disuse as it was awkward to use. The tractor has recently been overhauled and a new hydraulic system built up on the frame from a Bobcat modified to fit the Fiat, with a new blade/bucket made up and new hydraulic hoses fitted.

Cairns 0-6-0 Hudswell Clarke 1706 of 1939.

The loco has been re-assembled after its re-tube, riveting repairs and other renewals. It was successfully steamed, passed its annual boiler examination and has had a couple of trial runs quite successfully. A full repaint from primer on bare metal upwards now must be carried out, hopefully in time for a planned Members celebration in June.

Wallaby 0-4-OST R & W Hawthorn Leslie 2988 of 1913 (1435 mm gauge).

Planned more than a year ago but held up by a shortage of labour, the weather protection "loco-port" for *Wallaby* is now complete.

Inspection Car Drewry 1338 of 1924.

Following problems with disengaging the drive and with lack of power when trying to get the unit in motion, the body has been removed, the cone-clutch re-faced and the carburettor is dismantled and undergoing full

refurbishment. It is planned to re-introduce this unit to active service in June on the same occasion as *Cairns*.

The electric tramway has been progressively re-sleepered with steel whilst being lifted slightly, to allow drainage. It was decided to complete this most necessary work before proceeding with planned extensions to the system which will eventually more than double its length whilst providing a proper service to Museum patrons, rather than just a ride. The work force from the tramway is temporarily diverted to construction of a light firewood tramway between a new road truck unloading area and the sawbench.

The preparations for the Museum's miniature 184 mm (7.25 inch) gauge line are slowly advancing, mainly away from the Museum site, such as manufacturing locos and rollingstock and, of course, cutting and preservative-treating the timber sleepers. A need exists for steel bar for rails and ties, far in excess of what is held in stock. The sizes are 25 x 6 and 25 x 10 mm (1 x 1/4 and 1 x 3/8 inch), so the Society would be very grateful for donations of these materials or a source of supply at the cheapest rate.

Tony Madden 4/93

INCITEC LTD, Heron Road, Kooragang Island, Newcastle 1435 mm gauge

A Hi-Rail equipped rubber-tyred tractor was noted here on 27 February, parked next to one of the small fleet of internal user wagons. It is apparently normally stored in a nearby shed which was being worked on. The unit is similar to SRA units used at Flemington car sidings and elsewhere.

Ray Graf 3/93

JACR KENNEDY, Broken Hill 610 mm gauge?

Observed on 25 November, stored at a site off an equipment yard at 33 Pinnacles Road (owned by Charlie Farraugher), were three Gemco battery electric locos owned by Jack Kennedy, which he has purchased for resale as follows:

Running No.	Battery Box No.	Type	Weight
ZGM303	ZGL303	4wBE	3 tonne
ZGM301	ZGL302	4wBE	3 tonne
Z22	ZLO9	4wBE	5 tonne

The 3-tonners are priced at \$3500 and the 5-tonner at \$3000. It is suggested that the higher price for the 3 tonne locos is because George Moss have been buying back locos of this type for refurbishment and fitting with new batteries for sale into the South East Asian market at a price of around \$62000 each. Gemco have been buying such units in the Kalgoorlie area but demand is

believed to have led to a general price rise.

Ray Graf 3/93

KIZACO ENGINEERING PTY LTD, Broken Hill

(see LRN 80 p.7)

This company was previously reported as having a contract to do major maintenance on Pasminco's battery locomotive fleet. On 25 November, 1992, it was noted that the premises noted previously, on Kananadah Road, have long since closed, although the company name is still apparent on the roof.

Ray Graf 3/93

LEYLAND BROTHERS WORLD, Tea Gardens 610 mm gauge

(see LRN 92 p.10)

The John Dunlop built steam outline loco was noted out of service on 23 January with a broken final drive chain, parked outside the "tunnel". There is also a monorail worked by human pedal power.

Ray Graf 3/93

MARSDEN WEIR STEAM MUSEUM 610 mm gauge

(see LRN 92 p 10)

The group responsible for restoration work at the Museum is the Traction and Vehicle Restorers Association Inc. Contacts are John Walker: (048) 21 7750; Neville Green, resident caretaker (048) 21 9724; & Leon Oberg (048) 21 3801.

Ray Graf 3/93

MENANGLE NARROW GAUGE RAILWAY, Campbelltown Steam and Machinery Museum 610 mm gauge

(see LRN 91 p.8)

Construction of the running line is progressing. When completed it will total 1.2 km in length, with loco shed and workshop to be provided. Quite a collection of locomotives was viewed on site on 14 March as follows:

0-4-0WT	Hudswell Clarke	1423	1923	ex Corrimall Colliery
0-6-0DM	Fowler	16830	1926	ex Condong Mill
4wDM	Motor Rail	11023	1955	ex Condong Mill
4wPM	Alwyn Zinn	3	1974	ex A.N.G.R.M.S.
4wDM	Malcolm Moore	1023	1943	ex Australian Army
4wDM	Ruston & Hornsby	304453	1953	ex Public Works Dept.
4wDM	Ruston & Hornsby	304455	1953	ex Public Works Dept.
4wDM	Ruston & Hornsby	304457	1953	ex Public Works Dept.
4wDM	Ruston & Hornsby	304460	1953	ex Public Works Dept.

N214	4wBE	Wingrove & Rogers	?	?	ex R.A.N. Silverwater
218	4wBE	Wingrove & Rogers	?	?	ex R.A.N. Silverwater
219	4wBE	Wingrove & Rogers	3845	1948	ex R.A.N. Silverwater
	4wPMR	Fairmont	?	?	ex Fairymead Mill

(P Neve)

The steam loco was out of use with wheels and axles out. The Fowler diesel requires attention with some engine work and attention to fire damage needed. The Motor Rail "Simplex" was out of use. The Zinn loco was in use hauling the two passenger cars built in the 1970s for use at the then preservation site at Colo Vale. The Malcolm Moore is said to have been stored at Wedderburn, Victoria before arriving in late 1992, and currently has no engine. (My records state it was offered for sale by the Department of Supply at the St.Mary's munitions plant in 1973 - JB). Ruston & Hornsby 304453 was in process of being shortened by having the end stocks cut off.

The three battery locos arrived with 15 flat top wagons from the Silverwater naval munitions plant in February 1993. (Builder's records state that Wingrove & Rogers 1604 & 1605 of 1940 were ordered for Newington, while in addition 2174-6, 2182 & 2215 of 1942 and 3845-6 of 1948 were ordered for Commonwealth of Australia, Sydney - JB). The unit numbered N214 was in use at the time of the visit.

(The Fairmont car owned by Peter Neve was sold by the QGR to the Beaudesert Shire Tramway in 1928. In 1944 it was sold to the Fairymead Mill, and was afterwards converted to 2 ft gauge - JB)

Ray Graf 3/93

TOD WATSON, Moama 610 mm gauge

(see LRN 85 p.7)

Decauville 0-4-2T *Frenchy* (246 of 1897) was returned to Moama from the Megalong Valley Tourist Railway at Blackheath some time ago. It was due to be auctioned on 9 May 1993.

*Industrial Railway Soc. (UK) "Bulletin" No.543
via John Browning & Ray Graf; Warrick Turner 5/93*

QUEENSLAND

BUDERIM GINGER LTD, Yandina 610 mm gauge

(see LRN 92 p.11)

The correct builder's number for the Krauss 0-6-0WT here is 4687 of 1901. It is running as a 0-6-0+4DH, with the power unit in the tender driving the rear axle on the loco. The conversion has been carried out with a view to

possible future operation with steam power through the use of a modern diesel-fuelled steam generator unit possibly placed inside the boiler shell. The two carriages constructed for the railway are mounted on ex-Burrinjuck Tramway bogies obtained from Fairymead Mill. The commentary on the train ride states that the loco was used on a logging tramway in New Guinea before coming to the mill in 1905. This information is believed to be oral tradition and no supporting documentary evidence is known to have been located to date.

John Browning 4/93

BUNDABERG SUGAR LTD & subsidiaries 610 mm gauge

(see LRN 87 p.10)

A high speed tamping machine is reported to be on order from Plasser Australia.

Bob James 4/93

GRAHAM CHAPMAN, Murrumba Downs 610 mm & 1067 mm gauge

(see LRN 83 p.9)

A large number of locomotives are now to be found here as follows:

2 ft Gauge:

0-4-0WT	Jung	1052	1906	ex W.Prost, Mossman (Mike Loveday - dsm.)
0-6-0WT	Krauss	5869	1908	ex North Eton Mill (dismantled)
0-6-0ST	Hudswell Clarke	853	1908	ex North Eton Mill (no saddle tank)
0-6-2T	Krauss	6854	1914	ex Bingera Mill (Mike Loveday)
0-4-2T	Hudswell Clarke	1078	1914	ex Moreton Mill (dismantled)
0-4-0PM	Purcell	999A	1922	ex Moreton Mill
0-4-0DH	Fowler	18801	1927	ex Plane Creek Mill
4wDM	F.C.Hibberd	2333	1940	ex Plane Creek Mill (private owner)
0-6-2T	Bundaberg	8	1953	ex Proserpine Mill (dismantled)
4wDM	Foundry Ruston & Hornsby	371381	1954	ex Plane Creek Mill (private owner)

3 ft 6 in Gauge:

4wWE	Goodman	6035	1950	ex SEC, Bulimba (Q bus)
------	---------	------	------	-------------------------

It is reported that the boiler from the Jung locomotive has been obtained from a site to the west of Mareeba, where it was in stationary use for some years. The loco was acquired in dismantled state by Mike Loveday after the boiler had been sold.

John Browning 4/93; David Mewes 4/93

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 93 p.12)

CSR has announced an immediate \$30m of upgrade work for Victoria Mill over the next 18 months as part of a \$90m package which is expected to boost the district's crushing capacity to five million tonnes by the end of the century. It is certain that this will involve the acquisition of more locos in the remaining years of the decade.

The ex-QGR Walkers DH class B-B DH purchased for conversion to 2 ft gauge for the 1993 season is reported to be DH30 (612 of 1969).

Victoria Mill's 4-ton Motor Rail "Simplex" 4wDM *Smokey* (4054 of 1929) recently returned to service after a lengthy period. A new full length canopy roof has been fitted and some electrical work, including the fitting of a beacon, carried out. Clyde 0-6-0DH DHI.2 of 1954 ex Inkerman Mill remained at Macknade Mill at the end of April with no decision as to its future clear.

*David Mewes 4/93; Herbert River Express 3/4/93
via Chris Hart; Chris Hart 4/93*

GIBSON & HOWES LTD, Bingera Mill 610 mm gauge

(see LRN 83 p.10)

Parked in the compound at the Wallaville depot on 3 May, was 0-6-0DH *St.Kilda*. This unit was rebuilt by E. M. Baldwin from a Ruston & Hornsby 0-6-0DH originally supplied to a Snowy Mountains Scheme tunnelling contractor. E.M. Baldwin serial number is 6-2179-1-6-67 of 1967. Coupled to the loco was a very heavy duty bogie flat wagon some 13 m in length. It is constructed in steel with a heavy wooden decking and mounted on what appear to be ex-Burrinjuck Tramway bogies.

John Browning 5/93

GYMPIE ELDORADO GOLD MINES PTY LTD, Monkland Mine, West of Scotland Shaft 610 mm gauge

(see LRN 92 p.13)

A nameboard indicates that the above company, a wholly-owned subsidiary of Devex Ltd, now operates the mining operation here. A view through the fence on 3 May indicated that a quantity of rolling stock as well as the battery locos mentioned in LRN 85 (p.10) is in storage at the back of the premises. The two Gemco 4wBE locos numbered 5C and 6C are still sitting on the surface near the headframe, although the battery box has been lifted off the one numbered 5C.

John Browning 5/93

CHRIS HART, Cordelia 610 mm gauge

(see LRN 89 p.11)

Chris Hart has purchased the Clyde Queensland petrol-hydraulic line car from Victoria Mill. This unit was built in 1965, and will join the similar unit from Macknade Mill which Chris acquired in 1992. It had not yet been moved from the mill at the end of April.

Chris Hart 4/93

ISIS CENTRAL SUGAR CO LTD 610 mm gauge

(see LRN 92 p.13 & 91 p.12)

The report in LRN 91 concerning a second ex-QGR Walkers B-B DH loco entering service was premature, as implied in the report in LRN 92. (Apologies - Ed.) It was thought that DH18 (600 of 1968) had been purchased by Isis Mill, but it is reported that in April this was still in store on railway property at Maryborough with no sign of work commencing on it.

A quick inspection at the mill on 3 May revealed that the remains of John Fowler 0-6-ODM 1 (20766 of 1935) have been removed from the area near the old sugar shed. It appears likely that this unit has been disposed of for scrap.

David Mewes 4/93; John Browning 4/93, 5/93

KOLAN SHIRE COUNCIL, Wallaville 610 mm gauge

(see LRN 92 p.14)

The unidentified German 0-6-0T ex Gin Gin Mill has been made available by the Kolan Shire Council to the Gin Gin & District Historical Society for eventual display at the museum at Gin Gin. In the meantime, it is expected to be moved soon to the premises of Peter Melville at Bullyard where cosmetic restoration will be carried out.

Neville Rackemann 5/93

TONY GERMANOTTA 610 mm gauge

(see LRN 86 p.13)

(See Mackay Sugar Co-operative Association Ltd)

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 93 p.13)

It is reported that an ex-QGR Walkers DH class B-B DH is to be obtained for conversion to 2 ft gauge for use at Racecourse Mill, and that the acquisition of similar units for other mills is under discussion.

Marian canegrowers have called for a direct tramline inter-connection between Marian and Pleystowe Mills in order to provide security against a

major breakdown at a mill. The tramline link would be approximately 3 km in length and estimated cost would be between \$2m and \$3m. Although a link between the two mills does exist, via North Eton, it is about 20 km longer than a direct route link. Mackay Sugar Chairman Graham Davies suggested that the money, if available, would be better spent on additional tramline extensions to reduce cane cartage distances.

Permission has been given by the Pioneer Shire Council for a tramway extension in Moohin's Road, Habana, served by Farleigh Mill. It is also reported that there are 16 growers whose farms a \$7m tramline deviation will traverse in the near future, and it is assumed that this refers to the north coast deviation line through the Habana area.

Meanwhile, concern has been expressed by Racecourse Mill growers that the proposed Balberra tramline (to the east of the QGR north coast line) has not yet been built.

On 18 April, Mirani Museum held a special event in connection with Heritage Week. Entitled "Men of Steel", an exhibition of photographs and cane locomotives attracted more than 100 past and present cane locomotive drivers. On display on the Marian Mill tramway outside the museum were Tony Germanotta's Perry 0-6-2T 2601.1.51 of 1951 (ex Marian Mill) and a number of Marian's current diesel locomotives. A booklet "Cane Tramways and Locomotives of the Mirani Shire", compiled by John Browning and published by the Mirani Shire, was on sale. This contained details of the tramways and locomotives of North Eton, Marian and Cattle Creek Mills.

Bob James 4/93; Mackay Daily Mercury 21/3/93, 2/4/93, 16/4/93, 19/4/93; John Browning 4/93; Canegrowers 1992 Annual Report via Chris Hart.

PARKYS PARTS, Alice Street, Maryborough 610 mm gauge

(see LRN 65 p.10)

John Fowler 0-6-0T 11165 of 1907 still lies in the wrecking yard as reported some five years ago. Little seems to have changed except the size of the lantana bushes growing out of the boiler lagging.

John Browning 5/93

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 89 p.13)

Plane Creek Mill is facing the need to make alternative transport arrangements for 25% of its cane which until now has been brought to Sarina from the Carmila area by QGR train. QGR informed the mill in 1992 that the then current transport arrangements would not be able to be continued into 1993, affecting cane haulage and tipping. The mill has successfully

negotiated with QGR to continue the current system for one more season, but a new system has to be found for 1994. Road, rail and tramline transport have been investigated and there is a chance that the long mooted Koumala-Carmila tramline, possibly extending beyond Carmila to Flaggy Rock, some 50 km south of Koumala, may be the preferred solution. It is likely to be the most expensive option in terms of initial cost but the most economical in operating terms.

Canegrowers 1992 Annual Report via Chris Hart; John Browning

CLIVE PLATER 610 mm gauge

(see LRN 68 p.8)

Clive Plater is reported to have taken delivery of a number of further items from the Sunshine Plantation, possibly to premises at Eudlo. The first is John Fowler 0-6-0T *Coolum* (16036 of 1924) believed to be the property of his father, Edgar Plater. This unit was delivered new to Moreton Mill. He has also obtained the remains of a Ruston & Hornsby 4wDM Model 30DLU which was never used at the Sunshine Plantation, but was obtained for spare parts. Recent research indicates that this unit is 285340 of 1949 and that it was acquired from Proserpine Mill. It was originally supplied to the Victorian State Rivers & Water Supply Commission for the Tarago River Aqueduct Tunnel Construction. Clive also has obtained the engine and transmission from the unidentified Ruston & Hornsby 4wDM Model 44/48hp loco which is to be rebuilt as a diesel hydraulic at the Sunshine Plantation.

Bill Cole 4/93: John Browning

PIONEER SUGAR LTD, Pioneer Mill 1067 mm gauge

(see LRN 93 p.12)

It is reported that ex-QGR Walkers B-B DH DH22 (604 of 1969) has been purchased for spare parts.

David Mewes 4/93

SUNSHINE PLANTATION, Forest Glen 610 mm gauge

(see LRN 32 p.10 & 46 p.6)

Two 4wDM locos are in regular use. They are based on Ruston & Hornsby Model 48DLG 4wDM locos rebuilt as 6-tonne steam outline diesel hydraulics by E.M. Baldwin. They are now fitted with Deutz 67hp engines. SUGAR CANE TRAIN No 4 is green and black and is RH 379072 of 1954 rebuilt EMB 7807-1-11-77 in 1977. SUGAR CANE TRAIN No.5 is yellow and black and is RH 398072 of 1957 rebuilt EMB 8350-1-12-78 in 1978. The trains of twelve four wheel carriages run around a circuit with one very steeply graded section. There are

two trailing points, one in the depot area, and one to a service siding on the steep section. There are two sidings in the covered depot area. one train is stabled on the main line, and the other on the long siding. The second depot siding is a short one on which was noted a very neat green ballast hopper wagon, reportedly built by Sunshine Plantation. A couple of flat wagons were noted on the service siding.

SUGAR CANE TRAIN No.3 has been dismantled with a view to rebuilding to the same specification as the E.M. Baldwin rebuilds mentioned above. This unit is an unidentified Ruston & Hornsby 4wDM Model 44/48hp, which is believed to have been built for the British Royal Air Force, and was in Moreton Mill service for a while from 1970.

Two locomotives have departed the site in recent times. One is John Fowler 0-6-0T *Coolum* (16036 of 1924). The second is the chassis of a Ruston & Hornsby 4wDM Model 30DLU, probably 285340 of 1949. These units are believed to have gone to Clive Plater (see elsewhere this issue). Clive is also believed to have acquired the engine and chassis from SUGAR CANE TRAIN No.3. A second station has been built on the circuit. Named "Rainforest Stop", it serves the nearby rainforest walks and children's animal nursery.

Karen Heinze recently qualified as a loco driver at the "Big Pineapple", and is said to be the first woman in Queensland to hold a "Simplex Oil Locomotive" licence.

John Browning 4/93: Courier-Mail 10/4/93 Bill Cole 4/93

TULLY SUGAR LTD 610 mm gauge

(see LRN 91 p.15)

The second ex-QGR Walkers DH class B-B DH acquired for conversion to 2 ft gauge is reported to be DH63 (650 of 1970), which along with DH66 (653 of 1970) is expected to enter service for the 1993 season. The conversion work is being carried out by Walkers at Maryborough.

David Mewes 4/93

TASMANIA

IDA BAY RAILWAY. Lune River 610 mm gauge

(see LRN 92 p.15)

It is expected the steam locomotive built for this railway in 1936 and recently restored will be operating on the line during May.

(see LRN 93 p.15)

Restored Kelly & Lewis 0-6-0DM 4271 of 1935

Photo: Peter Evans

Kelly & Lewis 4271 returns to the rails.

On the afternoon of Easter Saturday, 10 April 1993, Kelly and Lewis 0-6-0DM 4271 of 1935 was officially returned to service. A short ceremony was held on the station platform in the presence of a large number of local people and tourists visiting the Museum. Ernie Le Brun, one of the Museum's "Living Treasures" made a short speech in which he recalled his association with the Rubicon Lumber and Tramway Company, and the time he last saw the diesel locomotive in service during the transfer of a load of timber from

the wooden line to the steel tramway at Tin Hut (Rubicon). Ernie drew an interesting historical parallel between the locomotive's "nick of time" arrival in Alexandra on Saturday, 1 December 1935, to start services on 3 December, and its physical return to the rails a scant 36 hours previously. Ernie then broke a bottle of champagne over the front buffer beam to rename the locomotive "The PIONEER". With Bryan Slader at the controls and Ernie and his wife Rose in the cab, the Kelly & Lewis glided out of the station with its first ever train-load of passengers.

There are a number of people whose contributions to the restoration of this locomotive must be mentioned, although as Ernie stated in his speech, it is like picking the best player in a football team. Restoration of the locomotive was begun by Ian Bowering and Alan White who dismantled the superstructure and removed the engine which was seized solid. Alan and his father arranged for the provision of new pistons and cylinder liners and the re-metalling of all of the main bearings in the engine.

The project languished for a time until Paul Simpson, who owns and has restored the sister locomotive to 4271, came to the rescue. Paul devoted several lengthy periods of his annual leave to the dismantling of all of the running gear, repaired the springs, and manufactured several replacement parts from the original drawings. He also provided some spare parts purchased with his own locomotive in order that the pioneer diesel be as close to its original condition as possible. Paul provided the major impetus which got the project underway again.

While the wheel flanges were being built up with weld, and later re-profiled by PBPS, the SEC crew at Rubicon sandblasted the cab and bonnet and repainted them in their spare time. They also supplied transport services and lifting gear required for this job. In particular, David Creighton deserves special mention.

Bryan Slader took up the re-assembly of the locomotive as his personal project. Under his skilled attention, what is virtually a brand new engine was carefully put back together from a huge pile of parts. Bryan also arranged for Ron Stephenson to repair a cracked axlebox and to re-metal the bearing. At the end of his already long working day, Bryan often worked until midnight on the re-assembly of the locomotive. The final result is a tribute to his dedication, care and skill.

Bryan stated that he would have the locomotive back in running condition for Easter, and he was as good as his word. It touched the track once again at 1.00 am on Good Friday morning. Later that same day, the break-gear was reassembled and a hurried coat of paint applied to several places which still showed primer. Several circuits of the track were made to test clearances,

and all was ready for the re-launching on Saturday. At the ceremony, Bryan was presented with an engraved pewter mug by the Museum volunteers in appreciation of his work.

There is still much of a cosmetic nature to be done on the locomotive, but this will have to wait until improved arrangements are made for its secure storage. It is hoped to have a second ceremony as close to 14 December as possible (the date of the original naming ceremony in 1935), at which time the totally restored locomotive will once again take pride of place at the terminus of the tramway for which it was originally built.

Easter running period.

The Museum has had its best running period over Easter, to date. Takings were significantly above those of previous years and the many pleasing comments made by visitors about the state of the grounds and the diverse nature and high standard of restoration of the exhibits, were most gratifying. Once again, Lloyd Gould generously loaned his two portable steam engines to the Museum to augment our exhibits over the Easter period. The success of the four open days is due to the hard work of the small group of volunteers who prepared and manned the Museum prior to and during Easter. A big "thank you" to all involved.

Tenure of the land.

After many years of frustration, a positive outcome may well be in sight. The Department of Conservation and Natural Resources has requested that the Public Transport Corporation withdraw from sale the land on which the Museum is established and hand it over to them so that it may be retained for historic purposes. As a further encouragement, the draft recommendations of the Land Conservation Council state that the Museum should be allowed to continue to use the land for its current purpose. Perhaps the end of the four year battle is in sight at last, and, with the momentum developing among the Museum volunteers and their gradually swelling number, the future is looking bright.

Peter Evans 4/93

CHELTENHAM PLATEWAY ?? gauge

(see LRN 91, p.17)

The Historic Buildings Council has included the remains of the Cheltenham Plateway in Centre Dandenong Road, on its register. This plateway was originally laid in the early 1900s by the Kingston family, and once stretched as far as St Kilda junction for the carriage of market garden produce. Today, only 300 m of the iron plates are intact, and the Moorabbin Council is relocating the existing rails onto the nature strip on the north side of Centre Dandenong

Road with the approval of the HBC. A small section is also being relocated to Joyce Park in Jasper Road, McKinnon, where it will be displayed with one of the original market carts.

GEE LONG STEAM PRESERVATION SOCIETY, Bellarine Peninsula Railway, Queenscliff 1067 mm gauge

(see LRN 55 p.15)

The Malcolm Moore 4wDM here was observed on 1 January 1993, very much out of use with engine parts missing and generally uncared for. Detail carried is Serial No.2; Model 47; Type L; Job No. C396; Date 13-12-46

Ray Graf 3/93

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 93 p.16)

Commissioner's Specials

This special train which has been described in a previous LRN is advertised to the public and in the past has been scheduled to run six times a year. It recently featured in a very favourable one-page article in the Melbourne Herald-Sun. As a result, the scheduled April and May trips were booked out, and two additional trips have been scheduled in the last two weekends in May. Both of these were booked out by the end of March.

Locomotives

6A: This has been hauled into the workshops, and work on its restoration to service has commenced. But, due to a fall off in traffic, purchase of its new boiler has been deferred.

7A: This is also in the workshops. Its boiler tubes will be replaced, and a new transom will be made for the rear pony truck. It may be back in service by the time you read this.

G42: The frames, which have been stored at Emerald for some years, were

moved to Belgrave workshops on Thursday, February 27, in a train hauled by D21. D21 had previously brought Sir John Grice from Belgrave to Emerald ready for its road transfer to Gembrook the following Saturday. To make room for G42's frames, its centre section has now been moved out of the workshops

All fittings have now been stripped from the frames. They have lots of cracks, and are worn where the wheels have rubbed against them (thanks to all the 2 chain curves and rough track on the Beech Forest line). It is now being assessed whether it is preferable to repair these, or replace them. Meanwhile the foundation ring has been fitted to G42's "new" boiler.

"Sir John Grice": attended this year's Moomba parade on March 6 on a float. Sir John was in steam, and attended under the name "Peter Peckett".

Rolling stock: 146 NQR has had air brakes, new draw gear and hand rails fitted. This is a unique vehicle, formerly belonging to the Walhalla & Thomson River Steam Tramway. They fitted a wooden body, without roof, and wooden seats from Melbourne trams. Until recently it had been on display in the Menzies Creek museum. It is intended to use it at Gembrook, but during Easter it ran on regular Belgrave-Lakeside trains and was very popular with passengers. Its "rooflessness" was an attraction, as the weather over that period was perfect.

Special Trains

As part of "Heritage Week" a mixed train was run on 28 March, hauled by 12A with three passenger cars, and a variety of goods vehicles which were attached and detached on the way. On 4 April, Sir John Grice ran a trip on the mainline hauling 146 NQR, an ordinary NQR with pallets for seating, and a car van for roof-addicted passengers.

Gembrook Restoration

Dismantling of Yanga Creek bridge, near Balranald, commenced on 26 March and was estimated to take four weeks. In fact the job was completed ahead of schedule, and below the budgeted cost. All the recovered materials had been transported to Emerald and Cockatoo for storage by 18 April. The condition of the timber beams is said to be excellent.

On the weekend of 20/21 March about 600 m of skeleton track was laid from Gembrook main road crossing to Orchard Road. Over 60 volunteers took part on Saturday, and about 20 on Sunday. Progress was very rapid and most of the work was finished on Saturday. The next stage (scheduled for 15/16 May) is to insert the missing sleepers, ballast the track and complete Orchard Road level crossing. I believe it is then intended to lay a short stretch of track beyond Orchard Road. When this is complete, one-third of the track between

Lakeside and Gembrook will have been laid, and the gap will be 4-1/2 miles.

Gembrook Operations

Trains are scheduled to operate on the last weekend in February, March, April and May. A recess is then planned for winter. In February and March passenger numbers averaged about 240 on Saturday, and 100 on Sunday. On Sunday, 25 April, when the weather was perfect, 14 trips were run and 188 passengers were carried, over 70% of whom were adults.

There is a pioneering informality about this operation. As an example, on Saturday, 27 March, trains ran with only the Deluxe Panoramic Vista Observation Car (i.e. an NQR open wagon with a superior class of wooden pallet on the floor to sit on). On one trip the DPVOC was carrying 35 passengers. On the following day, the temporary station (a tarpaulin on six poles) tried desperately to blow over during a heavy downpour, with quite a huddle of passengers and amused observers trying to shelter under it.

It is hoped shortly to erect a temporary shed in Gembrook yard to house the Peckett loco and a passenger car. This will save transporting these by road from Emerald for each weekend of operation. It is intended to extend operations to Orchard Road, but this will be dependent on satisfactory safety arrangements for the Main Road crossing, which has a very bad road approach on the Melbourne side.

Frank Stamford 4/93

An unconfirmed report suggests that one or more ex-QGR Walkers DH class B-B DH locos have been purchased for gauge conversion.

Ray Graf 3/93

LONG TUNNEL EXTENDED MINE, Walhalla 610 mm gauge

(see LRN 34 p.17)

The restoration of the mine is a project of the Shire of Narracan and the Long Tunnel Mine Reserve Committee of Management supported by the State Department of Conservation and Environment. Future work will include some restoration of surface tramways. The mine is open for tours each weekend, school, and public holidays and on other days. Contact is (051) 65 6242 or (051) 65 6259.

E.M. Baldwin 4wDH 6008-1-7-75 of 1975 was noted locked up at the

Machinery Chamber, 274 m from the entrance to the main adit on 27 December 1992, and some tipping wagons were seen on the surface near the adit entrance.

Ray Graf 3/93

MELBOURNE WATER, Sayers Road, Laverton 762 mm gauge

(see LRN 81 p.11)

No locomotives at all were seen here on 26 March. Six cement carriers were still on rail and apparently serviceable, but the remaining rolling stock, about 10 items mostly flat cars, seemed derelict. Can a Melbourne member provide details of when and where the locomotives previously here (and not disposed of at the recent auction) have gone?

Ray Graf 3/93

MELBOURNE WATER, 82 Chifley Drive, Preston 762 mm gauge

(see LRN 93 p.17)

All eleven locomotives sold at auction on 17 March are said to have been purchased by the one buyer but it was not clear if this was for scrap, resale or operation, although scrap seemed the most likely. The purchaser was reportedly "Beak Industries" J.P.Purton - King Island. Six units were reportedly moved from site on the morning of 29 March, after which only four remained. The locos concerned were as follows (details in [blue](#) from editorial records):

Lot No.	MMBW No.	Name	Type	Builder	Builder's No.	Date	Model
A354	028	Joan	4wDH	E.M. Baldwin	3225-1-2-70	1970	DH12T
A357	033	Tanna	4wDH	E.M. Baldwin	5346-2-2-74	1974	DH12T
A358	029	Margaret	4wDH	E.M.	3225-2-2-70	1970	Mk5/2 DH12T
A359	027	Dzidra	4wDH	Baldwin E.M.	3225-4-2-70	1970	DH12T
A361	014		4wDH	Baldwin Gemco	2889/Pl.0456/ L621/68	1968	Gemco- Funkey
A362	032	Annie	4wDH	E.M. Baldwin	5346-1-2-74	1974	DH12T
A363	030	Kasey	4wDH	E.M. Baldwin	3225-3-2-70	1970	Mk5/2 DH12T
A364	046		4wDH	E.M. Baldwin	6700-1-4-76	1976	DH4T
A367	035		4wDH	E.M. Baldwin	5366-4-5-74	1974	Mk2(a) DH4T Mk2
A368	011		4wDH?	Baldwin Gemco	2707/Pl.0472/?/68	1968	(a) Gemco- Funkey?
A369	039		4wDH	E.M. Baldwin	5366-6-6-74	1974	(b) DH4T Mk2 (a)

(a) - rebuilt from 2 ft gauge
(b) - another Gemco is reported to have had this running number, a 4wBE, 2147-8/142/76 of 1976. (The report does not identify the unit as diesel or electric.)

027, 029, 032 and 035 were the units still on site at lunchtime on 29 March. 032 had no engine, transmission or wheels. The disposal area is being cleared for land sale, and the sandblasting plant previously reported (see LRN 73) was being dismantled with the trolleys gone.

NOTES, CORRECTIONS & COMMENTS

Mulgrave Mills ComEng 0-6-0 DH 9

Tony Wells points out a repeated error in LRN concerning Mulgrave Mill's ComEng 0-6-0DH 9. Its builder's number was given incorrectly in LRN 90 & 91. The correct builder's number is FC3473.

AUSTRALIAN ARCHIVES

Ross Mainwaring has come across some interesting material in the Australian Archives in Canberra. Material from Series A425/122 Item 35/8410 relates to a dispute between the Customs Service and the importers of 100 complete sets of ironwork for canetrucks for Kalamia Mill in Queensland. The cane trucks were to be assembled and completed locally by the addition of local hardwood, and the dispute hinged on the rate of tariff to be applied. No doubt there are many other items of similar interest to be found in the archives.

CHANGE OF ADDRESS - NSW DIVISION

Would members please note that the new address for LRRSA NSW Division is 18 Rodney Avenue, Beecroft NSW 2119. Craig Wilson remains Secretary.

Jack Stock 5/93

PROTECTION OF MOVABLE CULTURAL HERITAGE ACT (1986)

It may not be very widely known that this Act (as subsequently amended) protects certain movable items from being exported from Australia without an export licence. An object of rail transport built in Australia before 1945 or in use in Australia before 1930 is a protected item and cannot be exported without an export licence, and this licence may be refused for a number of reasons. The main reasons would be if the item is significant to the history or culture of Australia, represents significant technological or social progress. or

is associated with a notable person in Australian history.

Any member concerned about the possible export of an item of movable cultural heritage, or who wishes to learn more about the Act should contact The Secretary, National Cultural Heritage Committee, GPO Box 787, Canberra 2601.

John Browning

1993 DIRECTORY OF AUSTRALIAN TOURIST RAILWAYS AND MUSEUMS

This publication was commercially successful and the ARHS (NSW Division) is planning to publish a new edition for 1994. Responses from preservation societies are required by the end of July and publication is scheduled for November 1993.

Bob McKillop 6/93

RESEARCH

BOILER INSPECTION RECORDS & WESTERNPORT COAL TRAMWAYS

Bob Whitehead has been undertaking some research at the Public Records Office at Laverton in Victoria. While doing so, he has discovered some material which may be of interest to other LRRSA members:

VPRS series 421, unit 49 (VR Secretary's Branch files).

File 11/7428.

This file contains details of boiler inspections carried out by the Victorian Railways (dated 17 May 1911). Also contains a report on boilers not the property of the VR but situated on railway premises (111 boilers), and boilers registered under the Boiler Inspection Act (138 boilers). Boilers in use on railway land are listed under the following categories: Timber cutting (96 boilers), chaff cutting (9 boilers) stone crushing (3 boilers) creameries (2 boilers), jam factories (1 boiler) and flour mills (1 boiler) (Dated 8 August 1911).

VPRS series 421, unit 84 (VR Secretary's Branch files)

File 99/3829.

This file contains papers dating from 1863 to 1899 relating to the Western Port Coal Mining Company and the Great Victorian Coal Mine Company, and includes diagrams maps and various reports.

VPRS series 422, unit 10 (Engineer of Existing Lines correspondence).

Unit 10 contains many entries regarding the supply of rails to the Western Port Coal Mining Company.

Bob Whitehead via Peter Evans 7/93

DEFENCE TRAMWAYS : BUNDAMBA EXPLOSIVES STORAGE, QLD

(see LRN 93 p.3)

"On account of uncertain deliveries of Cordite from Melbourne, due to the heavy traffic on the railways, it was found necessary to increase storage and hold a considerable reserve within reach of the S.A.A. [Rocklea Small Arms Ammunition Factory], and this was provided by the use of an old mine at Bundamba, some distance from Rocklea towards Ipswich. This mine had an inclined shaft with a wooden rail tramline down it, the shaft was cleared and the tramline rebuilt, and it was found made an excellent storage for Cordite as it was always cool and dry. Use of this mine shaft for the purpose saved building magazines and acquiring a considerable area of land to provide the necessary safety distances to the boundaries."

The above item was extracted from *Departmental Establishments - Historical. New Munitions Establishments Erected - Outbreak of War to June 1945 Queensland* [Undated, (c. 1950) Dept. of Munitions; copy courtesy Explosives Factory Maribyrnong].

Can any reader say which of the many coal mines near Bundamba, west of Brisbane, was utilised. Neither of John Kerr's extensive ARHS Bulletin articles on the mines of the area ("The Redbank - Bundamba Loop Line", No.368, June 1968; and, "Coal Mines Served by the Brisbane - Ipswich Railway", No.391, May 1970) make any mention of this interesting exercise in mine recycling.

The gauge, whilst not stated, was most probably two feet, as the department document's summary states that all explosives magazines were of that gauge. Any suggestions or further information would be most welcome.

EFM Research Group 6/93

WHERE WAS DILLONS SIDING?'

The Historic Places Section of the Department of Conservation and Natural Resources in Victoria has a document recording the despatch of poles and piles produced by the Forests Commission in the Heathcote district during the period 1913-1929. This record includes the dates and places of loading, the railway truck number, the destination and the customer. Most of the despatches were from sidings on the Mclvor Tramway or the Heathcote Railway.

Between May 1913 and November 1915, 71 trucks of poles were loaded at "Dillons Siding". This name has not been previously associated with the Mclvor Tramway. Can anyone suggest a possible location for this siding on the tramway or railway?

It is possible that Dillons Siding was somewhere near Singletons Siding (or

the same place) as the last truck load was sent from Dillons on 18 November 1915 (42 poles to Illababrook in QR 11) and the first load from Singletons was on 22 December 1915 (48 Poles to Bendigo in Q (sic) 45).

Colin Harvey 6/93

RACK RAILWAYS OF AUSTRALIA

David Jehan is researching the four rack railways of Australia, in particular the Mt Lyell Mining & Railway Company's Queenstown to Regatta Point line and the Queensland Government Railway's Mt Morgan line. Should anyone have any information, particularly photographs and gradient diagrams of these railways, he would like to hear from you. Please write to David Jehan, 44a Crump Street, Mortdale NSW 2223 or phone (02) 580 8564 (home).

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

BUNDABERG FOUNDRY ENGINEERS LTD, Queensland

(see LRN 94 p.3)

The QGR Walkers DH-class B-B DH reportedly obtained for rebuilding and conversion from 1067 mm gauge to 610 mm gauge is said to be DH 51 (633 of 1969).

Chris Malone via David Mewes 6/93

WALKERS LTD, Maryborough

(see LRN 88 p.3)

The Walkers ex-QGR DH-class B-B DH locomotive being rebuilt for CSR Ltd Victoria Mill, (612 of 1969) was observed on a visit to Walkers in late June. Bogies were yet to be fitted, and the new cab was not fitted out. As with the two locos recently rebuilt for Tully Mill (see elsewhere this issue), the radiator has been removed from the short hood end to the opposite end of the locomotive allowing the short hood to be removed to make way for the cab.

It is reported that Walkers have built a bogie brake wagon for Isis Mill (see elsewhere this issue).

Tony Wells 6/93

SITE REPORT - SOUTH AUSTRALIA

HALLET COVE LIGHT RAILWAY 610 mm gauge

(see LRN 91 p.3)

The South Australian Group of the LRRSA have been undertaking some

research into the Hallet Cove light railway. In preparation for a site visit, aerial photographs taken by the RAAF in 1936 were rescaled to match an orthophotomap produced from a 1983 aerial photograph and projected onto it. This provided a positive location from which to begin the search.

Using this technique the survey team were able to drive straight to the site and find the remains immediately. The line lay north of Perry Barr Road. It originated about halfway along this road in a small quarry visible from the road a little east of the corner of Capella Drive. North of the road, the land is a grassy valley lightly grazed by sheep. The formation follows the contours of the valley below the road. It swings out of sight to the north, before returning to skirt the hill below the bend of Perry Barr Road

Passing beneath some houses on that bend, it headed for what is now the end of Karoola Court. The line has been destroyed between Karoola Court and Kallamurra Street just north of its present corner with Perry Barr Road.

Running west off the present suburban highway which is Perry Barr Road is the original road alignment into the station yard. The remains of the graded rock pavement are still visible after many decades. On the northern section of this old roadway is a flat mound several feet wide, which was felt may be the original trackbed.

On the flat ground above the present Hallet Cove station are minor remains of concrete footings and several shorter than usual sleepers still embedded in the ground. These have escaped the many clearings and gradings of the ground over the years. On a second visit, three two-foot gauge pressed-steel sleepers were found in the weeds not far from the trackbed.

LRRSA S.A. Group minutes via Peter Evans 6/93

*** Memo to the S.A. Group: This is very good work - .don't keep it to yourselves Please send more field reports direct to your local LRN editor and include maps and photographs. That way our readers will be happy and informed and my typing fingers a little less blistered! (P.E.)

NEW SOUTH WALES

COAL & ALLIED LTD, Balls Head Coal Loader, Waverton 508 mm gauge

(see LRN 89 p.5)

North Sydney Council has given permission to Coal & Allied Industries to remove the historic coal loader to another site. The loader was rail operated until 1976.

Sydney Morning Herald 21/6/93 via John Browning

MENANGLE NARROW GAUGE RAILWAY, Campbelltown Steam and Machinery Museum 610 mm gauge

(see LRN 94 p. 9)

The 13-14 March rally at Menangle, although poorly attended by the public was successful as far as the railway was concerned. The Zinn 0-4-0 petrol loco operated well. While it hauled most trains on Saturday, it only did the morning operations on Sunday. Regrettably, a pin sheared on the drive shaft to the compressor. Although Paul Simpson, owner of the loco, made up a new pin it was found that the shaft was badly worn. On standby for hauling the train of two carriages, was a Wingrove and Rogers battery 0-4-0 locomotive, one of the three which arrived at Menangle during February this year.

For many years it was known that a railway of 610 mm gauge had been used for the transporting of ammunition between the bunkers and a wharf on the Parramatta River, at Silverwater. Of approx. 4 km, most rail is of 20 lb weight, with points of sharp radius. Details have only been found on the one BEV, these being built 1948, Mill Lane, Liverpool, number 3845; haulage rate 15 tons; drawbar pull 425 lb. The area is Commonwealth land and has very tight security and no public access. Currently in use at the base, are four Gemco battery electrics, at this stage details unknown. Laid aside about eight years ago, and stored on disused trackage, were four battery electric vehicles by Wingrove and Rogers, 1950s vintage. These, along with 15 four-wheeled, timber construction wagons, each 10 ft x 4 ft, were placed for auction in 1991. Receiving no bids after listing in government notices, they were stored pending scrapping. A guided tour was given by the base officers to Paul Simpson and Ron Goodrick and they were able to see the extent of the railway, the ammunition bunkers, other historic buildings, equipment, and the 4-track wharf. Ron Goodrick placed a successful bid and during February one loco was transported to Dudley, Newcastle, by him after the removal of its battery bank. The other three BEVs were transported to Menangle, along with the wagons, by a naval prime-mover.

As part of the railway construction, a heavy duty level crossing was formed in steel over two months of weekend work. Over 20 ft long and made up of RSJs and heavy cross-members, the assembly was positioned into the ground at the main entry gates. For the March rally, and the 5 April picnic day, a temporary platform was made utilising three of the ex-naval wooden flat-tops. The gap between them was bridged by heavy timbers and steps of sleepers placed alongside. Again public attendance at Menangle was very poor, and only one BEV was needed to haul the train, a push-pull operation over the 800 ft of track. 30 lb rail is used and there are three points laid at

this stage, one being made of new and second hand parts, the other two being from the Central Park Forresters Beach (near Gosford) 2 ft railway. As at 1 April, there are 12 locomotives at Menangle: 1 steam, 6 diesel, 2 petrol and 3 BEV. On loan and owned by Peter Neve, is a 4-wheel ex-canefield inspection vehicle (petrol engined).

During the March rally, Basil "Gypsy" Smith, who with his wife entertains with a wandering Punch and Judy show, told members of the J. Hein & Son (closed) factory at Leichhardt, having within its building and yard, a 2 ft gauge railway. Within a week, Paul Simpson and Len King were able to inspect the huge site. Within the confines of the entrance yard was laid varying weights of rail, set in concrete and roadbase. One turntable and the positions of others were seen. Inside the largest building is many feet of 15 lb rail, connected by 4 turntables. (Again, other turntable positions could be made out.) Much of the track was set in concrete in several of the buildings - timber flooring in a large section would mean that removal of rail was possible. Some is welded to cross members of angle iron and spiked to timber bearers. Other rail is only spiked to the bearers. Two turntables have been lifted out and were transported to Menangle during the week 17-21 May. Each of two cast sections, the centre piece measures about 4 ft across, being placed on a cast spigot of the outer casting. Upon removal of the turntables, large octagon-shaped brick foundations could be seen, going down between 6 ft and 10 ft. A central column of brick and concrete supported the pivot point. J. Hein & Son are a heavy engineering company, founded late in 1886. They manufactured guillotines and presses as their main items - the rails within the plant enabled heavy castings and supplies to be moved about the plant. Other rails appear in various sections, often isolated by rebuilding or dismantling. Along with the track and turntables, there are three 4-wheel flat-topped wagons, ex-army. It is not known if there were other vehicles, but knowing the nature of the industry, it is probably that there were. The Menangle Narrow Gauge Railway group, as part of the Campbelltown Museum, gained permission to remove all the materials mentioned, plus other items around the factory. The Society gained from the current owner/developer, many items that will prove useful over the next year or so.

Framework for the railway shed and workshop has been at the Museum for several years. Much discussion has been held into the track layout and with the soon arrival of three more points from Gosford, the run around loop at the far end of the property can be completed- The third point will be laid into the main line to form dual track - this will eventually be part of a continuous loop as well as being a long road leading to the engine shed. The depot will have three roads, plus another short line into the workshop alongside, where

rolling stock could be worked on away from the storage section. On Saturday, 5 June, a work group laid the station run-around loop to where the turntable will be positioned, and another point was completed. A siding from this will give valuable storage space. The platform road has yet to be ballasted and levelled, but the BEVs and two carriages are stored on it.

Four Rustons were delivered last September. Several weeks ago No. 304457 was transported to Albion Park, and soon to follow will be No. 304455. No. 304460 could possibly have a new home in the Hunter Valley, as its restoration base. No. 304453, the roughest of the four, is being modified to represent another model, with the chassis shortened and a possible remotoring. In part exchange for the Rustons travelling to Albion Park, Ruston 20DL No. 285301 will be moved from there to Menangle, for rebuilding.

Work to date on Fowler diesel 16830 has seen the removal of the engine and the loco being jacked up to allow the axleboxes to be removed. The engine cowling is to be replaced as heavy corrosion has taken place due to vandalism, fire and salt air.

Simplex 11023 has had its brake rigging dismantled and most of the chassis cleaned. The engine block is ready for repainting once the gearbox housing is cleaned.

Len King 6/93

NSW STEAM TRAM & RAIL PRESERVATION CO-OP SOCIETY, Parramatta Park 1435 mm gauge

(see LRN 89 p.7)

Tragedy struck on the night of Monday 7 June in the shape of a deliberately lit fire which gutted the shed and substantially destroyed the collection of the Parramatta Park Steam Tramway. However the Society is seeking to counter the impression given in the press that the collection was totally destroyed. While the damage was horrific, it was not total, as can be seen from the list following this report.

The Society's Board of Directors met on Monday 14 June to discuss the outcome of the fire and to plan for the future of the preserved tramway operation. While many obstacles remain, the Society believes that all possible efforts should be directed toward rebuilding the Museum and tramway in Parramatta Park. Steam tram-motor 103A and railway locomotive 1022 were moved by road to the Rail Transport Museum at Thirlmere on Friday 11 June for safe storage pending a decision on their future. While both locomotives appear to be restorable, a full boiler inspection and mechanical examination will be required. In the meantime, it is believed that locomotive CPC No.2 would require the least work to return to operation. This locomotive, although

part of the Society's collection, was already at Thirlmere undergoing overhaul, and was therefore not damaged by the fire. The Society has been offered the loan of suitable passenger carriages to run with CPC No.2 and feels confident of re-commencing operations in Parramatta Park in mid-1994.

While initial work can be carried out on CPC No.2, it is felt the most important goal must be the full restoration of tram-motor 103A and a steam tram trailer car. The Society has been engaged in negotiations to obtain another example of a trailer car currently being used as a shed in rural NSW. Since the fire, these negotiations have intensified.

As the Society is a small organisation, they cannot rebuild in Parramatta Park alone. They will be seeking the assistance of Government, industry and individuals to achieve this goal. Urgent talks have been sought with Parramatta Council concerning the provision of a secure structure to house the collection. If this assistance is not made available, there will be no choice but to disperse the remains of the collection, bringing to a close the only regular steam-tram operation in the Southern Hemisphere, and an important part of Parramatta's heritage will be lost forever.

The fire did not appear to be a random act of vandalism. The Society believes they were the victims of a carefully planned and executed attack designed to do maximum damage to the collection and organisation. In spite of losing almost all of the collection, the Society is firm in its resolve to rebuild. They would prefer to remain in Parramatta Park but if necessary will seek another site. Regardless of where they are, they are determined 103A will run again.

The Society has launched an appeal for donations to enable them to rebuild. It is known as the "Parramatta Park Phoenix Fund" and donations may be sent to PO Box 3179, Parramatta, NSW 2124. All donations over \$2.00 are tax deductible and they will be very grateful for your support.
S.T. & R.P.S. COLLECTION STATUS AS AT JUNE 1993:

NSW Government Tramways 11" 0-4-0ST Tram Motor No.103A

Burnham Parry Williams (Baldwin) Eddystone USA, B/N 11676, 1894. Badly damaged. 103A sent to RTM Thirlmere 11/6/93 for rebuild .

NSW Government Tramways 0-4-0 Replica Motor No.133A (The "Purcell")

NSWGT Randwick Workshops, 1957. (body only) Purcell Engineering, Auburn NSW, 1924. (underframe) S.T. & R.P.S. Parramatta Park NSW, 1981 (as replica tram-motor No. "133A"). Badly damaged. "133A" to be sent to Sydney Tramway Museum, Loftus, for rebuild.

NSW Government Tramways C2 class 70-seat enclosed crossbench trailer No.74B

Hudson Brothers, Auburn NSW, 1889. Total loss. Some metal components such as bogies salvaged for possible future re-use.

NSW Government Tramways C2 class 70-seat enclosed crossbench trailer No.191B

James Morrison, Strathfield NSW, 1891. Total loss. Some metal components such as bogies salvaged for possible future re-use.

NSW Government Tramways Replica Four-wheel Dummy Truck No.162S.

Richie Bros, Auburn NSW, 1914. (as LCH coal hopper) NSWGR Clyde Wagon Workshops, 1966. (rebuilt as shunters truck L 32) S.T. & R.P.S. Parramatta Park NSW, 1992. (as replica dummy truck "162S") Badly damaged, will be rebuilt on-site.

NSW Government Railways 10 class 0_4_OST No.1022

Vulcan, Wilkes-Barre, Pennsylvania, B/N 2505, 1916. Badly damaged. 1022 sent to RTM Thirlmere 11/6/93 for rebuild.

NSW Government Railways 13 class 4-4-2T No.1308

Beyer Peacock, Gorton Foundry, Manchester UK, B/N 1620, 1876 (as 4-4-0 tender engine). NSWGR Eveleigh Workshops, 1899 (rebuilt as tank engine) Undamaged. 1308 was not in shed at time of fire, so it escaped damage. Future use undecided.

Commonwealth Portland Cement 0-6-OST No.2 (Stevo)

Robert Stephenson, Darlington UK, B/N 2994, 1899. Undamaged.

Stevo was at RTM Thirlmere for restoration at time of fire, will hopefully be running soon.

NSW Government Railways CPH Railmotor No.5 ("Tin Hare")

NSWGR Eveleigh Workshops, 1924. Total loss. CPH 5 scrapped Monday 14/6/93. Bogies and power plant to Macquarie Valley Railway.

NSW Government Railways Yass tramcar No.KA 84

Hudson Brothers, Auburn NSW, 1891. Total loss. Some metal components such as bogies salvaged for possible future re-use.

NSW Government Railways End-platform saloon passenger car No.FA 1864

Richie Bros, Auburn NSW, 1914. Total loss

Operated as Railmotor No.2 "Kathleen" between 1922-1925. FA 1864 scrapped Thursday 10/6/93.

NSW Government Railways Four-wheel goods brakevan HG 15069

Richie Bros, Auburn NSW, 1909. Total loss. Some metal components such as wheels and axleboxes salvaged for possible future re-use.

NSW Government Railways Four-wheel open wagon S 4360

Tullochs Phoenix Ironworks, Rhodes NSW, 1921. Undamaged. S 4360 was not in shed at time of fire, so it escaped damage. Future use undecided.

NSW Government Railways Four-wheel louvre van LV 1478

NSWGR Eveleigh Workshops, 1910. Undamaged.

Sydney Morning Herald 8/6/93 via R Bremner*

TOD WATSON, Moama 610 mm gauge

(see LRN 94 p.10)

Decauville 0-4-2T 246 of 1897 was auctioned on 9 May, and was reportedly purchased by a British collector, David Best, who is understood to have moved immediately to export the item from Melbourne. However, it is believed that export could not proceed without a licence, under the provisions of the Protection of Movable Cultural Heritage Act 1986. Consideration of a licence application by the National Cultural Heritage Committee of the Department of the Arts and Administrative Services is understood to have been in progress.

Bruce Macdonald 5/93, John Browning 6/93

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge

(see LRN 92 p.11)

Cleaning down and painting of the mainframes of Hudswell Clarke 0-6-0 *Melbourne* (1701 of 1938) took place during the Easter period. The boiler and new smokebox were returned to site and reunited with the loco frames on

13 April.

A submission to rezone a 10 metre wide strip of Catholic Church owned land adjacent to the former branch railway formation between Peterson Road and Chambers Road is before the Shire Council. This rezoning is necessary because of the unavailability of the adjoining ex-railway land. It is hoped that rezoning will be granted and that land acquisition will follow.

Progress is continuing to be made on the ex-D'Aguilar station building and the workshop building both sited at Woodford.

Durundur Railway Bulletin 4/93 & 5/93

BUNDABERG SUGAR LTD, Mourilyan Mill 610 mm gauge

(see LRN 93 p.11)

Further details on the 1992 experiments in remote control of a Clyde 0-6-0DH locomotive for driver-only operation are available. A portable transmitter on a harness worn by the driver and a receiver unit mounted in the locomotive cab were tested. The portable unit gave the driver remote control of all locomotive functions including throttle, brakes, direction, horn and lights. Emergency stop, dead man controls and "mandown" functions also formed part of the control equipment.

It is reported that the equipment will be in regular use during the 1993 season as part of driver-only operation of the sugar trains which run between the mill and Mourilyan Harbour.

Durundur Railway Bulletin 5/93; Bob James 7/93

GRAHAM CHAPMAN Steamworks, Murrumba Downs 610 mm & 1067 mm gauge

(see LRN 94 p.10)

610 mm gauge John Fowler 0-4-2 17683 of 1927 arrived here from the Mackay Port Authority on 24 June. Meanwhile, Hudswell Clarke 0-6-0ST 853 of 1908 has been taken into the workshop for rebuilding.

David Mewes 6/93

CSR LTD, Herbert River mills 610 mm gauge

(see LRN 94 p.11)

Both Macknade and Victoria mills commenced the 1993 crushing on 21 June, with a harvest forecast of 3.6m tonnes. Continuous crushing is being worked at both mills.

Early in May, an ex-QGR bogie open wagon was noted at Victoria Mill, and it is reported that this is an HJS wagon being converted to a new brakewagon by the mill with some assistance from a local engineering business.

Late in the slack season, Victoria Mill's Clyde Model HG-3R 0-6-0DH *Ingham* (64-382 of 1964) was repainted dark yellow and given a green stripe of the same style and position as the bogie locos. It is believed that at least one other loco was also repainted in this style.

Victoria Mill's 4-cylinder diesel locos all seem to have been handed over to the navvies. Malcolm Moore 0-4-0DH Moore (DH-112-GT-1 of 1956) was with them all the slack season, E.M. Baldwin 0-4-0DH *Albany* (6-1792-1-11-66 of 1966) from April or early May, and E.M. Baldwin 4wDH "Hambledon" (8002-1-8-78 of 1978) from sometime in May. It is thought that Clyde 0-6-0DH *Perth* (69-682 of 1969) has taken over duties at the truck shop.

Clyde 0-6-0DH DHI.2 of 1954 (ex Inkerman Mill's *Iona*) has been banished to the navvy area at Macknade Mill, and its future is unknown. Macknade's Clyde 0-6-0DH 12 (65-434 of 1965) now has a new torque converter.

Approximately 300 bins of cane are transferred from Victoria Mill to Macknade daily. The pattern early in the season was for Macknade's 14 (E.M. Baldwin 0-6-0DH 6-2490-1-7-68 of 1968) and brakewagon 1, or 20 (E.M. Baldwin B-B DH 7070-4-4-77 of 1977) and brakewagon 2 to do a night shift trip, depending on the number of bins to come over. In addition, E.M. Baldwin B-B DH 19 (7070-34-77 of 1977), which is not brakewagon fitted, was doing a day shift trip. There has been no attempt to keep the Victoria and Macknade bin fleets separate, and they are rapidly becoming mixed up.

Chris Hart 6/93; Bob James 7/93

HAUGHTON SUGAR CO PTY LTD, Invicta Mill 610 mm gauge

(see LRN 93 p.12)

With massive expansion of canegrowing in the Burdekin irrigation area anticipated to impact most upon Invicta Mill, plans are underway to resite the mill yard in order to provide increased capacity. Two QGR DH-class DH locos are reported to have been acquired for future rebuilding and conversion from 1067 mm gauge. These are said to be DH11 (593 of 1968) and DH68 (655 of 1970).

Chris Malone via David Mewes 6/93; Bob James 7/93

ISIS CENTRAL SUGAR CO LTD 610 mm gauge

(see LRN 94 p.12)

Two more QGR DH-class locos are reported to have been purchased by Isis Mill for future rebuilding and conversion from 1067 mm gauge. These are said to be DH16 (598 of 1968) & DH69 (656 of 1970).

A new bogie brake wagon, No.6, was noted at the mill late in July. Stated to have been built by Walkers, using an ex-QGR wagon as a basis, its bogies

appeared to be rebuilt from ex-QGR bar frame bogies. The mill staff were fitting electronic equipment to this vehicle.

It is confirmed that John Fowler 0-6-ODM 1 (20776 of 1935) has been disposed of for scrap.

*Chris Malone via David Mewes 6/93;
Tony Wells 6/93; Bob James 7/93*

KOLAN SHIRE COUNCIL, Wallaville 610 mm gauge

(see LRN 94 p.12)

The unidentified 1896 German 0-6-0WT ex Gin Gin Mill had not been moved from Wallaville for the Gin Gin & District Historical Society when it was viewed on 19 June.

John Browning 6/93

MACKAY PORT AUTHORITY, Mulherin Park, Mackay Outer Harbour 610 mm gauge

(see LRN 91 p.13)

Ex-Racecourse Mill John Fowler 0-4-2 17683 of 1927 was still present at Mackay Harbour on 20 June. However, it shortly later departed for Graham Chapman's "Steamworks" (see elsewhere this issue).

John Browning 6/93

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 94 p.12)

It is understood that the ex-QGR Walkers DH class B-B DH locomotive acquired by Racecourse Mill for future rebuilding and regauging from 1067 mm gauge is DH70 (657 of 1970). The DH class is fitted with a Caterpillar 6-cylinder engine of 350 kW.

Meanwhile, Farleigh Mill has acquired three standard gauge Walkers 73 class B-B DH locos for future rebuilding and regauging from the NSW State Rail Authority, 7305 (664 of 1970), 7328 (690 of 1972) and 7330 (692 of 1972).

These arrived from Broadmeadow by road, 7305 & 7330 on 31 May and 7328 the following week. 7328 is in "candy" colours, and the other two in tuscan red. The locomotives are in indifferent external condition, with some evidence of vandalism, and with all builder's plates missing. It is thought that Farleigh Mill will wish to reduce the weight of these units from 50 tonnes to approximately 40, and that entry to service is planned for the 1995 season. The 73 class is fitted with a Caterpillar V8 engine of 520 kW.

The idea of rebuilding class 73 locos for 610 mm gauge service is believed to have been proposed by E.M. Baldwin to a number of sugar mills in 1992 although of course they intended obtaining the contract to do the work.

The proposal involved the construction of virtually new locomotives with the 73 class engine and transmission fitted. It was suggested that the price differential between DH-class locos and 73 class (with 73 class available at scrap price) made this an advantageous proposition, particularly as the 73 class engine and torque converter were regarded as superior to those fitted to the DH class.

As reported in previous issues, growers in the Habana area of Farleigh Mill have expressed some concern about the effect of relocating a section of the north coast line through their area. A number of them experienced a rail tour recently to see at first hand the heavily graded section of line which it is proposed to replace, and also to travel on the old Pleystowe line into the Habana area. The planned relocation would replace about 17 km of existing line with some 16 km of easier line on the new alignment if it went ahead, but another option of rebuilding the existing route with more substantial engineering works to reduce grades and curves is still a possibility.

Slack season work at Marian Mill during 1992 has included the construction of a new cab for a former Cattle Creek Com-Eng 0-6-0DH loco. In addition, 100 new six-tonne bins have been delivered to Marian, allowing 150 four-tonne bins to be transferred to Farleigh Mill. Conversion work on the old bins to suit Farleigh needs cost \$152,000, largely carried out by E & C Engineering, Walkerston. Meanwhile, crack testing of cane bin axles at Pleystowe Mill resulted in the replacement of 151 axles.

Following two axles breaking on Farleigh Mill's Eimco B-B DH *Farleigh* (L254 of 1990) during the 1992 season, ultrasonic testing was carried out on the remaining two axles. When this revealed that one was cracked, it was deemed prudent to replace them both.

Chris Malone via David Mewes 6/93, Tony Wells 6/93, Mackay Daily Mercury 3/6/93:

Mackay Sugar 3/93 & 6/93: John Browning 6/93. Bob James 7/93

MORETON CENTRAL SUGAR MILL CO LTD, Nambour 610 mm gauge

(see LRN 92 p.14)

As forecast previously, E.M. Baldwin 0-6-0DH *Bli-Bli* (6-1257-6-7-75 of 1965) has been fitted with the GM engine formerly in E.M. Baldwin B-B DH *Coolum* (5565-1-10-74). *Coolum* has received a new Cummins 6-cylinder diesel. Baguley 0-6-0DM *Jamaica* (3389 of 1954) has not been repainted in the standard Bundaberg Sugar livery of yellow with black bonnet top, unlike the rest of the active fleet. It is possible that at the end of the 1993 season, the engine and transmission from this unit will be fitted into Com-Eng 0-6-0DM *Yandina* (B1112 of 1956), which has been out of use for a number of years. *Jamaica* may then be scrapped.

The 1993 cane crushing season began on Monday, 19 July, and will continue around the clock for five days a week until the end of November, with perhaps an extension to seven days a week operation for a short time in the middle of the crush. Four-fifths of the cane is taken to the mill by cane trains while the remainder is transported by road.

Tony Wells 6/93; Sunshine Coast Daily- 19/7/93 via Peg Hayes

MOSSMAN CENTRAL MILL CO LTD 610 mm gauge

(see LRN 85 p.12)

Cane production on the Atherton tableland in the Mareeba-Dimbulah Irrigation Area is expected to top 130 000 tonnes in the 1993 season, expanding to 300 000 tonnes in 1995. During 1993, "B-double" trucks will be used to haul cane on the 75 km road trip from Mareeba to Mossman Mill for the first time. It is reported that some growers wish to have their cane crushed at Mulgrave Mill, 88 km by road from Mareeba, with some suggesting rail transport by QGR down the Cairns range. Another suggestion is for the establishment of a "mini mill" at Mareeba. The Mareeba Shire Chairman Mr Chris Lewis, has dismissed as a "pipedream" the possibility of establishing a tramline link from Mareeba to Mossman down the Julatten range.

Australian Canegrower 31/5/93 via Chris Hart

MULGRAVE CENTRAL MILL LTD 610 mm gauge

(see LRN 93 p.14)

It is reported that late in May a gang of navvies from Victoria Mill went to the Hambledon Mill site for a few days to lift track materials for use in the Victoria Mill area. Ownership of this track would presumably have been maintained by CSR under the agreement for the sale of the Hambledon Mill tramway to Mulgrave. The Herbert River district track jack (Plasser 374 of 1989) may have gone with them. Unconfirmed reports indicated that the track concerned included lines in the Hambledon Mill yard, and the connecting line to the "Sugarworld" theme park. It would appear that this removal of material is consistent with Mulgrave Mill having turned round the Redlynch line to face Gordonvale.

It is reported that Mulgrave Mill recently became the first to rationalise its departments so that the tramway operation has become an integrated transport department separate from other mill operations. Locomotive and rolling stock provision, tramway operations and maintenance, and tramway engineering thus becomes united in the one department with separate staff. It is believed that other mills may follow this example if it proves to be successful.

Chris Hart 6/93; Bob James 7/93

OAKBRIDGE LTD, Cook Colliery, Blackwater 1067 mm gauge

(see LRN 93 p.14)

Cook Colliery resumed production under its new owners on June 21, initially using just 14 men on a single-shift operation, although this could advance to a three-shift system depending on production and costs.

Mackay Daily Mercury 22/6/93 via John Browning

PIONEER SUGAR MILLS LTD, Inkerman Mill, Home Hill 610 mm gauge

(see LRN 93 p.12)

The new Tamper STM XLC tamping machine is reported to have been delivered to Inkerman Mill.

Bob James 7/93

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 94 p.13)

A bumper crop in the areas south of the mill has resulted in the need for road transport operations to supplement the QGR rail freight of cane originating south of Koumala, due to a lack of sufficient capacity in the rail operation. The possibility of the construction of a tramway connection from Koumala south to Carmila appears likely to depend on the availability of funds both from government sources and from grower contributions.

Bob James 7/93

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 93 p.14)

It is reported that the conversion to hydraulic drive of Prof B-B DH *Nyleta* (P.S.L.25.01 of 1990) has been carried out largely by mill staff, utilising some outside engineering expertise.

Bob James 7/93

TULLY SUGAR LTD 610 mm gauge

(see LRN 94 p.14)

The two ex-QGR Walkers DH-class B-B DH locos (650 and 653 of 1970) were delivered to Tully Mill by Walkers of Maryborough in June. Rebuilding has included removing the radiator from the short hood end, which has enabled the short hood to be completely eliminated and a new cab to be fitted in its place. Access to the air-conditioned cab is via a central door on the end which is reached from an end platform. The locomotives weigh 37 tonnes each, and are rated to haul 200 loaded bins, or 1000 tonnes.

Tully is reported to have a crop of 1.44m tonnes in 1993, the largest ever to be handled by a single train mill in Australia. Crushing commenced on 21

June. This season has seen the opening of a major tramway extension into the Murray Valley which has considerably reduced growers' haulage distances.

SOUTH AUSTRALIA

BHP LONG PRODUCTS DIVISION, Whyalla 1435 mm & 1067 mm gauge

(see LRN 79 p.16)

In June 1992, a contract was placed with Morrison Knudsen of Australia (see LRN 88 p.2) for the remanufacture of five of BHP's Clyde Bo-Bo DE locos, and the rebuilding (or partial manufacture) of another. The work is being carried out at the Morrison Knudsen plant in Whyalla. There appears to be some confusion about the identity of the locomotives concerned, with the ARHS Bulletin and Rail Australia giving different details. Re-manufacture includes engine rebuild to new specification, new alternator, traction motor overhaul, rewiring, and new cab. Four of the units will be used on 1067 mm gauge serving the mines at Iron Baron, Iron Duke and Iron Knob. The other two will operate on 1435 mm gauge within and around the Whyalla complex,

It is planned to withdraw the six Walkers DH class B-B DH locos from service around the Whyalla plant as the remanufacturing program takes place.

Other work being carried out for BHP Whyalla by Morrison Knudsen of Australia includes the replacement of Westinghouse brakes on twelve 200-tonne treadwell hot metal wagons (standard gauge), and installing air hopper doors on 111 60-tonne ore wagons (1067 mm gauge).

Rail Australia 23 & ARHS Bulletin 667 via John Browning

TASMANIA

BUSH MILL MOUNTAIN RAILWAY, Port Arthur 381 mm gauge

(see LRN 87 p.12)

The half-size version of the famous Tasmanian K1 Garratt is on its way to England where it is scheduled to haul passenger services on the famous Romney Hythe and Dymchurch Railway in Kent and the Ravenglass and Eskdale Railway in Cumbria, this coming summer holiday season. The Tassie steam train will be the first 15 in narrow-gauge, Australian built locomotive ever to visit Britain. An Australian Television crew will produce an informative documentary video on its visit for worldwide release.

ARE Newsletter June 1993 via Geoff Hayes*

HYDRO-ELECTRIC COMMISSION, Tullah 1067 mm gauge

(see LRN 88 p.13)

Tenders were invited on 15 May 1993 for the sale of equipment located at Tullah on the west coast of Tasmania. Included in the list was rail tunnelling equipment comprising locomotives, drilling jumbo, mine cars, face loaders and other items.

The Age 15/5/93 via Colin Harvey

IDA BAY RAILWAY, Lune River 610 mm gauge

(see LRN 94 p.14)

An advertisement from Transderwent Ferry and Railway Company in the May 1993 issue of *The Treasure Islander* states this is Tasmania's longest preserved railway line. It operates 7 days a week. Steam trains run Sundays or for group bookings (subject to weather conditions), with vintage trains running every day. Service every 90 minutes from 10.30 am to 4.30 pm.

David Jehan 7/93

VICTORIA

CHEETHAM SALT LTD, Laverton 610 mm gauge

(see LRN 93 p.15)

A meeting was held on the site on 4 March 1993 between the company developing the site, the Heritage Branch of the Department of Planning and Development, Gary Vines of the Living Museum of the West, and officers of the Werribee Council. At this meeting it was resolved that an amendment to the Werribee Planning Scheme would provide that a permit be required to demolish or remove the salt processing structure or associated buildings, and that the land on which they are located be designated "Industrial" to clarify their location and use. This amendment would include in a Proposed Public Open Space reservation, the No.3 Pump House and route of the main "spine" of the tramway system. A permit would also be required to demolish any of these structures.

Peter Evans 7/93

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 94 p.17)

Locomotives

QGR DH Class: The last issue carried a rumour that the ETRB had purchased

one or more Queensland Railways DH class Bo-Bo diesel-hydraulic locos for conversion to 2 ft 6 in gauge. I do not believe this is true.

It is true that thought has been given to obtaining a DH (or perhaps two DH's?) The logic behind this is, firstly - that D21 is not capable of maintaining schedule with more than eight vehicles, and on the first train of the day that many vehicles can be pre-booked for tour parties- secondly - that if for any reason D21 is not available, then on days of Total Fire Ban no service could be run, with resulting bad effect on the pre-booked business; thirdly - that D21 bashes the track about. In emergencies D21 has hauled 12 car trains, but the running times have been extended. It is possible that ETRB may have an option on the purchase of one or more DH's.

6A: Work on its restoration to service continues.

7A: As at June 20 it was still in the workshops, but its return to service was expected within a few weeks. :

G42: The frames are to be replaced. Steel has been obtained and a heavy engineering workshop is now cutting and machining this. This is being done very quickly and much of the cut material has already been delivered to Belgrave. All four cylinders have now been rebored. As many of the parts of G42 have been reconditioned it appears that the majority of the work involved in restoration is re-assembly and the completion of the boiler. No date has been set down for completion though it is believed to be at least two years away.

Special Trains

In the past the Commissioner's Special has been scheduled to run six times a year. In the 1993-94 financial year it is scheduled to run twelve times. All but the two trips in March 1994 are booked out. This is all the result of a one page article in the Melbourne Herald Sun in March. The Climax normally runs this train from Belgrave to Menzies Creek, with a photo run over the trestle bridge. The dates are 28 August, 4 & 11 September, 2 & 30 October, 6 & 13 November, 19 February, 12 & 19 March, 23 April, and 7 May.

Traffic

Customer numbers continue to be down on the previous year, a situation not helped by uninspiring weather throughout much of June. Most trains consist of five or six vehicles. Despite this the ETRB will still report an operating profit for the year.

Gembrook Restoration

A work party was held on 22/23 May, when all the missing sleepers on the skeleton track between Gembrook Main Road and Orchard Road were fitted, and ballasting of this section began. NRT1 was used, hauling two NQR

wagons. This was the first time a train had run to Orchard Road in 39-1/2 years, The Orchard Road level crossing was installed on 20 June. On the same weekend ballasting of the track to Orchard Road was completed. It still needs to be tamped. .

The section of track beyond Orchard Road is mostly on a long embankment and includes Fielder bridge. This embankment has sagged over the years and now has grades as steep as 1 in 26. It is now being filled and graded to bring it back to 1 in 30. It is planned to lay a long section of skeleton track along this embankment in September, and have it ballasted to mainline standards by the end of the year as far as the Fielder bridge.

On current plans it would appear that in 1994 track will be laid to Fielder and possibly across Doonaha Road, and by the end of 1995, Cockatoo would be connected to Gembrook. Construction of the small Wright trestle bridge is expected to commence early in 1994, and it could be completed in that year. Once this is done track will be laid to the site of the big bridge, to enable construction materials to be brought in by train. Clearing of the big bridge site has already commenced.

A \$29,000 bequest from the estate of the late Jack Metcalfe has been received. This will probably be put towards the small Wright trestle bridge

Jack, who was a regular attendee at LRRSA meetings and functions, was one of the founding five members of what became the PBPS.

A freshly painted lattice signal mast is now lying at the site of the old Gembrook home signal, waiting for installation.

Gembrook Operations

Train operations at Gembrook ended for the financial year on 29/30 May . On Saturday 390 passengers were carried. One train had 60 people on board the two vehicles (not counting the under four-year olds who travel free). Despite grim weather on Sunday, 150 passengers were carried. A total of 3903 paying passengers were carried on the 15 days the service operated between September and May. Dates of operation in the 1993-94 season will be (at least) 25/26 September, 30/31 October, 27/28 November, 18/19 December, 26/27 February, 26/27 March, 30 April/1 May, 28/29 May.

Other

The feasibility of installing a crossing loop between Belgrave and Menzies Creek is being investigated. It is intended to introduce Electric Staff working in due course on this section. Electric Staff machines are now in place, but not in operation at Menzies Creek.

Garbagelander

Each month a trolley runs from Belgrave to Wright to pick up litter along

the trackside. It now bears a professionally designed headboard reading *Garbagelander* and displays the "Keep Australia Beautiful" logo.

Frank Stamford 6/93; Peter Medlin 6/93

The PBPS is holding its second "Olde Time Festival" on Sunday 10 October 1993 in association with the Historic Commercial Vehicle Club. The festivities will include grand parades, historical re-enactments, heritage exhibitions and steam on show. Vehicles manufactured prior to 1 January 1968 are eligible for entry before 31 July 1993. Details are available from PO Box 451, Belgrave 3160 or call (03) 754 6800 during business hours. LRRSA members are invited to support this fund-raising effort by the PBPS with either an entry or by purchasing tickets and attending on the day.

PBPS brochure via Peter Evans 7/93

N. INGRAM & G. McLELLAN, Menzies Creek 915 mm gauge

John Fowler 0-4-2T 15989 of 1923 (ex Warburton Timber, Mount Morgan Mines, and Walhalla & Thomson River Steam Tramway), which has been in store at the Puffing Billy Menzies Creek Museum (see LRN 80 p.16), is reported to be up for sale.

Peter Medlin 6/93

MARR JACKSON & Associates narrow gauge

On Channel 10's "Hard Copy" on 16 June, a feature on ex-AFL footballer Mark Jackson showed him at work at his gold mine "near Melbourne". A sign showing the name "STRUCK OIL ADIT" was seen, as well as underground hand tramming of an ore truck. Gauge was perhaps 508 mm or 610 mm. Can anyone provide more details?

John Browning 6/93

LONG TUNNEL EXTENDED MINE. Walhalla 610 mm gauge

(see LRN 94 p.19)

E.M. Baldwin 4wDH 6008-1-7-75 of 1975 is said to have been out of use for some time and needs repairs. Its future is not certain and it may be offered for axle.

Peter Medlin 6/93

SECV, Yallourn & Morwell 900 mm gauge

(see LRN 94 p.3)

It has previously been reported that this railway is to close shortly and be replaced by road transport, which would be contracted out to a private operator. The contractor would be permitted to use B-doubles on the highway for a period of six months whilst building a private road between

Yallourn and Morwell (presumably on the formation of the railway). This has at least been deferred. The SEC has let a nine-month contract to Cook's Constructions to operate the railway. The contractors are expected to take over during June. The electric locomotives and their overhead supply have become unreliable in recent years and have involved heavy maintenance costs. Cook's proposal includes replacing the electric locomotives with three regauged ex-Queensland railway diesel-hydraulic locomotives. Larger loads could then be carried and this would allow the operation of a single train. This would enable the points, which are a major cause of derailments on the line to be removed, and would obviate the risk of collisions. When the State Government decides the future of the Morwell Briquette Factory - which it has-proposed to privatise - the future of the railway will again be considered. Industrial action by SEC staff in protest at the proposed privatisation of a number of aspects of SEC Latrobe Valley operations was being mooted early in July. At least two of the SEC's five electric locomotives would be placed in public museums. One of the locomotives would be used in the Ridge project planned for land near the SEC Visitors Centre.

WALHALLA GOLDFIELDS RAILWAY

(see LRN 92 p.19)

Sunday, 4 April saw the official launch of the Walhalla Goldfields Railway project at Walhalla in conjunction with a "back to Walhalla" steam special from Melbourne (using coach transport from Moe). The WGR hopes to have some operation in place by April 1994, 50 years since the last VR train left Walhalla.

The ends of the Thomson River bridge have been cleared of all foliage and undergrowth and the full length of the bridge is now visible from the road bridge. The railway formation has been cleared in a wide strip from the bridge for about 500 metres towards Walhalla. The old right-of-way is in excellent condition with only a couple of minor land slips - the ability of the original engineers is again revealed. The decking from the Thompson River bridge has also been removed to allow modern engineers to inspect the bridge, prior to its restoration.

The Society is hoping to get the rails and some other materials from the Yallourn-Morwell link railway. The Latrobe Valley newspaper, *The Express*, reported on 4 June that despite the decision to keep the link railway in operation, some rail material will be made available. In addition the SEC will

also provide a shunting loco (presumably one of the Fowler 0-6-0 diesel-mechanicals), and bogies. .

WESTERN AUSTRALIA

BUNNINGS PEMBERTON MILL 1067 mm gauge

G233 *Leschenault Lady* has been transferred from Boyanup Museum near Bunbury to Pemberton for operation of the Bunnings Mill railway between the mill and the Westrail sidings. Ian Willis, builder of the Pemberton trams, arranged the steam operation as substitute for Bunnings' own diesel. The operation began in early June but the cessation date is uncertain. Bunnings are expected to change to road haulage for all timber ex Pemberton Mill, possibly in August. and steam operation may continue until the changeover.

David Whiteford 7/93

CARNARVON LIGHT RAILWAY ASSN INC, Carnarvon 1067 mm gauge

(see LRN 91 p.19)

A rammed earth locomotive shed has been completed on Babbage Island to house the group's steam and two diesel locomotives. The shed was constructed using a training programme for unemployed youth and the participants also began relaying track from the jetty depot back towards Carnarvon. Until repairs, replacement, or approval to use occurs with the timber causeway that linked the island with the town of Carnarvon, track will only be completed on the island. The Dept of Marine and Harbours has donated the last Government locomotive to be used on the Carnarvon Jetty, to the Association. PW 29 *Banana Clipper* (Simplex 9097 of 1955) was transferred from Wyndham to Carnarvon in 1983 or 1984 for use on repair trains on the mile long jetty. PW 29 had not been used for some years and was stored in the Department's shed at the Babbage Island depot.

West Australian (State Ed.) 25/5/93 & 1/6/93 via David Whiteford

ROTTNEST ISLAND 1067 mm gauge

(see LRN 90 p.16)

Work on the 6.5 km tourist railway on Rottnest Island, off the WA coast from Fremantle, has begun. The track will take visitors from the main settlement past Kingstown (former Army Barracks) to the Oliver Hill gun battery following the courses of the former 610 mm gauge jetty to settlement line and the 1067 mm gauge Army line from the jetty and Barracks to the battery sites.

The line will run through scenic parts of the island previously inaccessible to the public. 60 lb rail ex the Westrail Milng line is being used on the line and volunteer labour of present and former Westrail staff will lay the track. The former Army line was still largely intact at the start of 1992 but was far too wasted to be reused and by mid 1993 it had been dismantled and sold to help finance the project. A railcar operation will be used on the line but details are unknown at time of writing (7/7/93). Although there has been opposition from the Rottnest Society (a public association of Rottnest enthusiasts), a Rottnest Island Railway Trust has been formed to manage the project and a major sleeper purchase protect was begun in June to raise funds for the line. Sleepers may be bought for \$40 each from R.I.R.T., GPO Box R1246, Perth WA 6001. Ex WA Premier, Sir Charles Court, drove in the "first spike" at a ceremony on 3 July. Sir Charles is Patron of the Trust. Railway construction is expected to be completed in August with trains to be running by the end of the year.

Rottnest Islander June 1993, Westland July 1993,

STATE ENERGY COMMISSION OF WESTERN AUSTRALIA, Bunbury Power Station 1067 mm gauge

(see LRN 36 p.11)

WAGR Tulloch TA-class 0-6-0DE TA1807 (056 of 1970) has been sold to the State Energy Commission for use at Bunbury Power Station. Commonwealth Engineering 0-6-0DM E1120 of 1956 was previously the only unit used here.

ARHS Bulletin 668, 6/93 via John Browning

MEETINGS

MELBOURNE: AGM AND OTWAYS EXTRAVAGANZA.

Following the formalities of our AGM Norm Houghton will be describing some of his more recent findings in the Otways. Norm usually illustrates his presentations with slides so be sure not to miss it!

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove. Ashburton.

DATE: Thursday 12 August at 8.00 pm.

SYDNEY: E.M. Baldwin & Sons

Sometimes during our researches collections do come to light and for the August meeting we have one such on show. A collection of slides showing locos after construction by E.M. Baldwin & Sons at Castle Hill and on delivery to the Queensland canefields. Baldwins are principally known for their sugar industry locomotives and these predominate (along with representatives of steam and other diesel locomotives) but also a number of their coal mining and tunnelling locomotives as well.

A not to be repeated chance to see the collection.

LOCATION: Woodstock Community Centre, Church St Burwood

DATE: Wednesday 25 August at 7.30 pm

ADELAIDE: Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park.

OBITUARY

The Society records with regret the death of member Ralf Alger. Ralf was an active member of the Society and regularly attended the Melbourne entertainment meetings. One of the earliest "bush bashers", he wrote several articles for *Light Railways* including "Wooden Rails to Kinglake and Flowerdale" (LR67), "The Impermanent Way: Slocumb and Walker's Tramway, Nayook West" (LR83), and more recently, "Reminiscences of the Cave Hill Tramway" (LR111). He will be sadly missed both by the LRRSA and the PBPS of which he was also an active member. We extend our condolences to his family.

We also record with regret, the death of another member, Mr J. Inchbold of Mt. Eliza.

Peter Evans 9/93

NOTES, CORRECTIONS & COMMENTS

Chris Hart kindly points out some errors which were perpetrated in LRN 94. John Fowler 18801 (p.10) was built in 1930. John Fowler 0-6-0DM Isis 1 (p.12) was Fowler 20776. John Fowler 0-6-0T *Coolum* (p.13-14) was built in 1923. The two working diesels at the Sunshine Plantation (p.13) are 4wDHs rebuilt by E.M. Baldwin from Ruston & Hornsby 4wDMs. In LRN 95 (p.11) it is incorrectly stated that Macknade Mill's E.M. Baldwin bogie loco 19 was doing a day shift cane transfer trip to Victoria. This should have read afternoon shift. In addition, it was not made clear that Victoria Mill's Clyde 0-6-0DH *Perth* was truck shop loco for the slack season only (there is no loco allocated to the truck shop during the crushing season).

RAILWAY PRESERVATION: A NEW PERSPECTIVE

Rails to Trails to Rails

In Australia quite a few old railway lines and tramways have been converted into walking tracks. Victorian examples are parts of the Powelltown Tramway

and two sections of the old Colac to Crowes narrow-gauge line, "The Beechy". Readers can probably think of several other lines.

When writing about a four kilometre section of the old Beechy line that passes through the Kwararren Regional Park, newspaper journalist, Heather Alexander described the walk as: "a flat clear path making walking delightfully easy". She observed that "birds noisily chirp overhead while the natural mulch of the forest floor deadens the sound of the walker's feet. Remnants of the railway line can be seen along the way".

I recently visited the area and was pleased to find that at one end of this walk - the site of the Birnam station - a shelter had been erected. The shelter had a large sign describing the old line and the area. It was illustrated with maps, photographs and sketches.

I had just missed out on travelling on the Beechy line while it was running, I had to be content with the next best - hiking the full length of the line from Colac to Crowes in 1963. Then the rails were still laid from Colac to Weeaprounah. The section with rails was easy to hike along but the section from Weeaprounah to Crowes which had closed some years earlier took a great deal of effort and "scrub-bashing". A recent visit in 1992 showed that now most of the line was either over-grown or converted to agricultural use. Apart from the two sections now made into trails, it would be hard to walk the whole line today. On my visit I was delighted to see the terminus at Crowes and the work of volunteers in erecting a railway sign there and laying a short section of track on which rested an NQ wagon. As I stood at Crowes I wished that at the time of the closure of the line, some-one had had the foresight to have the whole line set aside for future generations as a walking track.

Over the last thirty years I have hiked over many abandoned railway and tramway lines and found them excellent walking tracks - usually flat and easily followed. From 1986 to 1989 I worked and resided in the United States and, being a keen walker and light rail enthusiast, I visited many restored enthusiast railway lines as well as walking along abandoned lines. I discovered that there was an organisation in the United States called "Rails to Trails Conservancy".

"Rails to Trails" describe their aim as "Restoring Life to Abandoned Railway Corridors". They have recognised that old railway lines are perfect for linear uses such as hiking, horseback riding, jogging and cycling. They take an interest in both rural and urban rights of way. They point out that a mere two hundred acres of right of way can provide a linear park over 20 miles long. Their brochures are aimed at the conservationist rather than the railfan or rail historian but we can learn a lot from them. They aim to move in when the abandonment of a line is being considered. They are lucky to have the

support of a Federal (national) law which encourages the conversion of unused rail lines to trails.

Thus they aim to secure the right-of-way at the time of abandonment for a linear park. At this stage the land hasn't been carved up, the bridges and buildings are still intact and structures such as water tanks have not been demolished.

Applying this to the Australian context, we can look first at abandoned Australian Government rural lines. In most cases, the firm contracted to remove the rail was usually contracted to remove the bridges and most of the structures along the route. A few station buildings may have been left. After the contractors left, local farmers often purchased or leased the land which was usually fenced in. In some cases they filled in cuttings or levelled embankments. They are often hostile to walkers following the old line crossing their land. Land not sold or leased out often reverted to scrub then bush. In urban areas old government lines may remain disused corridors, converted to parks, or sold and built over.

In the case of Australian private railways (particularly timber tramways), bridges were sometimes left but steel rails were always removed for scrap. Although some railways and timber tramways in Australia have been made into walking tracks, there is no organised movement pointing out the potential of abandoned lines as walking tracks. I felt that there was the need to set up an Australian "Rails to Trails" movement. I am particularly interested in the Victorian narrow gauge line from Moe to Walhalla and the Tasmanian ABT line which would make excellent walking tracks. I believe that a "Rails to Trails" group could inspire local authorities and organisations to clear and signpost suitable lines and to put up markers and signboards at appropriate localities.

We will never be able to restore most abandoned lines to full working order but by clearing the right-of-way, people can enjoy the "feel of the line", observe the wonderful engineering works of the railway's builders and the scenery of the area as if they were a passenger on one of the old trains.

Once a right-of-way is secured as a linear park there is always the hope that the rails can be relaid on part of the right-of-way. Think of how much harder and costlier it would be for the Victorian Puffing Billy Preservation Society to re-open the line from Lakeside to Gembrook if the line had been parcelled up and sold, private housing erected on the right-of-way, cuttings used for tips and embankments razed.

Back in 1962 when it was proposed to close "the Beechy", the Puffing Billy Preservation Society was struggling to re-open four miles of line from Belgrave and was in no position to fight for the preservation of "The Beechy".

Tourist interest in the area was minimal.

Now tourist interest in the Otways has increased dramatically. For example when I visited the town of Lavers Hill on the old Beechy line in 1962 it was a declining country town with one general store. Upon revisiting Lavers Hill in 1992 I was amazed to find three large tourist cafes catering to extensive tourist traffic travelling along the Great Ocean Road. Just two kilometres from this tourist complex towards Crowes I found that Melba Gully was now a major tourist attraction. If a walking track were established along the old Beechy line from Lavers Hill to Melba Gully road it would be well patronised. Maybe one day the rails could be relaid along this short section. Maybe tourists could travel by trolley. Maybe.

The first step is to secure the right-of-way as a linear park. Turn it into a trail, that one day may become relaid with rails.

Readers of Light Railway News have extensive knowledge of the location of potential abandoned rail lines and their history. If they are interested in joining "Australian Rails to Trails" they can do so by sending a stamped self-addressed envelope to Box 223, East Melbourne, VIC 3002.

Mark Plummer 8/93

RESEARCH - BOOKS, MAGAZINES ETC.

Ray Graf alerts members to a number of relevant publications he has come across. *The History in and about Glenrock Lagoon (Newcastle NSW)* by John F. Grothen is a 66-page booklet on sale for \$6 at the Newcastle Museum. It includes a photograph of a 4wBE loco underground at Burwood Colliery, and two of a steam tram locomotive *Coffee Pot* which was used at Merewether

Mandurama and its Neighbours, by Thelma Treasure, priced at \$20, contains a note from the Blayney Advocate & Carcoar Herald of 18 August 1898 to the effect that the contractors for the tramway at Gallymont goldfields had just about completed their work.

Recently published, is *The Golden Mile* by Geoffrey Blainey, dealing with the history of Kalgoorlie since the discovery of gold to today.

Meanwhile, Leonie Knapman, author of *Joadja Creek: the Shale Oil Town and Its People, 1870-1911* is currently writing a book on Glen Davis and Newnes.

Ray Graf 8/93

An article appeared in the July 1993 issue of the *Independent Monthly* by Les Murray, who is possibly Australia's best regarded contemporary poet. The article makes various mentions of the North Coast timber tramway (where the Murray family grew up) and may be of interest to members.

The illustrated book, *A Pictorial History of the Shoalhaven* contains a few photographs of railway/light railway interest on the south coast of NSW.

Among them is a picture of a small steam locomotive hauling some five wagons (in which workmen stand) along a jetty. It bears the caption: "The silicon wharf at Bannister Head, built in 1921 and demolished in 1961. "Silica rock was in demand for the making of silica bricks which, because of their heat resistant qualities, were used in the construction of steel-making furnaces." The loco has a large metal roof covering cab and boiler sections (similar to a steam roller layout); it is impossible to define the wheel arrangement but gauge appears to be 2 ft The photo is "courtesy Milton and Uladulla and District Historical Society". Another photo relates to Watt & Son sawmill at Wandandian, and shows a steel railway of possibly 3 ft gauge leading from the mill to "the punt". A man sits astride a 4-wheel trolley on the line which is located on a bridge or jetty. A third photo shows SS *Belbourie* unloading material for the "new naval college" at Jervis Bay, in 1912. In the foreground, leading to a jetty, is what seems to be a standard gauge line, equipped with trolleys. The book was written and compiled by Narissa Phelps Morrissey.

David Burke 9/93

SALES OFFICER

LRRSA sales officer Alan Stebbing has indicated that he wishes to relinquish the role after six years during which he has kept members and the public supplied with our range of publications, earning valuable income for the Society. If any member is interested in taking over the position, please contact the Secretary for details of the work involved. This role would suit a retired person but is by no means too arduous for someone to undertake in their spare time.

Peter Evans 9/93

SITE REPORTS

BENANDARAH TRAMWAY, far south coast NSW

As advised in LRN 87 (page 3), the writer has been researching light railways on the NSW far south coast. Apart from the dozens of jetty, mining, breakwater, quarrying and agricultural lines, fifteen timber tramways have so far been identified. None of the timber tramways are thought to have used locomotives. However, a well preserved set of timber railed points has been discovered. The points are part of the Benandarah Tramway, which operated from about 1887. As part of researching the area, I contacted the District Forester, Mr Ian Barnes (who is an ex-member of LRRSA). Ian put me in contact with one of his Forest Supervisors, who told of seeing a set of what looked like railway sleepers. They had been spotted from a helicopter during

training for bush fire fighting many years before. The site was in the middle of a salt marsh and mangrove swamp.

Arrangements were made to try and locate the site on the ground. After parking the car on the edge of the Princes Highway, we plunged off through the dense she-oaks that fringe the swamp. Breaking out from the she-oaks into the salt marsh, we discovered that someone had excavated a drainage channel across our path. This was followed to our right for a few hundred metres, till we could wade across on an accumulation of foul smelling black organic ooze. But by now we were well off course. Heading due east we crossed the slippery slimy mud of the salt marsh, hoping to intersect the main creek, on which the tramway was thought to have ended, at a punt loading wharf. A band of close growing mangroves fringed the creek. Forcing our way through the mangroves, we nearly fell into the tidal creek - the bank was vertical and very slippery. But we managed to hold onto some supporting trunks and extricate our boots from the bottomless mud.

Next, were we up-stream, or were we down-stream, of the suspected location of the sleepers? Or, for that matter was this the main creek, or just a tributary anyway? Oh, boy! No way to answer any of these questions from where we stood, but having gone south along the drain, we decided to go north along the creek, hoping to counteract each diversion.

No tributaries were encountered, so it was thought that we were indeed following along the main creek. Progress was slow, as each footstep slid along the top layers of the dark grey, crab-hole riddled mud flat. Water movement in the creek indicated that the tide was coming in. We remembered the drain that we had crossed and wondered if we could cross it back to the road. But as I would be unable to return to the area for many months, we pressed on hoping to find the elusive sleepers before the tide rose too much.

With a notably rising tide on our right hand side, we stumbled around a bend in the creek, to blunder into an open area of low growing marsh plants. There on the other side of the opening, were the set of well preserved log sleepers. The sleepers lay on the mud flat, between the high and low tide mark. Waters started to lap the top of the creek banks and flow across the flat to where we were, so we busily photographed and measured the sleepers and adjoining set of points. The results of this research will hopefully appear in LR one day!

Jim Longworth 8/93

SANDERSON AND GRANT, Barramunga, Victoria 1067 mm gauge

Recently, while undertaking field surveys of the tramways in the Barramunga Creek valley, south of Forrest (Vic.), I came across a water tank

from one of Sanderson's vertical boilered locos. These were Kitson 0-4-0 VBT. OC, T69 and T70 of 1883 sold to the Victorian Railways and thence second hand to Sanderson in 1904. (See photograph on page 43 of *Sawdust and Steam*. One of these locos is also illustrated on the masthead of the magazine you are now reading). The horseshoe-shaped tank is at the Sanderson and Grant mill site on Barramunga Creek. Both locos were turned into winches by Jim Grant, one in 1919 and the other in 1923 and it was in this guise that one of the former locos found its way to the log landings on the Barramunga Creek log line in 1923. The mill is at the bottom of a 700 metre long slope, 200 vertical metres down from the Barramunga-Upper Gellibrand road (and 700 metres in from the Forrest-Apollo Bay road), so it is little wonder the tank has not been moved since the mill closed in 1928.

Another sighting in the area is a zigzag on Grant's tramway to the Upper Gellibrand mill. This zigzag, one of a pair on this line, is near the mill site (which is now on cleared farmland) and in the bush, but modern logging and pine plantings have severely mutilated it. I visited this site four days after 75 mm of rain had fallen in one burst so the area was literally crawling with leeches and the forest floor was one large puddle.

Norm Houghton 7/93

Water tank off one of Sanderson's vertical boilered loco/winches, Barramunga Creek Mill, June 1993.

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

VALE ENGINEERING PTY LTD, McCourt Street, Moss Vale

(see LRN 33 p.6)

A quantity of machinery and equipment was to be auctioned at this Kembla Coal & Coke subsidiary on 26 August, possibly associated with the closure of the plant. Items advertised included four Vale (battery) electric locomotives, Vale 14-man personnel cars, and a quantity of Vale locomotive spares and battery boxes. Illustrated was a single ended 4wBE loco with identification "A".

Ray Graf 8/93; The Age 31/7/93 via Colin Harvey

NEW SOUTH WALES

APPRENTICES STEAM CLUB, HMAS Nirimba, Quakers Hill 610 mm gauge

(see LRN 84 p.4)

Because of the impending closure of HMAS Nirimba, John Fowler 0-6-2T 1 *Invicta* (11277 of 1907), formerly of Qunaba Mill, is being returned to Bundaberg to the care of the Bundaberg Steam Tramway Preservation Society. Transfer to Queensland is expected to be carried out by Army transport vehicle, and is expected to take place before the end of September. Last steaming at Nirimba took place on 17 August. (The Foden steam road truck here is being transferred to HMAS *Cerberus*.)

Bruce Belbin 8/93; Sydney Morning Herald 18/8/93 via Ray Graf;

BLUE MOUNTAINS SEWERAGE TUNNEL CONSORTIUM

A consortium of McConnell Dowell Corporation, Obayashi Corporation and Sakura Australia is to build a 18 km sewerage tunnel from North Katoomba to the Hawkesbury River. The tunnel is for Water Board use but will be leased from its private owners. It will be drilled from a single point using a specially made \$5m boring machine. (It may be expected that a rail system will be used during construction - Ed.)

Sydney Morning Herald 8/6/93 via Ray Graf

BHP LTD, Newcastle 1435 mm gauge

(see LRN 94, p.7)

The rail connection from the BHP plant onto Kooragang Island (including the bridge) has been removed. This appears to have occurred fairly recently, judging by the debris still on site.

Ray Graf 8/93

COALCLIFF COLLIERIES PTY LTD, Coalcliff Colliery 1067 mm gauge

(see LRN 81 p.7 & 82 p.2)

An auction was to be held at this Kembla Coal & Coke subsidiary on 23 & 24 August. Among the equipment advertised for sale at the closed mine was six Vale 18-tonne battery electric locomotives, 52 kW, and personnel cars.

Ray Graf 8/93; The Age 31/7/93 via Colin Harvey

CLUTHA LTD, Oakdale Colliery 1067 mm gauge

A stoppage of at least six weeks was expected following a mishap towards the end of the installation of a \$3.5m automatic coal winding facility, on 15 May 1993. 150 000 tonnes of coal production was expected to be lost.

Sydney Morning Herald 18/5/93 via Ray Graf

EL CABALLO BLANCO, Catherine Field 1067 mm gauge

(see LRN 43 p.3)

This site was visited on 12 February, 1993, and the steam outline locomotive was examined. It appeared to be a 2-6-0DM, but in fact the pony truck does not touch the rails and the coupling rods connect the first two axles only. A Neil Moxon builder's plate identifies the unit as "ECB loco" (built 1983). The site was for sale by auction on 1 April 1993.

Weekend Australian 20-21/2/93 via Ray Graf, Ray Graf 8/93

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 94 p.7)

On Sunday, 8 August, the Society held a special day to celebrate the official return to traffic of the former CSR Victoria Mill Hudswell Clarke locomotive *Cairns* (1706 of 1939). The loco was withdrawn from traffic at Albion Park about two years ago, after the boiler tubes fitted on receipt of the engine from CSR in 1977, began to fail regularly. After plugging-off several and reaching the stage of dropping a tube each time the loco was lit up, it was decided she needed an overhaul. The loco has had the re-tube, re-fabricated lower smokebox, new ash pan, new safety-valve springs, new boiler cladding, all valves and fittings stripped and overhauled, and, when it was discovered that numbers of rivets joining the front tubeplate and smokebox to the boiler barrel had cracked, a learning exercise in hot riveting. Finally, a complete strip-back and repaint in the previously used early CSR style colour scheme, except the black boiler which is now maroon.

The preview of the event, covered a few days earlier by local TV news teams and local newspapers, resulted in a record crowd at the Museum for the big

0-6-0 Cairns (HC 1706 of 1939) posing in steam, whilst shunting 0-6-2T "Tully 6" (PE 7967/49/1 of 1949), ex-QGR P119 RM trailer and ex-MT&O 430.; Illawarra Light Railway Museum, Albion Park, 3/8/93.

Photo: Brad Johns

day, which also saw a visit by a local Morris Minor owners' club. By 11 am, cars were being forced to park in the street and four car trains were full with as many more awaiting the next run. Morning services were handled by the Society's Perry 0-6-2T "Tully 6", until at about 2 pm, *Cairns* appeared from loco and backed down onto the train to pilot the Perry, and after the ceremony of speeches and tape cutting by representatives of the businesses which had provided their services and materials free to help with the restoration, and by some local dignitaries, the two locos continued hauling well filled trains and providing the rare spectacle of double-headed steam at the "Park" (and on 2 ft gauge) for the rest of the day. After we shut the gates to the public around 5 pm, members and friends had a barbecue and indulged in a lot of nostalgic and atmospheric, night-running with lighted carriages, locos, signals, station buildings and signal box, which is very popular with members a couple of times each year and produces some good night photography on the line, station and at loco when de-ashing.

Dapto, the next suburb to Albion Park, has a Kentucky Fried Chicken branch which features vintage railway pictures and memorabilia on the walls and recently the ILRMS was asked if it wished to use a vacant wall to mount a display representing the Museum. A start has been made with the framing of an enlarged version of the Society logo with a brief description of

the ILRMS and its activities. Next to this is a frame with several colour 10 x 8 prints of current operations. The display will gradually include several scenes of historic local light railway interest and small railway artifacts.

The Society has been studying, and updating where necessary, its manual of working rules and operating methods, whilst waiting to find out the implications of the new NSW Rail Safety Bill, on 610 mm gauge light railways such as ours in NSW. The ILRMS Sales Department has commissioned a pair of coffee mugs featuring full colour drawings of our Hudswell Clarke in its CSR livery and the Perry in our green lined scheme. The mugs are available with optional gold rim (unsuitable for micro-wave ovens) or plain top. Each mug sells for \$8.50 with or without gold trim and postage is additional and dependent on destination. They are of course available from the ILRMS Souvenir Shop on Open Days but mail order enquiries may be directed to 042 71 6221.

Tony Madden 8/93

KEMBLA COAL & COKE PTY LTD, Illawarra Coke Works, Coalcliff gauges unknown

The coke works was noted in operation on 20 August, and has rail equipment for both charging and quenching. The coke quench car, which conveys the red hot coke from the ovens for quenching, and its haulage unit, appear to be cable worked.

There are two charging cars on top of the ovens which run together on parallel tracks. They are possibly 3-phase AC worked, with trolley poles facing the Sydney direction. It is recommended that future visitors contact the manager, Mr Ian Sheppard, if they wish to inspect this installation.

Ray Graf 8/93

NEW ENGLAND ANTIMONY MINES NL / VAM LTD 610 mm & 458 mm gauge

(see LRN 38 p.3)

Provisional liquidators offered the assets of these companies ("including fully operational gold and antimony mines near Armidale") for tender, closing on 30 July.

Ray Graf 8/93

ENC MANAGEMENT PTY LTD, Newvale Colliery, Vales Point 1067 mm gauge

(see LRN 20 p.7 & 22 p.4)

According to a brochure issued by Colliers Auction Group, a total disposal

auction was to be held at the Newvale Colliery on 6 & 7 September. Among apparent rail equipment advertised was:

- One 21-seat Gemco battery personnel carrier
- Two 9-person Fox "inspection cars"
- One Fox flat top
- Two Fox flat car carriers
- Two Hexham pod carriers
- One steel frame locomotive maintenance & service building
- Rail at 45, 60, 80 & 90 lb.

via Ray Graf 8/93

According to an advertisement in *The Age* of 28 August, the auction included two 24 ton type 12 battery-electric Gemco locomotives, 5 twenty seat personnel carriers, 15 coal skips, a Fox rail-mounted stone duster and a quantity of rail.

via Colin Harvey

STAN WOODS, Narellan Diesel Services, Narellan 1067 mm gauge

A leased yard visited on 12 February, 1993 revealed an ex-AIS personnel carrier numbered 46 (Fox 302 of 1971), plus the power unit of another unit which had been scrapped. It is reported that many personnel cars have been scrapped or dismantled for parts here in connection with a mining equipment repair business.

Ray Graf 8/93

XLPE CABLES PTY LTD, Lot 2 Canley Vale Road, Wetherill Park gauges unknown

The August 1993 catalogue of this dealer in electrical surplus stock contains the following items:

- Two Gemco 8 tonne locomotives with 2 batteries and charger
- Ten Gemco 10 tonne locomotives (7 with 2 batteries and charger, 1 with two batteries, and 2 with one battery and charger.)
- Two SIG (Schweizerische Industriegesellschaft) ETB70 10 tonne locos with two batteries and charger.

David Blakeley 8/93

QUEENSLAND

BUNDABERG SUGAR LTD, Mourilyan Mill 610 mm gauge

(see LRN 95 p. 10)

The mill's locos now all have numbers fore and aft as well as on the cab

sides. Clyde 0-6-0DH 5 (66-491 of 1966) is the loco fitted with remote control for one man operation, and is the yard loco. It carries large signs indicating that it can operate under remote control. Walkers 0-6-0DH 570 of 1956 has been numbered 11.

Chris Hart 8/93

CSR LTD Herbert River mills 610 mm gauge

(see LRN 95 p.10)

The new ex-QGR DH class Walkers B-B DH loco arrived about the beginning of July, and was in use by 20 July. It is Walkers 612 of 1969 (ex DH30) and is named *Herbert*. This unit works two shifts on the Bambaroo line which has required bridge strengthening throughout. On 5 August, it spread the track and derailed at Bambaroo. It is paired with the new 24-tonne bogie brake wagon which was produced by Solari's Engineering, Ingham, from an ex-QGR bogie wagon. The frame has been shortened, full size headstocks fitted, and roller bearings fitted to the converted bogies. Colour scheme is all over yellow except the red and white striped headstocks. Another QGR bogie wagon (HJS 25688) is at the mill,

At Victoria Mill, E.M. Baldwin B-B DH *Brisbane* (5423-1-9-74 of 1974) is the second loco painted in the new darker yellow livery. Clyde 0-6-0DH *Perth* (69-682 of 1969) and E.M. Baldwin B-B DH *Townsville II* (6400-2-4-76 of 1976) have had centre rear windows fitted to the rear of the cab. Clyde 0-6-0DH *Centenary* (64-381 of 1964) is still the yard loco. E.M. Baldwin 0-6-0DH *Hobart* (4413-1-7-72 of 1972) was on loan to Macknade Mill for about the last ten days of July. It appears that none of Victoria's 0-6-0DM Drewry locos has been used during the current crushing season.

During wet weather periods in July, three Macknade locos were painted in a new livery which is very similar to the Victoria livery. These were Clyde 0-6-0DH 18 (DHI.5 of 1954) and E.M. Baldwin B-B DH locos 19 & 20 (7070-3-4-77 and 7070-4-4-77 of 1977). The main body is the same yellow ("sunflower") as is being used by Victoria, with white valances, black underframe, red rods and red and white striped headstocks. There is also a broad (150 - 200 mm) green ("jade") stripe running around the whole loco below window level, rather than dropping down to footplate level at the front like the Victoria locos.

Cane transfer runs from Macknade to Victoria are now largely in the hands of the two Macknade E.M. Baldwin bogie locos. Bad weather, mechanical breakdowns and short supplies of cane can result in major transfers of cane, and on occasions just one mill will crush. On the afternoon shift of 23 July, there were five Victoria locos at Macknade waiting to head back to Victoria having arrived with cane. The Macknade Mill yard is not set up to receive large

tonnages from across the river, so Macknade locos had to be used to assist with the placing of fulls, removing brakewagons from rakes, and preparing empties.

Chris Hart 8/93

CHRIS HART, Cordelia 610 mm gauge

(see LRN 94 p.11)

The Clyde petrol hydraulic line car from Victoria Mill (built 1965) was delivered to Chris on 10 August. It will be a long-term restoration project.

Chris Hart 8/93

MORETON CENTRAL SUGAR MILL CO LTD, Nambour 610 mm gauge

(see LRN 95 p.12)

An eight-year-old boy was airlifted from Nambour General Hospital to Brisbane after an accident which occurred at Bli Bli at 2 pm on Saturday, 18 September, where his right hand and foot were partially severed when he fell from a moving cane train.

Sunshine Coast Daily 20/9/93 via Peg Hayes

CLIVE PLATER 610 mm gauge

(see LRN 94 p.13)

Coolum following extensive external restoration at Clive Plater's property, at Eudlo.

Photo: Clive Plater

Mr Clive Plater has a collection of ex-sugar tramway rolling stock at his property at Eudlo. The collection consists of:

- 1 1923 Powler 0-6-0T steam loco *Coolum* (externally restored)
- 1 1954 Ruston 0-4-0 diesel loco *Nambour*
- 1 1921 Moreton mill 0-4-0 petrol loco *Flyer*
- 1 1905 Krauss tender
- 3 Whole-stick cane trucks
- 1 Ballast wagon
- 2 Tipping ballast wagons
- 1 Bogie open passenger carriage
- 1 Bogie worker's toll carriage
- 2 Log bogies
- 2 Flat top wagons
- 1 Water tank wagon
- 1 Hand pump trolley
- plus numerous spares

The items are set up on 200 m of track of which about 50 m are under cover. Mr Plater's family have been associated with the Moreton Central Sugar Mill since 1895 when his grandfather was the first chairman of directors. His father worked at the mill for 51 years as Loco Driver, Traffic Officer, Line and Bridge Maintenance Officer and as Cane Inspector. Should any LRRSA member wish to view this collection, Mr Plater can be contacted on 074 45 0054.

Letter from Mr Clive Plater via LRRSA Secretary 8/93.

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 95 p.14)

The conversion of Prof B-B DH *Nyleta* (P.S.L.25.01 of 1990) from hydrostatic to hydraulic drive has involved the removal of the short end hood. This end of the cab is now fitted with a single full width window. The loco is now worked with the radiator or long hood end facing the mill, and was observed working the shuttle up the Basilisk Range from Japoonvale with 99 bins, paired with bogie brakewagon 6.

Chris Hart 8/93

TULLY SUGAR LTD 610 mm gauge

(see LRN 95 p.14)

The two new ex-QGR Walkers B-B DH locos at Tully Mill are TULLY No.5 (650 of 1970 - see photo front cover) and TULLY No.6 (653 of 1970) ex DH63 and DH66 respectively. TULLY No.6 runs with a new brake wagon rebuilt from an ex-QGR bogie wagon. The wagon is full length, runs on regauged bogies and incorporates large ballast weights at each end. A central full height shelter

structure covers the air compressor and control equipment, suggesting a "brake van". TULLY No.6 has been geared down to operate the range section to El Arish. A second brake wagon is in process of conversion for use with TULLY No.5.

This mill has introduced a satellite location system for its locos, based on navigation technology. A monitor in the traffic office shows the position on the system of each loco and is reported as being accurate to within two metres.

A major expansion of cane growing to the south of the Murray River is being undertaken. The new tramline bridge at Lihs Crossing, south west of Tully, was opened at the beginning of August by State Primary Industry Minister, Ed Casey, and has been built in association with tramline extensions which will cost \$1.5m. At least 5000 additional hectares have been opened up as a result of the new bridge, with the possibility of this extending to 20,000 hectares over time.

Paul Aslette 7/93; Chris Hart 8/93; Tully Times 5/8/93 via Chris Hart

SOUTH AUSTRALIA

MORRISON KNUDSEN OF AUSTRALIA 1435 mm gauge

(see LRN 88 p.2)

In early 1993, AN Rail Bo-Bo DE 533 (built by SAR Islington) was sold to Morrison Knudsen (for workshop shunting duties? - Ed,)

ARHS "Bulletin" 8/93 via Ray Graf

TASMANIA

IDA BAY RAILWAY, Lune River 610 mm gauge

(see LRN 95 p.15)

Hunslet 0-4-2T 1844 of 1937 has returned to service on the Ida Bay Railway this year, the line for which it was originally built for industrial service, having been in the custody of the Don River Railway for some time. This loco hauled an AREA special on 8 May as far as the halfway siding. Also seen in service on this day were diesel locos numbers 1, 2 and 3. It is stated that loco 2 has recently been rebuilt with a carriage body to carry about six passengers. (It is assumed that these are three of the Malcolm Moore locos converted from 4wPM. - Ed.)

via Ray Graf & Colin Harvey 9/93*

VICTORIA

THINGS SEEN ON THE WAY TO THE PUBLIC RECORD OFFICE 610 mm gauge

During a recent visit to the PRO at Laverton, two interesting items were seen in contractors' yards nearby. Gardner Denver Bogger serial No.153915, freshly painted, was on display (presumably for sale) in the yards of machinery merchants McConnell Dowell Constructors Limited in Cherry Lane, Laverton.

Nearby, on the corner of Cherry Lane and Dohertys Road a familiar outline was noticed in the yards of Situpile, pile driving contractors. Curious motorists looked on in amazement as your correspondent peered through the fence with a pair of binoculars in order to read the builder's number. Powering a twin drum cable winder (reminiscent of a logging winch but presumably part of a pile driver) was the engine unit of Malcolm Moore 4wPM builder's No.1081 of 1943. This seemed complete from the frames up with the exception of the right angled final drive. The frames, wheels etc were nowhere to be seen. It pays to keep your eyes peeled!

Peter Evans 8/93

BHP STEEL, Long Island, Hastings 1600 mm gauge

(see LRN 81 p.10)

Clyde Bo-Bo DE Y148 (65-414 of 1965) has been acquired by BHP from VR and was repainted in BHP corporate colours at Ballarat Workshops. It was transferred to Long Island on 14 July. This unit will presumably replace the two Com-Eng Aresco road rail units here.

AREA "Items" 10/7/93 & 14/8/93 via R.Graf; Ray Graf 8/93

COOKS CONSTRUCTION, Yallourn & Morwell 900 mm gauge

This company has taken over operation of the SEC line as forecast in LRN 95 (p.18). Four ex-QGR DH class locomotives have been obtained and are being put into use as follows (all Walkers B-B DH):

Running No.	Ex-QGR	Walkers B/N	Date
CC 01	DH4	586	1968
CC 02	DH5	587	1968
CC 03	DH56	643	1970
CC 04	DH24	606	1969

CC02 and CC03 were delivered to Yallourn on 25 June. They are painted in the same style as the DH class but with yellow replacing the green sections,

with a broad white stripe and red lining. CC01 was delivered to Yallourn on 28 June, not repainted.

*AREA "Items" 10/7/93 via Ray Graf;
ARHS Bulletin 9/93 via John Browning*

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 95 p.15)

Locomotives

6A: Is in the workshops but little work seems to have occurred.

7A: Was returned to service in late July.

G42: Work on the new frames and various other parts is continuing.

John Benn: This is the first of the two ex-West Melbourne gasworks Decauville/Couillet locomotives which was built in Belgium in 1886 as an 0-4-0T, and heavily rebuilt by Ron Kane in the 1970s as an 0-4-2ST for use on his abortive Walhalla project. It is now in the Belgrave workshops where maintenance work, and fitting of automatic couplers and air brakes is underway. The loco will eventually be used at Coal Creek Historical Park, near Korumburra.

Special Trains

A "Heritage Mixed Train" was run on 1 August, others are scheduled for 13 February 1994, and 1 May 1994.

Traffic

The number of paying passengers carried in the financial year 1992-93 was down 13% on the previous year, and the number of paying passengers carried in June 1993 was down 37% on the same month in 1992. Figures for July 1993 were down 15% on July 1992

Gembrook Restoration

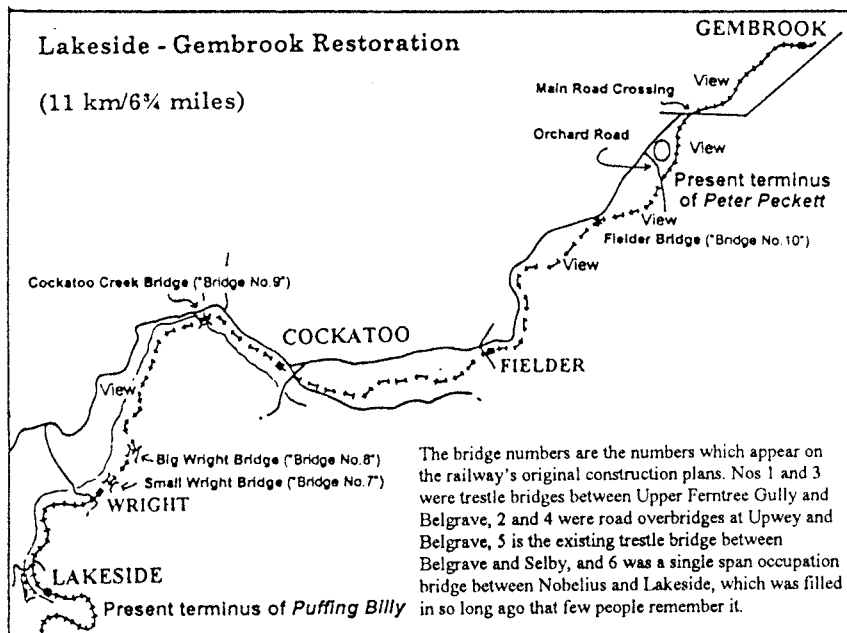

A work weekend was held on 14/15 August ballasting the Main Road - Orchard Road section, and the tamper has been in use on this section. Eight weekend work parties have been scheduled between September 1993 and June 1994, with the intention of having the track complete between Orchard Road and Fielder by the end of June 1994. This is a distance of 1.6 miles. Presumably the second half of 1994 would see the commencement of an assault on the Fielder - Cockatoo section (1.25 miles).

A grant of \$50,000 has been received from the Andrews Foundation (a charitable trust associated with the Pakenham Blue Metal Group of Companies). This is the third successive year that a grant has been received from this foundation.

Gembrook Operations

When train operations recommence in September, trains will operate to Orchard Road, now giving passengers a choice of fine views to the north and south!

Frank Stamford 9/93

ALAN STEBBING various gauges

(see LRN 84 p.14)

Alan Stebbing has retrieved his two locomotives from Uptons scrap yard at Corowa, Victoria. The locomotive previously described as a Fowler is almost certainly identical to the Kelly & Lewis locomotive shown on page 27 of *Light Railways* 102 and is assumed to be the same as the locomotive shown on page 9 of *Light Railways* 95. The locomotive has been rather crudely modified to standard gauge (not 5 ft as previously reported). All that remains are the frames, wheels, axle boxes and the final drive gearboxes, but all of the bolt holes and the distinctive cast-iron horn guides shown in LR 102 are the same. The second locomotive is a Baldwin-Witcomb, and is complete except for the engine which is believed to have been an International. This 610 mm gauge locomotive is very heavily constructed, has a short wheelbase and final drive

via roller chains. The name *Auckland* is painted on both sides of the cab, and the unit is reputed to have been used on the Snowy Mountains Scheme. Both locomotives are now stored at Alan's property at Belgrave South.

Motor Rail Simplex 7351 of 1938 (ex Cheetham Salt) belonging to Peter Evans is also stored at this location. It has now been completely stripped and the frame will require heavy repairs which are to be carried out at Alexandra. Meanwhile, the spare engine parts obtained with both 7351 and 10058 have been sorted out and cleaned, and it appears that enough parts are available to build a complete engine to fit into 7351. All parts from this locomotive are now in the process of transfer to the Alexandra Timber Tramway and Museum where it will be gradually restored to the same form in which it ran at Laverton, complete with a 44 gallon drum for a radiator.

Peter Evans 9/93

WESTERN AUSTRALIA

BROOME 610 mm gauge

The Myer catalogue for Spring/Summer 1993 shows a model (male) photographed on and around a rather weathered jetty carrying a 2 ft gauge tramway. Presumably this is the jetty at Broome Pearling Settlement (see LRN 35 p.13).

John Browning 8/93

BUNNINGS MILLS (various) 1067 mm gauge

From mid-August, the only timber mill to rail its output is the Bunnings' Manjimup Mill (see LRN 3 p.10). With the cessation of timber haulage from Pemberton the Westrail line between Pemberton and Lambert is likely to close as there is no other freight carried. The Bunnings mills at Pemberton and Jardee both have locomotives for hauling wagons into the Westrail sidings, and Manjimup's loco has been out of use for over two years with Westrail locos operating into the mill. The future of all three, plus the Nannup mill loco which has been out of use since rail haulage ceased in 1984, is uncertain. The only mill diesel preserved to date is the one from Yarloop (see LRN 93 p.19) and this has now been joined at the restored Yarloop Workshops complex by YX 176 (2-6-0 James Martin 178 of 1898). 176 formerly operated on the Bunnings' Donnelly Mill railways and in 1982 was moved from storage in Manjimup to the northern Perth suburb of Balcatta, where it sat outside a company retail complex. It was moved to Yarloop in mid-1993.

Peter Goss, David Whiteford 8/93

BUNNINGS DONNELLY MILL

Donnelly Mill operated from 1952 until 1977 with rail haulage from the mill to the WAGR's Yornup siding until 1970. At the mill, a large locomotive shed was constructed which had been deteriorating over many years. However in 1991, restoration of the shed and its conversion into holiday accommodation was commenced by lessees, Graeme and Ellie Wearne. While the exterior of the shed has not been dramatically altered, inside there is now a second storey and living areas, holiday accommodation units, dining area, toilets etc. Part of the former loco inspection pit has even been retained as a wine cellar. Enquiries about booking accommodation at the Loco Shed (26 km south west of Bridgetown) can be made on (097) 72 1220.

West Australian 21/8/93 via David Whiteford

BUNNINGS PEMBERTON MILL 1067 mm gauge

(see LRN 95 p.19)

Further to the report in LRN 95, steam loco G 233 *Leschenault Lady* apparently was not able to operate into the Bunnings Mill at Pemberton, due to company restrictions. Instead of hauling the mill output into the Westrail yard, 233 was steamed up and with one or two bogie wagon loads of timber, ran up and down on mill railway between the mill boundary and Westrail yard. This operation was to coincide with the departures of the tourist "tram" service from Pemberton to the Warren River cascades or Northcliffe. 233 was scheduled to return to the Boyanup Museum on 6 September, and its movement from Pemberton could be the last rail operation out of the town towards Manjimup.

Peter Goss. David Whiteford 8/93

GOLDSWORTHY MINING LIMITED 1435 mm gauge

Clyde Co-Co DE GML-20 - formerly GML-10 - (Model JT42C built 1990) has reportedly been sold to Comalco for use at Weipa, Queensland.

ARHS "Bulletin" 5/93 & AREA "Items" 10/7/93 via Ray Graf

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION Bennett Brook Railway, Whiteman Park 610 mm gauge

(see LRN 92 p.19)

Progress continues on ex-South African NG15 118 with hopes of steaming it before the end of the 1993 season. New boiler feed pipes have been installed and super heater tubes repaired as well as many other tasks. Preparation for installation of the former Midland Steam depot 80 ft turntable at Whiteman Village Junction has begun. From 1 July 1993, Whiteman Park commenced

full operations from Wednesday to Sunday inclusive with all major attractions including trains and trams operating. While the park has always been open 7 days a week, weekday transport services have usually only operated during school holidays, although Wednesday and Thursday train services have regularly run for some time.

David Whiteford 8/93

OVERSEAS

FIJI SUGAR TRAMWAYS 610 mm gauge

(see LRN 88 p. 14)

The following observations were made while on a recent trip to Fiji. The sugar season was in full swing at the time. The sugar crop seemed to be unusual in that many of the canes were flowering. In Cuvu, where I was staying, the pattern seemed to be to distribute empties in the early morning, gather fulls in the late afternoon, and take them to the mill at night.

15 July	Cuvu	No. 3	(shunting)
16 July	Nadi	No.12	(shunting)
	Nadi	No.17	(hauling fulls to Lautoka)
	Nadi	No.14	(hauling empties)
	Lautoka	No.11	(light to mill)
	Ba	No.24	(shunting to sugar bins)
	Tavua	No. 7	(shunting empties)
	Penang	No. 8	(hauling two wagons)
	Ellington	No. 3	(hauling fulls to mill)
18 July	Cuvu	No. 6	(shunting fulls to mill)
	Cuvu	No. 2	(shunting empties to Sigatoka)
	Natadola Beach	No. 6	(empties to Cuvu)
	Natadola Beach	No. 1	(light to Cuvu)
20 July	Sigatoka bridge	No.2	(hauling fulls to Cuvu)
23 July	Molomolo	No. 3	(empties to Cuvu)
24 July	Cuvu	Nos.6,7,2	(dead)

ADVERTISEMENTS

AVONSIDE STEAM LOCOMOTIVE - 3 ft 6 in gauge

Ex-Pioneer Sugar Mill loco *Airdale* is offered for sale. The 0-6-0T loco was built in Bristol, UK, 1930 (B/n.2043) with driving wheel diameter 28 in and cylinders 9.75 in x 15.5 in The locomotive is currently stored in Tully, NQ and its boiler has been removed for industrial use elsewhere. Asking price \$4500 ONO. All enquiries: Graeme Daniel 03 720 1547.

WANTED:

RAIL 30 lb/yard or lighter including old style portable sections, and points. Also small restorable Malcolm Moore or Simplex type loco. Phone 042 28 9353.

(Australian Canegrower 6/9/93 via Chris Hart)

NOTES, CORRECTIONS & COMMENTS

BHP LTD, Newcastle

(see LRN 96 p.8).

This report gave the misleading impression that the rail bridge to Koorangang Island has been removed. In fact it is used daily by SRA, although

the connection to BHP trackage has been severed. Apologies to Ray Graf.

ENC MANAGEMENT, Newvale Colliery

(see LRN 96 p.11).

Ray Graf kindly points out that the two Fox flat car carriers and the two Hexham pod carriers listed for auction were rubber-tyred vehicles.

ALAN STEBBING

(see LRN 96 p.17).

Ray Graf points out that the American loco acquired by Alan Stebbing is a Whitcomb (not a Baldwin-Witcomb). It is true that Whitcomb was owned by Baldwin for many years (as were other builders) but the two operations were separate, and Whitcomb products bore Whitcomb builder's plates! In LRN 61 (p.11), the Whitcomb builder's number is given as 40521.

"A PICTORIAL HISTORY OF THE SHOALHAVEN

(see LRN 96 p.5)

1. Regarding the Bannister Head locomotive - this is currently believed to have been an 0-4-0, Blackstone & Co. Ltd petrol locomotive - a very rare beast indeed !
2. Regarding the Watt & Son mill tramway - this mill operated c.1890 to c.1925.
3. Regarding the Jervis Bay Naval College line - this was a temporary line used during construction of the college and breakwater It was of standard gauge and locomotive No.128 (later 530, later 530x) ran the line. No.128 was a P Class 0-6-0 saddle tank.

Jim Longworth 10/93

RESEARCH

NSW TRAMWAY REGISTER

Some years ago APW published a Register of Victorian Tramways. While not definitive, it did serve to document the existence of many little known lines, such as those three referred to above. If any member thinks producing a similar register of NSW lines would be a worthwhile project, they might like to contact Jim Longworth at 2 The Boulevard, Cheltenham NSW 2119, or by phoning 02 876 4369 (home), to discuss the possibility.

Jim Longworth 10/93

C.B. THOMAS COLLECTION

The Reverend Cedric B. Thomas was one of the earliest researchers into Australian light railways. When he died, some of his collection was deposited with the Mitchell Library in Sydney. LRRSA member, Jim Longworth, has started cataloguing the collection (36 boxes). While the material is not yet

accessible, one day it should be. If anyone knows the whereabouts of any other parts of the collection, or is interested in what it contains, they might like to contact Jim as above.

Jim Longworth 10/93

KALGOORLIE-BOULDER

The WA office of the Australian Archives has published a 170 page source analysis of records of the Kalgoorlie-Boulder area of WA. The analysis has been organised into subject order with one of the chapters being dedicated to "Transport". The price is \$8 (plus \$5 for postage and packaging) and cheques should be made payable to the Collector of Public Moneys and sent to Kalgoorlie-Boulder Source Analysis, Australian Archives (WA Office), PO Box 1144, East Victoria Park WA 6101.

Records & Research Oct 1993 via Ross Mainwaring 10/93

MELBOURNE GASWORKS LOCOMOTIVES

There is currently a debate over the correct names of two of the West Melbourne Gasworks locomotives, Couillet 43/1886 / Decauville 861/1886, and Couillet 90/1890 / Decauville 986/1890. (See elsewhere in this issue for details of the current disposition of these locomotives). Much documentary evidence says the 861 was named *John Benn* and that 986 was named *Carbon*. This was conveyed in the text of the late John Buckland's article in *Light Railways* No.90. But in that same article a photograph of *John Benn* with two buffers makes me believe otherwise, as the locomotive surviving in its original form has two buffers and is 986 (the respective numbers are stamped on the parts of both locomotives). There are other photographs around that show the other locomotive with a single centre buffer, but on none of these can the name-plate be read.

I am looking for photographs that will help clear up this matter so that correct name plates can be fitted to the respective locomotives. If anyone can help, please contact me at "Platina", 12 Corringham Road, Upper Beaconsfield. Victoria 3808; or telephone (059) 443 839.

Bill Hanks 10/93

TIMBER TRAMLINES NEAR SYDNEY

In LRN 90 p.2, David Burke asks if Carson's Tramway (see LR No.98 for details) was the closest timber tramline to Sydney. Apart from those lines that have already been mentioned in these pages, the Hardwood Timber Co. line at Tommys Gully near Cattai, should also be considered. I have not researched the line in much detail, though enough is known to provide a start should a

Sydney researcher be interested in the project.

Jim Longworth 10/93

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

TULK GONINON LTD, Connors Road, Mackay, Qld

It is reported that this company has been successful in gaining contracts for the conversion of three ex-QGR DH class B-B DH locos to 2 ft gauge for sugar mill use. Two of the conversions are known to be destined for Invicta Mill, Giru (see LRN 95 p.11).

Tony Wells 10/93

NEW SOUTH WALES

JIM DENMARK, 11 Crooks Road, Mandalong NSW 2264

LRRSA member, Jim Denmark, owns and operates a miniature narrow gauge railway at the above address. It could be best described as a recreation of a timber tramway and features five bridges, one 90 ft long and 20 ft high timber trestle, two tunnels, sharp curves, and grades of 1 in 25 and 1 in 30. Length of the run is about half a mile and rail used in 14-16 and 20 lb/yd. Motive power is provided by two 1/3 scale 2 ft gauge locos, one an 0-4-2 Perry and the other a 2-4-2 freelance, but based on the Perry, and one petrol locomotive. There are five items of rolling stock, some for passengers. Jim

welcomes any LRRSA members, either as individuals or as a group (there is no charge) and intending visitors can contact him at the above address or by phoning 049 73 1315. The railway usually operates every Sunday from April until the end of November.

Jim Denmark 10/93

NARELLAN DIESEL SERVICES, Narellan 1067 mm gauge

Ex-AIS personnel carrier numbered 46 (Fox 302 of 1071) has been donated to the Illawarra, Light Railway Museum Society at Albion Park for preservation. It is intended to regauge the vehicle to 610 mm for use on the Museum's railway.

David Jehan 10/93

PETER NEVE Loftus 610 mm gauge

(see LRN 34 p.3)

An ARHS trip visited this private collection on 17 July. The following locomotives were noted:

Hunslet	0-4-2T	1187	1915	ex Inkerman Mill in use
Perry	0-6-2T	6676.38.1	1938	ex Kalamia Mill
Fowler	0-6-0TT	8766	1900	ex Victoria Mill under restoration
Ruston	4wDM	387892	1955	ex Gin Gin Mill in use

Please note that the collection is not open for general public inspection and that visits should be by prior arrangement only.

Ray Graf 10/93

NEWCASTLE REGIONAL MUSEUM, Hunter Street, Newcastle West narrow gauge

A coal exhibit at the museum incorporates a simulated "mine". At least one item of rolling stock, a coal skip, is on display.

Ray Graf 10/93

TUBEMAKERS OF AUSTRALIA LTD, Newcastle 1435 mm gauge

(see LRN 45 p.7)

E.M.Baldwin 6wDH *Worimi* (4877-1-9-73 of 1973) is reported to have been sold to the New South Wales Grain Corporation, and will see service on Newcastle Docks.

Craig Wilson 10/93

WALLACE & McGEE, Dubbo 915 mm gauge

(see LRN 90 p.10)

A drive past this site in late October revealed that the kilns had been demolished and the material removed. The boiler was lying on its side and the site appeared to be about to become a housing subdivision.

Ray Graf 10/93

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610 mm gauge

(see LRN 95 p.9)

This Society is one of seven Sunshine Coast Museums or Historical Societies to receive a special State Government Museum Grant, theirs being \$2150.

Sunshine Coast Daily 8/11/93 via Peg Hayes

BUNDABERG SUGAR LTD 610 mm gauge

(see LRN 94 p.10)

Bundaberg Sugar Ltd owned by Tate & Lyle Plc, has put in a bid totalling \$87m to acquire Tully Sugar Ltd and South Johnstone Mill Ltd. The bids represent \$37.5m for South Johnstone and \$49.5m for Tully. An additional \$13 for infrastructure upgrading has been pledged should the bid be successful. However initial reactions from both mills are that the sugar giant's offers need sweetening. Boards from both mills have recommended the cash offers be rejected as inadequate and have hired legal and financial advisers to provide further appraisals.

The Australian, The Courier-Mail, The Sydney Morning Herald, 19/10/93 via John Browning; Sunshine Coast Daily 19/10/93 via Peg Hayes

CSR LTD, Herbert River mills 610 mm gauge

(see LRN 96 p.12)

A \$75m upgrade has been approved for the Herbert Valley over the next two years. \$45m is being expended for the 1994 season, and a second stage of \$30m will be completed for the 1995 season. Most of the expenditure will be at Victoria Mill, where crushing rates will be lifted by 124 tonnes per hour to 954 tonnes per hour by 1995. Tramway-related expenditure includes another ex-QGR Walkers B-B DH DH-class loco and brake wagon, 400 or 450 new 4-tonne bins, and mill yard extensions.

Preserved Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) was in use with

the Decauville carriage for the Maraka Festival on 9 October. Because of continuous crushing, the trains this year ran from the mill estate and on the Nyanza line.

Cane transfers from Macknade to Victoria were reduced from two to one trip per day in mid September, and eliminated altogether a month later. This is because the Macknade cane estimates were climbing faster than Macknade, and it is planned for the two mills to finish the crush on the same day. Some cane transfers may be needed later to even things up.

Victoria Mill's E.M.Baldwin 0-6-0DH *Hobart* (4413-1-7-72 of 1972) was on loan to Macknade from 29 September to 2 October, and from 19 October to at least the 25th to cover breakdowns.

Victoria growers in the areas south of Bambaroo, the southern terminus of the mill's tramline, claim that an extension is required to ease congestion at the Bambaroo delivery point, which serves 30-40 growers and receives 60,000 tonnes of cane in 1993. The growers say that further cane expansion may be delayed unless the situation is relieved. CSR claims that an extension of 15 km to Crystal Creek or 30 km to Rollingstone would be uneconomic under current circumstances.

*Australian Canegrower 23/8/93 and Herbert River Express
28/9/93 via Chris Hart Chris Hart 10/93*

CSR LTD, Kalamia Mill 610 mm gauge

(see LRN 93 p.12)

Kalamia Mill is reported to have obtained another ex-QGR DH-class Walkers B-B DH loco for regauging.

Tony Wells 10/93

GRAEME DANIEL, Tully 1067 mm gauge

Avonside 0-6-0T 2043 of 1930 was removed from the Lions Park in Brandon by an Ingham scrap dealer in about May 1992, and was shortly afterwards acquired by Graeme Daniel and his brother-in-law. The boiler was removed and is currently in use for heating water at Tully Saw Mill. The remainder of the loco is also in Tully and is available for sale. See advert elsewhere in this issue for sale details.

Graeme Daniel 10/93

GORDONSTONE COAL MANAGEMENT PTY LTD, Gordonstone 1067 mm gauge?

(see LRN 71 p.11)

This mine near Emerald was officially opened on 5 October. News footage showed a dolly car on the inclined drift into the mine.

ABC TV News 5/10/93 via John Browning

HAUGHTON SUGAR CO. PTY LTD, Invicta Mill, Giru 610 mm gauge

(see LRN 95 p.11)

CSR has announced expansion plans which will involve spending more than \$100m on Invicta Mill over the next five years, expanding crushing capacity by 170%. This reflects the massive increase in cane production in the district associated with the Burdekin irrigation scheme. The major part of the spending will be over the next two years, with transport infrastructure expected to be a major component.

Herbert River Express 28/9/93 via Chris Hart; The Courier-Mail, The Sydney Morning Herald 28/9/93 via John Browning.

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 95 p.11)

Trials were recently carried out using a slave locomotive on the Farleigh Mill north coast line, using one E.M.Baldwin 32 tonne B-B DH loco from Marian Mill slaved with a second one from Farleigh Mill. The current load limit for single locos is 130 bins from White's Creek to the Summit and then 70 to the mill. On the two days of trials, the two locos together hauled a maximum of 250 bins to the Summit. The load was then split, with a maximum of 130 bins at a time being brought from the Summit to the mill. By using a slave operation, not only are crew costs reduced, but more bins can be hauled to the mill yard by an earlier time of the day.

The cost of the ex-NSW SRA 73-class Walkers B-B DH locos purchased by Farleigh Mill is \$10,000 each, or scrap price. The good value for money involved has led to further purchases of locos of this type by Mackay Sugar. Three 73-class were delivered to Pleystowe Mill in the first half of October. 7313 (Walkers 672 of 1971) in reverse yellow livery, was placed adjacent to the loco shed and almost immediately the bogies were removed for inspection and evaluation in preparation for regauging. This unit is said to be likely to enter service in the 1994 season. 7304 (663 of 1970) in reverse yellow livery and 7343 (705 of 1972) in "red terror" livery were delivered to the North Eton mill site for storage. Meanwhile it is reported that up to another four of these units will be purchased by Mackay Sugar, with Marian Mill to receive at least two.

Options are being considered for appropriate future use of the North Eton and Cattle Creek mill sites. Present plans include the retention of the loco shed at North Eton, and the erection of a navvy shed at Cattle Creek.

Cane is being transferred from Racecourse to Pleystowe mill and from Pleystowe to Marian to equalise season lengths. Final figures will probably be about 94,000 tonnes from Racecourse and about 115,000 tonnes from

Pleystowe. Locomotive schedules have been adjusted to take account of these transfers.

Mackay Sugar's plan to extend the Marian Mill tramway from Finch Hatton to Boonganna, about seven kilometres to the west, along the old QGR route, has met with opposition from the Finch Hatton Tidy Towns committee.

Tony Wells 10/93; Mackay Daily Mercury 12/10/93; Mackay Sugar newsletter 9/93 via

John Browning.

MOSSMAN CENTRAL MILL LTD 610 mm gauge

(see LRN 95 p.13)

A \$14m cane transport proposal (combined road and rail) has been put forward by Mossman Mill and its growers to the Commonwealth/State sugar industry infrastructure committee.

Australian Canegrower 20/9/93 via Chris Hart

MULGRAVE CENTRAL MILL CO LTD 610 mm gauge

(see LRN 95 p.13)

The former Hambledon Mill site has been levelled and cane planted. The mill yard no longer exists. The Sawmill Pocket line has been re-routed to bypass the Hambledon Mill area, and the Redlynch line has been turned to face Mulgrave.

At Mulgrave, a large shed is under construction adjacent to the full yard and it appears likely it will become the transport department's base of operations. The existing locoshed simply overflows with locos.

Clyde HG-3R 0-6-0DH locos 13 (64-316 of 1964) and 18 (64-379 of 1964) have 6-cylinder Cummins engines. These two and 19 (65-435 of 1965), also an HG3R have had their engine compartment doors removed. E.M.Baldwin 0-6-0DH 11 (4413-2-8-72 of 1972) has had its gull wing doors removed and the hood top made solid all the way through, leaving open sides also. These four workhorses will look much happier after the next paint jobs. Baguley 0-6-0DM 1 (3377 of 1953) is fitted with a John Deere 6-cylinder engine. All the ex-Hambledon Mill rolling stock has been converted to link and pin couplers.

Chris Hart 10/93

NOSTALGIA TOWN, Pacific Paradise, Sunshine Coast 610 mm gauge

A tourist railway is currently under construction here, with the proprietors hoping to have it running by Christmas. The line, laid in 42 lb/yd rail, is in the form of a loop (approx. 600 metres in length) circling the complex and will run through a "Dinosaur Swamp" and a man-made tunnel featuring audio/visual effects. Motive power is provided by steam outline loco, Chance Manufacturing Co. B-2-B PH, builder's number 84-50-200-24 of 1984 ex

Canberry Fair, Canberra (see LRN 57 p.4). Admission to the complex is free and it is located just to the east of the roundabout at the Pacific Paradise exit on the Sunshine Coast Motorway. The complex is open every day from 9 am to 5 pm, except Christmas Day.

Peg Hayes 11/93

PIONEER SUGAR MILLS LTD, Pioneer Mill, Brandon 1067 mm gauge

(see LRN 94 p.13)

Walkers B-B DH 647 of 1970 has been officially named *Jerona*. Clyde 0-6-0DH *McDesme* (DHL3 of 1954) is out of use and is dumped with DH22 (Walkers 604 of 1969) which was been purchased for spare parts.

Tony Wells 10/93

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 95 p.14)

Plans have been announced to construct a \$16m 44 km cane railway running south from Koumala to Karloo (just north of Carmila). This will enable the 250,000 tonnes of cane currently carted by QGR to Sarina to be hauled on the mill system. Such a development will open up about 14,000 hectares of land to production, leading to the creation of 125 cane farms over a 15-20 year period, and a crop increase of 700,000 tonnes. In addition to the construction costs of \$15m, an additional \$6m will be spent on locos, bins and improvements at the mill.

Support to enable the plans to go ahead is required from Commonwealth/State infrastructure funding, and it is proposed that growers served by the line will pay a levy of \$1.40 per tonne as their contribution.

Mackay Daily Mercury via John Browning 1/10/93

Australian Canegrower 20/9/93 via Chris Hart

QUEENSLAND PIONEER STEAM RAILWAY CO-OPERATIVE LTD 1067 mm gauge

(see LRN 75 p.9)

Two industrial locos are here (as well as ex-government railway equipment) and both were seen in use on 7 November. Perry 0-4-2T *Kilrie* (265 of 1925) was in use assisting with the passenger train and later on shunting the depot. A 1954-built Malcolm Moore 4wPM formerly in use at the Massey Ferguson works at Sunshine (Geebung), Brisbane, (see LRN 10 p.10) was also noted. This carries a plaque reading "On loan to Q.P.S.R. Co-op Ltd by Austral Group Manufacturing, a division of Austral Group Ltd, 356 Bilsen Road, Geebung. Servicing Australia's Transport needs". It is assumed that Austral took over the Sunshine works from Massey-Ferguson. The loco is painted an orange-red

colour and was in use for depot shunting.

John Browning, 11/93

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 96 p.14)

Atherton Tableland growers have expressed significant interest in supplying cane to South Johnstone Mill. Cane would be trucked down the Palmerston Highway by road. Discussion concerning the growing of sugar beet on the Tableland has also taken place. Up to 100,000 tonnes could be processed at the mill using existing equipment.

The rebuilding of Prof B-B DH *Nyleta* (P.S.L.25.01 of 1990), including conversion from hydrostatic to hydraulic drive, is described as being most successful. Mill personnel were quoted as saying "Now it looks like a loco and pulls like one".

Australian Canegrower 23/8/93 via Chris Hart; Tony Wells 10/93

TINBEERWAH MOUNTAIN RAILWAY, Cooroy 610 mm gauge

(see LRN 92 p.14)

A group of LRRSA members visited the line in late September and were treated to a trip to the top of Mount Tinbeerwah hauled by B-B DH G42, built by Russell Savage (B/n.7) in 1987. This unit has been fitted with a powerful chime air horn. A rail mounted leaf blower has been constructed which enables the track to be cleared with a minimum of effort. In the p, leaves on the steep track have been a real problem for adhesion. The KS car is no longer in service, having sustained major damage in a misadventure.

John Browning 10/93

TULLY SUGAR LTD 610 mm gauge

(see LRN 96 p.14)

It is reported that after the second bogie brake wagon converted from an ex-QGR bogie wagon entered service, one of the two suffered a bent frame in an impact. A major contribution to the damage appeared to be that since conversion from 1067 mm gauge, the buffing shocks are no longer received in the same part of the frame.

A \$1.4m tramway extension from Daveson Road to Dargin Road has been proposed to the Commonwealth/State sugar industry infrastructure committee.

Tony Wells 10/93; Australian Canegrower 20/9/93 via Chris Hart

TASMANIA

HYDRO-ELECTRIC COMMISSION, Tullah 1067 mm gauge

(see LRN 95 p.15)

An auction was held on 7-9 October for disposal of equipment no longer required. The railway items included in the notice were not sold and the Commission advised, "None of this equipment has been sold yet, we would prefer to sell it as one lot, and we are presently negotiating with a number of prospective buyers." This was as at 18 October. The surplus tunnelling and rail equipment formed Lot 216 and the list was headed by the information that where applicable all items were suited to 1067 mm gauge and heavy duty "Willison" hitch couplings were used on all items.

Rail equipment in Lot 216 included:

- Atlas Copco TH 654 Rail Mounted Jumbo - Electro hydraulic portal jumbo model PROMEC TH 654.
- Atlas Copco Haggloaders Model 8HR-5 (2 only)
- Gemco Diesel Hydraulic locomotives (5 only) (George Moss & Co., WA) Diesel powered Caterpillar 3306 PCT diesel engine, hydrostatic drive 27.0 tonne operational mass.
- PTA muckcars (24 only) PTA (Precision Tool Annexe Northern Tasmania) Capacity 12 cubic metres, carried on two fixed axles, each 25,000 kg capacity, 450 mm cast steel wheels. Tipping effected by fixed tipping ramp. Cars fitted with tipping bull wheel assembly.
- PTA flatcars (9 only). 7 units deck area 6000 x 1800 mm, 2 units 3000 x 1800 mm. Running gear & suspension as per muckcars. Decking replaceable hardwood.
- Personnel carrier (motorised). E.M. Baldwin model 6 DHS Mk2. Seating normally 10 to 12. Powered by Perkins 3.152 diesel, Driving from either end.
- Personnel carrier (non-motorised). Single personnel module for use on any of the 6.0 metre flatcars. Nominal capacity 18 maximum 24.
- Utility jumbo. Portable type rail mounted jumbo, supported by its own hydraulically driven 76 metre capacity cable reel.
- Face loading jumbo. Forklift type loading platform of 500 kg SWL. Folded width 1.9 m to pass Haggloader on sliding floor.
- Sliding floor. Comprising 3 sections and 16 segments. Floor itself incorporates a loading track, run-around track, empty track and drill jumbo track, total length 150 metres.
- Concrete transit cars (3 only). Mulhauser 6.1 cubic metre with electro-

hydraulic drum rotation.

- Scissor platform (chassis mounted). Hydraulic operated.
- Muckcar tipper. One fixed position to tipcar 36 degrees. Fitted with safety monorail & washdown facility. Warning siren for derailments and rock jams.

Arnold Lockyer 10/93; The Age 25/9/93 via Colin Harvey

MT.LYELL MINING CO LTD, Queenstown 610 mm & 1067 mm gauge

(see LRN 70 p.11)

Tenders closed on 5 November for two 2 ft gauge Gemco 10-tonne battery locos purchased in 1966.

The Australian 2/10/93 via David Jehan

To provide access to the Teepookana plateau, the Forestry Commission of Tasmania has recently replaced the bridges and upgraded the railway formation from the mouth of the King River to Teepookana. It is now possible to drive along the railway route all the way from Regatta Point to the Iron Bridge.

Colin Harvey 10/93

SECOND RIVER TRAMWAY INC, Karoola 610 mm gauge

(see LRN 78 p.17)

It has been reported that the operators of this tramway have decided to relocate their operation. The present site is on privately owned farm land and therefore somewhat less than ideal for future long term development. The intention is to relocate the tramway at Sheffield on the formation of the old Roland branch line of the TGR.

The old Sheffield railway station is still in existence and it is hoped to move this a short distance towards Railton and lay track in the direction of Stoodley.

As Sheffield is a town in its own right, and which is fairly close to more populous centres and has a strong tourist bias, it would appear that the chosen location would prove far more satisfactory than the present remote and isolated Second River site. As the relocation will make the existing name inappropriate, it is likely that a name change will occur.

Ken Milbourne 10/93

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC. P O Box 288. Alexandra Vic 3714 610 mm and 1029 mm gauge

(see LRN 94 p.14)

Installation of two sets of 60 lb/yd points at the southern end of the track loop was completed on the weekend of 6/7 November. These replaced two sets of 30 lb/yd points which were the last section of the lighter rail on the loop. All of the main line is now laid in the heavier rail on new 6 in x 4 in red gum sleepers and ballasted with clean crushed river gravel.

The owner of the JL Gould Sawmills in Alexandra, Mr Lloyd Gould, has indicated that the land on which the original shed for the Kelly & Lewis diesel tramway locomotives is still standing, is required for the expansion of the works. During the last few years the shed has gradually deteriorated and is now in a poor state of repair. He has donated the shed to the ATT&M with the proviso that it be removed shortly or it will have to be demolished.

The shed will be carefully dismantled and moved to the museum grounds a short distance away. There it will be re-erected in its original form and used to house the Kelly & Lewis diesel locomotive for which it was first built. Although the shed will lose some of its historic significance once removed from the original site, it will retain its former use not far from its present position.

Peter Evans 11/93

CENTRAL DEBORAH GOLD MINE, Bendigo 458 mm gauge?

(see LRN 92 p.17)

A small 4wBE trammer loco probably 1.5 to 2 tonnes in weight was noted underground directly outside the cage on the tourist inspection level. Only a short time was available to view it and no identification as to builder or owner was noted. Gauge is estimated to be 18 in and the loco appears to have been parked there for some time.

Craig Wilson 10/93

CHEETHAM SALT LTD Laverton 610 mm gauge

(see LRN 95 p.15)

The Last Day

On Saturday, 30 October, a commercially operated tour was run to the now closed Laverton saltworks. The tramway system has been sold and is in the process of being dismantled, but the main "spine" of the tramway was still intact at the time of the tour.

Twenty five participants made up the morning tour party and arrived on

site at 9.00 am. Time was allowed for everyone to walk around and inspect the tramway, workshops and rolling stock. Two locos were running near the workshops while a third was down the track somewhere, probably placing empty salt wagons for the last run home. The locos in use were Ruston & Hornsby Nos. 1, 2 and 3. No.4 sat close to the workshops in a very dilapidated condition.

An eight car train hauled by one loco was assembled and the tourists piled into the salt trucks for a run down the main spine to the terminus. At the terminus the train was shunted and two locos were put on to the head for the return trip. Morning tea was served at the workshop and then a triple-header eight-car train was made up and departed for the terminus. Here a further fourteen cars were added and the train, now boasting twenty-two cars, began the run back to the works. Photo stops were made at several locations. The ride in the rear cars was gut-wrenching owing to the coupler slack and it was not surprising that coupling chains broke on three occasions. The train eventually reached the top end minus two cars and about twenty minutes late. The tour concluded at 12.20 pm and the bus carrying the participants returned to Spencer Street station.

One lot of tourists trooped off the bus and another similar sized group took their place. Warnings of "hang on at the back of the train" ringing in their ears, the second group departed for Laverton.

The afternoon program was largely a re-run of the morning minus the

Three Ruston & Hornsby diesels at the head of the last official train at Cheetham Salt Laverton on 30 October 1993.

Photo: Brett Evans

broken coupling chains, those which survived the morning having suitably passed the stress test.

One of the most interesting features of the run down the line was the fact that demolition of the system was still continuing during the tour. Safeworking seemed to consist of the basic premise that if you saw another loco on the line ahead, you stopped until it had found safe refuge in a siding. Most of these sidings were heavily overgrown and the locos looked most forlorn rumbling away in the grass as the tour train passed by at a fast walking pace. After returning to the works one of the most fascinating parts of the day ensued. As the tourists wandered over the site, locos trundled empty wagons past to assemble the next train, one arrived from the outer reaches of the works hauling a flat car loaded with salvaged equipment, and truck loads of sleepers were shunted past. This managed to give the impression that the works were still alive, albeit temporarily. A most amazing sight was the salt conveyor mounted on two bogies being shunted around a curve. Designed to reach out onto the salt crystallisers, this must be the longest narrow-gauge rail vehicle in Australia and when halfway around the curve overhung the rails on the inside of the curve by about eight metres.

Soon it was time to depart once more for the terminus at the outer end of the crystallisers. Here the waiting wagons were added to the train again to make twenty-two cars and, with some complicated shunting, three locos were added to the head.

The Laverton bank was “stormed” for the last time. The muted crackle and pop of the three synchronous diesel engines added to the rattle and clang of the trucks and the clank of the chain couplers as the train swayed along the rough track. Those electing to take a photo stop on last rise up to the works had to walk back as the train could not be stopped due to fears that it could not be started again.

On the last stage of this last trip, your correspondent grew tired of taking photographs and, as the trucks rattled and swayed towards the wagon tippler, took time to reflect. This was indeed a sad day in Victoria’s industrial history. Gone was Victoria’s last privately owned narrow-gauge tramway system. Gone was a system of salt harvesting which had been practised on the shores of Port Phillip Bay for over a century. Gone was the seasonal workforce which gathered at Laverton each harvest season to bring the salt in to the stockpiles. Gone were the many items of unique machinery constructed in the Laverton workshops to assist with the harvest. About to go were the wooden tanks, and the miles of wooden channel and retaining walls used to pump the brine around the works and to hold back the walls of the crystallising pans. Under threat are the processing works standing silently under lock and key.

As the tour bus drew away from the works, the demolition of the tramway system continued.

Morning tour: Norm Houghton 10/93

Afternoon tour: Peter Evans 10/93

COOKS CONSTRUCTION, Yallourn & Morwell 900 mm gauge

(see LRN 96 p.15)

The poor condition of the track prevented the expected introduction of diesel traction at the end of June (they "run aground" in the dips) and the SEC electric locomotives continued in service. Reconditioning of the track began during August and is expected to take ninety days to complete with total track occupation required between 0700 and 1500 and most trains running at night. Two loops are now to be retained with loaded trains always taking the straight.

S. Photios 8/93

Diesel operation had commenced by 25 September when two trains were observed in operation: one of sixteen vehicles hauled/pushed by CC01 and CC02, and the other of eight vehicles with CC03.

Colin Harvey 10/93

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 96 p.15)

Locomotives

Most effort in the workshops is directed to G42 and *John Benn*. There is extensive activity on G42, with interesting bits all over the place. Once all the new frame material has been delivered, progress on the frames is expected to be quite rapid but the whole job will take a number of years.

John Benn is the first of the two ex-West Melbourne gasworks Decauville/Couillet locomotives. It is currently undergoing a major overhaul as a contract job for its owner. (See elsewhere this issue.)

14A is in the workshops with its wheels removed for turning.

Special Trains

D21 ran a tree-pruning train between Lakeside and Wright on 4 September.

Olde Time Festival

This special event was held on Sunday, 10 October, in conjunction with the Historic Commercial Vehicles Club. About four-hundred exhibits were involved. Four NA's, the Climax and the Peckett were in steam, D21 was in growl and didn't cause any disruptions, and a ten minute frequency bus service was provided between Menzies Creek and Emerald to augment the

train service. A complex "S" Circular (Special Train Circular) listing 27 services.

Gembrook Restoration

On 11-12 September 825 metres of skeleton track was laid from Orchard Road to Fielder bridge, with about 40 volunteers working in cold, rainy conditions, amidst deep, gluey boot-grasping mud. On Sunday afternoon, NRT1 ran a train of one or two NQR trucks over the Fielder bridge, not a bad effort for Victoria's least offensive diesel locomotive, considering the alarming appearance of the alignment of the skeleton track. On 16/17 October fitting of the missing sleepers and ballasting commenced, and a further 75 metres of skeleton track was laid.

On 13/14 November a further 540 metres of skeleton track is scheduled to be laid towards Fielder. After trackwork between Gembrook and Fielder is completed (a distance of about 2-3/4 miles) sometime in 1994, it is intended to move the centre of operations to Cockatoo. This is because it is becoming too far to drag ballast from Gembrook. Part of Cockatoo yard will be built, then tracklaying will commence towards Fielder.

Tenders for construction of the concrete foundations of the small Wright bridge will be called in early November, for construction in January or February 1994.

The ballast tamper has been working between Gembrook and Orchard Road.

Gembrook Operations

Passenger operations commenced for the 1993-94 season on Saturday, 25 September, with trains running to Orchard Road. This operation requires two flagmen on the Main Road level crossing. To mark the occasion Andrew Reynolds had his magnificent Ransomes steam road wagon on site, resulting in a most unusual form of parallel running, at least as far as the Main Road level crossing. For passengers riding in the luxury of the NQR open wagon, this provided a wonderful new variant of the motorcading phenomenon Peckett cading a Ransomes steam road wagon! There was much triumphant whistling from the loco and the steam wagon.

Frank Stamford 10/93

T.A.C.L. RAIL TRACTOR RESTORATION - PROGRESS REPORT

A Project to Restore the Climax's Little Brother!!!!

(see LRN 90 p.15)

Only about one more day's work is required on the axle-box brasses before re-assembly of the frames can commence.

Frank Stamford 10/93

GASWORKS LOCOMOTIVES 762 mm gauge

Peckett locomotive 1711/1926 hauls Decauville 861/1886 through Menzies Creek on 21/7/93.

Photo: Mrs Val Rees

On 4 July, Couillet locomotive 43/1866/Decauville 861/1886 was moved by low loader from Belgrave South to Emerald where it was unloaded onto the rails of the Puffing Billy Railway. It was then reunited with the Peckett locomotive *Sir John Grice* after a thirty-year separation.

A successful business negotiation with the owner, Mr Colin Rees, and the ETRB will see the locomotive fully rebuilt to the ETRB standards for operation on the Coal Creek Railway.

On Wednesday, 21 July, *Sir John Grice* (Peckett & Sons 1711/1926) towed 861 along with an NQR wagon for braking, from Emerald to the Belgrave Workshops.

This locomotive (861), originally an 0-4-0, was highly modified (but never completed) by Mr Ron Kain into a 2-4-2 "American Style" for use at Walhalla in the 1970s. Unfortunately for the purists among us, the modifications carried out make it very impractical to restore it to its original form. The work to be undertaken at the Puffing Billy workshops will see it finally finished. and its heart and soul will live on.

Couillet locomotive 90/1890/Decauville 986/1890, also owned by Colin Rees is currently at "The Engineerium" in Emerald where it is being overhauled and fitted with air brakes for use at Coal Creek. Boiler stays are being replaced and the boiler will soon be returned to its frames.

Sometime in 1994 should see a reunion of these three locomotives, all from the West Melbourne Gasworks, on the Puffing Billy Railway, and the running

of a number of special trains.

Bill Hanks 10/93

LONG TUNNEL EXTENDED MINE, Walhalla 610 mm gauge

(see LRN 95 p.18)

The E.M.Baldwin 4wDH loco was noted here stored in wet conditions. It has a lot of superficial rust, and would need some work to be done on it to be returned to service. The builder's plate carried by this loco bears the number 6008-1-6-75, NOT as previously published (apologies to Ray Graf - Ed.).

Craig Wilson 10/93

MARYBOROUGH ?? gauge

A miniature railway of approximately 7.25 inch gauge has been constructed at an "animal farm" near Maryborough and appears to be used as a means of viewing the livestock (or, one wonders, is it to entertain them). The railway was shown on a commercial aired on local television.

Ian Stanley 10/93

NORTH WESTERN SEWER CONSTRUCTION, Brooklyn 762 mm gauge

Stage One of the North Western Sewer is being constructed by Melbourne Water from Brooklyn Pumping Station to the Moonee Ponds Creek in Essendon; a distance of twelve kilometres. Tunnelling work is contracted to Transfield and about six kilometres has been bored.

Inspection on an open day on 5 September, revealed four Gemco battery-electric locomotives (only two were operational) and two Baldwin (?) diesel locomotives on the surface at the Brooklyn shaft. Three-phase AC overhead is installed in the tunnel so presumably the sixteen-ton electric locomotive built by the MMBW for the Western Trunk Sewer, is also in use.

Colin Harvey 10/93

SANDHURST TOWN MANAGEMENT PTY LTD, Eaglehawk 610 mm gauge

(see LRN 44 p.14)

A short visit was made to this site and its quite impressive tramway operation viewed. Noted on site were the following locomotives:

Perry	0-6-2T	67.50.3	1950	ex Tully Mill
Hudswell Clarke	0-6-0	1555	1925	ex Goondi Mill
Hudswell Clarke	0-6-0	1553	1925	ex Macknade Mill
Ruston & Hornsby	0-4-0DM	305328	1954	ex Macknade Mill (in service - steam outline)
Ruston & Hornsby	4wDM	354040	1953	ex Invicta Mill (reserve loco)
Ruston & Hornsby	4wDM	+	1945	ex MMBW (dismantled)

(+ thought to be 235657 or 235677 - Ed.)

The last two locos came here around the end of 1984 from Canberry Fair, ACT. The reserve unit has been heavily rebuilt with a new cab and bonnet.

Craig Wilson 10/93

SECV, Rubicon 610 mm gauge

(see LRN 84 p.14)

The tramway system used to patrol and maintain the aqueducts carrying the water to the power stations has been under threat recently. Following a washaway near Rubicon dam the track was not replaced when the aqueduct was repaired and a further section was lifted over the spillway of the Lubra Creek siphon. This has isolated about 500 metres of the tramway. To continue patrols, the SEC purchased two four-wheel-drive motorcycles. It was rumoured that, if this mode of transport was successful, the tramway system would be lifted and the four trestle bridges demolished to enable the motorcycles to be used for all patrol purposes. (Two of the existing trestle bridges were reconstructed only recently.).

Both the Rubicon hydro electric scheme and its tramway system have very high heritage value. This was recognised when the National Trust of Australia (Victoria) classified the scheme as of National Significance on 20 October. The scheme has also been nominated for the Register of the National Estate. The Historic Buildings Council has scheduled a hearing to discuss the future of the scheme on 1 December, and until that time the SEC have agreed to make no further changes without consultation with the Council.

Peter Evans 10/93

SMITHS EQUIPMENT, Hammond Road, Dandenong

Attempts to track down the fate of the Melbourne & Metropolitan Board of Works locos sold at the Preston auction (see LRN 94 p.19) led here, where E.M.Baldwin 4wDH 030 *Kasey* was discovered. The Caterpillar engine has been removed for other uses, but otherwise the loco is for sale. This is the only loco purchased by this company at the auction. The loco is presently for sale.

Craig Wilson 10/93

MEETINGS

MELBOURNE: Video Night

Peter Evans and others will be showing some of their prized videos. With a bit of luck we will be able to watch them on a large screen. See you there!

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday, 9 December at 8.00 pm.

SYDNEY: Any member wishing to know details of the next meeting should call Craig Wilson on 02-484 7984.

ADELAIDE: Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 23 December at 8.00 pm.

NOTES, CORRECTIONS & COMMENTS

MT MAGNET MINING & PASTORAL MUSEUM

(see LRN 97 p.1)

The little battery locomotive appears to be a Gemco "trammer".

John Browning

NEWINGTON NAVAL BASE

(see Menangle Narrow Gauge Railway - LRN 94 p.9)

Incorrect information was given regarding Wingrove & Rogers battery electric locomotives ordered for Newington. Wingrove & Rogers 1607 of 1940 (and possibly 1608) were ordered for Newington. 1603, 1604 and 1605 of 1940 were ordered for Maribyrnong Explosives Factory.

John Browning

RESEARCH

The Permanent Way Institution, NSW Section's 1993 conference, "Down The Track", contains an article that those interested in 610 mm gauge sugar cane lines might like to follow up. R.A. James contributed a paper, "Rail Transport within the Australian Sugar Industry". According to the paper, the systems transport about 26 million tonnes of cane per annum.

Jim Longworth 11/93

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

BUNDABERG FOUNDRY ENGINEERS LTD

(see LRN 95 p.4)

Walkers ex-QGR DH-class B-B DH DH51 was noted stored in the yard at the Bundaberg Foundry on 24 November. An unconfirmed report suggests that

it may be intended to go to Bingera Mill.

John Browning 11/93

G & N SOLARI ENGINEERS, Challands Street, Ingham

This company constructed a bogie brake wagon in 1993 for Victoria Mill using an ex-QGR HJS type wagon as a basis. A visit to the works in December revealed that there were seven ex-QGR HJS type wagons in the yard including HJS25846 and MHJS22922, no doubt stockpiled for future use. It is reported that Macknade and Victoria will each receive at least one new brake wagon for the 1994 season.

Chris Hart 12/93

TULK GONINON LTD, Mackay

(see LRN 97 p.4)

A recent report suggests that the initial contract for the rebuild of three Walkers ex-QGR DH-class B-B DH locomotives is for one loco for each of Invicta Mill, Victoria Mill and Kalamia Mill. On 6 December, the cabs and hoods of two DH-class locos were noted in the yard at Tulk Goninon, indicating that work on the conversion of these had commenced. The locomotives concerned were DH11 (593 of 1968) and DH17 (599 of 1968). Later in December, the cab and hood of DH19 (601 of 1969) had also appeared. As a previous report stated that DH11 was for Invicta Mill (see LRN 95 p.11), and it has recently been reported that DH19 was purchased by Kalamia Mill, it seems that DH17 will be going to Victoria Mill.

John Browning 12/93; Tony Wells 12/93

WALKERS LTD, Maryborough

(see LRN 95 p.4)

A visit on 26 November revealed three Walkers ex-QGR DH-class B-B DH locos undergoing rebuilding for Isis Mill. The three units, DH16 (598 of 1968), DH18 (600 of 1968) and DH69 (656 of 1970) will become Isis Mill's numbers 2, 3 and 4 respectively. They were stripped down to bare frame and the next stage of the rebuild was to remove all wiring, sandblast and paint. Delivery is scheduled for May 1994, and with a heavy workload, Walkers does not intend taking on any more DH rebuilds for the 1994 season. The appearance of the rebuilt units will be similar to the locos recently done for Tully and Victoria Mills, except that the short end hood will contain only a tool cabinet, not the fuel tank.

John Browning 11/93

SITE REPORT - SOUTH AUSTRALIA

VISIT TO SMITHFIELD MUNITIONS TRAMWAY 610 mm gauge

A small but very enthusiastic group met at the gates of the establishment on Saturday, 9 October 1993, with our guide, Peter Barry, in a unique opportunity to inspect the light railway facilities of this "para-military" site. Peter and Arnold Lockyer had taken the trouble to prepare a very useful bundle of documents to help explain the installations, including copies from photographs taken during construction during the war, a plan of the track layout near the workshops, and an illustration from the catalogue of the loco maker BEV (British Electric Vehicles).

The site is a large tract of flat and lightly grassed land on the western outskirts of Smithfield, part of the original Weapons Research/Edinburgh Airfield area. Suburbia is gradually creeping up towards its boundaries.

The site is approached from the east by the trackbed of a former broad gauge branch line access, still visible in places. The openness of the area, giving great difficulty to appreciate a sense of its scale, is punctuated by the large earth mounds which surround each store magazine and march away in a huge grid toward the horizon. The tracks form a rectangular pattern originating at the entrance workshops and giving access to each magazine and ancillary buildings between.

The architecture of all the structures is in that classical "wartime" style of redbrick of the highest quality in every detail. The track is 2 ft gauge in about 40 lb rail, laid directly on a "ladder" of concrete - a continuous strip under each rail with regular linking ribs between. The rail is bolted down, and bedded on resilient pads. It is strong, smooth and level. The overall impression is of a quality of integrity and alignment which has suffered little deterioration in 50 years and would last indefinitely. In its heyday, it comprised approximately 38 miles (45 km) of track.

The motive power was four 4-wheeled BEV battery electric locomotives of identical specification. As mining-type locos, they are solid and simple "battery boxes on wheels". The body box containing the batteries is in theory removable off the chassis. The driver sits side-saddle in a low boxed-in space at one end, driving by a tramway-type controller. The wheels were originally linked by coupling rods, but these were all cut off at some time, and traction is now a minor problem on tracks overlain by grass. About "two and a half" locos are available for duty - one has been partly cannibalised for spares.

Rolling stock, designed by the SAR, is said to have been built by the SAR at Islington. A fleet of over twenty 2-wheeled flat cars, with detachable drop-

on timber side rails, have roller bearings and sprung axleboxes, running very freely. Some of these trucks, with basic roofs fitted, are used as passenger carriages at the Moonta Mines line.

The threatening rain held off while we ventured a little way down the "main line". Because of the nature of the track, grass grows around the rails making them almost invisible from more than a few yards away. It was easy to understand why the tracks were so hard to pick out on an aerial photo. The central line we transversed is paralleled by a much overgrown broad gauge track. We stopped to examine several examples of 5 ft 3 in / 2 ft crossings.

The future of the site is clouded. The management of the facility is now in the hands of private contractors. There is still a definite, although diminishing, need for secure storage of the dangerous materials which the depot handles. Part of the area we saw has recently been sold out of government ownership, although it is not planned to be occupied for some time. We were saddened by the thought that this fascinating area might be bulldozed for housing subdivision in a few years. We speculated whether there might be any way these tracks, in such solid condition and by themselves occupying little area, could be retained along the streets in a future land division as a useful public amenity.

We extend our special thanks to Peter Barry for all his efforts to obtain permission for our entry, to ensure the loco was charged up for us and "track tested", and for his time spent with us to make this such a memorable event.

Lee Rodda 11/93

QUEENSLAND

ACLAND COAL MINE MUSEUM 610 mm gauge

(see LRN 69 p.6)

This Museum preserves the surface installations of the last coal mine on the Darling Downs. Two Jenbach type 4wDM locos are kept in working order, Jenbach 1138 of 1952 (Model JW15 - originally fitted with engine No.5067) and Bundaberg Foundry 16 of 1955 (Model BJ20). This is fitted with a Jenbach engine from a Jenbach rubber wheeled vehicle. There are also the remains of two other Bundaberg Jenbach Model JW15 locos on site, 1137 of 1952 and 1139 of 1952. Some surface lines still remain as well as a quantity of metal bodied skips, and there are also some sub-2 ft gauge wooden skips which are believed to have come from a sawmill in the Ipswich area.

John Browning 11/93

BABINDA SUGAR LTD 610 mm gauge

(see LRN 93 p.11)

The up *Sunlander* was delayed at Babinda for about 4 hours on 25 November when it ran into a cane train crossing the QGR. A cane bin became wedged under one of the QGR locos, derailing it. There were no injuries.

Sunshine Express 12/93 via John Browning

COMMERCIAL MINERALS LTD, Biggenden 660mm gauge?

This mine, once the site of a gold mine, is the main Australian source of magnetite. Development of the underground mine took place in about 1975-6 and although operations are now all on rubber tyres, a narrow gauge skip is mounted on track outside the office. The gauge appears to be 660 mm (2 ft 2 in), which might provide a link with equipment used by Mount Morgan Mines at a number of sites including nearby Many Peaks. Possibly the underground development was done using 2 ft 2 in gauge equipment.

John Browning 11/93

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 97 p.7)

The development for cane growing of about 900 hectares of the Wharp's Holding lands in the lower Stone River area is to go ahead with blocks being offered for sale by the Lands Department. Cane is expected to be planted in 1994 for harvest in 1995. A Victoria Mill line will branch off the Stone River line to serve the development, and this will be constructed in the 1995 slack season.

CSR and Herbert River Canegrowers had proposed a number of Victoria Mill cane railway extensions for funding under the Federal-State sugar infrastructure package, but these did not receive assistance. The projects were a 25 km extension from Kirkwood's Road in the Blackrock area to Crystal Creek, and branches at Pappin's Road (on the western side of the Bruce Highway at Helen's Hill) and Sheehan's Road (up river from Long Pocket). It is reported that these tramline projects may proceed with alternative funding as in any event the major contributors were to be the growers and miller.

The report in LRN 97 about cane transfers was somewhat misleading (apologies -Ed.). Cane transfers throughout the season were from Victoria Mill to Macknade (using Macknade loco power) and were reduced and then halted as the Macknade estimates were rising faster than Victoria's. They were resumed on 16 November and continued to the end of Macknade's season on 24 November (the day before Victoria). The final phase of transfers consisted of about 500 bins per day with the usual pattern of locomotive power being

E.M.Baldwin B-B DH 20 (7070-4-4-77 of 1977) on afternoon shift, E.M.Baldwin B-B DH 19 (7070-3-4-77 of 1977) with brake wagon 1 early on night shift, and Clyde 0-6-0DH11 (65-383 of 1965) on overtime from 4 am to 6 am before commencing its normal 6 am shift.

From time to time during the season, Victoria also sent across to Macknade a rake of bins for attention at the Macknade truck shop. The two bin fleets have been effectively merged.

After Victoria Mill's E.M.Baldwin 0-6-0DH *Hobart* (4413-1-7-72 of 1972) was returned from Macknade on November 3 or 4, Macknade's E.M.Baldwin 0-4-0DH 17 (6-1446-1-9-65 of 1965) again saw some use on cane haulage due to loco breakdowns and the unavailability of a replacement from Victoria. In a five day stint in mid November, 17 hauled in 156 bins from the Central line.

Macknade Mill's E.M.Baldwin 0-6-0DH 14 (6-2490-1-7-68 of 1968) is to receive a new Allison torque converter this slack season to replace its Rolls Royce Twin Disc converter which requires expensive repairs.

On Saturday, 18 December, Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) and the Decauville carriage were used to give rides for the Victoria Mill social club Christmas party. On 21 December, the Invicta Mill bridge crane was delivered to the Hawkins Creek bridge.

*Herbert River Express 20/11/93 & 27/11/93
via Chris Hart; Chris Hart 12/93*

DREAMWORLD PRODUCTIONS PTY LTD, Coomera 610 mm gauge

(see LRN 85 p.10)

An accident occurred at about 10 am on 5 January, when an empty coaching stock train leaving the depot area at about 5 km/h collided with a passing service train travelling at about 15 km/h with about 80 passengers on board. A newspaper photograph appeared to indicate that the empty train, hauled by Perry 0-6-2T 5643.51.1 of 1951, failed to give way at the points onto the main line, and collided with the two rear carriages of the passing train hauled by Baldwin 4-6-0 45212 of 1917. The Perry loco rolled onto its side, and the toastrack carriage behind it was left leaning at a 45 degree angle. The two open passenger cars of the service train, which reportedly contained about 30 passengers, were also derailed and at a 45 degree angle. The 60 year-old driver of the Perry loco was hospitalised, and one passenger had a suspected knee injury. Workplace Health and Safety personnel were investigating the accident, said to be the first in the park's 13-year history.

Meanwhile, there are unconfirmed rumours of a 2 ft gauge rail connection being planned from Coomera Station, on the new Gold Coast railway (currently under construction), to Dreamworld, and of a diesel hydraulic

locomotive being purchased from Isis Sugar Mill, presumably for use on this service.

Courier-Mail 6/1/94 via John Browning: John Browning 11/93

GIBSON & HOWES LTD, Bingera Mill 610 mm gauge

(see LRN 94 p.11)

A visit in late November revealed that an area behind the loco workshops has been cleaned out of the disused and dismantled small locomotives previously found there. The units which presumably have been disposed of for scrap are:

173-72	Motor Rail	4wDM	10234	1951
	Malcolm Moore	4wDM	1007	1943
	Malcolm Moore	4wDM	1008	1943
	Malcolm Moore	4wDM	1009	1943

Also gone, this time from the navy depot at Manoo, was a tool box wagon which is believed to have been converted from a very old line car originally built by the Wilson Engine Co. as long ago as 1910.

This means that there are only two small locomotives left at Bingera, with the frame of a third having been converted to a ballast plough:

Motor Rail	4wDM	10233	1951	
Malcolm Moore	4wDH	1025	1943	
Ruston & Hornsby	(4wDM)	387893	1955	ballast plough

Three locomotives were noted based at Wallaville depot, Com-Eng 0-6-0DH locos *Thistle* (A1207 of 1955) and *Sharon* (A1935 of 1959) and 0-6-0DH *St.Kilda* built on the frames of a Snowy Mountains scheme Ruston & Hornsby by E.M.Baldwin (6-2179-1-6-67 of 1967).

John Browning 11/93

TONY GILBERT, Pioneer Park Museum, Dalby 750mm gauge

(see LRN 62 p.14)

Henschel 0-6-0WT 29583 of 1956 is kept in an exhibit shed at the Museum and its overall condition appears very good. The boiler lagging has been removed revealing that the boiler is numbered 3. The lower cab sheets have also been removed and some work has been done on boiler fittings, but it was stated that no work had been done on the loco for two years.

John Browning 11/93

GYMPIE ELDORADO GOLD MINES PTY LTD, Monkland 610 mm gauge

(see LRN 94 p.11)

The four narrow gauge battery locos stored "down the back" at the mine site were examined on 23 November. They are all small 4wBE "trammer"

type locos. Two which are outside framed appear to be Gemcos and are numbered 2 and 7. They have Gemco Mk.1B.SS 1.5 controllers, serial numbers 1731 and 1673 respectively. The two other units are inside framed and carry battery boxes numbered R07 and R08. These appear to be of Greenwood & Batley manufacture (and could possibly be 420363/1 and 420363/2, two ton locomotives of 762 mm gauge supplied to the order of Graham Handling Equipment Pty Ltd Moorabbin, in 1974). Also present are two Eimco loaders numbered UR01 B3652 and UR02 Z4270, and a number of substantial wagons including six side tippers (two numbered UR09 and UR10), five V-skips, and three wagon chassis with knuckle couplers.

The two Gemco 4wBE units numbered 5C and 6C have disappeared from their previous position near the headframe.

Some preliminary work has begun to open up the East Oriental & Glanmire Shaft at Fairview Road.

John Browning 11/93

ISIS CENTRAL SUGAR CO LTD 610 mm gauge

(see LRN 95 p.11)

Walkers B-B DH number 1 (602 of 1969) was noted on 26 November running with the new Walkers brake wagon built this year. This loco still retains the QGR DH-class outline, but with three DH-class locos being rebuilt at Walkers for the 1994 season with new cabs and bodywork (see elsewhere this issue), it is expected that in due course, 1 will be similarly upgraded.

With the arrival of three new locomotives in 1994, the mill intends to dispose of its six Clyde Model DHI-71 0-6-0DHs. Two of these have had the cab removed for multiple-unit operation but this can easily be reversed. Unconfirmed reports late in November say that loco 6 (59-204 of 1959) has been sold to Dreamworld at Coomera, with the other five bound for Fiji. These units are as follows:

-	55- 66	1955	Multiplied with 5. Formerly numbered 3.
4	56-113	1956	
5	58-191	1958	
-	61-220	1961	Multiplied with 8. Formerly numbered 7.
8	64-385	1964	

There is talk of one of the mill's rigid framed six-wheeled brake wagons being fitted with four large diameter wheels for the 1994 season as a trial. There is also a report that the mill's Gregory River line will be driver-only operation in 1994.

Found in a scrap area near the loco shed were the dismantled remains of Walkers ex-QGR DH-class DH67 (654 of 1970) which has been stripped for

spare parts, and - surprisingly - the cabs of DH30, DH63 and DH66, the units rebuilt in 1993 by Walkers for Victoria and Tully Mills.

John Browning 11/93

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 97 p.8)

Pleystowe Mill's ex-North Eton Mill Com-Eng 0-6-0DH *Septimus* (A2128 of 1958) was rebuilt with a new soundproofed cab for the 1993 season, and painted (above the footplate) in the new Mackay Sugar corporate livery of green, red and yellow. Refurbished at Pleystowe during the season was E.M.Baldwin 4wDM 4-473-1-3-63 of 1963. This was also painted in the new livery but using the traditional Pleystowe hawthorn green rather than the Mackay Sugar mid green. This unit was shortly to be outshopped, fitted with *Allandale* nameplates, in early December.

At Marian Mill, ex Cattle Creek Mill Com-Eng 0-6-0DH *Pinnacle* (AA1549 of 1961; rebuilt AN5849, 1975) was also rebuilt with a new cab and new Detroit diesel engine for the 1993 season, and was numbered 22. It had been planned that the other two Com-Eng 0-6-0DH locos from Cattle Creek would also be rebuilt similarly, but with the introduction of rebuilt ex-government railway locos, this plan may now be superseded.

At the completion of the crush at Farleigh Mill, two E.M.Baldwin B-B DH locos, *Hampden* (6706-1-5-76 of 1976) and *Inverness* (10123-1-5-82 of 1982) were sent from Farleigh to Marian for trials, and these were retained in service at Marian until the end of the season to cover loco breakdowns.

The derelict frame of Clyde 0-6-0DH 64-377 of 1964 has been removed from the mill yard at Marian. This loco, named *Melba*, was involved in a serious accident and was replaced by a similar locomotive constructed by E.M.Baldwin in 1985.

A further four standard gauge Walkers ex NSW SRA 73-class B-B DH Cocos, 7331, 7332, 7337 and 7341 have been purchased by Mackay Sugar and arrived in Mackay on 18 and 19 November. They were delivered into storage at the North Eton Mill site to join 7304 and 7343 pending rebuilding to 610 mm gauge. Full details of the ten 73 class owned by Mackay Sugar as at early December are shown below:

No.	Walkers B/No.	Date	Livery	Notes
7304	663	1970	Reverse yellow	Stored at North Eton
7305	664	1970	Tuscan red	Stored at Farleigh Mill
7313	672	1971	Reverse yellow	At Pleystowe Mill for rebuilding
7328	690	1972	"Candy"	Stored at Farleigh Mill
7330	692	1972	Tuscan red	Stored at Farleigh Mill

7331	693	1972	"Candy"	Stored at North Eton
7332	694	1972	Tuscan red	Stored at North Eton
7337	699	1972	Tuscan red	Stored at North Eton
7341	703	1972	"Red terror"	Stored at North Eton
7143	705	1972	"Red terror"	Stored at North Eton

7313 will be rebuilt by mill labour at Pleystowe to enter service in the 1994 season at an estimated cost of \$317,000 which includes the cost of a new GM 12V-92TA engine. It is intended that this type of engine will be fitted to each locomotive as it is rebuilt. The regauging of a Walkers B-B DH at a mill will be a first and will be keenly observed by many who believe that this type of work is better carried out by specialist contractors. By early December, work had not begun on this project apart from the removal of the bogies. Of the units stored at North Eton, it is suggested that at least two are destined for Marian Mill. Meanwhile, 1067 mm gauge Walkers ex QGR B-B DH DH70 (657 of 1970) is to be rebuilt for Racecourse Mill for the 1994 season at an estimated cost of \$290,000, but it is not known whether this will be by outside contractor or at the mill. Other work for completion for the 1994 season includes a brake wagon for each of Marian, Pleystowe and Farleigh Mills, at a cost of \$80,000 each. It is understood these will be rebuilt from ex-QGR HJS wagons. In addition, 350 six-tonne bins will be constructed for Farleigh Mill (\$1.75m) and 400 six-tonne bins with Willison couplings for Marian Mill (\$2.22m). Marian's existing six-tonne bin fleet will also be fitted with Willison couplings (\$1.51m.). A new tippler/weighbridge capable of taking three four-tonne or two six-tonne bins will be installed at Farleigh (\$1.57m.)

The 1993 crop put enormous pressure on the tramline infrastructure with a total of 554 derailments being reported, and bin shortages being a problem. One example of a serious derailment took place at Gargett at about 4.30 am on Wednesday, 10 November. A train hauling some 100 full bins towards Marian Mill was derailed resulting in the line being closed for more than 18 hours while the debris was cleared.

Fixed infrastructure improvements for the 1994 season will include, at Marian the upgrading of tramway facilities at Cattle Creek depot (\$87,500) and the rationalisation of two sidings (\$100,000). At Pleystowe, Lemon Tree bridge will be replaced (\$80,000), and concrete sleepers will be laid on seven sidings (\$61,000) and on one kilometre of the Gap Line (\$39,000). At Racecourse, work will be carried out on Simpson's siding (\$66,000), and bridge strengthening will cost \$100,000.

A technological innovation trialed at Pleystowe towards the end of the 1993 season was a new automatic cane bin identification system. The system

called EBITAG consists of a small passive identification tag fixed underneath the bin, which is read by a coded radio frequency transmission from an antenna mounted between the rails. The tags can be read at a speed of 40 km/hr and the numbers are sent to the mill computer system.

A new type of cane railway/government railway crossing is to be trialed on Pleystowe Mill's crossing at Wallingford. The narrow gauge crossing works on a drawbridge principle and is lowered hydraulically across the QGR rails by remote control when a cane train approaches, setting the QGR signals to red. The design also incorporates a counter to ensure that the entire cane train which enters the section also leaves it. Advantages of the new design include obviating the need for the second man on the cane train to man the catch points and then walk the length of the train to the loco after crossing, and reducing the stress on wheels and bearings as vehicles cross the diamond crossing. Not a new idea, but now made much more practical through the use of modern technology.

It is reported that two sleeper replacement machines are on order from Tamper (Australia) Pty Ltd

A semi-trailer and station wagon were involved in a collision with a cane train on the Bruce Highway at Farleigh on 15 November. The multiple-unit locomotives, Com-Eng 0-6-0DHs *Pioneer* (A12358 of 1962) and *Carlisle* (A13271 of 1963) ended up on the bitumen and had to be re-railed by a mill crane.

*Mackay Daily Mercury 12/11/93, 16/11/93 & 27/11/93
& Mackay Sugar Newsletter 12/93 via John Browning;
Tony Wells 11/93: John Browning 12/93*

MILLAQUIN SUGAR CO PTY LTD 610 mm gauge

(see LRN 90 p.11)

On the afternoon of 23 November, Millaquin Mill's E.M.Baldwin B-B DH 752 (6456-1-11-75 of 1975) was noted at Qunaba picking up a rake of full bins from the old mill yard there for transfer to Millaquin. As cane from the Qunaba area is normally hauled to the Burnett River ferry for Fairymead Mill, it is assumed that this transfer was because of problems with wet weather which were being experienced at the time.

John Browning 11/93

NOSTALGIA TOWN, Pacific Paradise 610 mm gauge

(see LRN 97 p.9)

Chance steam outline B-2-B PH (84-50-200-24 of 1984) arrived here at Easter 1990 and has been stored since. Its wheels had been sent away for reprofiling in late November, and operations were expected to commence

by Christmas. There are four Chance bogie passenger cars, three with no canopy and one with canopy removed. A Caneland Engineering 1991 ballast hopper and a number of flat cars were noted on site, loaned by Moreton Mill for tracklaying operations.

John Browning 11/93

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 97 p.10)

\$5m. was earmarked by the Federal-State sugar infrastructure package announced in late November as a contribution towards the 44 km cane railway line to be built south from Koumala to Karloo. It is reported that three Walkers ex-QGR DH-class B-B DH locos have been purchased for conversion as part of the project totalling \$20.85, including construction costs of \$15m. These are DH12 (594 of 1968), DH48 1630 of 1969) & DH64 (651 of 1970).

Mackay Daily Mercury 27/11/93; Tony Wells 12/93

CLIVE PLATER, Eudlo 610 mm gauge

(see LRN 96 p.13)

Ruston & Hornsby 30DLU 4wDM 371386 of 1954, named *Nambour*, has been fitted with an open canopy and is finished in green livery. It is in working order. The Moreton Mill (1933)-built *The Flyer*, a 2-2wPM, has been fitted with new chassis members to replace the corroded originals. It is now awaiting a replacement Ford Model A motor before full restoration can be completed. Items stored on site include the frame of Ruston & Hornsby 285340 of 1949 and the 48 hp engine from an unidentified Ruston & Hornsby 44/48hp, both from the Sunshine Plantation.

Three timber cane trucks are included in the collection. Most of the timber parts were recently acquired from the stores at Moreton Central Mill, although a few timbers had to be milled specially.

John Browning 11/93

QUEENSLAND SUGAR INDUSTRY CORPORATION, Mackay Harbour 1067 mm gauge

(see LRN 79 p.16)

During the crushing season, the Sugar Corporation's locomotive, Com-Eng 0-6-0DH P1029 of 1958 sees hardly any use and normally sits in its shed/workshop. Sugar is delivered around a balloon loop by QGR. Outside the shed still sits the frame and wheels of Com-Eng 0-6-0DH F1018 of 1957 (formerly *Alex S. Hamilton* - not as shown in the report in LRN 79 - Ed).

Barry Campbell 11/93

TORBANLEA MINING MUSEUM 610 mm gauge

(see LRN 45 p.12)

When visited on 23 November, a sign on the door indicated "Closed due to unforeseen circumstances", and seemed to have been in place for some time. This museum contains *Rusty*, Bundaberg Foundry 4wDM 19 of 1956 (ex Burgowan Coal Co). A number of wooden coal skips are to be seen around the museum grounds.

John Browning 11/93

TULLY SUGAR LTD 610 mm gauge

(see LRN 97, p.11)

A project in the Murray/Riversdale lands has been approved for funding under the Federal-State sugar infrastructure package. This is understood to include a substantial provision for cane railway extensions.

ABC Radio Queensland "Country Hour" 26/11/93 via John Browning

TASMANIA

SECOND RIVER TRAMWAY INC, Karoola

(See Redwater Creek Steam & Heritage Society Inc.)

REDWATER CREEK STEAM & HERITAGE SOCIETY INC, Sheffield 610 mm gauge

(see LRN 97 p.12)

On 31 August 1993, members of the Second River Tramway Inc and Eric and Coral Howe decided, after 2 months of investigation, to relocate all of their equipment to Sheffield. The decision came after a well supported public meeting agreed to form an incorporated body to run the new venture's affairs, and after all approvals from landowners, the Kentish Council and the Forestry Department. had been tentatively gained.

The full Redwater Creek Rail, Steam and Heritage Museum project, as is currently proposed, consists of:

1. Building 4 km of 2 ft gauge railway track from Sheffield to the Redwater Creek caves and waterfalls. This site has great potential as an attraction in its own right consisting of 5 small caves and 2 waterfalls nestled amongst picturesque typical Tasmanian rainforest. The caves and waterfalls are approximately 100 m from the proposed terminus.
2. The relocation and restoration of the old Sheffield Railway Station. The station, originally built in 1913, has been relocated to the Society's site

(1.2 hectares which the Kentish Council has kindly allowed the Society to use) on the corner of Sheffield main road and one of the main arterial roads to the well known Tasmanian tourist destination of Cradle Mountain. The station building was restored by 5 Jobskills employees over 5 weeks and volunteer labour, and is currently close to being at lockup stage.

3. Construction of the locomotive/carriage shed to house the Second River Tramway's 2 ft gauge Krauss 0-4-0 locomotive, the Queen Victoria Museum's Krauss and the SRT's two carriages and one guards van.
4. Construction of a Museum building to house the SRT's and Eric and Coral Howes' collection of traction engines, chaff cutters, threshing machines, steam rollers, a steam wagon, old tractors, portables and other vintage machinery.
5. Construction of an operating steam sawmill.

The Society is currently organising a Steam Rally - Steamfest '94 for 5-7 March, by which time we hope to have laid 500 m of track, finished restoration work on the Sheffield Station and constructed a locomotive/carriage shed. This will be the RCRS & HM's first fund raising event and official opening. For further details, please contact Chris Martin, President of the Redwater Creek Steam and Heritage Society, 10 Chettle Street, Devonport TAS 7310, or phone 004 247 348. Membership to the Society is available at \$20 single and \$30 family (husband/wife/children to 16 years).

Chris Martin 12/93

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm and 1029 mm gauge

P O BOX 288, Alexandra Vic 3714
(see LRN 97 p.13)

Sunday, 12 December 1993, will be a day long remembered by those who were present for the official recommissioning of Kelly & Lewis 4271. The day dawned with a fine drizzle after heavy overnight rain. Around 6.00 am the first of the museum volunteers stumbled out of the "Alexandra Hilton" and began the task of shunting rolling stock to make up the various trains. Matches and paper and piles of wood were inserted into fireboxes and three boilers began to crackle and hiss into life. By 10.00 am all of the trains were assembled and members of the public and invited guests were quickly gathering on the station platform. By this time the rain had stopped, and the clouds were

beginning to dissipate.

The official ceremony began at 10.30 am. Peter Evans introduced special guest, the Hon. Graeme Stoney, MLC for the Central Highlands. In his speech, Mr Stoney recalled seeing one of the diesel locomotives in action on the Rubicon tramway as a small boy visiting Thornton. He went on to stress the importance of the tourist industry to both the Alexandra region and the State of Victoria. He praised the efforts of the museum volunteers in the presentation of the museum grounds, and made special mention of the efforts of Paul Simpson and Bryan Slader in the restoration of Kelly & Lewis 4271. In his conclusion, he stated unequivocally that the museum would retain the use of the land at the Alexandra railway station. He then introduced Ernie and Rose Le Brun to recommission the locomotive.

Ernie ran through the history of the timber industry in the Rubicon Forest, making special mention of his relationship with Robert Skinner and outlining the circumstances under which the tramway changed hands and the arrival of the first diesel locomotive. He then broke a bottle of champagne over the buffer beam and, under the control of Bryan Slader, the locomotive's Dorman diesel engine clattered into life. Hauling a load of sawn timber and the museum's two carriages jam-packed with passengers, Kelly & Lewis 4271 glided out of the station at the start of its new life.

For the rest of the day the museum was a hive of activity. Both the Kelly and Lewis and the John Fowler steam locomotive hauled passenger trains. The Lions Club of Alexandra BBQ on the station platform did a roaring trade with a sausage sizzle. We sold cups of tea and coffee, cold drinks, sweets, souvenirs and afternoon teas. The Alexandra Brass Band played on the station platform. The Day's tractor and the Malcolm Moore trundled up and down the sidings. Both of the Marshall portable engines revolved quietly in front of the goods shed.

At 2.00 pm the grand parade began. All of the operational locomotives and rolling stock were assembled on the main line, and at a signal from Bryan Slader began to circle the Museum loop. The parade consisted of:

Kelly & Lewis	0-6-0DM	4271/1935	timber & logs
John Fowler	0-6-0T	11885/1909	two carriages
Malcolm Moore	4wPM	1049/1943	SEC hoppers
Motor Rail	4wDM	10059/1948	poison sprayer
SEC Kiewa	2+2wPM	(dead attached at the rear of the procession)	

This event brought the photographers out in large numbers! It was the first time such a procession had been attempted at the museum. The two larger locomotives handled the speed changes with relative ease, but at the rear of the procession the two smaller locomotives with their purely mechanical

transmissions were constantly changing gear.

By 4.00 pm the large crowds at the Museum began to thin out, and at around 4.30 pm, the first of the locomotives retired to their sheds, and the long job of packing up was begun. Trestle tables were dismantled, the BBQ cleaned and disassembled, dishes washed, takings counted, the PA system packed up and the shunting completed. The tired Museum crew assembled on the station for a cleansing ale and a quick post mortem.

The day had been an unprecedented success for several reasons. We had earned the appreciation and support of a member of the Victorian Government and the Alexandra Shire President. We had celebrated the return of the Kelly & Lewis, the efforts of those involved in the restoration, and brought smiles to the faces of those residents of Alexandra and the Rubicon Forest who remembered the locomotive in action. We had shown that we could mount a "living" display and retain visitors at the museum for a whole day. Our catering efforts had been a resounding success, and had contributed a major portion of the financial rewards earned on the day. And finally, those financial rewards represented the greatest earnings on a single day at the museum, surpassing those of the entire Easter period.

On Sunday, 12 December 1993, we came "of age" at last. Every single person involved in the organisation and operation of the day, from our oldest "living treasures" to our youngest member, deserved a hearty pat on the back. Special mention must be made of Museum secretary Maxine Murray who bore the brunt of the organisational duties prior to the day and who like many others worked tirelessly on the day itself.

Peter Evans 12/93

BASS VALLEY RAILWAY

See CHEETHAM SALT LTD, Laverton

CHEETHAM SALT LTD, Laverton 610 mm gauge

(see LRN 97 p.13)

Australasian Post of 11 December 1993 contained an article and photographs by Ian Baker, regarding the above light railway, headed "Salt Shaker". The photographs showed one of the locos and Messrs John Knoor and Alan Maggs.

Mr Maggs, described as "a veteran restorer of things historical", intends lifting 1.6 km of the 2 ft gauge track and relaying it at Bass in the Gippsland. He also intends to renovate the Salt Company's 4 diesel locos and two dozen wagons. The locos and rolling stock will be stripped to the frames and rebuilt and fitted with air brakes "to bring the train up to passenger standards".

When laid, the line will become the Bass Valley Railway, linking several restaurants, Wombat World, the deer park and the Giant Worm Tourist Complex on the highway at Bass. Mr Maggs promises that the new line will be operating before the end of 1994. Mr Maggs describes himself as "a transport and tourist consultant", whilst Mr Knorr is credited with having had the idea of the project.

Australasian Post 11/12/93 via Arnold Lockyer 12/93

COOKS CONSTRUCTION, Yallourn 900mm gauge

See SECV, Yallourn

SECV, Yallourn

(see LRN 97 p.15)

An error occurred in the report in LRN 96 concerning the fourth Walkers exQGR DH-class B-B DH locomotive acquired by Cooks Construction. This should have been shown as DH28 which is Walkers 610 of 1969. Allocated the number CC04, it is not clear if this unit is intended for service or if it has been acquired for spare parts.

Only two electric locomotives (with one unreliable standby) had been available for use after December 1992, and as recorded in previous reports, electric traction had to be used up until at least August 1993. The last electric locomotives were:

121	Red Devil	Bo-Bo WE	Henschel	29858	1962	Derelict
122	Mighty Mouse	Bo-Bo WE	Henschel	29859	1962	In service
123	Electric Blue	Bo-Bo WE	Henschel	29860	1962	Standby
124		Bo-Bo WE	Hitachi	101	1967	Out of use
125	Thunderbird	Bo-Bo WE	Hitachi	102	1967	In service

At least two of these are expected to be preserved.

ARHS Bulletin 9/93: John Browning

SECV. Rubicon 610 mm gauge

(see LRN 97 p.19)

The Historic Buildings Council hearing into the Hydro Electric Scheme was held on 1 December. The SEC did not oppose registration of the scheme, observing that for them to do so would ignore the efforts of their employees who have maintained the scheme for the past 65 years.

It is probable that registration of the scheme is almost a foregone conclusion, with only minor details to be decided. The SEC has agreed to retain the haulage at Rubicon as well as the tramway between the Rubicon Forebay and the 15,000 siphon bridge. They are still arguing however for the removal of the tramway between the Royston power station and the Rubicon

dam. The case for the retention of the tramway was argued by Peter Evans and the decision of the Historic Buildings Council on this matter is awaited.

Peter Evans 12/93

RURAL WATER COMMISSION, Waranga Dam Tramway 610 mm gauge

This site was visited in late November. I last visited this line some 15 years ago. To my surprise I found it was largely intact albeit shortened and showing signs of not having been in use for some time.

The track layout has not changed from previous reports. The quarry end is obviously abandoned with parts of the line submerged under water at the extreme end. Midway between the quarry and the dam wall is a rectangular security fenced site where the rolling stock is located. This consisted of three skips, two skip chassis as a platform for unknown devices that used concrete and the "passenger" wagon: a galvanised-iron roof covered platform supported by two leaf-springs. When I originally saw this it had a wooden chassis with skip axle boxes. This has now been replaced by a regular skip chassis.

The locomotive was not sighted and was presumed to be locked in the locomotive shed. This was confirmed when I later rang the RWC Waranga office. The line was refurbished some years ago and was shortened to 2.5 km now going only halfway along the dam wall. Plans are being made to eventually replace the tramway with alternative transport methods.

John Peterson 12/93

YANGARDOOK TRAMWAY 610 mm gauge

(see LRN 86 p.19)

There have been many changes at this privately owned tramway at Toolern Vale.

All motive power has been removed from the site, and owner Jim Baines is inviting expressions of interest in the future of the tramway. Options include the outright purchase of the property, or the formation of a museum society to operate the tramway using suitable motive power and rolling stock. Jim can be contacted by writing to him at 424 Chapmans Road, Melton 3337.

The disposition of the locomotives is as follows:

Motor Rail 4wDM 9979/1953: To Colin Hirst who was 95% owner. The locomotive is to be used on a line to be constructed on private property at Drouin.

Malcolm Moore 4wPM 1090/1943: Sold to Roy Odgers. Currently stored at Coburg but to eventually be used at Echuca.

Ruston & Hornsby 4wDM 223725/1944: as previously noted in LRN, this

locomotive was sold by its owner Brian Peart to Bruce Weatherhead and is at Tynong North.

Jim Baines via Peter Evans 12/93

MEETINGS

MELBOURNE: NOOJEE

The Noojee railway line was constructed not only to provide the means by which further Victorian countryside could be opened for settlement but also to open the forests to the north of Warragul for exploitation. Mike McCarthy will provide an overview of the timber mills and tramways that were established along the Noojee railway between 1890 and 1940.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton,
DATE: Thursday 10 February at 8.00 pm.

SYDNEY: Any member wishing to know details of the next meeting should call Craig Wilson on (02) 484 7984

LOCATION: Woodstock Community Centre, Church St., Burwood. Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 23 February at 7.30 pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue. Royston Park.

EDITORIAL

Copious thanks are due to Geoff and Peg Hayes who edited Light Railway News numbers 60 to 98 and did a wonderful job. I have taken on the job of Editor again for the time being, and with the help of updated technology, this task may be a little less onerous.

News reports may be sent direct to me or through the State News editors. They may be in the form of notes or a fully developed report. Reports are welcome in written form (which may be posted or faxed), or on 3.5 in disk in WordPerfect for Windows or most other word processing formats (please enclose with your disk a hard copy and details of the format used). Your disk will be returned to you.

Anyone can provide reports to LRN, and I encourage members to visit sites of interest and to submit news of what you see. Reports can include operating light railways or preserved light railway equipment, the remains of light railways, and research news, questions or suggestions, including news of publications and archives which contain material of light railway interest. Don't forget that photographs for publication are always welcome, and that you should mark your photographs if you require them to be returned. Colour photographs are quite acceptable.

A working definition of what can be included in the term *light railways* past and present includes all industrial railways, railways operated by government departments other than the railway department and sub-3ft 6ins gauge railway department lines.

NOTES, CORRECTIONS AND COMMENTS

1937 FILM ON THE AUSTRALIAN SUGAR INDUSTRY

A 1937 film on the Australian sugar industry is now available on video. The 33 minute video is silent but comes with a copy of the original commentary. It may be purchased by mail order for \$35 from Book Sales, Canegrowers, GPO Box 1032, BRISBANE 4000.

Australian Canegrower 10/1/94 via Chris Hart

FOR SALE.

Nine metre steel girder bridge. See Illawarra LRMS report for further details.

CHRISTMAS ISLAND STAMPS

To be released on 19 May (and valid for use in Australia) will feature steam locomotives which formerly worked on the standard gauge Christmas Island phosphate railway. The locomotives shown on the three stamps (valued at 85c, 95c and \$1.20) are a Lima Shay, a Robert Stephenson & Hawthorn 0-4-0ST, and a Lima 0-6-0ST, and the first day cover incorporates another view of the Lima 0-6-0ST. The Australian Stamp Bulletin No.224 incorporates a potted history of the railway.

VALE ENGINEERING PTY LTD., Moss Vale

(see LRN 96 p.7)

The auction held here in August 1993 featured a number of 1067 mm gauge battery personnel cars and locomotives offered for sale. Personnel cars (all without battery boxes) were offered as lots 3096, 3097, 3098 and 3099 and were numbers 25, 7, 23 and 19 respectively.

Battery locomotives were offered as follows (battery box identification in brackets):

Lot 3042 - number 27 (A); Lot 3043 - 21 (G); Lot 3044 - 25 (K); Lot 3052 (part) - 23 (-).

In addition Lots 3047 to 3049 were loco battery boxes B, C & V respectively, and Lots 3050 & 3051 were unidentified personnel car battery boxes. Loco battery box W was also included but does not appear to have had a lot number. Three flat cars were also offered and a dolly car, numbered 8, was on site but not offered for sale.

Ray Graf 2/94

NEW SOUTH WALES

COALCLIFF COLLIERIES PTY LTD Coalcliff Colliery 1067 mm gauge

(see LRN 96 p.8)

Material offered for sale at auction was inspected on 20 August 1993. The painted lot numbers were altered that morning (to correspond with mistakes in the catalogue) by attaching papers, so both old and new lot numbers are recorded as the original ones will survive on the items!

ENC MANAGEMENT PTY LTD, Newvale Colliery, Vales Point 1067 mm gauge

(see LRN 96 p.11)

An advertisement in the Sydney Morning Herald provides different information to that given in LRN 96. This advertisement refers to two Gemco Type 12 24-ton battery electric locos, five 20-man personnel carriers, fifteen coal skips, a Fox rail mounted stone duster and what appear to be three rail mounted air compressors.

Sydney Morning Herald 21/8/93 via Ray Graf

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 96 p.9)

ILRMS members are wondering if the Society can claim a record for the first fully qualified husband and wife steam locomotive footplate crew in Australia. Mike and Helen Midway sat and passed their respective examinations for Driver and Boiler Attendant under NSW Work Cover in the latter part of 1993.

Much energy is being spent on ascertaining and complying with the requirements for accreditation under the new NSW Rail Safety Act since an ILRMS application for exemption was rejected. It appears that other states may see NSW as the forerunner for similar legislation for all Australian railways; thus the lower-limit gauge of 600mm which may be intended to catch all cane railways.

A girder bridge now surplus to requirements is available to any interested party at original cost to the Society. It originates from the Unanderra-Moss Vale line and is 9m long with girders about 1.2m deep. Sleepers were laid directly onto the girders which are spaced and diagonally braced at approximately standard gauge. Enquiries to ILRMS (042) 564627 (Tues/Thur/Sat).

The Society's "Mascot" loco, the onetime Corrimall Coal Co. Hawthorn Leslie 0-4-0ST BURRA (3574 of 1923) has been steadily progressing until temporarily interrupted by the peak summer-holiday period. The boiler has been hydrostatically tested and passed. Valve gear has been reconnected and set, and the various superstructure components and boiler and cab fittings have been painted or otherwise readied for reassembly, hopefully during the autumn.

A light standard-gauge turntable was obtained from Stockrington some years ago for possible conversion to 2ft gauge. It has now been decided to return this to its original home, where the Richmond Vale Railway Museum

proposes to restore it for its original use, turning the Cadillac Rail Motor which is now in the RVRM collection.

A new buffet car and souvenir shop at Yallah Station, using an ex-NSWGR carriage body, was commissioned just before Christmas. This replaces the old HG brake van body, which had served for 10 years as a souvenir shop, and was thoroughly termite-ridden.

Tony Madden (ILRMS) 2/94

MELALEUCA STATION, Chinderah

(see LRN 93 p.11)

This "railway themed attraction" was due to open in mid-February, but no information is yet to hand about the rail equipment which takes visitors on a tour of the ti-tree plantation, distillery and animal nursery.

Sunshine Express 2/94 via Editor

ROYAL AUSTRALIAN NAVY, Newington Armaments Depot 610 mm gauge

A feature in *The Sydney Morning Herald* shows rail lines and flat wagons at the 259-hectare depot, one third of which has been promised to the State Government for the Olympic Village for the 2000 games. The depot must be vacated by then.

Sydney Morning Herald 21/12/93 via Ray Graf

STATE MINE MUSEUM, Lithgow 1067 mm gauge

Together with some ex NSWGR stock, some mining rail equipment was noted behind the fence on November 25th, 1993. A four-wheel battery electric loco numbered 3, with its battery box numbered 51, may possibly have originated at Kandos Colliery. There were also three skips, one a bogie vehicle with lettering "MACQUARIE VALLEY RAILWAY SOCIETY", and two four-wheelers. In addition there were three coal cutters.

Ray Graf 2/94

ZIG ZAG RAILWAY CO-OP LTD, c/- Clarence Hardwoods, Clarence 1067 mm gauge

Noted here on 23 November 1993 was a quantity of mining rolling stock. There are two four-wheeled battery electric locomotives numbered 22 and 26 (with battery boxes lettered E and K respectively), four bogie hoppers of which three are numbered CH12, CH54 and CH82, four 4-wheeled hoppers numbered 22, 65, 68 & 84, and eight bogie flat cars.

Ray Graf 2/94

(see LRN 92 p.11)

Built in 1953 for the Mt.Lyell Mining & Railway Company by the Vulcan Foundry (D194) for the Drewry Car Co (2406), this 0-6-0DM was sold to the TGR in 1963. It is now the Zig Zag Railway's *Mount Lyell*.

Photo: Ray Graf

QUEENSLAND

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 98 p.5)

Land in the Wharp's Holding area, south-west of Ingham, is being released for cane growing. Victoria Mill has produced details of a tramline and siding program for the new area with Stage 1 to be completed by July 1995, and Stage 2 twelve months later if plantings progress satisfactorily.

The massive bridge crane from Invicta made a trip to the district to remove the spans of the Hawkins Creek bridge (Macknade Mill) on January 11-12 and the Gentle Annie Creek (Lucinda line) on January 13-14, since when the crane remained there. Locos used to move the bridge crane were E.M.Baldwin 4wDH 17 (6-1446-1-9-65 of 1965) at Hawkins Creek and Victoria Mill's Clyde 0-6-0DH *Lucinda* (65-436 of 1965) at Gentle Annie Creek. In mid February, Victoria Mill's Motor Rail "Simplex" 4wDM *Smokey* (4054 of 1929) was moved by road to Gentle Annie to take part in reassembly operations. Its cab was removed to avoid lifting damage. The bridges remained dismantled late in February.

Chris Hart 2/94; Australian Canegrower 24/1/94 via Chris Hart

HAUGHTON SUGAR CO PTY LTD, Invicta Mill, Giru 610 mm gauge

(see LRN 97 p.8)

The mill's 1930 4-tonne bins are having 30cm in height added to them by welding on new mesh sections. The work is being carried out by Pacific Coast Engineering of Townsville, and increases the bin capacity by half a tonne. However, the reason for the alteration is to make the old bins fit the mill's new tipper, which will be installed for the 1994 season. 200 new 6-tonne bins are also being provided for the 1994 season, and the new and altered bins are costing about \$1m. Another 700 to 800 new 6-tonne bins will be supplied over the next 12 months, and the old bins will eventually be eliminated.

North Queensland Register 24/2/94 via Chris Hart

THE LATE STEVE KELE, Mont Charlton, The Caves 610 mm gauge

(see LRN 85 p.11)

An extensive collection of engines and Australiana will be auctioned at Rockhampton on March 27th. This includes 610 mm gauge Hudswell Clarke 0-6-OST 496 of 1898, built for North Eton Mill.

Mackay Daily Mercury 12/3/94

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 98 p.8)

A newspaper feature has given details of proposed cane railway extensions in the various mill areas of Mackay Sugar, although some of these may not be built for many years to come.

It is reported that \$700 000 has been approved for the 7km. first stage of Racecourse Mill's \$1.4m Balberra tramline extension. This line will cross the QGR in the area south of Sandy Creek to serve growers to the east of the government railway. A possible further development at Racecourse is the construction of a cut-off line at Munbura to reduce running distances in the southernmost part of the mill area.

At Pleystowe Mill, short extensions are planned at Palmyra, Mt.Vince, Savannah and Eton. In addition, a direct connection line to Marian is under consideration.

At Marian Mill, planning is going on to built extensions in the old Cattle Creek area to Boongana, Finch Hatton Gorge, and Palm-tree Creek, Pinnacle. In addition, road transport can be replaced by rail by making extensions to Mt.Castor, Mia Mia (Mirani Weir), Dunwold, and Nabilla (on the proposed direct link to Pleystowe). Further projected extensions include ones at Benholme and Mt.Martin/Royston Park. The last is a very ambitious project which could extend for 12km between the existing termini at Mt.Martin School and Narpi

School, creating a large loop line.

Farleigh Mill is planning two significant extensions in its north coast area, one from Calen to Wewak in the St.Helen's Beach area, and another 16km line branching from the Wewak line north of Calen and extending to Yalboroo, beyond the mill's present northerly terminus at Wagoora and only 6km short of Proserpine Mill's southerly terminus at Elaroo.

At Pleystowe Mill, Hunslet 0-4-2T 1026 of 1910 has been moved from its display position at the old mill entrance. It has been brought adjacent to the workshop area for cosmetic repairs to be carried out. At Racecourse, it is believed that tenders for the conversion to 2ft gauge of Walkers B-B DH 657 of 1970 (ex QGR DH70) closed around the start of March.

Mackay Daily Mercury 27/1/94; Tony Wells 3/94; Editor 12/93

BUNDABERG SUGAR LTD, Mourilyan Mill 610 mm gauge

(See LRN 96, p.11)

Mourilyan Mill's 0-6-0DH 11 (Walkers 570 of 1956). Originally built as a demonstrator, this unit was not very successful and worked at the Mourilyan Sugar Terminal from 1960 to 1992, when it was acquired by the neighbouring sugar mill for cane haulage. Photographed at the loco shed 17/8/93

Photo: Chris Hart

MORETON CENTRAL SUGAR MILL CO LTD, Nambour 610 mm gauge

(see LRN 96 p.12)

An interesting occurrence was noted on November 16th 1993, when at 5pm, a stationary loaded train was found in Howard Street, headed by Com-Eng 0-6-0DH *Dunethin* (H1022 of 1958). Cane trains run up the centre of Howard Street before crossing the old Bruce Highway to enter the mill yard. The train was stuck fast, not having been able to surmount the rise of Howard Street without the assistance of the following loco which normally assists the loaded train by pushing in the rear. This was nowhere to be seen until the Howard Street marshalling yard was found to contain a derailed Clyde 0-6-0DH *Moreton* (63-289 of 1963) sitting at some 40° to the track. A road crane sent down from the mill yard soon had the Clyde back on the track and *Dunethin* reversed its train back down the hill and began the climb again, this time aided by *Moreton*, which ran up behind the loaded train to push.

Moreton Mill had a disastrous 1993 season with 150-170 000 tones of cane (more than a quarter of the crop) left unharvested in the paddocks on Christmas Eve when the season ended. Although wet weather was a major factor, growers have also criticised the maintenance and investment record of Bundaberg Sugar (now owned by Tate & Lyle).

*Durundur Railway Bulletin 1/94; Business Queensland 28/1/94
and Australian Canegrower 24/1/94 & 7/2/94 via Chris Hart*

PLANE CREEK CENTRAL MILL CO LTD, Plane Creek Mill, Sarina 610 mm gauge

(see LRN 98, p.10)

In spite of newspaper reports that the new 44km line to Karloo will be open this year, no construction had commenced by March. By that time, the indication was that construction for 1994 would commence in April and would extend to Ilbilbie, approximately half the distance. There was still a hope that an ex-QGR DH-class would be converted for use on the line during the 1994 season, although by March, no tender for this work had been let.

Mackay Daily Mercury 27/1/94; John Couchman 3/94

TORBANLEA MINING MUSEUM 610 mm gauge

(see LRN 98 p.11)

It is reported that this museum, currently owned by the adjoining service station proprietor, is closed permanently and is being offered for sale to the Hervey Bay City Council. Should a satisfactory offer not come from this source, the collection, (including Bundaberg Foundry 4wDM 19 of 1956) is likely to be auctioned off.

Kath Greenhalgh 2/94

SOUTH AUSTRALIA

BHP LTD, Iron Knob Tourist Centre various gauges

A variety of rail equipment was noted on display early in January: two narrow gauge muckers, one by Copco (18 inch gauge) and one by Eimco (possibly 20 in gauge), and three 4-wheel wagons. There is also a bogie caboose and a tank car, both ex-BHP.

Ray Graf 2/94

VICTORIA

A1 MINE, A1 Mine Settlement, Gaffneys Creek 610 mm gauge

(see LRN 91 p.16)

A visit here on 13 December 1993 revealed that the plant appears to be on a care and maintenance basis, and only two houses in the town appear to be occupied. Apart from a four-wheel battery loco in its shed, rolling stock observed comprised two side tippers and one tipper underframe as well as two flat cars, one with sides.

Ray Graf 2/94

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm gauge

(see LRN 98, p.12)

Debate about the future of the Museum project includes the possibility of restoring a section of the Alexandra to Rubicon tramway. About 200 metres of the government railway trackbed could be used to connect the current museum line to the tramway formation, and from then on it is felt that a staged reconstruction could return about 4.5 kilometres of the former route to use as a part of the museum project. Should such a plan be adopted, then considerable co-operation from government authorities and at least one private owner would be required.

The former locomotive shed from Gould's sawmill in Alexandra, formerly used to stable the Kelly & Lewis diesel locomotives, has been donated to the museum. It was removed in December and will be re-erected on the museum site.

ATT&M Newsletter 1/94 & 2/94 via Ray Graf

BALLARAT

A report has been received that a number of narrow gauge diesel locomotives are stored at a site in Ballarat. It appears that they may include

a number of the 762mm gauge diesel locomotives sold at the Melbourne & Metropolitan Board of Works auction in March 1993 (see LRN 94 p.19).

Further information from that auction indicates that many of the locomotives were sold for prices in excess of \$3000, possibly having been purchased for their diesel engines. It is also confirmed that Lot A368 (MMBW 011) was indeed a "Gemco-Funkey" diesel.

*Ian Comrie 2/94; Industrial Railway Society (UK) Bulletin No.558
via Ray Graf*

BILL & DAVID BEST 610 mm gauge

These British enthusiasts, who have done excellent restoration work on narrow gauge steam locomotives, were the purchasers of Decauville 0-4-2T 246 of 1897 (see LRN 95 p.9). It is believed that the loco was shifted to Melbourne immediately after the May auction, but that a permit to export it has been refused by the Federal government. A difficulty with the Movable Cultural Heritage legislation is that auctioneers are apparently under no obligation to alert potential purchasers to any possible restrictions on export affecting any item being offered for sale. It is thought that the locomotive may be resold in Australia at considerable financial loss, but no further details are presently to hand.

John Browning 2/94

COOKS CONSTRUCTION, Yallourn-Morwell 900mm gauge

(see LRN 98 p.14)

Operations were observed on 9 December 1993. During daytime, the working equipment is stored at the No.8 loop, which is also the train crossing loop. Three ex QGR Walkers B-B DH locos were in use with one man crews. CC02 (587 of 1968) and CC01 (586 of 1968) were hauling 16 trucks and CC03 (643 of 1970) was hauling 8. Loads have been reduced to these figures to minimise loco breakdowns.

Each train had the loco(s) at the Morwell end, which means that coal is hauled to the ditch bunkers at Morwell and pushed back to the Yallourn loader. During the day, the driver of CC03 had been occupied on track work, and train operations commenced at 4pm. Many or most of the passing loops on the line have been taken out, as have been the insulated rail joints. Safe working is by token with the existing SECV tokens padlocked together as appropriate.

Between Yallourn and Morwell the wheel/brake/underfloor automatic washer is still in use. Ballast machinery is stabled on the remains of a loop at the Morwell end of the line, and the ballast wagons and ballast loader are at

the Cook's Construction workshop. Walkers B-B DH CC04 (610 of 1969) was in the workshop under repair with the gearbox dismantled.

Of the overhead wiring, about one third was removed, about one third provided adequate clearance, and the remainder scrapes the loco cab roofs!

Ray Graf 2/94

SHIRE OF CRANBOURNE, Swamp Lookout, Main Drain, Koo-wee-rup 1067 mm gauge

Preserved at this lookout is a wheelset with a bicentennial plaque nearby stating that it came from a Lubecker steam bucket dredge imported from Germany early in the century by the Public Works Department. The 80-ton machine was fed with wood fuel "fed from small rail carts running beside it".

Ray Graf 2/94

SKILLED ENGINEERING, Yallourn 900 mm gauge

This appears to be the privatised SECV workshops (see LRN 98 p.14). Noted on December 9th 1993 were Malcolm Moore 0-4-ODM 8 (36 of 1949) and John Fowler

0-6-ODM 12 (4210050 of 1951), both operational. Also present was Henschel Bo-Bo WE 106 (25542 of 1950), which had been stripped for overhaul prior to privatisation. Confirmation of the ownership of these units would be of interest.

Ray Graf 2/94

STATE ELECTRICITY COMMISSION OF VICTORIA, Rubicon 610 mm gauge

(see LRN 97 p.19)

A hearing of the Historic Buildings Council held in December was told that the SEC do not oppose registration of the Rubicon hydro-electric scheme. The 2ft gauge tramway, which is an intrinsic part of the scheme, is of course included, but the 15 000 syphon bridge is closed and close to collapse, and 500m of track at the Rubicon dam end of the tramway has been closed, with some sections lifted. The SEC proposes to retain the Rubicon haulage and the tramway as far as the 15 000 syphon bridge. However, they are arguing for the complete removal of the tramway between Royston Power Station and Rubicon Dam.

ATT&M Newsletter 10/93 & 1/94 via Ray Graf

STATE ELECTRICITY COMMISSION OF VICTORIA, Yallourn 900mm gauge

(see LRN 98, p.14)

Noted out of use at Yallourn not far from the Cook's Construction workshop were the following Bo-Bo WE locos, which are thought to have been retained

by the SECV pending the confirmation successful dieselisation of the Yallourn-Morwell link:

122	Henschel	29859	1962
123	Henschel	29860	1962
125	Hitachi	102	1967

It is reported that only one of these units may eventually be preserved.

Ray Graf 2/94

TRANSFIELD TUNNELLING, Millers Road, Brooklyn 762 mm gauge

This company (a division of Transfield Industries) is the new name for the privatised Group C of the Melbourne & Metropolitan Board of Works, and this site is part of the North Western Sewer Project. The following locos were noted on site on December 12th:

No.1	327 2 056	4wBE	Gemco		Battery box 4 (a)
No.2	327 2 023	4wBE	Gemco		Battery box 6 (a)
No.3	327 2024	4wBE	Gemco		No battery box. OOU. (a)
4		4wDH	PTA		Hydrostatic.
5	327 2048	4wBE	Gemco		Battery box 7. OOU. (a)
6		4wDH	Gemco	237-90	1990 (b)
9		4wDH	Gemco	?	OOU. (b)
10		4wDH	Gemco	291-91	1991 Under repair (b)

(a) 5-ton loco.

(b) 15 ton loco 93kW hydrostatic

OOU - Out of use

In addition, there is a four-wheel conduit electric rack locomotive working on 3-phase 415v a.c. This works on the first floor of the head frame and draws loaded bogie wagons into the rotary tipper and then returns them to the hoisting cage. This was previously used at Sayers Road site.

Reported locos not observed were two PTA diesel hydrostatics underground, one Gemco hydrostatic under repair elsewhere, and a second 415v. 3-phase a.c. conduit electric underground.

Ray Graf 2/94

WALHALLA GOLDFIELDS RAILWAY 762 mm gauge

(see LRN 95 p.18)

At Yallourn on 12 December 1993, John Fowler 0-6-0DM 4210051 of 1951 (ex SECV number 14) was noted on a "pig-sty" converted from 900mm gauge, but with brake rigging still to be adjusted to the new gauge. In addition, two bogie carriages were noted under construction, utilising ex SECV hoppers.

Meanwhile, the spans of the Thompson River bridge near Walhalla have been removed.

Ray Graf 2/94

WESTERN AUSTRALIA

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION, Bennett Brook Railway, Whiteman Park 610 mm gauge

(see LRN 96 p.18)

Progress on the restoration of Henschel 2-8-2 NG15 118 (24476 of 1938) has continued in fits and starts, with it currently due to enter service in mid-1994. Orenstein & Koppel 0-4-4-0T Mallet 2609 of 1907 has been moved to Willis Engineering to have the motion completely overhauled. Major maintenance is taking place on coach AQ6 (built in 1984), and Franco-Belge 2-8-2 NG15 123 (2670 of 1951). 123 requires work on superheater elements, pistons and big end brasses and is due to return to service at Easter.

Perry 0-4-2T *Adelaide* (8967.39.1 of 1939) (see LRN 88 p.14) is now owned by Malcolm Thompson and has a steam certificate. New tanks and cab have been manufactured for this loco, which is due to be returned to working order by late 1994.

Ken Watson 3/94

Bennett Brook Railway: Late in January, Ruston & Hornsby 4wDM 404982 of 1957 handled all trains for a two week period following the failure of all the large diesels on the line.

OVERSEAS

COOK ISLANDS

RAROTONGA STEAM RAILWAY, 750 mm gauge

Chrzanow 0-8-0T Px48-1741 ex PKP (Polish State Railways) was purchased in working order but is being restored to original condition, to be completed hopefully by early 1995. The loco may operate as a tourist attraction at the Sheraton Resort Hotel currently under construction.

Continental Railway Journal via Ray Graf

FIJI

PLANTATION ISLAND RESORT, Malololailai Island, 610 mm gauge

A 2 ft gauge railway was built at this resort but it is now defunct. Some sections of line are removed or covered. Motor Rail "Simplex" 4wDM 3733 of 1925 (ex Lautoka Mill) which worked on the line was not to be seen but could be stored somewhere on the island.

Continental Railway Journal via Ray Graf

MEETINGS

MELBOURNE

BRITISH INDUSTRIAL MUSEUMS

John McCutcheon will be showing slides and describing his experiences following recent visits to Industrial Museums around England.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 14 April at 8.00pm.

SYDNEY

Any member wishing to know details of the next meeting should call Craig Wilson on 02 4847984

LOCATION: Woodstock Community Centre, Church St Burwood

Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 27th April at 7.30pm

ADELAIDE

Contact Arnold Lockyer for details.

Phone: 08-2969488

LOCATION: 150 First Avenue, Royston Park.

DATE: Tuesday 27 April at 8.00pm.

EDITORIAL

Number 100 of Light Railway News encourages me to think of Australian industrial locomotives relevant to the "Century" theme. Perhaps the most obvious is the Clyde Model HG3R 0-6-0DH locomotive *Centenary* (64-381 of 1964) at Victoria Mill in Queensland, while preserved at Kununurra, WA, is a 1912-vintage "New Century" 0-6-0PM built by a German builder, quite possibly Deutz. Tully Mill in Queensland has as its No.17 Com-Eng 0-6-0DH AH42100 of 1975, the one hundredth Com-Eng industrial loco. At Wongawilli Colliery in NSW, Australian Iron & Steel had a Titan battery-electric personnel car numbered 100 in its man rider fleet. Steam locomotives are harder to find. Perhaps readers can find some further examples of units following this theme.

RESEARCH COLUMN

HARBORDVILLE, PALMER RIVER GOLDFIELD, QUEENSLAND

Harbordville, on the Palmer River goldfield in far north Queensland, was the site of a two-kilometre 2 ft gauge tramline which ran from the Anglo-Saxon mine to the ten-stamp mill in 1890. Horses were used to haul the empty wagons back to the mine, with gravity being used for the full trucks. Two smaller tramways were also to be found on the Normanby field. (Information from *Chasing the Rainbow* by Grenville Pike, 1993).

Chris Hart.

CLARK DAM, DERWENT RIVER, TASMANIA

The Journal of the Institution of Engineers Australia, Vol 22, Jan-Feb 1950, contains an article on the construction of Clark Dam on the Derwent River in Tasmania. The article mentions the use of 3 ft 6 in gauge steam locomotives used to haul stone from the quarry to the concrete batching plant, while two diesel locos hauled buckets of mixed concrete. This could provide the impetus for an interesting research project.-

Jim Longworth

BRITISH PHOSPHATE COMMISSION

The British Phosphate Commission records, including material relating to Christmas Island, Makatea, Nauru, Ocean Island and the Pacific Phosphate Co. are located at the Melbourne Office of the Australian archives. The main series noted so far are MP1174/1 (Christmas Island Phosphate Commission Reports, correspondence & memoranda), R32 (BPC photographs including predecessors and Christmas Island), and R91(BPC annual cost summaries). Research on Ocean Island (Banaba) is being conducted by Stacey M.King, PO Box 536, Mudgeeraba, 4213 - (075) 30 5298 - who publishes a newsletter every two months.

Colin Harvey

LOCOMOTIVE & ROLLING STOCK MANUFACTURERS

BUNDABERG FOUNDRY ENGINEERS LTD

(see LRN 98 p.2)

Walkers ex-QGR DH-class B-B DH DH51 (Walkers 633 of 1969), in very good external condition, was noted still in storage at the works yard in April.

Tony Wells 4/94

TULK GONINON LTD, Mackay

(see LRN 98, p.3)

Work has been progressing on the rebuilding of three Walkers ex-QGR DH-class B-B DH locos for mills in the CSR group. The first is for Invicta Mill (601 of 1969) and was substantially complete on 6 May. It was expected to be despatched on about 11 May. It will now be receiving the name *Giru*, not as previously reported. The second loco (593 of 1968) is for Kalamia Mill and will be receiving the name *Jarvisfield*. The third loco (599 of 1968) is for Victoria Mill, and will receive its name at the mill. These two are expected to be despatched at about the end of May.

Meanwhile, DH70 (Walkers 657 of 1970) arrived on Wednesday 27 April, having been transferred to a road vehicle at the old Mackay goods yard rather than at the siding which runs from the QGR main line very close to the Tulk works. It is to be rebuilt for Mackay Sugar's Racecourse Mill. Another loco, DH68, (655 of 1970) is expected to arrive in about August for rebuilding for Invicta Mill for the 1995 season.

Editor 4/94, 5/94; Eddie Rogash (Tulk Goninon Ltd) 5/94

WALKERS LTD, Maryborough

(see LRN 98, p.3)

One of the three ex-QGR DH-class locos being rebuilt for Isis Mill was delivered to the mill early in May while the other two should be delivered within the following four weeks.

David Mewes 4/94

QUEENSLAND

BUNDABERG SUGAR LTD 610 mm gauge

(see LRN 97 p.7)

A Plasser KMX-12T ballast tamper has been delivered to the Bundaberg Sugar group, and was undergoing commissioning trials late in April.

Bob James 4/94

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 99 p.7)

The Invicta Mill bridge crane had replaced the spans of the Gentle Annie Creek bridge (between Halifax and Lucinda) by 9 March, but was still present on that date along with Motor Rail "Simplex" 4wDM Smokey (4054 of 1929). Both had gone by 19 March.

Rinaudo's Engineering at Macknade has been producing new 4-ton bins for Victoria Mill. Rinaudo's are assembling the 450 on order, with Firmi's Engineering in Halifax making the sides and ends, with the frames and wheelsets coming from another source. On completion, they are taken by road the short distance to Macknade's Wharf Line, and when a decent rake has accumulated they are collected by a Victoria loco. Clyde 0-6-0DH *Lucinda* (65-436 of 1965) collected the first rake on 3 March, having taken a load of welded rails from Victoria to Seymour the day before and staying on site overnight.

There has been an increasing amount of inter-mill workings and use of motive power by the Civil Department. One example of this has been the

use of the Macknade Motor Rail "Simplex" 4wDM 10232 of 1951 this slack at Abergowrie (Victoria Mill) with the Macknade thermit welding team. After the job finished, it was left at Victoria Mill.

A proposal from CSR for a cane railway extension south from Bambaroo is being awaited by existing and prospective cane growers from Kirkwoods Road south to Crystal Creek.

Australian Canegrower 21/2/94 via Chris Hart; Chris Hart 4/94

TONY GERMANOTTA, Kuttabul 610 mm gauge

(see LRN 94 p.12)

Tony Germanotta has disposed of Perry 0-6-2T 2601.1.51 of 1951 and two bogie carriages to Melaleuca Station, Chinderah, NSW (see LRN 99 p.5). They were delivered there in January. The remaining two bogie carriages have been sold to Mackay Sugar Association, Marian Mill, for navy use. Tony has retained his two diesels, Windhoff 4wDM 452 of 1940 and Gmeinder 4574 of 1949, which he intends to re-engine.

David Mewes 5/94; Tony Germanotta 5/94

ISIS CENTRAL SUGAR MILL CO LTD 610 mm gauge

(see LRN 98 p.8)

All six of the mill's Clyde 0-6-0DH Model DHI-71 locos were shipped to the Fiji Sugar Corporation around the end of March, making delivery of the three rebuilt ex-QGR DH class units from Walkers essential before the start of the crushing season.

Bob James 4/94; Tony Wells 4/94

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 99 p.8)

Work on Racecourse Mill's Balberra tramline extension has been deferred, probably to the 1995 slack season. The projected line includes a crossing of the QGR north coast line, and it is understood that this crossing has been agreed to subject to it being of the proposed new "drawbridge" type which is to be trialled on the Pioneer Valley branch line (see LRN 98 p.10). Successful trials of the prototype will enable an installation in a main line situation.

At Pleystowe Mill, it has now been decided that conversion work on ex-NSW SRA Walkers B-B DH 7313 (672 of 1971) will largely be carried out by local subcontractors, although the overall planning and design is still being done by the mill. This work is believed to include shortening the frame of the unit, and is still scheduled for completion in 1994. Of the remaining six 73-class locos obtained for Pleystowe and Marian, five will be rebuilt and the

last will be used for spare parts.

Farleigh Mill's 350 new bins are being constructed locally by Westhill Engineering.

A comprehensive locomotive driver and assistant training and resource package is being developed to improve driver skills and crews' mechanical knowledge as well as promote safety consciousness.

Bob James 4/93; Mackay Sugar Newsletter 3/94 via Editor;

Editor 4/93

MORETON CENTRAL SUGAR MILL CO LTD 610 mm gauge

(see LRN 99 p.9)

As forecast in LRN 95, work has begun on the rebuilding of Com-Eng 0-6-0DM *Yandina* (B1112 of 1956), with bodywork being removed for sandblasting. Mechanical equipment from Baguley 0-6-0DM *Jamaica* (3389 of 1954) is being prepared for fitting into the locomotive, and it would be assumed that a torque converter will be fitted as part of the rebuild. It is anticipated that the remains of the Baguley loco will be written off following the rebuild, and that the rebuilt ComEng unit will be renamed *Jamaica*.

Tony Wells 4/94

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 99 p.10)

By early April, there was little sign of any activity associated with construction of the new tramline south of Koumala. It appears that construction has been deferred, but that it will be completed for the 1995 season. Funding problems involving Federal and State governments, the growers and CSR are thought to be a significant factor in the delay. Tamper Model TSR-RS sleeper replacement machine/scarifier 825817 of 1987 was noted outside the loco shed. It appears that this unit is shared between Plane Creek Mill and Inkerman Mill.

Editor 4/94

ROYAL QUEENSLAND BUSH CHILDRENS HEALTH SCHEME, Leslie Wilson Home, Townsville 610 mm gauge

(see LRN 9 p.14)

The bush children's home at Rowes Bay was due to close in June 1994 following a reassessment of the scheme's activities. The fate of first world war veteran Hunslet 4-6-0T *Invicta* (1215 of 1916), which has been preserved here since 1967, is not currently known, but it is understood that its future has been secured.

Townsville Daily Bulletin 22/3/94 via Chris Hart; B.Lobb (RQBCHS) 5/94

SIMSMETAL, Townsville

A number of different types of narrow gauge wagons were noted through the fence of this scrap metal yard. One large four-wheeled wagon near the fence had large Willison couplers and appeared to be a Granby type, possibly 3 ft or 3 ft 6 in gauge.

Chris Hart 3/94

SOUTH JOHNSTONE MILL LTD/ TULLY SUGAR LTD 610 mm gauge

(South Johnstone, see LRN 97 p.10), (Tully, see LRN 98 p.11)

Following the successful fending off of take over offers from Tate & Lyle's Bundaberg Sugar during April, after a six month battle, a proposal to merge these two mills is being considered. There is even a possibility of Mulgrave and Mossman Mills being included at a later stage, as well as a possible proposal to purchase Mourilyan and Babinda Mills from Bundaberg Sugar.

Mackay Daily Mercury 6/5/94 via Editor

SOUTH AUSTRALIA

Smithfield Munitions Factory 610 mm gauge

The South Australian Group of LRRSA visited this defence establishment, now managed by private contractors, on 9 October 1993. A 2 ft gauge tramway, laid in a grid pattern, links the many storage magazines, and is constructed with 40 lb rail bolted to continuous concrete strips which are linked by spacers.

There were originally four Wingrove & Rogers "BEV" 0-4-0BE locos used on the site, although the coupling rods have all been cut off at some time, leaving just one axle powered. This has created some traction problems on overgrown track. One loco has been cannibalised for spare parts. (Builder's records show four battery-electrics supplied to the Commonwealth of Australia, Adelaide in 1942: 2216, 2217, 2230 & 2231 - Ed.)

The rolling stock is said to have been built by the SAR at Islington. There are over 20 four-wheeled flat cars, with detachable drop-on timber side rails, running on roller bearings and sprung axleboxes. Trucks of this kind have been fitted with basic roofs and used as passenger cars at the Moonta Mines tourist line.

The future of the site is increasingly clouded, with suburbia encroaching, and rationalisation of defence establishments in progress.

LRRSA SA Group 12/93

VICTORIA

BILL & DAVID BEST 610 mm gauge

(see LRN 99 p.12)

It is believed that the matter of the refusal of an export permit for Decauville 0-4-2T 246 of 1897 has been taken to the Commonwealth Administrative Appeals Tribunal, with hearing set down for August.

Editor 4/94

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 97, p.16)

Couillet 0-4-2ST *John Benn* (861 of 1886 as rebuilt by Ron Kain) and Beyer-Peacock 2-6-0+0-6-2 G42 (6268 of 1926) are still occupying most of the workshop's time. The frames of G42's rear unit have been assembled, and work is now to commence on the front unit. All four NA class 2-6-2T locos (7A, 8A, 12A & 14A), and the Climax 4w+4wTG (1694 of 1928) were in steam on February 5th, when three regular trains, the Commissioners' Special, and another special train were run.

Fully enclosed compartment car 24NB has undergone an almost total body rebuild at Emerald workshops, though fortunately enough parts have been recycled to retain a patina of old age, in places at least. It went into service in March, and looks magnificent.

NQG3, an ex-TGR ballast hopper converted to 2 ft 6 in gauge, has had extensive work done to provide an efficient method of dropping ballast from either the sides or the centre. It lacks elegance, being very wide for the gauge. It is to be used on the Gembrook ballasting operations, and was first used on 19 March at Gembrook.

Eleven Commissioners' Specials are scheduled to run in 1994. Four wedding reception trains were run in February, with another two in March.

Contrary to the report in LRN 97, the November 1993 work weekend concentrated on fitting missing sleepers to the existing skeleton track between Gembrook and Fielder, and ballasting work, rather than laying new track. There were no tracklaying work parties in December or January, but the February work party achieved spectacular results when 1,118 metres of skeleton track was laid by about 60 volunteers. This was all achieved by 4.00 p.m. on Saturday, by which time all available sleepers had been used. This remarkable achievement was made possible by careful preparation in the preceding days, and excellent weather conditions.

On the weekend of 19-20 March a further 550 metres of skeleton track was

laid, and 450 sleepers were fitted to the existing skeleton track. This brought the railhead to Fielder station, 4.4km from Gembrook. Ruston & Hornsby 4wDM NRT1 (296058 of 1950) ran the first train to Fielder in over 40 years, on Sunday 20 March. The April work party will concentrate on fitting sleepers to the skeleton track, and ballasting. The Doonaha Road level crossing, just beyond Fielder station, is scheduled to be constructed on the weekend of 28-29 May. After that work will not resume at the Gembrook end until September. The gap between the two railheads is now 4.8km, and more than half the track between Lakeside and Gembrook has now been laid.

Ballast is one of the most expensive items in track laying, and PBM Readymix (a Pakenham Blue Metal Company) have generously agreed to supply all future ballast for the Gembrook project at cost.

The concrete foundations for the small Wright bridge were constructed in February. Below ground level the original piles for this bridge still exist, and the new foundations are on the same site as the original piles and cap them. Materials to build the bridge have been obtained, and it is hoped to have it finished by Christmas. Surveying work is being carried out at the big Wright bridge, where finding the sites of the original piles has proved difficult.

Current plans are to lay 1.85 km of skeleton track from Fielder to Cockatoo on the weekend of 17-18 September, and to fill it with sleepers, and ballast it on weekends in October and November. A start may also be made on building Cockatoo yard.

Although trains from Gembrook now officially terminate at Orchard Road, occasionally they go further. On Saturday 30 October the last train of the day ran almost to Fielder bridge to pick up walkers on the annual Walk G42 to Gembrook event. On Saturday 18 December the 11.00 am train ran to the same place. Apart from its normal passengers, it had two members of the ETRB Board and several Pakenham Shire officials and councillors on board. The official party travelled in the NQR open wagon.

On Sunday 28 February the last trains of the day were also scheduled to run almost to Fielder bridge, with a party of Steamrail Victoria Ballarat Branch members. The ballasted track ends just short of Fielder bridge.

On Saturday 26 March, after the last regular train, Peckett 0-4-0ST 1711 of 1926 ran one NQR wagon to Fielder, with a small number of volunteers as its passengers, taking over an hour for the round trip, the speed over the unballasted skeleton track being little more than walking pace. All the better to admire the scenery, which is superb. It was the first steam train to Fielder in over 40 years. On the way back a number of empty 44 gallon drums were picked up, which had contained dogspikes, fishplates, and track plates.

Frank Stamford 4/94

JIM PURTON, Ballarat 762 mm gauge

(see LRN 99 p.11)

Further details are to hand about the locomotives reported in LRN99, which are stored on a site off Fussell Street, Ballarat, adjoining the Anthony Joinery Works. They are seven of those sold at the Melbourne Water auction on March 17th 1993 (see LRN 94 p.19) as follows (information in brackets from Editorial records):

011 3277011		Gemco	4wDH	(2707/Pl.0472/?/68	1968)
014 3277014		Gemco	4wDH	2889/Pl.0456/L621/68	1968
027 3277027	Dzidra	E.M.Baldwin	4wDH	(3225-4-2-70	1970)
029 3277029	Margaret	E.M.Baldwin	4wDH	(3225-2-2-70	1970)
033 3277033	Tanna	E.M.Baldwin	4wDH	(5346-2-2-74	1974)
		E.M.Baldwin	4wDH	5366-4-5-74	1974
46		E.M.Baldwin	4wDH	(6700-1-4-76	1976)

The locomotives are stored on private property and permission to inspect should be sought from the joinery works next door. There is a report that Mr.Purton may also have a yard in Brisbane, Queensland, with two partners, and that locos may also be stored there.

Ian Comrie 4/94

WESTERN AUSTRALIA

EQUIPMENT FOR SALE

Advertised for sale on November 27th 1993 were six Goodman battery d/c locomotives, four Gia DHS-12S locos (V6 Deutz engines, built 1981) and five Conway/Goodman type 100-2 Conway Muckers of "gauge to 42 inch". A Perth fax number (09) 451 4446 was given as the only contact detail. (Could the diesel locos could be four of the five Gemcos built for the Tasmanian Hydro Electric Commission in 1987? - Ed.)

West Australian 27/11/93 via David Whiteford

VICTORIA SQUARE, Queen Street, Busselton 1067 mm gauge

The National Trust of Western Australia may register ex-Western Australian Timber Company 0-4-0WT locomotive *Ballaarat* as the first item of movable heritage to be registered in the state. *Ballaarat* was completed in 1871 at the Victoria Foundry, Ballarat, Victoria for the WA Timber Company, and became the first steam locomotive to operate in Western Australia when it was used on the Lockeville to Yoganup line. *Ballaarat* is believed to be only the fourth

steam locomotive built in Australia, and is the earliest surviving one.

A cover was erected over the locomotive in 1991 or 1992 to provide some protection from the weather.

David Whiteford 3/94

DIZZY LAMB, Waneroo 610 mm gauge

(see LRN 48 p.12)

This tourist attraction has purchased the Kless Engineering steam outline locomotive and rolling stock offered for sale by Tilden Orchard in February 1994 (see elsewhere this issue).

David Whiteford 4/94

GWALIA 508 mm gauge

(see LRN 25 p.17)

The Sons of Gwalia woodline train formerly displayed at the old mine site is now next to the Gwalia State Hotel, its former home now part of an open cut mine. The 0-6-2T loco *Ken* (WAGR Midland, 1934), with bogie tender (John Fowler 14637 of 1916), two wagons, and the tanks off FOWLER (John Fowler 0-6-0 14636 of 1916) are "preserved" while in the former WAGR lie a cab roof and back, possibly from the loco *Koppel* (Orenstein & Koppel 0-6-2T 5081 of 1911). At the Gwalia Museum (where the ex-Sons of Gwalia headframe and winding machinery now are) are various mining kibbles and hoppers, some set up on short lengths of rail.

David Whiteford 9/93

HANNANS NORTH TOURIST MINE, Kalgoorlie 610 mm gauge

Hannan's North tourist mine train, Kalgoorlie, September 1993, with typical mine buildings and mullock heaps in the background.

Photo: Donald Whiteford

This tourist attraction opened in February 1992, replacing the Hainault Tourist Mine (see LRN 87 p.17), which has now been dug out as part of the "super pit" open cut mine. Situated a few kilometres north of Kalgoorlie on the Leonora road, this site is an expanded, neater version of the Hainault with many surface buildings and machinery on view that has been transported from various mine sites or else built in replica. The underground operation is a genuine mine although tourism is now the only commercial activity. On the surface a one-kilometre "figure of eight" railway has been laid to convey tourists around the attractions with driver operated p.a. commentary and stops to inspect some of the buildings. Various halts on the line have been named for former Kalgoorlie-Boulder suburban stations (e.g. Hannan Street, Brown Hill), and passengers can join at any halt. However, there is no provision for easy disembarkation at any but two or three 'official' stops on the run. The train is hauled by one of two or three small (Gemco?) 4wBE locomotives (with no identifying marks) and has four cage type four-wheeled carriages.

Unfortunately, misleading advertising has given the impression that underground trains were also operated but a visit in September 1993 has confirmed that there is no such operation - although leaflets still handed out at the mine say that there is! On the tour level of the mine is a short, corroded, mine tramway with Eimco bogger model 12B S-P-N 12966-2-A-82, an unidentified Gemco loco and one standard skip - but there appears to be no likelihood of operating underground trains.

A machinery compound includes a large collection of mining rail equipment - bidders, locos and hoppers - but they are not restored or on official display.

The whereabouts of former Lake View & Star F.C.Hibberd "Planet" 0-4-0DM 2011 of 1937 and hoppers formerly displayed at Hainault is unknown although they have not been transferred to Hannans North.

David Whiteford 9/93

ROTTNEST ISLAND AUTHORITY 1067 mm gauge

(see LRN 90 p.15)

Although the new tourist railway on the island was completed in late 1993, trains were not due to commence until June 1994. By November 1993, more than 165 \$40 sleepers had been sold as a fundraising campaign and Shell Australia which supplies Rottneſt Island with fuel, will donate a portion of the money spent on fuel by the Island towards supplying fuel for the railcars. Gemco has donated two trailers, worth about \$6000 for use on the railway. The trailers will be designed and built by Gemco in Osborne Park. Negotiations are underway for one of the ex Westrail shunting tractors to be used on the island. The ARHS (WA Division) is believed to have obtained one

of these 4wD 1966-8 constructed units, and this may be the initial, though not permanent, motive power.

Thirty soldiers from the Australian Army's School of Artillery at Manly, NSW, visited Rottnest in November 1993 and among community projects undertaken by the men was the removal of some of the few remaining sections of old rails from the route of the new island railway.

Rottnest Island Authority hopes to commence passenger trains by June 1994. Ex-Westrail flat top container bogie wagons are being turned into the "Quokka Express" for use on the line, but special hybrid train-trams (the Gemco contribution?) are being developed to eventually replace the wagons. It is intended to have four self-powered trams, driven from either end, on the line.

Rottnest Islander 11/93, 12/93; David Whiteford 3/94, 4/94

TILDEN ORCHARD, Harvey (former Harvey Fruit Bowl) 610 mm gauge

(see LRN 70 p.14)

On 12 February 1994, tenders were invited for the "purchase and removal on an as is where is basis of 4 cylinder Cleff Engineering Fairground locomotive, 3 carriages (seat 24 ea.) and 2.4km 45lb 28 inch (sic) gauge track". Tenders closing on March 11th were to be sent to Tilden Orchard, Harvey. This is the former "Harvey Fruit Bowl" or "Big Orange" railway which opened on 26 December 1986 beside the South Western Highway on the approach to the town from Perth. The original developer of the complex envisaged a "Big Pineapple" (Queensland) type of operation with the railway running through the orchards with commentary on the many fruits and nuts grown there. It was also hoped to establish a small zoo, water playground, and other features that would have been served by the railway, but with changes in ownership the whole tourist operation has gradually been wound down.

The locomotive is actually a steam outline 4wDH(?) 4.8 tonne Kless Engineering product, and the coaches were built on site using wheels built by Connellan in Queensland. The stock has rarely been stored under cover, and is believed to have been largely unused for over a year. A later report indicates that the equipment was sold to Dizzylamb, Waneroo.

West Australian 12/2/94; David Whiteford 3/94, 4/94

WATER AUTHORITY OF WESTERN AUSTRALIA, Shenton Park

The government of Western Australia is constructing a \$5 million, one kilometre, sewer tunnel at Shenton Park. Rail operation is used in the tunnel, but further details are unknown at present.

Subiaco Post 15/3/94 via David Whiteford

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION

Bennett Brook Railway, Whiteman Park 610 mm gauge

(see LRN 99 p.14)

Henschel 2-8-2 NG15 118 (24476 of 1938) has passed all major steam test hurdles, and 1994 operations are envisaged. Franco-Belge 2-8-2 NG15 123 (2670 of 1951) was named *Fremantle* during a ceremony at Whiteman Village Junction station on October 10th 1993. The then Federal Treasurer and member for Fremantle, Mr. John Dawkins performed the naming. *Fremantle* was named for the port of arrival of the locomotive in WA and has other significance in that the Whiteman Park land was once owned by the Midland Railway of Western Australia, and there was also a Midland Railway locomotive named *Fremantle*. Loco 118 is to be named *Elizabeth* after Port Elizabeth in South Africa.

WALRPA is installing the former Midland Workshops 80 foot turntable at Whiteman Village Junction as the first stage of future running sheds to be established there. The girder is now in place and the finishing off of the pit will be the next stage of work.

Rusty Rails various issues via David Whiteford 3/94

WESTRAIL, East Perth Terminal 1067 mm gauge

WAGR four wheel composite carriage AI 258 was placed on display in the foyer of East Perth Terminal on 19 October 1993. AI 258 was one of two carriages built by the Metropolitan Railway Carriage & Wagon Co Ltd, Birmingham, at a cost of £380 each for use on the first WA government railway - Geraldton to Northampton. It was delivered in 1876 and ran on the WAGR until sold to the Goldfields Water Supply for use on the then private Mundaring Weir railway around 1900. From 1912 to 1962 it operated on the Carnarvon town to Babbage Island jetty railway before being sold for use as a storage shed. 258 was eventually rescued but sat at the jetty depot and then the Lighthouse Cottage Museum at the mercy of vandals for a few years before Westrail brought it to the Midland Workshops for full restoration. Various plans for 258 included display at Perth Station but after over two years waiting, it is now at East Perth Terminal for all to see.

Jeff Austin & David Whiteford 10/93

STOP PRESS:

It is reported that Charlie McClelland's Hunslet 4-6-0T (Frankston, Victoria) and Keith Watson's Freudenstein 0-4-0T (Perth) - both 2 ft gauge - have been offered for sale. The latter has been advertised overseas.

- David Mewes 5/94

OVERSEAS - FIJI

FIJI SUGAR CORPORATION 610 mm gauge

(see LRN 96 p.19)

Some 15 to 20 line cars are still said to be operated by Fiji Sugar Mills. Recently, six ex-SRA of NSW line cars were purchased at auction by Sydney-based FSC Services, overseas agents for Fiji Sugar, for shipping to Fiji and conversion to 2 ft gauge.

Of the six Clyde Model DHI-71 0-6-0DH locos purchased from Isis Mill (see LRN 98 p.8), the four complete with cabs are expected to be in service in the 1994 season. The other two may not be ready for service until 1995.

Con Van Wensteen (FSC Services) 5/94

MEETINGS

MELBOURNE

Western Australian Railways and Tramways

Ted Godwin will be showing some of his extensive collection of slides depicting Western Australian railways and tramways.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 9 June at 8.00pm.

SYDNEY

Any member wishing to know details of the next meeting should call Craig Wilson on 02-4847984

LOCATION: Woodstock Community Centre, Church St Burwood

Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 22 June at 7.30pm

ADELAIDE

Contact Arnold Lockyer for details. Phone: 08-2969488

LOCATION: 150 First Avenue, Royston Park

NOTES, CORRECTIONS & COMMENTS

Bob McKillop wishes it to be known that Patrick Lane from the *Continental Railway Journal* (UK) will be in Australia from August to the end of the year, and hopes to visit many preservation and industrial sites. Although unable to contact every group he hopes to visit in advance, Patrick hopes that this note will serve as some kind of notice and he is looking forward to meeting many LRRSA members.

It has come to the Editor's attention that for some time he has been spelling the name of Mackay loco rebuilders Tulk Goninan incorrectly. Apologies.

RESEARCH COLUMN

UPPER NEPEAN DAMS, NSW

A number of articles on construction railways of the Upper Nepean dams, NSW, which might interest LRRSA readers have appeared recently in the ARHS Bulletin. Ken McCarthy introduced the light railways of the Upper Nepean Dams water supply scheme in LR 43. More recent articles in the "Bulletin" have been:

- Cataract Dam - Bulletin 669 (July 1993)
- Cordeaux Dam - Bulletin 672 (October 1993)
- Avon Dam - Bulletin 675 (January 1994)
- Nepean Dam - Bulletin 679 (May 1994)

Woronora Dam still seems to have defied all attempts at research.

Jim Longworth

ANGLO-SAXON MINE TRAMWAY, Palmer Goldfield, Queensland

The Anglo-Saxon mine tramway on the southern part of the Palmer Goldfield in far north Queensland (see LRN 100 p.2) connected mine and ore crushing battery. It was a substantially built line and well graded, so that gravity would have been the main motive power for loaded trucks. Ruth and John Kerr of Brisbane (105 Highland Terrace, St.Lucia 4066) and John Hay of Cairns have researched and walked the line and are preparing an article for *Light Railways*. They would welcome any further information on the subject. So far, they have been unable to locate any historic photos.

John Kerr

LADY MUSGRAVE ISLAND, Queensland

Lady Musgrave Island (otherwise known as Bunker Island No.1 - see *Light Railways* 110 p.6) off the Curtis Coast in Queensland was still found to have several lengths of railway track left over from the guano mining days when a building was erected there in 1931, according to a newspaper cutting (possibly from the *Bundaberg News-Mail* - Ed.)

George Bond

FIELD REPORTS

NSW Division Craven Forest Railway Tour

On Sunday 22 May the NSW Division conducted a tour over some of the more picturesque and better preserved sections of the Craven Forest Railway.

This standard gauge railway was a 6 mile long line which connected the NSW government owned sawmill at Craven railway station with the nearby Craven State Forest. It was built in 1918 by the NSW Public Works Department. The line was used to supply saw logs to the sawmill for nearly 20 years before being dismantled in 1936.

Maitland member Ian McNeil, who has been researching the history of the mill and railway, conducted the tour. A small group of members travelled from as far afield as Sydney and Port Macquarie to rendezvous at the village of Stroud Road. The weather was cool but sunny, ideal for a Light Railways tour. The group motored north to Craven Village then turned eastwards along Glen Road. We stopped from time to time to view the remains of the railway formation visible from the road. After leaving the road, the next kilometre of the railway passes through cleared pasture lands, and is poorly preserved. From this point to the State Forest boundary, the railway follows Wards River upstream. Heavy earthworks and sharp curves were needed for the line to

follow the winding course of the river.

A lunch stop was made inside the State Forest at a spot known as "The Glen". At this point, the railway is a low embankment running through a grassy glade. Bel birds, tall trees and an over-friendly herd of horses made for a very pleasant lunch stop, although it was dangerous to leave your lunch unattended for an instant.

Several members explored the remaining 400 metres or so of line towards the terminus during lunch. Along this section, Wards River is a shallow placid creek running alongside the shallow ledge excavated for the railway. The formation ended abruptly in a small cutting which may have extended further, but which appears to have been filled in by past logging activities. This locality appeared to be a most unsatisfactory place to terminate a railway - in a cutting and on an upgrade. There was some speculation that this was a long headshunt. About 100 metres back the ledge was certainly wide enough for a runaround loop. It was also possible that this formation never saw any rails at all, as a 1922 report spoke of plans to extend the line another 2 miles into the forest.

The main walking tour was held after lunch. Permission had been obtained from three property owners to walk the first 2 kilometres of formation outside the State Forest. Heading west towards Craven the line soon passed through a succession of tall embankments, deep cuttings and hillside ledges, following the serpentine course of Wards River downstream. It was obvious that although sharp curves were a necessity for the line, no expense had been spared to keep to a steady downhill grade. For a timber railway, earthworks were very heavy. At the first river crossing it was estimated that the railway bridge would have been some 35 metres long and 15 metres high.

Several artefacts were found during the walk, including sleepers, dogspikes, bridge timbers and a few of the 50cm long iron bolts that were used extensively for bridge construction in those days. The walking was mostly easy along the old formation, passing through grassed paddocks and lightly timbered bush. The only hazard encountered was the hungry leeches at the second river crossing.

The last part of the walk was through riverside paddocks where, regrettably, the old formation has been bulldozed flat. After a rendezvous back at the cars, a short visit was made to the site of Craven railway station and the old mill. Both areas have been comprehensively cleared, and it required a very good imagination to picture what it must have been like in its heyday. At 4.30pm the tour was concluded after a most enjoyable day.

Ian McNeil 6/94

EAST OTWAY DISCOVERIES

Bush bashing in the untracked wilds of the East Otway Ranges has revealed some wonderful finds over recent months.

Along Henry's tramways in the Noonday Valley and West Barwon Valley there are kilometres of extant formations along the watercourses, up the side gullies and along the side spurs. The larger of Henry's two tunnels has been blown in and there is not much to see at the portals, but the small tunnel east of the No.1 mill is visible. Two thirds of the small tunnel has collapsed but the brave can scramble up the rock and earth slides and wriggle into the intact section (and hope there are no snakes within). The wooden supports are still standing but the roofing laths have long since gone. The writer has been inside the tunnel twice and safely emerged. Fellow member David Critchley has done likewise and captured the scene on video. It is planned to show the video and slides at the October entertainment meeting in Melbourne.

In the Barwon River itself are numerous lengths of iron and steel rail, relics of the 1923 flood. Up on the side spurs are zig-zags (two discovered and a third suspected) on sinuous routes crossing deep gullies via huge bridges as well as log landings, winch sites and snig tracks. Believe it or not, there is 15km of tram route east of the No.1 mill in the West Barwon valley made up of the main line and seven branch lines.

At Henry's Tangye mill is another zig-zag on the access tram while at Henry's Nettle mill are bench trucks, an intact bushfire shelter and bits and pieces of the Donaldson Trail tractor. The tram routes to Henry's Fun Factory mill is now a walking track in the Mount Sabine Falls reserve.

Hayden's tram route to the mill at Gail Clearing is largely intact on the Cumberland River side. There are some bridge remains, including one that was apparently built on top of two tall tree stumps as well as a double or triple decker over the northern arm of the Cumberland River, intact iron rails on one incline, a few wheel sets lying about and a pair of bogies with a log on them at a landing on the southern arm of the Cumberland River. The log bogies were loaded and ready to haul up when a tree fell onto the incline and wrecked the track, so the lot was left.

As is the case with such matters, all the exciting relics are situated way off the logging and fire tracks either at the bottom of gut-busting, leech-infested slopes or, if close, in the most tortuous and near impenetrable thickets of wire grass, dog wood, ferns and blackberries. It is not likely that tours will be conducted to these sites for Health and Safety reasons.

Norm Houghton 5/94

LOCOMOTIVE, ROLLING STOCK & EQUIPMENT MANUFACTURERS

ANDERSON RAE PTY LTD, Boundary Rd, Paget, Mackay, Qld

This company is managed by Ian Wright, former Mackay manager of Eimco Australia Ltd, and is situated close to Eimco's Mackay workshops. Not surprising in view of Ian's interests, is that Anderson Rae has become involved in cane railway work. Noted on 13 May was a new cab for Com-Eng 0-6-0DH *Alma* (FE56110 of 1975) of Inkerman Mill, basically complete but still to be fitted out. The design was fairly similar to that used previously by Eimco. Out in the yard was found the old cab of *Alma*. This cab was delivered to Inkerman by about the end of May.

Also on 13 May the mainframe and bogies of Pleystowe Mill's Walkers B-B DH 672 of 1971 (ex NSW SRA 7313) were receiving attention. The mainframe had approximately 600mm removed from each end, while bogie regauging was also taking place. In addition pivot modification to accommodate new smaller diameter wheels was to be carried out. The mainframe and bogies were returned to Pleystowe Mill by late June.

Editor 5/94, 6/94

G & N SOLARI ENGINEERS LTD, Challands St, Ingham, Qld

(see LRN 98 p.2)

A bogie brake wagon was delivered to Victoria Mill on about 26 May and to Macknade Mill on 27 May. These are based on cut-down ex QGR HJS type wagons, and the Macknade one at least was supplied without electronics, electricals, control system and air reservoirs, which were to be fitted by the mill. G & N Solari also built a third brake wagon for stock.

Chris Hart 6/94

TULK GONINAN LTD, Connors Rd, Paget, Mackay, Qld

(see LRN 100 p.3)

The three ex-QGR Walkers DH-class B-B DH locomotives rebuilt for sugar mills were despatched by road transport in May and June. Walkers 601 of 1969 left for Invicta Mill on 12 May, 593 of 1968 left for Kalamia Mill about the start of June, and 599 of 1968 left for Victoria Mill on 6 June. Delivery of Walkers 657 of 1970 for Racecourse Mill is scheduled for the end of August. This unit will be similar in external appearance to those rebuilt by Walkers for Tully Mill in 1993. Meanwhile, DH68 (655 of 1970), to be rebuilt for Invicta Mill, had been delivered to Tulk Goninan by the end of June. The company has

expressed interest in rebuilding the similar but larger Walkers ex-SRA of NSW 73-class B-B DH locos for sugar mill service.

Mackay Daily Mercury 6/6/94, Editor 5/94, 6/94

VAE RAILWAY SYSTEMS PTY LTD, McLennan St, Ooralea, Mackay, Qld

A \$2m extension was recently opened at this factory which manufactures points, crossings and associated products. The company was formerly known as the Mackay Foundry before being purchased by the Austrian-based Voest-Alpine a few years ago. Private railway customers include Mackay Sugar, CSR, Bundaberg Sugar and other sugar mills, as well as Mt. Isa Mines and Comalco, Weipa.

Mackay Daily Mercury 28/5/94 via Editor

NEW SOUTH WALES

EQUIPMENT FOR SALE 762 mm gauge

Advertised for sale ex NSW in the Index Industrial Brokers January/March 1994 catalogue are a Gemco 10 tonne battery loco, a Gemco 8 tonne battery loco and SIG 10 tonne battery locos (number unspecified); also an Eimco 21 bogger, Hagglund 90c muck car and various items of rolling stock, all 762 mm gauge. Can any reader provide the editor with further details on this equipment?

Barry Campbell 6/94

MELALEUCA STATION, Chinderah 610 mm gauge

(see LRN 99 p.5)

A visit in mid-May found that this attraction was not yet open in spite of expectations to the contrary. The main building is large and built as if a railway station with what appear to be ex-VR Tait electric multiple unit cars featuring prominently. The site is drained ti-tree swampland adjacent to the Pacific Highway between Chinderah and Condong. Perry 0-6-OT 2601.1.51 of 1951 and two bogie cars built by Tony Germanotta (see LRN 100 p.5) were parked in the open, with the steam loco partly sheeted over, and no 2 ft gauge railway works apparent.

Editor 5/94

NESTLES CHOCOLATE, Abbotsford 610 mm gauge

During May 1994, Bruce Macdonald was able to successfully negotiate access to this site for himself and Jim Longworth. Initial suspicions were that the site had contained a line of about 3 ft gauge. During the course of the site

survey, seven separate 2 ft gauge lines were recorded. A complete operable V tipping skip was also found in situ on one of the tracks. A research report will be submitted after further enquiries are carried out.

Jim Longworth 5/94

QUEENSLAND

ARAMAC TRAMWAY MUSEUM 1067 mm gauge

In 1913, the Aramac Shire Council opened a 67 km light railway connecting Aramac to Barcaldine, 600 km west of Rockhampton on the QGR's Central Railway. The Shire's Tramway Board operated the line until its demise. On 1 January 1976, the line closed after the road connecting the two towns was sealed. A museum has been opened in the old goods shed at Aramac. Here is to be found ex-QGR red railmotor RM28 and its trailer, which provided passenger services on the line after 1963. Other relics and items of rolling stock have also been saved at Aramac including a carriage and a Fairmont line car, while both diesel locomotives which operated on the line are in operation at sugar mills. The museum is open daily by request at the Aramac State School (076 51 3177).

Editor 6/94

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY Durundur Railway, Woodford 610 mm gauge

(see LRN 97 p.6)

The workshop building was completed in May and will soon be in use. The first occupants are likely to be Hudswell Clarke 0-6-0 *Melbourne* (1701 of 1938) and John Fowler 0-6-0DM No.1 (18620 of 1929). Reassembly of the Hudswell Clarke should be able to proceed more quickly under cover, while once the Fowler's wheel bearings are completed, it will also be able to be moved inside. New cab side panels and cab roof are being made for this loco, while further work is continuing on the clutch assembly.

Durundur Railway Bulletin 4/94

BUNDABERG SUGAR LTD, Mourilyan Mill 610 mm gauge

(see LRN 96 p.11 & LRN 99 p.9)

Walkers 0-6-0DH 11 (570 of 1956) has been painted in the mill's yellow and grey livery. Late in May, a Clyde Model DHI-71 0-6-0DH was seen stripped down and painted in primer at the mill. It looked as if it had almost certainly been sandblasted.

Chris Hart 6/94

GRAHAM CHAPMAN, Murrumba Downs 610 mm gauge

(see LRN 95 p.10)

John Fowler 0-4-0DM 18801 of 1927 is believed to have left here, apparently sent south to a private owner. Further details from any reader would be welcome. It seems likely that 4wDMs Hibberd 2333 of 1940 and Ruston & Hornsby 371381 of 1954, which arrived from Plane Creek Mill at the same time as the Fowler, are owned by Graham Chapman, not privately owned as shown in LRN 94. Ownership seems to have been confused between these and the Fowler.

David Mewes 7/94

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 100 p.4)

Construction of a \$7.5m 26km line into the Crystal Creek area some 40 km to the south of Ingham is planned to go ahead from mid-1994. The line will diverge from the existing Bambaroo line close to where it crosses to the western side of the QGR and serve areas to its east before running parallel to the QGR to around Mutarnee. A contribution to the costs of the new line will be made through a levy on growers for five years. In addition, major extensions in the Kirkwoods Road, Grassos/Pappins Road and the new Wharps area will be in place for 1995 or 1996, while extensions at Sheehans and Mortons roads are described "as a couple of years down the track".

Victoria Mill's new loco arrived on 6 June. It is Walkers B-B DH 599 of 1968 rebuilt and regauged by Tulk Goninan, and the name selected for it is *Victoria*. It will haul cane on the Bambaroo line.

The new Solari's brake wagons arrived in May, Victoria's probably arriving on 26 May and Macknade's on 27 May. They are built from shortened ex-QGR HJS type wagons and are yellow all over with the exception of silver bogies and red and white stripe headstocks. Macknade's, numbered 3, had to be fitted out with electricals, electronics, control system and other items by the mill, and probably the same applies to the one for Victoria. Macknade's carried above deck on delivery only fuel tank, beacon mast, a large package compressor, the brake cylinders and an empty control box. It was given the air reservoirs from Clyde 0-6-0DH DHI.2 of 1954 (ex Inkerman Mill's *Iona*). It will be paired with E.M.Baldwin B-B DH 19 (7070-3-4-77 of 1977) and used mainly in the undulating Hawkins Creek area.

The Invicta Mill bridge crane was noted back at the Hawkins Creek bridge replacement job on May 4th, attended by Motor Rail "Simplex" 4wDM *Smokey* (4054 of 1929), and was gone by May 12th, although the loco stayed

a little longer before returning to Victoria Mill. Motor Rail 4wDM 10232 of 1951 eventually found its way back to Macknade in May or early June after spending some time at Victoria.

Some if not all of the Victoria Mill Clyde and Baldwin main-line locos now have rear cab centre windows. Among those fitted with them during the slack season were Baldwins *Brisbane*, *Darwin*, *Homebush II*, *Wallaman* and *Hobart*, and Clydes *Lucinda*, *Perth* and *Centenary*.

Macknade Mill's E.M.Baldwin 0-6-0DH 14 (6-2490-1-7-68 of 1968) has been fitted with a new Alison torque converter instead of its Rolls Royce Twin Disc one, and has also received a stainless steel exhaust system. Macknade's Clyde 0-6-0DH 18 (DHL5 of 1954) dropped a side rod on 29 June and bent it. E.M.Baldwin 0-4-0DH 17 (6-1446-1-9-65 of 1965) was pressed into service for a few hours on 30 June, and Victoria Mill's E.M.Baldwin 0-6-0DH *Hobart* (4413-1-7-72 of 1972) arrived on loan the same day.

A number of different size bins seem to have been trialled at Victoria Mill, with three 6-tonne bins with Willison couplers (possibly from Inkerman) and a pair of four-wheeled 10- or 12-tonnes with link and pin couplers (possibly from Tully) having been noted in May. There is discussion of moving to larger bins in the valley, but the final decision will depend in part on the amount of modification needed to feeding stations to accommodate any larger design.

At Victoria Mill, Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) together with its carriage and display shed were repainted in June. *Homebush* is now maroon with black cylinders, frames, smokebox and safety valves and red headstocks and rods. Valances are gold and there is gold lining out and lettering. The name is in plain capitals on the cabsides and CSR CO LTD is across the tender sides. The carriage is maroon and white with gold railings.

The transfer of cane from Victoria Mill to Macknade will continue as required during the crushing season, with the first trips made on June 23rd. Average for 1994 may be around 8500 tonnes per week.

*Herbert River Express 9/6/94, 14/5/94, 26/5/94 & 23/6/94
via Chris Hart, Chris Hart 6/94*

HAUGHTON SUGAR CO PTY LTD, Invicta Mill, Giru 610 mm gauge

(see LRN 99 p.7)

B-B DH *Giru* (Walkers 601 of 1969), rebuilt by Tulk Goninan, arrived at the mill in mid May. It is the first of a planned fleet of seven 40 tonne locomotives each capable of hauling 200 six-tonne bins. When the mill is crushing at 1000 tonnes in 1997 (a 150% increase on the 1993 rate), thirteen locos will be required to haul cane to the mill.

North Queensland Register 19/5/94 via Chris Hart

THE LATE STEVE KELE, Rockhampton 610 mm gauge

(see LRN 99 p.8)

2 ft gauge Hudswell Clarke 0-6-0ST 496 of 1898 was sold at auction on 27 March, according to press reports. It would be appreciated if any member could provide further information.

Alan Robert 7/94

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 100 p.5)

Following modification by Anderson Rae Pty Ltd (see elsewhere this issue), the frame and bogies of Walkers B-B DH 672 of 1971 (ex NSW SRA 7313) have been returned to Pleystowe mill and rebuilding by the mill was programmed to begin in earnest in early July, with a possible completion date before the end of the crushing season. It is suggested this loco will be named *Walkerston*, quite appropriate for a Walkers loco! Clyde 0-6-0DH locos *Palmyra* (63-273 of 1963) and *Palms* (70-708 of 1970) have been rebuilt with new GM engines incorporating DDEC (Detroit Digital Electronic Control) for the 1994 season.

Hunslet 0-4-2T 1026 of 1910 has been stored in the crane shed behind the loco shed at Pleystowe pending cosmetic repairs.

The new crossing of the QGR at Wollingford, on the Pleystowe link to North Eton, which is used by about 60 cane trains per day, has been placed in operation. Two short hinged sections of 2 ft gauge track are normally held in an elevated position on either side of the government line. In order to allow a cane train to cross, these sections are lowered hydraulically and meet together across the government railway track, secured with a locking pin and supported by a series of steel base plates so that there is a small gap between the 3 ft 6 in gauge railhead and the foot of the 2 ft gauge rails. Operation is completely automatic, and is remotely activated by radio signal by the loco crew of the cane train as it approaches the crossing so long as no government railway movement is conflicting with it. A long audible (siren) and visual (flashing lights) alarm operates before the crossing is lowered or raised. The installation is interlocked with track circuits and connected to colour light signals on both government and cane railway, and catchpoints protect the crossing from cane trains when the cane railway track is in the raised position. A counting device ensures that all cane vehicles entering the section have left it before the crossing is raised.

At Racecourse Mill, Clyde 0-6-0DH *Rosella* (64-317 of 1964) was nearing the end of a major overhaul at the end of June. It has received a new GM turbo-charged engine with DDEC, increasing power by about 100hp, and is the first

Racecourse loco to be painted in the new Mackay Sugar corporate livery of yellow, green and red. The ex-QGR DH-class Walkers B-B DH loco being rebuilt at Tulk Goninan (657 of 1970) is due for delivery at about the end of August, and is expected to receive the name *Balberra*.

Two new Model TSR-TRS Sleeper replacement machines/track scarifiers have been delivered by Tamper under the new identity of Fairmont Tamper (a Harsco Company) according to the builder's plates. These are 6.5 tonne four-wheeled machines with drive from a hydrostatic motor onto each axle. 926213 is allocated to Pleystowe Mill and 926223 to Marian Mill.

All the locos at Marian Mill have been fitted with adaptors enabling them to handle both Willison and link-and-pin fitted bins. All Marian's six-tonne bins have been fitted with Willison couplers for the 1994 season, but there are still many smaller bins in service. No new brake wagons were observed at the mills late in June. Possibly these are designed to be used with converted government railway locos and so may be delivered in the future.

Mackay Sugar Newsletter 6/94; Editor 6/94

MOSSMAN CENTRAL MILL CO LTD 610 mm gauge

(see LRN 97 p.9)

Hudswell Clarke 0-6-0 *Ballyhooley Too* (1838 of 1950) has reportedly been sold to a NSW group.

Bruce Belbin 5/94

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 97 p.9)

A new loco shed is under construction to contain the expanded number of locos following the merger of the Mulgrave and Hambledon loco fleets at the end of 1991.

A new loco livery has been chosen in which locos will be painted progressively. This is dark green above waist height with a yellow strip and red band below, with yellow below that. Red and white dazzle stripes are also to be applied.

It is reported that two ex-QGR Walkers DH-class B-B DH locomotives, DH13 (595 of 1968) and DH31 (612 of 1969), have been purchased for future rebuilding for cane railway use.

David Mewes 7/94; Editor

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 100 p.6)

Funding for the 44 km cane railway extension from Koumala to Karloo was

confirmed on 30 June. This will enable an early go-ahead of construction, with the line completed for service in the 1995 season. As noted previously, three ex-QGR DH class B-B DH locomotives built by Walkers, DH12 (594 of 1968), DH48 (630 of 1969), and DH64 (651 of 1970), have been purchased for conversion to cane railway use, and it is expected that a contract for these conversions will soon be finalised.

In late June and early July a total of eight ex-NSW SRA 73 class B-B DH locos, also built by Walkers, arrived at the mill for storage pending eventual conversion. It is believed that these units are destined for Plane Creek and Invicta mills, with the split suggested as 3:5. Details are as follows:

SRA No.	Walkers	Date	Livery
7309	668	1971	Reverse yellow
7310	669	1971	Candy
7318	677	1971	Candy
7325	687	1972	Candy
7346	708	1973	Tuscan
7347	709	1973	Tuscan
7348	710	1973	Tuscan
7349	711	1973	Reverse yellow

In addition, about 12 ex-QGR 4-wheel covered grain hopper wagons are stored at the mill, but it is unknown for what purpose.

A number of new bins have been built for the 1994 season by local company Graham Engineering.

*Editor 6/94; Mackay Daily Mercury 1/7/94 via Editor;
Tony Wells 7/94*

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 91 p.15)

Proserpine Mill has adopted a design for a 10-tonne four-wheel cane bin, and a number are in use for the 1994 season, which more observed being assembled at the mill in early July. These bins have a rigid wheelbase and are fitted with coil springs. They are also divided transversely internally, providing two compartments for cane. Because of the need to keep as low as possible the centre of gravity of the loaded bin, the bin floor is slightly raised over each wheelset to accommodate the wheel diameter. The implementation of this design of bin is said to increase siding capacities by 30% in cane weight when compared to the smaller bins in general use.

Clyde 0-6-0DH 6 (62-272 of 1962) was fitted with an Eimco cab in 1991. Unlike that fitted a year earlier to Clyde 0-6-0DH 5 (60-218 of 1960), this has a profile

which slopes inwards above waist height. Both locos have bi-directional controls. [In LRN 79 p.15, it was incorrectly stated that Clyde 0-6-0DH 3 (58-195 of 1958) had received an Eimco cab in 1990. This information referred to number 5. Number 3 received a Hockey cab in 1981 (see LRN 30 p.14).] Proserpine Mill's two E.M.Baldwin brake wagons are still not being used.

Editor 7/94

ALAN ROBERT, Beaudesert 610 mm gauge

Alan Robert is the new owner of Hunslet 4-6-0T 314 *Invicta* (1215 of 1916) from the Bush Children's Home in Townsville. This locomotive was purchased by Invicta Mill from Bingera Mill in 1956. After arriving there it was rebuilt with the tanks and cab from Invicta's 1226 of 1916, so taking on its name and original War Department number. The locomotive was fitted with a new boiler in 1942 and appears to be in good condition despite having spent the last 27 years within a few yards from the ocean, possibly due to careful preparation for display initially and regular maintenance since. It is intended to restore it fully to working condition.

Alan Robert 7/94

TASMANIA

WARATAH 610 mm gauge

2 ft gauge play wagons on the site of the Emu Bay Railway's Waratah railway station. May 7th 1994

(Ross Mainwaring)

On the site of the original Waratah railway station has been built a narrow gauge railway children's playground to delight LRRSA members young and old. Two foot gauge track runs from an imitation mine adit to a "pretend" stamp mill, and on the track are two four-wheel wagons, newly built with timber frames and bodies but incorporating original wheels (and axleboxes in at least one case). Someone deserves congratulations.

Ross Mainwaring 6/94

VICTORIA

EQUIPMENT FOR SALE 1067 mm gauge

Advertised for sale ex Victoria in the Index Industrial Brokers January/March 1994 catalogue is a 15 ton Com-Eng diesel hydraulic loco, Caterpillar engine, in good order, price \$27 500, and several 20 ton Com-Eng diesel hydraulic locos, Caterpillar engines, in very good order, price \$37 500. Can any reader provide the editor with further details on this equipment?

Barry Campbell 6/94

CHARLIE McCLELLAND, Frankston 610 mm gauge

(see LRN 22 p.21)

Charlie's Hunslet 4-6-0T 306 (1218 of 1916) has reportedly been sold by tender to a steam preservation centre in Narrabri, NSW. It would be appreciated if any member could provide further information.

Alan Robert 7/94

COAL CORPORATION OF VICTORIA 900mm gauge

The Coal Corporation of Victoria, otherwise known as Energy Brix Australia, has invited expressions of interest for coal transport contracts at Yallourn. These comprise the operation of the 15 kilometre narrow gauge railway conveying 1.6 million tonnes of coal per annum to the Morwell briquetting plant, and of the cross country conveyor to the Morwell Power Station. Cook's Construction previously held the railway contract (see LRN 99 p.12).

The Age 7/5/94 via Colin Harvey

CROWES BUFFER STOP 762 mm gauge

(see LRN 66 p.15)

The Crowes Buffer Stop tourist attraction on the ex-VR 2 ft 6 in gauge Beech Forest railway was officially opened on Sunday 1 May by John Robinson, President of the Emerald Tourist Railway Board, and Norm Houghton. The attraction at Crowes has a weatherproof information board, a station name

board, 139 mile post, a buffer stop, a length of track, and a flat top NQR wagon minus the brake gear and couplings.

Norm Houghton 6/94

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 100 p.8)

The frames of the front unit of G42 (Beyer Peacock 2-6-0+0-6-2 6268 of 1926) have now been assembled, and the cylinders are now to be fitted. At the end of June, 7A (VR Newport 2-6-2T, built 1905) was having its coupled wheels reprofiled.

On the Gembrook restoration project, the Doonaha Road level crossing, just beyond Fielder station, was installed on the weekend of 28-29 May. It is the last of six level crossings between Lakeside and Gembrook to be built. Ruston & Hornsby 4wDM NRT1 (296058 of 1950) has recently had the busiest time in its career on the Puffing Billy Railway. In June it distributed over 1000 tonnes of ballast between Orchard Road and Fielder, hauling ten tonnes at a time in ballast hopper NQG3. These ballasting operations are expected to continue in July. The tamper has been over most of this section, and a second pass is scheduled in July.

On the weekend of 28-29 May NRT1 and Peckett 0-4-0ST *Sir John Grice* (1711 of 1926) were both working at Gembrook, NRT1 on track-work trains, and "Sir John" on passenger trains to Orchard Road. On Saturday on one occasion a works train hauled by NRT1 was attached to the front of the passenger train for the Gembrook - Orchard Road trip. Here the trains separated, with the works train heading towards Fielder, and the passenger train returning to Gembrook. This interesting manoeuvre was repeated four times on the following day. The first passenger train to Fielder since 1953 ran on 25 June, with the Peckett hauling one NBH car and one NQR wagon, with about 50 passengers on board. Travelling from Fielder back to Gembrook, non-stop, took about 22 minutes.

Regrading of Cockatoo yard to return it to its original level was underway in June. The steel bridge materials which were previously stored here have been moved to another site. Two of the three piers for the small Wright bridge have now been built, off-site. It is hoped to commence work at the bridge site before the end of July.

The restoration project on the TACL 4wPM (55 of 1928) - "the Climax's little brother" - by LRRSA and PBPS members is continuing (see LRN 97 p.17). Work has now recommenced on the frames. The horn guides have been built-up to the correct thickness, and ground down to fit the axleboxes. At a work

party scheduled for June it was intended to fit at least one pair of wheels, but this was deferred due to incessant rain. This work has to be done outdoors at Emerald to make use of the crane.

Frank Stamford 7/94

EXPLOSIVES FACTORY MARIBYRNONG 470mm gauge

(see LRN 88 p.3)

EFM was to become history after 30 June 1994, with the whole site to be cleared and disposed of. A LRRSA tour was due to be held on 18 June. The 40 or 50 cordite paste trucks have been saved and about half have gone to museums with the remainder to be sold to LRRSA members (looking forward to receiving a complete list for LRN - Ed.)

Phil Rickard 5/94; 6/94

GISBORNE DISTRICT STEAM & ENGINE SOCIETY 610 mm gauge

(see LRN 89 p.17)

This Society owns Perry 0-4-2T 9737-45-1 and intends to run it on a 1.5km loop of track to be laid at Gisborne. The locomotive was originally purchased by the Essendon Lions Club for the Essendon Steam & Oil Engine Preservation Society in 1981. It came from the Millaquin Sugar Mill, Bundaberg.

By 1987, the Essendon Steam & Oil Engine Preservation Society had fitted a new front tube plate, built a new smoke box and funnel, retubed the boiler, and built a new ashpan. At this stage, the project ran into difficulties due to lack of Essendon City Council support for plans to run the loco in a park in North Essendon, and work was halted.

In 1989 the Essendon Lions Club donated the loco to the Gisborne District Steam & Engine Society, who undertook to continue its restoration with some of the original Essendon workers. In 1992 the boiler passed its hydrostatic test, and was fully certified on May 9th 1994. This enabled it to perform at the Society's annual engine and vintage rally on May 15th. The side tanks are still to be fitted to the loco, and some other adjustments must be carried out before final approval can be sought from the boiler inspector. 600 metres of rail came with the loco from Essendon, and this is currently being laid.

Neil White 5/94 via Frank Stamford

RAAC TANK MUSEUM, Puckapunyal

It is reported that a narrow gauge radio-controlled battery target trolley has been on display at the museum, and may still be. This would be one of several which operated on target tramways on the ranges at Puckapunyal, but which are thought to be no longer operational. However, there is also

a report of more recent high speed winch-hauled target trolleys on a wider gauge in operation at the Camp. Further details will hopefully follow.

Paul Napier 4/94 via Phil Rickard

WESTERN AUSTRALIA

KEITH WATSON, Rossmoyne 610 mm gauge

(see LRN 88 p.14)

Freudenstein 0-4-0T *Golden Ridge* (217 of 1905), in working order and with new boiler fitted in 1990, has been advertised for sale overseas. Contact address was Wato Engineering, 11 Sandra Way, Rossmoyne 6148. Phone (09) 354 2549. This machine would be subject to export control under the Protection of Movable Cultural Heritage Act.

Narrow Gauge News 202 5/94 via Editor

OVERSEAS - PAPUA NEW GUINEA

MacKENZIE-HOLLAND-KUMAGAI JOINT VENTURE, Port Moresby 914mm gauge

Battery locomotives and rolling stock used by the joint venture contractors during the construction of the Rouna No.4 power station have been located in Port Moresby. The project was completed around 1988 and the equipment has apparently been stored since this date. Four heavy Japanese-built 4wBE locomotives (Numbered DBH-89, 93, 95 and 96) and some specialist items of rolling stock are now dumped in the former Longreach Clothing Company yard in the suburb of Hohola. Rolling stock includes two cement hoppers, two rail-mounted hoists built by Uchida (B/no. 31782 and 31550), a spoil loader and a rail-mounted cement pump built by Putzmeister of Stuttgart in 1978. Twelve battery boxes have been located in the former Kumagai yard at Six Mile. Other rolling stock has recently been dumped on the causeway in Port Moresby harbour to Tautana Island. Eleven heavy four-wheel dump trucks, two cement hoppers and two flat trucks were identified here in February and there may be other items below water level.

Bob McKillop & Michael Pearson 6/94

STOP PRESS

A number of interesting reports were received just after the news deadline. Details of these reports will appear in the next issue.

All members are encouraged to submit reports suitable for inclusion in

LRN. Remember, they don't have to be completed items: rough notes will be edited into a suitable form.

Please help to keep LRN a truly national publication by submitting contributions from all states. There has been rather a shortage of news from NSW recently, particularly on the industrial front. I know we are thin on the ground but I would be delighted if we could receive a few more NSW reports for future issues. NSW members interested in obtaining ideas for visiting sites in that state should contact the NSW Division or the LRN Editor for suggestions.

MEETINGS

MELBOURNE

AGM AND MEMBERS SLIDE NIGHT.

Following the formalities of our AGM a members slide will be held. Members and visitors wishing to show slides are asked to bring them along. The usual limit of 20 per person will apply but if you have a few more bring them along and if we get the opportunity they will be displayed as well.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 11th August at 8.00pm.

SYDNEY

Any member wishing to know details of the next meeting should call Craig Wilson on 02-4847984

LOCATION: Woodstock Community Centre, Church St Burwood

DATE: Wednesday 24 August at 7.30pm

ADELAIDE

Contact Arnold Lockyer for details. Phone: 08-2969488

LOCATION: 150 First Avenue, Royston Park.

The **news deadline** for LRN 103 (December 1994) is 1 November. A number of Field Reports have been held back from this to the next issue because of space constraints.

EDITORIAL

One of the most satisfying aspects of my work with LRN has been to see the role of LRN in the discovery, or at least the bringing to public knowledge, of a number of tramways still in existence, about which there was little if any knowledge in the past. It is a great excitement to come across such an operating system, or even the remains of a defunct one, and the publication of information about it not only informs the membership, enabling equipment to be recorded and research to be done, but it can often improve the chances of equipment being preserved. Above all, it encourages the rest of us to keep our eyes open and to realise that there is so much more out there waiting to be discovered. Don't assume that "everyone must know" about what you come across; they probably don't. Secondly, don't think that the operators of lines are generally negative about people taking an interest; they are generally rather flattered, if somewhat amused or bemused, and there are not so many of us to become a nuisance. Lastly, remember that a Society like ours exists because of a realisation that people benefit from sharing knowledge about their interest. We all benefit from the discoveries of others, so let us all be generous with our knowledge. As Editor, I realise that there are cases where information needs to be handled with discretion, and I am happy to discuss that issue with anyone who is concerned. Be assured that no news given to me is ever published without the informant's permission.

RESEARCH COLUMN

TIMBER TRAMLINES NEAR SYDNEY

(see LRN 90 p.2)

Following on from David Burke's query, another tramway that ought to be recorded in these annals was that of Tomas Davis at Terrigal. A line from near North Avoca brought logs in to a mill behind "The Haven". From there, a second tramway carried sawn timber to the jetty, for transhipment to Sydney. (Ref: Swancott C., 1954. *The Brisbane Water Story - Part III*. Brisbane Water Historical Society, Woy Woy.

Jim Longworth

AUSTRALIA'S AGE OF IRON.

The book of this title, by R. Ian Jack and Aedeen Cremin was published by Oxford University Press earlier in the year (\$39-95), and provides an interesting account of an early aspect of Australia's industrial development.

Ray Graf

NATIONAL RAILWAY ATLAS PROJECT.

This project is being undertaken by the ARHS (ACT Division) and will include *all private lines which are, or were, worked by locomotives (not being tractors or home-made steam locomotives fitted with wide wheels for use on wooden-railed timber tramways)*. Dr. Howard Quinlan of the ARHS (ACT Division) is co-ordinating the project with the help of state co-ordinators. Further details are to be found in the *ARHS Bulletin* for May 1994.

Ray Graf

LOCOMOTIVE, ROLLING STOCK & EQUIPMENT MANUFACTURERS

PLASSER AUSTRALIA PTY LTD, St.Marys, NSW

This manufacturer of track maintenance equipment is reported to have orders on hands for 610 mm gauge tamping machines from three sugar mills. Proserpine Mill and Isis Mill have ordered KMX-12T machines, while Plane Creek Mill has ordered a KMX-08.

Bob James 9/94

BUNDABERG FOUNDRY ENGINEERS LTD

(see LRN 100 p.3)

This company has obtained orders to convert five 1067 mm gauge ex-QR DH class Walkers B-B DH locos for 610 mm gauge sugar mill use. They are as

follows:

DH12	B-B DH	Walkers	594	1968	Plane Creek Mill
DH13	B-B DH	Walkers	595	1968	Mulgrave Mill
DH31	B-B DH	Walkers	612	1969	Mulgrave Mill
DH48	B-B DH	Walkers	630	1969	Plane Creek Mill
DH64	B-B DH	Walkers	651	1970	Plane Creek Mill

Delivery is expected to be early in 1995.

Jeff Shucksmith 8/94; Tony Wells 9/94

NEW SOUTH WALES

BLACK DIAMOND DISTRICT HERITAGE CENTRE, Bulli 1435mm gauge

It is believed that Hudswell Clarke 0-6-0T *South Bulli* (297 of 1888) is to be transferred here from Illawarra Light Railway Museum Society at Albion Park and that it will be placed on static display with a period coal wagon and brakevan. The museum is situated at the former Bulli Railway Station and includes railway memorabilia and photographs.

Bob McKillop 9/94

HUNTER VALLEY TRAINING CO, East Greta 1435mm gauge

(see LRN 70 p.5 & 81 p.7)

The following ex-South Maitland Railways Beyer Peacock 2-8-2T locomotives were noted in the open on a visit on April 17th: 23 (6056 of 1920), 26 (6127 of 1922), 27 (6137 of 1922), 28 (6138 of 1922) and 31 (6295 of 1925).

Ray Graf 8/94

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 99 p.5)

The Society has been donated two Baguley 0-6-0DM locos built to the order of The Drewry Car Co. from CSR Ltd, Victoria Mill, Queensland. These are:

Seymour (2392 of 1952) and *Leichhardt* (2393 of 1952). These were removed from the mill at the start of August and were shipped from Townsville by the Royal Australian Navy on August 9th approximately on board the landing craft *HMAS Labuan*, to arrive in Sydney on August 16th approximately. The locos arrived at Albion Park on August 19th and were shunted into the compound by an old comrade, Hudswell Clarke 0-6-0 *Cairns* (1706 of 1939). *Seymour* is believed to be in quite good condition and is presumably the loco

which was noted in operation at Albion Park in early September. At the same time, some concrete sleepers, sets of 45lb points, wheelsets and cane trucks were acquired from Tully Mill.

Michael Milway (Internet) via Colin Harvey 8/94; Paul Simpson 9/94

MENANGLE NARROW GAUGE RAILWAY, Campbelltown Steam & Machinery Museum, Menangle Park 610 mm gauge

(see LRN 95 p.5)

An interesting new arrival at the Menangle Narrow Gauge Railway is a small 4wDM loco which has been rescued from the basement of a Technical College in the Sydney area. The loco is fitted with a water bath exhaust conditioner, and changes from the original appearance seem to include the fitting of a canopy and most likely the replacement of the original hood. The loco has plate frames with external springs and external chain adjusters. The engine is a 2-cylinder *Listar* or *Listard* marked *Made in England*. The identity of the builder is unknown, as are details of its history, so any information about this locomotive would be very gratefully received.

Hudswell Clarke 0-4-0WT 1423 of 1923 is currently under restoration off site and it is hoped it will return in time for the running days on November 12/13. There is also an Open Day on the previous Sunday.

Wingrove & Rogers 4wBE 3845 of 1948 has had its builder's plate removed and is out of use with a broken flexible coupling. It appears to be identical in design to the loco which carried the number 218 in 1993, having the control gear mounted across the frames. The loco numbered 214 is of a different design with the control gear mounted parallel to the frames. (This leads to the suspicion that 218 would be builder's number 3846 of 1948, while 214 is likely to be one of 1607 or 1608 of 1940. - Ed.) All three battery locos are painted safety yellow.

Ruston & Hornsby 4wDM 304455 has gone to the Illawarra Light Railway Museum Society's Albion Park Museum. The Alwyn Zinn 4wPM loco (3 of 1974) has had about 200mm cut back from its cab roof overhang on each side, and has been fitted with a "builder's plate" for the first time.

Ray Graf 7/94; Paul Simpson 9/94

LACHLAN VALLEY RAILWAY, Cowra 1435 mm gauge

(see LRN 81 p.7)

There are two ex-industrial locos at this predominantly government railway preservation site. F.C.Hibberd "Planet" 4wDM 3575 of 1952 in red oxide was

noted with hood and engine removed on July 10th. English Electric B-B DE D9 (A.005 of 1956), in orange and black Australian Iron & Steel livery was in use on this day.

Ray Graf 7/94

ROTHBURY RIOT RAILWAY & STEAM MUSEUM GROUP 1435mm gauge

Among a number of ex-SRA NSW locos on 17 April were observed ex-South Maitland Railways Beyer Peacock 2-8-2T locos 17 (5570 of 1913) and 20 (5998 of 1915).

Ray Graf 8/94

TIMBERTOWN WAUCHOPE 610 mm gauge

(see LRN 85 p.7)

Timbertown closed around the middle of the year pending responses to national advertisement of its lease which is being offered to private enterprise. It would appear that one of the factors forcing the closure decision by the Hastings Council was that the railway had been closed down previously following an accident caused by track and bridgework maintenance arrears. This had apparently led to a considerable diminution in patronage.

Coast Line 1/8/94 via Roger Persson

ZIG ZAG RAILWAY CO-OP LTD, Lithgow 1067 mm gauge

(see LRN 99 p.7)

Noted at the Lower Points on 26 June were three former industrial diesel locomotives. Malcolm Moore 0-6-0DM 26-204 No.11 of 1951 in yellow livery as rebuilt with high profile cab by Zig Zag has now been fitted with nameplates *Kemira* as well as carrying the number 11. Unrebuilt loco Malcolm Moore 26-204 No.3 of 1948 is being used to supply spare parts. *Mount Lyell*, Vulcan Foundry 0-6-0DM D194 of 1953 / Drewry 2406 is in dark green livery.

Also noted was a three-quarters buried four-wheeled wooden underframe from a coal mine of 762 mm (2 ft 6 in) gauge. (Ex Blue Mountains Colliery or State Coal Mine? - Ed.)

Ray Graf 7/94

QUEENSLAND

CANE RAILWAY EASEMENTS

The Sugar Industry Act of 1991 requires sugar mill owners to apply to the Queensland Sugar Corporation to register easements for tramlines constructed and used by mills to carry cane before 25 October 1948.

Previously these were not individually identified and registered but were preserved "en masse" by industry legislation. Registration applications must be made by 30 June 1996, and the grant of a statutory easement will be made, following advertisement of applications in local newspapers, if the tramline was constructed before 25 October 1948 and is in use and required by the mill owner.

Mackay Sugar Newsletter 9/94 via Editor

BT & KA COLEMAN CONSTRUCTIONS PTY LTD, Sarina 610 mm gauge

This company, which specialises in rail line construction, is reported to have purchased Plasser KMX-12T tamping machine (222 of 1981) from Proserpine Mill. It is not known whether delivery has already taken place or whether it is being delayed until Proserpine's replacement ballast tamper is delivered. It is possible that the company hopes to carry out track laying work on Plane Creek's new 44km Karloo line, scheduled for completion for the 1995 season.

Bob James 9/94; Editor 9/94

CSR LTD, Herbert River mills 610 mm gauge

(see LRN 101 p.9)

It is reported that in August Victoria Mill purchased four Walkers M and MA class 1067 mm gauge B-B DH locos from West Australian Government Railways for conversion to 2 ft gauge. The locos concerned are:

M 1851	B-B DH	Walkers	680	1972
M 1852	B-B DH	Walkers	631	1972
MA 1861	B-B DH	Walkers	713	1973
MA 1863	B-B DH	Walkers	715	1973

It is assumed that these units will be transported to Queensland for storage.

Also in August, Victoria Mill disposed of quantities of rail equipment, including its five Baguley 0-6-0DMs built for The Drewry Car Company:

Dalrymple	2391	1951	Simsmetal, Townsville, for scrap
Seymour	2392	1952	Illawarra LRMS, Albion Park, NSW
Leichhardt	2393	1952	Illawarra LRMS, Albion Park, NSW
Herbert	2394	1952	C.Hart, Cordelia
Victoria	2404	1953	M.Mina, Hawkins Creek Road

Also disposed of to LRRSA member Chris Hart were Malcolm Moore 0-4-0DH Moore (DH-112-GT-1 of 1956), and two Hansen line cars. The *Dalrymple*, which had no motor, had reportedly been cut up by Simsmetal by the end of the first week of September.

At Victoria Mill, Clyde 0-6-0DH *Centenary* (64-381 of 1964) is used in the full yard, and the E.M.Baldwin 4wDH known as *Hambledon* (8002-1-8-78 of 1978) in the empty yard. *Hambledon* has been fitted with a new engine for the 1994 season. E.M.Baldwin 0-4-0DH *Albany* (6-1792-1-11-66 of 1966) is being used by the navvies.

Three 12-tonne bins are on trial at Victoria and are running filled with woodchips. The 6-tonne and 10-tonne bins seen late in the slack season seem to have gone.

E.M.Baldwin 0-6-0DH *Hobart* (4413-1-7-72 of 1972) has been on loan from Victoria Mill to Macknade Mill on several occasions because of loco breakdowns at Macknade, and E.M.Baldwin 0-4-0DH 17 (6-1446-1-9-65 of 1965) has continued to see occasional use on cane haulage for the same reason. Macknade Mill's new bogie brakewagon 3 entered service on July 19th.

The transfer of cane from Victoria to Macknade ceased (for the time being at least) during the last week of August. Macknade's crush estimate is up and Victoria's is down.

Victoria Mill's preserved Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) was to be used in passenger service for the Annual Maraka Festival on September 17th.

Tony Madden 8/94; Chris Hart 8/94; Bob James 9/94

CSR LTD, Kalamia Mill, Ayr

(see LRN 97 p.7)

(see Pioneer Sugar Mills Ltd, Pioneer Mill, Brandon)

PIONEER SUGAR MILLS LTD, Pioneer Mill, Brandon 1067 mm gauge

(see LRN 97 p.9)

These two CSR-owned mills are involved in the expansion of cane growing associated with the Burdekin irrigation scheme development. Consequently, there has been a continuing re-assignment of cane areas from Pioneer to Kalamia to enable Pioneer expansion further out. This has resulted in the conversion of a number of 3 ft 6 in gauge lines to 2 ft gauge on the northern bank of the Burdekin River, most recently about 7km in the Kilrie - McDesme area over the last four years. The reassignment has been further continued with the dual gauging of about 3.5km of Pioneer's Mona Vale line, and the conversion to 2 ft gauge of the 1.5km branch off it in the Airdale area. A third rail has been laid into the Pioneer track using steel sleepers fitted with dual fastenings. Kalamia locos entering the dual

gauge section must switch to the Pioneer radio channel, and a system of electrically controlled and interlocked points with colour light signals at each end of the dual gauge section control entry into it. Points leading into 2 ft gauge sidings and the branch line are padlocked to prevent Pioneer locomotives being derailed by the points being changed to the wrong position by people other than loco crews.

Since 1992, the new Pioneer line extending from Mona Park into the Jardine irrigation area have been extended about 4.5 km to the north with a 3km branch running to the east. The Pioneer line is now only 6km from the Bruce Highway at Jerona,. The new lines have points facing Jerona, not the mill, which could indicate that it is planned to connect these lines to Pioneer's Lochinvar line, enabling further areas towards Mona Park to be handed over to Kalamia., and providing a more direct route to Pioneer Mill for Jardine cane.

Pioneer Mill's two ex-QR DH-class Walkers B-B DH locos *Jardine* (592 of 1968) and *Jerona* (647 of 1970) operate with bogie brake wagons which are converted QR wagons. That used with *Jerona* is numbered 2. Kalamia's two ex-DH class locos *Kilrie* (632 of 1969) and *Jarvisfield* (601 of 1969) do not operate with brake wagons.

2 ft gauge Matisa small tamping machine 7664, which was previously noted at Inkerman Mill, is at Pioneer Mill presumably for spare parts.

Kalamia Mill still utilises hook and chain couplers.

Editor 9/94

CHRIS HART, Cordelia 610 mm gauge

(see LRN 96 p.12)

Chris Hart has recently acquired a number of items from CSR Victoria Mill for preservation. These are:

Herbert	0-6-0DM	Baguley (for Drewry)	2394	1952
Moore	0-4-0DH	Malcolm Moore	DH-112-GT-1	1956
V3	2-2wPMR	Hansens	12B	1972
M2	2-2wPMR	Hansens	1112	1972

The line cars were moved to Cordelia on August 15th, and the locos on August 20th. *Herbert* is complete and should be operable once batteries are fitted. Moore has had the governor removed and a lot of wiring cut as it had been planned to remove the motor for use in another loco, but this was not proceeded with.

Chris Hart 8/94

HAUGHTON SUGAR CO PTY LTD, Invicta Mill, Giru 610 mm gauge

(see LRN 101 p.11)

Further track extensions have been built in the last two years. In the Mulgrave irrigation area, near Clare, a 3.5km extension to the west has been built on the Mulgrave line beyond the Mitchell's Road junction, and a 2km extension to the south has been built on the Mitchell's Road line. In addition, a 9km branch has been built into the Selkirk irrigation area. This line leaves the main line about 11km south of the mill and runs back up to the Bruce Highway about 6km east of the Haughton River bridge. In association with this a 2.5km deviation has been made to the main line to take it further away from the Haughton River.

A massive new yard has been laid out at the mill and major expansion work is continuing. The mill's new tippler can tip up to five 4-tonne bins at a time.

Track upgrading to the main line in the Millaroo area was taking place early in September. The Fairmont Tamper ballast tamper delivered to Inkerman Mill last year was in use for this task. This is a large four-wheeled machine, Model STM-XLC, which carries builder's number 94952.

A new brake wagon is in use with Walkers B-B DH *Giru* (601 of 1969 rebuilt Tulk Goninan 1994). This appears to consist of a chassis built at the mill on bogies supplied by F & M Baldwin, Castle Hill, NSW.

It is reported that consideration is being given to having two Walkers ex SRA NSW standard gauge 73 class B-B DH locos rebuilt for the 1995 season. This is in addition to the ex QR DH class B-B DH (655 of 1970) currently being rebuilt in Mackay at Tulk Goninan. This loco may be fitted with a new Caterpillar low speed diesel engine.

Tony Wells 9/94; Bob James 9/94; Editor 9/94

ISIS CENTRAL SUGAR MILL CO LTD 610 mm gauge

(see LRN 100 p.5)

All three new ex-QR Walkers B-BDH locos, rebuilt by the makers, were noted in use during late August. It is said that there have been some engine and transmission problems experienced with these units. It is believed that engines and transmissions were refitted essentially in ex-QR condition.

A new cab has been constructed for the original Walkers conversion, 1, (602 of 1969), and this is on hand at the mill for fitting at the end of the 1994 crushing season.

The frame from Walkers B-B DH 654 of 1970 (ex QR DH67), which was originally bought for spare parts, is likely to be used as the basis for a new bogie brake wagon, as the old small six-wheel brake wagons are not really

suitable for running with the Walkers locos.

A KMX-12T tamping machine is reportedly on order from Plasser Australia.

Tony Wells 9/94; Bob James 9/94

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 101 p.11)

Work on the conversion of Walkers B-B DH 672 of 1971 (ex NSW SRA 7313) seemed to be progressing well by early September, with bogies, cab, and body components on hand and painted or being painted, and a new Cummins engine also on hand. It was anticipated that the assembly of a rolling chassis might enable further assembly work to take place within the loco shed. A uniform loading gauge has been determined for the entire Mackay Sugar group, and this and all other new locos will be built within its limits, with the underpass under the QR at Farleigh being the height restriction adopted.

It would appear that the delivery of Walkers B-B DH 657 of 1970 (ex QR DH70) to Racecourse Mill by Tulk Goninan will be delayed until about the start of October because of the late delivery of wheels and axles.

By the start of September, work was well under way at Farleigh and Marian Mills respectively in dismantling Walkers B-B DH locos 692 and 707 of 1972 (ex NSW SRA 7330 and 7345). The latter loco had been transported to Marian from the North Eton Mill site. It was anticipated that tenders for the conversion of these two units would be closing in mid-September, with delivery being required in May 1995.

It now appears that each of Marian, Racecourse, Pleystowe and Farleigh Mills are building a new brake wagon based on ex QR bogie wagon components, for use with converted Walkers ex-main line locomotives.

The use of locotrol at Marian Mill on trains from Finch Hatton was only in place for one season. Traffic requirements and crew preference have led to its discontinuation.

At the start of the crushing season in June, manpower was used to push loaded bins up to the new tippler/weighbridge for a few days while computer software problems were sorted out.

Fabrication of a further 400 six-tonne bins for Marian Mill by Westhill Engineering has commenced, with delivery due later this year, bringing the total to 1800 bins.

*Tony Wells 9/94; David Lloyd 9/94; Editor 9/94;
Mackay Sugar Newsletter 9/94*

M. MINA, Hawkins Creek Road, via Ingham 610 mm gauge

Mr.Mina has acquired Baguley (built for Drewry) 0-6-0DM 2404 of 1953 from Victoria Mill. It was delivered on 17 August, and is probably destined to remain in static condition and used as back yard playground equipment.

Chris Hart 8/94

MOSSMAN CENTRAL MILL CO LTD 610 mm gauge

(see LRN 101 p.12)

The *Bally Hooley Steam Express* service from Port Douglas to Mossman has been discontinued, with only the train from the mill north to the golf course being in operation. However, the diesel-hauled *Bally Hooley Commuter* is still operating in Port Douglas itself.

Tony Madden 9/94

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 101 p.12)

It is reported that operations of the *Mulgrave Rambler* tourist train have been reduced to a charter only basis.

The two ex-QR Walkers DH class B-B DH locos (595 of 1968 and 612 of 1969) are being rebuilt by Bundaberg Foundry Engineers to enter service in the 1995 season.

Tony Madden 9/94; Tony Wells 9/94

PIONEER SUGAR MILLS LTD, Inkerman Mill, Home Hill 610 mm gauge

(see LRN 95 p.13)

An extension to the Up River line was completed in 1993 and runs for 8.5km beyond the old terminus near Ardenkeith. This line has been built to service the Leichhardt irrigation area and further extensions may be expected as this area is developed further. A 3km extension to the Groper Creek line has been built in recent years. The long term plan for the development of new irrigation areas extends to the south-east of Home Hill for about 25km past the present tramline terminus at Mount Inkerman, at least as far as Gumlu, so further tramline extensions may well be undertaken in the years ahead.

New six-tonne bins are fitted with Willison couplers, but many 4-tonne bins are still in use fitted with hook and chain couplings.

Editor 9/94

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 101 p.13)

The contract for the modification and conversion to 2 ft gauge of ex-QR

Walkers DH class B-B DH locomotives DH12 (594 of 1968), DH48 (630 of 1969), and DH64 (651 of 1970) has been let to Bundaberg Foundry Engineers, and these locos were present at the Bundaberg Foundry by the end of August. It is apparently intended to use two of these locos in a Locotrol configuration. Track speed proposed from Karloo to Koumala is 40kph, reducing to 15kph on the existing Koumala - Sarina section. The empty yard will be redesigned for the 1995 season, as will the mill end of the full yard.

The mill has ceased the regular use of locomotives operating in multiple, due, it is believed, to the punishment they gave to the track, as well as limited siding capacities reducing potential efficiency in traffic operations.

It is reported that a new KMX-08 tamping machine is on order from Plasser, which will replace the mill's existing Tamper unit (4375595 of 1975).

The route of the new southern line will be along the eastern side of the QR from Koumala to Riley's Road (between Mt.Christian and Ilbilbie). It will then run east south east for about 7 kilometres and then generally south to Karloo.

Russell Anderson 7/94; Tony Wells 8/94, 9/94; Bob James 9/94

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 100 p.7)

A Model STM-XLC ballast tamper is reported to be on order from Fairmont Tamper.

TASMANIA

AUSTRALIAN NEWSPRINT MILLS, Sharpes Siding 1067 mm gauge?

A historic rail-borne steam-powered log hauler which had suffered from the attentions of contact timber harvesters has been resurrected and reassembled, receiving some restoration work in the process. A brief account and photographs are published in the first edition of a new Tasmanian Forestry Corporation publication.

Forestry Tasmania Vol.1 No.1 July 1994 via Colin Harvey

MT.LYELL MINING & RAILWAY CO LTD, Queenstown 610 mm & 1067 mm gauge

(see LRN 97 p.12)

Renison Goldfields Consolidated will close the Mt.Lyell operation in December 1994. The leases are being taken up by Gold Mines of Australia, who have commenced an 18-month extensive evaluation program before any decision to reopen the operation is taken, meaning than any reopening

is unlikely before 1996. Could any member provide information on whether any rail operations are still in place at Mt.Lyell?

Sydney Morning Herald 29/6/94 via Ray Graf

VICTORIA

BALLARAT 1600 mm gauge

The body of ex-Brunswick Plaster 0-6-0DM Y413 (ex Phoenix Foundry 0-6-0 - see LRN 55 p.14) was noted dumped on the former SECV site at Midland Highway formerly occupied by Steamrail. There may be some connection with the restoration project for ex-VR Phoenix Foundry 0-6-0 Y112 which is being done by a group at the West Coast Railway Ballarat East Workshops.

Ray Graf 8/94

ALEXANDRA TIMBER TRAMWAY & MUSEUM 610 mm, 1029mm & 470mm gauge

(see LRN 99 p.11)

It was announced by the State government in February that ATT&M is to retain tenure of the Alexandra Railway Station under the control of a Committee of Management, putting an end to many years of uncertainty.

A propellant truck and two cordite trucks have been obtained from the 18 inch Explosives Factory Maribyrnong tramway, together with a quantity of rail, a wagon turntable and much other useful material.

Timberline 4/94 & 6/94 via Ray Graf

CASTLEMAINE & MALDON RAILWAY PRESERVATION SOCIETY, Castlemaine 1600mm gauge

(see LRN 53 p.11)

In July, the Malcolm Moore 0-4-0DM ex APM Broadford was noted in a compound at the Castlemaine Station yard in red paint. All the ex-VR stock for the project is stationed at Maldon.

Ray Graf 8/94

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 101 p.16)

7A (VR Newport 2-6-2T, built 1905) is still in the workshops, and is not expected to return to traffic until November. Amongst other work, it is having its wheels reprofiled, and much work done to its valve-gear. The cylinders are being fitted to the rear frames of G42 (Beyer Peacock 2-6-0+0-6-2 6268

of 1926).

The body of car 1NBC, built in 1898, was recently found in a backyard in Colac. It has since been transported to Emerald and protected with a weather proof covering. It is in a remarkably complete condition, with handrails, lamp brackets, window bars, louvred sunshades, guard's seat, desks, parcel shelves, toilet compartment with porcelain bowl, signs and notices, glass light bowls and pintsch gas burners. It is intended to restore this to its original condition.

As part of the Gembrook restoration, it is planned to lay 1.845 km of skeleton track from Doonaha Road to Cockatoo on the weekend of 17-18 September. By the middle of August one of piers of the small Wright bridge had been installed, and it was expected the other three would be in place by the end of August. Work on the abutments was scheduled for September.

Running days at Gembrook for 1994-95 will be 24/25 September, 29/30 October, 26/27 November, 17/18 December, 25/26 February, 25/26 March, 29/30 April, and 27/28 May. Operations will be extended to Fielder bridge. This is considered the maximum distance practicable working with the Peckett 0-4-0ST *Sir John Grice* (1711 of 1926).

Work on the restoration of the TACL 4wPM (55 of 1928) by LRRSA and PBPS members was unceremoniously interrupted in July when the NQR wagon frame on which it was standing was removed for the rescue of 1 NBC. Work recommenced in August after another NQR was scrounged from Gembrook. A major milestone in its restoration was achieved on 20 August, when the frames were placed back on both sets of wheels. A little adjustment was needed to one horn guide, but no major hassles occurred. It now has three new axleboxes, four new axlebox brasses, new springs, new and rejuvenated horn-guides, and new tyres. As a result of this work the front axle no longer scrapes on part of the frames, as it did during its last years of operation at Erica. The abrasion marks on the frames have been left there as a record of its former hard life!

The TACL tractor fund has benefited to the extent of \$500 from the sale of EFM explosives wagons. This is a valuable boost to funds, as expenditure will soon be needed on chain sprockets and drive chains.

Frank Stamford 9/94

ICI AUSTRALIA OPERATIONS PTY LTD, Deer Park 762 mm gauge

(see LRN 93 p.17)

The tramway system at the Deer Park factory has been rehabilitated as proposed and continues in operation. The main works seem to have been the replacement of decayed timber sleepers with concrete sleepers cast in situ.

there is approximately 1.5km of track with about 30 items of rolling stock, mainly four-wheel flat trucks (class M). There are also a few large covered trucks (class CT) which are being used for storage.

The locomotives are two small 4wBE locos built by Greenwood & Batley, Leeds, UK. They carry Greenbat builder's numbers 420363/1 and 420363/2. Both are painted yellow and were formerly numbered BL115 and BL116. Cabs have been fitted to protect the drivers from plover attack! (These were the locos imported by Graham Handling equipment in 1974 - see LRN 68 p.2 - and so another possible identity has to be found for the two suspected Greenbats at Gympie Eldorado Gold Mines - see LRN 98 p.7 - Ed.) The question arises as to whether this line predates 1974, and, if so, what motive power was used before then.

Phil Rickard via Colin Harvey 9/94

JIM PURTON, c/- A.F.Butler Joinery, 11-13 Lalor Street, Ballarat 762 mm gauge

(see LRN 100 p.10)

A diligent search has produced more precise location details as noted above, and so enable future visitors to find the site.

Ray Graf 8/98

WALHALLA GOLDFIELDS RAILWAY 762 mm gauge

(see LRN 99 p.14)

John Fowler 0-6-ODM 14 (4210051 of 1951) was noted in use at Thomson on 17 July, painted in magnificent VR Canadian Red livery, and hauling bogie passenger vehicle 146 NQR. This is an NQ wagon fitted with seats, extended pipe safety rails and a door on one side only, reputedly owned by Colin Rees. A free passenger service was being run over a section of track on the Moe side of the Thomson River about 150 metres in length, from the river bank past the station to a small shed. Operations had been scheduled to commence from 10 April. The three iron spans of the bridge were back in place, but not all the new timber approach piers were in position. Two passenger cars are expected from Yallourn and a considerable amount of equipment is being salvaged from the Yallourn Inter-Connecting Railway, including buildings.

Commonwealth-funded WorkStart trainees have worked at both Thomson and Happy Creek, working on stations, trackbed, picnic areas and paths.

State Electricity Commission ("Generation Victoria") workers have also

been working on bridge reconstruction at these two sites pending their future deployment in SECV.

(LRN needs a correspondent for this exciting project - a volunteer please?)

BUSSELTON 1067 mm gauge

(see LRN 83 p.15)

A tourist railway is expected to be back in operation along the 2km jetty by the end of the year. A four carriage train will haul passengers from a tourist complex at the base of the jetty to an underwater observatory at the head.

Sunday Times (Perth) 24/4/94 via David Whiteford

DIZZY LAMB, Waneroo 610 mm gauge

(see LRN 100 p.11)

The track from Tilden Orchard (see LRN 100 p. 13) is believed to have been purchased by Dizzy Lamb, following the failure of plans to sell the track to other buyers during June 1994.

David Whiteford 7/94

ROTTNEST ISLAND RAILWAY TRUST 1067 mm gauge

(see LRN 100 p.13)

The 6.5km Oliver Hill Railway was to be commissioned on 3 July. The locomotive is an ex-WAGR 4wDH shunting tractor on loan from the ARHS (WA Division) and refurbished by Willis Light Engineering, and the carriages are rebuilt ex-WAGR wagons fitted with new superstructure by Fastcraft International. The loco has been sandblasted, repainted blue and green, and fitted with vacuum brakes. Track was laid by volunteers from the Permanent way Institution, using sleepers provided by Bunnings and rail on permanent loan from WAGR. A compressed air-powered rail trolley was used during track construction.

Legally owned by the Railway trust, the railway is being operated by the Rottnest Island Authority for its initial 12 months.

The Rottnest Islander 6/94 via Ray Graf/AREA; 7/94 via David Whiteford; Northern Star (Lismore) 4/7/94 via Ray Graf/AREA

WEST AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION Bennett Brook Railway, Whiteman Park 610 mm gauge

Wato Engine Works 0-4-2T *Annie* (built 1990) has been in use hauling trains on the Mussel Pool line. Perry 0-4-2T *Adelaide* (8967.39.1 of 1939) (see LRN 88 p.14) is now owned by member Malcolm Thompson. It was due to have a steam test at last report, with tanks and cab fabricated.

Rusty Rails (WALRPA) 2-4/94

OVERSEAS - FIJI

FIJI SUGAR CORPORATION 610 mm gauge

(see LRN 96 p.19)

With six new locomotives arriving from Germany and six second-hand ones coming from Queensland, there have been quite a few changes on Fiji's sugar mill railways in the last three years. The move does seem to be towards heavier track, but the FSC still seems wedded to a six-ton axle load rigid frame locomotive. The new Diema locomotives which were put into service in 1992 have had some transmission problems, and have had to be modified to improve performance.

Universal hand cutting of cane requires the use of whole stick cane trucks, which are difficult for train crews to handle, and easy to tip over when loaded. They also sustain a lot of wear and tear as they are hauled cross country by

farmers using bullock or tractor haulage. The use of hook and chain couplers on these vehicles certainly adds to the problems of loco crews, in addition to the fact that farmers are under no obligation to couple them up. The cost of milled timber for cane truck stanchions has become such that timber stakes of various lengths are widely being used, giving the empty yard the appearance of a dead forest at times. Small locomotives are more common than in Australia, and are used for many jobs around the mill yard which would be largely mechanised at Queensland mills, as well as for bringing crippled cane trucks back to the mill. Track maintenance is almost wholly done manually, and the Fiji sugar industry is generally extremely labour-intensive by Australian standards.

Much cane is brought to the mills by motor lorries, which seem to have to wait for long periods to tip their cane. However, the future of cane railways in Fiji seems very secure. The great success which has been experienced with the second-hand locomotives recently arrived from Queensland makes it easy to predict that more might well follow. It is a fascinating country to visit not only to observe how a different equation of labour and capital costs has led to very different decisions about how the industry is run, but also because of the most friendly and obliging people at every level.

Lautoka Mill

The archetypal Fijian cane train: Lautoka Mill's 13 (Clyde 0-6-0DH 65-449 of 1965) outside Nadi Airport, 17 August 1994.

Photo: John Browning

Lautoka is Fiji's biggest mill, and is not only the port of entry but also where the facilities for carrying out the heaviest work on locomotives are to be found. By late August, Lautoka had outshopped all six Clyde Model DHI-71 0-6-0DH locos acquired this year from Isis Mill in Queensland, three for itself, two for Rarawai and one for Labasa. As four of these had been running as "master and slave" units in Queensland, new cabs had to be constructed for the two which had been slaves.

New locos in the Lautoka roster are:

(19)	6wDH	Diema	5174	1991	DFL200/13d	
20	0-6-0DH	Clyde	61-220	1961	DHI-71	Ex Isis 7 New cab
21	0-6-0DH	Clyde	58-191	1958	DHI-71	Ex Isis 5
22	0-6-0DH	Clyde	59-204	1959	DHI-71	Ex Isis 6
(19)	4wDH	Diema	5172	1991	DFL75/14	

The 6w Diema is numbered in the main line series, while the 4w unit is numbered in the "Simplex" series. As on these locos the door opens outwards to obscure the normal position where a number would be placed, neither to date carry a number. This potential confusion is compounded by the fact that each has been allocated the same number but in two different series. All the main line locos were being used for cane haulage, with five Clyde Model DHI-71 0-6-0DHs usually being stationed at Cuvu, 104km south of the mill.

In the "Simplex" series there are three Motor Rail 4wDM locos. 8, a 100hp model (23014 of 1960) was in occasional use hauling ash wagons while (7), a 48/63hp model (14041 of 1959) and 11, an S series (60s375 of 1969) appeared to be spare. A fourth Motor Rail unit, 9, a 32/42hp model (10115 of 1949) is derelict in the scrap area, and there was no sign of any of the other Motor Rail Simplexes which once worked here. The five Motor Rail / Simplex Mechanical Handling U series 4wDH locos are all in regular use with Motor Rail 12 (122U128 of 1972) being used for "pick up" duties (picking up crippled trucks) in the areas close to the mill. The remainder were working in the full and empty yards, weighbridge and truck repair shop. Simplex Mechanical Handling locos 13 (122U135 of 1973) and 15 (122U156 of 1975) have had their Dorman engines replaced with GM motors. Hunslet 140hp 4wDH 17, (9267 of 1986) was sent south to Cuvu (as a vehicle) on August 25th to commence pick up duties in the southern area. Baguley-Drewry 140hp 0-6-0DH 18, (3770 of 1983) was in use with the reloading gang (reloading cane from capsized trucks along the line). This locomotive type is unusual in that the jackshaft situated behind the rear axle drives not onto the rear axle but onto the middle one. Diema 140 hp 4wDH (19) is used for shunting sugar boxes and molasses tankers at the bulk terminal.

Lautoka's loco livery is grey with dull yellow upper parts with a dark green separating line, and dull yellow running boards. Headstocks are black and white dazzle stripes. The Diemas are orange with a black line. The Baldwins and Hunslet locos are grey with a thick vertical yellow line on cab and hood corners.

The mill has eight line cars, the seven in normal use having Lister diesel engines and apparently built at the mill. They are stationed at six different locations along the 164 km of Lautoka's main line which runs along the coastline of Viti Levu. The end-to-end distance is a total of 220 km if you add on Rarawai Mill's connected track.

Hudswell Clarke 0-4-OST 1056 of 1914 is preserved in reasonable condition at the weighbridge. A second steam locomotive, Hudswell Clarke 0-6-0, 1855 of 1950, was found dismantled in two pieces (chassis and boiler only with the tubeplate cut out of the firebox) in two separate locations. It was said a second Hudswell Clarke 0-6-0, 1664 of 1936, was disposed of to someone in the Nadi area "about three or four years ago". The loco was for sale in California by 1991 (see LRN 84 p.2).

Ballast tamper Plasser 64 of 1974 was found derelict at the Lautoka garage, together with a number of ex-NSW SRA line cars which were purchased with a view to possible conversion, but proved to be unsuitable and are now derelict.

Rarawai Mill, Ba

New Locomotives at Rarawai are:

25	4wDH	Diema	5170	1991	DFL75/14	
26	6wDH	Diema	5173	1991	DFL200/13d	
27	0-6-0DH	Clyde	56-113	1956	DHI-71	Ex Isis 4
28	0-6-0DH	Clyde	55-66	1955	DHI-71	Ex Isis 3 New cab

Rarawai Mill's track connects with that of Lautoka, and raw sugar and molasses from Rarawai are hauled by rail 48 km to the bulk terminal at Lautoka. There are now three sugar trains with two running continually being hauled by Baldwin bogie diesels and the third running at least once daily, hauled by Clyde 0-6-0DH 27, newly arrived from Queensland. Lack of suitable vehicle capacity for molasses means that road vehicles also carry molasses from Rarawai to Lautoka. A typical train consists of 26 bogie sugar boxes (known locally as "bins") and 6 bogie molasses tankers ("gins"), with a journey time in one direction of between 3 and 4 hours. These vehicles are fitted with Willison auto couplers, which makes them much easier to handle than cane trucks.

Two locomotives have been transferred to Penang Mill, this year Baguley-Drewry 0-6-0DH 23 (3772 of 1983), and last year Motor Rail 4wDM 16 (14047

of 1960). The latter was exchanged for Penang Mill's Motor Rail 4wDM 15, (14024 of 1957) which was transferred from Rarawai to Penang in 1987, and sent back to Rarawai before the start of the 1994 season, having all the while retained its Rarawai number. 15 is used at the wagon repair shops. Diema 25 was being used in the full yard/weighbridge, Baguley Drewry 0-6-0DH 24 (3773 of 1983) at the truck servicing shop, E.M.Baldwin 4wDH 17 (5060-1-9-73 of 1973) in the empty yard and Steelweld 4wDH 2 (IEL6304 of 1962) shunting sugar boxes and molasses tankers. (The Steelweld loco was built in Melbourne under license from Plymouth). Com-Eng 4wDH 19 (HB2764 of 1963) was awaiting repairs, and presumably is normally used for the full yard/weighbridge duty.

Dismantled and derelict in the scrap area were found Steelweld 4wDH 18 (IEL6305 of 1962) and Motor Rail 4wDM 14 (10441 of 1955). The latter loco was positively identified from a builder's plate and is not 10452 of 1955 as previously published. It presumably became number 14 when renumbered from 44 in the 1960s/70s, not 13 as previously thought. Also in the scrap area, overgrown and partially buried, were two John Fowler 0-6-2TT locos, 11393 of 1907 and 11459 of 1908. John Fowler 0-6-2TT 11458, numbered 10, is preserved in reasonable condition near the weighbridge.

All the other diesel locomotives are used for cane haulage, with three Clyde Model DHI-71 0-6-0DHs and one Model HG-3R 0-6-0DH normally stationed at Tavua, 35km from the mill. One diesel line car is also kept at Tavua, with another three at the mill.

Rarawai's livery is grey with bright safety yellow upper parts with a fluorescent red separating line. Running boards are white with a fluorescent red stripe, and headstocks are fluorescent red and white dazzle stripes. The Diemas are orange with a black stripe and the ex-Isis Clydes are in Lautoka colours.

50 000 tonnes of Lautoka cane is being crushed at Rarawai this year, which means that Rarawai locos collect cane from about 9km into Lautoka territory on the connecting line between them.

Penang Mill, Rakiraki

Penang Mill is Fiji's smallest, and has a small rail system and some branches laid in light rail. The big change in recent years is that since 13 June 1990, sugar and molasses are no longer taken by rail to the port at Ellington. Penang Mill produces white sugar for Fiji domestic consumption and any excess production of raw sugar and molasses is now taken by road transport to Lautoka.

Penang received two new locomotives from Rarawai recently, Baguley-Drewry 0-6-0DH 9 (3772 of 1983) this year, and Motor Rail 4wDM 16 (14047

of 1960) in 1993. The latter is awaiting the return of its engine from Lautoka, where repairs are being carried out. Motor Rail 4wDM 15 (14024 of 1957) was returned to Rarawai this year after seven years at Penang.

Baguley 0-6-0DM 8 (2727 of 1964) was in the shed up on blocks having suffered a broken axle. Also under repair was Motor Rail 4wDM 4 (11036 of 1956). Full yard loco was Motor Rail 4wDM (1) (10003 of 1947), which has apparently been rebuilt with parts of scrapped 10440 of 1955. Empty yard loco and being used on branch lines close to the mill was Motor Rail 4wDM 7 (14046 of 1959).

Abandoned and dismantled at the bottom of the full yard was ex Rarawai Mill 1 (Hudswell Clarke 0-6-0DM D753 of 1950). Preserved near the mill office in fairly mediocre condition is Hudswell Clarke 0-6-0 1658 of 1935, without a tender, although it has had a bright repaint in green and yellow recently.

Penang's livery is grey with bright yellow upper parts, and white running boards. Headstocks are black and white dazzle stripes.

Labasa Mill

Labasa is on Fiji's second island, Vanua Levu, and its tramway to the west traverses some particularly rugged country. In 1992, almost the entire fleet was renumbered and is now as follows:

1	(ex 13)	4wDM	Motor Rail	11288	1965	60hp
2	(ex 8)	0-4-0DM	Baguley (for Drewry)	2365	1950	68hp
3	(ex 11)	0-4-0DM	Baguley (for Drewry)	2676	1960	71hp
4	(ex 6)	4wDH	E.M.Baldwin	3229-?-4-70	1970	DHC8MMk2A rebuilt Labasa 1980
5		4wDH	E.M.Baldwin	3229-?-4-70	1970	DHC8MMk2A rebuilt Labasa 1980
6	(ex 14)	4wDH	Hunslet	9284	1987	140hp
(7)		4wDH	Diema	5171	1991	DFL75/14
8	(ex 9)	0-6-0DH	Clyde	DHI-8	1954	DHI
9	(ex 1)	0-6-0DH	Clyde	62-270	1962	DHI-71
10	(ex 4)	0-6-0DH	Clyde	64-320	1964	DHI-71
11	(ex 2)	0-6-0DH	Clyde	64-319	1964	DHI-71
12	(ex 10)	0-6-0DH	E.M.Baldwin	5995-1-1-76	1976	DH18 Mk3
13	(ex 7)	0-6-0DH	E.M.Baldwin	9442-1-4-81	1981	DH18
14	(ex 3)	0-6-0DH	E.M.Baldwin	4413-3-9-72	1972	DH18 Mk2
(15)		6wDH	Diema	5175	199 sic	DFL200/13d
?		0-6-0DH	Clyde	64-385	1964	DHI-71
12		4wDH	ComEng	HB2765	1963	HB rebuilt Labasa 1983

Labasa received the two new Diemas in 1992 and received a Clyde 0-6-0DH (ex Isis Mill 8) this year. This was despatched by sea from Lautoka on August 19th, and it was expected to receive a number on arrival at Labasa. three or four days later. Clyde 0-6-0DH 8 was fitted with a new cab at Lautoka in 1993 after meeting with a serious accident when it fell from a bridge the previous year. The new cab has a mansard roof like a Clyde Model HG-3R loco, and the loco itself was painted in Lautoka colours.

Motor Rail 1 was in use in the empty yard, Baguley 2 was with the bridge gang, Baguley 3 at the truck shop, Baldwins 4&5 on the full yard/ weighbridge (4 in use, 5 spare) and Hunslet 6 was on ash wagon trains as well as some cane haulage. Com-Eng 12 was not renumbered in 1992 as it was already out of use. Frequent derailments made it unsatisfactory and it was noted dismantled by the loco shed. All other locos were hauling cane, although the new Clyde was yet to arrive.

Labasa's livery is grey with a thick vertical red line on cab and hood corners. Headstocks are red. The Diemas are orange with a black line, and do not carry their numbers. Clyde 8 is in Lautoka colours, as will be the new Clyde.

The mill has three line cars stationed at various locations away from the mill, although one was seen at the mill awaiting repairs. There is also a tamping machine, Plasser 63 of 1974, which sees little use.

Found derelict, overgrown, and half buried in mill ash were John Fowler 0-6-2TT locos 11350 of 1907 and 9462 of 1902. Preserved at the weighbridge in indifferent condition is John Fowler 0-6-2TT 3 (10992 of 1907) with its four wheel tender which was made from the chassis of John Fowler 0-4-2ST 4788 of 1884.

Editor 8/94

BULA INVESTMENTS, Coral Coast Railway Co., Yanuca, Cuvu 610 mm gauge

(see LRN 68 p.14)

The Coral Coast Railway runs a daily return service from the entrance of the Fijian Resort to Natadola Beach, departing at 10am daily. The distance is about 20 km and the day trip, returning by 4 pm, costs \$56 for adults including transfers and lunch. The loco, Hudswell Clarke 972 of 1912, carries one correct builder's plate and a plate from 1855 of 1950. It has a diesel engine in the tender and a hydraulic drive onto the rear axle of the loco (making it an 0-6-0+4-4DH?). The loco's coupling rods are in place but the cylinders are disconnected. Three bogie carriages are in normal use, running on ex-tender bogies. The carriages appear somewhat weathered. Loco and carriages are an attractive bright red in colour.

Editor 8/94

LABASA TOWN COUNCIL, Mudliar Place Playground, Labasa 610 mm gauge

(see LRN 26 p.14)

Fowler 0-6-OT 7879 of 1896 is a sad sight in semi-derelict condition and would undoubtedly be removed as a safety hazard under Australian conditions.

Editor 8/94

LAUTOKA CITY COUNCIL, Dravuni Street Depot, Lautoka 610 mm gauge

(see LRN 26 p.15)

The unique free passenger train loco, Hudswell Clarke 4-4-0 1118 of 1915 was removed from Churchill Park about 6 or 7 years ago, and languishes in poor condition here, in danger of being overwhelmed by an adjacent pile of dirt. It is said "a number of offers" for it have been received, but meanwhile there is no action and the future looks dim.

Editor 8/94

RAFFLES GATEWAY HOTEL, Nadi Airport 610 mm gauge

(see LRN 26 p.14)

John Fowler 0-6-2TT 10656 of 1906, lettered *SPSM Ltd 7* is on display near the entrance to the hotel opposite the airport, painted green and in quite reasonable condition.

Editor 8/94

SHANGRI LA'S FIJIAN RESORT, Yanuca Island, Cuvu 610 mm gauge

(see LRN 26 p.15)

In spite of seeming to be in quite good condition, multicoloured Hudswell Clarke 0-6-0 1856 of 1950, numbered 24, has been enclosed by a plywood fence presumably as a safety hazard in the children's playground, and seems set for removal.

Editor 8/94

SUVA CITY COUNCIL, Thurston Gardens, Suva 610 mm gauge

(see LRN 26 p.15)

Painted in garish green, yellow and red, and fairly close to the ocean, this Hudswell Clarke 0-6-0 (1663 of 1936), with its Hudswell Clarke tender painted THURSTON EXPRESS is in deplorable condition.

MEETINGS

MELBOURNE

TheOtways

Norm Houghton is currently working on a rewrite of *Sawdust and Steam*. His research has involved extensive “on the ground” investigation which has revealed a number of remarkable new discoveries including evidence of a previously unknown form of agriculture in the region. Norm will be showing slides of his discoveries and will speak of them at the October meeting.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 13 October at 8.00pm.

SYDNEY

Mt. Lyell Night

Last year we held our Portland night where members were encouraged to bring material on the railways of Portland Cement works and collectively present the material. This was so successful we’ve decided to do it again, this time with theme as Mt Lyell in Tasmania.

Now we have two starters, David Jehan who has been researching the rack railway and Peter Charrett who visited Mt Lyell in its last days. So, even if you have only a small contribution, bring it along and add to our knowledge.

NOTES, CORRECTIONS AND COMMENTS

PAPUA NEW GUINEA

According to Railways of Australia *Network* Vol.31 No.1, \$4,620,000 was spent (last year?) on orders for Railway Equipment / Products by Papua New Guinea. Michael Pearson asks if someone can indicate the project(s) on which this money has been spent?

HANSEN LINE CARS

Chris Hart points out that Hansen line cars (see LRN 102 p.10) should be described as 4wPMR as both axles are powered.

WONTHAGGI, Victoria

Jim Longworth reports that the Channel 7 (Sydney) *The Great Outdoors* on Friday 17 June showed footage from Wonthaggi, Victoria, including archival shots of the narrow gauge skipway. A modern shot showed a pit pony and skip, and much surface trackage appeared to be still in existence. The show also featured the Skitube from Bullock's Flat to Blue Cow in NSW.

HENLEY-ON-TODD REGATTA, Alice Springs

Jim also noted an SBS segment shown on 1 October featuring the annual Henley-on-Todd "regatta" at Alice Springs. Two narrow gauge tracks are laid in the river bed and the "boats" are fitted with railway wheels. The paddlers provide forward propulsion by dipping their oars in the sand of the river bed.

WANTED

Wanted: a pinion for a CAV starter motor fitted to a Ruston & Hornsby 3VRHL diesel engine. The starter motor is Type S5/65, S/n GU212. It is 12 volt, clockwise rotation and 13 tooth. If you can help, or suggest a source for the part, please contact ANGRMS, PO Box 270, Brisbane Albert Street 4002. Phone: (07) 273 2014.

RESEARCH COLUMN

BASS RIVER SAWMILLS, VICTORIA

The *Illustrated Sydney News* of 3 March, 1877, contains a description of and an illustration of horse hauled timber tramways around the mill. From the illustration, logs were hauled into the mill, and sawn timber was hauled out. A 4½ mile long tramway is described as connecting the mill with a jetty at Queensferry.

Jim Longworth 7/94

J & E TOOTH, BUNDANOON, NSW

The World's News for 30 September 1905 contains an article on this timber tramway, located between the Riverview and Mark Morton's lookouts. It was built by the brothers J & E Tooth to bring logs out of a local gully to their mill, located on the plateau top. The line is described as 700 yards long; almost perpendicular, rising 500 ft in 750 ft at the steepest point; with a gradient in one particular spot of 12 inches in 16 inches. Construction took 5 months, and involved blasting away rock. On completion, a flood swept down the valley, washing the whole thing away. Undaunted, they resumed work and completed it a second time. Timber was felled at the side of the gully, debarked and allowed to slip down to the creek. A

team of twelve bullocks then pulled logs to the landing stage, where they were placed onto the trolley for hauling up the incline by an ordinary winding engine.

Jim Longworth 9/94

FIELD REPORTS

RINGWOOD COLLIERY, BUNDANOON, NSW

As stated by Peter Evans (see LRN 56 p.2), parts of the colliery's tramway formation do still exist. The most readily accessible is near where the road from Bundanoon to Exeter crosses over the main southern railway line. South of the overbridge and east of the railway line is an elongated mound of dirt. East of the road, the mound becomes an embankment, then a cutting through a low hill. This earthwork marks the end of the tramway from the mine, where skips were emptied through a timber screening structure into standard gauge government wagons at Collins Siding (see ARHS *Bulletin* No.379 p.109). Access to the rest of the tramway is difficult, as the landowner does not like people walking through the area. An article on Ringwood and Erith collieries for LR is nearing completion.

Jim Longworth

STATE BRICKWORKS TRAMWAY, Homebush Bay, NSW

The old brickworks tramway was described by G.H.Eardley in ARHS *Bulletin* No.415m May 1972. The brickworks has been demolished, and recent roadworks have disturbed much of the area. Despite extensive landscaping works around Bicentennial Park, a search was made for the old line that had been an extension to the Park Road depot. After several false attempts among the mangroves, use of a boardwalk gave access to a section of the old tramway about 100m long running through the swamp. The formation is made of brick waste and the surviving sleepers appear to be standard gauge sleepers sawn in half.

Jim Longworth

LOCOMOTIVE, ROLLING STOCK & EQUIPMENT MANUFACTURERS

BUNDABERG FOUNDRY ENGINEERS LTD

(see LRN 102 p.4)

By the end of September, work was proceeding on the task of converting six ex-QGR DH class B-B DH locos for cane railway use. Five locomotives for

Plane Creek and Mulgrave had been stripped down to bare frame, with that of DH31 outside and the remainder in the shop. DH51 (Bundaberg Sugar) was inside the shop but had not been stripped down. At the end of October, three ex-SRA 73-class locos arrived from storage at Plane Creek Mill, Sarina for conversion for Invicta Mill, and striping got underway quickly in order to meet an early deadline for completion.

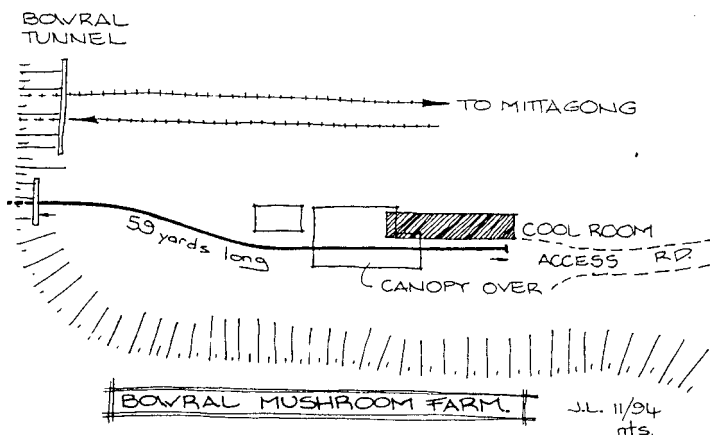

A full list of the locos currently being rebuilt is as follows: DH12 (594 of 1968), DH48 (630 of 1969) & DH64 (651 of 1970) for Plane Creek Mill, DH13 (595 of 1968) & DH31 (612 of 1969) for Mulgrave Mill, DH51 (633 of 1969) for Bundaberg Sugar (possibly Millaquin Mill), and 7310 (669 of 1971), 7318 (677 of 1971) & 7325 (687 of 1972) for Invicta Mill.

Tony Wells 11/94; Editor 9/94

NEW SOUTH WALES

Bowral Mushroom Farm 610 mm gauge

On the downside of the current double track Bowral railway tunnel is the previous (1866) single track tunnel, abandoned in 1919. Projecting from the northern portal is a narrow gauge tramway leading to a mushroom cold room. The site is still in use, but no one was there at the time of the visit. No rolling stock was observed and the track seemed abandoned and overgrown but solid doors across the tunnel portal blocked further investigation.

Jim Longworth 11/94

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 102 p.4)

A heritage grant of \$103,000 has been awarded by the NSW Department of Transport to the Society for construction of a loco shed with service pit and restoration of the Davenport 0-4-0ST *Kiama* (1896 of 1917).

Tony Madden 11/94

MR.REVELL, Wee Waa 610 mm gauge

Initial indications are that this gentleman was the purchaser of Hunslet 4-6-0T 1218 of 1916 from Charlie McClelland (see LRN 101 p.16).

Bruce Macdonald 10/94

STATE MINE MUSEUM, Lithgow 1435 mm & 1067 mm gauge

(see LRN 99 p.6)

The State Mine Railway preservation group and the State Mine Museum are jointly developing this industrial heritage precinct as a tourist attraction. Former NSWGR Dubs 2-6-2ST 2605 (2794 of 1892) ex Portland Cement Works and three end-platform carriages will form the basis of the standard gauge rail operations over the 2.5km branchline. It is planned to commence heritage rail operations between Blast Furnace Park and the museum site during 1995. Inspections of the line and mine site can be arranged by appointment. Contact PO Box 316, Lithgow 2790. Phone: (063) 52 3070 or 51 3457.

John Newland via Bob McKillop 9/94

QUEENSLAND

BUNDABERG SUGAR LTD, Fairymead Mill 610 mm gauge

(see LRN 90 p.10)

Com-Eng 4wDH 72 (GA1148 of 1961) has been fitted with a new torque converter and was partially reassembled at the end of September. Gemco sleeper renewer 521382002667-R855-87 of 1987 (delivered to Millaquin Mill) was in the loco shed for fitting with a turntable. New Plasser KMX12T tamping machine 390 of 1994 was noted in the shed. This is a 23 tonne machine which runs on bogies and is 14 metres long with a top speed of 40kph. It was reported that Bundaberg Sugar's earlier KMX12T machine, 249 of 1982 has been sent to the northern mills (Mourilyan & Babinda) this year.

Editor 9/94

BURGOWAN COAL CO LTD, Burgowan No.12 Colliery, Torbanlea 610 mm gauge

(see LRN 60 p.11)

This last colliery of the Burrum field supplies coal to the Millaquin Sugar Refinery, with all production handled by conveyor. Rail is in evidence for haulage on the inclined shaft and, handworked, to serve a sawbench and the pit prop stockyard.

Editor 9/94

BURRUM MINING MUSEUM, Torbanlea 610 mm gauge

(see LRN 99 p.10)

The former Torbanlea Mining Museum is reported to have been renamed as shown, under the new ownership of the Harvey Bay City Council.

Bob McKillop 9/94

CSR LTD, Herbert River mills 610 mm gauge

(see LRN 102 p.)

Preserved Hudswell Clarke 0-6-0 (1067 of 1914) was used for the Maraka Festival on 17 September. Trains ran from Forrest Beach Road near the Victoria Mill housing estate to Bosworth's Corner. It is possible that on this occasion two carriages were used, both the original Decauville car and the replica built for the Halifax Kindergarten in the 1970s (in order to exchange it with the original). This is no longer wanted at the Kindergarten and so was returned to the mill.

Cane was transferred from Victoria Mill to Macknade, using Macknade loco power, on 18-20 September and 12-17 October. It was believed that little if any further transfer of cane would be needed to allow both mills to finish on the same day. Victoria Mill has continued to regularly send a rake of bins across to Macknade for attention by the Macknade bin shop.

E.M.Baldwin 0-6-0DH *Hobart* (4413-1-7-72 of 1972), spare loco for both mills, was at Macknade on 22-23 September, 5-8, & 13-18 October. Macknade's E.M.Baldwin 0-4-0DH 17 (6-1446-1-9-65 of 1965) was used for cane haulage on 13 October, having been on loan at Victoria Mill for a few days from 5 October in order to do trial runs with 12-tonne bins. These bins incorporate a South African designed suspension/steering system.

Some 7000 rails have to be straightened at Victoria Mill during the 1994-5 slack season, with 5700 rails to be used in the new Crystal Creek line.

The purchase of a 40-tonne locomotive and brake wagon have been approved as part of a \$14m expansion at Victoria Mill for the 1996 season, together with additional cane bins and additional sugar boxes.

An Italian Festival is to be centred on Ingham in May 1995, and is expected to feature steam train rides between Victoria Mill and Halifax.

DREAMWORLD PRODUCTIONS PTY LTD, Coomera 610 mm gauge

(see LRN 98 p.6)

Photo: Peter Gough

Motor Rail "Simplex" 4wDM 21543 of 1956 is used for maintenance duties and hauling a staff train daily 90 minutes before the park opens. It has been rebuilt with completely new bodywork including full width footplate, hood and cab. Livery is VR blue with cream band and dazzle stripes.

Bob Gough 10/94

GYMPIE ELDORADO GOLD MINES PTY LTD, Monkland 610 mm gauge

(see LRN 98 p.8)

The two Gemco 4wBE locos previously observed stored on the surface at the main mine site were still present late in September. However, the other two, possible Greenbat, units were reported to have been returned to their

owners, Eltin's in Kalgoorlie. It was reported that four 5 tonne Gemco battery electrics have been recently acquired from Broken Hill and are already in use underground. A new shaft site is being developed and was found via Langton Road. A headframe is to be erected here. Located on the surface at this site were found some Granby cars, possibly moved from the main site.

Editor 9/94

ISIS CENTRAL SUGAR MILL CO LTD 610 mm gauge

(see LRN 102 p.11)

All three ex-QGR DH-class B-B DH locos rebuilt by Walkers were observed in service in late September. They carry oval cast chromed number plates reading (for example) ISIS No.2. Identities are confirmed as follows: ISIS No.2 - Walkers 598 of 1968, ISIS No.3 - 600 of 1968 and ISIS No.4 - 656 of 1970. Modifications to the hood doors to increase air circulation have proved necessary due to overheating. A new bogie brake wagon is under construction, utilising the frame of cannibalised Walkers 654 of 1970. Three locos are used on the night shift, four on the afternoon shift, and six on the day shift, leaving one spare for servicing.

Editor 9/94

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 102 p.11)

Racecourse Mill's ex-QGR DH-class B-B DH *Balberra* (Walkers 657 of 1970) was delivered from Tulk Goninan, Mackay on September 27th, painted in the Mackay Sugar corporate colours of green, yellow and red.

Pleystowe Mill's ex-SRA 73-class B-B DH *Walkerston* (Walkers 672 of 1971) was completed in the first week of November. Most of the rebuilding work was carried out at the mill and the result is a very handsome locomotive which retains 73-class features such as the underslung fuel tanks and the sandboxes forming part of the footplate handrail supports. Rebuilding of the first 73-class locos for Farleigh Mill (692 of 1972) and for Marian Mill (707 of 1972) is to be co-ordinated by mill staff, but it is reported that local firm Anderson Rae will play a major part in carrying out the work. The locomotives will be very similar in appearance to *Walkerston* but will have Caterpillar power plants rather than the GM engine favoured by Pleystowe. *Walkerston* was reportedly to be trialled at Marian Mill in the one or two days between the end of the Pleystowe crush and the end of crushing at Marian (November 11-12) and was then expected to go to Farleigh for the remaining ten days of the crush there.

Reallocations of cane between the mills in the latter part of the season

has led to the temporary transfer of other locomotives also. Pleystowe was receiving cane from Farleigh's north coast area, and Marian was taking Pleystowe cane between Marian and North Eton. Pleystowe's Clyde 0-6-0DH *Pleystowe* (64-321 of 1964) was transferred to Marian and Marian's Baldwin 0-6-0DH 15 *Melba* (of 1985) was transferred to Farleigh. Marian Mill's Com-Eng 0-6-0DH *Tannalo* (B1724 of 1957) was sent to Pleystowe but was promptly returned after being black banned by loco crews, reportedly because of excessive noise levels. Both *Tannalo* and *Netherdale* (Bundaberg Foundry 6wDM 13 of 1954) have had crude sliding doors fitted to them, possibly to reduce cab noise levels.

It was reported that following the end of the Pleystowe crush on 11 November, a bogie Baldwin loco was to be sent to Proserpine Mill because of loco breakdowns there. In addition, two Eimco bogie locos were reportedly to be sent from Marian to Farleigh for trials hauling loads over the summit.

Tony Wells 9/94-11/94; Editor

M.MINA, Hawkins Creek Road, via Ingham 610 mm gauge

(see LRN 102 p.12)

The owner intends to sandblast and paint Baguley 0-6-0DM *Victoria* (2404 of 1953) with a view to it being mounted statically.

Chris Hart 10/94

MORETON CENTRAL SUGAR MILL CO LTD 610 mm gauge

(see LRN 100 p.6)

Commonwealth Engineering 0-6-0DM B1112 of 1956 (formerly *Yandina*) has been rebuilt to 0-6-0DH and is named *Jamaica*. It is understood that the original *Jamaica*, Baguley 0-6-0DM 3389 of 1954, has been cut up. The two E.M.Baldwin 0-4-0DH "twins", *Maroochy* (6-1064-1-11-64 of 1964) and *Valdora* (6-1258-1-6-65 of 1965) are based at the River Depot during the crush. Having arrived at River Depot, the driver of *Jamaica* uses the twins to pick up cane from light lines around the Maroochy River before heading back to the mill with the big loco. E.M.Baldwin B-B DH *Coolum* (5565-1-10-74 of 1974) is usually used exclusively for assisting in the handling of cane on the shuttle through the streets of Nambour from Howard Street yard to the mill. A loco must always be at the tail of the rake for safety reasons and *Coolum* regularly seems to have this task.

Editor 9/94

PEABODY AUSTRALIA PTY LTD, Laverack Avenue, Eagle Farm, Brisbane

A visit to the former Costain site (see LRN 85 p.9) on 1 October showed it to

be occupied by this company, although some 1067 mm gauge loaders and shuttle cars observed previously were still in evidence. Some equipment was noted marked *Costain* and some marked *Costain Pearson Bridge*. Two dolly cars were noted, apparently 610 mm gauge, one numbered 0911 carrying markings indicating that it was used at Gordonstone (presumably by Coya Constructions - see LRN 71 p.11). Two red oxide Gemco-Funkey 4wDH locos powered by 4-cylinder diesel engines were also noted on site, numbered 0961 and 0962. These also appeared to be 610 mm gauge.

Editor 10/94

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 102 p.13)

By the end of October, earthworks were well under way as part of the construction of the northern section of the southern cane railway to Karloo.

Tony Wells 10/94

CLIVE PLATER, Eudlo 610 mm gauge

(see LRN 98 p.11)

The cab and bonnet of dismantled Baguley 0-6-0DM *Jamaica* (3389 of 1954) was removed from Moreton Mill on August 9th by Clive Plater. The cab, with a much shortened bonnet, has been restored, and has been given the original QGR (Innisfail Tramway) identity DL13 *Innisfail*.

Clive Plater 10/94

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 102 p.14)

A number of reports have indicated that the mill may intend to construct a new bogie loco, presumably using components from a scrapped Walkers B-B DH loco such as the QGR DH-class and the SRA 73-class.

Editor 10/94

TULLY SUGAR LTD 610 mm gauge

(see LRN 100 p.7)

A State and Federal Governments infrastructure package of \$4.6m will be used for water management and cane railway infrastructure in the Murray Valley. Three cane railway extensions totalling 8.2km will be built by Tully Sugar to link up with the line at Lihs Crossing, opened in 1993.

Australian Canegrower 8/8/94 via Chris Hart

VICTORIA

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 102 p.15)

About 100 volunteers attended the Gembrook Restoration work party on Saturday 17 September, with about 70 on the following day. The plan to lay 1.845 km of skeleton track from Doonaha Road to Cockatoo on that weekend was easily achieved. In fact work finished early on Saturday so that the Sunday group would have something to do! This was a PBPS record for the longest stretch of track laid in one weekend. On the weekend of 8/9 October work continued on this section, with fitting of additional sleepers. At Cockatoo the track was connected to the level crossing in the main street, and NRT 1 (Ruston & Hornsby 4wDM 296058 of 1950) hauled a works train onto the level crossing and stopped very briefly for photographs. At that stage no track had been laid on the other side of the crossing due to problems with the level of the trackbed. On 12-13 November it is planned to fit a further 900 sleepers.

All of the intermediate trestles and one of the abutments of the small Wright bridge had been installed by the end of October. Meanwhile work on assembling the steel spans was in progress at Emerald workshops. It is hoped to install these in November.

Frank Stamford 11/94

TRANSFIELD CONSTRUCTION PTY LTD, Transfield Tunnelling Division, North Western Sewer Construction, Essendon 762 mm gauge

(see LRN 99 p.13)

Melbourne Water (formerly M&MBW) had one of their open days on 23 October, at the Afton Street Essendon site. This site is on the north bank of the Maribyrnong River, on land previously part of the Explosives Factory Maribyrnong. No EFM tramways existed on this side of the river. However, pre-World War II sandpits hereabouts are believed to have used tramways to carry sand to chutes above the river for depositing into barges.

The Maribyrnong River effectively divides the North Western Sewer construction project into two parts which will be joined by a syphon under the river. Approximately eight kilometres, from Brooklyn Junction shaft to the south bank of the Maribyrnong have been completed. Tunnelling on the remaining section, from Afton Street, Essendon, to Albion Street, Moonee Ponds (approximately 3.8 kilometres) commenced on September 12th this year. Total length will be 11.7km.

A Robbins 5.5m diameter tunnel boring machine was used for the first three kilometres from Brooklyn, and a Lovat machine is being used for the balance. this machine erects concrete rings in the tunnel as it advances, and so can cope with the difficulties involved with mixed ground conditions

Four locomotives were seen on site; two were in the trench which extends approximately 50m from the southern portal of the tunnel. These were Gemco 4wDH locos 6 (237-90 of 1990) and 10 (291-91 of 1991), both cordoned off from idle public scrutiny. Gemco 4wDH 7 and Gemco 4wBE No.2 (still with battery box 6) were on the surface. arge amounts of heavyweight rail were stored; a diagram seen quoted 80lb/yard as being required, but rail 90lb and heavier was seen. Colour-light signalling controls train movements in the single track tunnel, which is equipped with "California" switches at intervals for crossing purposes. A section of three-phase AC overhead is in place near the portal but there was no sign of any electric locos. Points seen near the portal were hydraulically operated. Surface track in the contractor's yard is basic and consists of about 300 metres, connecting workshops, pre-fab segment yard and a crane situated above the headshunt in the trench.

Colin Harvey & Phil Rickard 10/94

WALHALLA GOLDFIELDS RAILWAY 762 mm gauge

(see LRN 102 p.17)

On Sunday 2 April 1994 the Railway was officially reopened by the Hon Mark Birrell MP, the Minister responsible for the Walhalla Railway. In attendance were the Speaker of the Legislative Assembly, John Delzoppo - a descendent of an old Walhalla family, Phil Ashdown - a fireman based at Walhalla in the 1920s, and Norm Holmes - a former Walhalla Railway guard.

Since 2 April trains have operated on a 200 m section of track on the Moe side of the Thomson River bridge. They run every Sunday and public holiday between 11am and 4pm and on other days for special charters. Patronage levels in the depth of the Gippsland winter have been more than expected, resulting in a useful financial surplus. It is intended to move to seven day per week operations during January 1995.

Passenger facilities at Thomson consist of an authentic VR narrow gauge style station 52 feet long, based on the building at Crowes in 1912. An SM's office, waiting shelter and tea stall are provided; with a lamp room and toilet block still to come.

On 7 August the first enclosed passenger carriage entered traffic. Classified 1NBW, this carriage is broadly based on the original 1899 saloon NB design, but the full narrow gauge structure limits have been exploited, giving a vehicle 31 feet long by 8 feet wide, seating 36 passengers on 2 x 2 seats.

The seats themselves are turn of the century style American throw-over units obtained from the State Rail Authority of NSW. A second NBW is now half completed, following which it is planned to build two 40 seat NQW semi-open excursion cars.

Work on restoration of the Thomson River bridge is nearing completion, with the re-opening date set for Thursday 27 October. Concrete abutments have been poured and five sets of timber trestles constructed from Gippsland yellow stringy bark bolted to concrete footings. Meanwhile, the original iron work has been repaired and painted. The three centre spans were lifted back onto the original concrete piers on 23/24 April and the lighter approach spans bolted to the new timber trestles on 6 August. Completion of this 303 feet long bridge will open the way to three kilometres of road bed already cleared and graded for track construction.

All being well the Railway's Committee of Management would like to open 800 metres of track for traffic prior to Christmas/New Year, giving a one kilometre run for the peak December/January season. A further 800 metres is planned to take the Railway to the 'little bridge' at 24m 73ch by Easter 1995. It is hoped to reach the Happy Creek temporary terminus by 1996.

Looking toward the next big challenge, the Army dismantled the 12 span 'boat belly' bridge at 25m 18ch over the weekends 14/15 and 29/30 May. The iron spans are now at Dasma Pty Ltd for sandblasting and painting. Funds permitting, the Army will commence re-erection of the bridge during the first half of 1995. This beautiful structure is the first of the six bridges that lie in the final 500 metres of line before Walhalla.

OVERSEAS - PAPUA NEW GUINEA

BOUGAINVILLE PLANTATION TRAMWAYS 610 mm gauge

(see LRN 39 p.11)

The tramlines on the plantations of Bougainville at Soraken, Kunua, Boiu and Tsiroge are reported to have been removed and used in local cocoa dryers and for other building purposes.

Michael Pearson 7/94

KOKOPO WAR MUSEUM, New Britain 610 mm gauge

A Katoworks 4wPM locomotive is exhibited at this museum. It is ex-Japanese Navy, and was used at Tobera Plantation near Rabaul where an airstrip was constructed by the occupying forces in World War II. It has a

4-cylinder petrol engine and drove onto both axles via a chain. It appears to be a 4-tonne model like the drawing shown in LR 101 p.5.

Michael Pearson 7/94

ULAMONA, WEST NEW BRITAIN PROVINCE 700mm gauge

(see LRN 44 p.15)

The sawmill at the Catholic Mission closed in February 1994 and has been taken over by the local landowners. It is not known whether the tramline, using an 0-6-0DM (converted steam loco Jung 8644 of 1938) is still in use.

Michael Pearson 7/94

MINIATURE RAILWAYS

JOHN FEKETE, Smokey Express, Victor Harbor, South Australia 305mm gauge

A 400 m miniature railway was noted under construction in August along the foreshore adjacent to the terminus of the horse tramway to Granite Island. The line was due to be opened in time for the October Public Holiday, and a steam locomotive named SMOKEY EXPRESS based on a NSWGR Class 12 Atlantic and built in Sydney about 1920 will be used.

NOTES, CORRECTIONS AND COMMENTS

John Browning, the regular editor of LRN, is currently on holiday visiting his family in the UK. We wish him well for an enjoyable trip. This issue of LRN has been put together by me (Mike McCarthy!) and I must say it has been a learning experience of some magnitude. It has only served to deepen my appreciation for the work that John puts into the magazine. I might also add that this is said after having been "spoon-fed" much of the content by John himself. Consequently I have been left wondering how John manages to find the time to do the quality job that he does.

Nevertheless, as you are now well aware, the magazine has been produced albeit without that JB touch but hopefully with something of interest for readers.

RAILS IN THE WILDERNESS

This very interesting video from Memory Line, New Zealand features Bush Tramways, Heislars and Climaxes as well as steam logging engines and a multitude of home-made rail vehicles and machines of the New Zealand forests. Included is some footage of the last working bush tramway in New Zealand as well as remnants of old abandoned tramways.

Members interested in logging tramways in particular will find this to be a valuable addition to their video collection. It is available from ARHS Sales, 67 Randwick Street. Redfern, New South Wales 2016, at a cost of \$39.95.

AUSTRALASIAN CONFERENCE ON ENGINEERING HERITAGE

The first Australasian Conference on Engineering Heritage was held during

November 1994. The conference papers included the following railway topics. Readers might be interested in chasing up papers that cover light railway topics. Among those covered are: Rakaia Gorge Bridge (New Zealand) Light Railways in Australasia New Zealand Bush Tramways Christchurch Trams Goolwa to Port Elliot Railway and Extensions Napier to Gisbourne Railway

Jim Longworth 12/94

RESEARCH COLUMN

Warburton, Millgrove and Wesburn, Victoria

I am currently working on my next book dealing with the Warburton district in Victoria. I am interested in hearing from anyone who, in particular, has photographs of mills and tramways from this region in their collection. I would especially like to hear from anyone who has in their possession postcard/s depicting tramway scenes which have been rendered (coloured). I can be contacted at 27 Verbena Ave. The Basin 3154 or on 03-762 5847 (AH).

Mike McCarthy 1/95

NEW SOUTH WALES

ILLAWARRA LIGHT RAILWAY MUSEUM

(See LRN 103)

The two Drewry diesels to be received by the ILRMS arrived via the RAN LCT HMAS *Labuan*, from Townsville. The locos and some truck materials were donated by the Tully Mill and were shipped by courtesy of the RAN to Sydney. BHP Transport agreed to collect the locomotives from Garden Island and take them to Albion Park where Cleary brothers were to provide assistance in unloading. The locomotives are the Baguley-Drewry 0-6-0 diesel mechanical units .. *Seymour*, B/N 2392/1953 and *Leichardt* B/N 2393/1953. Neither unit has run for several years, but both are reasonably complete and it seemed that *Seymour* could be made operable fairly quickly. *Cairns* was used to tow the diesels, one at a time, into the yard for the benefit of television news crews. Also received from Tully were concrete sleepers and point parts.

Since their arrival the diesels have been covered by a swarm of bodies removing bits from one and grafting them on to the other, stripping and cleaning things and fitting electrical gear from the boxes of spares which accompanied the locos. A set of new heavy duty 12 volt truck batteries was bought at cost from Apollo batteries at Oak Flats. Surprises jumped out of the header tank in the shape of half a dozen NQ tree frogs and a chameleon type

which had been happily living in the engine cooling galleries until flushed out. These were found a good home at a nearby animal sanctuary.

Several tries were made at starting Seymour without success. However, following some assistance from a visitor, who had some expertise with diesel engines, the frozen racks and pumps were freed up and on reassembly she fired. After blowing a lot of rubbish, the locomotive ran very smoothly which confirmed the opinion of a filter at Victoria Mill, who had told ILRMS that she had not done a lot of running since a heavy overhaul. Subsequently the air brake cylinders have been taken off and stripped and cleaned of rust and gunk and, as the rubber boots were in good order, reassembled and tested on Saturday 24 September when they worked quite effectively with no leakage from the seals. With the likelihood of fire bans in the coming months there will be a need for Seymour on passenger work so most effort is being put into finishing off many other pubs which need doing including a new cab roof, radiator and side panel grills, fitting auto couplings and a temporary repaint.

The Government's "LEAP" training Scheme for the unemployed may provide the opportunity for a quantity of much needed work to be done about the Museum. This will include a complete strip and repainting of the newly arrived Seymour and the preparation of rails and track bed for the 184 mm gauge miniature track around the picnic area. Other possible projects for the scheme and other training schemes available within the district include a new underframe for ex Goulburn, Melbourne cable trailer No.110, parts for the reconstitution of the Shay locomotive and perhaps the regauging and repair of the diesel man-rider from Narellan Diesel Service.

The ILRMS has applied for a Rail Heritage Grant to be made available by the NSW Government. Among the projects being considered are the following:

- Extension to the locomotive shed with concrete floor, and proper servicing and inspection pit. (approximately \$50,000)
- Overhaul and retubing of the two Davenport boilers and repairs to the shuttle tank and restoration of the Ex-maffei tank locomotive tender for traffic use, with the Davenport. (approximately \$55,000)
- Replacement of main line sleepers with concrete plant and replacement of some rails with new material, approximately \$55,000.

ILRMS Review - July/August, September/October 1994

TIMBERTOWN, Wauchope 610 mm gauge

(See LRN 102)

The Timbertown theme park at Wauchope New South Wales, is set to reopen after a period of closure. Bruce and Geraldine Campbell proprietors of the Murramarang resort at South Durras have been granted a 30 year lease

of Timbertown and will undertake a \$4.385 million development program over the next 10 years.

Press coverage of the proposal to reopen the complex included a photograph of John Fowler 0-4-2T 17881 of 1928 at timber town undergoing maintenance, so it is assumed that the railway will reopen with the complex.

Port Macquarie News - 16/11/94, via R Persson.

QUEENSLAND

CSR Ltd Macknade Mill 610 mm gauge

(See LRN 103)

The Board of Directors of CSR has announced a \$14.4 million capital works program at the Macknade Mill. This includes the construction of a new 200 t steam/hr boiler (No. 7) to be ready for the 1996 season and a complete retube of the back of No. 6 boiler prior to the 1995 season. It is believed that the investment program shows a strong commitment from CSR for Macknade's future. Concern had existed in regard to the future of the mill when among the various options being considered for its future were a derating of Macknade's crushing rate and the shut down of the mill. However, the investment proposed will see the mill in operation for many years.

About \$300,000 worth of damage occurred when the Clemmac was involved in a derailment of 37 sugar boxes at Girgenti's Siding near Halifax at 1 am Sunday, October 23. About 120 tonnes of sugar were spilled when some boxes burst open spreading sugar over a large area. Two trucks and a loader were used to transport the sugar back to Macknade Mill for remelting. Five boxes were totally written off, the remainder sustained considerable damage to the box, chassis, bogie and couplings. The main line turnout, leading to the siding, and 40 metres of main line were damaged and had to be replaced. The main line was re-opened at 1 pm.

It would appear the derailment was caused by a cut out bearing on one of the boxes. Investigations revealed that the box derailed in Halifax township, rerailed on the road crossing before the turnout at Andersen's Line Junction, travelled through Mona Junction and again derailed 200 metres before the main line turnout at Girgenti's Siding. The derailed box threw the points, causing the rake to enter the siding and derail.

Crystal Creek Cane Railway

The construction of a cane railway extension to service canelands in the southern part of the Macknade district has been funded to the tune of \$7.8 million. Survey work is well advanced and procurement of sleepers, rails and

turnouts is underway. Two new gang trucks and a dual cab 4WD have been purchased to be used in construction. The manufacture of a ballast spreader is all but complete while some truck panels have been prefabricated and rails welded into long lengths.

There are a couple of important steps required before work can commence on site. Firstly, the design route has to be finalised with all landowners and people living in the vicinity of the new line. This task has been completed except for a couple of locations. The second task is to ensure that all interested parties are satisfied that the project will cause no significant environmental damage.

There are two impacts from the construction which need to be addressed. The first relates to the direct effects the track construction will have through clearing and on flood water flows. The second related to the clearing and development of land for cane to be carried by the line. If the line is not built some land owners would not clear land and plant cane because of high transport costs. The land affected most in this way is south of Bambaroo. Some of this land is unique environmentally as it provides a habitat link between the coastal plain and the mountains. The engineering consultants GH & D are helping with this work.

Herbert Valley Sugar New and Views 10/11 via Chris Hart

TULLY and SOUTH JOHNSTONE SUGAR MILLS 610 mm gauge

(Tully - see LRN 103, South Johnstone - see LRN 103)

A massive farming extension will result in the Tully and South Johnstone Sugar Mills crushing an additional 800 000 tonnes of cane per year by 1997.

The increase production will come from new farms on the Atherton Tablelands and in the Murray River Valley south east of Tully. It is believed that the proposal will increase the throughput of the Tully Sugar Mill from around from 1.4 million tonnes at present to 2 million tonnes within three years.

The Tully Sugar Limited Chairman, Rino Cargnello said that a 25 km cane railway was being built to service the new area and another 4 km of track would be constructed to link the Tully network with South Johnstone if a proposed merger of the two mills went ahead as planned.

The crushing capacity of the Tully Mill will be increased from 570 to 600 tonnes per hour next year and a move to continuous crushing will be made in 1996 to cope with the additional throughput. Any cane that cannot be handled at Tully beyond that will be sent to Johnstone.

Townsville Bulletin 8/11/94 via Chris Hart

INVICTA MILL 610 mm gauge

(See LRN 102)

Invicta Mill Manager K C Jones is confident the mill will overcome the problems faced this season and live up to the promise of its major upgrade in years to come. The mill underwent a \$62 million upgrade in the 1993 off season and a further \$70 million is planned to be spent in the factory and yard in the next 12 months. It is reported that everything up to the shredder at the mill is new, including the feeding station, yards and cane receival areas. The feeding station hauling equipment "Goliath" was designed by CSR with NQEA and hauls up to 180 bins by their chassis, up to 24 tonnes of cane in four six-tonnes bins can be tipped at a time on the fully automated system.

The new rail yard is three times the size of the old yard and the number of bins is being progressively Increased to reach 2300, including 1000 new six tonne bins now under construction. By 1997 most bins will be six tonnes.

Australasian Cane Grower 17/10/94 via Chris Hart

MACKAY SUGAR CO-OPERATIVE, Pleystowe Mill 610 mm gauge

(See LRN 103)

Clearing work on the bank of the Pioneer River behind Pleystowe Mill in November uncovered two steam locomotives each almost a hundred years old. They were dumped there about 40 years ago in an attempt to stabilise the river bank. It is not known if these two locomotives, which are understandably in indifferent condition, will be recovered from the site. However, if recovered, it is understood that mill management will ensure that they will not be scrapped. The locos are:

3	0-4-2ST	Hudswell Clarke	478	1896	ex Plane Creek Mill, 1911
6	0-4-0WT	Krauss	3263	1897	ex Palms Mill, 1925; formerly ex Plane Creek Mill. 1911

Pleystowe Mill's E.M. Baldwin B-B DH *Shannon* (7126-1-5-77 of 1977) was on loan at Proserpine Mill for about four weeks following the end of the season at Pleystowe.

Kevin Shanks & John Browning 11/94

Specification for the modified 1984 class locomotive is as indicated below . The locomotive is a modified 73 Class built by Walkers Ltd in the early 1970's. The modifications include:

- Re-gauging from 1435 mm to 610 mm
- Reducing wheel size
- Reduce main frame to bogie distance by 145 mm
- Lower Cooling System by 100 mm

- Lower Engine by 100 mm
- Shorten main frame by 910 mm • Raise the fuel tanks by 200 mm
- Replace the 3CDC Air Compressor
- Lower bonnet by 200 mm
- Fit new driver's cabin & controls

Description

Type:	Diesel Hydraulic
Axle Arrangement:	B-B
Gauge:	610 mm
Total Weight:	41000 kg (maximum)
Control Equipment:	Electric/Pneumatic
Engine Type:	Cummins KTTA 19C
Engine Speed:	1900 RPM
Engine Power:	515 kW
Tractive Power:	485 kW
Transmission Model:	Voith L4r4U2
Transmission Type:	Turbo Reversing - 4 converters
Primary Axle Drive:	Gmeinder GM170/EHA/469
Secondary Axle Drive:	Gmeinder GM170/E/327B
No. of Axle Drives:	2 of each of above
Type of Drive:	Cardan Shaft

Basic Dimensions

Length over headstocks:	10060 mm
Bogie Centres:	5790 mm
Axle Centres:	2286 mm
Wheel Base:	8077 mm

COMALCO, Weipa

Comalco's locomotive R1001 was sent to Clyde's work at Kelso (NSW) for a rebuild. It was sent back to Weipa on 25 July 1994 via Newcastle and the vessel Mirabella.

After the vessel deposited R1001 back at Weipa, sister unit R1002 was loaded bound for Fremantle and its new owners West Rail. It arrived at the Port of Fremantle on the 30 August.

ARHS Bulletin 12/94

ELDORADO GOLD MINE, GYMPIE GOLD MINE

(See LRN 103)

A new gold mine officially opened on 13 December 1994, at Gympie. The Eldorado Gold Mine, developed by Devex Limited, is based in the Monkland area of Gympie, the mine having begun production in the middle of 1994.

Gympie first produced gold in 1867 and up to 1948 the area yielded 106 tonnes, making it Queensland's third largest gold producer.

Mackay Daily Mercury 14/12/94 via J. Browning

TASMANIA

MOUNT LYELL MINING AND RAILWAY COMPANY, Queenstown to Regatta Point Line 1067 mm gauge

(See LRN 102)

Following the recent closure of the Mount Lyell mine at Queenstown another proposal for the restoration of the former Mount Lyell Mining and Railway Company's, Queenstown to Regatta Point Line is on the agenda. The State Government recently commissioned a report which advocates reinstatement of the railway between Lynchford and Teepookana. Although highly desirable, the restoration of the rest of the line was deemed impractical because of roads and houses that have been built since the line closed. However, the section proposed for reinstatement does include the best sections of the route including the two inclines.

An alternative scheme has been put forward by a Queenstown business man which proposes the restoration of the entire railway over 5 years. This alternative proposal relies upon the State Government assistance to build a replica ABT locomotive and two carriages. Various factors, including the construction of roads, river flooding, and the need for a reconstruction of the Quarter Mile bridge, all suggest that the alternative scheme is unlikely to occur. However, it is encouraging that at least part of the line may be restored as a consequence of the Government's report.

ARHS Bulletin - 11/94

MOUNT LYELL MINE

Members may be aware that the Mount Lyell Copper and Gold Mine in

Queenstown, Western Tasmania, was set to shut down on the 15 December 1994. It seems that there is a strong possibility that the mine may reopen as part of a \$14 million redevelopment and expansion by Gold Mines of Australia. A proposal is presently in the planning stage with GMA actively seeking to interest potential investors in the proposal. However, it is understood that the news has provided some optimism for the Queenstown mining industry.

The Age 10/11/94 via Phil Rickard 11/94

VICTORIA

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 103, page 12)

Locomotives

7A was still in the workshops as at 17 December but it was hoped to have it back in service by the time of the holiday peak season. G42 has had its cylinders fitted to the frames, and the horns (24 of them!) are being machined and fitted to the frames. After its mammoth effort this year in hauling ballast between Gembrook and Fielder, NRT1 was having problems with its clutch plates. These were fitted with new linings and the loco returned to service at Emerald.

Gembrook Restoration

By 17 December bridge No.7 - the small Wright bridge - was almost complete with the decking in place and the side timbers to contain the ballast being fitted. It is a most impressive sight, deep in the forest, on a slight curve, and will provide some interesting photographic opportunities. It was built by a team of volunteers under the guidance of a V/Line trestle bridge expert. Early in 1995 it is intended to lay track from the present rail-head at Wright station across this bridge and a few hundred feet beyond it. From that point the right-of-way will be kept clear to allow road vehicles to use it to access the site of bridge No.8 during its construction. I do not think any official decision has been made on which of the remaining two bridges will be built first. Design work for bridge No.8 (the big Wright bridge) is more advanced, but bridge No.9 (Cockatoo Creek) is simpler, and consequently cheaper.

The track from Fielder to Cockatoo is still unballasted, but all sleepers are fitted for the first half-mile. The next work party on this section is scheduled for February. After that is completed, work will be done on the Cockatoo station yard, and it is then probable that track will be laid from Cockatoo to bridge No.9. The formation on this section is still very overgrown.

Gembrook Operations

A temporary portable office building has been provided at Gembrook to act as a station for the Market weekend services. On Sunday 18 December the Peckett hauled a special train from Gembrook to Fielder, and beyond for half a mile towards Cockatoo. It was the first time a steam loco had worked between Fielder and Cockatoo since 1953. This was for a Mechanical Engineering branch end-of-year function.

Frank Stamford 1/95

TACL TRACTOR RESTORATION (A project to restore the Climax little brother!)

(see LRN 102, p.16)

The main drive shaft has now been fitted back on to the frames, and new parts fabricated to hold the axle-boxes in place in the horn guides.

HOTHAM VALLEY TOURIST RAILWAY

(See LRN 85)

Locomotive G123 has worked well all season and has been towed to Benjarra to have some repairs carried out. Last maintenance work done on this loco was carried out during the summer of 1991/92 giving the Hotham Valley Tourist Railway two years of service at two days a week of steaming for six months of the year. This year has been somewhat of an exception due to the late start of the steam season and an early close due to weather conditions.

Pinjarra Steam Express 11/94

EDITORIAL

Thanks to Mike McCarthy for his efforts in editing LRN 104. He did a great job and I enjoyed reading it.

Unfortunately, this LRN has been delayed. My visit to England at Christmas was to enable me to see my father, who had been seriously ill a few months before. Unfortunately he died at the end of February, so I have had another trip overseas in the last four weeks, with resulting disruption to work, family and LRN schedules. This has been made more difficult by the accumulation of extra material which arrived after the early close-off in December and since the normal close-off date in March. Apologies to the hard-working Melbourne production and distribution team for the disruption caused.

TOURS INFORMATION

The NSW Division is conducting three tours in the near future. The first is on Sunday 22 May and is a Craven Forest Railway tour conducted by Ian McNeil, commencing at Stroud Road village store at 10.30am. The second tour is also conducted by Ian and is a Simsville Logging Tramway tour commencing at the Booral Service Station at 10am on Sunday 4 June. Intending participants on these tours should contact Ian on (049) 33 2706 for further information and to confirm the tours in case unforeseen circumstances have caused cancellation. The third tour is likely to take place in late June and will be to two early coal mines in the Mount Victoria area. Members interested in attending this tour, which will be held at short notice, or in obtaining more information, should ring Jeff Moonie on (047) 536 302 or Craig Wilson on (02) 484 7984.

NOTES, CORRECTIONS AND COMMENTS

ANDERSON REA, Mackay

Tony Wells has corrected my spelling of this firm's title (see LRN 101 p.6). Not all short words are easy to spell!

ILLAWARRA LRMS

Thanks to Chris Hart for pointing out that the correct building dates for the two Drewry diesels (LRN 104 p.3) is 1952. Unfortunately, this does not necessarily correspond with the date shown on the builder's plates.

THE FORGOTTEN RAILWAYS OF SYDNEY

At the request of Sydney University Department of Continuing Education, the ARHS are repeating this course of lectures in 1995. The course is intended for non-enthusiasts but covers much of light railway interest. The University has also asked for an additional but different course to be developed. If any readers have ideas on suitable topics they are encouraged to contact Jim Longworth on (02) 876 4369.

HISTORY OF COAL MINING IN AUSTRALIA

Ray Graf has come across this 1993 monograph (No.21) of the Australian Institute of Mining & Metallurgy, 191 Royal Parade, Parkville 3052. This appears to be a useful publication. However, due to its price (\$85 plus postage) he recommends that members examine it carefully before purchasing.

BLACK SNOW & LIQUID GOLD (A History of the Burdekin Shire)

Chris Hart has come across this new book by well known author John Kerr, and points out some aspects of sugar industry interest including some photographs. John Kerr can be contacted on (07) 370 9588.

FIELD REPORTS

Please continue to send in reports of the use of light railways in industry for the Research Column and Field Reports sections so that as full a record as possible can be built up for the benefit of future and present researchers - Ed.

LEVER & KITCHEN, Balmain

Following the presentation of the talk *Forgotten Railways of Sydney - the Industrials* - by Jim Longworth, an offer was made to assist in gaining access to the Lever & Kitchen soap factory at Balmain. Inspection revealed sections of 2 ft gauge track on both sides of Hyam Street. The level of the track was about level with street level, so a crossing by tunnel was unlikely. On the north side a point was located, but within a few days redevelopment work removed all traces of track on this side of the street. On the south side of Hyam Street, a network of tracks and wagon turntables was located. Some rail ran through very old barrel vault catacombs under the works, with the rail head flush with the concrete floor. The vaults were approximately 2.1 m wide and 2 m high and a turntable was measured at about 1.6 m. This was all at a lower level than the floor of the most recent factory, which presumably is a later stage of development on the site. It was indicated that the section south of Hyam Street will remain intact for some time to come.

Jim Longworth 2/95

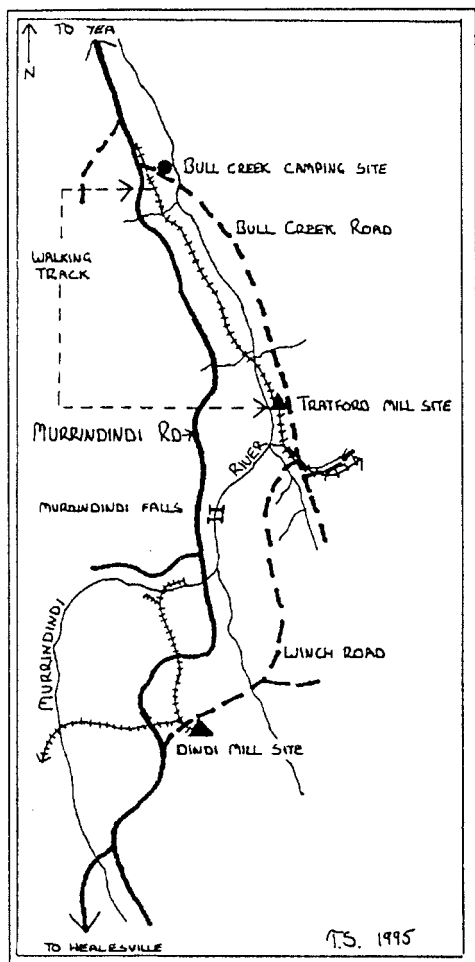

MURRINDINDI FOREST, Victoria

(see *Timber Mountain* by N Houghton)

The recent efforts of the Conservation Forests and Lands Department to construct forest walks along former tramway formations has enabled shall we say the more mature of us to undertake tramway walks without the effort of bush bashing and becoming meals for leeches. An example of the Department's efforts has seen the 1984 clearing of a section of a 2.2 km length of former tramline which once served the mills of Trafalgar and the Erieka Hardwood Co in the Murrindindi River area.

Access is via the Bull Creek camping ground from the Murrindindi Road and is well signposted. If travelling from Melbourne a detour down Winch Road will take you to the site of the Dindi mill, which is now a picnic area and according to the signpost has been declared a heritage site. The mill site has been cleared and the log foundations are clearly discernible.

From the Bull Creek camping area the formation to Trafalgar's mill is clearly defined as it winds its way around the contours with a couple of well preserved cuttings along the route. A surprise along the walk is a display of a length

of timber tramway track with two tramway bogies supporting a load of logs. The restorers have omitted the swivelling requirements of the log bogies, and have instead simply placed a solid piece of timber on the bogies. This is a small oversight and does not detract from the overall appearance of the display. Not far past the bogies is a curved length of well preserved timber tramline in a shallow cutting. However one would imagine that the constant pressure of bush walkers may see this section of tramline soon deteriorate, and it may be advisable for members to enjoy the preserved section while in its present state. The walk along the tramway section concludes at the Tratford mill site. The mill log bearers, sawdust trench, and sawdust heap being easily defined.

Information signs have been erected at Tratford mill, the preserved timber line section and the log bogie display. The

Department is commended for its efforts in educating the general public, and maintaining a part of our timber transport heritage.

Tony Sedawie and Rita Pietzch 3/95

NEW SOUTH WALES

BHP LTD, Port Kembla 1435 mm gauge

(see LRN 94 p.7)

Ex-Goldsworthy Co-Co DE locos D50 (ex GML6) and D51 (exGML9), built by English Electric (Australia) at Rocklea, Queensland, were noted working in

multiple on a coal train on the Wongawilli line on 12 November 1994. They are painted in the BHP corporate blue, white, black and red livery.

On 10 October 1994, BHP rail operations ran a *Camp Quality* day. *CAMP QUALITY FLYER* train rides were featured, in the hands of orange and black liveried Com-Eng (NSW) Bo-Bo DE D6 hauling two wooden end platform cars and an ex-Lysaghts bogie van. Trains were scheduled to run at 10.30, 11.45, 1.00 and 2.45, but the last did not operate.

Ray Graf 1/95

COOLANGATTA HISTORIC VILLAGE RESORT, Shoalhaven Heads 600 mm gauge

(see LRN 51 p.4)

A recent visit indicated that the petrol steam-outline locomotive and a couple of passenger vehicles are still disused at this site. They are to be found in the long grass behind resort outbuildings with a stack of rails. (They are still being identified as "from Taronga Park Zoo", although readers' comments in 1985 tended to shed considerable doubt on this, with Adelaide Zoo suggested as a more likely source. - Ed.)

David Burke 3/95

DORRIGO STEAM RAILWAY & MUSEUM 1435 mm gauge

(see LRN 77 p.9)

The former Lysaghts Goninan B-B DE JL3 (017 of 1962), obtained for preservation, had been stored at the Ampol sidings at Port Kembla along with some ex SRA locomotives. This equipment has now been noted stored on BHP Lysaghts trackage at Spring Hill works, near the Lysaghts platform on the Wollongong - Port Kembla main line.

Ray Graf 1/95

LITHGOW MINING MUSEUM INC, Lithgow gauges various

(see LRN 103 p.6)

The museum is located at the former State Coal Mine site at Lithgow and plans to mount a display of mining equipment at the site and operate over the standard gauge siding from the mine to the steelworks site. The museum is not yet opened but visitors are welcomed on days when working parties are active. When visited in October, the following items were noted:

3	4wBE	1067 mm	Gibson Battle	ex Kandos No.3 Colliery
AIS 59	4wDHR	1067 mm	Fox	(a)
	4wWE	1067 mm?		(b)

- | | | | | |
|---|------|----------|---------------|-----|
| | 4wWE | 1067 mm? | | (b) |
| | 4wDM | 610 mm? | Jenbach? | (c) |
| 3 | 4wBE | 1067 mm? | Gibson Battle | (d) |
- (a) ex Mines Department, Londonderry. Originally from one of the AIS south coast pits for a possible museum at Londonderry. (Fox 315 of 1971 supplied to Kemira Colliery - Ed.)
- (b) ex Farm & Building Supplies, Narellan. Originally ex National Oil Co, Glen Davis. Purchased by R.Mainwaring and placed with museum. (One is the yellow 'tram' loco built by Glen Davis using frames made by A.Goninan in 1947; the other is a 1909 General Electric ex Sulphide Corporation fitted with new frames built by Thirlwell & McKenzie in 1946 - Ed -see LR 121 & 122)
- (c) has both Jenbach and Bundaberg Jenbach marked axle set. Jenbach JW20 motor No.5336
- (d) ex Lithgow Valley Colliery. Stored at Pipers Flat for many years awaiting preservation.

There were also two man-riding cars, also possibly ex Pipers Flat.

MENANGLE NARROW GAUGE RAILWAY, Campbelltown Steam & Machinery Museum, Menangle Park 610 mm gauge

(see LRN 102 p.5)

Hudswell Clarke 0-4-0WT 1423 of 1923 was observed in steam at the November 13th Open Day, having worked also the previous day.

The first Sunday of each month will be an Open Day at the park in 1995 while November 11th/12th will be a rally weekend.

Ray Graf 1/95

DAVID MOTTRAM, 123 Blackbutt Road, Herons Creek 2443

A smokebox, believed to be from standard gauge Class B Climax 1375 (of 1914?) has been purchased by David Mottram (065) 85 7076. This locomotive worked for Longworths (Laurieton) Ltd, Kendall, between approximately 1916 and 1932. The smokebox is complete with N18 front, N108 stack base, N63 inspection hole, N9 twin blast pipe and N8 saddle mounting with integral exhaust elbows. Future intention is to display the smokebox in association with photographs of the locomotive. The whereabouts of other items, records, articles and illustrations would be appreciated for an article on Longworths tramway for *Light Railways*.

David Mottram via Craig Wilson 1/95

POKOLBIN LIGHT RAILWAY PROJECT 610 mm gauge

This project, referred to in LRN 101 (p.12), involved building a tourist railway in the vineyard area of the Hunter Valley. Plans have had to be shelved because of the Cessnock Council's refusal to allow a level crossing of McDonald's Road, adjacent to the Brokenwood vineyard, even if flashing lights were installed. An underpass would involve significant disruption to the vineyard. The 4.5km section planned for west of the road may however be a viable option.

Hudswell Clarke 0-6-0 1838 of 1950 was purchased from Mossman Mill for use on the project. It has been stored on a property at Bolwarra (Maitland) and will be undergoing minor repairs. However, its owner, unhappy with events at Pokolbin, has turned his attention northward and has become part proprietor of the tourist train operations at Mossman. The loco will be returning to north Queensland in due course.

Harry Wright 1/95; Bruce Belbin 3/95

SYDNEY WATER BOARD narrow gauge

(see LRN 91 p.10)

A quantity of equipment was advertised for sale by tender through agents

Pickles Auctions Pty Ltd and was inspected as follows:

At Bringelly: a Fowler Rex agitator car; an Atlas-Copco shuttle car (A1-1A battery electric) plant number 105148.

At Werrington: two 4wBE Gemco locos (presumably 610 mm gauge - Ed.), plant numbers 79 and 105. The first is unidentified but carries controller SS3 1834. The second is Gemco 12705-06/98/70 of 1970, and has two 4 hp motors (controller numbered 1831). There were also three battery boxes (no batteries), two of which were numbered 95 and 108, as well as five sets of shuttle car batteries and three sets of loco batteries.

At the Atlas-Copco works at Blacktown: three Atlas-Copco shuttle cars (A1-1A battery electric with centre flanged wheels). Two were 5m3 units stored in the open, with plant numbers (new series) 112595 and 106195. The other was a 4m3 unit stored under cover, plan number (old series) 2546. Also here were two mini fullfacers each comprising tunnelling machine, power car, conveyer unit and hopper car.

Other material offered for sale included cable/transformers and lots of rail about 40/45lb.

Ray Graf 1/95

TIMBERTOWN, Wauchope 610 mm gauge

(see LRN 102 p.6 & 104 p.4)

The successful tenderer for Timbertown, Murramarang Resorts Pty Ltd has withdrawn its bid, sending the Hastings Council back to square one in its bid to reopen the attraction. Murramarang Managing Director, Mr Bruce Campbell claimed that the Council had not fulfilled its obligations by completing a number of projects to bring the park up to scratch . . . *the main thing was that the steam trains were not working* . The park was scheduled to re-open on December 17th, then 26th.

Mayor Cr Ray Cooper said that the Council had worked *at a cracking pace* but had underestimated the amount of work needed to be done. This had included 1400 hours of work by volunteers. A report on 'Prime' T.V. news showed various activities taking place to bring the park up to scratch, including a collapsed bridge support. Of a pig-sty construction it appeared to have fallen sideways and is at an angle of about 30 degrees.

It appears that the Council will call for new tenders.

Prime T.V. News, via Bill Hanks*

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge

(see LRN 101 p.8)

Trains were run daily from 28 December to 1 January to coincide with the Maleny Folk Festival, which has relocated to Woodford. This was a very successful exercise.

Restoration work is proceeding on Hudswell Clarke 0-6-0 *Melbourne* (1701 of 1938), with work concentrating on the boiler mountings and the interior of the tender tank. John Fowler 0-6-0DM *Goondi* No.1 (18620 of 1929) has had a new cab built, utilising some parts salvaged from the old corroded cab. Some sections of the cab floor also require replacement, and the axleboxes complete with new bearings are ready for refitting. Bundaberg Fowler 0-6-2T 5 (5 of 1952) has had its boiler certificate renewed and its side tanks emptied and cleaned. Ruston & Hornsby 4wDM 279567 of 1949 has had an overhauled starter motor and generator fitted thanks to the assistance of Clive Plater. It is planned to rebuild one of the old rail motor trailers which has been in storage for some time, as passenger numbers increase.

A new station platform has been installed at the Peterson's Road terminus to serve the neighbouring Woodford Country Herbs Cottage Garden, and was first used in January.

Durundur Railway Bulletin 12/94, 1/95, 2/95; Bob Gough 2/95

BABINDA SUGAR LTD 610 mm gauge

(see LRN 98 p.5)

A cream Malcolm Moore 4wDM, probably number 20 (1057 of 1943), was noted dumped out of use near the navy depot during January.

Editor 1/95

BUNDABERG SUGAR LTD, Mourilyan Mill 610 mm gauge

(see LRN 101 p.9)

Some bins were observed in December to have been painted red above waist level and white below, presumably as a road safety device. Plasser KMX-12 high speed ballast tamper 249 of 1982 was noted in the mill yard. This machine has been transferred from the Bundaberg district. Clyde 0-6-0DH 8 (55-57 of 1955) has been fitted with a new cab. The navy area near the mill entrance has been cleaned out and the derelict Malcolm Moore 4wDM unit displayed there (1001 of 1943) has disappeared. Two old steam locomotive frames and the remains of Conquip tamping machine 10 of 1971 were noted

in the area of the yard furthest from the loco shed.

Motor Rail 4wDM "Simplex" 4wDMs 10219 of 1950 and possibly 3668 of 1924 were observed at the depot at the old Goondi Mill site together with Walkers 0-6-0DH 11 (570 of 1956).

It is suggested that there may be only one year remaining in which sugar will be conveyed to Mourilyan Harbour by rail.

Editor 12/95

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 104 p.5-7)

A couple of points of clarification / correction are required in relation to the reports in LRN 104. The Crystal Creek cane railway will serve Victoria Mill, while *Clemmac* is the local abbreviation for *Clem H McComiskie*, the Walkers B-B DH 605 of 1969.

Further transfers of cane from Victoria to Macknade were needed to equalise the 1994 season length at the two mills. They resumed on 16 November 1994 and were halted before crushing ceased on 21 November. A total of 52 490 tonnes were transferred from Victoria Mill to Macknade by Macknade locos during the season.

Planning consent for the 26 km Crystal Creek line from Helens Hill to Coolbie was given by the Hinchinbrook Shire Council in late February in spite of some objections. Many track panels and lengths of welded rail had been readied in preparation by then. The line is to be built by direct labour and a start was due to be made around the middle in late February, due to some uncertainty as to the exact route for the first section. It was planned to build the line right through to the road transport interchange at the terminus first and build the sidings later. Rail for the project has been acquired from the QR Brisbane Valley line. A new ballast spreader constructed at Victoria Mill will no doubt be used in trackbed preparation on the construction project. It is towed along behind tip trucks delivering ballast to site by road and consists of a delivery chute and roller.

The two most recent Walkers B-B DH rebuilds acquired by Victoria Mill were observed to have been fitted with nameplates by late December 1994. 599 of 1968 has *Victoria* nameplates as expected but 612 of 1969 is officially named *Herbert II*.

Between 6 and 12 May, Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) will be in daily use giving passenger rides in connection with the Italian Festival being held in Ingham. It was also used on 17 December 1994 for the annual Victoria Mill's social club Christmas party, together with the Decauville carriage and the replica built for Halifax kindergarten in the 1970s.

Following the success of making available the Crown freehold former pastoral lease at Wharp's Holding for Victoria Mill cane production, there has been some speculation that similar land in the Upper Ripple Creek area may in the future be made available to Macknade Mill growers.

All Herbert Valley cane bins are being renumbered into one series for the 1995 season. Previously, there had been a Macknade series, a Victoria series, and an ex-Hambledon bin series at Victoria Mill. Consequently there were many duplications and some triplications. The lowest number observed, believed to be the starting number, is 01001.

Loco repainting at Macknade has resumed with Clyde 0-6-0DH 11 (65-383 of 1965) having been sandblasted and painting having commenced by late February. A new road vehicle has displaced from service Macknade's Hansen linecar 4 (1112 of 1973), formerly used for maintenance on the mill's eastern lines.

The old loco shed, water tank and barracks at McKell's on Victoria's line at Longpocket was advertised for removal in December. A locomotive was stationed here in the crushing from the building of the line in the 1950s until at least the 1970s.

CSR LTD, Kalamia Mill 610 mm gauge

(see LRN 102 p.8)

A new weighbridge/tipler is being built for the start of the 1995 season. This will enable any combination of Kalamia, Invicta and Inkerman cane bins to be handled. This could perhaps be a forward looking move when considering that the mighty Burdekin River separates Inkerman and Kalamia and that the nearest Invicta line is some 17km from a Kalamia line. However, it might merely mean that Kalamia is likely to receive the other mills' cast-off bins.

Australian Canegrower 12/12/94 via Chris Hart; Editor

HAUGHTON SUGAR CO LTD, Invicta Mill, Giru 610 mm gauge

(see LRN 104 p.7)

The ex-QGR DH-class Walkers B-B DH (655 of 1970) was delivered from Tulk Goninan, Mackay, towards the end of March 1995. Delivery was delayed as it was decided to fit this unit with a new engine rather than retaining the engine received from QGR. In addition, three ex-NSW SRA 73-class Walkers B-B DH locos (669 & 677 of 1971 and 687 of 1972) are also due for delivery

from the Bundaberg Foundry before the start of the season. An order of 687 six-tonne cane bins is also due for completion before the start of the new season.

Australian Canegrower 6/2/95 via Chris Hart; Editor

W. HECK & SONS PTY LTD, Rocky Point Mill, Woongoolba 610 mm gauge

(see LRN 78 p.14)

on the multi-lift system allowing direct tip into the carrier. This would have meant the end for the internal rail system at the mill which was previously used for cane bins delivered by semi-trailer.

Australian Canegrower 12/12/94 via Chris Hart

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 104 p.12)

The 1994 season saw significant quantities of cane transfers between mills via tramline as follows:

- Farleigh to Pleystowe: 101 000 tonnes;
- Pleystowe to Marian: 90 000 tonnes;
- Racecourse to Pleystowe: 17 000 tonnes;
- Farleigh to Marian: 4 500 tonnes.

A 7km tramline is being built by Racecourse Mill into the Balberra area. This area lies south of Sandy Creek and east of the QGR north coast line, and could not be accessed without a rail crossing. QGR would not allow a level crossing, and there were considerable problems in building an underpass. The solution is a "drawbridge" crossing like that put into service at Wollingford on the Pioneer Valley branch in 1994. The first 3.5km stage of the line will cost \$1.3m and will be in service in 1995. A further 3.5km will be built for the 1996 season.

Tramline improvements undertaken by Marian Mill include realignment of a 1km section through Mirani township, and reconstruction of a 1km section at Uruba, approaching Finch Hatton. Some siding reorganisation is also taking place including some amalgamations to allow the use of 6-tonne bins, and some modifications to facilitate the use of cane elevator tippers by growers.

Racecourse Mill is investigation replacing the sheet metal lower section of its 2150 cane bins with mesh. This idea will be trialed in 1995.

Pleystowe Mill's new Walkers B-B DH 73-class rebuild *Walkerston* (672 of 1971) was trialed on the steepest grades on the Marian and Farleigh systems in the last days of the 1994 season. It was tried out on the Messmate Range and at Harvison's (Gargett) on the Marian system, and on the Summit on Farleigh's north coast line.

Work on similar loco rebuilds for Marian and Farleigh is expected to be completed for the start of the 1995 season. These locos are Walkers 707 of 1972, and 692 of 1972 respectively. It is understood that Mackay firm Anderson Rea have carried out frame and bogie modifications on them, as well as constructing new cabs.

MICKY MINA, Hawkins Creek Road via Ingham 610 mm gauge

(see LRN 103 p.10)

Drewry 0-6-0DM *Victoria* (Baguley 2404 of 1953) is sitting directly on the ground with generator, starter motor, compressor, fuel filter, stop solenoid, brake control and most gauges missing. The roof is starting to collapse, not surprising after a few years on "rotten row" at Victoria Mill.

Chris Hart 2/95

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 102 p.13)

A visit in December found a number of locomotives in the new livery. This is yellow below the waist and peppermint green above. A thick red line is painted just below the start of the yellow, and curves down to footplate level at the front end. The headstocks and running boards are in red/white dazzle stripes. The locos observed in the new colours were:

9	0-6-0DH	Com-Eng	FC3473	1964
13	0-6-0DH	Clyde	64-316	1964
18	0-6-0DH	Clyde	64-379	1964
19	0-6-0DH	Clyde	65-435	1965

The new loco shed has three roads and is located adjacent to the navy complex.

Editor 12/95

NOSTALGIA TOWN, David Low Way, Pacific Paradise 610 mm gauge

(see LRN 98 p.10)

The railway here was noted in operation in May 1994. The locomotive is Chance steam-outline B-2-B PH 84-50-200-24 of 1984 ex Canberra Fair, Canberra. Admission is free but there is a charge for rides.

Paul Simpson 1/95

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 103 p.11)

Formation work on the new tramline was well advanced by the end of

January, with some major bridge works in progress. John Holland is the major contractor. Track laying would not be able to proceed until at least March, with concrete sleepers the major item not able to be delivered until then. Rail purchase requirements had largely been met by late January, with only 400 tonnes of 60 lb rail still to be acquired.

There will be seven siding locations on the line, 4km south of Koumala, Mt.Christian (9.5 km), Ilbilbie (21 km), Orkobie (32 km & 34.5 km), Tinerta (41 km) and Karloo (44 km). The new line runs adjacent to the QR from Koumala for 13 km and for the last 8 km to Karloo. The middle 23 km section is some distance to the east of the QR.

Rod Taylor (Plane Creek Central Mill) 1/95

QUEENSLAND RAILFAST EXPRESS, Woree 1067 mm gauge

Two Walkers DH-class B-B DH locos have reportedly been obtained from QR for use at the QRX yard at Woree, Cairns. These are 37 (619 of 1969) and 45 (627 of 1969), which have been painted white and carry the QRX logo.

Sunshine Express 12/94

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 104 p.7)

It is confirmed that plans are being made to construct a new bogie locomotive, with design based on the Prof B-B DH *Nyleta* (PSL 25.01 of 1990) as rebuilt by the mill in 1993. However, no definite decision as to when this will happen. Although not carried, *Nyleta* is officially number 13 in the loco roster while E.M.Baldwin B-B DH *Liverpool* (10385-1-8-82 of 1982) is officially number 12.

An equipment transporter wagon was noted in December, made from two bin chassis joined as bogies with a heavy frame above. The new Fairmont Tamper Model STM-XLC ballast tamper was due for delivery in February.

Editor 12/94

SUGARWORLD, Edmonton 610 mm gauge

This attraction continued to operate after the closure of Hambledon Mill in 1991 (see LRN 86 p.12) under the ownership of developers who leased it to Hugh and Donna Anthony. However, with the subdivision of the site, the park was expected to close in March 1995. Ex-Hambledon Mill E.M.Baldwin 4wDH 9109-1-9-80 of 1980 operated a passenger service here, and according to one report has continued to venture onto the now Mulgrave Mill tramway system.

Sunshine Express 12/94

TINBEERWAH MOUNTAIN RAILWAY, Cooroy 610 mm gauge

(see LRN 97 p.10)

In October 1994, a 15 m x 7.5 m workshop was constructed adjacent to the storage depot, with rail connection. Track upgrading has been carried out through the grey patch, and the S-bends on the mountain are being removed to facilitate the passage of the rail motor which is to be constructed later in 1995. All track at the old bush depot has been removed but a 30m siding still leads off the main line.

A Robert Hudson side tipping skip has been acquired from Victorian scrap dealer Don Wilson, who has retained three similar ones, alleged to have come from a mine in Bendigo 20-30 years ago.

Russell Savage 2/95

TULLY SUGAR LTD 610 mm gauge

(see LRN 104 p.7)

10 kilometres of cane railway is under construction at a cost of \$2.5m as part of the Murray River infrastructure project, which is receiving assistance from federal and state governments. New lines are being constructed to Stamp Road, Warrami Road and Murray Upper Road, each capable of further extension to tap additional cane assignments.

A visit in January revealed a bogie brake wagon under construction near the locoshed. A QR wagon is being used as the basis for this vehicle.

WHITE MINING LTD, North Goonyella narrow gauge

(see LRN 91 p.16)

An auction of equipment used in the construction of this underground mine took place on 5 October 1994. Auctioneers were Gray Eisdell Martin. Underground rail equipment offered included two 5 cu. m. concrete agitators, a passenger dolly car, a side tipping muck wagon, two flat top wagons and a Tamrock Jumbo twin boom underground drill.

Ray Graf 1/95

TASMANIA

EMU BAY RAILWAY 1067 mm gauge

(see LRN 86 p.15)

With the cessation of mining operations at Mt.Lyell on 15 December 1994, operations were expected to be discontinued on the Primrose - Melba Flats section.

All Walkers 11-class B-B DH locos have been fitted for driver only operation, and 1105 (642 of 1970) was the first to receive cab airconditioning. A program to refurbish all wagon stock is continuing with two vehicles completed per month. Work involved includes refurbishment of frames and bodywork, and repainting.

ARHS Bulletin 12/95

Mt.LYELL ABT RAILWAY SOCIETY 1067 mm gauge

(see LRN 104 p.12)

Moves towards a possible rebuilding of the famous railway have reportedly extended as far as approaching the Puffing Billy Preservation Society and the Tasmanian Transport Museum Society with enquiries as to the availability of the Abt 0-4-2T rack locomotives they hold: ABT No.5 (North British 24418 of 1938) and ABT No.2 (Dubs 3594 of 1898) respectively. ABT No. 1 (Dubs 3369 of 1896) is at Zeehan and ABT No.3 (Dubs 3730 of 1898) is at Queenstown.

ARHS Bulletin 12/94; Editor

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm gauge

(see LRN 102 p.15)

Work has continued on the dismantling of the boiler fittings, cylinders and motion of Hudswell Clarke 0-6-0 1098 of 1915. The boiler was inspected on November 14th and passed for 150lbs pressure. The cab has been removed, and steel is on order for the construction of a new footplate. It is obvious that a downward dip of the frames under the cab was caused by a past collision and remedial attention is required for cosmetic rather than mechanical reasons.

The regulator of John Fowler 0-6-0T 11885 of 1909 has been refurbished and its boiler has been passed for 120lbs. Kelly & Lewis 0-6-0DM 4721 of 1935 continues in regular use for mid-week bus tours. Malcolm Moore 4wDM 1098 of 1943 needs new tyres. Motor Rail "Simplex" 4wDM 10058 of 1948 now carries out almost all shunting and work train duties.

Possible future plans for the site include a new locomotive depot and turntable to be accessed from a new line to be laid behind the existing goods shed.

Timberline 10/94 & 12/94 via Ray Graf 1/95

BASS VALLEY RAILWAY 610 mm gauge

(see LRN 98 p.14)

It would appear that between 13 December and 27 December 1994, a large

pile of track and loose rail arrived at a site on the road which passes between the Bass Station Restaurant and the Big Worm tourist attraction. It can be assumed that this material will be used for the construction of the projected Bass Valley Railway, using equipment ex Cheetham Salt.

(see LRN 96 p.15)

Two Com-Eng Aresco *Trak-Chief* 4WDH road-rail units, numbered 1 and 2, have been displaced by Clyde Bo-Bo DE Y148 (65-414 of 1965) recently acquired from VR. They were advertised for sale late in 1994 and at least one has subsequently been noted at Leongatha (see elsewhere this issue).

Ray Graf 12/95

COAL CREEK HISTORICAL VILLAGE, Korumburra 762 mm gauge

(see LRN 91 p.18)

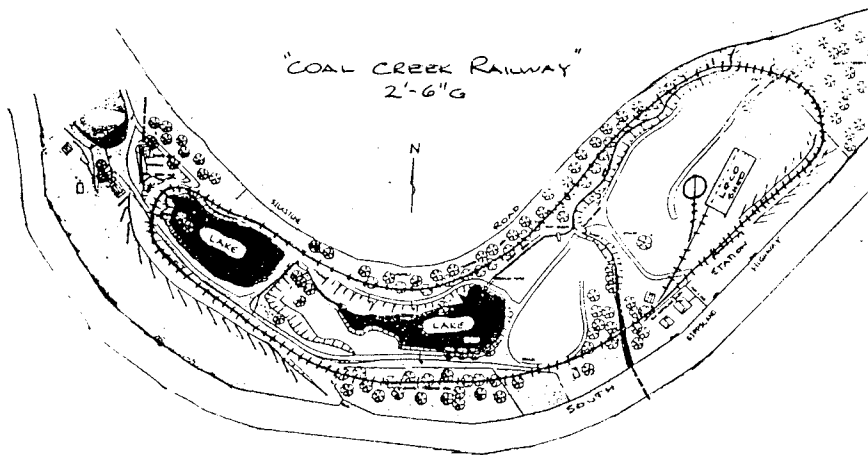

The Clarkat 2-2wPM *Coal Creek Tug* at Coal Creek, January 30th 1995.

Photo: Paul Simpson

A 2 ft 6 in gauge track has been laid at the Coal Creek Historical Village at Korumburra. On 1 November 1992, Puffing Billy's Peckett 0-4-0ST *Sir John Grice* (1711 of 1926) was at the village for the official opening of a short length of track which was attended by the Minister for Transport, Mr Brown.

Work continued over the years extending the track around the park to make up a loop approximately 1.5 km long. A large cutting has been made through the eastern corner of the property, and the line also makes two creek crossings and runs through a timbered area which will provide some shade as well as some great photographic spots. A shed has been erected with point work and tracks connecting it to the loop. The shed has one track with room for two others.

In February 1995 the Ruston & Hornsby 4wDM locomotive NRT1 (296058 of 1950) and the ballast hopper NQG3 were transported from Emerald to Coal Creek by low loader, to enable the track to be ballasted. Then the ETRB Plasser tamping machine, PTT 16, was sent up to pack the ballast and lift the track to the proper levels. February 18th/19th saw the Peckett and passenger car 16NBH back for the opening of the completed track, which is hoped to increase the flow of paying customers through the park.

Two privately owned NQR frames are to be refurbished at Emerald and sent away to have passenger bodies built and attached to the frames, which will then be delivered to Coal Creek, to be used as the passenger carrying stock.

On site is also a Clarkat luggage hauler converted for rail use (CK43470 built by Clarke Trutractor, Division of Clark Equipment Co., Battle Creek, Michigan, USA). Built to haul luggage trolleys at main line stations, it is appropriately named *Coal Creek Tug*. Several home made flat wagons were noted adjacent to it.

It was reported that regular steam train operations would begin early in 1995, using a locomotive on loan from Puffing Billy (presumably the Peckett) until the overhaul of the Coal Creek loco (Couillet 0-4-0T 90 of 1890 and/or Couillet rebuilt 2-4-2ST 43 of 1886? - Ed.), is completed.

Ray Graf 1/95; Paul Simpson 2/95; Hugh Markwick 2/95

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 104 p.15)

Locomotives 2-6-2T 7A is back in service. At the end of February, 2-6-2T 12A was out of service for DLI boiler inspection. Both Ruston & Hornsby 4wDM NRT1 (296058 of 1950) and the Peckett 0-4-0ST *Sir John Grice* (1711 of 1926) made a visit to the Coal Creek Historical Village in February, along with the tamping machine (see separate item above).

Gembrook Restoration The February work party completed sleepiering of the track between Fielder and Cockatoo. This track is not ballasted, and funds are not available to do this at present. The workparty in March is scheduled to lay track from Wright station to the recently rebuilt small Wright bridge, if funds are available. (Funds must be very tight at present, as this is a very short stretch of track.)

TACL Tractor Restoration The brake rigging is being refurbished, remade (where necessary), and refitted to TACL 4wPM 55 of 1928, under restoration by LRRSA and PBPS volunteers. It is necessary to complete the brake rigging before the engine can be replaced, due to difficulty of access once the engine is in place. As a matter of policy the team is trying to reuse as much of the original fabric of the machine as possible, but unfortunately some parts are beyond redemption.

Frank Stamford 3/95

THE GISBORNE DISTRICT STEAM & ENGINE SOCIETY 610 mm gauge

(See LRN 101, p. 18)

Perry 0-4-2T loco 9 (9737-45/1 of 1945) was viewed, recently restored and in steam, at The Gisborne Steam Park, Webb Crescent, New Gisborne in November 1994. Some lining along the tanks and cab will complete the loco externally. The Perry can be seen operating at the annual Steam & Vintage Engine Rally organised by the Gisborne District Steam & Engine Society Inc. on Sunday 21 May, 1995. Other attractions at the Rally will be 7¼ inch gauge live-steam train rides, a Fowler steam roller in action, vintage machinery and vintage cars and trucks.

Neil White via Frank Stamford 3/95

LEONGATHA 1600 mm gauge

Com-Eng Aresco *Trak-Chief* No.2 was seen parked on the rails in the railway station yard on December 28th 1994. This unit was number 2 at BHP Long Island (see elsewhere this issue) and was previously at BHP Acacia Ridge in Queensland. Its present owner is unknown, but it was said to have been used by a contractor pulling up the line beyond Leongatha.

Ray Graf 1/95

DEAN MARTIN, Gator Magoons, Ovens Highway, Porepunkah 610 mm gauge

This recreation centre set in a scenic position beside the Ovens River half a kilometre on the Bright side of Porepunkah is presently constructing a 2 ft gauge pleasure railway on a US "wild west" theme. Work commenced about August 1994 and completion is hoped for by Easter 1995. By December, the 0.75km continuous formation was complete, tracklaying had commenced and a locomotive nearly finished.

The 4-6-4PH steam outline loco is being built by Dean in his well-equipped workshop, and is essentially a scaled-up version of the "Denver & Western RR" 2-6-2 battery-operated model available in toy shops. Weighing over two tonnes, the engine is in the "smokebox" and drives through a hydraulic transmission with final drive to the wheels via chains. The front bogie wheels and drivers are flanged but the trailing bogie wheels are unflanged. The loco makes a "chuffing" sound thanks to compressed air escaping from the cylinders and has a realistic sounding whistle. Yet to be added were the "smoke producer" and genuine bronze bell. The tender and three "American" end balcony carriages were yet to be built.

The track, partly on Dean's land and partly on leased land besides the Ovens River has minimal gradients. The rails, of 30lb and 45lb/yd are ex Mackay Sugar, Cattle Creek Mill, as are a small tamping machine and a number of wheelsets. The tamper is Matisa (Switzerland) 7665 of 1967 (ex Australian Army), and it will be used for packing ballast and aligning the redgum sleepers being cut at Howlong, NSW. A lengthy embankment has been created using mullock from former mining activities along the river. A tunnel, bridge, water tower and miniature "western" town will eventually add to the theme. Dean wishes to purchase more rail and can be contacted at PO Box 523, POREPUNKAH 3740.

Phil Rickard 12/94

JIM PURTON, Lalor Street, Ballarat 762 mm gauge

(see LRN 102 p.17)

A visit on 27 November 1994 revealed just six ex-MMBW locos stored for resale. These seem to be as listed in LRN 100 except that the E.M.Baldwin 4wDH numbered 46 (tentatively identified as 6700-1-4-76 of 1976) had gone. (The E.M.Baldwin 4wDH previously identified as 5366-4-5-74 of 1974 appears to carry the MMBW number 3273035 - Ed.)

Craig Wilson 2/95

ROYAL AUSTRALIAN ARMoured CORPS TANK MUSEUM, Puckapunyal 915 mm gauge

(see LRN 101 p.18)

On a visit on 12 December 1994, it was ascertained that a battery target trolley was held but not on display. However, the unit was located at the store and repair yard where the vehicle stood in the open. It is a battery-powered inside-framed four-wheeled flat vehicle with steel plated deck to which the target was attached. Approximate dimensions are: wheel diameter 450 mm, wheelbase 1m, height of top 600 mm, width 1.2 m, length 3 m over the pointed ends. The vehicle is painted red but green paint is visible below the red. An electric motor is mounted between the frames at one end; details are Metropolitan Vickers Co. Ltd 15 bhp, 230v dc.

It is planned to restore the target trolley and position it on rails for display. Some control apparatus is also held. Further information is being sought on when the system was last used and about the current system in use.

Phil Rickard 12/94

WODONGA 1435 mm gauge

A steam locomotive was reported at Wodonga by Jim Jaworski in January 1995. An inspection on 8 January found it visible, through two fences, from the Victorian Roads car park off the old highway. Tentative identification is Andrew Barclay 0-6-0T 1470 of 1916 ex Portland Cement. It appears dumped, without wheels, axles and motion.

Ray Graf 1/95

WESTERN AUSTRALIA

BROOME HISTORICAL SOCIETY 1067 mm gauge

The Broome Historical Society operates their museum in the old customs house adjacent to the old Public Works Department rail depot, and was

visited in August 1994. In the outside display is an old unidentified 4-wheel rail wagon and some wheelsets. The wagon has two 1880 WA Ry Britannia Works Birmingham axle box covers and one 1885 WA Ry M.R.C&W Co, Saltley Works, Birmingham cover. The Society will be taking over the old rail yard for expansion of outdoor displays. It is intended to retain the depot remains which include passenger and goods platforms. The four-wheel coach 'preserved' in Bedford Park (see LRN 65 p.18) is to be moved to the museum.

The society is planning to relay a railway within the townsite, probably from the former depot towards Chinatown. A diesel loco may be constructed from parts existing in the Kimberley. There are considerable rail wagon remains in scrap heaps within the PWD depot (though with the vegetation cover it is impossible to identify parts) and the society hopes they can use some of these for rolling stock construction.

There is now no wagon on the 2 ft gauge Streeter's pearling jetty tramway (see LRN 96 p.17) and the old shed at the shore end of the tramway has been demolished.

David Whiteford 2/95

WYNDHAM - EAST KIMBERLEY SHIRE COUNCIL 1067 mm gauge

(see LRN 65 p.19)

The railway display at the port was viewed in August 1994. It consists of two lines, the longest being approximately on the old town rail alignment and the other at right angles to it. The following items are to be found: Com-Eng 4wDH PW26 (GB1046 of 1960), a 4-wheel crane with BHP frame, a 4-wheel low side wood frame & deck wagon, G(3?)507 & 15 (steel frame wood deck low side wagons), steam crane by Jessop & Appleby, Leicester; Hudswell Clarke 0-6-OST *Preston* (379 of 1891) and wagon 16.

A bogie steam crane by Herbert Morris Ltd, Loughborough (7 ton maximum lift) sits in the dirt near the Marine & Harbours (ex PWD) depot, and inside the depot is the 1912 0-6-OPM New Century loco *Kaiser*, which has been rescued from a Kununurra park. This loco is destined for display with the other items and had been waiting some months to be sandblasted by Marine & Harbours prior to repainting. Also in the depot is wagon 52 (steel frame and deck) and around the depot and its mangrove boundary are many piles of scrap rail and wagon pieces.

Very little remains of the actual port rail system as industrial and transport developments are on former rail and depot land. However, there is a railway crossing sign on one of the jetty access roads, and the southern jetty approach track exists from near the goods yard boundary to the jetty. In addition all tracks remain on the jetty itself. Former goods sheds are incorporated into

other transport depots and have been structurally modified.

Little remains of the older Anthon landing tramways. Remains of the landing piles can be seen at low tides, and remains of former stockyards with rail line fencing still exist. As well as a line connecting Anthon with the later Wyndham port, there also was a line to a quarry behind the old town. A little skip rail can be seen in the quarry.

David Whiteford 2/95

ROTTNEST ISLAND RAILWAY TRUST 1067 mm gauge

(see LRN 102 p.19)

Rottneſt's second locomotive with carriage *Quokka* approaches Oliver Hill in January 1995.

Photo: Donald Whiteford

A visit here in November 1994 saw the railway in operation from the terminus "Settlement Station" to the "Oliver Hill" station, with the timetable showing four trains per day. The journey time including an inspection of the Oliver Hill gun emplacement requires two hours. The last trip of the day does not include the gun inspection.

The loco observed in November is ex WAGR 4wDH shunting tractor ST1 on loan from the ARHS Bassendean Railway Museum, painted blue and green. By January, the second unit had arrived, also an ex-WAGR shunting tractor.

Two open bogie carriages are in service, *Quokka*, painted blue and *Osprey*, painted green. Push-pull operation is used, with the locomotive capable of being operated between the two cars if necessary, as on the opening day, 3 July 1994. The track grade is almost level except for a steep section at Oliver's Hill.

The new line is on the original trackbed using second hand rail donated by

Westrail and sleepers supplied by Bunnings at cost. The seven kilometres of restored track were laid in just six weeks by 45 volunteers, with an additional new section of one kilometre added between Kingstown Barracks and the Thomson Bay settlement.

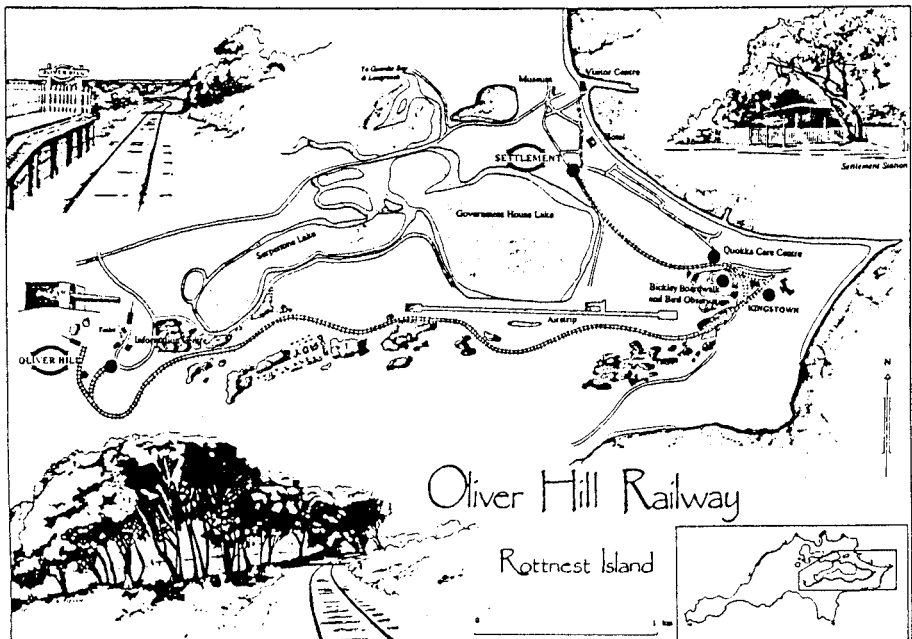

There is no siding for the locos or cars but the train rests on the “barracks” end of the triangle near Kingstown Station.

A spur line to Gun H2 at Oliver Hill has been laid but was not yet in use in January. When the gun is restored, passengers will be able to take the train up to one gun, view that and then walk the tunnels connecting it with the other gun where the train will be reboarded.

It has even been suggested that passengers will one day be able to travel through the narrow tunnels by rail.

It is anticipated that two purpose-built diesel electric tramcars will be in service on the line in the next couple of years.

CHRISTMAS ISLAND

PHOSPHATE RESOURCES NL 1435 mm gauge

(see LRN 65 p.19)

General Electric B-B DE 9402 near Drumsite, Christmas Island, March 1994

Photo: Greg Stephenson

A visit in February and March 1994 enabled inspection of the railway relics associated with phosphate mining operations on the island. Current mining activity consists of reworking the previously mined areas to recover discarded overburden material. Rubber-wheeled transport is now used. Railway tracks have been largely removed with only a short section at Drumsite remaining. This is near some of the disused phosphate dryers and includes a substantial steel and concrete bridge above the roadway. Drumsite derives its name from the winding winch which was formerly used on an incline from the upper terrace to the wharf at Settlement. This incline has long been superseded by a conveyor system, although remains of it can be seen, obscured with water, sewage and stormwater pipes, and concreted up to rail level to act as a drainage channel.

Sections of rail embedded in concrete are being removed as part of wharf area reconstruction. The former loco shed and workshop at Drumsite is now used as a heavy equipment workshop. Six diesel-electric locos and three other items of rolling stock remain on the island with the rest having been scrapped.

Opposite Drumsite School adjacent to an old platform, a B-B DE loco and

three vehicles are “preserved”. The loco is numbered 9401 and the diesel engines, generators and traction motors have been removed. It carries a plate:

**GENERAL ELECTRIC REMANUFACTURED BY F.R.TULK & CO PTY LTD PERTH
WESTERN AUSTRALIA SERIAL No.17933 F.R.T.No.OT11604 CLASS B-B-88/88 DATE 17.8.79
4 GE 733 MOD 763 H.P. 440.**

(This is ex NSWGR 7920 - see LRN 44 p.14 - Ed.).

The rolling stock is a 4-wheel tank wagon numbered 9303, bogie hopper wagon 9281 and a bogie flat. The hopper wagon carries a plate;

**MANUFACTURED BY TOMLINSON STEEL LIMITED
PERTH WESTERN AUSTRALIA.**

On an isolated section of track near the Drumsite Workshop is located a second B-B DE loco, 9402 (ex NSWGR 7923). The loco appears complete and has been partially repainted. It is similar to 9401 but is fitted with two Caterpillar Model 3306 PC diesel engines coupled to GE generators. Westinghouse braking equipment is fitted. It is understood that this loco was used in the dismantling of the railway.

Further to the south west beyond the phosphate dryers and the island's power station are four locos located on isolated sections of track. These appear to be B-B DE also, and were becoming engulfed in prolific vegetation. They carry no identification plates. 8901 and 8902 are said to be Whitcomb locos and 9001 and 9002 were referred to as “Canadians”.

8901 and 8902 were fitted with two 8-cylinder Model D17000 diesel engines, Type 195-A Westinghouse DC generators and Gardner-Denver vertical air compressors. Markings inside the cab indicate that the previous numbers of these locos were V911 and V912 respectively. 9001 has two Model D326F 6-cylinder 176hp Caterpillar diesel engines and Type 193-PC Westinghouse DC generators. 9002 has two Model D326P 6-cylinder 184hp Caterpillar diesels. Further details regarding the origin of these locomotives would be of interest; scrap appears to be their most likely fate.

Two interesting publications on life on Christmas Island which includes aspects of the railway operations have been published by Bruce Neale, 5 Rolfe Place, CHAPMAN 2611. These are *We were the Christmas Islanders 1906-80* by Margaret Neale, 1988, and *Christmas Island The Early Years 1888-1958* by Jan Adams & Margaret Neale, 1993.

Greg Stephenson 1/95

MEETINGS NOTICE

As John has already indicated this issue has been delayed because of the need for John to travel to England to attend his father's funeral. I'm sure all

members will join with Council in extending our sympathy to John and his family on this sad event.

All meetings covered by this issue have been held so there is little point in providing details of entertainment items etc. Another issue of LRN is due shortly. Details of future meetings will be listed as usual.

EDITORIAL

A number of questions have been asked about the editorial policy for inclusion of material in LRN. It was developed to mirror the longstanding practice of *Light Railways*. Included are all industrial railways (including private sidings), except the heavy haulers of the Pilbara. Included are all government-owned railways which were not part of a government railway system (eg PWD, Marine & Harbors). Included are the "narrow gauge" lines of government railway systems: i.e. narrower than the gauge(s) which were standardised for that state: Victoria 2 ft 6 in; Queensland & Tasmania 2 ft All preserved equipment from the above lines and any such lines which have been preserved (eg Puffing Billy, Rottne Island) are included. Railways down to 15" gauge will generally be included: miniature railways are sometimes included in LRN when space availability allows. Electric street tramways are excluded, as are preserved ex-government railway lines and preserved equipment from government railways, although government equipment sold for industrial use is included. The emergence of "privatised" lines ex-government railway systems is a new phenomenon. These lines will be excluded, although the idea of the Silverton Tramway Company becoming the operator of a privatised line does pose a challenge.

LRN reports can be submitted on computer disk. Most word processor formats acceptable. Disks returned.

NOTES, CORRECTIONS AND COMMENTS

AUSTRALIAN RAILS TO TRAILS

This organisation has been set up to preserve disused rail corridors for alternative public uses such as cycling, horse riding and bush walking. Enquiries to PO Box 223, East Melbourne 3002.

MULGRAVE SUGAR MILL

A centenary publication is available from the mill (PO Box 21, Gordonvale 4865) for \$24 including postage.

BURDEKIN SHIRE HISTORY

Black Snow & Liquid Gold by John Kerr can be obtained from the Shire Council (PO Box 974, Ayr 4807) for \$32-60 including postage.

A MILITARY MYSTERY TOUR

A 2 ft gauge Orenstein & Koppel 0-4-2T was brought back to Australia from war service in Palestine at the end of World War I. It was displayed in the Melbourne Exhibition grounds only to be sold for scrap in 1937. This article by John Browning tells of its story and is published in the *Industrial Railway Record*. A number of Australian War Memorial photographs are featured. Available at Stg£2.50 (surface mail) from R.V.Mulligan, Owls Barn, The Chestnuts, Aylesbeare, Exeter EX5 2BY, UK.

RESEARCH COLUMN

RAILWAYS IN PAPUA NEW GUINEA

Michael Pearson and Bob McKillop are working on a book on Papua New Guinea's railways. They would like to be contacted by any researchers who have material available which could be of assistance. Of particular interest would be information on recent movements of railway material to PNG, information from Commonwealth railway records from about 1910 to 1937, and information from Queensland railway records from 1884 to the 1930s. Please write c/- the LRN Editor.

LOCOMOTIVE, ROLLING STOCK & EQUIPMENT MANUFACTURERS

BUNDABERG FOUNDRY ENGINEERS LTD

It is reported that Walkers B-B DH locos being rebuilt for 2 ft gauge use

at the Bundaberg Foundry are sent on commissioning trials at Bingera Mill before acceptance for delivery.

CLUTHA LTD, Oakdale & Brimstone Collieries 1067 mm gauge

(see LRN 96 p.8)

Clutha Ltd was placed into voluntary administration in February 1995 after rising gas levels severely curtailed coal production at its two south coast collieries. At the end of March employees agreed to take holidays without pay and long service leave in an attempt to save the company from closure.

Sydney Morning Herald 28/3/95 & 30/3/95 via Ray Graf

THE MANILDRA GROUP, Manildra 1435 mm gauge

(see LRN 88 p.10)

Walkers B-B DH 7340 (702 of 1972), in yellow and dark blue livery was noted on shunting duties at Manildra by Harry Wright on 14 May 1992. When the site was visited by Ray Graf on 22 April 1995, this loco was at the headshunt behind the bowling green, possibly stored out of use. Another

loco, numbered MM01, was observed with gleaming paint adjacent to the loading bank in the mill area. This is reportedly Clyde ex SRA Co-Co DE 4907 (62-257 of 1962), delivered on 20 January 1995. Both locos have GEM OF THE WEST painted on the end of the short hood. A second new loco, 4903 (60-223 of 1960), was reportedly in an advanced state of rebuilding at that time. Manildra is also stated to own 4904 (60-224 of 1960) and 4909 (62-259 of 1960). [Where will they be stationed and what happened to 7329 (Walkers 691 of 1972), 7334 (696 of 1972) and 7335 (697 of 1972) purchased in 1991/2? - Ed.]

H.J.Wright 6/92; Ray Graf 4/95; ARHS Bulletin No.691

Manildra's Walkers B-B DH 7340 shunting at the Manildra Mill on 14 May 1992. This unit has apparently been made redundant by the arrival of Clyde Co-Co DE loco 4907 in the guise of MM01 in early 1995.

Photo: Harry Wright

RICHMOND VALE PRESERVATION CO-OPERATIVE SOCIETY LTD, Richmond Vale Railway Museum 1435 mm gauge

(see LRN 88 p.11)

Ex-South Maitland Railways Beyer Peacock 2-8-2T locos 24 & 25 (6125 and 6126 of 1922) were advertised to be in use hauling trains at Pelaw Main at *Steamfest '95* on 8 and 9 April . Subject to official approval, Clyde 0-4-0ST *Marjorie* (462 of 1938) was also to be in use, on a short section of line reconstructed parallel to the still active main coal line of the SMR at Weston.

Ray Graf 4/95

THE SILVERTON TRAMWAY CO LTD, Broken Hill 1435 mm gauge

(see LRN 90 p.9)

A number of SRA locomotives were purchased at auction on 6 December 1994. Six were A.E.Goodwin 48-class Co-Co DE locos similar to the existing fleet delivered to Silverton or acquired from ANR. These are 4811, 4815, 4825, 4829, 4838 and 4843. There are also four A.E.Goodwin 442-class Co-Co DE locos which may be intended for privatised use on the Tarana - Oberon line. These are 44202, 44203, 4217 & 44220.

ARHS Bulletin No.688 via Ray Graf

TRACTION & VEHICLE RESTORERS ASSOCIATION INC, Marsden Weir Steam Museum, Goulburn 610 mm gauge

(see LRN 94 p.9)

Noted at the former Goulburn Steam Museum on 29 January 1995 was a Fowler 0-4-2T with *BFC* painted on the front. Fowler builder's plates 17882 are reportedly carried. This number is not a Fowler loco builder's number. (Presumably this loco is Fowler 16340 of 1924 rather than 17881 last reported at Timbertown Wauchope - Ed.) Also present was a F.C.Hibberd Planet 4wDM with chassis number 1348 of 1954, which indicates it is B/n 2388 of 1954 rather than the 2380 carried on the engine covers. [What has happened to Krauss 0-6-0T *Stella* (4323 of 1896) which was here dismantled in 1992?- Ed.]

Two extra tracks have been laid in a widened loco shed, one a 2 ft gauge display / work line and the second standard gauge. A third rail has been added to part of the 2 ft gauge tramway, apparently for trolley use, but uses light rail which is rusted, worn and kinked with few sleepers.

Steam operation is advertised for the first and third weekend of the month.

Ray Graf 5/95

LUCKNOW

The Lucknow Wentworth gold mine site east of Orange was sold at auction to Bantela Pty Ltd of Sydney in March, in spite of the opposition of the local historical society. The site, which has had a heritage protection order put on it, features the headframe of the main Wentworth shaft. It is not known what tramway relics remain on site.

Midstate Observer 30/3/95 via Ray Graf

QUEENSLAND

QR DISPOSAL OF DH CLASS LOCOS

Queensland Railways disposed of eleven Walkers DH class B-B DH locos by tender in April. The units were DH24 (B/n.606), DH25 (607), DH29 (611), DH35 (617), DH36 (618), DH40 (622), DH41 (623), DH43 (625), DH46 (628), DH47 (629) all of 1969, and DH59 (646 of 1970). Many of these were in indifferent condition with parts removed but all have been purchased for regauging and reuse. Disposal for cane railway use is reported to have been as follows: Bundaberg Sugar, Mulgrave Mill, Tully Sugar, Proserpine Mill, CSR Ltd (2), Mackay Sugar's Racecourse Mill (DH25), and Isis Mill (all for conversion to 610 mm gauge). In addition the Emerald Tourist Railway Board purchased DH59 for conversion to 762 mm gauge and two units were sold to Cook's Construction, Yallourn for conversion to 900mm gauge.

BABINDA SUGAR LTD 610 mm gauge

(see LRN 105 p.10)

Plasser KMX-12T ballast tamper 249 of 1982 was noted at Babinda, on loan from Mourilyan Mill, on 29 March.

Chris Hart 4/95

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 105 p.11)

Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) was scheduled to operate return trips between the mill yard and Halifax, where temporary stations were set up, as part of the Italian Festival from 6 to 12 May. Departure and return times at Victoria Mill were scheduled to be 9.00 - 11.35am; 12 - 2.35pm and 2.45 - 5.20pm. Only the first two trips were scheduled for 6 May. The one-way journey time was about 50mts, and when bookings justified it, half the passengers travelled to Halifax by bus and the other half by train, swapping over for the return journey. An oiling-up stop was made at Brae Meadows

in each direction. The loco faced Lucinda at all times but ran around its two carriages at the mill and at Mahoney's loop, Halifax. As there was no provision for trips originating at Halifax, shuttle trips were operated back towards Victoria Mill as far as the Macknade triangle on 7 May at least.

Approximately the first mile of Macknade Mill's western line is being deviated this slack season. The objective is to straighten the route of the line and eliminate two level crossings. Two sidings in this stretch will be replaced by one large one.

On 6 May Victoria Mill's Hansen 4wPMR linecar L CAR 2 (56 of 1972) was seen leaving the mill on the back of a road truck, and was later seen on the rails at Coldwater near Abergowrie. This is often done when track has been lifted and a unit is needed on the isolated section.

Most Victoria Mill units now seem to be running in the new livery of yellow with a jade stripe. Those still in the old livery observed on May 6th were:

	4wDM	Motor Rail	11255	1964
Canberra	0-6-0DH	Clyde	65-433	1965
Albany	0-4-0DH	E.M.Baldwin	6-1792-1-11-66	1966
Hobart	0-6-0DH	E.M.Baldwin	4413-1-7-72	1972

while E.M.Baldwin 4wDH (*Hambledon*) is still in yellow with a very wide green band.

At Macknade Mill, a majority of locos were in the yellow and jade but those seen in the old livery were:

12	0-6-0DH	Clyde	65-434	1965
16	0-6-0DH	Clyde	DHI.1	1954
17	0-4-0DH	E.M.Baldwin	6-1446-1-9-65	1965

Clyde 0-6-0DH 11 (65-383 of 1965) is undergoing a heavy rebuild including receiving a new GM 92 series turbocharged V6 engine.

*Herbert River Express 2/5/95 via Chris Hart; Chris Hart 4/95, 5/95;
Editor 5/95;*

HAUGHTON SUGAR CO LTD, Invicta Mill, Giru 610 mm gauge

(see LRN 105 p.12)

The ex-QGR Walkers B-B DH (655 of 1970) delivered in March is named *Clare*. It appears that at least one new bogie brake wagon has been constructed this slack season. It appears to be similar to the one built by the mill last year.

Editor 5/95

ISIS CENTRAL SUGAR MILL CO LTD 610 mm gauge

(see LRN 103 p.9)

Isis Mill is understood to have taken delivery of its Plasser KMX-12T tamping machine.

Bob James 5/95

JOHN HOLLAND CONSTRUCTION & ENGINEERING PTY LTD 610 mm gauge

See PLANE CREEK CENTRAL MILL CO LTD, Sarina

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 105 p.13)

By mid April, the first section of Racecourse Mill's Balberra Tramline complete with sidings had been constructed for the 1200 m from its junction with the Munbura line to the QGR crossing, with an additional 100 m built beyond the crossing. Site work had yet to commence on the installation of a "drawbridge" crossing of the QGR main line. 450 m of trackbed had been completed beyond the end of track with surveyor's pegs beyond for a further 1150 m.

It is reported that the Bundaberg Foundry will be completing the rebuilding work on the Walkers 73-class locos for Farleigh and Marian, with delivery scheduled for August. The shortened frame of 7345 (707 of 1972) was noted still at Marian on 17 April, but that of 7330 (692 of 1972) was not in evidence at Farleigh a few days later.

Engine replacements this slack season include the fitting of GM 92 series V6 engines with electronic control into Racecourse Mill's Clyde DHI-71 0-6-0DH *Sunnyside* (57-160 of 1957), Pleystowe Mill's Clyde HG-3R 0-6-0DH *Pleystowe* (64-321 of 1964) and Farleigh Mill's Clyde HG-3R 0-6-0DH *Conningsby* (61-232 of 1961). Although the model HG-3R was originally fitted with a V8 engine, the DHI-71 had a 71 series straight six. These motors are no longer manufactured by GM, so the V6 fitted to *Sunnyside* will be rated down as far as possible, to 275hp. The V8 motor ex *Conningsby* has reportedly been resold to Racecourse Mill for fitting to Com-Eng 0-6-0DH *Oakenden* (FB3169 of 1963).

Farleigh Mill's early Com-Eng 0-6-0DM locos *Richmond* (A1308 of 1955) and *Ashburton* (A1614 of 1956) are expected to be withdrawn from cane haulage duties from the 1995 season. They will probably be allocated for navvy use.

It is reported that a new branch line to Wewak, past Calen, is to be constructed off Farleigh's north coast line for the commencement of the 1996 season.

A long rail welding system has been established at Farleigh Mill. 100 m lengths of rail are made up, and a set of nine 4-wheel bolster wagons has been provided to transport the lengths to site.

Paul Aslette 4/95; Brian Mather 5/95; Editor 4/95

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 105 p.14)

The two new locos rebuilt from ex-QGR Walkers DH-class B-B DH units were in Mackay overnight on 14 -15 April during road delivery. The locos did not carry any mill identity but did have Bundaberg Foundry rebuild plates stating they were DH13 (595 of 1968) and DH31 (613 of 1969). Livery is as described in LRN105 but with white sandboxes and handrails, black fuel tanks and frames and black brake cylinders, springs and axleboxes on red bogies.

It is reported that one of these locos will be used on the line to the south. The other is reportedly to run to Redlynch (where the ex-Hambledon Mill tramway crosses the QGR under a low bridge) to pick up a load and bring it over the Brimsmead Gap to loops at Edmonton. It will then return to Redlynch to bring a second load right back to the mill. It is said that a trial last season using double-headed Clyde HG-3R locos to haul a long rake over the Brimsmead Gap pointed out the necessity of having strong couplings!

PETER S PHILLIPS, Pros Vegas Sugar Estates, Proserpine

This gentleman proposes to build a tourist attraction incorporating a 2 ft gauge railway and has investigated a number of possibilities for locomotive and rolling stock purchase. He can be contacted at PO Box 1, Hamilton Island 4803.

Editor 4/95

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 105 p.14)

John Holland are contractors for Plane Creek Mill's southern cane railway construction. They have established a depot in Sarina, just north of the mill's navy depot at the Flat, where materials are stored and lengths of rail are welded together into 120 m lengths before transport to site, from Koumala south.

Positions for two "locomotive operators" were advertised by John Holland in late April and two 0-6-0DH locos have been hired from the mill for construction duties. They are D1 (56-101 of 1956) and 11 (70-709 of 1970) which were noted at Koumala on 15 May. By that time, a few hundred metres of track had been laid, and ballast and sleepers were in place for the placement of rails

for a few kilometres beyond. Substantial bridgework has been completed at Little Station Creek and Rocky Dam Creek, but it is said that much more remains to be completed, especially south of Ilbilbie, although earthworks construction has been forging ahead, and bridge foundations laid.

The mill's first DH-class rebuild arrived from the Bundaberg Foundry on 3 May and the second about a week later. The third was expected to follow within another week or so. Seen at the mill on 15 May were two locos, neither with any mill identity but carrying Bundaberg Foundry rebuild plates stating they were DH48 (630 of 1969) and DH64 (651 of 1970). These were finished in a yellow livery with green bonnet top and upper part of cab, which means that the mill's current blue livery may be on the way out. It has been suggested that the new locos will be receiving names.

Hansen 4wPMR line car 1314 of 1975 was receiving attention in the loco shed.

The diamond crossing with the QR on the Turnor's Paddock line at Koumala was removed after the 1994 crushing season, leading to conjecture that it might be replaced by a drawbridge crossing. However, it appears that the diamond will be restored for the 1995 crushing.

COAL CORPORATION OF VICTORIA, Yallourn 900mm gauge

(see LRN 101 p.16 and LR 82 & 84)

See COOKS CONSTRUCTION, Yallourn

COOKS CONSTRUCTION, Yallourn 900mm gauge

(see LRN 99 p.12)

On Tuesday 4 April, 1995, Bill Ferris and Peter Medlin visited the former SEC Yallourn site and detailed notes concerning the 900 mm gauge rolling stock

were made.

Former Queensland Railways DH Class B-B DH locos CC 03 (DH56) and CC 04 (DH28) (Walkers 643 of 1970 and 610 of 1969) were in use.

CC 04 had been previously listed in 1993 as stored at Dandenong. It is believed that CC 01 (DH4) and CC 02 (DH5) (Walkers 586 and 587 of 1968) were in use on the Inter Connecting Railway, but were not sighted. It is understood that two further DH-class units were purchased by tender from QR during April.

Bo-Bo WE locomotives 122 *Mighty Mouse*, 123 *Electric Blue* (Henschel & Sohn 29859 & 29860 / Siemens-Schuckert 6109 & 6110 of 1962) and 125 *Thunderbird* (Hitachi 102 of 1967) were noted stored in a poor condition out of use. These are believed to have been allotted to various groups for preservation, one believed to be going to the ARHS Museum. Bo-Bo WE loco 37 (SEC Yallourn 3 of 1942) has been at the ARHS Museum since 1985. Whilst not seen, John Fowler 0-6-0DM 12 (4210050 of 1951) is now in use by Skilled Engineering which is located on the site.

Of the 200 series four wheel ballast hopper wagons, numbers 201, 202, 204, 207, 208, 209, 210 and 211 were noted on site. Numbers 209, 210 and 211 had been fitted with extended ends presumably to increase their capacity. Number 206 has been converted to 762 mm gauge, and was noted on the Walhalla Goldfields Railway on Sunday 12 February, 1995. Numbers 203 and 205 are still 900mm gauge, stored at a WGR Morwell site waiting gauge conversion.

None of the 300 series coal hopper wagons were noted and it is believed that these have all been scrapped. The 400 series overburden wagons were believed to have been scrapped by 1984 except for four converted to flat wagons. The 500 series overburden wagons were all converted to 600 series wagons sometime before 1984. None of the eighty 600 series coal hopper wagons were noted and these are also presumed to have been scrapped except number 637 which has been at the ARHS Museum since 1985.

Of the ninety-two 700 series coal hoppers, one set of cars (hailed by CC 03 and CC 04) was noted, with further cars (some in poor condition) stored nearby. Wagons not seen were 704, 705, 707, 708, 709, 710, 713, 719, 725, 726, 728, 731, 733, 737, 738, 745, 751, 752, 759, 761, 762, 763, 764, 766, 769, 770, 775, 779, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790 and 792. Of these wagons, nine are believed to have been allotted to the WGR and one set of cars (hailed by CC 01 and CC 02 - not sighted) would be included in the above. The others are presumed to have been scrapped.

The five Track Shifters, four maintenance wagons and two Overburden Dump Ploughs were not sighted and are also believed to have been scrapped.

Only one flat wagon, believed to be one of the four converted from the 400 series wagons, was noted.

The Walhalla Goldfields Railway passenger carriage NBW 2, built on a 700 series underframe was noted nearing completion by Skilled Engineering at the site, requiring a small amount of painting and the fitting of minor items. Currently it is being proposed that when this carriage is completed, it will operate on the 900mm Inter-connecting railway for a short while. Is this the first passenger carriage to operate on the ICR? Following this, NBW 2 would be bogie exchanged to 762 mm gauge and taken to Thomson for use with NBW 1. One proposal that has been suggested is for a tour group to travel from Melbourne to Morwell on the 1600 mm gauge, ride NBW 2 on the ICR on 900 mm gauge, and then ride NBW 1 on the WGR at Thomson on 762 mm gauge - in the one day. Time will tell if this proposal proceeds.

Peter Medlin 5/95

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 105, p.20)

Locomotives A Queensland Railways DH class B-B diesel-hydraulic loco, reportedly DH59 (Walkers 646 of 1970) was purchased by tender in April for conversion to 762 mm gauge.

From time to time rumours have circulated that the ETRB was looking at the possibility of getting an NGG 16 class Beyer-Garratt from South Africa. At a PBPS members' information night in April these rumours were made official. At this stage there has been no firm decision to purchase, but the idea is being investigated. At the same meeting it was announced that consideration was being given to converting one NA to oil burning, and/or fitting an experimental gas-producer firebox. The latter would enable effective use of a wider variety of coal. It is becoming increasingly difficult to get satisfactory coal of the right grade.

The ETRB has entered into some form of agreement with the owner of the ex-West Melbourne Gas Works locomotives *John Benn* (Couillet rebuilt 2-4-2ST 43 of 1886) and *Carbon* (Couillet 0-4-0T 90 of 1890), whereby the ETRB can use these locos on its own line. In return the ETRB will provide professional advice and assistance to the Coal Creek Historical Village railway. This assistance has already included the provision of Peckett 0-4-0ST *Sir John Grice* (1711 of 1926), the Tamper PTT 16 (Tamper 381 of 1988) and Ruston & Hornsby 4wDM NRT 1 (296058 of 1950), to the Coal Creek railway. It is therefore quite possible that in the future *Sir John Grice* and *Carbon* might be seen double-heading on the Gembrook railway - a deeply moving sight for

many light railway enthusiasts.

Gembrook Restoration On 18 April 2-6-2T 14A (Newport, 1914) crossed the newly-reconstructed small Wright trestle bridge only a matter of minutes after completion of the laying of the rails. At this stage the rails only extend about 100 yards beyond the bridge. On the weekend of 8-9 April the Cockatoo station yard was relaid, in its original form with two points forming one loop. All the sleepers have been fitted, but the track is not ballasted, nor is the track ballasted between Cockatoo and Fielder. When this section is ballasted, trains will run from a ballast dump at Cockatoo, rather than at Gembrook. The advantage of this is that it is a shorter haul; the disadvantage is that it is all on a 1 in 30 grade against the load.

Train Services From 15 July, it is proposed to run a mid-day "up-market" train from Mondays to Fridays, which will include the provision of lunch. This train seems to have been inspired by the highly successful "Commissioners' Specials".

Frank Stamford 5/95; Chris Hart 5/95

DEAN MARTIN, Gator Magoons, Porepunkah 610 mm gauge

(see LRN 105 p.21)

By January, 100 metres of track had been laid. The 4-6-4PH steam outline loco is powered by a GM 4 cylinder 2 litre (Starfire Holden) engine. It weighs 2.5 tonnes and is designed to haul a 6 tonne load on a 5 degree slope. Brakes are hydraulic on drive, with back-up hand brakes, as required by the Victorian Occupational Health & Safety Department. Bogie open carriages are under construction, with an air-brake system similar to modern road transport. Air will be supplied from a compressor and reservoir on the loco. In the distant future the line might be extended along the Ovens River for 5 km to Bright.

John Lawrence 5/95

SKILLED ENGINEERING, Yallourn 900mm gauge

(see LRN 99 p.13)

See COOKS CONSTRUCTION, Yallourn

STAWELL 540mm gauge

The miniature railway referred to in LRN 85 p.17 as being for sale in August 1991 is believed to be at a Koala park near Stawell. Any further confirmation of this would be grateful. The train consisted of a 4-2-0PM loco with two four wheel roofless carriages each seating eight people.

North Western Sewer Construction, Essendon 762 mm gauge**

(see LRN 103 p.12)

Transfield Construction's MMBW-built 762 mm gauge 4w overhead wire / conduit electric loco E with a train ready to be sent to the workplace at Afton

Street, Essendon, 16 December 1994.

Photo: Ray Graf

This site was inspected on 16 December 1994, and a number of locomotives were observed as follows. (Builder's numbers in brackets are taken from Editor's records)

No.	Type	Builder	B/n	MMBW No.	Notes
No.1	4wBE	Gemco	?	327/2/056	Gemco 5 ton (1)
No.2	4wBE	Gemco	?	327/2/023	Gemco 5 ton (2)
6	4wDH	Gemco	(287-90)	6	in use (3)
7	4wDH	Gemco	288-90	7	on surface (3)
8	4wDH	Gemco	289-91	8	under repair (3)
9	4wDH	Gemco	(290-91?)	9	service-able in trench (3)
10	4wDH	Gemco	291-91	10	mainten-ance (3)
E	4wWE/CE	MMBW	-		in use (4)
(1)	no battery box; out of use on surface				
(2)	battery box 6; out of use on surface				
(3)	15 tonne 93kW hydrostatic loco				
(4)	three-phase 50 cycle 415V. overhead wire / conduit locomotive				

(also equipped with cable reel) used for shunting

The rail operating area is an "open cut" or "trench" about four metres below ground level which leads into the underground tunnel. Rail access to this area is by crane. On the surface above was a variety of locomotives and rolling stock, with two locomotives (8 & 10) undergoing repairs / maintenance in the workshops.

The method of operation noted was for the electric loco to stand ready in the trench with a rake consisting of a bogie drop centre car (loaded with concrete tunnel segments), a four-wheel concrete agitator/pump car, and four bogie spoil wagons. When a phone message was received from the crew at the tunnel boring machine to mix the slurry for grouting the next set of tunnel sections, it was mixed and delivered by pipe to the concrete car. The train was then drawn forward by the electric loco. When the other, similar, train arrived at the tunnel mouth from the face, its diesel loco (in this case number 6) cut off, ran forward, and reversed onto the train placed by the electric shunter. In the meantime the electric shunter had cut off, run forward and reversed onto the newly-arrived train, which it propelled out of the tunnel ready for spoil unloading. The first train was then propelled to the working face by the diesel. Spoil was unloaded by the crane picking up the body of the spoil car and dumping its contents in the spoil area. After the first body was returned, the electric loco then spotted the next car and so on. Following this, the flat car was lifted out and loaded by forklift with concrete tunnel sections on the surface. After it had been returned loaded to the train, the concrete car was positioned and everything was ready for the next phone call from the working face.

Three sets of points are controlled remotely from a central location and large

coloured lights suspended from the bracing girders above the trench indicate the point positions.

Ray Graf 4/95

WALHALLA GOLDFIELDS RAILWAY 762 mm gauge

(see LRN 103 p.13)

Progress on the WGR continues, with track laying now in the Stringers Creek gorge approximately 350 metres past the Thomson River bridge.

A ballast wagon, 206, had arrived at the Thomson site by 12 February and a further 4-wheel flat wagon had arrived by 18 April to assist with track laying. Both are from the 900mm gauge SEC Yallourn railway converted to 762 mm

gauge.

Of interest, John Fowler 0-6-0DM loco 14 (4210052 of 1951) is currently fitted with the wheels from scrapped State Electricity Commission 0-6-0DM John Fowler 13 (4210051 of 1951). The wheels of 14 are stored by the WGR for future use.

Peter Medlin 5/95

WESTERN AUSTRALIA

HOTHAM VALLEY TOURIST RAILWAY (WA) INC 1067m gauge

(see LRN 104 p.17)

Most of the equipment used by this operation is ex-government railway main line stock and therefore generally escapes notice in LRN. However, one ex-industrial unit is Drewry 0-6-0DM SEC1 (2302 of 1950) which is currently awaiting repairs and a repaint at Dwellingup. This loco seems likely to have been built by the Vulcan Foundry for agents Drewry.

Pinjarra Steam Express March 1995; Editor

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC, Bennett Brook Railway, Whiteman Park 610 mm gauge

(see LRN 104 p.16)

Ex-WAGR 4-wheel van D33 has been regauged and fully restored by Lindsay Watson, and has been signwritten in traditional railway advertising style. The next regauging project is a bogie van which will become a dedicated brakevan with platform end, monkey boxes, a goods compartment and inter-coach access. A recently-arrived resident on the railway is an F.C.Hibberd Planet 4wPM. This is thought to be 3428 of 1949 which was delivered new to Whiteman's Brick Pty Ltd, Middle Swan.

Ken Watson 4/95; Editor

OVERSEAS - PAPUA NEW GUINEA

SANTA FE ENERGY RESOURCES (PNG) LTD, Paibuna-1 oilwell 610 mm gauge

A 2 ft gauge railway was constructed in April-August 1993 to serve the site of the Paibuna-1 oilwell. The well was sunk some 330 metres from the west bank of the Paibuna River and well into a tidal swamp. A railway was the best method for gaining access to the rig site. The line is supported on cross-braced wooden piles driven deep into the swamp. The rail, sleepers and

two flat cars were reportedly imported from Queensland and the line was initially winch-worked. However, this system did not prove suitable and so a 4wD loco was imported. (Judging from a photocopied magazine illustration, this appears to be possibly of German design and is fitted with a canopy for the driver - Ed.) It is reported that results from the well, drilled in 1994, were disappointing so it is not known if the railway still exists.

PNG Resources July-Sept 1994

(Energy Publications, Mt.Hawthorn, WA) via Michael Pearson 4/95

MINIATURE RAILWAYS

MELBOURNE STEAM TRACTION ENGINE CLUB 305mm gauge

At the National Steam Centre at 1200 Ferntree Gully Road Scoresby, a 12 in gauge railway is nearly completed. It is planned to have a track around the site, a distance of approximately 800 yards, with completion due in July 1995. The track uses 14 lb rail with 20 lb rail at the level crossings. There are presently two steam and one petrol-electric locomotives, plus four passenger carrying vehicles available on the site, with a live steam model of an R class locomotive under construction. One steam locomotive, a 4-4-2 tender unit, and the passenger stock was built in Melbourne in 1933-35 by a Mr Roberts and saw duty in the basement of Myers in 1948-49 with the locomotive made up to represent the Spirit of Progress. It was then, with a 60 ft circle of track, sent on the one day show circuit around the countryside. In 1960-61 it was operated by the Echuca Rotary Club, and in 1984 it was bought by the MSTEC and operated at its Wantirna site and then at the present site at Scoresby. In 1991 the wheel sets and underframes were altered to allow the set to run on straight track and the present layout construction began. The second steam locomotive is a 4-4-0 tender loco with the number 342 on the side.

MEETINGS

MELBOURNE

Ironbridge Gorge and the Industrial Revolution

Many will recall the excellent presentation on industrial archeology in Great Britain given by John McCutchan some time ago. At the June meeting John will again provide the entertainment with a similar presentation focusing on Ironbridge Gorge and, more generally, the Industrial Revolution.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 8 June at 8.00pm.

SYDNEY

Any member wishing to know details of the next meeting should call Craig Wilson on 024847984

LOCATION: Woodstock Community Centre, Church St Burwood

Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 28 June at 7.30pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-2969488

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 3 August at 8.00pm

EDITORIAL

A fair amount of comment was to be heard in the media and among railway circles about the refusal of an export permit for a 2 ft gauge Decauville steam locomotive recently (see LRN 105 p.17). What is to happen to this valuable item now? In spite of the rhetoric implicit in the legislation which allows the export of such items to be banned, nothing more is done by the Commonwealth Government to ensure they will be preserved here. Surely, funds should be available for such items to be acquired for a national museum or else to be restored by a genuine museum or preservation group. The affair also highlighted the paucity of groups or individuals with a genuine track record in preservation. Most locomotives of a similar age are, sadly, in a similar or worse state than the Decauville. This is not to condemn those who are actively involved in preservation, but unfortunately they are few and rely largely on volunteer effort. Hopefully their massive efforts to secure items for the future will be rewarded in time.

REPORTS WANTED

Members are encouraged to submit information for publication in LRN and also photographs, especially those featuring newsworthy events or subjects not previously featured.

Many sites, especially industrial, have not been reported for years. The NSW coal industry, which has undergone such massive changes in the past, is one area where reports would be very valuable. Another area of interest is all types of contractor's lines, of which tunnelling would be the most common.

Lastly, what about the press items you come across from time to time. LRN relies on members to cut them out and send them in, but only one or two correspondents are currently doing this. Your society needs you.

Reports on the current status of the following would be particularly welcome:

Austatrain, Murwillumbah, NSW (LRN 78 p.8) 2 ft gauge: was believed to have acquired Ruston & Hornsby diesel locomotives from Hayman Island by 1990.

Mountain High Railway (LRN 76 p.11) standard gauge: operated a tourist railway on the Tumut - Batlow railway line, NSW.

New England Antimony, Hillgrove, NSW (LRN 96 p.11) 2 ft and 1 ft 6 in gauge: no current report of operations at the various mines has ever been received by LRN.

CRA Southern Copper, Port Kembla, NSW (formerly Electrolytic Refining & Smelting) (LRN 81 p.6) 2 ft gauge. Had a 2 ft gauge railway system with diesel locomotives.

Coominya, Qld. (ex Gary Lynch - see LRN 85 p.11) 2 ft gauge. Equipment for a tourist railway sold to an unknown buyer at Coominya in 1990.

Rural Water Commission, Tatura, Vic. (ex SR&WSC) 2 ft gauge: had a Ruston & Hornsby diesel at a pipe manufacturing plant. Not reported since 1976.

ANR Institute, Parkeston, WA (see LRN 67 p.17) 2 ft 6 in gauge. Pleasure railway not reported since 1988.

ex Hainault Tourist Mine, Kalgoorlie, WA (see LRN 87 p.17) 2 ft gauge. Planet 4wDM ex Lake View & Star here does not seem to have appeared at the attraction relocated to Hannans North Tourist Mine.

More requests for information when space permits. In the meantime, please let LRN have your information!

NOTES, CORRECTIONS AND COMMENTS

PUBLICATIONS

The Railton - Roland branch line is a 50 page book published by the Redwater Creek Steam & Heritage Society Inc. PO Box 143, SHEFFIELD 7306. It deals with the history of the 14 mile long branch and the plans for a new 2 ft gauge line to be built on part of its formation. Written by Mr. Leonard Fisher it consists of over 50 pages of written history, and 30 maps and photographs (some in colour). Cost is \$9.95 plus postage which varies according to destination. Ring 004 247 348 after 7.30 pm for details.

By Strong Arms by Clive Moore is the Mulgrave Mill centenary publication.

It is a substantial 268 page book well worth the price of \$24 (see LRN 107 for details of availability).

They're all Half Crazy. A 21-minute video has been produced to accompany the Canegrowers' book of the same title. It portrays the development of mechanical harvesting and features a wide variety of cane bins, although no actual trains are seen. Cost \$38 from GPO Box 1032 BRISBANE 4001.

NARROW GAUGE CONVENTION 1996

A narrow gauge convention for both modellers and enthusiasts hosted by the Croydon Narrow Gauge Group Inc. will be held in the eastern suburbs of Melbourne on April 6/7, Easter 1996. Expressions of interest are invited to Grant McAdam, 194 Booran Road, GLENHUNTLY 3163; Phone:(03) 9578 8685. He would like to hear from those interested in attending, presenters of discussion topics or practical workshops, people interested in assisting with organisation, those with narrow gauge layouts or exhibits for visits or display at the venue, and the commercial trade. Registration of interest will result in your name being put on the mailing list.

RESEARCH COLUMN

EARLY INTERNAL COMBUSTION LOCOS IN AUSTRALIA

Jim Longworth wonders what was the date of the earliest internal combustion locomotive to operate in Australia. He knows of one entering service in February 1904 (where?- Ed.). Can anyone better this?

ISLE OF PINES (ÎLE DES PINES), NEW CALEDONIA

Geo magazine Vol.17 No.3 has an article about the penal colony once situated on this island off the southern tip of New Caledonia. It had a 2 km hand worked railway from the wharf to the settlement.

Chris Hart

LOCOMOTIVE, ROLLING STOCK & EQUIPMENT MANUFACTURERS

BUNDABERG FOUNDRY ENGINEERS LTD

(see LRN 103 p.4 & 106)

A number of ex-QGR Walkers DH-class B-B DH locos arrived on June 21st for storage on behalf of sugar mills. It is anticipated that these units will later be converted to 2 ft gauge at the foundry. They are:

DH29	606	1969	CSR
DH40	622	1969	Tully
DH43	625	1969	CSR
DH46	628	1969	Proserpine

In addition, Mulgrave Mill's DH47 (629 of 1969) was to arrive from Rockhampton within a few days. It is anticipated that the two CSR locos will be destined for Kalamia and/or Inkerman Mills. The units for Tully, Proserpine and Mulgrave are likely to be rebuilt for the 1996 season.

DH51, the unit scheduled to be rebuilt for Bundaberg Sugar (633 of 1969) did not progress very far before June because of the need to give priority to work for mills outside the Bundaberg Sugar group. Work is believed to have resumed on this unit, but it is not yet known which mill it will be delivered to, although Bingera might be the most likely. Another loco, DH41 (623 of 1969), was purchased from Queensland Government Railways by Bundaberg Sugar this year. It is also being stored at the Bundaberg Foundry awaiting rebuilding.

Currently undergoing conversion from standard gauge are ex NSW SRA Walkers 73-class 7330 (692 of 1972) for Farleigh Mill and 7345 (707 of 1972) for Marian. However, many parts removed from these locos were still in Mackay in mid June.

It is reported that the bogies from the Emerald Tourist Railway Board's DH59 (Walkers 646 of 1970) have been delivered to the Bundaberg Foundry for regauging to 762 mm.

NEW SOUTH WALES

ADVANCE COAL LTD., Oakdale Colliery 1067 mm gauge

See BRIMSTONE COAL CO LTD, Brimstone Colliery

BRIMSTONE COAL CO LTD, Brimstone Colliery

(see LRN 106 p.4)

Clutha Ltd has sold these troubled coal mines to the companies shown. They will continue in operation thanks to an interest-free loan of more than \$3m from the NSW state government.

Sydney Morning Herald 20/6/95

BHP LTD, Port Kembla 1435 mm gauge

(see LRN 105 p.5)

The former Australian Iron & Steel Clyde Engineering 0-6-0ST *bronzewing*

(457 of 1937) is under restoration to working order by BHP to provide power for works tour trains.

ILRMS Review 3-4/95

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD., Albion Park 610 mm gauge

(see LRN 104 p.3)

Hawthorn Leslie 0-4-0ST *Burra* (3574 of 1923) has been steam tested, and work is progressing with painting. The loco will be finished in lined "milk chocolate". Because of its small size, thought has been given to the possibility of building a suitable carriage to use with it, and drawings have been produced of a toastrack style car similar to Burrinjuck Tramway design but about 90% the size.

Work is continuing on the overhaul of Davenport 0-4-0ST *Kiama* (1596 of 1917). It is planned to refurbish the spare Davenport boiler rather than the one off the loco, although both need major work to be carried out. The boiler work to be done by Garnock Engineering includes new front tubeplate, new inner firebox sides including new foundation ring, all new firebox stays and retubing. Meanwhile the wasted parts of the original boiler have been cut out so that future assessment and restoration will be more economical. The frames and motion have been dismantled and overhauled, while the wheelsets will be machined to increase the back-to-back measurement. The saddle tank has been repaired.

Baguley (Drewry) 0-6-0DM *Seymour* (2392 of 1952) has seen occasional use for shunting although the injectors are yet to be replaced. New engine compartment sides have been constructed, paint removal has proceeded apace, and the bonnet covers are to be grit blasted. The loco will probably be repainted in Brunswick green with red headstocks and motion and possibly light green frames.

Major shed extension work have made operations difficult as there is little track available on which to stable rolling stock with the shed roads severed. Work has been done on refurbishing the overhead wires on the electric tramway by replacing insulators and removing a redundant section.

Tony Madden 5/95; ILRMS Review 3-4/95 & 5-6/95

McCONNELL DOWALL AUSTRALIA PTY LTD / OBAYASHI CORPORATION

(see LRN 96 p.8)

The last 18 km section of the 39 km Katoomba-Winmalee sewerage tunnel was completed at Hazelbrook on 19 June. The tunnel commenced in February 1994, and world tunnelling records for a shift, a day, and a week are

claimed. A 100 tonne boring machine was in use. Following commissioning, the tunnel will be leased by the Sydney Water Board for the next 25 years. (No reports were ever received of rail transport being used but it would be appreciated if a member could confirm or deny its use - Ed.)

Sydney Morning Herald 20/6/95

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY INC., Durundur Railway, Woodford 610 mm gauge

(see LRN 106 p.7)

On 23 September, the restored D'Aguilar station building will be officially opened by the Mayor of Caboolture Shire at 2.30 pm.

On 27 May, the Bundaberg Foundry 0-6-2T (5 of 1952) was used to shunt all the locomotives out of the storage compound to enable various items to be repositioned in readiness for the construction of the Com-Eng-Eng shed and to enable a rail motor trailer to be moved in preparation for its rebuilding.

Durundur Railway Bulletin 6/95

CSR LTD., Herbert River Mills 610 mm gauge

(see LRN 106 p.7)

It is reported that tenders have been invited to rebuild one of the mill's ex-Western Australian Government Railways MA class Walkers 3 ft 6 in gauge B-B DH locos, to enter service in 1996.

Changes will be made to the handling of bulk sugar from the mills to Lucinda this season. One loco will operate two Victoria Mill sugar trains per shift but only one will be running right through to Lucinda. The other will run as far as the Four Mile loop where full sugar boxes will be left and empties collected. The Macknade loco will do one return trip from Macknade (Macknade sugar) and one return trip from the Four Mile (Victoria sugar) each shift.

Macknade's Clyde 0-6-0DHs 12 (65-434 of 1965) and 16 (DHI.1 of 1954) were both to have received the new yellow livery with a jade stripe before the start of the season in addition to E.M.Baldwin 0-6-0DH 14 (6-2490-1-7-68 of 1968) which was repainted earlier in the slack. Clyde 0-6-0DH 11 (65-383 of 1965) was outshopped (with its new engine) in yellow without the jade stripe. These all have yellow steps rather than the grey steps of the locos repainted for the 1994 season. The mill's brake wagons have also been repainted, as has at least one of the Victoria Mill Clyde brake wagons.

The adaptor wagon previously used to enable 2 ft gauge locos haul Queensland Government Railways rolling stock on dual gauge track was

returned from Macknade to Victoria during the slack season. It will form the basis of a new poison spraying unit.

The diamond crossing of the Queensland Government Railways at Gairloch was temporarily removed during the slack season at the request of QGR. Construction of the new Crystal Creek line had still not been commenced by mid July.

Preliminary estimates provide for the transfer of 85 000 tonnes of cane from Victoria to Macknade during the season, which is expected to see the cane railways of the Herbert transport a new record of over 5 million tonnes of cane and bulk sugar.

Chris Hart 6/95; Bob James 6/95

Herbert River Express 22/6/95 via Chris Hart; Rod Taylor 7/95

HAUGHTON SUGAR CO. PTY. LTD., Invicta Mill

It is reported that the mill's three rebuilt ex SRA NSW 73-class Walkers B-B DH locos were delivered to the mill from the Bundaberg Foundry in early June (669 & 677 of 1971 & 687 of 1972). These are named *Hodel*, *Scott*, and *Piralko* respectively, the first and last being former stopping places on the Ayr Tramway (later QGR) in the Giru area. Three new bogie brake wagons, with bogies built by F.& M.Baldwin Engineering have also entered service. It is anticipated that a further two 73-class locomotives, currently in store at Plane Creek Mill Sarina, will be rebuilt in 1996, 7346 (708 of 1973) for the start of the crushing season and another by the end of the year.

Bob James 6/95,7/95; George Carr 7/95

ISIS CENTRAL SUGAR MILL CO LTD 610 mm gauge

(see LRN 106 p.9)

The ex-QGR Walkers DH-class B-B DH loco purchased by the mill is DH35 (617 of 1969). It has been delivered to the mill for storage pending rebuilding.

Bob James 6/95, 7/95

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 106 p.9)

The drawbridge crossing over the QGR at Balberra on the Racecourse system has been installed. The new branch now extends 1.6 km past the crossing with a yard under construction at the terminus in mid-June.

Ex-QGR Walkers B-B DH DH25 (607 of 1969) was delivered to Racecourse Mill during June and is in storage in the mill yard pending rebuilding. The rebuilding of Racecourse's Clyde Model DHI-71 0-6-0DH *Sunnyside* (57-160 of 1957) had still not been completed on June 19th, a few days after the

commencement of the crushing season. Racecourse's E.M.Baldwin 2-2wDH *Road Runner* (6-2612-2-11-68 of 1968) has been sitting outside the loco shed for some months and is due to have its reconditioned wheelsets fitted soon. A bogie brakewagon has been built at Racecourse Mill and was seen outside the loco shed in mid June. It has a long locally-built steel chassis and is mounted on ex-QGR bogies, and like the Tully brake wagons it has an open cabin at the centre of the vehicle. It was still to be fitted out with air compressor and control equipment.

The 73-class frame reported at Marian Mill in April was a case of mistaken identity. This was also a locally-built frame for a brake wagon; a similar one has also been delivered to Farleigh. The frame was still outside the loco shed at Marian in mid-June. It is suggested that the rebuilt 73-class units for Farleigh (Walkers 692 of 1972) and Marian (707 of 1972) will be delivered from the Bundaberg Foundry in September.

A further 415 six-tonne bins were delivered to Farleigh Mill in the slack season brings the mill's total to 765. Tags have been placed under 4400 Pleystowe and Racecourse bins following the successful trial of a new automatic cane bin identification system. Readers have been placed in the two mills' full yards but visual numbers will also be maintained. Marian and Farleigh are expected to change over as their current bar code systems continue to deteriorate. The system can be further developed to detect hot axle boxes on bins.

Tony Wells 6/95; Mackay Sugar Newsletter 6/95; Editor 6/95

PLANE CREEK CENTRAL MILL CO LTD, Sarina

See JOHN HOLLAND CONSTRUCTION & ENGINEERING PTY LTD

JOHN HOLLAND CONSTRUCTION & ENGINEERING PTY LTD 610 mm gauge

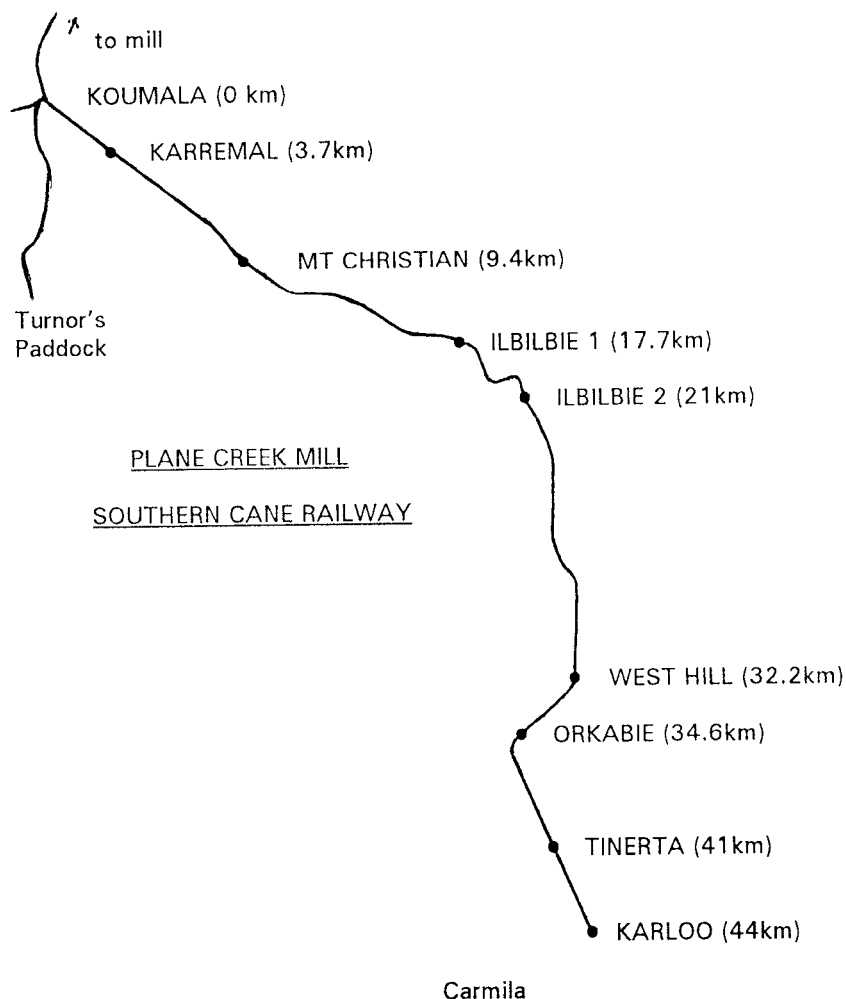

(see LRN 106 p.10)

The earthworks for the 44 km southern cane railway were largely complete by the end of May, although bridgeworks south of West Hill were not complete. Wet weather in May appears to have held up bridge construction and earthworks. Completion of the line was predicted to be just over three weeks after the originally-scheduled crushing commencement date of June 26th, but the mill itself did not start until 6 July.

Track laying commenced during May. By 11 June, track laying had extended as far south as the 19 km mark at Ilbilbie, with rail in position to just south of the Marion Creek bridge. Top ballasting had extended almost to the head of steel. The 60 lb rail being laid at the railhead was rolled for the NSWGR in

Barrow in 1900/1. By 20 June, track laying had extended beyond the 23 km mark, by 27 June had reached Basin Creek (28.5 km), by 3 July was just north of West Hill Creek (32 km), and by 10 July had reached the 37 km mark. On 15 July it had reached 41.5 km.

Two bridges remained to be completed in late June, at West Hill Creek, Orkatie (33 m), and Spider Creek, Tinerta (38.5 km). Pierwork was in progress at West Hill Creek on 20 June, and the bridge was complete before the end of the month, ready for tracklaying to continue south unimpeded. Similarly, the Spider Creek bridge was completed during the second week of July.

Rails are conveyed to the head of steel in 120 m lengths carried on a train of eleven bogies made from cane truck chassis linked by steel cable and with an additional spacer bogie next to the loco. A loaded rail train was noted parked at sidings at the 17.7 km mark (off Green Hill Road), north of Marion Creek, on 11 June headed by Clyde 0-6-0DH D1 (56-101 of 1956). There were 14 rails on the train, colour coded for left or right hand use. The train is pushed forward by the loco to the head of steel when required.

At the railhead, an agricultural tractor with extended axles, followed by a runner wagon, is positioned at the head of the rail bogies. The tractor is used to pull each rail forward off the rail bogies onto the concrete sleepers which are already placed on a precise alignment on top of a layer of ballast on the formation. The rails are then joined and spiked down approximately every eighth sleeper to allow the rail train to be pulled forward. At the rear of the train are four flat wagons, one fitted with a compressor and another with a tool box. Air tools are used to fully spike down the track using elastic spikes on straights and pandrol clips on curves (as well as on road crossings and points). It is reported that 1 km of track can be laid per day using this method, with the record standing at 1.25 km. Straight track is not surprisingly easiest to lay. Top ballasting follows closely behind, with the ballast train making successive trips to the tracklaying site. The head of the right hand rail is marked with spray paint to denote the position of sleepers prior to top ballasting in preparation for the ballast tamper.

The sidings at Green Hill Road, Ilbilbie, are additional to the seven sidings originally planned to be laid, and are known as Ilbilbie 1. The full list of sidings (in order) is Karremal, Mt.Christian, Ilbilbie 1, Ilbilbie 2, West Hill, Orkatie, Tinerta and Karloo. Sidings are laid in 42 lb rail and are being constructed separately from the main line tracklaying. Sidings were largely completed and progressively connected to the main tramline as it advanced, with West Hill being an exception. Although the completion of tracklaying on the entire line was anticipated to take place in July, levelling and tamping of the track was delayed while the mill awaited delivery of its new Plasser ballast tamping machine, which had still not arrived by 15 July.

A cutting at about the 14 km mark provided a good source of ballast for track construction. A steeply-graded siding was laid to enable ballast wagons to be loaded at a large stockpile of material, using the body from a QGR steel grain hopper as an overhead loading chute. 32 loaded four-wheel ballast wagons were noted on the main line at this site on June 11th with Com-Eng-Eng 0-6-0DH 7 (FC3776 of 1964) at the head. Sixteen of the wagons were red oxide with a variety of numbers, eight were yellow with numbers between 2 and 9, and eight were rust with a variety of nicknames painted on. The oxide

hoppers were from Plane Creek Mill with the yellow ones loaned by Inkerman and the others by Kalamia. Between 20 and 27 June the ballast loading chute was moved 7 km south to the Ilbilbie 2 sidings at Marion Settlement Road, with ballast stocks at the new loading point replenished by road. By the 30th it straddled the main line at Basin Creek. With the ballast loco between the chute and the railhead, the low-level chute would have to be removed by crane to enable the loco to escape and the empty rail train to be retrieved. On 11 July the ballast chute was at Orkobie and it was due to be moved to Tinerta on about 16 July.

With the commencement of crushing on 6 July, the new line was reportedly in use (untamped) to Ilbilbie 1 siding. West Hill and Orkobie were scheduled to be available after 9 July, with Tinerta and Karloo from 16 July. However, there was no evidence of cane bins even at Ilbilbie 2 on 11 July, but by 14 July bins were being delivered as far south as Orkobie.

Just north of West Hill Creek, some sections of track have been constructed with the sleepers placed almost flush into a concrete bed. This section is flood prone (this tracklaying technique has also been used as the first stage of road crossing construction). The West Hill sidings (on the north side of West Hill Creek) are at right angles to the main line, unlike other locations, and a triangle has been laid here. These sidings had been still under construction on 11 July.

On 15 July, with tracklaying nearing Karloo, a tamping machine was noted at the eventual terminus, having been moved there by road. This was Tamper 4375626 of 1976, on loan from Kalamia Mill. The yard at Karloo has four loading points for road vehicles and is large enough to accommodate about 300 empty and 300 full bins.

Close to the mill, the kilometre of line between the Anzac Street crossing in Sarina and the John Holland depot at Shannon's Flat was being replaced in June, and loops were being laid here to relieve pressure on the mill yard, with tracklaying in progress on the through line in the last week of June. The loops were being ballasted by July 9th, using the mill's Tamper (4375595 of 1975) and the one from Kalamia, with E.M.Baldwin 0-6-0DH rebuild 9 (6-825-1-5-64 of 1964) in attendance with ballast hoppers and plough.

The third rebuilt Walkers B-B DH was delivered from the Bundaberg Foundry by 11 June and is 630 of 1969, formerly DH12. By 9 July it had received the name *Allan Page* on a chromed rectangular plate on the cabside which also bears the CSR logo. The other two locos were named *Karloo* (630 of 1969) and *Koumala* (651 of 1970) in the following few days. Trials with Locotrol began on 14 July when *Karloo* and *Allan Page* double headed empty bins to Orkobie. On the return journey, beyond Karremal, the train consisted of *Allan*

Page with 148 bins followed by *Karlo* in slave mode with 152 bins. On 15 July *Allan Page* and *Karlo* passed through Koumala heading towards Orkatie with about 330 empties, while *Koumala* brought 203 empties south from the mill. Clyde Model HG-3R 0-6-0DHs 10 (67-569 of 1967) & 11 (70-709 of 1970) are working back to back in multiple once again this season.

The diamond crossing at Koumala has been relaid. The QGR apparently removed a number of such crossings during the slack season by agreement with the mills concerned to lessen wear and tear on QGR rolling stock. All bins have been fitted with Willison couplers for this season.

Walkers B-B DH 7317 (676 of 1971) is reported to have been purchased from Simsmetal, Kooragang Island, Newcastle, NSW, for future rebuilding.

The Daily Mercury 9/6/95 & 7/7/95 via Editor;
Tony Wells 7/95; Rod Taylor 7/95; Editor 6/95, 7/95

TASMANIA

EMU BAY RAILWAY 1067 mm gauge

(see LRN 105 p.16)

Two one day steam train trips will be run from Burnie to Rosebery and return in association with the Don River Railway on November 18th and November 19th 1995.

Ray Graf 6/95

REDWATER CREEK STEAM & HERITAGE SOCIETY INC., Sheffield 610 mm gauge

(see LRN 98 p.11)

In mid 1993, land tenure and insurance problems made it impossible for the Second River Tramway to continue to operate on the site which had been occupied since 1958. Chris Martin, Eric Howe, Peter Martin, John Allum and a group of local residents examined what they thought was an ideal site in Sheffield and convinced the Kentish Council that it was possible to set up a viable tourist-oriented operation on the site. The original Sheffield railway station was to be relocated about 300 metres from its former location and a 2 ft gauge railway about 4 km in length built to a very scenic area of several small natural caves, waterfalls and bush. Here it is intended to establish a picnic area with scenic walks, accessible only by the railway. The line will be mainly on the of formation of the Railton - Roland Branch line which was 14 miles long and operated from 1914 to 1957.

Progress to date has seen the station relocated and totally renovated, two old houses moved to the site, and 600 m of main line laid with six sets of

points and associated shed roads. Some of the rolling stock from the Second River Tramway has been transported to Sheffield and have been in operation for about 15 months. This comprises a Krauss 0-4-0T (5682 of 1907 rebuilt with boiler from 5800 of 1907), two passenger cars, a guard's van and flat wagon.

A large steel framed building has been dismantled at Karoola and rebuilt at Sheffield as a three-road locomotive shed. About 70% of the track at Karoola has been pulled up and about 50% of the rails and sleepers transported to Sheffield. Tracklaying was to be recommenced in November 1994 when the Council intervened over planning approval. Rezoning will now be necessary but the outcome looks favourable following a recent positive response from the Planning Review Panel in Hobart.

Trains have continued to run on the first weekend of each month and there is also an annual Steamfest on the March long weekend. The Steamfest concept incorporates train rides, steam chaffcutting, threshing, traction engines and a Sentinel steam wagon, bullock team, vintage tractors and stationary engines and so on. Attendance in 1995 was 10 000 over three days.

Eric Howe owns Orenstein & Koppel 0-6-0T 4241 of 1910 (see LRN 87 p.13) and this is likely to become available for use on the line at some time in the future, although major boiler work will be required.

P.J.Martin 6/95; 7/95

SECOND RIVER TRAMWAY INC., Karoola

See REDWATER CREEK STEAM & HERITAGE SOCIETY INC.

VICTORIA

COOKS CONSTRUCTION LTD. 900 mm gauge

(see LRN 106 p.12)

Cook's Construction have purchased two more Walkers DH-class B-B DH locos from Queensland Government Railways. These are DH24 (606 of 1969) and DH36 (618 of 1969). They should have been removed from QGR property during June.

Bob James 6/95

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 106 p.14)

An inner pile on a four-pile pier near the centre of the Monbulk Creek bridge was replaced early in May. This was done without any train cancellations, and

delays of only a few minutes.

On the Gembrook restoration project, most work in May and June was directed to tree clearance and trackbed preparation between Cockatoo station and Cockatoo Creek. It is then intended to lay track from Cockatoo to Cockatoo Creek in July or August, but this will depend on sleeper availability. Of the two remaining bridges to be built, it is probable that Cockatoo Creek (bridge No.9) will be the next to be tackled. This is a relatively "easy" bridge to build, being 150 ft (45.7 m) long, but with a maximum height of only 17 ft (5.2 m). It has ten 15 ft spans, and two-pile trestles. It is also straight, and fairly accessible. By contrast, bridge No.8 (the big Wright bridge) is 200 ft long, 50 ft high, on a three chain curve, and is not easily accessible. The bridge just completed (bridge No.7 - the small Wright bridge), is 80 ft long, 25 ft high, and on a 20 chain radius curve.

The first public passenger train to run between Gembrook and Fielder for 42 years ran on Saturday afternoon 29 April, after the last Market Day train had run. Normally trains only run as far as Fielder bridge. On the subsequent Market Day on 29 May, the 1.30 pm train was extended to Fielder. On Sunday 30 May the 1.30 pm train was also scheduled to run to Fielder, which it did; but there were so many passengers for Fielder that the following train was rescheduled to run to Fielder. It is a 50 minute round trip. Thanks to volunteer work by the Warrandyte Model Railway Club, Fielder station now possesses a platform again, complete with a name board. The waiting shed is still to built. Gembrook passenger trains will not be operating again until September.

It is possible that Peckett 0-4-0ST *Sir John Grice* (1711 of 1926) will not be available to operate them, as it is due for a major overhaul including boiler examination in September. On recent running days this loco has had some problems with the lubricator, which lead to some trains being cancelled, but on the whole it has performed very well.

It is reported that Walkers B-B DH DH59 (646 of 1970), purchased from Queensland Government Railways, will be rebuilt at Belgrave. However, the bogies have been delivered to the Bundaberg Foundry for regauging from 1067 mm gauge.

Frank Stamford 7/95

MEETINGS

MELBOURNE:

AGM AND MEMBERS SLIDE NIGHT.

Following the formalities of our AGM a members slide will be held. Members and visitors wishing to show slides are asked to bring them along. The usual

limit of 20 per person will apply but if you have a few more bring them along and if we get the opportunity they will be displayed as well.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday August at 8.00 pm.

SYDNEY:

Any member wishing to know details of the next meeting should call Craig Wilson on 02-4847984

LOCATION: Woodstock Community Centre, Church St Burwood

DATE: Wednesday 23 August at 7.30 pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-2969488

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 3 August at 8 pm

2 ft GAUGE STEAM LOCOMOTIVE FOR SALE -

See page 12

YALLOURN FOWLER DIESELS.

Phil Rickard points out that in LRN 106 (p.13 & 18), your Editor has further muddled the waters about the three SECV 0-6-ODM locos, John Fowler 4210049, 4210050 and 4210051 of 1951. These were numbered 12, 13 & 14. The first is now with Skilled Engineering, Yallourn and the third with the Walhalla Goldfields Railway, while the second has been scrapped. (Fowler 4210052 was a standard gauge loco which never came to Australia).

Apologies.

TRAIN SYSTEMS - YALLOURN AND MORWELL OPEN CUTS

by J.A. Vines. Published by Generation Victoria 1994. This major work has 260 pages and includes many photos, maps and drawings. It was researched and written by ex-SEC employees, having been commissioned by the SECV Yallourn just before its dismemberment and with the knowledge that the "grim reaper" was coming! It is a fitting epitaph to the SEC railways of the brown coal open cuts and the interconnecting line. Watch the sales list for availability.

CANE TRAIN.

The New Zealand Railway & Locomotive Society reportedly have a special

offer on this definitive book on Fiji's Sugar Tramways, which at NZ\$25 posted is excellent value (PO Box 5134, Wellington).

RESEARCH COLUMN

WARBURTON, VIC.

Mike McCarthy is preparing a manuscript dealing with the Warburton area. He is currently trying to sort out the steam locomotives that worked on the tramway from La La to Big Pats Creek. The following locomotives are believed to have operated on the line. However, the period of operation for each is uncertain as indeed is the claim that they actually did work on the line! The arrival date of Fowler 5851 is definite, but all else is open to question!

Fowler 5851 of 1889. Arrived at Warburton in 1909. Departure date?

Fowler 13576 of 1918 (1913? - Ed.) Date of arrival at Warburton?
Departure date?

Fowler 15989 of 1923. Date of arrival at Warburton? Departure date?

Barclay 311 of 1888 (Kerr Stuart 539 of 1896). Date of arrival at Warburton? Departure date? Was it ever there?

Mike would welcome any clarifying information at 27 Verbena Avenue, THE BASIN, Vic. 3154.

MINING IN THE ALPS.

Phil Rickard writes of the displays at the Bright Gold Shop & Museum. One photograph, of exceptional clarity, is entitled Mining - Australian Alps. It depicts, five large brand-new 4-wheel V-shaped side tipping skips carrying the painted name Geo W Kelly, Makers, Melbourne. Two of these skips have brakesman's platforms with screw-operated brakes and brakemen at the ready. The rake appears to be gravitating from a mine adit towards a battery along newly-completed track of 2 ft or 2 ft 6 in gauge. Shop proprietor Rob Kaufman, believes the photo was taken around Harrietville early this century. Any ideas, readers?

Contemporary photos show that tramways were/are in use at Williams United, Wandiligong; Red Robin, near Mt.Hotham (at 5,800 ft Australia's highest industrial railway?); Victoria mine, Wandiligong; and Sambas mine, Harrietville. Needless to say, as at any mine, permission must be obtained to visit if the lease is current.

A browse in the Bright Gold Shop can definitely be recommended (Phone (057) 55 1209 to check opening hours). A good range of books are on sale including a booklet with do-it-yourself historic mine walks, written and

mapped by Rob. An excellent concept that could be easily (?) be adopted by some keen member in relation to timber mills.

EARLY INTERNAL COMBUSTION LOCOS.

John Robin writes about an article he recalls in the magazine Railways of Australia dating from the late 1940s or 1950s which told of a very early locomotive powered by an Otto gas engine at use on a tramway between Darebin and Merri Creek in Melbourne's northern suburbs. Can a reader provide further details?

TARONGA PARK ZOO.

David Burke provides a photograph of the train which operated at the zoo, which he found in the Mitchell Library's videodisc pictorial records. .

FIELD REPORT

Norm Houghton has recently visited the Mt.Isa - Cloncurry area and travelled to Bellara, not far south of Mary Kathleen. This was the terminus of the 3 km 2 ft gauge tramway to the Wee McGregor mine. The site is accessible today and includes a tunnel near the mine end of the line.

LOCOMOTIVE, ROLLING STOCK & EQUIPMENT MANUFACTURERS

BUNDABERG FOUNDRY ENGINEERS LTD

(see LRN 106 p.3 & 107 p.5)

The two Walkers 73-class B-B DH units rebuilt for Mackay Sugar were delivered during August, with 692 of 1972 leaving for Farleigh on August 7th,

and 707 for Marian on about 14 August.

The Walkers DH-class B-B DH unit 633 of 1969, rebuilt for Bundaberg Sugar, had left the works by 7 August, but it is unknown at this stage which mill it was delivered to, although Bingera seemed a likely destination.

Bob Gough 8/95; Tony Wells 8/95

VALE ENGINEERING PTY LTD, Moss Vale

(see LRN 99 p.3)

Vale Engineering, a Kembla Coal & Coke subsidiary (in turn wholly-owned by CRA) did not close in 1993, as seemed possible, but its closure was announced to take place from the end of July.

Sydney Morning Herald 6/7/95 via Ray Graf

NEW SOUTH WALES

AUSTRALIAN NEWSPRINT MILLS LTD, Albury 1435 mm gauge

On 16 June, a 4wDM Com-Eng Aresco (*Adelaide*) Track Chief high rail tractor (a road-rail vehicle) was noted shunting newly arrived containers into the paper mill.

Ray Graf 8/95

BHP LTD, Port Kembla 1435 mm gauge

(see LRN 107 p.6)

Three ex NSW SRA locomotives have been leased to BHP for use on coal trains between its mines and the Port Kembla steelworks. These locos have been made available by Austrac Ready Power of Junee and are A.E. Goodwin Co-Co DE units 44229, 44233 and 4537. They are now numbered 101, 102, & 103 respectively. Apart from repainting in BHP corporate livery, modifications carried out include removal of dynamic brake equipment, fitting of exhaust silencers and fitting of cab air conditioning as well as additional external warning lights. In addition 4537 has had its end hood shortened and lowered allowing twin cab windows to be fitted above the lowered hood. (Could a reader please supply builder's numbers for the above?)

On 15 July, 101 and 102 were noted running coal trains between Unanderra and Elouera Colliery, Wongawilli. It is reported that a triple header had run on 10 July, while during the week there had been several permutations of single and double-headed running.

Railway Digest 8/95 via Bob McKillop;

Ray Graf 8/95; ARHS Bulletin 9/95

BHP LTD, Elouera Colliery

This colliery was previously known as Wongawilli (see LRN 82 p.9). A strange warbling sound attracted the attention of the visitor which was revealed to emanate from the upper counterweight car on the access incline. Solar panels are mounted on this vehicle, obviously to keep onboard batteries charged. The batteries power the warning signal but it is not clear whether this starts automatically when the car begins to move, or is started remotely by the incline winch operator.

Ray Graf 8/95

BLACK DIAMOND HERITAGE CENTRE, Bulli 1435 mm gauge

(see LRN 102 p.4)

The transfer of Hudswell Clarke 0-6-0T SOUTH BULLI No.2 (297 of 1888) from Albion Park has been completed. It is displayed outside the old Bulli station with a 4-wheel non-air hopper wagon and an ex-AIS CHG-type brakevan. The museum display at the centre is open on Sundays from 10 am to 4 pm.

Bob McKillop 8/95

CLUTHA COAL PTY LTD 1067 mm gauge

(see LRN 106 p.4)

A clearance auction was held on 23 August at Allied Camp, Ridge Road via Oakdale with a number of rail items advertised for sale. These included:

LOT 171	One heavy duty bogie flat car, 6m x 2.1m
LOT 314	One rail mounted 5000l. water tank.
LOT 416	approximately 48 steel coal skips, 8-tonne capacity.
LOT 447	six 4-wheel equipment transporter flats
LOT 525	six 40-man drift passenger cars, steel construction. Three carried numbers: 2, 3 & 8.
LOT 540	one 4wDH loco "numbered" B and carrying reflectorised plate "No.2 loco." Six-cylinder diesel engine. Hydrostatic motor on rear axle and cardan shaft to front axle. Reportedly ex-Nattai North Colliery, this unit was obviously used for some time on the surface as a raised canopy on pipe posts had been fitted (but was now dangling off).
LOT 553	one 4-wheel dolly car - cable operated - with reflectorised plate "1"

Not included in the sale were four 4-wheel vehicles earmarked for "Oak Historical Society": one carrying a wooden box/skip, one with a wooden body, one a steel coal truck and one a service (rerailing?) vehicle.

Ray Graf 8/95

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 107 p.6)

A steam gala open day is being held on Sunday October 8th to celebrate the return to steam of Hawthorn Leslie 0-4-0ST *Burra* (3574 of 1923). Three steam locomotives will be in use and the day will feature double headed and night running and the commissioning of the new loco shed / servicing centre.

Neville Cook 9/95

INDUSTRY WORLD, Wollongong

A press item refers to the activities of Industry World which "has received \$135 000 federal funding for a new information centre located on the builders tip with the new narrow gauge railway project." Can any reader provide any information?

Illawarra Mercury 5/8/95 via Ray Graf

KEMBLA COAL & COKE PTY LTD, Illawarra Coke Works, Coalcliff & Corrimal Coke Works 1435 mm gauge?

(see LRN 96 p.10)

Kembla Coal & Coke has put its cokeworks up for sale. Funds generated would be put towards further development at the company's West Cliff and Tahmoor coal mines.

Illawarra Mercury 5/8/95 via Ray Graf

JACK KENNEDY, Broken Hill 610 mm gauge?

(see LRN 94 p.8)

The three 4wBE locos noted previously are still for sale at the previously advertised prices. A battery charger may be available for the 5 tonne loco, but not for the 3-tonners, and the batteries in all three will probably need replacement. Also on site are three Eimco-25 bidders, two in yellow paint (one with serial number 0245 and the other numbered B2501) and the third in blue paint. Any interested buyer should contact Jack at 28 Kanandah Place, BROKEN HILL. Phone (080) 88 5793 (w); (080) 87 6716 (a/h & fax)

Ray Graf 8/95

THE MANILDRA GROUP, Manildra 1435 mm gauge

(see LRN 106 p.4)

On 25 May, Co-Co DE MM01 (Clyde 62-257 of 1962) was noted shunting the yard at the mill. Walkers B-B DH 7340 (702 of 1972) had gone from the

yard, and was possibly the unit observed at a distance at Parkes a few days before.

Ray Graf 8/95

ROYAL AUSTRALIAN NAVY, Newington Armaments Depot 610 mm gauge

(see LRN 74 p.9 & 99 p.6)

A decontamination bill of \$84m will be required to be paid before the site can be utilised for Olympic Village construction. This was predictably a bone of contention between Federal and State governments.

The Sun-Herald 4/6/95 via Ray Graf

SILVERTON GAOL & MUSEUM various gauges

(see LRN 90 p.9)

The battery electric loco 1 (and battery box TB2) previously in the backyard here has been moved to the front, and repainted. Unfortunately the number formerly carried on the loco has now been obliterated.

Ray Graf 8/95

SILVERTON TRAMWAY COMPANY, Broken Hill 1435 mm gauge

(see LRN 106 p.6)

A number of STC locomotives were observed at Broken Hill loco on 17 August. These were A.E. Goodwin Co-Co DE locos 29 (83828 of 1961), 33 (win plain yellow livery without painted number or name), 4838, and an unidentified 442 class.

Ray Graf 8/95

TRANSFIELD CONSTRUCTION PTY LTD - BOUYGUES JOINT VENTURE

A German Herren Knecht tunnel boring machine has been preferred to a French Bouygues design by the joint venturers for the construction of the new rail link between the city and Sydney Airport. (It seems likely that underground rail haulage may be use for this project.)

Sydney Morning Herald 27/7/95 via Ray Graf

WEST DARLING MACHINERY PRESERVATION SOCIETY, The Conservation Centre, 479 Crystal Street, Broken Hill various gauges

This site is the one previously referred to as the SES area (see LRN 90 p.8). From a distance outside the only item previously seen here which could be confirmed was 2 ft gauge Ruston & Hornsby 4wDM 394021 of 1956. However, a new item seen was an apparent amusement park steam outline loco and carriages. The loco is internal-combustion driven and is low, wide and square so that it could at first could be taken for a rubber-tyred vehicle. The gauge

seemed to be at least 3 ft 6 in, and wheel arrangement possibly 2-2w.

More details will no doubt be obtained during a visit in opening hours which are advertised as being 9 am to 12 noon Thursdays and Sundays.

Ray Graf 8/95

ZIG ZAG RAILWAY CO-OPERATIVE LTD, Lithgow 1067 mm gauge

(see LRN 102 p.6)

Malcolm Moore 0-6-0DM units 6 & 2 at Bottom Points, Zig Zag Railway on 15 October 1994

Photo: Ray Graf

Ex-Australian Iron & Steel unrebuilt Malcolm Moore 0-6-0DM 6 (26-204 No.6 of 1948) still with low profile cab as supplied for underground use, was noted on a work train at Lower Points on 27 May. [This, together Malcolm Moore 0-6-0DM 2 (26-204 No.2 of 1948) was photographed at Bottom Points in October 1994, but this had gone unremarked by your Editor]. Also noted was rebuilt Malcolm Moore 0-6-0DM *Kemira* (26-204 No.11 of 1951) and Vulcan Foundry 0-6-0DM *Mount Lyell* (D194 of 1953).

Ray Graf 8/95

QUEENSLAND

FRANK ASTON ROTARY MUSEUM, Mt.Isa

Some rail-mounted mining vehicles were noted to be present in this museum, which might bear further examination.

Norm Houghton 8/95

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY INC, Durundur Railway, Woodford 610 mm gauge

(see LRN 107 p.7)

The official opening of the restored D'Aguilar Railway Station building at Woodford was to be carried out by the Mayor of Caboolture Shire on 23 September. This was to be followed by the official opening of the Herb & Cottage Display Garden at Peterson Road, Woodford, currently the site of the railway's terminus.

Editor 8/95

BABINDA SUGAR LTD 610 mm gauge

(see LRN 106 p.7)

The derelict Malcolm Moore 4wDM at the mill is confirmed as number 20 (1057 of 1943). The other Malcolm Moore 4wDM (1011 of 1943) was noted outside the loco shed in August together with Plasser KMX 12T ballast tamper 249 of 1982.

Bob McKillop 8/95

BUNDABERG SUGAR LTD., Mourilyan Mill 610 mm gauge

(see LRN 105 p.10)

The unidentified Malcolm Moore 4wDM has been repainted and was noted on the head of a navy train in the mill yard in August. Some cane arrives at the mill by road transport (presumably from south of Tully - Ed.) It is tipped into a receiving bin and then transferred to rail bins by a tractor-mounted front-end loader, seemingly a somewhat inefficient method.

Bob McKillop 8/95

CSR LTD., Herbert River mills 610 mm gauge

(see LRN 107 p.7)

Regular cane transfers from Victoria to Macknade commenced on 28 June using Macknade's E.M.Baldwin B-B DH 20 (7070-4-4-77 of 1977) and E.M.Baldwin brakewagon 1 for one trip each day on the afternoon shift. A large tonnage of cane was transferred from Macknade to Victoria using both mill's locos in late August when wet weather disrupted crushing. The planned working of Victoria Mill's sugar by a Macknade loco still seemed not to have commenced by late August.

Three 12-tonne bins have been trialed at Victoria Mill again this season, although one has since been badly damaged in a derailment. Three 6-tonners and two or three 4-tonners are also included in the trial rake for comparative purposes. They are taken around in their own little train rather than being

in regular service. The 12-tonne 4-wheel bins have a limited degree of self-steering and are running with wheels machined to a variety of profiles to evaluate differential rates of wheel tread wear.

Victoria Mill's E.M.Baldwin 0-6-0DH *Hobart* (4413-1-7-72 of 1972) was on loan to Macknade from 22 June to 25 July. Victoria Mill's preserved Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) is again programmed to run in the Maraka Festival on 28 October.

A study into derailments is taking place. The total tonnages hauled in 1994 were: cane - 3.89m tonnes or 72 million tonne/kilometres; and sugar 574,150 tonnes or 11.44m tonne/km. The cost of cane derailments in the 1994 season was \$434 000 giving a cost of 0.6c per tonne/km. The cost of raw sugar derailments was \$350 000 or 3.06c per tonne/km.

Hansen Linecar 4 was transferred from Macknade Mill to Victoria Mill late in the slack season. Linecar 2 went to Macknade in its place during the week ending 12 August.

*Chris Hart 8/95; Herbert Valley Sugar News and Views
29/6/95 & 27/7/95 via Chris Hart*

Macknade Mill's Clyde 0-6-0DH 12 (65-434 of 1965) with a short train on the Forrest Home leg of the south side triangle at Cordelia, 11 June 1995.

See PIONEER SUGAR MILLS LTD

PIONEER SUGAR MILLS LTD., Inkerman Mill

(see LRN 102 p.13)

Com-Eng 0-6-0DH *Chiverton* (C1030 of 1958) was transferred temporarily from Kalamia Mill to Inkerman Mill for a few weeks in June to relieve a shortfall in locomotive capacity at Inkerman.

Home Hill Observer 29/6/95 quoted in Sunshine Express 8/95

GRAHAM DANIEL, Tully 1067 mm gauge

(see LRN 97 p.8)

Avonside 0-6-0T 2043 of 1930 was noted in a yard in Tully reunited with its boiler. It has reportedly been sold to a buyer in the Brisbane area.

Ian Comrie 8/95

EQUIPMENT & MACHINERY SALES PTY LTD, Rocklea 762 mm gauge

Two white E.M.Baldwin 4wDH locos were sold at auction on August 3rd at a site at Grindle Road in the industrial suburb of Rocklea in Brisbane. One, Lot 53, was identified as 3937-7-6-71 of 1971 Model DH12M MkIV, while the other, Lot 54, was said to be "the same". (The first loco was last reported as being used by Codelfa in Western Australia in 1981(see LRN 25 p.17). However, the other two Baldwin locos used at Wungong were 8-tonne types. It seems likely that the second loco sold at Rocklea was one of these, or like the first was possibly another of the ten 12-tonne machines used in the Thomson Dam construction in Victoria. - Ed.)

It is believed the locos were stored at a yard in Rocklea for several years, together with two concrete agitator cars.

David Mewes 8/95; Sydney Morning Herald 22/7/95 via Ray Graf

MACKAY CITY COUNCIL, Seaforth 610 mm gauge

A Dick Kerr 0-4-2T ex Marian Mill, believed to have been built in 1910, has been preserved at what was originally the Pioneer Shire Council park at Seaforth since 1964. Thirty years later, the loco has to be removed for safety reasons and is being offered for sale to narrow gauge enthusiasts. Enquiries / offers to purchase or remove should be directed to Mr. Mark Leyland (Director of Community Services) or Brian Delaney (Technical Officer Parks & Recreation) at Mackay City Council, PO Box 41, MACKAY 4740. Phone (079) 51 6444 up to Tuesday 31 October 1995.

Ian Comrie 8/95; Mackay Daily Mercury 13/9/95 via Editor 8/95

MACKAY SUGAR CO-OPERATIVE ASSOCIATION 610 mm gauge

(see LRN 107 p.9)

Farleigh Mill's rebuilt 73-class B-B DH loco (Walkers 692 of 1972) left the Bundaberg Foundry on 7 August and was at the mill by the 10th. It was reportedly to receive the name *Calen* but was not named and still not in traffic on August 22nd. The similar B-B DH for Marian Mill (Walkers 707 of 1972) left Bundaberg on about 14 August and was at the mill by the 16th. (Correct NSW SRA number for this is 7343, not 7345 as shown incorrectly in LRN 106.) It was to be named *Tannalo*. Both these units have received new Detroit 12VA engines as part of their rebuild. By 16 August, *Tannalo* nameplates had been removed from Com-Eng 0-6-0DH B1724 of 1957. This loco was to be renamed *Netherdale*, while the previous bearer of this name, Bundaberg Foundry 6wDM 13 of 1954 was reportedly to be withdrawn from service.

Bob Gough 8/95; Tony Wells 8/95; Ian Comrie 8/95; Editor 8/95

MOSSMAN CENTRAL MILL CO LTD 610 mm gauge

(see LRN 102 p.12)

All Bally Hooley Steam Express tours and mill tours were discontinued from June 1st 1995. Bundaberg Foundry 0-6-2TT 2 of 1952, originally Mossman Mill's *Bundy*, is to be retained, but Bundaberg Foundry 0-6-2T 6 of 1952, *Bally Hooley*, is reportedly for sale together with the passenger carriages. The commuter passenger service at Port Douglas continues to operate with good loadings but it is understood that the mill is seeking expressions of interest from parties wishing to continue its operation. (This report puts under question the reported involvement of southern interests in the steam operation as referred to in LRN 105 p.8.)

It is reported that John Fowler 0-6-0T *Faugh-A-Ballagh* (8733 of 1900) is to be cosmetically restored to be returned for display at Port Douglas.

Sunshine Express 7/95 via Editor;

Ian Comrie 8/95; Tom Porritt 8/95; Bob McKillop 8/95

MOUNT ISA MINES HOLDINGS LTD 1067 mm gauge

(see LRN 79 p.14)

Mt.Isa Mines has 130 km of tramline underground. Underground tours are booked out three months in advance, so planning ahead is essential if you wish to do the trip. To be standing in 50 degree heat one mile below the surface in a shaft whose walls are at 60 degrees in near darkness is an experience not to be missed. However, surface tours can be booked on the day and provide much of railway and tramway interest from the bus window.

There is a central train control on 19 level and two sets of ore trams of 15

wagons run continuously from the ore stopes to the underground crushers. A planned viewing of an ore dump into the crushers was cancelled due to a derailment. Several service trams run as required delivering aminex and fuel oil (the explosive mixtures). The lower levels are worked by electric rubber-tired trucks using an overhead trolley wire. system.

About 10 haulage cars were noted in a surface scrap yard, together with a battery electric loco numbered 1782 (is this Fox 4wWE/BE 002 of 1972, formerly numbered 782? - Ed.)

Walkers B-B DH 589 of 1968 (ex DH7) was sold to MIM by QGR in 1991 for surface use.

Norm Houghton 8/95; Editor

MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 106 p.10)

Walkers B-B DH 595 of 1968 (rebuilt by Bundaberg Foundry 1995) has been named *Gordonvale*. This unit normally works to Redlynch over the Brinsmead Gap making use of a new 35 tonne bogie brake wagon fitted with disc brakes. Its largest load on the return trip over the gap is said to have been 110 full bins. Walkers B-B DH 613 of 1969 (rebuilt by Bundaberg Foundry 1995) has been named *Mulgrave*. This loco normally works to the south, to Fishery and Deeral.

Additional locos reported to have been painted in the new peppermint green and yellow livery are:

2	0-6-0DM	Com-Eng	A1001	1955
7	0-6-0DH	Com-Eng	B1010	1956
11	0-6-0DH	E.M.Baldwin	4413-2-8-72	1972

Com-Eng 0-6-0DM 4 (A1004 of 1955) is undergoing an extended engine overhaul and may not be returned to service this season.

It is reported that the mill is considering the disposal of several of its smaller main line locomotives and that a number of inspections with a view to purchase have been made. Locomotives reportedly for sale at a price of \$20 000 each are:

1	0-6-0DM	Baguley	3377	1953
6	0-6-0DH	Com-Eng	A1006	1955
14	0-6-0DH	Clyde	56-86	1956
15	0-6-0DH	Clyde	58-190	1958
16	0-6-0DH	Clyde	56-96	1956

A late report suggests that locos 1 & 16 are to be sold to the Rotary Club of Wynnum and Manly acting on behalf of the "St.Helena Tramway Preservation Society".

Most growers are now using tipper elevator trailers to load cane into the bins at the siding rather than taking them infield. This has led to the trialing of ten 4-wheel 10-tonne bins this season, with nine having been supplied recently by the Boogan Implement Co.

The Mulgrave Rambler tourist train now operates on a charter only basis. It is reported that only a few trips have been made this year, using Baguley 0-6-0DM 1 (3377 of 1953) as motive power. John Fowler 0-4-2 *Nelson* (20273 of 1934) has reportedly not been in steam since the mill centenary on 24 April 1994.

Observed in August was Motor Rail Simplex 4wDM 10450 in the navy area, while two other Motor Rail units (2090 of 1922 & 4207 of 1929) were out of use nearby. The Mulgrave Mill-built 4wDM of 1962 was shunting the truck shop.

Tom Porritt 8/95, 9/95; Bob McKillop 8/95

NATIONAL PARKS & WILDLIFE SERVICE, St.Helena Island 610 mm gauge

(see LRN 63 p.8)

An application by the Crown for "the construction of a tramway at St.Helena island, Moreton Bay" under Section 37 of the Queensland Heritage Act 1992 has been advertised. The application states that no relics of the tramway remain apart from the formation.

St.Helena Island operated as a prison from 1867 to 1933. The tramway on the island is understood to have operated from 1888 originally using convict-powered flat wagons. A horse tram was used from 1898.

The proposed tramway will run from the shore end of the causeway to the old blacksmith's shop along original formation with a new branch to a storage shed. "Iron rails" and "ironwood sleepers" were acquired as a 1988 bicentennial project which was not completed. The second stage is the acquisition of non-heritage rolling stock to operate the tramway. This seems to have begun with the reported sale of Mulgrave Mill's Baguley 0-6-0DM 1 (3377 of 1953) and Clyde 0-6-0DH 16 (56-96 of 1956) to the Rotary Club of Wynnum and Manly acting on behalf of the "St.Helena Island Tramway Preservation Society" in September 1995.

JOHN HOLLAND CONSTRUCTION & ENGINEERING PTY LTD

See PLANE CREEK CENTRAL MILL CO LTD

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 107 p.9)

The southern cane railway from Koumala to Karloo was placed into full

operation on July 18th, with construction having been completed by John Holland the day before.

Two new bogie brake wagons, constructed by Mackay firm Anderson Rea were delivered a few days before for use with the three rebuilt Walkers DH class B-B DH locos. They incorporate regauged QR bogies. The Walkers locos have received identifying numbers at each end, presumably as an aid to recognition by mill staff, duplicating existing loco numbers at the mill. They are

1	Allan Page	B-B DH	Walkers	594 1968	(reb.BFE DH12 1995)
2	Karlooloo	B-B DH	Walkers	630 1969	(reb.BFE DH48 1995)
3	Koumala	B-B DH	Walkers	651 1970	(reb.BFE DH64 1995)

(Please note that the identification for ALLAN PAGE given in LRN 107 was incorrect).

Tony Wells 7/95

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 106 p.12)

South Johnstone Mill's Com-Eng 0-6-0DH 19 (AH4688 of 1965) was shunting 14-tonne bin containers for Atherton Tableland cane at the new transfer gantry on 24 August 1995. Note the new main line track construction in progress on the adjacent line.

Photo: Bob McKillop

Baguley 0-6-ODM 10 (3390 of 1954) was noted outside the Engineers Office with the Turtles Express carriage. Mill tours still operate on a daily basis during the crushing season. Malcolm Moore 4wDM 17 (1060 of 1943) was noted with a number of other locomotives in the loco storage shed.

Cane from new areas on the Atherton Tableland is being hauled to the mill by road in 14-tonne bins which are transferred onto rail transporter bogies using an overhead gantry crane at the northern end of the mill yard. The rail vehicle observed in December (see LRN 105 p.15) was clearly a prototype of the transporter. B-double trucks convey three bins at a time to the mill yard, and there are 38 bins in use. On August 24th, freshly painted Com-Eng 0-6-ODH 19 (AH4688 of 1965) was working the Atherton Tableland bin train.

Ian Comrie 8/95; Bob McKillop 8/95

SUGARWORLD, Edmonton 610 mm gauge

(see LRN 105 p.15)

The former Sugarworld theme park has now closed to make way for urban subdevelopment. The Assemblies of God church has taken over the administration building and access to the site is restricted to church members. E.M.Baldwin 4wDH 9109-1-9-80 of 1980 and two passenger cars were noted on site on 24 August, but it was impossible to tell whether static Hudswell Clarke 0-6-0 1549 of 1924 was still present. These items may still be owned by CSR.

Bob McKillop 8/95

TULLY SUGAR LTD 610 mm gauge

(see LRN 105 p.16)

A new bogie brake wagon incorporating regauged ex QR roller bearing bogies was noted at the mill on 15 August, seemingly uncommissioned as yet.

Chris Hart 8/95

TASMANIA

COPPER MINES OF TASMANIA PTY LTD, Mount Lyell Mine 610 mm gauge

The new operators of the Mt.Lyell mine arranged an auction on 15 March 1995 as part of its rationalisation of operations for future development. Included in the sale were two 2 ft gauge battery locomotives built in 1972, each with two 25 hp motors and complete with battery packs. Can any

member provide any details?

Ray Graf 8/95

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610 mm gauge

(see LRN 105 p.17)

From 1 July, the Shire of Murrindindi became the lessees of the railway land at Alexandra, making it securely available for ATT&M use. Work has commenced on the reconstruction of the Rubicon Tramway within Alexandra township. Motor Rail Simplex 4wDM 10058 of 1948 has been selected to head the construction train and will soon be in use on this task.

ALLIANCE GOLD MINES NL, Maldon

Alliance Gold Mines has started gold mining beneath the old Union Hill North open cut after completing a 260 m decline from the base of the pit. (It seems quite possible that rail equipment will be in use.)

Sydney Morning Herald 25/7/95 via Ray Graf

THE BRIGHT GOLD SHOP & MUSEUM, Bright narrow gauge

This fascinating shop, dedicated to the Upper Ovens goldfields, is situated at Shop 6, Riverside Avenue, Bright. The museum display, housed in the rear section of the shop, covers all types of gold-mining: alluvial, deep-lead, dredging and quartz reef mining. Of interest are the two 4-wheeled half ton box trucks (they actually hold between 8 and 10 hundredweight). One of these appears to be 16 in gauge (406 mm) and came from the Pioneer mine in Bright. It still carries the painted logo of machinery merchants Miller & Co Pty Ltd. Also displayed is a pair of 16 in gauge wheels from the Young American mine, Freeburgh, and pressed steel sleepers from the 2 ft gauge incline of the Rose, Thistle and Shamrock mine, Harrietville. There is also a selection of dogspikes on display, some of commercial origin and others the result of the labours of bush blacksmiths.

Phil Rickard 8/95

COOKS CONSTRUCTION PTY LTD 900 mm gauge

See COAL CORPORATION OF VICTORIA

SKILLED ENGINEERING LTD, Yallourn 900 mm gauge

See COAL CORPORATION OF VICTORIA

COAL CORPORATION OF VICTORIA 900 mm gauge

(see LRN 106, p.12)

Coal Corporation of Victoria (trading as Energy Brix Australia) acquired ownership of the Yallourn-Morwell Inter Connecting railway on 16 August 1994. Cook's Construction are contractors to operate and maintain the railway, while Skilled Engineering presumably maintain the rolling stock.

As suggested in LRN 106, passenger trains were run on the 14 km Inter Connecting railway on Saturday 2 September 1995. The trains consisted of a new NBW passenger car built by Skilled Engineering for the Walhalla Goldfields Railway, hauled by Cook's Construction Walkers B-B DH loco CC01 (586 of 1968). The carriage had been placed on 900 mm gauge bogies for a test run in August. It was originally intended to use Skilled Engineering's Fowler 0-6-0DM *Pride of Yallourn* (4210049 of 1951), but the DH was used instead because the Fowler would have been too slow. A pity from the aesthetic viewpoint, as the DH towered above the NBW car. Six trips were run, two for Walhalla Goldfields Railway personnel, two for members of the Rail Tourist Association Inc. (as the RTA were not able to completely fill two trains, at the last minute they made ten places available to the LRRSA) and two for Skilled Engineering workers and their families who had donated hundreds of hours to the carriage project.

John Fowler 0-6-0DM *Pride of Yallourn* is now painted in an extremely ornate livery. The colours are basically royal blue, yellow and white, with pale blue lining and black and yellow stripes on the buffer beams. There are also a few touches of red. In addition the loco bears its name painted in a decorative script in a pinkish shade on the cab side. That may all sound over the top, but the job has obviously been done with great care. It is a marked improvement on SEC grey. No longer No.12, it is now numbered 1!

Normally coal trains are operated over the two night-time shifts, leaving the day shift free for track maintenance. Operation of the special passenger trains occupied the whole of the day-shift period, with trains being run at approximately 80 minute intervals.

The railway offers an interesting contrast in views, with the highly industrial scenes of the Yallourn and Morwell open cuts, distant views of mountains, and cows grazing in nearby fields. Noted was the track rationalisation at Yallourn, a double-headed train "dead" under the coal loader, the better standard of track around the East Field deviation and the improved track elsewhere, the complete removal of the overhead wire and the recent removal of No.9 loop near the Morwell River (leaving No.8 as the sole loop). Average speed was about 30 kph.

At Morwell the train halted over the ditch bunker so passengers were forbidden to detrain there. A wise move, as instead of a platform, there was about a six-metre drop into a heap of brown coal. A photostop at the Morwell River trestle bridge on the return journey was much appreciated.

The passenger car was numbered NBW1 and is shortly to be delivered to the Walhalla Goldfields Railway. It may be incorrectly numbered, as it is understood that NBW1 has already been delivered to the WGR. Another inconsistency was that this vehicle had the word FIRST painted on the side, in which case it should be an NAW.

Seating 36 in comfort, the car has 2+2 seating using ex-NSWGR throw-over seats. Built to Victorian Railways narrow-gauge design, but wider to accommodate the seating, it is complete with clerestory roof, end platforms and generously-sized windows. Although a comfortable, well built vehicle which retains something of the aura of the 1900s, it is obvious that it is not built of timber.

There is unlikely ever again to be passenger train running on the Inter Connecting Railway. Impending government legislation for tourist railway accreditation means that Cook's will be prohibited from running future passenger trains.

Frank Stamford 9/95; Phil Rickard 9/95

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 107 p.15).

A State Government Grant of \$500,000 has been received to help finance capital works. It seems unlikely that any of this will be used on the Gembrook restoration. A carriage shed at Belgrave seems to have very high priority.

On the weekend of 19-20 August, track was laid from Cockatoo station to within about 100 metres of Cockatoo Creek bridge (bridge No.9). No further track laying on the main line is considered practical until either bridge No.8 or 9 is built. All of the track from Fielder station to Cockatoo Creek is unballasted, and funds are not available to buy the 2500 tonnes of ballast required.

Trains will be running at Gembrook on the weekends of 30 September/1 October, 30/31 October, 25/26 November, 23/24 December, 24/25 February 1996, 30/31 March, 27/28 April, and 25/26 May. In all cases the Saturday is Gembrook market day. A new timetable will be in operation.

On Saturdays trains will depart Gembrook at 9.30, 10.15, 11.00, 11.45, 12.30, 1.30, 2.30, and 3.15. The 1.30 and 3.15 trains will go to Fielder, a 47 minute round trip. All the others will go to Fielder Bridge, a 30 minute round trip. On Sundays, trains will depart Gembrook at 10.30, 11.30, 12.30, 1.15, 2.15, and

3.00. The 11.30, 1.15 and 3.00 trains will go to Fielder; the others will go to Fielder Bridge.

Frank Stamford 9/95

GOULBURN - MURRAY RURAL WATER AUTHORITY, Tatura 610 mm gauge

Ruston & Hornsby 2 ft gauge 4wDM 285342 of 1949 is still held at the pre-cast plant at the Goulburn-Murray Water depot.

Steven Fox (GMRWA) via Phil Rickard

GOULBURN-MURRAY RURAL WATER AUTHORITY, Waranga Basin 610 mm gauge

(see LRN 59 p.11 & LRN 98 p.15)

The site was visited on 18 March 1995. The tramway depot area is at the western end of the reservoir wall, adjacent to the Rushworth-Tatura road. The 4wDM loco, numbered 18-C-25, was built by G.Sewell of Footscray in 1959. It hadn't moved since May 1994 and was extracted from the loco shed with some difficulty. Its original petrol engine was replaced by a Petter diesel in 1971/2. It may have originally had only one driven axle. A flat truck was also pushed out of the shed.

Six additional items of rolling stock were noted in the works yard, all built on skip frames. They were :

- an open top rectangular metal bin which holds about ½ cubic yard of screenings and sand with a tool compartment below. Bags of cement can be carried on top.
- a flat truck for carrying a portable cement mixer.
- a flat truck with a rack to accommodate six extension chutes (to enable cement to be placed anywhere on the dam wall) and a mounting for a water tank.
- the so-called caboose a sprung vehicle for workers. Has a leaf spring, wooden floor and corrugated iron sides and roof.
- two side-tipping skips, one with a plant class 17-C painted on it, carrying builder's plates G.C. Sewell, Cross Street, West Footscray. Frames are made of channel steel manufactured by Frodingham Iron & Steel Co. Ltd, with some axle boxes lettered MD.

The railway, used for servicing the dam wall, was noted to be in situ for 2.3 km along its crest, with the remaining 5 km converted to roadway. It appears that the line was cut back progressively in the 1970s and 80s. Since the visit, it is understood that the remaining rail has been removed from the dam wall and tenders called for the disposal of the railway. A few hundred yards

of track are understood to remain from the dam wall to the quarry. However, the Alexandra Timber Tramway & Museum's newsletter suggests that the ATTM may become involved in overseeing the development of a working tramway museum on the site, presumably utilising the remaining track.

Phil Rickard 8/95; Timberline 1/8/95 via Ray Graf

RED CLIFFS HISTORIC STEAM RAILWAY INC. 610 mm gauge

The Red Cliffs Historic Steam Railway Inc. has undertaken to construct a 610 mm gauge tourist railway on a portion of the former Victorian PTC branch line from Red Cliffs to Morkalla. Approximately 1800m of track was retained where the branch diverges from the Melbourne to Mildura main line.

The former SR&WSC Kerr Stuart 0-4-2T 742 of 1901 (should it be 743? - Ed.), which was withdrawn from service in 1953 and preserved in Red Cliffs township from 1955, will be used as motive power. The locomotive was completely restored to working order by Sunraysia Steam Preservation Society in 1987 (see LRN 80 p.16) and is owned by the Rotary Club of Red Cliffs. It is proposed that the loco be placed in trust with RCHSR.

Two bogie carriages have been built and are housed in a substantial purpose-built shed with pit and servicing facilities. Track construction is well advanced using 60 lb AS rail from the former branch line and takes the form of a balloon loop with triangle connections. The line will extend for about 1500 metres where a loop will be built at the terminus. New red gum sleepers, crushed rock and limestone ballast are being used in construction.

The Victorian Government's Rail Safety Act has necessitated the granting of Accreditation before trains can begin running, and an application is in course of preparation.

Interested members might care to contact Bruce McLean at PO Box 285, MILDURA 3502 to become involved in this project.

Bruce McLean 8/95

SANDHURST TOWN MANAGEMENT PTY LTD, Eaglehawk 610 mm gauge

(see LRN 97 p.19)

This theme park has closed and will be moved to a new site with another tourist attraction. The Perry 0-6-2T 7967.50.3 of 1950 here has only seen occasional use. (This unit was ex Babinda Mill, not Tully Mill as shown in LRN 97).

KALAMUNDA HISTORY VILLAGE 1067 mm gauge

This extensive folk museum is established in the former WAGR station yard. The display of artefacts and photographs covers the ownership of the railway by the timber company (1891-1903) and the subsequent government railway ownership until closure in 1949. The village is open from 10 am to 3 pm Monday to Thursday, 9.30 am to 3 pm Saturday, and 1.30 pm to 4.30 pm Sunday.

Bob McKillop 8/95

OVERSEAS - FIJI

FIJI SUGAR CORPORATION 610 mm gauge

(see LRN 102 p.19)

Strikes by lorry drivers disrupted production at Lautoka and Rarawai Mills in July. About 350 lorries bring cane by road to Lautoka Mill, mostly from areas also served by tramway, and drivers wait in long lines for many hours to unload. The drivers are demanding that the mills provide them with toilets and canteen facilities. They would also like faster turn around facilities at the mills. (One suspects that FSC is not keen to encourage further cane to go by road even though the substantial tonnages presently handled must relieve pressure on the mill rail systems - Ed.)

Courier-Mail 25/7/95 via Editor

SUVA CITY COUNCIL, Thurston Gardens, Suva 610 mm gauge

(see LRN 102 p.27)

Hudswell Clarke 0-6-0 1663 of 1936 was cut up on site in mid-July 1995 as it had become a safety hazard to children.

EDITORIAL

Sincere apologies for the late appearance of this issue of LRN. It got tied up with the onerous responsibilities of finishing one job and starting another. There just wasn't time to attend to LRN and so it had to wait for a while. Hopefully, we will soon be back on schedule again. As of early next year I will be in a new job based in Rockhampton, and more permanent contact details will be published then. Until then, the old address will still find me.

NOTES, CORRECTIONS AND COMMENTS

Kerr Stuart at Redcliffs.

A photograph sent by Bruce McLean showing what appears to be an original builder's plate of the Kerr Stuart here (LRN 108 p.22) shows the number 742, confirming published sources.

Industry World

(see LRN 108 p.7)

Eddie Oliver writes to say that Industry World, at Port Kembla, is a collaboration between many of the big local industries to increase their tourist orientation. The "builders tip", located immediately to the north of the Inner Harbour rail arrival roads is now closed as a tip and is a rather bleak, partly grass-covered hillock tall enough to provide an excellent viewing point over the inner harbour and across to Port Kembla. The "narrow gauge railway" apparently refers to a miniature train ride to allow visitors to ride around and see the views in all directions. The Coniston BHP Visitors Centre displays a diagram of the proposed track configuration.

St.Helena Island

(see LRN 108 p.15)

David Burke writes to say that his late uncle, Tom Burke, was the Government Land Agent in Brisbane, and that in the early 1940s he was required to hold an auction on St.Helena Island. On visiting the island and opening the tramway shed, a completely intact Brisbane horse tram was found within, a fact made much of by the local press at the time.

RESEARCH COLUMN

Early internal combustion locos.

Phil Rickard writes that the locomotive referred to by John Robin could be that referred to in *Light Railways* 25 p. 16. If so, it probably would not qualify as an industrial locomotive.

W.R.B.Johnson diaries.

Jim Longworth has been reading these diaries, held in the ARHS archives in Sydney. Johnson was an early researcher into Victorian timber tramways, and light railways across Australia. On 28 March 1940, he visited Marchbank's Tramway in Victoria where, as well as recording his experiences and mapping the tramway layouts, he made detailed notes as to how to minimise danger when in the vicinity of log hauling operations. These diaries would be well worth checking by a Victorian researcher.

Department of Education records.

Jim Longworth has been using NSW Education Department files as part of his researches into south coast timber tramways. Mill owners frequently petitioned the Department to provide a school in an attempt to attract more stable family men to their timber operations. The files contain a wealth of information relevant to mill history including letters from managers and maps showing mill locations and even tramways. He suggests they may be worthy of inspection in other states also.

Rack railways.

David Jehan of 44A Crump St, Mortdale 2223, is writing a book on Australian rack railways. He would be interested in hearing from anyone with photographic material on the Mt.Lyell or Mt.Morgan rack railways. He also has for sale reproduction E.M.Baldwin plates.

NEW SOUTH WALES

CONCRETE CONSTRUCTIONS - KINHILL ENGINEERS JOINT VENTURE, Wollongong - Upper Avon Dam gauge unknown

A 1.7km tunnel is being driven from an existing shaft at the bottom of the Illawarra escarpment near Wollongong to a new shaft at the Upper Avon Dam. The work is being undertaken on behalf of Wyuna Water as part of the Illawarra and Woronora Water Filtration Plants Project. The 4m wide and 3.5m high tunnel is being driven through the Illawarra coal measures on an alignment selected to bypass existing flooded coal mine workings. A 1.3m pipe will be placed inside the tunnel when complete.

Spoil cars, self tipping Hagglund cars which discharge onto a conveyor, are hauled to and from the workface by a Gemco 10 tonne electric locomotive.

Civil Engineer Australia 11/95 via Greg Stephenson

EASTERN GOLD AUSTRALIA NL, Cowarra Creek Gold Mine, Bredbo narrow gauge

An advertisement for an auction to take place at this location on 1 November 1995 included two 1.5 tonne Gemco battery electric locos, 10 rail wagons and 1200m of rail track.

HUDSONS, Showground Road, Castle Hill 610mm and 900mm gauge

This timber yard has hand worked lines in connection with woodworking machinery. Two 2ft gauge transfer trolleys consisting of skip frames are found on one lengthy 2ft gauge track. On shorter tracks, a 2ft gauge feed truck operates on either side of a planer, and a 900 mm gauge feed truck serves a band saw.

Craig Wilson 7/95

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610mm gauge

(see LRN 108 p.7)

The recommissioning day for Hawthorn Leslie 0-4-0ST *Burra* (3574 of 1923), 8 October went well with reasonable weather. The ceremony was carried out by Bill Fancourt, former BHP Public Affairs Manager, who had released the loco from open display to ILRMS in 1978. *Burra* did a demonstration run with a short train of coal skips and then took over a passenger consist, the ex Excelsior Colliery man rider and ILRM Car No. 1, for several trips before

retiring for the day. The loco is magnificently finished in orange-brown livery with red lining, motion and buffer beams and carries ILRM number 4. Several minor items, such as injectors, still required attention following the recommissioning.

Tony Madden 10/95

LILYVALE MUSHROOMS, Helensburgh 610mm gauge

(see LRN 15 p.10)

An ARHS (NSW Division) trip visited the Cawley (No.2) tunnel at Helensburgh on 23 July 1995. This was still very much as described when visited by a LRRSA group in 1980, with a single line through the tunnel inside which the mushrooms are grown, and a siding on the surface serving a packing shed. One locomotive was noted near the packing shed. A diesel and a petrol locomotive were noted in 1980, but at that time it was stated that there were other associated lines at the Lilyvale No.6 tunnel and the Helensburgh No.3 tunnel. Can it be established whether these are still in use, and if so, whether either has a locomotive present?

ARHS (NSW) Members' Newsletter 9/95 via Ray Graf

THE MANILDRA GROUP, Manildra 1435mm gauge

(see LRN 108 p.7)

It was noted in passing on 25 September that Walkers B-B DH 7340 (702 of 1972) had returned to shunting the yard. No other non-SRA motive power was seen.

Ray Graf 10/95

NSW RAIL TRANSPORT MUSEUM 1435mm gauge

(see LRN 88 p.10) Two industrial units were noted at Sydney Terminal on 1 October in connection with the 140 Years weekend. These were Hunslet 2-6-0 2705 (1115 of 1913) ex Public Works Department, and General Electric Bo-Bo DE 7921 (built 1944) ex St.Mary's Munitions Factory.

Ray Graf 10/95

NOEL RAWLINSON, Ophir narrow gauge

For more than 30 years Noel Rawlinson has worked a small 200 m deep gold mine in the Ophir field, where payable gold was first discovered in Australia 144 years ago. He is pictured in a press report with a very narrow gauge skip on an underground tramway. Tourists are shown through the mine, and Mr Rawlinson is hopeful of getting the contract to supply gold for the Olympic medals for the 2000 games.

The Sun-Herald 15/10/95 via Ray Graf

TIMBERTOWN WAUCHOPE 610mm gauge

(see LRN 105 p.9)

As reported previously, the proposed lease operation of this heritage theme park did not eventuate. Hastings Council is presently considering the matter with a new unlisted company registered as Timbertown Community Enterprise Ltd - having some local interest and some from outside the district. Shares are to be issued at the time that a suitable lease is finalised.

A visit on 20 June provided information on the tramway and equipment being readied for the future re-opening of the venue.

John Fowler 0-4-2T 17881 of 1928 and Hudswell Clarke 0-6-0 1862 of 1953 are at the Broken Bago workshops siding. The Fowler is said to be in need of extensive boiler work, or even boiler replacement and is awaiting a decision as to its future. The running gear is in satisfactory to good condition and the side tanks were rebuilt in 1986/7. Some boiler fittings seem to be missing. The Hudswell Clarke has had its cab removed and its boiler stripped of fittings and of all asbestos insulation in order to carry out boiler inspection and testing. A new smokebox has been fitted to the boiler shell. The inspection hole and covers plus the mud holes and covers have been checked and reworked where required to provide steamtight closures. Gauge glass mounts have been bead-blasted and refitted with stainless steel studs and nuts. Likewise the injector adaptor plates have been fitted with stainless steel studs and nuts.

The three open-sided carriages have been serviced and repainted. Low steel gates have been provided on each carriage in place of the chains formerly fitted.

John Fowler 0-6-0T 12271 of 1910 and Motor Rail Simplex 4wDM 4214 of 1929 are at Timbertown Station and loco shed. New wheelsets have been procured for the Fowler. All six wheels (the middle pair flangeless) have been fully machined from plate by Haden's Pty Ltd of Taree. Cost is reported to be approximately \$20 000, allegedly below the price of cast steel wheels for which patterns would also be required. A new inspection cover assembly with external closure plate was fitted to the boiler in about 1993. The front buffer beam and cylinder end covers have been repainted red and this loco has been tarpaulin covered in readiness for reopening. The Simplex diesel is used for maintenance duties. It has recently been repainted from industrial yellow to red and green, and the engine has been cleaned back to bare metal. Four vertical stanchions are now attached to the chassis frame.

The 2 km railway and associated bridgework have received considerable

attention, particularly since mid 1994, and are ready for use when an operator for the park is found.

David Mottram 6/95

QUEENSLAND

SUGAR INDUSTRY DEREGULATION AND ROAD TRANSPORT

A worrying feature of the deregulation of the sugar industry in Queensland as well as its expansion to Western Australia is the trend to uneconomic road transport in some areas with the transport cost burden being shifted to all taxpayers. Mourilyan Mill currently trucks cane more than 40 km past Tully Mill, and now South Johnstone Mill has acquired a substantial plantation in the Murray Valley area south of Tully, which could be producing 60,000 tonnes of cane by 1998. In addition, cane is now being trucked long distances to a number of northern mills from the Atherton Tableland, while \$1.0m is reportedly to be spent by the government to upgrade roads in the Ord River district of WA.

and Australian Canegrower 21/8/95 via Chris Hart*

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610 mm gauge

(see LRN 108 p.10)

The Durundur Railway was officially opened on 23 September by John White, the Mayor of Caboolture. Bundaberg Foundry 0-6-2T 5 of 1952 broke the ceremonial ribbon and then ran trips between Woodford Station and the Herb & Cottage Display Gardens for the remainder of the day.

Durundur Railway Bulletin 9/95 via Editor

BABINDA SUGAR LTD 610mm gauge

(see LRN 108 p.10)

Four of the mill's eleven locos were not in regular use during the 1995 crushing season. Com-Eng 0-6-0DH locos *Bramston* (AH2460 of 1962) and *Russell* (A2027 of 1958) were spare, with the former preferred for use when required. Com-Eng 0-6-0DH *Josephine* (A1821 of 1957) was reduced to bare frame in the shed for rebuilding. Baguley 0-6-0DH *Fishery* (3387 of 1954) was inaccessible in the shed behind *Josephine*.

A booking-on and refuelling area near the traffic office in the centre of the mill complex was being used by locos, but some units were noted returning to the loco shed between shifts.

Editor 9/95

BUNDABERG SUGAR LTD, Mourilyan Mill 610mm gauge

(see LRN 108 p.10)

All five steam locomotive frames previously noted at the mill were seen in late September. These are believed to have come from:

0-4-0WT Krauss 3267 1895

0-4-2T John Fowler 12967 1911

0-4-2T John Fowler 15916 1921

0-4-2T Hudswell Clarke 1556 1925

0-4-2T John Fowler 20713 1935

Most consist of chassis and wheels only, and are fitted up to carry mill rollers or other heavy equipment.

The unidentified Malcolm Moore 4wDM in service with the navvies has not only been repainted but has been given the somewhat unusual number of .5. It was noted hauling a single bogie ballast hopper at Martyville on 28 September.

More than 40 ex-QGR Innisfail Tramway 2ft gauge bogie sugar boxes were noted out of use at Goondi Mill site. With substantial bogies and hardwood timber frames, these vehicles would be excellent as the basis of passenger vehicles and cannot be expected to be left to lie around for ever.

Editor 9/95

CAIRNS CITY COUNCIL, SUGARWORLD, Edmonton 610 mm gauge

(see LRN 108 p.17)

It is reported that the City Council now owns the Sugarworld site, which was open to the public free of charge on 27 September. All railway track had recently been lifted from the site.

There was no sign of E.M. Baldwin 4wDH 9109-1-9-80 of 1980, which had been moved south by road to Victoria Mill a few weeks before. However there were still five four-wheel carriages stored in a corner of the site. It has been reported that these were to be donated to an "island resort near Brisbane". Maybe this is a reference to St.Helena Island (see LRN 108 p.15). Also present was ex-Hambledon Mill Hudswell Clarke 0-6-0 4 (1549 of 1924) under its protective canopy but with rust coming through.

Editor 9/95: Chris Hart 10/95

CAPRICORNIA HERITAGE RAIL ASSOCIATION INC. Archer Park Station. Rockhampton 1000 mm & 1067 mm gauge

This site, adjacent to the QGR main line in Denison Street, is a preserved railway station containing some interesting items of rolling stock. Three of these are French-built Billard 4wDM locomotives formerly stored at the

Rockhampton City Council bus depot (see LRN 67 p. 10). One (T75P VM 227) was rebuilt by Birch crane hire in Mackay in 1986 and is 3ft 6 in gauge. The other two are unrebuilt from metre gauge, 11E1 (T75P VM 224) with wheels removed. and 11 E3 (T75P VM 228). Also present is the Purrey 4wVBTG steam tram.

Editor 9/95

CSR LTD, Herbert River Mills 610 mm gauge

(see LRN 108 p.10)

Victoria Mill's E.M.Baldwin B-B DH *Darwin* (6171 -1 -9-75 of 1975) was noted hauling empty bins on the morning of 29 September at Ripple Creek in the Macknade Mill area. The loco, with Clyde brakewagon 5, had arrived at Macknade Mill that morning on a week's loan. Also on loan to Macknade Mill was E.M.Baldwin 0-6-0DH *Hobart* (4413-1-7-72 of 1972) from 1 to 5 September, and 5 to 8 or 9 October.

E.M.Baldwin 4wDH 9109-1-9-80 of 1980 ex Hambledon Mill arrived at Victoria Mill from the Sugarworld site in Edmonton between 4 and 6 September.

Cordelia Road was closed while the road overbridge at Cordelia was replaced on 30 September - 1 October with a CSR crew replacing girders and deck, and constructing new safety rails.

GRAHAM DANIEL, Tully Welding Works 1067mm gauge

(see LRN 108 p.12)

Avonside 0-6-OT 2043 of 1930 was noted in the yard here on 29 September adjacent to the Bruce Highway. The boiler is separate from the chassis.

Editor 9/95

HAUGHTON SUGAR CO PTY LTD, Invicta Mill, Giru 610mm gauge

(see LRN 106 p.8 & 107 p.8)

Two further Walkers ex-NSW SRA 73-class B-B DH locos 7346 (708 of 1973) and 7348 (710 of 1973) are reportedly being rebuilt at the Bundaberg Foundry, having been in storage at Plane Creek Mill, Sarina. Two additional brake wagons will also be delivered for use with these locomotives.

In spite of the massive expansion undertaken at Invicta Mill in recent years, it is said that crushing capacity on the Burdekin will be exhausted once again in 1997. The total crush of Burdekin Mills has gone up from 3.6m tonnes in 1988 to 7.3m tonnes in 1995, with a figure of 10m tonnes expected in 2000 and 12m not impossible in 2005. Current expansion work programmed is

expected to cope with 10m tonnes.

MACKAY CITY COUNCIL, Seaforth 610mm gauge

(see LRN 108 p.12)

Mackay City Council have provisionally accepted a tender for the purchase of the ex Marian Mill Dick Kerr 0-4-2T from Seaforth believed to have been built in 1910. The successful offer was received from Red Gum Works, Echuca

(Warrick Turner). Mackay Daily Mercury 16/11/95 via Editor

MACKAY SUGAR CO-OPERATIVE ASSOCIATION 610mm gauge

(see LRN 108 p.13)

Farleigh Mill's rebuilt 73-class B-B DH loco (Walkers 692 of 1972) was in service on 26 September, still without nameplates. It had received the name *Calen* by 2 October. Marian Mill's similar loco *Tannalo* (Walkers 707 of 1972) was seen at Gargett on 30 September, hauling 250 full bins from Harvison's, after having taken two rakes of 136 from Tannalo across the Cattle Creek crossing to Harvison's. On 4 October, *Tannalo* was noted being ignominiously hauled dead into the mill yard after failing at Boldon.

The old Cattle Creek Mill site at Finch Hatton is still used as an out depot. for Marian Mill. Clyde Model DHI-71 0-6-0DH locos 12 *Nellie* (58-188 of 1958) and 13 (67-568 of 1967) were noted based there on 28 and 29 September. *Nellie* was noted working bins from Finch Hatton to Tannalo while 13 was used to work cane from local branch lines to Tannalo.

Bundaberg Foundry 6wDM 13 of 1954 was noted out of use at Marian Mill on 30 September. It and the mill's 1965 Gemco 4wDM are reportedly surplus to requirements.

North Eton Mill is also used as an out depot, for Pleystowe Mill. Clyde Model HG-3R 0-6-0DH locos *Palmyra* (63-273 of 1963) and *Palms* (70-708 of 1970) were stationed here at the beginning of October. Also here were E.M. Baldwin 4wDM Allandale (4-473-1-3-63 of 1963) and Bundaberg Foundry 6wDM 6 (10 of 1953), apparently out of use. 20km beyond North Eton is Mia Mia, and further still are Pinevale and Septimus. E.M.Baldwin B-B DH locomotives *North Eton* (6780-1 -8-76) and *Shannon* (7126-1 -5-77 of 1977) were noted in these areas and shuttling cane in to North Eton for most of the day. From North Eton to the mill, E.M.Baldwin B-B DH *Mia Mia* (9815-110-81 of 1981) and Walkers B-B DH *Walkerston* (672 of 1971 rebuilt by Pleystowe 1994) take over the cane shuttle for the last 16 km.

Racecourse Mill's new bogie brake wagon was in the loco shed still awaiting commissioning on 2 October.

At Farleigh Mill, Com-Eng 0-6-0DM A1614 was noted out of service on 5 October, but the other Com-Eng locos were all in use. Motor Rail Simplex 4wDM 21623 of 1957 has received the name *Phar Lap*.

Editor 9/95; Craig Wilson 10/95

MOSSMAN CENTRAL MILL CO LTD 610mm gauge

(see LRN 108 p.13)

Mossman Mill's 0-6-ODM Baguley Mowbray (3378 of 1954) on the turntable at Marina Mirage. 27 September 1995.

Photo: E.D. Behan

In spite of the cessation of steam tourist passenger services, The Ballyhooley Commuter service continues to run between Marina Mirage and St.Crispin's Stations at Port Douglas, with the return trip taking 45 minutes. The loco used is Baguley 0-6-0DM *Mowbray* (3378 of 1954) in maroon and yellow livery with BALLYHOOLEY COMMUTER on the bonnet sides. It normally hauls two or three of the bogie carriages built for use on the steam tourist services. There is a turntable at each terminus of the commuter line although turning of the loco is unnecessary. The one at Marina Mirage remains in use however, as it is used to gain access to the run-round loop from the main line instead of a headshunt.

E.D. Behan 9/95

MULGRAVE CENTRAL MILL CO LTD 610mm gauge

(see LRN 108 p.14)

The new brake wagon was noted in use with Walkers B-B DH *Gordonvale* (595 of 1968 rebuilt Bundaberg Foundry 1995). The bogies on the brake wagon carry F&M Baldwin Engineering builder's plates (with a close resemblance to E.M.Baldwin plates) and builder's number 495. The chassis of the brake wagon was reportedly built by North Queensland Engineers & Agents, with assembly and fitting out done by the mill.

Com-Eng 0-6-0DM 5 (A1005 of 1955) was not carrying its number when observed in late September, presumably as a result of repainting. Com-Eng 0-6-0DM 3 (A1003 of 1955) was under repair in the shed having suffered a collision with a cane harvester a few days before.

A large area of cane was burnt out at Green Hill on 26 September when sparks due to a broken axle flew from a train hauled by Clyde 0-6-0DH 13 (64-316 of 1964).

Editor 9/95: Tom Porritt 9/95

PIONEER SUGAR MILLS LTD, Inkerman Mill 610mm gauge

(see LRN 108 p.12)

E.M.Baldwin B-B DH *Iyah* (6558-1-6-76 of 1976) was noted at Keabah on 24 September. It has received the number 1, which could suggest that the entire fleet has been numbered.

Extension of irrigation to the right bank of the Burdekin River is under consideration by the Department of Primary Industries. This could make 9000ha of land available, potentially 80 to 90 farms.

Editor 9/95; Australian Canegrower 18/9/95 via Chris Hart

PLANE CREEK CENTRAL MILL CO LTD 610 mm gauge

(see LRN 108, p.16)

The new ballast tamper, supplied by Plasser, was noted in use at Karremal on the southern cane railway on 21 September. Bundaberg Foundry rebuilt Walkers B-B DH locos *Karlo* (630 of 1969) & *Allan Page* (594 of 1968) (name spelt incorrectly in LRN 108 p.16) were noted double heading a long rake of empties south from this point on the same day. This pairing of locos with a brakewagon has been noted frequently operating double heading empty rakes and returning to the mill in locotrol mode with up to 350 bins.

The new brake wagons have been numbered 1 and 2. The first was in the loco shed on 1 October, having suffered a shunting mishap. The second was in use with the locotrol train. It carries a triangular brass plate with the words OVERHAULED BY ANDERSON REA 2017195. The brake wagons each

incorporate into their handrails eight sandboxes removed from 73-class locos.

Ex-NSW SRA Walkers B-B DH locos 7346 (708 of 1973) and 7348 (710 of 1973) are reported to have been removed from storage at Plane Creek Mill and sent to the Bundaberg Foundry for rebuilding for Invicta Mill.

The southern cane railway was officially opened on 8 November. A train of empties headed by *Allan Page* and *Karlo* was driven through the pink ribbon at Koumala by the Queensland Minister for Primary Industries, Bob Gibbs.

Editor 9-11/95; Bob James 10/95; Craig Wilson 10/95

SOUTH JOHNSTONE MILL LTD 610mm gauge

(see LRN 108 p.16)

The mill's cane railway receives more than slight attention in the Australian film "All Men are Liars". In one well-publicised shot a Baldwin B-B DH loco smashes a piano at a level crossing, while much of the film's action is shot in the main street of South Johnstone with cane trains passing to and fro.

Com-Eng 0-6-0DM 8 (AA1544 of 1960) had taken over as the "Turtles Express" tourist mill tour train loco by 26 September.

New Tamper STM-XLC ballast tamping machine 94962 of 1995 was noted at a worksite at Coorumba on 28 September. It carries the nameplate BADILA 1995.

Editor 9/95

TULLY SUGAR LTD 610mm gauge

(see LRN 108 p.18)

There appears to have been some confusion about the two bogie brake wagons at Tully. Construction of both was both commenced in 1993, but only one was put into use while the other became a long-term project. Although largely completed by 1995, including painting, it still was awaiting to be commissioned in late 1995. Meanwhile the first was being used as a mobile air compressor by the navvies when the mill was shut down for a few hours on 25 September.

Track construction work in relation to the sugar infrastructure package for the Riversdale-Murray area seemed to be largely completed by late September. The line bridging the Murray River at Lih's Crossing has been extended to total 11 km from its junction with the Riversdale line and is known as the Warrami Road Extension. A 3 km branch from this line, the Upper Murray Road Extension, was still under construction late in September with 1 km in use, a further 1.4 km built and the remaining 0.6 km, together with a 0.6 km branch, not completed. E.M.Baldwin 0-4-0DH 2 (6-1082-2-2-65 of 1965) was at the head of steel in charge of the construction train. The third extension, the Stamp Road Extension, about 3 km in length, is downstream

on the eastern side of the QR main line. A large part of the infrastructure package is concerned with drainage and flood mitigation work, and it would appear that there will be further track extensions in years to come for there are very large areas of potential cane land to be opened up.

The El Arish depot is no longer being used for main line locomotives. Even though shift changes are made in the El Arish area, B-B DH No.6 (Walkers 653 of 1970, rebuilt 1993) and its bogie brake wagon are based at the mill. One reason may be that the shed at El Arish would not accommodate them!

It was all in day's work on 25 September when Com-Eng 0-6-0DH No.15 (AK3574 of 1964) split a set of points at Lower Tully while hauling empty bins and ended up in the dirt at right angles to the track with about ten bins of the rake a tangled mess behind and the remainder of the bins blocking a local road. A farmer's tractor was summoned to clear the roadway and the loco crew set to jacking bins in order to uncouple them, while the mill mobile crane and truck wagon were sent for.

It is reported that ex QR Walkers B-B DH DH40 (629 of 1969) has been sent to Walkers at Maryborough for rebuilding. The unit was expected back at Tully before Christmas for final fitting out, to be completed for the 1996 season.

For many years now, Tully Mill has used its loco drivers in the slack season to make concrete sleepers, and the mill's sleeper making plant enables it to be self-sufficient in this important commodity.

Editor 9/95

VICTORIA

COAL CORPORATION OF VICTORIA 900mm gauge

(see COOK'S CONSTRUCTION PTY LTD)

COOK'S CONSTRUCTION PTY LTD 900 mm gauge

(see LRN 108 p.19)

Contrary to the expectation expressed in LRN 108, Walhalla Goldfields Railway carriage 2NBW did not go to Thomson immediately after the trips over the Inter Connecting Railway on 2 September. Although due to be delivered there by the end of October, it is believed that more passenger trips using it were planned for 14 October.

On 20 September, a train triple-headed by Walkers B-B DH locos was parked at the coal loading stage. The units concerned were CC01 (586 of 1968), CC02 (587 of 1968), and CC04 (610 of 1969), while CC03 (643 of 1970) was on a ballast train at the Cook's Construction workshops. Also here was Walkers B-B DH DH36 (618 of 1969) unregauged and in QGR green & white livery. This unit had its engine removed and is believed to be for spare parts. Sister engine

DH24 (606 of 1969) was reportedly elsewhere undergoing gauge conversion, and will presumably become CC05.

At the triangle near the Cook's Construction depot, three electric locos (listed in LRN 106) were visible amidst a host of coal wagons. No sign was detected of Malcolm Moore 0-4-0DM 8 (Model 10-102, 36 of 1949), formerly used by the SECV here, but it is reported to be still on site.

Phil Rickard 10/95 Ray Graf 10/95

GEELONG STEAM PRESERVATION SOCIETY, Bellarine Peninsula Railway, Queenscliff 1067 & 915 mm gauge

(see LRN 94 p.17)

The Malcolm Moore 4wDM here (Serial No.2, Model 47, Type L, Job No.C396 of 1946) was still very much out of use here on 16 September. However another ex-industrial, Hudswell Clarke 0-4-2ST 6 *Wesley B.McCann* (646 of 1903), was noted in use. Seemingly missing was the 3ft gauge Whiting Trackmobile ex Alcoa, Port Henry. Can anyone provide any information?

Ray Graf 10/95

WALHALLA GOLDFIELDS RAILWAY INC. 762mm gauge

(see LRN 106 p.18)

Phase one of the railway project is well in hand. This is the 3 km of line from Thomson Station to Happy Creek, expected to be 80% completed by November 1995, with completion in 1996. The second phase involves reconstruction back to Walhalla, including six trestle bridges in the Stringers Creek Gorge. The steel sections of the first of these bridges was removed for refurbishment in May 1994. Phase three is the long term objective of extending the track back towards Erica. initially to Platina Station. Trains run every Sunday from 11 am to 5pm.

WGR via Ray Graf 10/95

WESTERN AUSTRALIA

ANR INSTITUTE. Parkeston 780mm gauge

(see LRN 67 p. 17)

The site at Parkeston is believed to be disused by the Institute, and AN are thought to be preparing to lease out the site. The pleasure railway line is still intact but has not been used for a long time. There is no rolling stock from the railway on site. AN now only operates the Indian-Pacific, "Tea and Sugar" and a weekly goods out of Parkeston following National Rail's takeover of interstate operations from 8 October 1995.

On 8 September 1993, the petrol locomotive and at least one carriage from the line were seen lying in the Boulder yard of the Golden Mile Loopline Railway Preservation Society.

Bernie Morris & David Whiteford 10/95

CARNARVON JETTY RESTORATION COMMITTEE 1067mm gauge

Carnarvon's One Mile Jetty has been closed in its entirety for some months

and well over a year has passed since the last jetty train ran (see LRN 91 p.19). From mid-August a large local public campaign has been underway to save the jetty and to raise funds for restoration. The Department of Transport has reportedly earmarked \$192,000 for demolition of the jetty by the Carnarvon Jetty Restoration Committee wants this money put forward as a government contribution to repairs. By 13 September, local businesses had pledged \$40,000 towards the jetty. Many business people have said that the jetty closure has resulted in tourist dollars being lost with fishermen no longer staying in the town.

Northern Guardian 13/9/95 via David Whiteford

CARNARVON LIGHT RAILWAY ASSOCIATION INC. 1067mm gauge

(see LRN 95 p.18)

The old PWD loco shed was due to be demolished in July 1995, and replaced by the new two road covered shed adjacent to it. A further covered area may be provided on the site of the old shed.

Association Chairman John Young said in September that the railway would commence operating once the Babbage Island station was complete and track fully laid over the Tramway Bridge (the final bridge into Carnarvon Town). On the weekend of 9-10 September, Andrew Barclay 0-4-0T *Kimberley* (1754 of 1922) had its annual "checkup" and was steamed along some of the track on the island. The Association has two suburban carriages ex Westrail which it hopes to have in use behind *Kimberley* soon. Some of the former bridges on Babbage Island have been filled in as part of the railway's reconstruction, and the Carnarvon Shire Council have been undertaking an engineering study on the main bridge.

Phillipa Uhe 7/95; Northern Guardian 13/9/95 via David Whiteford

SHIRE OF DENMARK 1067 mm gauge

The remains of Baldwin 0-4-0ST 10770 of 1890 have been secured for preservation by the Shire of Denmark after lying at Hotham since about 1927 when it was reportedly broken up for scrap.

Pinjarra Steam Express 10/95

ROTTNEST ISLAND RAILWAY TRUST 1067mm gauge

(see LRN 105 p.24)

In April 1995, the Rottnest Island Authority called tenders for:

"the design, manufacture, supply, delivery and commissioning of one alternatively two self propelled diesel powered railcars for operation on Rottnest Island".

Tenders closed on 28 April. However, in August the Authority sought expressions of interest from engineering companies

“who could undertake the design and construction of either a self propelled diesel railcar or alternatively a non-powered railcar suitable for haulage by a rail traction unit. Interests are also invited from organisations who could undertake specific major tasks associated with the construction, in conjunction with other organisations, so as to maximise their respective company's expertise and specialist areas (e.g. the body work as separate from the traction work). A 10.8m long narrow gauge freight wagon underframe and bogies are offered free of charge to prospective contractors”.

Submissions closed on 8 September.

West Australian 1/4/95 & 5/8/95 via David Whiteford

TRANSFIELD CONSTRUCTION (TUNNELLING DIVISION) - KUMAGAI GUMI JOINT VENTURE, Port Hedland gauge unknown

An 1160 m undersea tunnel is to be constructed to link BHP's Nelson Point iron ore processing plant and shipping facilities on the eastern side of Port Hedland harbour with shipping facilities at Finucane Island on the western side of the harbour. Tunnelling is programmed to commence in May 1996 and to be completed in November 1996. The 4.35 m diameter tunnel will house a 1.8m conveyor and service access way.

The tunnelling will be done by an earth pressure balance tunnel boring machine (EPBM). A Canadian-built Lovat EPBM weighing 370 tonnes will be used, with 84 tonnes of its weight in the rotating cutting head. A train will be used in conjunction with the tunnelling machine, and precast concrete sections will be fitted inside the tunnel for each 1.2m advance.

Civil Engineers Australia 11/95 via Greg Stephenson

WESTERN AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC Bennett Brook Railway, Whiteman Park 610 mm gauge

(see LRN 106 p. 18)

On 3 September, WALRPA commissioned its turntable at Whiteman Village Junction. The turntable is ex Midland steam depot and sat at Whiteman Park in sections for many years before a concerted effort in 1994-5 saw it reassembled and connected to the railway network. This was the first opportunity since the railway opened in December 1984 to turn stock without requiring cranes. Turntable operation was a feature of an Enthusiast Day held on the Bennett Brook Railway on 9 September and the highlight was a double-headed steam train consisting of 2-8-2 locos NG 15 118 *Elizabeth* (Henschel 24476 of 1938) and NG15 123 *Fremantle* (Franco-Belge 2670 of 1951) with seven bogie and three 4-wheel vehicles.

David Whiteford 10/95

1994/5 ANNUAL REPORTS OF SOCIETY DIVISIONS AND GROUPS

NEW SOUTH WALES DIVISION

COMMITTEE

President Jeff Moonie

Secretary Craig Wilson

Treasurer Peter Charrett

Committee Ross Mainwaring, Jim Longworth, Paul Simpson & David Jehan

MEETINGS

Mt.Lyell (Tasmania) - David Jehan. This was a talk on the Mt.Lyell rack system from information he has collected during his research on the subject - David's talk was complemented by a selection of slides of the Mt.Lyell system taken by Peter Charrett.

Port Kembla steelworks and associated industries. This was another theme night where we select a popular subject and members share in its presentation by bringing slides or movies from their own collections.

A.G.M. followed by the traditional members' slide night.

Peter Charrett showing slides taken by himself of various sugar mills and tramway systems from the early 1960s.

TOURS

Craven Forest Railway. Conducted by Ian McNeil, this tour inspected some of the more interesting sections of this standard gauge timber railway formation. It concluded with a visit to the site of the sawmill and the interchange with the NSWGR between Dungog and Gloucester on the north coast line.

Mt.Victoria. Conducted by Jeff Moonie to abandoned coal mines in the Blue Mountains: Blair Athol No.4 Colliery had an incline tramway down to the coal seam. Asgards Swamp Coal Mine was a very interesting industrial site having a small coal mine in the escarpment to feed a bee hive coke oven (which is still intact)

Silverwater Naval Munition Depot. Conducted by Len King, allowing a detailed inspection of its internal tramway system and its fleet of battery electric locos. Regrettably, no cameras were allowed but still worth the visit.

Simsville Timber Tramway. A projected tour with Ian McNeil has been deferred to a later date.

RESEARCH BULLETIN

No Research Bulletins were produced this year.

PROPOSED TOURS 1995-6

Wolgan Valley Railway and its oil shale works site at Newnes with Alan Watson.

Malabar Coastal Gun Emplacement with Jim Longworth.

PROPOSED MEETINGS

August 1995 - Len King on the Simsville Timber Tramway

October 1995 - Alan Watson on the Wolgan Valley Railway

If any interested members are in Sydney on our meetings nights, please come along and make yourselves known. All are welcome.

Jeff Moonie (President LRRSA NSW Division)

SOUTH AUSTRALIAN GROUP

During the past year, the South Australian group has continued to meet on a bi-monthly basis on the first Thursday of even months at Peter Letheby's theatre, 150 First Avenue, Royston Park.

Although it is now two years since we reverted to our old meetings arrangements, the number of members and friends has remained at about 7. In spite of the small numbers, at meetings considerable progress has been made on the group project of providing a list of Light Railways in South Australia, as well as discussing items of interest to members, such as newly discovered light railways (past and present) and SA articles in preparation and after publication in *Light Railways* or *Light Railway News*.

During the year we held one field trip, a visit to Smithfield Explosives Tramway led by Peter Barry. Seven members and friends attended.

As leader of the group, I would like to record my appreciation of the support given to me by Lee Rodda. Lee copies and distributes the record of our meetings and fills in when I am not available. I would also like to thank Peter Letheby for continuing to provide us with a most suitable meeting place.

Arnold D. Lockyer

TASMANIAN GROUP

No formal division exists and meetings are not held. There does not appear to be any real support for such and it appears that the best we can hope for at present is a loosely connected network of members ready to share their records and findings with each other. In addition, I respond to requests for information from people, presumably members, living interstate and from overseas concerning Tasmanian railways and tramways.

John Robin has provided valuable information concerning a very much under-researched sawmill tramway near Meander. Other members with whom I have been able to maintain an effective exchange of research

findings include Wayne Chynoweth, David Beck, and Tony Parnell. The former two have maintained interest in the very extensive timber industry in the Channel area south of Hobart. Tony has done excellent work mapping the various tramways which operated in the Circular Head district.

Finally it should be recorded that I have established a very good relationship with the Tasmanian Forestry Commission and they have willingly co-operated in giving access to their photographic records and their extensive collection of aerial photos dating back to the late forties.

Ken Milbourne

MEETINGS

MELBOURNE:

Erica

The Erica district was perhaps the eastern most region in Victoria that made major use of tramways for log and timber transport. Other timber regions were exploited further to the east but were of eras which employed more modern, road based means of transport. Mike McCarthy will provide an overview of the timber mills and tramways that were established in the vicinity of Erica and the small nearby timber sidings on the Walhalla railway.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 8 February at 8.00 pm.

SYDNEY:

Any member wishing to know details of the next meeting should call Craig Wilson on 02-4847984

LOCATION: Woodstock Community Centre, Church St., Burwood. Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 28 February at 7.30pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park.

Sorry for the delay! Work commitments have slowed things down a bit. We are hopeful of catching up with the February issue shortly

RESEARCH COLUMN

North British mining locomotives.

Peter Barry would like to have any information available about a 100hp 3ft 6ins gauge 0-4-0DH North British locomotive with 2ft driving wheel diameter, builder's number 27096 of 1950. The loco was ordered on 20 October 1950 through Australian agents Knox Schlapp, but is said to have been delivered in 1952. What is believed to have been a similar loco, 27297 of 1952, was owned by The Lithgow Valley Colliery Co Ltd in NSW. A locomotive fitting this description was offered for sale in the *Commonwealth Engineer* of 1 June, 1953, but with only The Secretary, GPO Box 2159, Sydney given as the contact details. Your editor has heard of a story of such a locomotive being stored at Sargeants Ltd in Brisbane in the 1950s. Any information to the editor, please.

FIELD REPORTS

THE SOUTH OZ SALT SAFARI - Norm Houghton

My researches into the Cheetham Company archives on the saltworks at Price and Lochiel in South Australia had come to a dead end by mid-1991 owing to gaps in the records. There were numerous questions that could not be answered in Geelong, so an on-site inspection and round of interviews was called for. I arranged through the Cheetham works managers at Price and Lochiel to be supplied with the names of present and past employees who could remember the tramway era, and visited South Australia between 11 January and 15 January 1992.

On Monday 12 January I spent all day at the Price Saltworks and township. The works have been altered and rebuilt since the last of the tramways were removed, and nothing remains of the tramways themselves. Some 50 lb rail (ex Kangaroo Island tramway, 1954) is *in situ* under a mobile stacker.

One former employee, Les "Blue" Hill, had also been loco driver on the Price Harbours Board Jetty line, and I was given a tour of this long-gone tramway. The saltworks had its own spur line connecting with the jetty line, and despatched its output by sea from 1919 to the 1960s. This was written up in LR 120. There were several locos at Price over the life of the tram, mostly Fordsons, and one Ruston & Hornsby which was Blue's favourite, in his words "a proper loco". In the 1950s and 1960s there were two locos on permanent station, and for a short period there was a third and its role was jetty shunter. Eventually the tramway became redundant when bulk handling did away with bagged grains and the salt works began using motor trucks more and more. The jetty tram closed in 1967 and the rails were subsequently pulled up. The goods shed, loco shed and fuel shed remain, and nearby, in a recently-built shed with a viewing window is a Fordson loco.

Next day I had arranged interviews at Ardrossan and while in the town had a look at the public jetty. The tram is basically intact, although portions at the shore end have been removed. Rolling stock comprises two 4-wheel flat tops at the goods shed and a primitive-looking hand crane on a 4-wheel base at the sea end, built by the Union Engineering Co., Adelaide.

On the way to Edithburgh, I stopped at the jetties at Port Julia, Stansbury and Wool Bay. The rails at these places have been lifted and relaid along the jetty edge as a protective lip. The goods shed at Port Julia survives.

Edithburgh was more promising. One line of rails remains on the jetty, but no rolling stock is present. Another line of rails is visible, running off the

jetty and up Edith Street to O'Halloran Parade, and then in patches under the bitumen for 1½ blocks. The inclined grade cutting where the tram ran up to the salt refinery on the south is now a walking track, and one or two sleepers can be detected. The salt refinery sites are now built over with dwellings and a motel.

I then drove west out to Yorketown, along the main road where in days gone by the District Council laid kilometres of metal plateways for the salt wagons to travel over. Salt lakes and lagoons are everywhere. The smaller lakes are now used for dumping sites for farm junk and rocks cleared from the paddocks. Beyond Yorketown, I headed west to Warooka and across Peesey Lake. On the west bank of this dry lake near Warooka are the remains of a small salt-gathering show with one rusting V-skip and some rails.

I then turned down to Stenhouse Bay where an extensive deposit of gypsum was worked by loco trams.

At Marion Bay there is a jetty with a 2ft gauge tram on it. The rails look as if they were laid and dogged by a drunken professional or a rank amateur, as they wiggle all over the place. One modern 4-wheel trolley and a fuel-tanker trolley were at the shore end. In the 1920s, extensive gypsum deposits were worked at Hassell's Lake near here. A loco-hauled 2 ft gauge tramway using 1-yard trucks ran from the quarry site to the stacking ground near the end of the jetty.

The Stenhouse Bay area is now National Park, and a fee is payable for admission. "Just down for the day, mate?" enquired the attendant. "Yes, just for the day", I replied, paid my money and then sped around the sites in a cloud of dust for 45 minutes in the quickest day trip ever. The gypsum loading jetty is intact and in good condition, and all around it on the land side are the remains of the gypsum workings, and foundations for conveyors, bins etc.

After a quick inspection, I returned to Innesston to the gypsum lake, now a historic site. At Price I had been shown a photograph of a tram tractor here, so was expecting to find something of interest. At the lake are two tramway skips, various foundations and several buildings. Gypsum mining started here in 1915, originally using a wooden tramway some five km. in length to Stenhouse Bay. In later years, the operation, under the Peninsula Plaster Co., became very large and sophisticated using steam locos, steel railed tramways etc.

I then turned around and drove north to Kadina for the night. On the way I called at Port Victoria. This place was formerly an important grain loading site, and in the days of the windjammers (to 1939) used to load the big four-masted barques by lighters from the jetty. The jetty is intact with one length of tram track along it as well as one four-wheel wagon on display at the goods shed.

Next day I went to the salt works at Lochiel and interviewed two knowledgeable locals (see LR 118). I had a good look at the site, but could not find much of tramway interest, as the tram was made redundant in the early 1950s. There is plenty of rail about, most of it in the guide tracks for the stackers, numerous lengths used as stakes, and a couple of piles of spare rails. I was shown the two foundation blocks for the winches used from 1916 to 1918 to haul the harvest trucks up out of the lake to the stacks. In response to my query, the site supervisor, Ron Darling, said there was no old tramway junk lying about in the rubbish heaps to the north of the works, but that at the northern end of the lake there were some items to be seen.

Ron drove me two kilometres to the end of the lake and here we found an amazing assortment of industrial detritus from the old Castle Co's operation (1918-30). There are several piles of rails, now almost reduced to dust, eight salt-hopper tops, a pile of rusting metal fastening straps from the bag bales, two road wagons, three odd-looking flat top trucks, and running out into the lake on a causeway a collapsed conveyor system. There were no hopper underframes or wheelsets present, so I presumed these useful items had been salvaged in the 1930s by the main works. The odd-looking trucks were, in my opinion, three of the four monorail vehicles that I knew the Castle Co had at one time. Two of the trucks are 13 ft 6 in long by 5 ft wide, while the third is slightly shorter. Down the centre of the trucks is a long slot. None of the wheels, guides, pulleys or track system remains, so we were unable to determine how the whole thing worked and how the trucks were balanced. I later checked some back issues of LR and came to the conclusion that the monorail was a Caillet type.

We then walked down to the conveyor remains for a look. This all-wooden contraption was a masterpiece in construction technique. It originally ran 210 metres from the crusher and bagger high on the bank straight out into the lake on long wooden legs. The first half has disappeared due to the locals using the conveyor as a timber supply for farm carpentry projects and the second half has collapsed into a flat pile. The conveyor frame is built of square-cut oregon beams joined and braced by metal plates and bars. The rollers are all wood, and dowelled into wooden bearers. Beyond the end of the conveyor is one 3 ft gauge wheelset fixed solidly into the salt crust. We supposed that the salt was harvested into tramway trucks out on the lake and run to the end of the conveyor for discharge. The lake has a firm bottom in the centre, but around the edge it is very soft, hence the adoption of the monorail and the conveyor over the soupy sections.

At the conclusion of the Lochiel inspection, it was time to leave and after thanking my guide, I departed for Linga in Victoria to check the Sailor Salt Co.

tramway (see LR 112). I arrived at Linga at dusk and as this place has no five-star, or even no-star accommodation, I slept under the stars in the mulga. I had visited this site before but had only walked the top end of the tram at the lake. Today I intended to follow the tram as far as it was recognisable. I left the car at the Lake Becking car park and walked right to the very end of the tram at the northern shore of the lake before commencing a plot. From the lake, the tram heads south on a rising grade all the way to the southern end of the lake to surmount a tall sand ridge. Much of the tram formation near the lake is obliterated due to erosion, but it can be followed by reference to remains of a low bridge or make-up across one washaway and to the loco shed site. At the shed is a large pile of rusting kerosine tins, probably for the fuel used in the loco tractors.

After leaving the shed site the formation is clear and unambiguous as it climbs to the top of the sand ridge and then drops down into the open mallee spaces beyond. From here onwards the formation is easily detectable as low embankments or slight depressions. The route is mostly straight. Near the lake only the odd sleeper remains, but as I moved further south I found entire sections 50, 70 and 100 metres long with sleepers intact. In clear areas and on some embankments regularly crossed by kangaroos and wallabies there are few or no sleepers remaining, but where the formation runs through the mallee scrub the sleepers have survived. The sleeper mix is interesting. Most of the sleepers are rough-cut mulga boughs laid closely together and interspersed with square-cut red gum sleepers. This can be explained by the fraud over the sleeper supply and the Company's need to finish the track with whatever sleepers were available. Dog spikes litter the ground, left here when the rails were removed in 1930.

On and on I walked, up and down the very slight gradients and through a few sections of prickly tussocks. Occasionally I came across a rusting kerosine tin, tossed off the loco more than 60 years ago. The track crosses three salt depressions on low embankments, and these embankments are exactly as wide as the sleepers. The longest embankment is 50 m in length, I kept going, crossed one of the State Park tracks, and way up ahead could see wheat paddocks. The formations and sleepers come out of the Crown Lands right at the corner of a paddock, about 4 km. from my starting point. The original farm fence is still in place, but has been superseded by a fierce-looking, three strand, heavy gauge electric fence. The tram ran just inside this electric fence along the road reserve. The 'road' is nothing more than a sand track, and the terrain is dead level. Although I walked the fence for a long distance, I found no more sleepers.

Cultivated lands extend through to Linga, and while there are probably

traces of the formation closer to Linga, I would have had to walk another 24 km there and back to find out, so I called off the search at this point. I would need two vehicles and at least two people to complete my plot through to Linga. I retraced my steps to the car park and then headed home.

NEW SOUTH WALES

ROTARY CLUB OF LITHGOW, Rotary Park, Lithgow 1067mm gauge

(see LRN 47 p.8)

It was noted in passing on 29 September 1995 that the Hunslet 0-6-0DM underground loco (4059 of 1950) preserved here in about 1982 has been very recently repainted in bright yellow with red trim.

Ray Graf 9/95

QUEENSLAND

ROGER ANDERSON, Pinnacle Holiday Village, Wonga Beach 610mm gauge

This gentleman is reported to have purchased John Fowler 0-4-2T Ivy (15947 of 1922) from Mossman Mill. It had been dismantled in the mill scrap yard since 1980 and was reportedly about to be disposed of for scrap. Mr. Anderson's caravan park is north of Mossman and apparently features ex-QGR railway carriages and a miniature railway.

Ian Comrie 12/95

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY INC., Durundur Railway, Woodford 610mm gauge

(see LRN 109 p.7)

A quantity of ex-Innisfail Tramway bogie sugar box wagons have been acquired from Mourilyan Mill at Innisfail and await transport to Woodford.

Restoration of Hudswell Clarke 0-6-0 *Melbourne* (1701 of 1938) is continuing with the complete overhaul of running gear being carried out.

Bundaberg Foundry 6wDM 13 of 1954 arrived from Marian Mill on December 15th for preservation by the Society. Its condition was such that it was able to be started up immediately on arrival. After servicing, a trial trip over the length of the railway was successfully carried out.

The Maleny Folk Festival, now held outside Woodford meant that trains were scheduled to run for six days from 27 December to 1 January.

The Caboolture Shire Council is calling expressions of interest from

consultants to investigate the viability of a tourist railway extending all the way from Woodford to the current terminus of the QGR branch at Wamuran. It is believed that government funding for the study has already been secured from government.

Durundur Railway Bulletin 11/95; David Mewes 12/95

CSR LTD, Herbert River Mills 610mm gauge

(see LRN 109 p.9)

The district crush for 1995 finished at about 4.9 million tonnes. This tonnage indicates a much faster than expected growth, and further mill expansion will be necessary. Only twelve months before, it had been planned to crush 5 million tonnes in 2001. The revised plan now is in the expectation of 6 million tonnes being crushed in 2000. By 1998, there will be 28 main line locos and 10 000 bins in use. There are currently 24 main line locos in use.

Programmed haulage of Victoria Mill raw sugar by Macknade Mill locos during the 1995 season did not eventuate due to a lower than expected sugar content, below expected crushing rates at Victoria Mill, and the bulk sugar terminal unloading for three shifts a day.

A derailment on the Herbert River bridge at Macknade Mill on December 3rd closed the bridge for 22 hours while emergency repairs were carried out. At about 3am, a coupling pin appears to have pulled out in a 190 bin rake descending the south bank, allowing a gap to develop in the rake. No further mishap occurred until the loco slowed on the climb up the mill bank, and the breakaway bins collided with the rear of the intact section of the rake on the bridge. This caused the derailment of 47 full bins of which 45 ended up in the river damaged beyond repair. Serious damage was also caused to a pier and headstock, and a temporary steel reinforcing section had to be inserted. Road transport had to be organised to convey 590 full bins from the south side to the mill, and bulk sugar was sent to the Lucinda terminal in hired tip trucks, via a cement plant for weighing.

200 new bins were supplied during the season and were delivered to any unused siding on Macknade Mill's Wharf or Central line.

The E.M.Baldwin Model DH8 4wDM 9109-1-9-80 of 1980 ex Hambledon Mill and Sugarworld has been used by the navvies working out of Victoria Mill to haul welded rail to track laying sites. It still carries the name *Sugarworld Shuttle* and is known as "THE SHUTTLE". It had made at least one trip to Macknade Mill before the end of 1995, to pick up some ballast hoppers.

The wagon previously used as a transition wagon for 3ft 6ins gauge stock has had its 3ft 6ins gauge drawgear completely removed, and is being converted to a poison sprayer.

Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) was used to give rides on the Nyanza line for the Maraka Festival on October 28th.

Macknade's E.M.Baldwin 0-4-0DH 17 (1446-1-9-65 of 1965) was used for cane haulage at Macknade on November 15th. It very shortly afterwards spent a couple of weeks at Victoria, where it was used for empty bin shunting on the day shift, replacing E.M.Baldwin 4wDH *Hambledon* (8002-1-8-78 of 1978) which had broken down. A Clyde Model HG-3R 0-6-0DH was used on this duty during the night. 17 went back to Macknade to assist with clearing operations on the Herbert River bridge on December 3rd, but it was back at Victoria on December 8th and did not return finally to Macknade until December 22nd. It would appear that Victoria Mill's E.M.Baldwin 0-4-0DH *Albany* (6-1792-1-11-66 of 1966) must also be out of service, for during this whole period it was noted languishing outside the Victoria loco shed.

Data has been collected at Macknade Mill regarding bin defects with almost 10 per day needing repairs (798 by late October). Couplings (36%), frame (36%), and mesh (11%) accounted for the bulk of repairs. Wheels accounted for 7% and running chassis 3% with "derailment" the remainder. Six bin bodies had to be written off completely, and one bin (1547) had been involved in damage from three different derailments.

Work on Victoria Mill's new Crystal Creek line construction has been delayed, apparently due to land tenure problems. However, the Kirkwood's Road line has been extended by 2.2km, and work seems likely to have commenced on the line serving Wharp's Holding.

Two Walkers ex-WAGR MA class B-B DH locos have arrived for storage at Plane Creek Mill, Sarina (which see for further details). They were purchased in 1994 together with two similar M class locos, M1851 (680 of 1972) and M1852 (681 of 1972). One of these is believed to have been sent to the Bundaberg Foundry for rebuilding while the other may be sent to Victoria Mill, possibly for spare parts. Chris Hart 12/95; Editor 12/95; Bob James 1/96

*Herbert Valley Sugar News & Views 2/11/95 & 14/12/95
& Herbert River Express 4/11/95 & 5/12/95 via Chris Hart;*

CSR LTD, Kalamia Mill 610mm gauge

(see LRN 108 p.12)

(see PIONEER SUGAR MILLS LTD., Inkerman Mill)

PIONEER SUGAR MILLS LTD., Inkerman Mill 610mm gauge

(see LRN 109 p.12)

An ex-QGR Walkers B-B DH loco is believed to be undergoing rebuilding at the Bundaberg Foundry to enter service at Kalamia in the 1996 season. It is thought that following this, another loco will be transferred from Kalamia

to Inkerman Mill. Inkerman Mill cannot readily make use of a rebuilt DH loco as there is not sufficient clearance below the approaches to the Burdekin Bridge, which pass over the entrance to the mill's full yard.

Bob James 1/96; Tony Wells 1/96

HAUGHTON SUGAR CO PTY LTD, Invicta Mill, Giru 610mm gauge

(see LRN 109 p.9)

Unfortunately, the three Walkers 73-class B-B DH locos delivered to the mill by the Bundaberg Foundry carry plates indicating identity at variance with the details provided by the Foundry in July 1995. According to the plates fitted, Walkers 669 & 677 of 1971 and 687 of 1972 are *Scott*, *Piralko* and *Hodel* respectively. Each of the new brake wagons is named the same as its matching loco.

Tony Wells 12/95

DAVID JOHNSTONE, Craiglie, Mossman 610mm gauge

David Johnstone, who purchased Hudswell Clarke 0-6-0 1838 of 1950 from Mossman Mil in 1994 for use on the projected Pokolbin Light Railway (see LRN 105 p.8) is reported to have returned the loco to the Mossman area during 1995. It is said to be stored on a property close to the Port Douglas turnoff on the Captain Cook Highway.

Ian Comrie 12/95

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610mm gauge

(see LRN 109 p.10)

Farleigh Mill's tiny E.M.Baldwin 4wDM loco 5-774-6-63 of 1963 hauls a navvies' train into the Calen yard from the south as the crushing season nears its end, 18 November 1995. The Wewak branch will diverge immediately to the left of the picture.

Photo: Editor

On 18 November, 100 full cane bins broke away from a Marian Mill train of 130 bins at Gargett and ran back for almost two kilometres, crossing the old QGR Cattle Creek bridge before derailling just to its west. This major derailment blocked the line into the former Cattle Creek Mill area for 20 hours. 55 bins had to be written off. In spite of this incident, Marian's derailment record for the 1995 season to that date was an improvement, with 117 derailments representing one for every 17 500 tonnes as compared to 1 per 13 900 tonnes in 1994.

Earthworks for the second stage of Racecourse Mill's Balberra line were well progressed by the end of the year. The extension runs in a straight line 2.1km from the 1995 terminus to Cameron's Road, and the projected cost is \$1.163m. The formation includes a 300m concreted section across a flood-prone area. The extension is programmed to be ready for the start of the 1996 season and will represent the completion of 4.5km of the line's projected total length of 7.5km.

Expenditure authorised for Marian Mill for 1996 includes \$402 654 for the 1km Mt.Castor cane railway extension on the old QGR Owens Creek branch, and \$460 000 for the purchase of a ballast regulator. In addition, a Clyde HG-3R 0-6-0DH at Pleystowe Mill will receive a new engine in the slack season.

A 4.5km branch costing \$1.9m is being built for the 1996 season from Calen on the Farleigh north coast line to the Wewak area. Formation construction was well under way by the end of the year, with heavy earthworks almost completed. A bridge was to be constructed to cross a creek close to the current Calen yard. A more ambitious project in the planning stage is a branch approximately 15km from Pindi Pindi on the north coast line to Yalbaroo, which is 6km beyond the present terminus at Wagoora.

Further studies of Farleigh Mill's north coast line suggest that the best solution to the bottleneck of the steeply graded section over the Summit, where rakes have to be split, is a complete regrading of the line close to the existing alignment rather than a major deviation. The regrading would be a \$9m. project with major earthworks throughout and a very deep cutting at the summit itself.

The four original Farleigh Com-Eng 0-6-0DM and 0-6-0DH locos were reportedly black banned after one lost a side rod out on the line. All four were parked in the navyy area at the mill on November 18th as follows:

Richmond	0-6-0DM	A1308	1955	
Ashburton	0-6-0DM	A1614	1956	engine removed
Pioneer	0-6-0DH	AI2358	1962	
Carlisle	0-6-0DH	AI3271	1963	

Marian Mill's Bundaberg Foundry 6wDM 13 of 1954 left the mill on 14 December for preservation at The Australian Narrow Gauge Railway Museum Society's Durundur Railway at Woodford.

*Brian Mather 11/95; Mackay Sugar 12/95 via Editor;
David Mewes 12/95; Editor 12/95*

MOSSMAN CENTRAL MILL CO LTD 610mm gauge

(see LRN 109 p.12)

It is reported that the mill's two Bundaberg Foundry steam locomotives are up for sale following the closure of the *Bally Hooley Steam Express* passenger train services. They are 2 of 1952 (ex Mossman Mill *Bundy*), which is fitted with a tender, and 6 of 1952 (ex Millaquin Mill 6 & Qunaba Mill *Dobbin*). It has been suggested that ex Douglas Shire Tramway and Mossman Mill John Fowler 0-6-0T *Faugh-A-Ballagh* (8733 of 1900) is to be returned to Port Douglas for display.

Ian Comrie 12/95

THE MULGRAVE CENTRAL MILL CO. LTD., Gordonvale 610mm gauge

(see LRN 109 p.12)

Cairns City Council wants Mulgrave Mill to relocate its cane railway crossing of the Bruce Highway in Edmonton to an area outside the township. A Federally-funded dual carriageway scheme to include this section of road should already have been under way by the end of 1995. The mill claims that since the closure of Hambledon Mill in Edmonton at the end of 1991, fewer (and longer) trains use the crossing.

The Cairns Post via Chris Hart

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610mm gauge

(see LRN 109 p.13)

The 1995 crush finished at midnight on 30 December 1995 with only a small amount of cane standing over. Growers had previously demanded that arrangements should be made to have cane crushed at Mackay Sugar's Racecourse Mill after the season there had finished, but were eventually persuaded that the suggestion was impracticable at an economic cost. There is no tramway connection between the mills.

Ex NSW SRA Walkers B-B DH 7317 (676 of 1971), purchased in 1994 from Simsmetal in Newcastle, has reportedly been sent to the Bundaberg Foundry for rebuilding to enter service in the 1996 season.

Two ex-WAGR Walkers B-B DH MA class locos, MA 1861 (713 of 1973) and MA 1863 (715 of 1973) had arrived at the mill for storage by the end of 1995. It is understood that these locos are being stored for Victoria Mill. They

were purchased in 1994 together with two similar M class locos, M1851 (680 of 1972) and M1852 (681 of 1972).

The mill's new Plasser KMX 08 ballast tamper carries serial number 415 of 1995 and has a fully-enclosed cab, a far cry from the first KMX 06 machines of twenty years ago. The unit is carried on four wheels.

A few problems with minor track buckling were experienced on the Southern Cane Railway as the weather got hotter. This was possibly because of inconsistencies in the provision of expansion gaps between the long welded rails. Some reballasting assisted with this problem.

Editor 12/95; Bob James 1/96

TASMANIA

EMU BAY RAILWAY 1067mm gauge

(see LRN 107 p.13)

A four-day rail tour celebrating 125 years of railways in Tasmania will feature on 10 April 1996 a passenger trip from Burnie to Rosebery on the Emu Bay Railway. Included will be visits to *Wee Georgie Wood* and the Zeehan mining and railway museum. Also advertised as side trips to the whole tour are visits to the Ida Bay Railway, the Bush Mill, Tasmanian Transport Museum, Redwater Creek, Karoola, and the Don River Railway Museum.

Ray Graf 11/95

VICTORIA

PETER SCHWARZ, 797 Toorak Road, Hawthorn 610mm gauge

Peter is recorded as the purchaser at auction of ex North Eton Mill Hudswell Clarke 0-6-0ST 496 of 1898 from the estate of Steve Kele in Rockhampton, Queensland, in 1994 (see LRN 101 p.11).

Ian Comrie 12/95

TEAL RESOURCES NL, Maxwells Mine, Inglewood narrow gauge

An auction was advertised for Tuesday November 28th to dispose of the complete mining operation here, the assets of this company believed to be in liquidation. Equipment included three battery electric locos, four ore trucks and two boggers.

The Age 1/11/95 via Colin Harvey

WESTERN AUSTRALIA

HOTHAM VALLEY TOURIST RAILWAY (WA) INC, Etmilyn Tramway 1067mm gauge

(see LRN 106 p.18)

During the spring school holidays a train hauled by 4-6-0 G123 (Dubs 3507 of 1897) ran into a fallen tree in a cutting just outside Dwellingup, causing some minor damage to the five vehicles. Summer maintenance programmed for G123 included boiler washout and preparation for inspection, dome removal and rejoining, grate removal and ashpan repair, examination of boiler tubes, and patching of holes in coal space floor. Meanwhile Drewry 0-6-0DM SEC1 (2302 of 1950) is still awaiting transmission repairs at Dwellingup.

Pinjarra Steam Express 11-12/1995

MEETINGS

MELBOURNE:

BRITISH LIGHT RAILWAYS

Many members will be aware of President Bill Hanks long sojourn in the UK last year. Although he went there ostensibly to do some work it seems Bill's main reason for visiting "the old country" was to photograph every possible light railway site he could in the time available! At the April meeting he will be showing a selection of the slides he took featuring mostly narrow gauge subjects.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 11th April at 8.00 pm.

SYDNEY:

Twenty years ago the NSW Division was formed. Over those years the industrial scene has changed dramatically. Railways and Rolling Stock have come and gone it seems at ever increasing speed. Two of the eighteen members present at that first meeting, Jeff Moonie and Craig Wilson will present a review of those years. Steam, diesel and electric operated railways will be well represented with a mixture of operating, preserved and abandoned railways.

Come along and relive those years.

LOCATION: Woodstock Community Centre, Church St., Burwood Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 21 April at 7.30 pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 4 April at 8.00 pm.

THE COUNCIL AND MEMBERS TAKE THE OPPORTUNITY TO CONGRATULATE
THE NSW DIVISION ON ITS 20TH BIRTHDAY. WELL DONE GUYS!

NOTES, CORRECTIONS AND COMMENTS

Internet

Thanks to Vicnet, the Society has a Web page on the Internet at
<http://www.vicnet.net.au/vicnet/club/lrrsa.htm>

Eastern Gold Australia

(see LRN 109 p.4)

The report in LRN 109 was forwarded by Colin Harvey, not Phil Rickard. Phil confirms the gauge as 2ft and says two locos have been acquired by someone at Wandiligong, near Bright, Victoria. A report will follow.

CSR Ltd, Herbert River Mills.

The Editor's report in LRN 109 (p.9) of Victoria Mill's E.M.Baldwin B-B DH *Darwin* being on loan to Macknade Mill in September - October 1995 was incorrect. It was in fact *Brisbane* (5423-1-9-74 of 1974). Thanks to Chris Hart.

Mount Morgan Mines.

A 1067mm gauge 0-4-0WE locomotive was reported at work here in 1978 (see LRN 7 p.8). This unit is believed to have been built from the chassis of Hunslet 0-4-0ST 796 of 1902. It is reported that it subsequently went out of use and was buried during the 1980s.

Editor

South Johnstone Mill.

A 318 page hard cover mill history, *Sweet Success*, has recently been published. Written by a journalist, Alan Hudson, its best treatment is of the recent events associated with industry rationalisation and a takeover attempt, as well as other themes which could be researched from newspaper sources. Unfortunately, although the rail transport aspect of the mill's history is dealt with, accuracy is not consistent, especially with regard to the photo captions. Nevertheless, the book is worth putting alongside other volumes dealing with the history of sugar mills in Australia. It is available, post paid, from South Johnstone Mill Ltd, PO Box 16, SOUTH JOHNSTONE 4859 at a price of \$39-95.

Editor

Kioloa, Bawley Point & Narooma (NSW south coast).

A map of the extensive wooden rail tramway network that once extended from Kioloa and Bawley Point is contained in a local history, *They Came to Murramarang* by B V Hamon. The publisher is ANU Centre for Resources & Environment, Canberra, 1994. Meanwhile, the Narooma Historical Society's Mitchell's Mill Walk leaflet points out the remains of the Bodalla Company Wharf where its 1884-built wooden tramway terminated.

David Burke

Powelltown.

Australia Post is currently selling a book of black & white picture postcards depicting the delivery of mail in earlier years. Prominently featured is a clear photograph of the Powelltown Shay crossing a timber trestle somewhere along the line. The caption suggests that the train is bringing the mail to Powelltown; more accurately perhaps, it should say *to the timber cutters on the High Lead*. Normally the Shay worked beyond Powelltown mill.

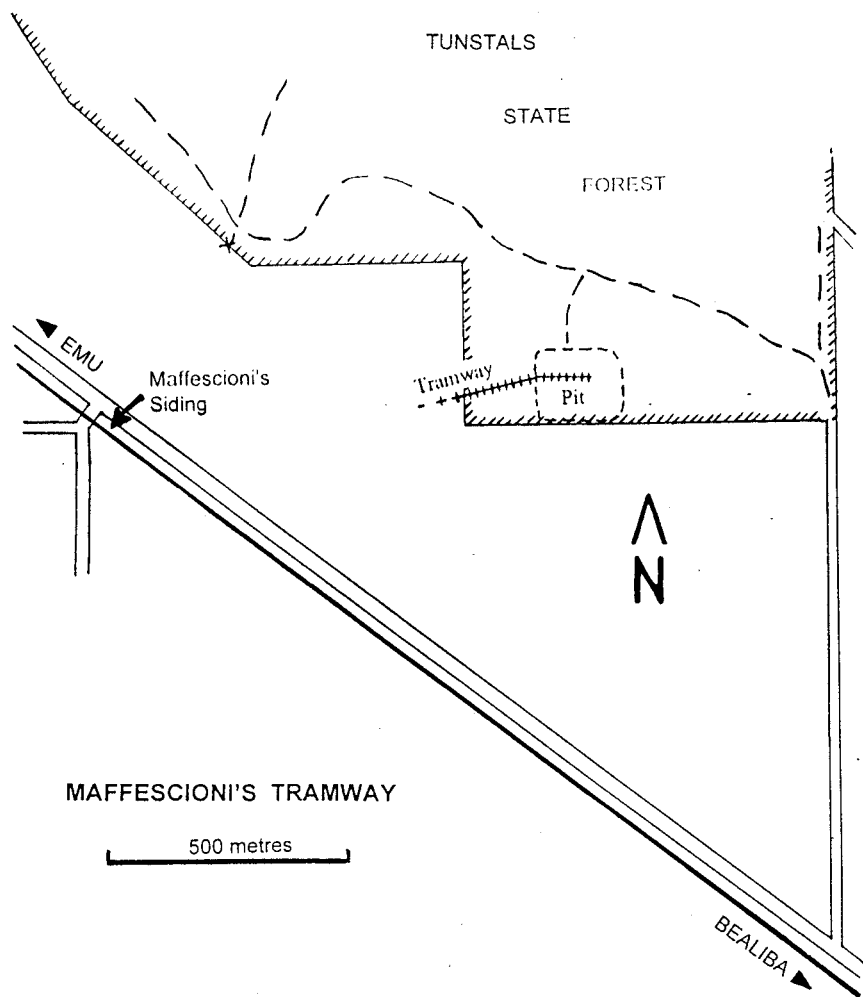

David Burke

Narrow Gauge Convention 1996.

The Croydon Narrow Gauge Group Inc convention is to be held at Heathmont College Senior Campus in Melbourne on the Saturday and Sunday of the Easter Weekend and includes sessions for both enthusiasts and modellers of Australian and overseas narrow gauge railways. Details from Grant McAdam at (03) 9578 8685 (a/h).

FIELD REPORTS

B.Maffescioni gravel tramway, Bealiba, Vic.

In 1928, Mr B Maffescioni was obtaining gravel from Tunstals State Forest in the parish of Bealiba and carting it by dray to his railway siding, which was approximately half way between Bealiba and Emu railway stations. At this time he stated his intention to construct a tramway from his siding through his property and approximately 8 chains of State forest to a gravel pit. Construction of the tramway was not undertaken until January 1930 when a tramway licence was issued by the Forests Commission. Very little use was made of the tramway and the licence was cancelled in February

1932. The total length of the tramway was about one kilometre. (Source: Forest Commission file 32/886)

All traces of the tramway from the siding (grid reference YE226275) to the forest have been obliterated by ploughing but the formation can be still be seen within the forest. Only very minor earthworks were required and these, with some sleeper impressions, remain. A single-track tramway formation can also be discerned within the gravel pit (GRYE237276). The gauge appears to have been 2ft or less. Several wheel sets of the type used for mining skips are located in a nearby paddock and may be associated with the line.

Colin Harvey 2/96

Tivoli Collieries, Burnett Colliery, Selene, Monto, Qld.

This colliery had a 1ft 8½ins railway with two Ruston & Hornsby diesel locos from 1952 until the 1960s. The site still contains the remains of the timber headframe and a few buildings. No rail was noted, but a four-wheel tipper skip frame was present when inspected in February.

Editor 2/96

RESEARCH COLUMN

Rail Tractors.

With work progressing towards the restoration of the TACL rail tractor at Emerald, it is proposed to publish a book on this area of light railway activity. If anyone has any information or material on TACL rail tractors built by Malcolm Moore of Melbourne, or any material on other makes of rail tractors, such as Day's, could they please contact Hugh Markwick, 6 Chalmers Grove, Upper Ferntree Gully, Vic 3156.

Comans Mine, NSW south coast.

During a recent visit to the Lighthouse Museum at Narooma, David Burke observed a large framed colour photograph of the steel tramway at Comans mine. The line appeared to have been of substantial construction and of 2ft 6ins or 3ft gauge. It was located in the hills some 20km or so inland from Narooma; no other information was attached.

LOCOMOTIVE, ROLLING STOCK & EQUIPMENT MANUFACTURERS

BUNDABERG FOUNDRY ENGINEERS

(see LRN 108 p.4)

A visit on January 29th revealed four Walkers B-B DH locos in course of rebuilding to 610mm gauge for sugar mill service. The frames of standard

gauge ex-NSW SRA 7346 and 7348 (708 and 710 of 1973) for Haughton Sugar Co, Invicta Mill, had been modified and painted and were ready for the installation of engine and transmission. One cab, the bogies (including new wheels) and many component parts had been prepared for fitting to these units. The frames of 1067mm gauge ex-WAGR M1851 (680 of 1972) for Victoria Mill had been shortened but new headstocks had yet to be fitted. The frames and bogies of 1067mm gauge ex-QGR DH51 (633 of 1969) for Bundaberg Sugar had been modified and painted during 1995 but this job had not proceeded further and it was unclear if it would be completed in 1996.

Ready for dispatch in the workshop were the bogies of ex-QGR DH59 (646 of 1970) for the Emerald Tourist Railway Board (Puffing Billy), regauged to 762mm gauge. It is understood that the Army is arranging for transport of these back to Brisbane when the loco will be reassembled and transported to Victoria.

In addition, seven Walkers 1067mm gauge B-B DH locos were lined up in storage inside the workshops yard. All were QGR DH-class apart from one WAGR M-class.

DH29	Walkers	611	1969	Kalamia Mill
DH40	Walkers	622	1969	Tully Mill
DH41	Walkers	623	1969	Bundaberg Sugar Co.
DH43	Walkers	625	1969	Kalamia Mill
DH46	Walkers	628	1969	Proserpine Mill
DH47	Walkers	629	1969	Mulgrave Mill
M1852	Walkers	681	1972	Victoria Mill

In addition, the cabs and bonnets of three other locos were nearby. These were from 7346 and 7348, and DH31 (612 of 1969) rebuilt last year for Mulgrave Mill.

It is believed that customers considering ordering further conversions for the 1996 season include Plane Creek, Kalamia Mill and Mackay Sugar.

Graham Rose 1/96; Editor

NEW SOUTH WALES

THE MANILDRA GROUP 1435mm gauge

(see LRN 109 p.5)

The details of the four 49-class Co-Co DE locos purchased for use by the Manildra Group are as follows:

MM01	Clyde	62-257	1962	ex 4907 purchased by November 1994
MM02	Clyde	64-342	1964	ex 4913 purchased by November 1994

MM03	Clyde	60-224	1960	ex 4904 purchased by March 1995
MM04	Clyde	62-259	1960	ex 4909 purchased by March 1995

(There was an error in LRN 106, which gave an incorrect identity for MM02 -Ed.)

NORTHERN TERRITORY

WYCLIFFE WELL 610mm gauge

This is a roadhouse, motel and caravan park complex at a historically significant major watering hole. A passenger carrying train will travel 3km through the property. The train originated from Telopea Gardens in Victoria (see LRN 65 p.17). (The two locomotives at Telopea Gardens were built as 4wPMs by Alwyn Zinn in Ipswich, Queensland in 1971 and 1972. By 1988, the first had its engine removed and the second was rebuilt as a steam outline 4wDH, and there were five four-wheel carriages constructed on cane truck chassis in use. - Ed.)

Australia's Holiday StopOver, Feb.1996 via David Whiteford

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610mm gauge

(see LRN 110 p.9)

More than 600 passengers were carried during the period of the Woodford Folk Festival at the end of the year.

Bundaberg Foundry 6wDM *Netherdale* (13 of 1954) was serviced after arrival and from January 7th has been available for use. Since then, work has proceeded in refurbishing the cab, and a repaint will be done.

Bundaberg Foundry 0-6-2T 5 of 1952 underwent an annual boiler inspection on February 9th and was back in service by February 18th.

Progress with Hudswell Clarke 0-6-0 *Melbourne* (1701 of 1938) means that a steam test is anticipated for March/April. Attention has been focussed on the tender which had to be internally sandblasted and painted

Durundur Railway Bulletin 1/96, 2/96 via Editor

BUNDABERG SUGAR CO LTD, Fairymead Mill 610mm gauge

(see LRN 103 p.6)

On January 23rd, it was noted that Ruston & Hornsby 4wDM 9 (339211 of

1953 was parked in the yard near the loco shed with its engine removed.

Editor 1/96

CSR LTD, Herbert River Mills 610mm gauge

(see LRN 110 p.9)

The new Victoria Mill poison unit (built on the "buffer wagon" transition unit) saw its first use, on Macknade Mill's Hawkins Creek line, on January 12th. It was teamed up with Victoria Mill's E.M.Baldwin 4wDH *Sugarworld Shuttle* (9109-1-9-80 of 1980). The new unit has two tanks, a small one to spray with, and a large one for water storage. The water storage tank was also used to supply the Macknade spray unit while the two worked together.

Hansen petrol linecar L CAR 3 (1920 of 1978) and the granulated poison spreader unit came to Macknade Mill from Victoria late in the 1995 crushing, to poison bin storage areas, as is normal. This unit has been retained at Macknade for use with the mill's poison spraying unit, while L CAR 5 (34 of 1973) was sent back to Victoria in its place, together with the granulated poison unit, on January 5th. L CAR 3 is a more modern unit, roomier and with a three-speed gearbox.

L CAR 3 and the Macknade spray unit had completed most of the Macknade lines before the arrival of the Victoria Mill equipment on January 12th, and a few days later both teams turned their attention to the Victoria Mill area. The Macknade outfit was back at home base by early February. Last slack season, each team had looked after its own mill area and did not work together.

Construction on Victoria Mill's Wharf's Holding line had commenced by January, with earthworks curving away from a newly installed set of points on the Stone River line at Bogotto's Siding. The line will curve away at right angles to the Stone River line and cross the Stone River road at its intersection with Tweed Road. It then follows Tweed Road for 1.5 - 2km and crosses Tweed Road at right angles to terminate in a siding complex. There is also a siding on Tweed Road about three-quarters of the way along the line. Track had been laid from the junction to Stone River Road and in the sidings by the end of February.

The Crystal Creek line had also commenced in January with the junction points in at Pombel just before the QGR catchpoints. A large culvert is being installed just beyond this, and once completed track laying is expected to start. Evidence of a false start for the line can be seen a short distance back towards the mill where a stretch of track, set in concrete, heads off through a cane paddock from part way along a pre-existing loop siding. Another section of new track, laid at the other end of the abortive route from Pombel

to Helens Hill Road, is to become a siding. By the end of February, earthworks had extended 3 or 4km on the confirmed alignment from the junction at Pombel, and bridge piles are stored at the approximate crossing points of Leichhardt Creek and Waterview Creek. The State Department of Environment & Heritage has been fairly active in connection with construction plans for the line.

Plasser track jack 371 of 1989 had arrived at Victoria Mill on loan from Plane Creek Mill by early January. The rail bogies used on the Southern Cane Railway construction at Plane Creek also appear to be in use, and it is anticipated that the Southern Cane Railway track laying procedures will be used for Crystal Creek. Baldwin 4wDH *Sugarworld Shuttle* was noted late in February at Pombel Junction with the first load of welded rails for the Crystal Creek line. The rails are ex QGR 61lb. There is also some 58lb rail from Western Australia in stock at Victoria Mill.

Victoria Mill's Walkers B-B DH *Clem H McComiskie* (605 of 1969, rebuilt Walkers 1991) is to receive a new GM V12 motor this slack. Another of the Walkers locos may also be receiving one.

It is reported that lines 14 to 17 on the Bambaroo side of the Victoria full yard will be extended this slack season. Sixty 10-tonne bins are reported to be on order for use on the Nyanza line in the 1996 season.

Chris Hart 2/96, 3/96

GIBSON & HOWES LTD, Bingera Mill 610mm gauge

(see LRN 98 p.7)

A visit on January 23rd revealed that Motor Rail *Simplex* 4wDM 10233 of 1951 had been pushed off the track behind the workshop and is apparently out of use.

Editor 1/96

GOLDEN MOUNT RAIL PRESERVATION SOCIETY, Mount Morgan 1067mm gauge

Hunslet 0-4-0ST MM LD 3 (854 of 1903) was removed from a picnic area adjacent to the lake (see LRN 87 p.1) to the Mount Morgan Station for display in 1991, and some preparatory restoration work was later begun. In 1995, it was moved to a training company in Penrith, NSW, for restoration to working order under a Federal government grant. Progress has been pleasing, and the loco was due to undergo steam trails at the Lithgow Zig Zag in April before delivery back to Mount Morgan in time for the May Day weekend 1996. It will be used for selected passenger duties at Mount Morgan after this.

Editor 2/96

MOUNT MORGAN GOLD STAMPS 661mm gauge

This historical display, adjacent to Mount Morgan Station, is being set up by the Mount Morgan mine. It contains only a few exhibits but there are three items of rail interest, an Eimco 12B bogger, a mine skip and a tipper skip frame.

Editor 2/96

MOUNT MORGAN & DISTRICT HISTORICAL SOCIETY 1067mm gauge

(see LRN 85 p.13)

The Historical Society Museum has moved around the corner to Morgan Street, but Hunslet 0-4-0ST 797 of 1902 still stands in the medial strip opposite the old museum in East Street. A sister engine of the one currently under restoration in NSW, it is possible that it might be moved to the Golden Mount Railway Station in the future.

Editor 2/96

TULLY SUGAR LTD 610mm gauge

(see LRN 109 p.13)

Capital works for the 1996 slack season includes increasing bin heights to improve capacity, and extending tramlines into the top of Riversdale and El Arish.

Australian Canegrower 22/1/96 via Chris Hart

TASMANIA

HYDRO-ELECTRIC COMMISSION, Tullah 1067mm gauge

(see LRN 97 p.11)

Webster Auctions of Burnie have invited expressions of interest for the purchase of part or all of the equipment which failed to sell at auction in October 1993, and which has been exposed to the open weather for the last three years. This appears to be the entire plant previously offered including five Gemco 27-tonne diesel hydrostatic locomotives, one E.M.Baldwin diesel personnel carrier, muckcars, flatcars, a non-motorised personnel carrier, concrete cars, jumbos and loaders. An illustrated catalogue has been issued. Equipment stored in the ex-stores compound at Tullah is to be removed by June 30th, 1996, and that stored on the northern side of the lake (old tip site) by December 31st 1996. Inspections are available every Tuesday on a by appointment only basis.

The Miner Dec.1995 and Webster Auctions catalogue via Phil Rickard 2/96

VICTORIA

BALLARAT GOLDFIELDS NL

A \$20m 2.7km decline project at Ballarat East, commenced in August 1994, was reportedly suspended temporarily early in 1996. Can any reader confirm if rail transport is in use on this project?

The Age 31/1/96 via Phil Rickard

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762mm gauge

(see LRN 108 p.20)

An obstacle to the Gembrook restoration project is that road access to the Lakeside (up) end of bridge No.8 (the big Wright bridge) is not suitable for long road vehicles. Therefore, on Saturday 10 February, track was laid from bridge No.7 to bridge No.8. This is a distance of about 200 metres, and it will enable the bridge timbers and bridge spans for the up end to be brought in by rail. Work on bridge No.8 commenced in mid-November, and by 22 February the foundations for all the piers had been completed, and the abutment piers were in place. During January and February the piers were constructed at another site. At Emerald work is underway on welding the beams into pairs, with six spans complete, out of the total of ten. By 24 February, four of the completed spans, and about five of the piers (in pieces) had been delivered to the bridge site. Assembly of these parts was begun on 23 February, and by the afternoon of the following day three piers and two spans were in place.

At Gembrook, No.2 road now forms a complete run-round loop with the recent installation of the points at the down end. In March the points at the down end of No.3 road will be installed. Another three sets of points will be required to complete Gembrook yard, and I believe it is planned to install these later this year. Work has commenced on the installation of flashing lights and warning bells on the main road level crossing at Gembrook.

At Fielder, work on the foundations of the station building have commenced. This is a simple corrugated iron shed, and the work is being done by a group from the Warrandyte Model Railway Club, and a descendant of the Fielder family.

About 150 metres of the right-of-way between bridge No.8 and the site of bridge No.9 (Cockatoo Creek) has been cleared recently, and the rest will be cleared in March/April. It is hoped to lay skeleton track between these two bridges on the weekend of 13-14 April, a distance of about 1.6 km. At that stage, the only track remaining to be completed between Lakeside

and Gembrook will be about 200 metres on the Gembrook side of bridge No.9. This will be kept clear to enable road access for construction of bridge No.9.

The foundations of bridge No.8 were completed substantially below the estimated cost. As a result it is hoped to make an almost immediate start on the foundations of bridge No.9, whilst the ground is still dry.

2-6-2T 14A (Newport, 1914) ran its first trial on 10 February, after spending about 6 months in the workshops. For the trial run it had 10A's number plate on one side, and 17A's on the other. 14A is now painted in a different shade of red to that previously used. The new colour is a much more accurate rendering of the VR's "Canadian Red" livery than its previous colour.

Ruston & Hornsby 4wDM NRT1 (296058 of 1951) is having its engine replaced. Until this job is complete, no further work will be done on ballasting the track between Fielder and Cockatoo Creek.

Walkers B-B DH DH59 (646 of 1970), the ex-QGR diesel hydraulic loco, has now had its bogies regauged to 2ft 6in by Bundaberg Foundry. The rest of the loco has been in storage in Brisbane, and it is hoped to have it transported to Belgrave by the time you read this.

Work on the frame units of Beyer Peacock 2-6-0+0-6-2 G42 (6268 of 1926) is continuing, but it seems there will be at least two more years of work on this project, and the overall cost of its restoration is likely to be between \$900 000 and \$1m. This will be a complete rebuild, with many worn parts replaced.

Two ETRB staff members went to South Africa in February to examine an ex South African Railways 2ft gauge NGG16 class 2-6-2+2-6-2 Beyer-Garratt, which may be the last one currently available for purchase. Its conversion to 2ft 6in gauge would apparently have to be done in Australia. There is a belief that in the long term such a loco could be useful, to work with G42, and that with the re-opening of the Lakeside - Gembrook section more locomotives will be needed anyway.

Frank Stamford 2/96

GOULBURN - MURRAY RURAL WATER AUTHORITY, Tatura 610mm gauge

(see LRN 108 p.21)

On 4 December 1995, a visit was made to the pre-cast plant of Goulburn-Murray Water to inspect their Ruston & Hornsby 4wDM, 285342 of 1949. Cabless and painted yellow, it is a class 30DLU and was 4½ tons and 27½hp as built. It currently has a Caterpillar engine, although originally delivered with a Ruston 3VSH engine. The loco still carries its old State Rivers & Water Supply Commission number 18-C-23. (18-C is the SR&WSC code for locos and 18-C-25 is at Waranga. So where are/were locos 1 to 22, 24 and 26

etc?)

Battered but not bowed. Murray-Goulburn Water's 2ft gauge Ruston & Hornsby 4wDM 18-C-23 (285342 of 1949) at the Tatura precast depot on 4 December 1995.

Photo: Phil Rickard

The Tatura works is believed to have opened in 1956, so it appears the loco previously worked elsewhere, and the class code DLU indicates underground diesel locomotive. (R&H 285338 to 285343 are believed to have been purchased for the Tarago scheme in West Gippsland - Ed.)

The loco, looking well used after 45 years' work is still used on an irregular basis and there are no plans to replace it. Its duties entail shunting pre-stressed cast concrete beams from the pre-cast planet (a large open-sided structure wherein the rails are set in the concrete floor) to the yard where the beams are lifted by crane to storage pending transport from the site. The loco was in use on the day of the visit; the present work includes a contract for 36 concrete beams each 11.5m long and weighing 4.85 tonnes, for use at Torrumbarry Weir. Each beam has two hollow cylinders inserted lengthwise to reduce their weight and to create flexibility. Two beams are cast at a time.

Rolling stock consists of five bogies, two of which have turntables fixed to the top. These two are not in use but were previously required when the track layout included a set of points and flexibility was needed to negotiate the curves with long loads. The second track was not in use long as LR 10 (1962) reported it already out of use. The points are still in place and were

revealed following some scraping away of their dusty cover.

The loco currently hauls the other three bogies. The first is a spacer while the two beams, one atop the other, rest on the other two bogies. The heavy duty trucks are connected by link and pin, have a wheel base of 1067mm, overall length of 2.643m and steel channel frames, and carry no visible builder's markings. The present length of track would not exceed 80m; the load being hauled no more than 40m. Is this Australia's shortest loco hauled industrial tramway?

Readers wishing to visit the line should make prior arrangements as a matter of courtesy.

Phil Rickard 2/95

KARRS REEF GOLD MINE, Twist Creek, Nr.Yackandandah 457mm gauge

This mine, typical of the thousands of small gold mines of which virtually all employed rail transport, has been opened as a tourist venture, and was visited on December 2nd, 1995.

Situated five kilometres west of Yackandandah, in Victoria's north-east, the town of Twist Creek existed for some twenty years from the 1860s. Today, a few apple trees in an open paddock mark its site, whilst the surrounding bush hides many small mullock heaps. The Twist Creek area was mostly alluvial with some quartz reef mining. Karr's Reef was one of the larger of the reef mines in the area.

According to the present tour operator, Karr's Reef was discovered in 1866 and was worked until 1884, the average yield being about ½ ounce gold to the ton. The reef was originally opened up via surface workings along the line of the reef, these surface shafts and stopes being up to 30m deep. In 1880, due to difficulty of working, a 485 foot adit was driven from an adjoining gully to intersect the reef at a lower level. Once the reef was located, crosscuts were driven along the line of the reef. In the South drive, stoping above the level eventually made a connection with the surface stopes. In the North drive a winze was sunk but had to be abandoned due to water ingress. (As usual, the richest gold is still down there).

The mine has recently been cleaned out, new sleepers and rails laid, and a Tourist Authority permit gained. When re-discovered a few years ago, the original sleepers were still *in situ* (rails gone) but were too fragile for reuse. The track is light (12 - 15 lbs/yard) and includes a set of points outside the adit and a turntable at the crosscut. Total length is about 200 metres. Rolling stock consists of a 4-wheeled flat truck, fitted with a rack to carry timber, rails etc., and a standard 18-inch "half ton" box truck which is now used to store the hard hats. The truck carries an old metal plate, rivetted to its side,

carrying the inscription *No.4 Sambas Gold Mine, Vic.* It also carries a painted number 12. (*The Mining & Geological Journal* [Vol 6 Nos.1&2] reports that the track in at least one of the Sambas levels was “widened” [regauged] in 1955 to 23-inches [sic]). Almost certainly the truck is a survivor of much earlier days when there was a dense network of tramways, chutes, ropeways, and sled tracks around the many mines situated a mile to the south of Harrietvale.

Readers wishing to visit this mother-friendly mine may contact Yack Track Tours, phone (060) 27 1757, or enquire at the tourist oriented shops in Yackandandah.

Phil Rickard 2/95

DEAN MARTIN, Gator Magoons, Porepunkah 610mm gauge

(see LRN 105 p. 15)

A quick visit to this site on 7 December revealed virtually everything in readiness for opening. Locomotive and tender, carriages, station and infrastructure appeared complete. The only hold up was bureaucracy - obtaining the necessary tourist railway accreditation. Dean expected the railway to be open to the public immediately after Christmas 1995. Can a local reader confirm this?

Phil Rickard 2/96

STATE ELECTRICITY COMMISSION OF VICTORIA, Kiewa Hydro-electric Scheme 915mm gauge

(see LRN 75 p.11)

West Kiewa Power Station The West Kiewa power station is located underground and a 3ft gauge, single-track incline is used in the West Kiewa Adit to transport equipment (personnel access is by lift). The upper terminus is equipped with a gantry and a single siding (grid reference EV166318).

West Kiewa Diversion Tunnel Several decrepit, 3ft gauge, track panels are stacked near the portal here (GR EV165313).

Big Hill Power Station Construction of this station was never completed. However two sections of 3ft gauge tramway, set in concrete, remain at the works site (GR EV171302).

Colin Harvey 2/96

WHEELER MINES NL, Maxwells Mine, Inglewood

(see LRN 110 p.15)

This company is believed to have bought into the mining operation from Teal Resources before the auction scheduled for November 28th took place. Current debts are said to be about \$2.5m.

ABC Radio News 21/11/95 via Phil Rickard

WESTERN AUSTRALIA

CARNARVON JETTY RESTORATION COMMITTEE 1067mm gauge

(see LRN 109 p.17)

The committee has launched a last ditch bid to save the one mile jetty from demolition. Tenders for the jetty demolition were due to be called in December 1995, but after a three month stay of execution may be called in March 1996. The Committee says that restoration of the jetty for pedestrian access could cost less than \$100 000 while the Department of Transport budgeted about \$200 000 for demolition. A mooted \$1m price tag for jetty restoration included provision for Carnarvon Light Railway Association operations but *although the inclusion of the train was desirable in the long term (it) was not an integral part of the jetty and should be a secondary consideration when it came to restoring the structure.* As at the end of January the Committee had \$70 000 in pledges and cash towards their \$100 000 target. A conservation plan on the jetty was due to be released by the end of February.

David Whiteford 2/96 (Northern Guardian 31/1/96)

CARNARVON LIGHT RAILWAY ASSOCIATION INC 1067mm gauge

(see LRN 109 p.18)

Contractors Quintin Holdings have won a Carnarvon Shire Council tender for restoration of the Tramway Bridge connecting Babbage Island with the town centre. Work began in late January and will include partial replacement of the bridge by an embankment and restoration of the remainder with a lift-up span being added to allow boating access. About 150 metres of the eastern (island) end of the bridge is being replaced. The Light Railway Association had hoped to win the tender, and to include provision for a railway in the contract. It is likely now that the Association's activities will be confined to Babbage Island.

David Whiteford 2/96 (Northern Guardian 31/1/96)

MEETINGS

MELBOURNE: BRITISH LIGHT RAILWAYS

Many members will be aware of President Bill Hanks long sojourn in the UK last year. Although he went there ostensibly to do some work it seems Bill's main reason for visiting "the old country" was to photograph every possible light railway site he could in the time available! At the April meeting he will showing a selection of the slides he took featuring mostly narrow gauge subjects.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 11th April at 8.00 pm.

SYDNEY: Twenty years ago the NSW Division was formed. Over those years the industrial scene has changed dramatically. Railways and Rolling Stock have come and gone it seems at ever increasing speed. Two of the eighteen members present at that first meeting, Jeff Moonie and Craig Wilson will present a review of those years. Stearn, diesel and electric operated railways will be well represented with a mixture of operating, preserved and abandoned railways.

Come along and relive those years.

LOCATION: Woodstock Community Centre, Church St., Burwood Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away. DATE: Wednesday 21 April at 7.30 pm

ADELAIDE: Contact Arnold Lockyer for details. Phone: 08-296 9488
LOCATION: 150 First Avenue, Royston Park. DATE: Thursday 4 April at 8.00 pm.

THE COUNCIL AND MEMBERS TAKE THE OPPORTUNITY TO CONGRATULATE THE NSW DIVISION ON ITS 20TH BIRTHDAY. WELL DONE GUYS!

Queensland historic sawmills and tramways consultancy

The Queensland Department of Heritage has advertised a consultant position to assist with a project to research and field survey historic sawmills and associated tramways in south-east Queensland.

The Weekend Australian 23-24/3/96 via Jim Longworth & Editor

Historic walks in NSW

Ray Graf sends NSW National Parks & Wildlife Service brochures *Ruined Castle Track, Blue Mountains National Park; Newnes Historic Ruins Track, Wollemi National Park; and Glow Worm Tunnel Track, Wollemi National Park*. The Ruined Castle track uses the trackbed of the Australian Kerosine Oil and Mineral Company's tramline at Katoomba. The Newnes Historic Ruins track traverses the Newnes oil shale works, and includes a number of rail formations. The Glow Worm Tunnel Track follows the path of the Wolgan Valley Railway.

Tasmanian Railway Hobbyist

John Robin draws attention to Volume 2 Number 1 of this bimonthly glossy

publication with colour pages containing an illustrated article on the 2ft gauge Magnet tramway, while Numbers 2 & 3 will contain an article on the 3ft 6ins gauge Marrawah Tramway. Copies are available for \$5 from Tasmanian Railway Publications, 5 Villiers Street, Burnie 7320.

Publications

Ray Graf draws our attention to a variety of publications of interest.

Harnessed Waters - A River Dammed - Edited by A.Noel Loughnan, published by the Yarrawonga Shire Council, 1989. Contains photographs and details of the Yarrawonga Weir construction, including what appear to be 2ft gauge Fordson 4wPM locos.

Lucknow - A Veritable Gold Mine - by Kerrin Cook, published by Orange City Council, 1996. Contains photographs and details of the mines at Lucknow.

Yallourn Power Station - A History 1919 to 1989 - by Colin Harvey, published by SECV, 1993. Good value at \$25 plus postage & packing from the Morwell visitors centre.

Tasmania's West Coast on old picture postcards - by Pete Jermy, Michael Simco & Peter Broadfield, published by Llanfair Publishing.

Asbestos - Its Human Cost - by Jock McCulloch, published by University of Queensland Press, 1986. Shows photos of the mine and tramway at Baryulgil in northern NSW.

And from your editor, other books which may be of interest:

Northern Outpost - by John Kerr, published by Mossman Central Mill Co Ltd, Second Edition, 1995. An updated and expanded version of the Mossman Mill history, with added cane railway interest. Available from the mill.

Rails to Wealth - The Story of the Silverton Tramway Company 1886-1972 -by Lew Roberts, published by the author, 1995. An outstanding history and highly recommended.

Motive Power - The Development of Modern Australian Locomotives - by Leon Oberg, published by Kangaroo Press, 1995. In spite of some isolated lapses in accuracy, this provides much very good information on private railway locomotives.

East German Narrow Gauge John Robin has recently returned from a trip to Europe and sends details of some exciting steam narrow gauge lines in East Germany. Copies of his letter will be sent on request by the Editor on receipt of stamped addressed envelope.

NSW Industrials movie action Ray Gardiner has acquired some anonymous film footage which he had put on video. It includes a wide range of NSW industrial steam, both standard and narrow gauge, taken mostly around the Illawarra in the 1950s. Details available from Ray at 28 Hyacinth Street, Asquith 2077.

Correction - Wungong, WA

In LRN 108 p.12, it was stated by your editor that there were two 8-tonne Baldwin diesels and only one 12-tonne Baldwin used in a tunnelling scheme at Wungong in 1980-2. Thanks to Craig Wilson for pointing out the incorrectness of this statement, and to David Whiteford for providing additional information. There were three 12-tonne locos at Wungong, and seemingly one 8-tonner (or at least one was disposed of subsequently - in August 1982). This makes it possible that the two locos offered for sale in Brisbane were indeed "the same" as reported.

FIELD REPORTS

Unusual type of rail found near Bright, Victoria

Phil Rickard writes, "two Bright correspondents, Rob Kaufman and Andrew Swift,

"found a tramway with the rail still intact. The tramway led from a little goldmine in a gully, around (approx one km.) to a flying fox, which in turn conveyed the stone to the battery at an adjacent mine. The rail itself was intriguing, and I haven't come across this type in this district before (ie the upper Ovens Goldfield). It was made of light gauge pressed steel, in the shape of an inverted "V". It was fastened to the wooden sleepers by bent-over nails. The track was of (narrow gauge) and used for 8-cwt. end-tipping box trucks. We would be interested to hear whether you have come across this type of rail before, and any information about it."

Any information, clues, suggestions or hints to the Editor would be much appreciated.

Phil Rickard 4/96

Magnetic Mango, Horseshoe Bay, Magnetic Island, Qld.

(see LRN 84 p.7)

This site is at the end of Apjohn Street, Horseshoe Bay. Here, in the midst

of a mango orchard, is an old mine shaft and next to it what looks to be a side tipping skip less the skip. One the axleboxes is cast *G&S. Berlin*. Several short lengths of approximately 20-25lb rail were stacked next to the shaft. The line apparently ran from the shaft to the nearby lagoon, a distance of approximately 80m. It is all now either buried or removed, nothing being visible on the surface. Sticking a small distance out of the side of the shaft just below ground level were two rails about 660mm apart, almost certainly spread from their original gauge. The skip measured out at 600mm gauge.

Chris Hart 4/96

RESEARCH COLUMN

Australian Forest History Society: Notice and call for papers

AUSTRALIA'S EVER-CHANGING FORESTS III, 24-27 November 1996.

The third national conference on Australia's forest history will be held at Jervis Bay (185 kilometres S of Sydney). It will include a workshop on *Concepts of forest age*, papers on many aspects of forest history, short presentations of work in progress and a session to review progress of official forest history.

email John.Dargavel@anu.edu.au

LOCOMOTIVE, ROLLING STOCK & EQUIPMENT MANUFACTURERS

BUNDABERG FOUNDRY ENGINEERS LTD

(see LRN 111 p.5)

A visit on 13 March revealed that an eighth Walkers B-B DH loco had joined the seven previously recorded in the works yard. This was standard gauge ex-SRA of NSW 7336 (698 of 1972) in "Candy" livery, formerly at Rothbury Riot Railway & Steam Museum Group Ltd, Braxton, NSW (see LRN 102 p.6). It is believed to have been purchased by Plane Creek Mill, Sarina.

By 17 April, ex-QGR 1067mm gauge locos DH40 (622 of 1969) and DH46 (628 of 1969) had gone from the works yard, and so presumably had been taken into the works for rebuilding and regauging to 610mm gauge, for Tully and Proserpine Mills respectively.

No further work on the rebuilt frames and regauged (to 610mm) bogies of DH51 (633 of 1969) for the Bundaberg Sugar Company had been carried out

since the start of the year.

The discarded cabs from ex-QGR DH31 (612 of 1969) and ex-WAGR M1851 (680 of 1972) were delivered to the Golden Mount Rail Preservation Society at Mount Morgan (see this issue), apparently during April.

Editor 3/96; 4/96

NEW SOUTH WALES

ABB TRANSPORTATION PTY LTD 1435mm gauge?

On Tuesday 26 March at about 1pm a small industrial type diesel locomotive with ABB markings was seen leaving No.5 shipping berth, Darling Harbour, Sydney, on the back of a semi-trailer. A few minutes later, another semi-trailer came off the same wharf conveying two 4-wheel flat wagons. It is suggested that this equipment may be involved with the construction of the Pyrmont light rail project.

Wal Lane 3/96

BHP LTD, Newcastle 915 & 1435mm gauge

(see LRN 97 p.2)

The steelworks 3ft gauge lines have all gone, with all six Goninan B-B DE locos cut up in early 1993, although parts were cannibalised for possible future use in the similar standard gauge locos.

Motive Power (Leon Oberg), 1995

CONCRETE CONSTRUCTIONS - KINHILL ENGINEERS JOINT VENTURE, Sheaths Road, West Dapto 762mm gauge

(see LRN 109 p.3)

This site was visited on 2 February, and revealed a 4wBE locomotive, numbered 4 (in weld) in use, hauling Hagglund air operated shuttle cars. The loco hauls the cars downhill to near the tunnel mouth, and the cars are unloaded inside the tunnel mouth into a pit, from where a conveyor belt takes the spoil to a dump area.

A similar 4wBE, numbered 3, was on battery charge, parked next to a small man rider car. There were also a number of other vehicles seen, including two bogie concrete agitator cars.

The two locos did not carry any maker's identification. They appeared to have been regauged from 610mm gauge, judging by weld marks. It was said that they were selected because of their good condition and because they will run together (via multiple unit cable?) without problems. They had been previously used on an outfall construction job.

Ray Graf 3/96

Number 4, a 2ft 6in gauge 4wBE of Concrete Constructions - Kinhill Engineers Joint Venture in use at the tunnel mouth at West Dapto, February 10th, 1996. Is this a Gemco?

Photo: Ray Graf

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610mm gauge

(see LRN 109 p.4)

Ruston & Hornsby 4wDM 304457 of 1951, Model 20DLU, has been having its engine overhauled and some missing parts replaced. Baguley (Drewry) 0-6-0DM *Seymour* (2392 of 1952) was in undercoat by February, and repainted bright green shortly after. Radiator grille and engine side covers still remained to be fitted. A spare Davenport boiler for 0-4-0ST *Kiama* (1596 of 1917) has been under repair at Garnock Engineering, and it was hoped to be returned to the museum site in the early part of the year to enable restoration of the loco to proceed.

At the museum on February 11th, Hudswell Clarke 0-6-0 *Cairns* (1706 of 1939) was in use, with 4wWE 26 on the electric line, and Ruston & Hornsby 4wDM 285298 of 1949 in use for shunting.

ILRMS Review 162 & 163; Ray Graf 3/96

Illawarra Light Railway Museum Society's Perry 0-6-2T TULLY 6 (7967.49.1 of 1949) with Ruston & Hornsby 4wDM 304457 of 1951 in the shed at Albion Park, February 11th, 1996. *Photo - Ray Graf*

BROKEN HILL JUNCTION LEAD MINING CO NL, Junction Mine, Broken Hill 458mm gauge

Weighbridge and tippers at Brown's Shaft with some interesting pointwork. 22 February 1996.

Photo - Ray Graf

The surface installation at Brown's Shaft was visited on 22 February. An 18 in gauge 4wBE loco, numbered No.8 was observed, as well as two 4-wheel ore trucks, one 4-wheel timber truck, and one 4-wheel passenger truck. All the equipment appeared to be 18 in gauge, but one track was dual gauged to 15 in (?) gauge. The floor above the ore bin at the head of the head frame revealed one square end opening mine truck. The floor contained a weighbridge and three end rotary semi-automatic tippers (one with connecting track removed) and one simple grating through which material can be shovelled or swept into the bin.

Ray Graf 3/96

THE MANILDRA GROUP 1435mm gauge

(see LRN 111 p. 6)

At Manildra's Gunnedah mill, a converted Clyde 49-class loco Co-Co DE (64-342 of 1964) numbered MM02, was noted parked in the old goods shed adjacent to the railway station at around 4pm on 22 November, 1995. It apparently works daily from around 7.30am to 3pm.

Apart from the plants at Manildra and Gunnedah, there are also believed to be rail operations at Manildra's ethanol plant, Shoalhaven Starches, at Nowra.

Motive Power (Leon Oberg), 1995; Ray Graf 3/96

NEW ENGLAND ANTIMONY MINES PTY LTD, Hillgrove 610mm gauge

(see LRN 96 p.11)

A visit on 30 November 1995 revealed that rail operations on 10 level at the **Eleanora mine** at Hillgrove have now ceased, as that mine is now worked out.

Mining is now proceeding in the Black Lode in **Metz Gorge** (West Hillgrove). Levels 2 to 6 are being opened up with a 3-ton Gemco loco (2 level) and a 3-ton Mancha loco (Level 6). Antimony ore is hauled in Granby cars to the surface, tipped onto a below track level dump. From this, a front end loader filled a motor lorry for the trip to the mill.

Near the **workshop at Hillgrove** is a machinery dump with the remains of 15 battery locos, Gemcos and Manchas, as well as the remains of 22 boggers (Eimco, Atlas Copco & Scoma). Loco numbers noted at the dump were: 5 -Gemco 12328/122 ex Sydney Metropolitan Water Sewerage & Drainage Board; 6 (also numbered 16) - Gemco; 7 - no identification; 8 & 9 - Gemcos. The remaining ten locos are in various degrees of dismemberment and have no identification marks or numbers at all. At the entrance gate, a Mancha 3-ton loco and granby car are on display, painted black and welded to the rails. The loco has a metal number 4 inside the "shield" surrounding the controller. The

Granby car has body number BA6 110 and frame number ZA6 43 in weld metal.

Ross Mainwaring 3/96; Ray Graf 3/96

WEST DARLING MACHINERY PRESERVATION GROUP, Crystal Street, Broken Hill various gauges

(see LRN 108 p.9)

This site was examined in more detail on 22 February, and a number of items noted. As well as Ruston & Hornsby 4wDM 394021 of 1956, Model 48DLU, there was a second Ruston & Hornsby 4wDM, without end weights, exhaust conditioner, wheels or axles, and numbered Z6001. With a three-cylinder engine, this is a Model 40DLU, and so will be either 287688 or 287689 of 1951. It is believed it had been acquired from a property owner to whom it had been sold for powering a pump. There is also a 2ft gauge 2-2wBE loco numbered TB1 in weld metal with battery box TB2, and an 18" gauge 2-2wBE numbered 2.

The 2-2wPM steam outline amusement loco and bogie carriage was also noted. It is apparently 3ft 6ins gauge, and came from a park at Silverton.

There are a number of four-wheel mine trucks (end tipping square box), one 16" gauge, three 18" and one 2ft gauge. There are also three Model L12B muckers, numbered Z4204, Z4210 and B3505. The last is under cover and is operable, having been in use two years ago.

Ray Graf 3/96

QUEENSLAND

BUNDABERG SUGAR LTD, Atherton Tableland proposal

Bundaberg Sugar seem set to establish a new sugar mill near Mareeba, following the withdrawal of Sugar North (Tully, South Johnstone, Mulgrave and Mossman mills) from the contest. A new mill proceeding will depend on the co-operation of growers and the assistance of state government with infrastructure, including the negotiation of transport arrangements with local authorities and Queensland Transport. Nevertheless the support in principle of the Queensland Government provides some encouragement. The Sugar North mills will no doubt redouble their efforts to secure cane supplies from the Tableland in opposition to Bundaberg. It is thought that any new mill would be supplied with cane by road transport.

*Australian Canegrower 22/1/96
& The Australian Sugar Digest 17/4/96 via Chris Hart*

CSR LTD, Burdekin mills 610mm & 1067mm gauge

(see LRN 102 p.8 & 110 p.11)

The possibility of a new sugar mill on the Burdekin to keep pace with rapid growth is not an unrealistic option, according to retiring CSR Burdekin Mills chief manager, Don Brown. A CSR expansion team has been investigating options for the future, and was due to report in early 1996. Of the four existing mills under the control of CSR: Inkerman & Pioneer (Pioneer Sugar Mills), Invicta (Haughton Sugar Co.) and Kalamia (CSR), only Inkerman is on the south of the Burdekin River, while on the north side, cane is hauled long distances, particularly to Invicta. The fact that Pioneer Mill has a 3ft 6ins gauge tramline system makes integration even more difficult.

Australian Canegrower 11/12/95 via Chris Hart; Editor

CSR LTD, Herbert River mills 610mm gauge

(see LRN 111 p.7)

Victoria Mill's Baldwin 4WDH Sugarworld Shuttle (9109-1-9-80 of 1980) (ex Hambledon Mill) on ballast wagons in the navy area at the mill, January 1st 1996.

Photo - Chris Hart

An unfamiliar tamping machine was observed at Victoria Mill on 15 March. It is a four-wheel machine with tamping heads at one end, and may

have had a partial repaint. Initial suggestions are that it is a regauged unit from QGR, and is on hire from a Mackay firm.

A set of bogies for long-welded rail based on the Plane Creek design was manufactured at Victoria Mill around the end of 1995 / start of 1996. They appear to have been built on cane truck frames. An older set, in use for many years for welded rail is still around also.

Victoria Mill's Clyde 0-6-0DH *Perth* (69-682 of 1969) picked up approximately 100 4-tonne bins, numbered in the 80xx series, from their delivery point on Macknade Mill's Wharf line on April 16th. There is more 4-tonne bin material on hand at Rinaudo Engineering. This indicates that the 10-tonne bins are still very much on trial.

Metropolitto's line, a very short branch off Macknade Mill's Western line, has recently been completely lifted (including the short horseline off the end), and will be replaced with a siding laid alongside the Western line.

A new level crossing at Stone River (Stone River Road intersection with Tweeds Road and Bogottos Road) was to be laid during the three weeks following 15 April.

By the start of May, about 3km of track had been laid on the Crystal Creek line, but was temporarily halted because of wet conditions.

A correction needs to be made to the report in LRN 110 about the aftermath of Macknade Mill's Herbert River bridge derailment in December. Good organisation and good work by loco crews enabled the mill to continue for the 22 hours the bridge was closed with northside cane only, and road transport was not needed to bring the southside cane across. Once the bridge re-opened, four locos crossed it to collect the southside cane.

Chris Hart 3/96, 4/96, 5/96; Herbert River Express 16/4/96 via Chris Hart

GOLDEN MOUNT RAIL PRESERVATION SOCIETY, Mount Morgan 1067mm gauge

(see LRN 111 p.9)

Darryl Moore, from Hamersley Iron, Western Australia, was appointed in April to the position of railway precinct manager on a one year contract. Darryl has experience with the Pilbara Railway Historical Society.

Unfortunately, Hunslet 0-4-0ST MM LD 3 (854 of 1903) did not arrive back at Mount Morgan in time for the May Day weekend, the town's major event of the year. This was said to be due to the illness of a key member of the restoration team in Penrith. Arrival was expected to be delayed by at least several weeks.

The Morning Bulletin (Rockhampton) 10/4/96; Editor 5/96

HANSONS HERITAGE HALL, Black River 610mm gauge

A visit on 15 March to this machinery preservation centre revealed Hansen 4wPMR 90 of 1972/3, ex Victoria Mill, on display. The unit is said to be in working order and has several lengths of portable line to run on, but judging by the grass growth around, it has not run for some time. It is not currently clear whether the line car came directly from CSR to this site.

Chris Hart 3/96

MACKAY SUGAR CO-OPERATIVE ASSOCIATION 610mm gauge

(see LRN 110 p.12)

Seventy new six-tonne bins will be introduced into the Marian Mill system for the 1996 season. This has necessitated the upgrade of two sidings in the Mt.Jukes / Hampden area. Earthworks are well advanced on the Mt.Castor extension at Owens Creek, and trackwork construction had started by March. A large capital program to upgrade sections of main line and a number of sidings is under way.

Work has begun on rebuilding another ex-SRA of NSW 73 class locomotive for Farleigh Mill. The major part of the conversion is being carried out by mill staff at an estimated cost of \$515,000, to be completed by the end of June. About 70 six-tonne bins are being added to the Farleigh fleet.

At Racecourse Mill, rail on the Balberra extension had been laid by late March. 100 new five-tonne bins with mesh rather than sheet metal bottoms and sides are to be added to the Racecourse fleet.

At Pleystowe Mill, early warning lights are to be provided at the road crossings at Dew's Crossing, Balnagowan, and at the southern end of Balnagowan bridge.

Mackay Sugar (Newsletter) 3/96; Editor 3/96

QUEENSLAND RAILFAST EXPRESS, Woree 1067mm gauge

(see LRN 105 p.15)

During floods in March, Walkers ex-DH class B-B DH locos 619 and 627 of 1969 were used to haul QGR trains through flooded sections of the north coast line main impassable to diesel-electric locomotives south of Innisfail.

Sunshine Express 4/96 via Editor

QUEENSLAND SUGAR INDUSTRY CORPORATION, Townsville Harbour 1067mm gauge

(see LRN 69 p.8)

In April, the 4wDM loco ex Hambledon Mill, first noted here in 1989, had disappeared from the spot where it was previously seen. (This loco, built on

a 40hp *Simplex* chassis of World War I vintage, had always been known at Hambledon as a *Planet*. Evidence now suggests that it was refurbished in 1949 at CSR's Pyrmont works in Sydney from an existing 3ft 6ins gauge *Planet* loco. Can any reader suggest its origin? Nepean Sand & Gravel, and New Zealand spring to mind. - Ed.) It is not known why the engineless unit came to Townsville Harbour.

Chris Hart 4/96

SOUTH JOHNSTONE MILL LTD 610mm gauge

(see LRN 109 p.13)

The transport and transfer arrangements to handle Atherton Tableland cane (see LRN 108 p. 16-17) earned the mill two national awards, the Australian Institute of Management Pike Trophy for the best transport improvement or cost reduction, and the Ritchie Memorial Trophy for primary industry materials handling.

Australian Canegrower 11/12/95 via Chris Hart

Thursday Island 1435mm gauge

Overheard on a TV news report around Christmas time was the statement that a diesel loco from the Pilbara iron ore lines is to be "preserved" on Thursday Island in commemoration of the efforts made by TI track workers. Sounds improbable, but stranger things have happened . . .

TASMANIA

EMU BAY RAILWAY LTD 1067mm gauge

(see LRN 110 p.15)

Pasminco's (formerly Electrolytic Zinc) Ruston & Hornsby 4wDM 284836 of 1950, Model 88DS, which has been in store at Rosebery since at least 1983, was taken by road to the Burnie workshops in February 1996. It is planned to restore this unit in connection with the EBR centenary in 1997, certainly for

static display and possibly for operation.

Tasmanian Railway Hobbyist Vol 2 No.2 1996.

MT.LYELL ABT RAILWAY SOCIETY 1067mm gauge

(see LRN 105 p.16)

It is reported that 10km of trackbed of the Queenstown - Regatta Point line has been cleared by volunteers intent on seeing the opening of the Abt railway. It is said that tracklaying will commence soon.

The Australasian Post 23/3/96 via Arnold Lockyer

TRANSERWENT FERRY & RAILWAY CO, Ida Bay Railway, Lune River 610mm gauge

(see LRN 96 p.14)

The timetable brochure for this line shows photographs of a number of locomotives. There are stated to be three Malcolm Moore 4wDM locos, Hunslet 0-4-2T No.6 (1844 of 1937) and No.2 *Teddy Bear, a replica 1910 box-cab tram motor*. In LRN 96, it was suggested that this may have been rebuilt from a Malcolm Moore unit, but further details are requested. The steam loco runs on most Sundays.

The timetable indicates a daily service with five trains from Boxing Day to April, a three-train service on weekends only in May, September & October, a three train service on Sundays only in June, July and August, and a four train service on Wednesday, Saturday and Sunday in November and December up to Christmas. Details can be checked on (002) 23 5893 and (002) 98 3110.

Ray Graf 3/96

VICTORIA

Private preservation, Huntingdale 915mm gauge

John Fowler 0-4-2T 15989 of 1923 (see LRN 95 p.16), originally ex Warburton Timber Co, was moved from the Menzies Creek museum on 10 February to a factory in Huntingdale. It is planned to restore the loco in due course, and convert it to 762mm gauge, as was planned when it was acquired in 1976 for the then Walhalla & Thomson River Steam Tramway.

AUSTRALIAN PAPER MANUFACTURERS LTD, Maryvale 1600mm gauge

(see LRN 78 p.19)

V/Line Freight took over the operation of this line from 1 March 1996.

Colin Harvey 3/96

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 111, p.10)

On the Gembrook restoration, project, by 28 April all the piers of bridge No.8 were in place, and only one span was still to be installed. The decking on most of the spans was already fitted, but without the side boards to hold the ballast. A special rough-terrain crane was used in assembling the highest piers, making its way into the bottom of the valley by a very confined, and exceptionally muddy zig-zag track. It was planned to lay track across the bridge before the weekend of 11-12 May.

Some work on bridge No.9 (Cockatoo Creek) was started in March. The abutment pier at the Belgrave end has been constructed, and some earthworks done. Before much progress can be made a Telecom junction box right in the middle of the bridge has to be moved, and this work was underway at the end of April. Completion of the bridge is unlikely until summer, when the area is drier.

At Gembrook, earthworks for the construction of the platform have commenced, and two typical VR goods yard gates have been installed, so the area is just starting to look like a typical VR station again. At Fielder, the station building has been completed, but not yet painted. It is an excellent job, done by the Warrandyte Model Railway Club, and a descendant of the Fielder family. Great care was taken to recreate the station as close as possible to its original appearance.

About 1.5 km of skeleton track was laid between bridge 8 and 9 on the weekend of 13-14 April. By the time you read this, the only gap between Lakeside and Gembrook should be about 300 metres at Cockatoo Creek bridge. The track between bridge No.7 and bridge No.8 has been ballasted, and ballasting of the track from Fielder to Cockatoo Creek was to commence early in May. Ruston & Hornsby 4wDM NRT1 *William H Collis* (296058 of 1951) was moved to Gembrook late in April to do this work.

NGG16 class 2-6-2+2-6-2 Beyer-Garratt locomotive 129 (Beyer-Peacock 7430 of 1950) is to be purchased from Alfred County Railway, Port Shepstone,

Natal, South Africa. This was fitted with a new boiler in 1964 while in the service of South African Railways. It is expected to be shipped later this year, but work on conversion to 762 mm gauge will not commence until G42 is complete. In the meantime it is expected to be placed in storage off site. Walkers B-B DH DH59 (646 of 1970) had still not left Brisbane by the end of April.

New chain sprockets and drive chains have been obtained for the TACL tractor, currently under restoration. The chain sprockets were fitted in April, and it is hoped to install the Fordson engine soon. Following a very successful visit by Hugh Markwick to the Malcolm Moore company, it was discovered that Malcolm Moore still had detailed drawings of many of the parts. These will be very useful in replacing missing parts, particularly a highly sophisticated part of the reversing mechanism, which had caused the restoration team some concern. It turned out to be a piece of bent steel, with three holes drilled in it.

Quotes for building six NBH type carriages, but of steel construction, have been obtained from a Latrobe Valley source - presumably the builders of the rolling stock for the Walhalla Goldfields Railway.

Frank Stamford 4/96; Peter Medlin 3/96

M.G.S. TIMBERS PTY LTD, Boolarra 1600mm gauge

An auction of railway contractors' machinery and plant was to be held on April 18th 1996 at Boolarra. Railway plant included:

- 80hp 1600 mm gauge ComEng loco
- ComEng track springer 1600 mm gauge
- ComEng track springer 1067 mm gauge

(Could the loco be a 4wDM or DH ComEng Aresco? Can a reader provide further details of this locomotive and the vendor concerned? - Ed.)

The Age 14/4/96 via Colin Harvey

MOUNT CONQUEROR MINERALS NL, Morning Star Gold Mine, Woods Point

This company has been making a reassessment of the mine, which last worked in 1963. In 1950, it appears to have had a narrow gauge tramway (perhaps 1 ft 6 in gauge) with at least two battery locomotives. With the mine in operation once again, the company has moved to increase its capitalisation to speed up a return to production.

The Age 11/4/96 and Mining & Geological Journal 9/50 via Phil Rickard

SANDHURST TOWN MANAGEMENT PTY LTD 610mm gauge

(see LRN 108 p.23)

The entire railway system at Sandhurst Town has been offered for sale, as separate items or as a job lot. Offers were invited by May 31st 1996. Items offered included (builder's numbers from editor's records):

Lot No.	Qty.	Description
1	1	Ruston & Hornsby 0-4-0DM 305328 of 1954, Model LHT. (Original bodywork removed and replaced with crude steam outline.)
2	1	Ruston & Hornsby 4wDM 354040 of 1953, Model 20DLU fitted with cab. Also Ruston & Hornsby 4wDM 235657 or 235677 of 1945, Model 20DL (chassis and engine block only)
3	1	Hudswell Clarke 0-6-0 1555 of 1925 (oil burner) with tender
4	1	Perry 0-6-2T 7967.50.3 of 1950
5	1	Hudswell Clarke 0-6-0 1553 of 1924 - no tender, poor condition
6	3	Kiewa works bogie carriages, 30 passenger capacity; two built 1981, one 1982. Two have air brakes
12 & 13	2	Cane truck chassis with detachable ballast bins
14	1	4wPM line car chassis
15	-	Numerous wheelsets
16	360	Lengths (7.15m) 60lb rail including fastenings
17	20	Lengths portable track
18	3	Sets 60lb points
22	1	Tricycle pump car

In addition, there were four railway and tramcar bodies and a VR workman's carriage, as well as tools, buildings, signs, and railway furniture.

Further details may be obtained by contacting Ian Green at Sandhurst Town, RMB 1530, EAGLEHAWK 3556. Phone (054) 46 9612 or 014 94 6221; Fax (054) 42 5301.

Arnold Lockyer 4/96

WALHALLA GOLDFIELDS RAILWAY 762 mm gauge

(see LRN 109 p.17)

On 8 March 1996, Henschel 0-6-0WT (25427 of 1956) (see LRN 82 p.6) was transported by road to Cook's Construction at Morwell, where it is to have its wheels reprofiled, air brakes fitted and other work carried out to enable it to operate on the WGR. It had been in storage at Belgrave South for a number of years. It is one of four identical locomotives that came from Thailand, where it was numbered 103. 102 (29583 of 1956) is currently in a dismantled state in Dalby, Queensland (see LRN 98 p.7) but may well at some stage operate at Walhalla. The other two are both in England.

Tracklaying back towards Walhalla has been progressing with the next

bridge after the Thomson River bridge in sight from the head of steel by early March. This bridge is a 14m trestle some 1.8km from Thomson Station. It is 1km to the next big bridge and then 0.6m (and five further bridges) to Walhalla.

A second ballast hopper had arrived on the line by March 3rd, being ex-SEC, Yallourn, 203, joining 206. A further hopper, 205, is still in storage. The bogie vehicle transport wagon has been fitted with metal posts and railings to enable it to carry passengers when the two enclosed cars are full. It was due to be used on March 8th with a jazz band on a special evening train.

NOTES, CORRECTIONS AND COMMENTS

OBITUARY - CHARLES SMALL

Charles Small died in Honolulu, Hawaii, in May 1993 aged 78. He had suffered from Parkinson's disease since 1989. His illness made it impossible for him to write or type, so many correspondents and friends did not receive replies to his letters after 1990. His Japanese wife, while fluent in spoken English, was unable to communicate readily in written English, so news of his death has been slow to be discovered by the rail enthusiast fraternity.

Charles was an engineer, who served in the US Navy in World War II, and afterwards worked for the Standard Vacuum Oil Company, working in Japan, south-east Asia, Australia, East Africa and France, before returning to America. He was able to visit many interesting and rare locations at an early stage, with narrow gauge the preference, and popularised many of them (including some of Queensland's sugar mills) through his books, many of which he published himself.

Charles was an enthusiastic researcher who shared time and material generously with others, giving and demanding high standards of integrity, and providing an example that we could all aspire to.

Continental Railway Circle 106 (Jeff Lanham) via Ray Ellis and Bob McKillop

Glow-worm Tunnel Walk

Allan Watson runs a kiosk at weekends in what was the bar of the old hotel

at Newnes, and has produced his own, recommended, brochure *Glow-worm Tunnel Walk*. He will send any member one copy on receipt of a stamped addressed large (DL) sized envelope.

National Parks & Wildlife Service have recently released a booklet *Newnes and the Glow Worm Tunnel*, which will retail for about \$2 and appears to be an expansion of their two brochures.

Allan is also working on a series of booklets about Newnes which will sell for about \$5 and while for a general audience, will also be of interest to LRRSA members. He will keep us informed! Allan can be contacted at PO Box 126, WALLERAWANG 2845.

Steam across Australia

This 86-minute video features a variety of Australian main line footage and also includes a section on cane railways, including steam locomotives in use at Bingera Mill, and is highly recommended by its reviewer. It is available in PAL format for \$A49.95 from Sunday River Productions, PO Box 565, Concord, MA 01742, USA.

Australian Model Railway Magazine 4/96 via Chris Hart

FIELD REPORTS

Delatite Valley, Victoria

(see LR 71 January 1981)

The recent efforts in opening former tramlines to walking tracks has been extended to the Plain Creek tramline which supplied logs to Carter Bros Mill at Sawmill Settlement on the Mt. Buller road. Sign posts on the main road direct you to the tramline which, contrary to the article in LR 71, has not been destroyed by Plain Creek Road, which in fact parallels the tramway. The formation is easy to follow with many lengths of wooden rail remaining. Earthworks are minimal, as most of the line was laid directly on the ground surface. The remains of a four pile pig sty bridge marks the crossing of Winch Creek; however after much tramping up Winch Creek, no remains of the branch line could be found.

At Mirimbah, a walk up Buller Creek did not find any remains of the tram which served the Delatite Sawmill. However at Sawmill Settlement a drive up Doherty's Road leads to the area where the tramway ran, leading from the top of the incline from Buller Creek. Much of the tram has been converted to Doherty's road, and no remains could be noted from the road. However modern maps show a quarry on the top section which corresponds to the

location of the lowering gear at the top of the incline. The road to the quarry has been built on the tramline, and from just below the quarry the formation may be found, and followed a short distance to the incline summit. No remains of the winding gear foundations were evident; however lying up against the side of the cutting appears to be the remains of a tractor frame which presumably operated on the top section. Many dog spikes and sleepers were evident on the incline which was only explored for a short distance.

Tony Sedawie and Rita Pietzch 5/96

RESEARCH COLUMN

West Melbourne Gasworks Tramway

Mr J Feldman of 16/2, 201 Spring Street, MELBOURNE 3000 is interested in this line (see LR 90) because he demolished the tramway in approximately 1956. He would appreciate receiving photographs or any information and would be happy to pay any costs incurred.

Mourilyan Mill Perry 0-4-2T number 7 (2714.51.1 of 1951).

Bruce Belbin would like to trace photographs and information about this locomotive for an article he is preparing. Anyone who can help with information from the period 1951 to 1972, please contact him at Kailoa House, 44 Union Street, NORTH SYDNEY 2060; Phone (02) 9922 3233; Fax (02) 9922 6742.

B. Maffescioni gravel tramway, Bealiba, Vic

(see LRN 111 p.3)

Regarding the above item, research notes show that it was located at 141 miles 22 chains 38 links (234.5 km), opened on 7 October 1901 as Proctor's Siding, renamed Maffescioni's Siding on 14 July 1902, and closed on 10 October 1956; siding abolished on 28 January 1958. (References: *Weekly Notices* 15/01, 28/02, 40/56, and 4/58; and VR Secretary's Branch files.) Colin Harvey's item in LRN 111 confirmed that Mr Maffescioni's siding was on the UP side of the line. It is believed Mr Maffescioni was in the firewood business.

R.K Whitehead 6/96

Maude Gold Mine, Glen Wills, Vic

The Glen Wills and Sunnyside district, in Victoria's north-east, was an important gold-producing area from the mid-1890s until 1950s. Peak production occurred around the turn of the century; however a 20-year

revival from the 1930s also say significant gold produced. The Maude and Yellow Gold Mining Co NL commenced mining in 1932, having taken over the leases of the Maude, which first worked in 1892, and the adjacent Yellow Girl mine, first worked in 1893. During production by this company only the Maude reef was worked, although the ore was processed through the Yellow Girl battery. The principal access to the workings of the Maude was via the No.5 adit. This level extended over 3000 feet, and this length together with the large output necessitated resort to locomotive haulage.

Ghosts and Gold in the Victorian High Country by RW Christie (1993) includes a photo of a small 0-4-0BE loco at the Maude mine. It appears to be propelling ten half-ton box trucks into the adit. Mr Rob Kaufman of Bright has now drawn my attention to a photo in *Brajerack - Mining at Glen Willis and Omeo* by K Fairweather (1983), also taken at the Maude mine, and depicting what looks like the same loco.

Does any reader know the identity of this locomotive? It was probably at the mine from 1932 until closure in 1952 and is referred to in an article in the *Mining & Geological Journal* for March 1941, when it is mentioned in the singular, the inference being that there was only one locomotive. If it was second-hand at the Maude then it could be very hard to identify; however, if new ... can any reader assist?

Phil Rickard 4/96

0-4-0BE loco at the Maude & Yellow Girl Mine, Glen Willis.

From Brajerack - Mining at Glen Willis and Omeo by K Fairweather, 1983.

Editor's comment - It looks like a Greenwood & Batley (see *Greenwood & Batley Locomotives 1927-1980* - Booth - p.33) with 18 in gauge appearing likely by comparing frame width and battery box width. It seems to be similar to

the one at Williams United mine, Wandiligong (see later this issue), which has a modified folding driver position. 5hp *Trammer* locos from Greenwood & Batley delivered to Victoria pre-war for which customers are not shown are:

1486 1937 1'6" 4wBE ordered by William Adams & Co. Ltd., Melbourne

1504 1937 1'5" 4wBE ordered by William Adams & Co. Ltd., Melbourne

LOCOMOTIVE, ROLLING STOCK & EQUIPMENT MANUFACTURERS

BUNDABERG FOUNDRY ENGINEERS LTD

(see LRN 112 p.5)

Five Walkers B-B DH locos are being rebuilt and converted from 3 ft 6 in and standard gauge to 2 ft gauge for sugar mill use this year. The two rebuilt SRA NSW 73-class Walkers B-B DH locos for Invicta Mill, Giru, 7346 and 7348, (708 and 710 of 1973) are believed to have been despatched in the second half of May. The rebuilt WAGR M-class Walkers B-B DH for Victoria Mill, M1851 (680 of 1972) was due to be despatched during the first week of June. Its *Jourama* nameplates were being fixed to the cabsides on 29 May.

Conversion work had begun during May on 73-class 7317 (676 of 1971) for Plane Creek Mill. This unit had been purchased from Simsmetal in Newcastle in 1995, and is believed to have been delivered to the Bundaberg Foundry direct from New South Wales. It is scheduled for delivery in September. Work had also resumed late in May on the QGR DH-class Walkers B-B DH DH51(633 of 1969) for the Bundaberg Sugar Co. This job had been set aside in 1995

following bogie regauging and frame modification.

Stored DH-class locos DH40 and DH46 (622 and 628 of 1969) were sent to Walkers Ltd at Maryborough between mid-March and mid-April for rebuilding there, for Tully and Proserpine Mills, while DH43 (625 of 1969) was sent to Goninans in Mackay in early April for rebuilding for Kalamia Mill.

Harvey Flanders 5/96; Tony Wells 5/96; Editor 5/96

A.GONINAN LTD, Paget, Mackay

This is the former Tulk Goninan Ltd plant (see LRN 101 p.6), now trading as Goninan Mackay and believed to be operated by a subsidiary company of A.Goninan. Ex QGR Walkers B-B DH DH43 (625 of 1969) being rebuilt as a 2 ft gauge loco for CSR Ltd, Kalamia Mill, was reportedly "still in bits" at the end of June.

Tony Wells 5/96; Editor 6/96; Jeff Shucksmith 7/96

WALKERS LTD, Maryborough

(see LRN 100 p.4)

Walkers are rebuilding for 2 ft gauge sugar mill service two ex-QGR DH class B-B DH locos which were built in its works 27 years ago. The former DH40 (622 of 1969) was due to be despatched to Tully Mill towards the end of July, while DH46 (628 of 1969) was due to leave for Proserpine Mill about the beginning of August.

Harvey Flanders 5/96; Jerry Jirasek 7/96

NEW SOUTH WALES

BHP LTD, Port Kembla 1435mm gauge

(see LRN 108 p.5 & 112 p.19)

Clyde 0-6-OST *Bronzewing* (457 of 1937) has been restored to working order by Max Hodgson, and made its inaugural run to Kemira on Sunday 19 May. It had been withdrawn from service in 1971 and placed in the hands of the NSW Rail Transport Museum in 1975. As the loco has been accredited for main line running, it will probably also visit the Wongawilli loader in the future.

Ex Goldsworthy Mining 8, an English Electric (Australia) Co-Co DE, has been placed into service a number of years after its arrival from WA, numbered D49 and in a new version of BHP's yellow livery. It is used on Kemira trains.

Of the three A.E.Goodwin Co-Co DE locos on hire from Austrac, the two 442 class (101 & 102) have been proving troublesome, while the 45 (103) has been a great performer.

Brad Peadon 5/96

TRANSFIELD BOUYGUES JOINT VENTURE

(see LRN 108 p.8)

Expressions of interest have been sought for the removal of up to 2 million tonnes of spoil from the Airport Link New Southern Railway Project. A shaft is being developed near Green Square, and a portal at Prince Albert Park, while a further header will commence at Tempe Reserve.

Sydney Morning Herald 18/10/95 via Ray Graf; ARHS Bulletin 5/96 via Editor

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY INC Durundur Railway, Woodford 610mm gauge

(see LRN 111 p.7)

Steam trials have successfully been carried out on Hudswell Clarke 0-6-0 *Melbourne* (1701 of 1938), with a couple of test runs having been completed. Reassembly of this locomotive has still to be carried out.

The Wamuran Railway Station building has been purchased by the Caboolture Shire Council and is to be removed to Woodford. In addition, the CWA cottage at Woodford has been donated to the Society and will also be moved onto the museum site. Site works should soon begin for the construction of a two road running shed which will house the train and up to five locomotives.

A strip of land has been purchased from the Catholic Church parallel to the former formation from Peterson Road to Chambers Road, Woodford. This will enable the reinstatement of the railway line in spite of the unavailability of the original trackbed in this section.

The Caboolture Shire Council has commissioned a consultancy firm to examine the feasibility of a tourist railway from Caboolture to Woodford.

Society equipment, including a number of small locomotives, which has been stored at Rosewood for many years is to be removed to Woodford in the near future.

Durundur Railway Bulletin 4/96, 5/96, 6/96 via Editor

BRAMPTON ISLAND PTY LTD 762mm gauge

(see LRN 79 p.9)

The two F.C.Hibberd *Planet* locomotives previously reported (4wDH 3475 of 1950 & 4wDM 3476 of 1950 - Ed.), both painted green, were still in use in March. Only one, fitted with electric start, sees regular use.

Six or seven flat top cars were noted as well as the four-wheel passenger carriages. One flat top is fitted with low side rails for luggage, and one was new but still without wheels. The battery electric car noted in 1987 was not seen.

The train runs from the resort to the jetty and return in the morning to pick up passengers off the boat from Mackay, and performs the reverse in the afternoon. The trip is very popular and adds to the charm of Brampton. Given the light duties required of the equipment, the cost of maintenance must be quite low.

Barry Campbell 5/96

CARPENTARIA TRANSPORT PTY LTD, Woree 1067mm gauge

(see LRN 112 p.13)

This company, trading as QRX in Cairns, has two Walkers ex QGR DH class B-B DH locos (619 and 627 of 1969) in use shunting rolling stock at its Woree terminal. On 23 May, the two were seen in white livery with QRX logo, working in multiple as they moved container wagons around.

Editor 5/96

CLAIRVIEW 610mm gauge

(see LRN 82 p.12)

John Fowler 4wDM 21914 of 1937 is still standing in the open on a block of land which bears a *FOR SALE* sign placed there by agents TJ Leonard of Mackay. This unusual 8-10 ton loco would be worthy of preservation.

Editor 6/96

CSR LTD, Herbert River Mills 610mm gauge

(see LRN 111 p.7 & 112 p.11)

Construction of the first stage of Victoria Mill's new line to serve the Wharp's Holding area had progressed well by the second half of May. The new branch is off the Stone River line, and after 0.3km crosses Stone River Road to run for

2.4km along Tweed's Road before turning along Pettit's Road for 0.9km. The terminal loop in Pettit's Road is 0.7km long. By 21 May, 1.7km of track had been laid. Not much of the Crystal Creek line has been built since the report in LRN 112, with pegs but no formation noted on the route to the east of Yuruga, Scrubview and Abswold.

The ballast tamper noted at Victoria Mill in June is said to have been there on hire from Fessl Pty Ltd. This company is believed to have a contract to maintain track at Pioneer Mill (see LRN 77 p.13). It was not known previously that the company had a 2 ft gauge machine. Plasser 41 of 1973 is the 3 ft 6 in gauge machine noted at Pioneer Mill. Perhaps it was regauged for use at Victoria Mill. It was returned to its owner in mid-May. Meanwhile, the track jack on loan from Plane Creek Mill (371 of 1989) was still at Victoria Mill in May.

The rebuilt WAGR M-class Walkers B-B DH *Jourama* (680 of 1972) is believed to have arrived on time from the Bundaberg Foundry and is paired with a new Solari type bogie brakewagon.

Victoria Mill's Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) was used to give passenger rides for the Italian Festival on May 11th & 12th. It ran from Victoria Mill to somewhere along the 4 Mile line. Several Macknade cane trucks were used at a cane cutting and loading competition at the Ingham International Club on 12 May.

At Macknade Mill, the final drive from ex-Inkerman Mill's Clyde 0-6-0DH DHI.2 of 1954, which is being progressively cannibalised, was removed for fitting into Clyde 0-6-0DH 16 (DHI.1 of 1954). The final drive from 16 had been found to be cracked, but the replacement unit was found to be cracked also so the original was patched up and refitted.

New 4-ton bins continue to roll out of Rinaudo's, with the current order in the vicinity of 500-550. The mooted sixty 10-tonners have so far failed to materialise.

Early in May, Macknade's Hansen linecar L CAR 3 (1920 of 1978) was damaged after an encounter with split points at Hawkins Creek. It went to Victoria Mill for repairs and was replaced by L CAR 5 (34 of 1973).

With the start of crushing on 17 June, Victoria Mill was using two of its Clyde Model HG-3R locos for yard duties, *Centenary* (64-381 of 1964) on full yard shunting and *Ingham* (64-382 of 1964) on empties. Victoria's E.M.Baldwin 4wDH *Hambledon* (8002-1-8-78 of 1978) was still undergoing repairs in the locoshed in late June.

Regular cane transfer from Victoria to Macknade started on day 1 of the crushing, and difficulties at Victoria Mill meant that extra transfers were common. On 22 June, Macknade growers did not cut, to enable the mill to

assist Victoria deal with its backlog of cane. Nearly 20 000 tonnes of Victoria cane was crushed at Macknade in the first week, approximately half the mill's throughput. Although the majority of transfer haulage was done by Macknade locos, Victoria locos were also involved. Victoria locos used included Walkers B-B DH *Victoria* (599 of 1968 rebuilt Tulk Goninan 1994), which ran to Southside loop, Cordelia on June 19th & 20th. This is probably the first time that one of these locos come so far into Macknade territory; it would be impossible to go right through to the mill because of the overbridge at Cordelia.

(A correction from LRN 112 p.11 is that "Metropiloto's line" should have read Mastrippolito's line.)

GYMPIE ELDORADO GOLD MINES PTY LTD 610mm gauge

(see LRN 104 p.12)

The go-ahead was announced in April for a third shaft on the old Gympie goldfield to be refurbished to provide further sites for underground exploration.

The Age 16/4/96 via Ray Graf

HAUGHTON SUGAR CO PTY LTD, Invicta Mill, Giru

(see LRN 110 p.11)

The two rebuilt Walkers 73-class locomotives were observed at Invicta Mill on 20 May, apparently having arrived from the Bundaberg Foundry quite recently. They are named *Cromarty* (708 of 1973) and *Minkom* (710 of 1973). The rebuild plates state that they are 38-tonne locos, and are misleadingly dated 1995. Each loco is paired with a new bogie brake wagon bearing the same name as the loco. These have locally built frames, and bogies supplied by FM Baldwin in 1995 and 1996. The earlier rebuilds all

have similar brake wagons, and this mill now has seven of these impressive locomotives in service.

Expansion of Invicta Mill's cane railway has also been taking place, with two new branches off the mill's main line to Dalbeg being noted in the section north of Clare. One of 4.8 km, with an additional 0.8km of trackbed prepared, runs parallel with the Haughton River in the upstream direction to the west of the main line, to serve the Haughton irrigation section. Another, 6 km in length, leaves the main line just after it crosses Barratta Creek, and runs east, serving the Northcote irrigation section. It then joins a Pioneer Mill line, which becomes dual gauge and remains so for some 7 km to the east, almost as far as the Ayr-Clare road on the west bank of the Burdekin River. The last 2 km of this dual gauge section seems to have been freshly completed, with the remainder built for the 1995 season. This now leaves a gap of about 12 km of Pioneer Mill 3 ft 6in gauge line separating the extremities of dual gauge connected with the Invicta and Kalamia systems. A short extension of about 0.5 km appears to have been made to the Pioneer -Kalamia dual gauge section in 1995.

A section of trackbed has been prepared for about 3 km alongside the Ayr-Clare road, south from the Pioneer - Invicta dual gauge section. It appears that it is planned for this to be dual gauged also, judging from the dual gauge crossing of the side road already laid in concrete.

On Saturday 25 May, preparations for the crushing season at Invicta Mill were well under way, with Walkers B-B DH *Piralko* (677 of 1971, rebuilt Bundaberg Foundry 1995) delivering bins to the Selkirk line, Tamper ballast tamper 94952 of 1993 at work on the Northcote line, and the unique Com-Eng 0-4-0DH *Invicta* (CA1040 of 1960) parked at a ballast dump to the north of Clare. However, E.M.Baldwin B-B DH *Selkirk* (6750-1-8-76 of 1976) was still undergoing heavy mechanical work in the workshop at the mill.

In the meantime, further government auctions of land in the irrigation area have been halted, and farmers have been warned not to grow cane without planting permits, following CSR's decision not to invest more capital in mill capacity while growers insist on a maximum season length of 22 weeks.

Editor 5/96

ROD LEONARD, Leonards Road, Trinity Beach, Cairns 610mm gauge

(see LRN 91 p.12)

Rod Leonard still hopes to find a way to operate a passenger railway service, although insurance costs to run on sugar mill lines used by cane trains is prohibitive. He recently purchased the five four-wheel passenger carriages from Sugarworld (see LRN 109 p.8) which were advertised in March

with offers closing on 17 April with Peter Gelling Real Estate in Cairns.

Apart from a quantity of cane railway rolling stock and four large bogie carriages (not all completed), Rod owns the following locomotives:

0-6-0	Hudswell Clarke	1653	1935	under restoration
4wPM	F C Hibberd	3570	1952	restored
4wDH	E M Baldwin	4660-1-8-72	1972	restored: cab fitted
4wDH	E M Baldwin	4660-2-8-72	1972	unrestored

As the property on which the equipment is stored has been sold, it will need to be removed elsewhere soon. Rod may be tempted by a proposition to buy some or all of the equipment, but would dearly love a chance to operate it. Anyone genuinely interested can ring him on 018 18 3463.

Courier-Mail 23/3/96 via Barry Campbell; Rod Leonard 7/96

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610mm gauge

(see LRN 112 p.13)

The ex-SRA NSW 73-class Walkers B-B DH being rebuilt by Farleigh mill staff for the 1996 season is 7305 (664 of 1970), at a quoted cost of \$515 000. This was observed outside the loco shed on June 29th with superstructure substantially complete and in grey primer with yellow side frames.

None of Farleigh's Com-Eng 0-6-0 locos was in use when the mill was visited early on June 29th. Com-Eng 0-6-0DM *Ashburton* (A1614 of 1956), without engine, was noted dumped in the yard, while *Richmond* (A1308 of 1955) was parked in the navvy area. Com-Eng 0-6-0DH *Pioneer* (AI2358 of 1962) and *Carlisle* (AI3271 of 1963) appeared to be both spare in the loco shed, where also was seen *Barcoo* (FB4383 of 1965).

Farleigh's Clyde 0-6-0DH *St.Helens* (61-234 of 1961) was noted newly painted in the green, red and yellow corporate livery. Also noted recently repainted in the corporate colours were Marian Mill's EM Baldwin B-B DH 16 *Charlton* (9562-1-6-81 of 1981) which has finally been fitted with its nameplates, and Pleystowe Mill's Clyde 0-6-0DH *Victoria Plains* (66-490 of 1966).

Pleystowe Mill's 0-6-0DH *Septimus* (A2128 of 1958) appears to be spare loco and was noted parked in the yard adjacent to the full lines, while Bundaberg Foundry 6wDM 6 (10 of 1953) appears to be out of use at North Eton mill site.

Noted in the shed at Marian Mill was a bogie brake wagon with central cabin, similar to the one built at Racecourse Mill last year.

The mixed gauge link from the QGR to Pleystowe Mill (LRN 82) has finally been eliminated entirely. In 1991, all that was removed was that portion from the edge of the Eungella Road inside the mil property. Subsequently, resurfacing of the road in 1994 covered the rails, and at the other end of the line the QGR removed the 3 ft 6 in gauge connection. In the 1996 slack

season, the third rail and all unnecessary points were removed, and finally in April 1996 the level crossing lights were removed, two years after the crossing was closed to rail traffic.

Racecourse Mill's order for new 5.5 tonne bins was increased to 120, constructed by E & C Engineering of Walkerston. Pleystowe Mill has received deliveries of 112 new 6 tonne bins painted grey rather than the previous red oxide. However, they can still be recognised by having galvanised sheeting up to waist level rather than full mesh sides. Farleigh Mill is receiving 70 6-tonne bins.

With the increased use of infield tipper bins, many sidings on the cane railway network have been altered to enable tipping into the bins. This means that bins remain on the rails rather than being taken infield, no doubt reducing maintenance costs. A disadvantage, however, is that average bin weights are lower with tipper bins.

The Farleigh Mill 4.5km Wewak branch at Calen was completed in time for the crushing season, as was the second stage of Racecourse Mill's Balberra line. This line will reportedly be completed with a 1.5km extension to be built for the 1997 season.

Mackay Sugar 6/96 via Editor; Barry Campbell 6/96; Editor 6/96

MOUNT ISA MINES HOLDINGS LTD 1067mm gauge

(see LRN 108 p.14)

An auction was to be held at Mt Isa Mines on 28 May 1996, under instructions from Mount Isa Mines Ltd and Carpentaria Gold Pty Ltd

Items to be sold included (not all necessarily rail mounted):

Lot 67	VO503 '74 rail ballast diesel tamper
Lot 87	VO452 Com-Eng 12 ton diesel loco (parts)
Lot 88	VO459 Com-Eng 12 ton diesel loco (parts)
Lot 93?	VO406 Gemco-Funkey 12 ton diesel loco, Deutz engine
Lot 94	VO407 Gemco-Funkey 12 ton diesel loco, Deutz engine
Lot 95	VO430 Greenbat 20 ton electric loco (scrap)
Lot 96	VO472 Com-Eng 12 ton diesel loco V6 Deutz engine (parts)
Lot 97	VO458 Tamrock RMH400 rock bolter, rail mounted drill (incomplete)
Lot 98	VO408 '86 Atlas Copco Prome TH556 boom jumbo rail mounted drill
Lot 102	Two Granby Rail truck dump bins
Lot 104	Two Granby truck dump bins
Lot 105	VO556 '83 Gardner Denver 3 boom track drill (scrap)
Lot 107	VO781 Greenbat-Allan West loco diesel
Lot 108	VO782 Greenbat-Allan West loco diesel
Lot 109	VO780 Greenbat-Allan West loco diesel

There were also numbers of underground loaders, a Plasser "sweeper",

three Fox 478 underground service vehicles, and rod carriers, some of which may have been rail mounted.

(Lot 67 seems to be Plasser 1817 of 1974. Lot 96 would appear to be Com-Eng 4wDH LA55109 of 1970. All other 12-ton Com-Eng diesels are supposed to have been sold in 1978, and the only two Gemco-Funkeys are supposed to have been sold in 1977. Perhaps all the other Com-Eng and Gemco-Funkey diesels are in fact Com-Eng 20 tonne machines. Lots 107-109 sound like Fox *electric* locos, built 1971-2 under licence from Greenbat - Ed.)

The Age 18/5/96(via Colin Harvey);

Sydney Morning Herald and MGS Turners auctions via Craig Wilson

THE MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610mm gauge

(see LRN 110 p.14)

More locos had been painted in the new livery by late May, including some supposedly available for sale last year. This means that the old Mulgrave blue and yellow livery is extinct, and leaves only two main line locomotives in the old Hambledon green and yellow: Clyde 0-6-0DH locos 14 & 16 (56-86 and 56-96 of 1956). EM Baldwin 4wDH 10 (6-881-1-6-64 of 1964) was noted at the Redlynch navy depot.

A charter of the *Mulgrave Rambler* hauled by John Fowler 0-4-2 *Nelson* (20273 of 1934) ran for St.James' Rail Tours on 18 June. The charter is said to have been very difficult to arrange, and was stated to be definitely the last to run. Local publicity to this effect boosted the 40 members of the tour party by about 10. *Nelson* performed in fine style, rattling its three bogie cars amid a green jungle of ripening cane, and with a commentary on the sugar industry provided by a talented young woman from Mulgrave Mill. A photographer from the *Cairns Post* and a studio photographer recorded the final run as the Fowler made a run at 1 in 20 grades and with whistle shrilling thundered along trestle bridges above crystal clear streams. After lunch and an inspection at Orchid Valley, which is reached on a balloon loop, the afternoon return included a "reverse" run down one of the numerous and mysterious branch lines, where stalks of cane - the harvest was due to begin the next day - brushed against the delighted passengers. When the *Mulgrave Rambler* doth ramble no more, North Queensland tourism will be the poorer.

David Burke 6/96

PIONEER SUGAR MILLS PTY LTD, Inkerman Mill 610 & 1067mm gauge

(see LRN 110 p.11)

3 ft 6 in gauge Hunslet 0-6-0T *Inkerman* No.1 (1119 of 1913) was not apparent in its normal position when the mill was visited briefly on May

25th. It has been preserved at the mill since 1972.

Editor 5/95

(see LRN 102 p.8)

(see HAUGHTON SUGAR CO PTY LTD, Invicta Mill, Giru)

PJ ENGINEERING, Mount Ossa 610mm gauge

(see LRN 73 p.10)

The Motor Rail *Simplex* 4wPM 4199 of 1927, and flat cars ex Hayman Island, appear to be abandoned in a paddock adjacent to the Bruce Highway north of Mackay. PJ Engineering has moved to Calen, so this equipment will surely disappear soon unless saved for preservation.

Barry Campbell 6/96; Editor 6/96

MR TAIT, Old Clare Road, Mirrigan, Ayr 1067mm gauge

(see LRN 83 p.12)

Ex Pioneer Mill Hunslet 0-4-2T *Pioneer* (642 of 1896) still remains standing in the open adjacent to the roadway, with no work apparently having been done to it since it arrived at least five years ago.

Editor 5/96

SOUTH AUSTRALIA

PORT DOCK RAILWAY MUSEUM various gauges

(see LRN 88 p.13)

The 3 ft 6 in gauge Malcolm Moore 4wPM appears to be a rebuild of two units. It has Malcolm Moore ballast weights at each end and a Malcolm Moore "diamond" plate on the frame on the side. However, it is fitted with a Day's gearbox. (This is similar to the example at Yarra Junction, Victoria, except that it has a new frame with no builder's plates, but Malcolm Moore ballast weights and a Day's gearbox.) (Were Day's gearboxes routinely fitted by MM? - Ed.)

Peter Medlin 6/96

TASMANIA

EMU BAY RAILWAY LTD 1067mm gauge

(see LRN 112 p.14)

Don River Railway carriages were hired for the inauguration of the reopened Mt.Lyell concentrates traffic on 16 December 1995. Walkers B-B DH locos

1102 & 1103 (639 & 640 of 1970) were used to take the train from Burnie to Melba Flats, where two loaded X class ore wagons were added, and return.

ARHS Bulletin 6/96 via Editor

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC 610mm gauge

(see LRN 108 p.18)

On 22 March, a new 400m extension along the formation of the Rubicon Tramway was formally opened, with the Kelly & Lewis 0-6-0DM (4721 of 1935) at the head of the train and the John Fowler 0-6-0T (11885 of 1909) making up the rear and returning with the two carriages. During the Easter period, each of these locomotives were used on passenger train services, reversing down the new line from the station before returning and making a few circuits of the old museum line. The new line crosses the line to the goods shed by means of a diamond crossing.

The track extension and many other jobs at the museum have been achieved with the assistance of seven workers on a Federally-funded New Work Opportunities project.

BENDIGO MINING, Central Deborah Mine, Bendigo

The mine is being dewatered and explored by Bendigo Mining from the poppet head above the tourist mine (although using a separate shaft), to a depth of 411 m below the surface to the old 17 level. Several hundred tonnes of ore have been removed from the 8 level. It is not known whether mining will be resumed, either from the Central Deborah or North Deborah shaft, nor whether rail operations are being used.

Australian Mining March 1996 via Ross Mainwaring

CARMANS TUNNEL GOLDMINE, Maldon

Situated 2.7 km south of Maldon, this tourist mine features a 570 m long tunnel driven through solid rock by the Great International Quartz Mining Co NL in 1882-4. The mine features *mine trucks and tracks*. Tours take place on Saturdays, Sundays, Public and school holidays. Enquiries (054) 75 2667 or 019 95 9633.

Ray Graf 6/96

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 112 p.16)

The 1996-97 timetable has an interesting change. From 15 July to the end of August, the 2.30 pm weekday train will run only as far as Menzies Creek. Passengers carried for the year ending 30 June 1996 will total about 235,000. This is 37,000 more than the previous year.

On the Gembrook restoration project, track was laid across bridge No.8 on 10-11 May, and NA class 2-6-2T 14A (Newport, 1914) was the first to cross it, on 11 May. 14A departed Emerald at 8.00am on this day, with the ballast hopper, two NBH cars with trackwork volunteers, an NC van, and Ruston Hornsby 4wDM NRT1 (296058 of 1951) in tow at the back. At about 9.30 am it went on to the bridge, only going far enough to have its front pony wheels off the bridge on the Gembrook side, as the track had still not been connected. After photographs were taken, the train was propelled back to Lakeside. 14A then made two trips pushing the ballast hopper, to ballast the track on the bridge.

NRT1 was to be used later in the day to take NQR wagons loaded with sleepers on to the skeleton track. Unfortunately NRT1 was somewhat confused, and went backwards when it should have gone forwards. Since having its Ruston & Hornsby engine replaced with a Cummins engine, it has had some clutch troubles. On 1 June the first passenger train crossed the bridge. Passengers were the bridge construction team, their families, and management committee members, and they travelled in NBL cars.

Sleepering of the skeleton track between bridges 8 and 9 was completed for about half the distance by mid-June, and ballasting of the completed sections was underway. The ballast trains are being run by 0-6-0DM D21 (TGR Launceston, 1968). Some ballasting was completed between Fielder and Cockatoo, and this is now being tamped.

By the end of June four and a half of the nine concrete foundations of bridge No.9 had been completed. The underground section of the old piles for this bridge have been uncovered and found to be in excellent condition. The concrete work is therefore not really "foundations", but caps on the original piles - a method of joining the old and the new. This was not the case with bridge No.8, where the concrete foundations are based on rock.

At Cockatoo earthworks for the construction of the station platform have commenced.

Frank Stamford 29/6/96

FIRST NJK INVESTMENTS PTY LTD, Leisureland Fair, Langwarrin 610mm gauge

(see LRN 83 p.14)

It is believed that this park with its railway system has been closed for about two years, and that the three Chance 2-4w-2PM steam outline locos have been sold, together with the carriages and track. (Builder's numbers are 75-50134 24, 75-50142 24 & 75-50143 24 of 1975, and numbers carried are 134, 142 & 143. -Ed.) Can any reader provide any information about where they have gone?

Peter Medlin 6/96

HARVEYS FISH FARM, Lincoln Causeway, Wodonga 457mm gauge

This site, formerly Aussie-land Adventure Park (see LRN 76 p.15), resumed operations on December 23rd 1995 with 0-4-0PM *Jumbuck* and a bogie toastrack coach numbered 4 noted in use at Easter 1996. A second bogie carriage, 3, is also available for use. Also here is RM6, a 2-4wPM rail motor built by Denys Steinhäuser (see LRN 69 p.1), who is involved in rail operations at the site. The station has been moved to a new position, and a drive on ramp means that locomotive movements on and off the site are accomplished easily.

Ray Graf 6/96

POWERWORKS, Yallourn 900mm gauge

Hitachi Bo-Bo WE locomotive 125 (102 of 1967) has been placed outside the visitors centre at Yallourn together with coal trucks 701 and 711. The trio sit on a short length of track and all were newly repainted when noted on 11 May.

Ray Graf 6/96

SCHOOL OF ARMY HEALTH, POINT NEPEAN QUARANTINE STATION MUSEUM, Portsea 686 mm gauge

This site ceased operation as a quarantine station in 1979 and is now the School of Army Health. However, some of the disinfection buildings and the boiler house have been retained as a museum. Transport from the jetty to, and through, the disinfection process was by 2 ft 3 in gauge tramway, and

some track is still in position set in concrete. Retained at the disinfection building are three wooden-top flat trucks, a metal flat truck and a truck with metal shelves. Other features are two turntables, an hydraulic lifting turntable and a set of bladeless points.

Tours of the quarantine station leave the Point Nepean National Park orientation centre at Portsea at 2.00 pm on Saturdays and Sundays.

Further examination of the remains of the Fort Nepean tramway (LRN79 p.4) indicate that this was also 2 ft 3in gauge.

Colin Harvey 6/96

SOUTHERN HYDRO LTD, KIEWA HYDRO-ELECTRIC SCHEME, West Kiewa Power Station 610mm gauge

(see LRN 111 p.14)

A section of 2 ft gauge tramway at the West Kiewa Headrace Tunnel (grid reference EV166315) is used for handling materials stored inside the tunnel portal. Two flat trucks and four side-tipping trucks were on site in December 1995. Approximately 90 metres of track extends outside the tunnel and this was relaid during 1995.

Colin Harvey 3/96

UNDERGROUND MINING ENGINEERS PTY LTD, Union Hill, Maldon 457mm gauge

It has been confirmed that rail transport is being used at this location under contract to Alliance Gold Mines Pty Ltd (see LRN 108 p.18) ; not in the decline but in the drive. The contractor is a Stawell-based company, currently working two shifts a day, driving and setting up stopes on narrow ore bodies. Access is by a decline using a Wagner 13t rubber-tyred truck to haul the ore up from the rail drive; an unusual but quite workable set-up. The rail drive was taken around an old stope, hit an undiscovered shaft on the way, and hit an unexpected quartz reef some 60 m short of the original target of 150 m.

UME are using a rail-mounted bogger to load skips for haulage to the decline by a battery electric locomotive. The loco is an 18 inch gauge 4wBE *Little Trammer* built by Mancha Storage Battery Co, USA. In December, 1995, this loco was noted being overhauled at Williams United Gold Mine at Wandiligong, and was subsequently sold to UME.

The decline is likely to be extended from 120 m below surface to some 500 m below once resources are proved.

*P.O'Donnell (Williams United Gold Mine) via Phil Rickard 6/96;
Australian Mining March 1996 via Ross Mainwaring*

WILLIAMS UNITED GOLD MINE, Wandiligong 457mm & 610mm gauge

This site, near Bright, was visited on 9 December 1995 to inspect two battery-electric locomotives said to be on site. The locos concerned turned out to be a pair of 2 ft gauge 1½ ton 0-4-0BE Gemco locos that had recently arrived from Cowarra Creek Gold Mine at Bredbo, NSW, where they were part of a lot auctioned off on behalf of Eastern Gold Australia NL (see LRN 109 p.4). One loco has no identification plate. The other is 12101/107/63. The manager, Peter O'Donnell, advised that they are intended for a tourist operation which he hopes to start at a disused mine nearby.

Following inspection of the Gemcos, another loco, a 4wBE, was noted under repair. It was said that this was a Mancha *Little Trammer* obtained about a year ago, and being repaired for resale. It is 18 inch gauge and said to be ex Wattle Gully Gold Mine, Chewton, Victoria, having originally been acquired by them in 1957 and disposed of when Newmont Mining took control.

Also present on the surface were five rail-mounted bidders of various nationalities. Under repair (with the Mancha) was an Eimco 12B, 18 inch gauge, also Wattle Gully, carrying a plate *Goodman Lennings Manufacturing, PO Box 6120, Dunswart [South Africa] S/n.88067*. Nearby were three Atlas-Copco LM36 bidders purchased from Bredbo in addition to Williams United's own LM36, a yellow-painted 18 in/24 in gauge machine.

The Williams United is the only commercial mine remaining in Wandiligong, having been in production intermittently since 1926. Operations in recent years have been on the 200 ft and 300 ft levels, each level using one rail-mounted bidder to load the traditional ½ ton box trucks.

The manager advised that no locos have ever been used underground at the mine as distances are fairly short; only ½ ton trucks are being used due to the size of the cages in the shaft. At the time of the visit there was a Spanish built Eimco 12B bidder underground. However, this has since been moved to the surface as underground operations are virtually finished for the present.

Dumped nearby, a fourth loco was found - a derelict 0-4-0BE chassis of 18 inch gauge. It bears no other identification other than a Greenwood & Batley motor (No.50391, Type T1). Its full provenance is unknown other than that it came to Wattle Gully (any ideas to the Editor, please). (ex Maude Gold Mine? - Ed.)

Intending visitors to this working mine should seek permission to visit.

Phil Rickard 6/96

WESTERN AUSTRALIA

BUNNINGS, Manjimup 1067mm gauge

(see LRN 96 p.17)

Located at the Bunnings Mill at Manjimup (on the Pemberton Road) is a 4wDM loco off the rails: apparently a former underground loco. No identification is carried - can a reader provide details of this? (I believe this is a Plymouth 4wDH. What are the ones at Nannup, Pemberton & Jardee? - Ed)

Peter Medlin 6/96

DIZZY LAMB, Wanneroo 610mm gauge

(see LRN 102 p.19)

This location is reported to have the RIDLEY No.1 4wPM locomotive built at Whiteman Brickworks about 25 years ago. This was to be retained at the brickworks in 1983 after a similar loco was donated to WALRPA (see LRN 35 p.14).

Peter Medlin 6/96

KALGOORLIE CONSOLIDATED GOLD MINES

Offered for sale at an auction on April 12th was equipment including three one tonne rail trucks.

Sydney Morning Herald 30/3/96 via Ray Graf

ROTTNEST ISLAND RAILWAY TRUST 1067mm gauge

(see LRN 109 p.18)

On Monday 29 April, 4wDH loco ST1 and the *Osprey* carriage (ex WAGR wagon frame 11298) were in use. The second 4wDH loco and carriage *Quokka* were stored on one of the triangle tracks at Kingstown, about 20 minutes walk from the jetty / visitors centre. A Malcolm Moore 4wPM rail tractor (formerly of Bunnings) was due to arrive from the Bennett Brook Railway, but was not yet on the island by the day of the visit.

Peter Medlin 6/96

WEST AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC. Bennett Brook Railway, Whiteman Park 610mm gauge

(see LRN 109 p.19)

The 1996 Enthusiasts Day will be held on Saturday 14 September, and should feature the normal exciting range of operations, with steam and diesel haulage, passenger and freight trains, runpasts and night running. Trains will operate from 11am and information is available on (09) 276 8745 or 294

4087. It is hoped to operate Malcolm Thompson's Perry 0-4-2T (8967.39.1 of 1939), which is painted in lined mid-green livery and has been fitted with a Bundaberg Fowler type cab. It carried the name *Betty Thompson* when photographed in early June. This loco was expected to be completed by mid-July.

It is also hoped that Franco-Belge 2-8-2 NG 15 123 *Fremantle* (2670 of 1951) will also be back in service after repairs by the Enthusiasts Day. In addition it is hoped to have completed a brakevan, to complete new track work and a water tank at Whiteman Village Junction, and to have made substantial progress on the Orenstein & Koppel Mallet 0-4-4-0T (2609 of 1907). The boiler and old side tanks from this loco are stored at Mussell Pool depot while the wheels and engine frames are at Ian Willis Engineering at Burswood (renamed from Riversdale).

The 3 ft 6 in gauge Malcolm Moore 4wPM rail tractor (ex Bunnings) is to be transferred to Rottnest Island (see above).

Apparently not under the control of WALRPA, but to be found in the grass near the car park at the entrance to Whiteman Park, is a 3 ft 6 in gauge Malcolm Moore TACL tractor, which carries the builder's number 49, possibly built in 1927. This unit is believed to have been used at Cardup brickworks and is in poor condition with its motor and other parts gone.

Ken Watson 5/96, 6/96; Peter Medlin 6/96

YARLOOP WORKSHOPS MUSEUM 1067mm gauge

(see LRN 93 p.19 & 96 p.17)

Noted here were James Martin 2-6-0 Y 176 (178 [1st] of 1898) and Clyde 0-6-0DH 61-241 of 1961). The diesel is used to give rides on special days. Although there appear to be spare locomotive boilers at the museum, it is apparently not planned to restore the steam loco at this time.

Peter Medlin 6/96

OVERSEAS

WELSH HIGHLAND RAILWAY 610mm gauge

The first Beyer-Garratt locomotive, ex-Tasmanian Government Railways Beyer Peacock compound 0-4-0+0-4-0T K1 (5292 of 1909), which worked on the North-East Dundas Tramway from 1910 to 1929, is being restored to working order for use in north Wales.

The loco had been returned to Britain in 1947 and was displayed in Beyer Peacock's works at Gorton, Manchester, until it closed in 1965. It was then purchased by the Festiniog Railway, but was unable to be used because of

that line's restricted loading gauge, and was displayed in the National Railway Museum, York from 1979 (see LRN 12 p.1). During 1995, it travelled from York to Tyseley in Birmingham for restoration, via periods on display at Caernarfon (which will be the northern terminus of the Welsh Highland), and Minffordd on the Festiniog Railway (which is a major supporter of the rebuilding of the WHR and will be linked to it). K1 will be joined on the Welsh Highland by two modern NGG16 2-6-2+2-6-2T Garratts from South Africa.

Ken Milbourne 5/96; Editor

MEETINGS

MELBOURNE:

AGM and Members' Slide Night

Its that time of the year again! As usual the formalities will be dealt with as efficiently as possible leaving plenty of time for the annual surprise packet in the form of members' slides. Remember a limit of 20 per member applies. Hope to see a big turn out.

LOCATION: Ashhurton Uniting Church Hall. Ashburn Grove, Ashhurton.

DATE: Thursday 8 August at 8.00 pm.

SYDNEY:

Any member wishing to know details of the next meeting should contact Craig Wilson on 02-9484 7984

LOCATION: Woodstock Community Centre. Church St., Burwood Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 22 August at 7.30 pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08 - 296 9488

LOCATION 150 First Avenue, Royston Park.

DATE: Thursday, 1st August at 8.00 pm.

NOTES, CORRECTIONS AND COMMENTS

Maude

(LRN 113 p.4)

Denys Steinhauser notes that in 1969, Vale Constructions of Yackandandah were contracted by Western Mining Corporation to clean out the No.5 adit to enable exploratory work to be done. The existing, badly corroded trackage of 1 ft 5 in gauge was removed to be replaced by 2 ft gauge. Two battery electric locos, believed to be Gemcos, were obtained. Work had ceased by June 1970, after the adit had been extended by some 600 feet, to make a total of 3600 feet. The locos, all welded-trucks and plant (excluding the rail) went to Thiess Brothers in Queensland (where? - Ed).

The locomotives listed at the bottom of p.5 in LRN 113 should have been shown as 0-4-0BE, and the gauge shown above reduces to two the likely candidates for the Greenbat there before 1952 .

Editor

Sandhurst Town

(LRN 112 p.18)

The numbers of the builders numbers of the Hudswell Clarke steam locos were transposed. The oil burner is 1553 of 1924, while the semi-derelict displayed at the gate is 1555 of 1925.

Chris Hart

Rod Leonard

(LRN 113 p.13)

The builder's date for Hudswell Clarke 1653 is 1934.

Chris Hart

Emerald Tourist Railway Board

(LRN 113 p.18)

NRT1 4wDM (Ruston & Hornsby 296058 of 1951) has had its Ruston & Hornsby engine replaced by a Gardner diesel engine, not a Cummins engine. Apologies for the error.

Frank Stamford

Unusual rail type

(LRN 112 p.4)

John Robin found an example of the inverted "V" pressed steel rail in 1966 in a gold mine tunnel about 100m downstream of the Long Tunnel Mine adit and on the same level. The rail was approximately 30mm high, 7mm across the head and 25mm across the top of the "V". With the feet approximately 10mm each, the total base width was about 45mm.

FIELD REPORTS

Great Western, Victoria

During a recent tour of the Seppelt Great Western Winery sections of light rail set into the concrete floors were noted in many of the underground cellars. The rails appeared to be about 2 ft 6ins apart, and the flangeways have been filled in. They were no longer in use, with many sections now buried below a raised concrete floor. Several historic photos displayed in the wine sales area showed what must have been one of the most delightful uses of light rail.

Jim Longworth 7/96

Boxvale Tramway, Mittagong

David Jehan sends details from a tourist paper of the Boxvale Tramway Walking Track. This track is a Crown Lands Office project and follows the route of the old tramline to the old mine near the junction of the Nattai River and Drapers Creek about 4km from Mittagong, with access just before the Wombeyan Caves Road.

The Highland Way, Winter 1996

RESEARCH COLUMN

Photo archive

The LRRSA is about to embark on a photographic archival project. We are planning to establish a register of private photographic collections and use optical disk technology (Kodak PHOTO-CD) to preserve valuable and rare collections of photographs for future research. If you have a photographic collection or know of someone who has, that falls into our "Light Railway" sphere of interest, please contact the council and let us know what you have. We already have had some people offer us their collections to record on PHOTO-CD and the results have been very satisfactory.

W.L.Hanks 15/7/96

CSR Drewry diesels

Chris Hart of 88 Eddleston Drive, CORDELIA 4850 Phone (077) 77 7245 would like to obtain photographs of the Victoria Mill and Hambledon Mill Drewry 0-6-0DM locos taken before 1965, in an attempt to disentangle the history of his loco *Herbert*, which may well have changed identity in that year. All costs reimbursed.

Australian Mining History Association

Ross Mainwaring advises that this Association has recently been established, with contacts in each state. Further details can be obtained from Mr Mel Davies, Department of Economics, University of Western Australia, NEDLANDS 6907

Queensland Historic Sawmills and Tramways

John Kerr has been awarded a consultancy to report on sawmills and tramways in the south-east Queensland bio-geographic region which is roughly delineated by a line from the coast north of Gladstone south to the NSW border. John would be pleased to hear from anyone who has information on the subject and is willing to be contacted as part of the project. As John has been researching in this area for a quarter century, he will be interested to hear about any part of Queensland. Please write to John Kerr, 105 Highland Terrace, ST LUCIA 4067, _ (07) 3870 9588, or E-mail jkerr.gil.com.au.

Lucknow, NSW

Ray Graf sends a cutting showing a photograph of the first Phoenix Shaft safety cage used in NSW, a rail vehicle which was installed at the Wentworth gold Mine in the late 1880s. The wire mesh cage protected the miners as it

was lowered down the steep decline into the mine.

The Sun-Herald 14/7/96

Tumbarumba, NSW

Ray Graf draws attention to the book *Survivors and Dreamers - 150 years at Tumbarumba* by George Martin which deals with gold mining and the timber industry, both of which used tramways.

South-Western Victoria protection of historic places

Norm Houghton has sent a copy of the Land Conservation Council's recommendations for protection for a variety of tramway and timber mill sites. These include the following:

- Henry's Nettle and Carisbrook Sawmills, Kennett River
- Hayden's Sawmills, Forrest
- St George Sawmills, Lorne
- Mt Zero Quarry and tramway, Grampians
- Apollo Bay Timber Company Sawmill, Elliot River, Otways
- Martin's Sawmill, Otways
- Sharp Sawmill, Sheoak Creek, Lorne
- Armistead Sawmill, Kennett River
- Hay's Sawmill and jetty remains, Wye River
- Marchbank Sawmill, tramway and double incline, Weeaprounah
- Knotts No.3 Sawmill, Wyelangta
- Henry and Sanderson Sawmills, Barramunga
- ACA Sawmill, Lorne
- Winch Site, Grey River Road, Kennett River
- Sharp's No.1 & No.3 Sawmills, Tanybryn
- Knott Sawmill, Crowes
- Robins and Kincaid Sawmills, Stalker
- Smedley Sawmill, Olangolah
- Sharp No.2 Sawmill, Skenes Creek
- Haydens / Gales Sawmill, Mount Cowley
- Mackie No.5 Sawmill, Mount Cowley
- Hitt No.4 Sawmill, Lardner Creek
- Hayden No.4 Sawmill, King Creek
- McDonald Tramway, Wimba
- Mackie No.2 Sawmill, Forrest

- Northern Timber Co. Sawmill, Otways
- Mackie No.6 Sawmill, Otways
- Mackie No.4 Sawmill, Forrest
- Henry No.2 Sawmill, Barramunga
- Sanderson Sawmill, Barramunga
- Henry Sawmill, south-west of Forrest
- Seeback / Henry Sawmill, Forrest
- Kincaid Sawmill, Dinmont
- Devitt Sawmill, Dinmount

Warrnambool, Victoria

Parts of a sandstone building were unearthed late in June during excavation work for West Coast Railway's maintenance centre at Warrnambool. The *Warrnambool Standard* reported that train driver Kevin Rowe, believed that the building - its roof 1.5 metres below ground level - might have been a cellar. "It looked like it was extensive and well built," he said. "The blocks were square cut with red grouting, which I hadn't seen before. The half-dozen blocks I could see were about 45cm deep and were from an internal wall and were whitewashed."

The *Warrnambool Standard* also reported that railway historian Greg O'Flynn believed the building was linked with a horse-drawn tramway which ran before the railway opened in 1890. "The tram ran from the pier behind the Lady Bay Hotel, along Pertobe Road, beside the mill along the sealed path and ended where the rail yards are now," he said. "It was probably a cellar and probably had tramway offices on top." Mr O'Flynn, of Warrnambool, said the railway was built before the local council kept plans and it was difficult to know the profile of the land then and how it was altered.

The excavating machinery soon backfilled and buried the blocks but not before three wine bottles dating back more than 100 years were recovered and given to the supervisor Philip Morris. The site was filled in before it could be examined by archaeologists from Heritage Victoria. It is probably now under a lot of reinforced concrete. The impressions of the tramway sleepers can be seen in the tar at the north end of Pertobe Road near the railway yard.

The following information about the tramway is from *By these we flourish. A history of Warrnambool* by C E Sayers and P L Yule.

"The tramway was constructed by the Warrnambool municipality in 1858 from Merri Street between Gilles and Kepler Streets and ran westwards to a point between Fairy and Henna Streets, then ran south to the jetty (which was near the LadyBay Hotel and not the present pier).

"The tramway was leased to James Bateman for the first three years and to Thomas King for the next three years. By 1864 there were at the terminus (presumably the town end) storage sheds about 200 feet in length on the northside of the tramway, bond stores on the north side of the tramway, and on the west side produce stores, mostly for potatoes, and Customs sheds.

"Horse-drawn trucks hauled out-going goods along the tramway to the jetty. The tramway was no longer needed after 1890 when the railway arrived and the breakwater was constructed but it may not have been removed until some time after that date."

Warrnambool Standard 26/6/1996, Colin Harvey & Frank Stamford

LOCOMOTIVE, ROLLING STOCK & EQUIPMENT MANUFACTURERS

BUNDABERG FOUNDRY ENGINEERS LTD

(see LRN 113 p.6)

Invicta Mill's Walkers B-B DH *Piralko* (677 of 1971), rebuilt at the Foundry in 1995, was returned to Bundaberg for attention following a collision which took place on approximately July 18th (see later this issue). The cab of this loco was noted inside the works area on July 31st, apparently little damaged, while the complete loco, restored to pristine condition, was seen leaving Bundaberg on a low loader on 20 August.

By 29 August, work was well advanced with the Walkers 73-class B-B DH conversion for Plane Creek Mill (767 of 1971), with painting apparently in progress. It had apparently left Bundaberg by the second week of September. This loco is fitted with long hood radiator styling similar to that of the DH-class conversions done last year. Work was also slowly progressing with Walkers DH-class B-B DH 633 of 1969 for Bundaberg Sugar, with the frame of this unit receiving attention.

Editor 8/96

QUEENSLAND

BABINDA SUGAR LTD 610mm gauge

(see LRN 109 p.7)

(see BUNDABERG SUGAR LTD, Mourilyan Mill)

BUNDABERG SUGAR LTD, Mourilyan Mill 610 mm gauge

(see LRN 109 p.8)

A report about the projected Atherton Tableland sugar mill indicates that the Bundaberg Sugar group (which plans to build the mill) will send liquor from the mill to Babinda by QGR, where it will be offloaded for transport to Mourilyan Mill. This suggests that 2 ft gauge railway will be used for the liquor transport between Babinda and Mourilyan.

The Cairns Post 19/6/96 via Chris Hart

BURDEKIN MACHINERY PRESERVATIONISTS INC, Home Hill 1067mm gauge

Inkerman Mill's Hunslet 0-6-0T *Inkerman* No.1 (1119 of 1913) has been placed in the custody of this group for restoration. President of the group

is Jim Phillips who can be contacted at PO Box 205, *Home Hill* 4806, phone (077) 82 5322.

Bob McKillop 8/96

CAPRICORNIA HERITAGE RAIL ASSOCIATION INC, Archer Park Station, Rockhampton 1000mm & 1067mm gauge

(see LRN 109 p.9)

It is proposed that the Rockhampton City Council takes over 1000 m of former QGR rail line in Denison Street (between Fitzroy and Albert Streets) to provide a running track and to connect Archer Park Station to the main line railway system. It is believed that the QGR main line in Denison Street will be only single track after reconstruction of the line is completed this year.

The Steam Tram Consultative Committee is investigating the possibilities of operating the Purrey 4wVBTG steam tram on the Denison Street line, and it is rumoured that one of the Billard 4wDM locomotives will be used as a back-up unit and the other two scrapped or disposed of.

Bob McKillop 8/96;

The Morning Bulletin (Rockhampton) 1/8/96 via Editor

CSR LTD, Herbert River Mills 610mm gauge

(see LRN 113 p.10)

Macknade Mill's Clyde 0-6-0DH 12 (65-434 of 1965) being rescued from the bed of the Herbert River, August 2nd 1996

Photo: Chris Hart

On 10 July, a double-headed QGR freight hit the last few bins of a Victoria Mill rake of fulls crossing the line at Pombel, south of Ingham. The lead QGR loco ended up on its side, while on the 2 ft gauge, several bins were derailed or destroyed, and the brake wagon was dragged off the line. There were 26 bins in the load, which were being hauled by Walkers B-B DH *Victoria* (599 of 1968). The diamond crossing was wrecked and had to be replaced with one believed to have been brought in from Innisfail.

On 13 July, 50 Victoria Mill full bins were derailed near Stone River Road, while a major derailment took place in Ingham on July 30th. A Victoria Mill train of 190 empties headed for Abergowrie ran into 200 full bins at Milton's Loop. It was believed that someone had changed the points diverting the train from the main line into the loop containing the full bins. This accident caused a 90 minute stoppage at the mill.

There was also a major mishap at Macknade Mill at 11.50pm on 1 August when Clyde 0-6-0DH 12 (65-434 of 1965) ran into 21 empty bins on the Herbert River bridge while returning to the mill with 32 fulls. The loco ended up in the river on its side and almost completely submerged as the full bins piled up behind it. Fortunately, the two crew members were not trapped and were able to climb to safety. Heavy equipment was used to extend dry ground into the river so that a large all terrain crane from Victoria Mill could lift the loco back onto the bridge, with Victoria Mill's E M Baldwin 0-6-0DH *Hobart* (4413-1-7-72 of 1972) in attendance at the Cordelia end of the bridge. The bridge was back in service by 7.30pm on 2 August.

Hobart was loaned to Macknade following the accident, and was still there on 26 August. 12 was back in service on 12 August but failed twice during the following ten days. It is due for an overhaul and new motor in the forthcoming slack season. Meanwhile Macknade's Clyde 0-6-0DH 18 (DHL.5 of 1954) broke down on 5 August and was out of service until 24 August, with parts having to be sent from overseas. With two locos out, E M Baldwin 0-4-0DH 17 (6-1446-1-9-65 of 1965) was pressed into service. This small 10-tonne loco amazingly succeeded in hauling 184 full bins for about two miles on 22 August.

After a trial on 6 August, regular haulage of Victoria Mill sugar by the Macknade sugar loco commenced at last on 16 August. The Macknade loco, E M Baldwin 0-6-0DH 14 (6-2940-1-7-68 of 1968), delivers a load of fulls from Macknade to Lucinda and returns to the 4 Mile with a rake of empties for Victoria. It then takes a load of Victoria fulls from the 4 Mile to Lucinda before returning to Macknade with empties.

The Victoria Mill Motor Rail *Simplex* 4wDM, 4054 of 1929, was in use by the Macknade navvies for about a week at the end of July after the Macknade

Motor Rail 4wDM 4 (10232 of 1951) suffered a breakdown. Victoria Mill's E M Baldwin 4wDH *Hambledon* (8002-1-8-78 of 1978) was back on empty yard duties by 4 July after a lengthy lay-off.

Victoria Mill's new Crystal Creek line had been laid for approximately 11 km to Waterview Creek by the end of August. It was expected that construction would be halting there for the time being.

A \$34.7m expansion program for the Herbert River mills has been committed for the next two years, bringing the combined crushing rate up to 1610 tonnes of cane per hour. The program includes an additional loco conversion for Victoria Mill (which would be expected to be M1852, Walkers B-B DH 681 of 1972, currently stored at the Bundaberg Foundry) as well as a brake wagon and additional cane bins, to be in use for the 1997 season.

*Herbert River Express 11/7/96, 16/7/96, 20/7/96 & 3/8/96 via Chris Hart

CSR LTD, Kalamia Mill 610mm gauge

(see LRN113 p.11)

Walkers B-B DH 625 of 1969 was noted at the mill around the second week of September, having been rebuilt by Goninan at Mackay. It is named *Rita Island*, and is commonly referred to as "Big Rita".

Tony Wells 9/96

GIN GIN & DISTRICT HISTORICAL SOCIETY 610mm gauge

Ex Gin Gin Mill 0-6-0T *Bunyip* had its centenary celebrated on 31 August when it was placed on display at the museum in Gin Gin, exactly 100 years after it commenced operations at the mill at Wallaville. Donated by Kolan Shire Council in 1993 (see LRN 94 p.12), this loco has been cosmetically restored by Peter Melville and volunteers at Bullyard. It is finished in a bright green livery with red trim. Once thought to be built by Krauss, this loco was supplied by agents Arthur Koppel and may have been constructed by a small German builder.

Editor 9/96

GOLDEN MOUNT RAIL PRESERVATION SOCIETY Mount Morgan 1067mm gauge

(see LRN 112 p.12)

Hunslet 0-4-0ST MM LD 3 (854 of 1903) arrived back in Mount Morgan on 18 July after its restoration at Penrith at a reported cost of \$360 000. It has been painted in green with red headstocks and yellow lining. It has also been fitted with a Westinghouse pump and its chimney has been raised to a pleasing height. (It was pictured on the front of LRN 87 before restoration).

After a few teething problems, the loco commenced running each day from Friday to Monday, hauling hourly trips from 9am to 4pm. Steam running on other days is by arrangement. Enquiries may be directed to the railway office on (079) 382312. Editor 7/96, 8/96, 9/96

The Morning Bulletin (Rockhampton) 18/7/96, 19/7/96, 14/8/96 via Editor

Hunslet 0-4-0ST MM LD 3 (854 of 1903) comes into Mount Morgan Station with a passenger service, August 19th, 1966.

Photo: Editor

HAUGHTON SUGAR CO PTY LTD, Invicta Mill, Giru 610mm gauge

(see LRN 113 p.11)

WINTV News featured footage of a head-on collision between two locos just on the mill side of the Haughton River bridge. Com-Eng 0-6-0DH *Northcote* (AH9091 of 1965) hauling full bins had met a Walkers B-B DH hauling a rake of empties. The Com-Eng appeared to have suffered some serious damage to its radiator and its driver was reportedly airlifted to hospital. A number of full bins appeared to be derailed on the Haughton River bridge, but no great pile up appeared to have occurred.

The identity of the Walkers loco became evident when the cab of *Piralko* (677 of 1971) was noted inside the works area of the Bundaberg Foundry on July 31st. The complete loco left Bundaberg on a low loader on 20 August, having been repaired. One report indicated that frame straightening had been required.

Chris Hart 8/96; Editor 8/96; Tony Wells 9/9/6

ISIS CENTRAL SUGAR MILL CO LTD 610mm gauge

(see LRN 107 p.8)

Walkers B-B DH *Isis* No.1 (602 of 1969) has been fitted with a new cab and identity plate to bring it in line with the other three similar locos at the mill. The brake wagon constructed from the chassis of Walkers B-B DH 654 of 1970 (ex QGR DH67) is paired with Walkers B-B DH *Isis* No.3 (600 of 1968). Ex-QGR Walkers B-B DH DH35 (617 of 1969) has been partially dismantled and has had its bogies removed. It is believed this may be rebuilt to 2 ft gauge at a later date. The Plasser KMX-12T bogie ballast tamper carries builder's number 414 of 1995.

Editor 9/95

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610mm gauge

(see LRN 113 p.13)

Farleigh Mill's newly rebuilt Walkers B-B DH 73-class (664 of 1970) entered service in early August carrying the local name *Miclere*. It is suggested that Marian, Pleystowe and Farleigh Mills may each have another such loco for the 1997 season, and it is rumoured that Farleigh Mill may contract to rebuild all three.

Marian Mill advertised in the press inviting offers for two locos in early August. The two units were Motor Rail *Simplex* 4wDM 21512 of 1955, and a Gemco 4wDM of 1965, built under licence from C H Funkey, South Africa. It is believed that the Australian Narrow Gauge Railway Museum Society was successful in obtaining the Gemco-Funkey.

John Kerr points out that Wagoora, the northern terminus of Farleigh Mill's line, must be one of the busiest rail loading places in Australia. The basic unit for loading/unloading is a loop, one line for fulls and the other for empties. At each end of the loop there is a loading dock where fulls can be run off road vehicles, and empties winched on. Variations include fishtail sidings (with a loading point at the mainline end only), and additional loop lines. At the Wagoora/Hillcrest complex there are no less than five full loops (one with an extra loop, one with an extra siding) and one full fishtail siding. A constant stream of vehicles: trucks and trailers with two bins each, and semi-trailers with four bins use the complex during the crushing season. The amount of traffic here explains the desire to build a new line from Pindi Pindi to Yalboroo to serve the area to the north of the present line from Pindi Pindi to Wagoora.

Courier Mail 3/8/96 via David Mewes & Chris Hart

MARYBOROUGH CITY COUNCIL 1067mm gauge

In connection with the city's 150th anniversary in 1997, the City Council plans to have constructed a replica of *Mary Ann*, the unique 0-4-0VBTG loco built by John Walker's Union Foundry in 1873 for William Pettigrew's timber line. A full scale mock-up is being built by Olds Engineering to establish project costs. It is planned to operate a heritage passenger railway running from the old railway station via the Maryborough industrial branch to Queens Park and the historic wharf area on the Mary River. Here *Mary Ann* will demonstrate her timber sawing capacity before returning to the railway station.

Bob McKillop 8/96

THE MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610mm gauge

(see LRN 113 p.15)

It is again reported that Clyde 0-6-0DH 16 (56-96 of 1956) has been sold to the Rotary Club of Wynnum and Manly for use on St.Helena Island (see LRN 108 p.15), although there is nothing to suggest that the loco has left the mill as yet.

David Mewes 9/96

PIONEER SUGAR MILLS PTY LTD, Inkerman Mill 610mm gauge

(see LRN 113 p.16)

It is reported that a locomotive named *Bojack* has been in use at Inkerman this season. It is reasonable to surmise that this would be a loco transferred from either Invicta or Kalamia Mill, as each of these has received one or more Walkers rebuilds this season. Walkers locos cannot currently be used at Inkerman because of the low clearance available under the Burdekin River bridge at the western throat of the mill yard.

ARHS Bulletin 9/96 via Editor; Editor

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610mm gauge

(see LRN 110 p.14)

Walkers B-B DH 1 *Allan Page* (594 of 1968) suffered a mishap on at 3.30 pm on 5 August while slave loco on a train of fulls travelling towards the mill on the Southern Cane Railway at Bull Creek, 35 km south of Sarina. The last 185 bins became uncoupled from the slave loco and after having been left behind, picked up speed on a downhill section, derailing the loco and 71 full bins upon impact. The loco capsized onto its left side down a small embankment, but there were no injuries as the slave loco is unmanned. Repairs to the 60 m of buckled track and concrete sleepers were completed 12½ hours after the

accident. The loco sported a number of gouges on its left-hand side when noted a few weeks later.

E.M.Baldwin B-B DH D12 (6890-1-10-76 of 1976), was noted in mid-August running with a rather primitive nameplate OONOOIE which also appeared to include a plant number. Investigation indicates that this is purely an unofficial venture.

Walkers B-B DH 767 of 1971 arrived at the mill from Bundaberg in early September and is reportedly to be named *Carmila*. In spite of its 73-class ancestry, it is very similar to the three previous DH class conversions at the mill.

Plasser track jack 371 of 1989 returned ex loan at Victoria Mill sometime between late July and 25 August.

*Daily Mercury (Mackay) 7/8/96 via Tony Wells & David Blakeley;

Photo: Daily Mercury (Mackay)

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610mm gauge

(see LRN 106 p.11)

Walkers B-B DH No.11 (628 of 1969) arrived at the mill around the start of August, having been rebuilt by its original builders in Maryborough. It has a governed top speed of 35 km/h, and at full power uses 100 litres of fuel per hour.

A 2.2 km extension is being built from Janella's Siding at Koolachu

down Red Hill Road to Rileys Road. The line was laid out using laser, and concrete sleepers are used throughout except on pointwork, where timber is used. Crushed rock ballast is used for ballasting the main line, but crusher dust for the sidings, which total at least 1 km. 60 lb rail is reportedly used for the main line and 42 lb rail on sidings. Further extension of this line is considered likely.

At least 500 of the new 4-wheel 10-tonne bins are in use. They are supplied by the Boogan Implement Co at Innisfail but are assembled at the mill. These bins are not removed from the rail line for loading operations, unlike the 4-tonne bins which were designed for infield use. This means that at sidings where the large bins are used, track arrangements have to allow for hydraulic tipper vehicles to come alongside the bins. This was noted in the loop arrangements at the terminus of the new Koolachu extension, and at the southern extremity of Elaroo where one of a pair of loops has been removed.

John Kerr 8/96

TULLY SUGAR LTD 610mm gauge

(see LRN 111 p.9)

Walkers B-B DH 622 of 1969 arrived at Tully from Walkers, Maryborough, around the last week of July. It is reportedly No.4 and is still fitted with its original Caterpillar engine.

Tony Wells 8/96

TASMANIA

EMU BAY RAILWAY LTD 1067mm gauge

(see LRN 113 p.17)

The centenary of the Emu Bay Railway Co will be celebrated by a Tasmanian rail tour in September/October 1997 organised by the Don River Railway, which will include a trip on the Emu Bay Railway. Details are available from the Don River Railway at Don, Tasmania 7310.

With speculation rife about a possible privatisation of ANR, The Emu Bay Railway was stated in August to be possibly interested in the acquisition of Tasrail.

VICTORIA

COOKS CONSTRUCTION PTY LTD 900mm gauge

(see LRN 109 p.15)

Of the non-operational Walkers B-B DH locos, DH24 (606 of 1969) is stored at Dandenong, devoid of its bogies, while DH36 (618 of 1969) is at Yallourn as previously reported. Both these units are apparently used for spare parts for the four operational units.

Australian Locomotive News 8/96 via Editor

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762mm & 610mm gauge

(see LRN 113, p.18)

Reopening to Gembrook is now officially scheduled for October 1998. Rail connection will be available by October 1997, but stations and other facilities will still have to be built.

On Saturday 3 August a special train was run for PBPS members across the recently completed bridge No.8. It continued to the end of track at bridge No.9, running on unballasted track for about half the distance between bridges 8 and 9. An NA loco was attached to each end of the train.

On Wednesday 7 August all engines were in steam. The Climax 4w-4wTG (1694 of 1928) ran a two car special train to Menzies Creek with a group of about 30 railway enthusiasts from the UK. The regular 10.30 train then departed, hauled by three NA class 2-6-2T locos built by VR at Newport, 14A (built 1914) and 12A (built 1912) funnel first, and 7A (built 1905) bunker first (the first time triple-headed NAs have ever been used). The train was 16 or 17 cars long, and the leading 8 cars - which included 3 Mount Lyell cars - were bound for bridge No.8 where the Minister of Tourism was to declare the new bridge officially open. VIPs and the UK visitors travelled in the Mount Lyell cars, and PBPS members travelled in the NBH cars. At Menzies Creek the visitors from UK had joined this train.

At Lakeside, 14A was attached to the front of the eight cars bound for bridge 8, with 12A attached to the rear; whilst 7A took the regular train back to Belgrave. At bridge 8 the Minister declared the bridge open. The train then travelled a few hundred metres further towards Cockatoo, before returning to Emerald, still with a loco attached to each end.

The train then spent 80 minutes at Emerald. During this time the 12.00 departure from Belgrave passed through on its way to Lakeside, hauled by 8A, and the UK visitors travelled on a shuttle trip to Clematis in an NBH car

hailed by the Peckett 0-4-0ST *Sir John Grice* (1711 of 1926). Earlier in the day the Peckett had ventured out to bridge 8 on a track patrol.

The second regular train of the day on its return from Lakeside was combined with the bridge opening train at Emerald. It was a triple header again, with 8A (black), 14A (red), and 12A (black) all running bunker first. For the passengers in the NBH cars (whose view is unobstructed by the inconvenience of windows) these made a magnificent sight. The weather was cold and wet, with frequent outbreaks of sunshine, making a great play of light on the steam, the clean locos and the polished copper work.

The weather was interesting, including icy winds, rain, a sudden torrential hailstorm at Emerald when most of the passengers were in the town looking for lunch, and best of all periods of sunshine. Interestingly the train went over bridge 8 four times, and each time the sun broke through.

At bridge 9 seven of the nine concrete foundations are finished. Completion of the others must wait for drier weather.

The 610mm gauge South African 2-6-2+2-6-2 Beyer-Garratt NGG 16 129 (Beyer Peacock 7340 of 1950) arrived in Melbourne on 5 August, and was taken by road to Menzies Creek on 8 August. From there it went by train on three NQR wagons to Belgrave. It is now on display outside the workshops on a short section of 610 mm gauge track. During September the boiler unit will be removed for anti-corrosion treatment. Gauge conversion is unlikely before 1999.

Walkers B-B DH DH59 (646 of 1970) arrived at Menzies Creek on 2 August after being transported by road from Queensland. It was towed to Belgrave by 0-6-0DM D21 (TGR Launceston 10 of 1968) on the same day. It is expected to be available for the summer season.

At 6.30 am on Saturday 24 August, *Sir John Grice* was being steamed up at Emerald to be moved to make room in the carriage workshops for the imminent arrival of 0-4-0T *Carbon* (Couillet 90 of 1890 / Decauville 986 of 1890 ex West Melbourne Gasworks). This loco was to be delivered from Rod Martin's Engineerium, where it has been for the last few years undergoing an overhaul and fitting of air brakes.

A few preliminary moves had to take place before *Carbon* was placed on Puffing Billy metals. A prime mover arrived and picked up the loco transporter which is normally used for transferring locos and rolling stock to and from Gembrook. A run was made to Ferntree Gully to pick up a 1908 Ruston & Proctor traction engine, to be taken to The Engineerium for restoration. Upon arrival at The Engineerium, a mobile crane was used to take the Ruston & Proctor up the driveway and place it on blocks.

Attention now turned to *Carbon* which was carefully lifted (all 5.6 tonnes

of it) and taken down the driveway and onto the roadway. The hard part was now over and it was decided to keep going with the loco on the jib all the way to Emerald station, about 1 km. The opportunity was taken to stage a photo with the loco dangled over the track at the level crossing. The show then proceeded through Emerald shopping centre, to the bemusement of shoppers and into the station yard, where it was placed on the track at 9.30am. The cab roof was then lifted off a truck and reattached to the loco. After a few tests to check clearances, *Carbon* was then pushed into the car shops by Ruston & Hornsby 4wDM NRT1 (296058 of 1951)

This is the first time since 1962 that the three gasworks locos have been together on the same railway. *Carbon* still needs some minor work on the braking system, but is basically ready to operate on the Puffing Billy Railway, having been fitted with auto couplers.

0-4-2ST *John Benn* (Couillet 43 of 1886 / Decauville 861 of 1886 rebuilt Ron Kain 1964) is also almost complete and together with *Carbon* and Sir John Grice it is proposed to run a triple-header over the "Thomas Weekend" on September 14-15th.

Bill Hanks 8/96; Frank Stamford 8/96

SAMBAS GOLD MINE, Harrietville 610mm gauge

The old gold mining town of Harrietville lies at the junction of the East and West branches of the Ovens River where they emerge from the shadows of the Great Dividing Range onto the river flats to combine for a more sedate journey towards the Murray. Gold was discovered in the area in 1863 and has, over the subsequent 133 years been extracted by alluvial, deep lead, reef, hydraulic sluicing and dredging methods. One of the few remaining "traditional" reef mines in Victoria is the Sambas, situated some three kilometres south of the town, on the rugged range which separates the two branches of the Ovens.

Discovered in 1910, the Sambas reef is one of several rich reefs lying in close proximity and which share a history of closely related transport systems. Johnsons reef (discovered 1866), the Tiddle de Addle (1874), the Jackass (1878), the Mons Meg (1880) and the Sambas all, at some time, made use of, variously, sleds, chutes, adhesion tramways, aerial ropeways and inclined tramways to transport their gold-bearing ore to a large battery which used to be sited on relatively flat ground on the valley floor beside the West Ovens River (see *Gold at Harrietville*, Brian Lloyd, 1982).

On December 6th 1995, a visit was made to the Sambas mine (the name derives from the important 19th century gold-producing sultanate of Sambas in Western Borneo). The Sambas levels are numbered 1 to 11, from highest

to lowest in elevation. Since World War II, most production has been successively from 8, 9 and 10 levels, and operations have recently commenced on 11 level. Around the start of 1995, rails, loco and equipment from 10 level were transported down the hill, track laid, and work begun on retimbering and clearing out the 11-level adit.

Motive power is a Gemco 0-4-0BE (1959/207/74 of 1974) a 4hp *trammer*, origins unknown. Rolling stock consists of three side-tipping skips, a flat truck for timber and other supplies, and a rail-mounted Atlas Copco LM36 bogger.

In December, the mine was waiting an assay report prior to proceeding to full scale production. The manager, Simon Law, advised that if work proceeds, another loco would be required together with more trucks. (He would like to hear from anyone with deep, narrow trucks with wide flanges.) The track and points installed on 11 level are of Simon's making and are based on a design used at the Central Norseman in WA. The sleepers outside the adit are redgum, whilst underground, local eucalypt hardwood is used and survives well provided it stays wet.

The rather elaborate and now-disused trackwork outside 10 level was installed in 1955 when that adit was re-opened and track regauged. Lying out of use nearby is a stack of mine trolleys with centre flanges, which carried detachable box containers. These may be reused if full production recommences. Any readers proposing to visit must make prior arrangements.

Phil Rickard 6/96

Ever the cautious Treasurer, Colin Harvey carefully manoeuvres the Gemco 0-4-0BE (1959/207/74 of 1974) towards the 11 level adit, under the watchful eye of Sam, the manager's dog. December 6th 1995.

WESTERN AUSTRALIA

BUSSELTON JETTY 1067mm gauge

(see LRN 102 p.18)

The jetty train resumed operations in 1995 after a break of 15 years. It has begun operations with a loco which has been converted to road-rail operation from a straight rubber-tyred steam outline "tank locomotive" of the type used in a number of attractions around the country, acquired from Mindarie Quays north of Perth. It is understood that the loco, numbered 501, uses its rubber wheels to run around its train.

ARHS Bulletin 8/1996

CARNARVON LIGHT RAILWAY ASSOCIATION INC 1067mm gauge

(see LRN111, p.15)

Commencing in May 1996, the CLRA operated steam train rides each Friday, Saturday and Sunday on the Babbage Island railway. Andrew Barclay 0-6-0T *Kimberley* (1754 of 1921) and former Perth suburban AYE and AYF coaches operate on the 1.4km line.

David Whiteford 9/96

PILBARA RAILWAY HISTORICAL SOCIETY 1435mm gauge

(see LRN 112 p.19)

Hamersley Iron has donated an Alco Co-Co DE, 3017, to the Society. This was rebuilt from a M636 to a C636R by Com-Eng in 1983 and has run more than 3 million kilometres.

Australian Locomotive News 8/96 via Editor

WEST AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC, Bennett Brook Railway, Whiteman Park 610mm gauge

(see LRN 113 p.22)

A number of important projects were making good progress for completion by Enthusiasts Day, 14 September. No.3 road, and the No.4 runaround loop at Whiteman Village Junction were completed by 25 August, as was the electric staff system and phone system between Mussel Pool and Whiteman Village Junction. Other jobs included completing the handrails on the turntable, and completing a new Z brakevan to the state where it can be run.

Malcolm Thompson's Perry 0-4-2T *Betty Thompson* (8967.39.1 of 1939) was commissioned at his business premises at Bentley on August 18th and was due to arrive at Whiteman Park on 30 August.

A Friends of Thomas the Tank Engine Day was due to be held on 13 October from 11.30am.

Ken Watson 8/96

OVERSEAS - INDONESIA

Steam-starved narrow gauge enthusiasts are assured of plenty of interest in Indonesia with 40 mills on Java using steam locos. Bali also has its share of sugar mills and Sumatra has its palm oil plantations. There is a wide variety of loco types, including a variety of articulated and semi-articulated machines, but steam is today mostly restricted to areas around the mills with motor trucks bringing in most cane, and diesels generally being sent further afield than the steam locos. This is about the right time of year to visit, and you can photograph narrow gauge steam in action the same day you depart from Sydney. Ray Gardiner of 28 Hyacinth Street, ASQUITH 2077 is happy to provide further details.

Ray Gardiner 7/96

MEETINGS

MELBOURNE:

Narrow Gauge Railways around the World

Graeme Knight has kindly offered to show us some of his collection of slides/films taken on his various journeys around this planet. A visual feast is guaranteed! Don't miss it! Just because it was cold in August and you didn't want to come to the AGM is no excuse to by-pass this night! It's in October. The weather's warmer. The footy's over. There's nothing else to do! So, please join us! Supper provided.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton

DATE: Thursday 10 October 1996 AD. 20.00hrs (8.00pm)

EDITORIAL

Curious why your favourite light railway location has not featured in LRN photo coverage? Would you like to see your photos published? The photos published are a selection of those submitted by just a few readers, and they provide a great coverage. However, the choice of subjects can become a little limited when no photos of certain sites are ever submitted. The Editor will select suitable shots, and would prefer newsworthy ones where available. Industrial as well as preservation locations are welcome. Physical cropping is used on those selected. Please indicate if you require the photos returning, otherwise they go into the editorial files for possible future use. Thanks to all our past contributors, and looking forward to receiving further contributions.

NOTES, CORRECTIONS AND COMMENTS

Happy birthday, NSW Division The NSW Division's 20th birthday celebrations were held on 22 August, with a specially iced cake at the regular meeting, followed by films, slides, and the inspection of model items. The entertainment focused on the many tours organised over the years by the NSW Division, with Paul Simpson's films a highlight.

Len King

No sugar mills on Bali!

Your editor apologises to Ray Gardiner for mangling his comments, in LRN

114 (p.19). Of course, Bali has no sugar mills. However, a companion of Ray's recently counted 130 locos in steam on an Indonesian trip, and they also saw the unique 700 mm gauge E M Baldwin 6wDM at Mojopanggung Mill.

LRRSA on the Internet

The LRRSA has a new expanded presence on the world wide web. The address is <http://www.ozemail.com.au/~telica>. If you have access to the Internet then your suggestions on how our web site could be improved would be welcome.

Frank Stamford

How to find a needle in a haystack

Not quite, but have you ever wanted to find every reference to a particular locomotive in the back copies of "Light Railway News", or track through every reference to Moreton Central Mill, or even explore the sordid connection between diesel locomotives and sewers?

For the past two years work has been underway on a project to publish all past copies of LRN in an electronic form, so that they can be read on a PC running Windows software. The advantage of this is that you can search for every item in LRN which - for example - contains reference to a particular locomotive, or contains specific words (like "diesel" and "sewer"). Such searches are very fast, and can be measured in seconds, not minutes.

The electronic LRN will probably be published on a CD-ROM, or possibly on floppy disks, and it should be available sometime in 1997. To help us gauge the market, if you are interested in obtaining a copy, please contact Frank Stamford (phone (03) 9830 1640, (or address details on page 2). Yes, the same exercise has commenced for "Light Railways"!

Railways of Papua New Guinea

Long term members of the LRRSA will have seen numerous references to railways and tramways in Papua New Guinea in our publications. Most of these have been contributed by Michael Pearson and Bob McKillop, both of whom have spent long periods in PNG. They have now collaborated to write a book on the railways of PNG. They have identified over 150 lines, most of them being small man- or animal-powered affairs, but with an interesting range of more substantial lines. The book is being published by University of PNG Press, and should be available next year. Watch for details of how to purchase this book.

Frank Stamford

Isis Mill Centenary book

The Isis Central Mill celebrated its centenary recently, and to mark the occasion, John Kerr's book *Only Room for One* was published. In your editor's opinion, this is John's best book yet, and is a hard cover volume with 160 pages and many illustrations. The title refers to the fact that the Isis Central Mill at length became the only one in the district, after outlasting many other mills, including the heavyweights of CSR and the Millaquin company! The book is priced at \$30 plus postage (it weighs 800g). For those interested, look out for the centenary books for Proserpine Mill and Moreton Mill next year.

FIELD REPORTS

BHP Ltd, Abbotsford, Sydney

On 17 September, a visit was made to the BHP wire works at Abbotsford, formerly Lysaghts. Paul Simpson owns plans (from the 1930s-40s) showing two gauges of hand worked lines around the works for materials carriage. Double and single tracks totalling thousands of feet were then in use, from the wharf, up an incline, and throughout the many buildings. Nowadays, only a few 2 ft 6 in gauge remnants are to be seen, and those outside the buildings were able to be inspected.

The most extensive area was on the wharf and what had been a storage area beside it. The remains of a double track layout with many wagon turntables are to be seen, but it was not possible to enter the area because demolition work and some track lifting was in progress. Much of the plant has been remodelled over the years and all that remains of a once extensive network of tracks was viewed in just half an hour. There were around five sections of rail, each no more than 60ft long, isolated by buildings, concrete slabs and new walls. Inside three buildings were further remnants.

The rails have not been used for over 12 years. At this stage, nothing is known of when it was originally laid; the gauge of the (narrower) track is not known; and nothing is known of the wagons used. The rail weight appears to be 25 to 30 lb.

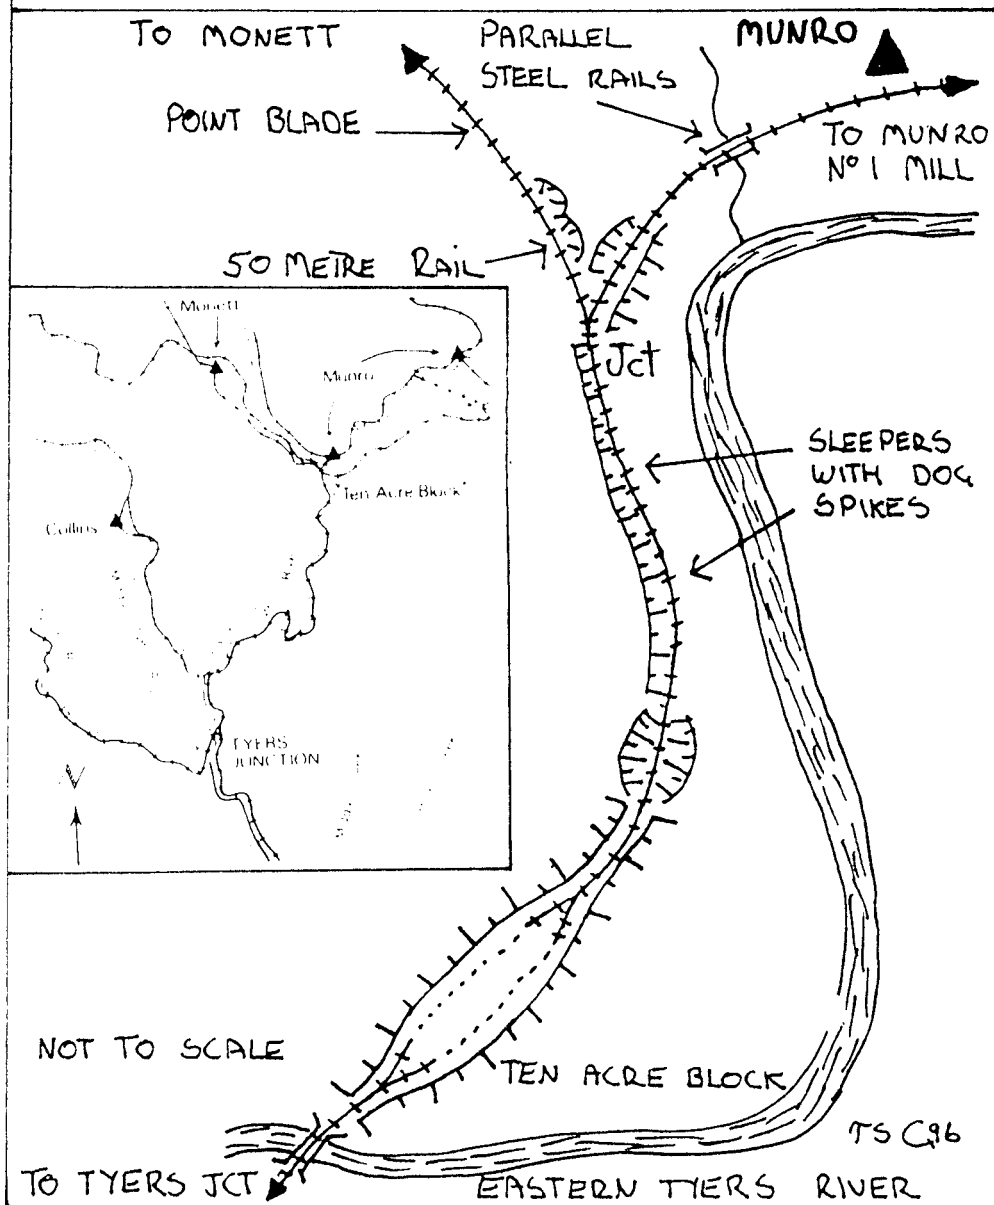

Len King

Tyers Valley, Victoria

(see LR 79 January 1983)

It appears that wherever the writer ventures to explore tramway remains, that many have been converted to walking tracks. Another excellent walk is

TYERS JCT Ten Acre Block

that from Tyers Junction to the terminus of the Forest Commission of Victoria line at "Ten Acre Block". The walking track continues to the two Munro mills situated on the Eastern Tyers River and also on the formation of the line to Horner and Monett.

From Tyers Junction to Ten Acre Block, the well built tramway is easily followed with the seven crossings of the Eastern Tyers River being bridged by fallen trees with some having support notches cut into the logs. Indeed the notches even have chicken wire nailed down to increase grip; tramway hiking gets easier and easier!

Most of the original bridges have disappeared with time, but where beams remain there is a discernible difference between the level of the formation and the beams which carried the line across the Eastern Tyers River.

The height difference of around one metre was a mystery to the writer. It was not until the return walk to Tyers Junction, that it was noticed that on crossing a small gully that what appeared to be a solid foundation was actually earth deposited on top of the timber bridge.

A later short walk along the Western Tyers River line from Tyers Junction also revealed the same method of construction. It would appear that on the FCV lines, bridges were constructed and then a layer of earth placed on top of the structure. Whether this procedure was used on all of the bridges or just a few is unknown to the author. Possibly the FCV lines are a combination of timber tramway construction, but with a degree of Victorian Railways civil engineering standards thrown in for good measure. The location of Ten Acre Block is easily discernible, the whole site is built on a raised embankment situated on the river flats, and is quite picturesque being covered in tall ferns. Unfortunately the track layout could not be discerned due to the amount of forest debris covering the site. While published maps show the FCV terminus at Ten Acre Block to be the end of the steel rail section, remains show clearly that the steel rails continued to the Munro mill site a short distance beyond. On the section between Ten Acre Block and Munro's there are sleepers with dog spikes and a section of parallel steel rails near Munro's mill. The formation from Ten Acre Block to Munro's is in marked contrast to the well built FCV line; the formation now takes on the typical tramway construction, becoming more steep and less discernible.

There are even signposts at the Junction of Munro's and Monett's lines directing the walker; you cannot even become lost anymore! However the signpost directs the walker to the Nelson mill which is actually the Munro mill. In the LR article it is mentioned that a Mr Nelson was the manager of the Munro mill. Apparently whoever erected the signpost had confused the ownership of the mill between the two men.

Also at the Junction remains a 50 metre length of steel rail positioned on the outside of the curve, as is normal practice on a wooden rail tram. This section to Monett's mill is also a walking track, but time did not permit any investigation of this section.

At the (Nelson?) Munro mill site is the inevitable sawdust pile, pieces of log truck bearings and a saw blade. The walking track continues onward to Munro's first mill. This section was wooden rail; however no remains could be discerned other than a sleeper just past Munro's mill with nails embedded in it. Indeed if it were not for the walking track, normal bush bashing would have ended in despair, due to the lack of tramway features and the rugged nature of the valley. The river is again crossed by suitably placed logs. Earthworks were minimal and no bridge remains were visible.

The site of Munro's first mill is marked by a huge sawdust pile and the mill boiler is still in position, bolted to its collapsed bearing logs. During the short stay, an exciting find was the remains of the frame of the Raynor-Munro tractor which was located a short distance from the boiler and at a higher level. The rusting frame lying on the forest floor was easily identifiable by the unique design of the brake pedal which can clearly be seen beside the left foot of the driver in the photograph on page 4 of LR 79. Also lying nearby were two headstocks with draft gear from another tractor; however perusal of photographs in LR did not enable the writer to identify the tractor type, although they are similar to those used on the Thomson Valley tramway. How they came to be at Munro's mill is a mystery as the two tramlines are of a different gauge.

Time did not allow walking the formation to Horner and Monetts mill nor the formation from Tyers Junction along the Western Tyers line to Growlers Creek. Any takers?

Tony Sedawie and Rita Pietszch

Port Milang Historic Railway Museum, South Australia

A small group have made outstanding progress in re-establishing railway infrastructure at the historic inland port town of Milang to commemorate the contribution of the railway to the town. A 1067mm gauge horse tramway operated from the railway precinct to the wharf on Lake Alexandrina. The formation is well defined and the stone platform at the northern end of the yard for the tram is to be restored by the Strathalbyn Rotary Club. A hand crane is retained at the platform and there is a crane on the jetty.

Bob McKillop

RESEARCH COLUMN

Historic Places - Special Investigation - South-Western Victoria

Apart from the many sawmilling sites in the Otway ranges mentioned in LRN 114, the following recommendations, published by the Land Conservation Council, may also be of interest:

A2 **Lloyd's Whip Shaft, Stuart Mill**, south of St Arnaud - former gold mining site: mentions remains of a wooden tramway.

B1 **Bell Rock Company, Gold Mine, St Arnaud** - mining dates from the 1870s. "The area features include tramway embankment ..."

B24 **Stony Creek Sawmill, Hall's Gap** - site of a 1920s sawmill and associated tramway.

C57 **Parker River Track, Otway National Park** - provided access to Cape Otway lighthouse. Supplies, unloaded on the beach, were taken by a tramway up the hillside, and hence by dray three miles to the lighthouse. "Used until 1878"

C59 **Blanket Bay Landing Site** - replacement for above "after 1877". Traces of a tramway reputedly remain.

C252 **Shell Grit Extraction Site, Murrell's Beach**, near Cape Nelson. "A variety of methods have been employed to carry the grit to the cliff top, including a pulley system and a gravity tramway remains of the tramway and assorted machinery remnants are in evidence." Site dates to early 1900s.

C265 **Remains of tramway building, Warrnambool**. Features an underground structure, probably a cellar ... wine bottles over 100 years old have been recovered from the site. Its association with the early (jetty) tramway is unknown. [Customs / Bond store?]. (See LRN 114 p.5)

C315 **Wensley Bray coal mine, nr Wensleydale**. Utilised tramways in the brown coal open cut 1924-52 intermittently, together with an aerial ropeway to Wensleydale Station 1925-32. Original open cut abandoned 1952; now partly water-filled.

C329 **Port Campbell Jetty**. At some stage in its life the jetty is believed to have had a tramway.

The following additional sites are listed in the report's inventory of Historic Places:

AR0140 Walter's sawmill and tramway, nr Mafeking, Grampians National Park

AR0146 Sawmill and tramway, Mafeking, Grampians National Park

AR0151 Tramway, Stoney Creek, Grampians National Park (related to B24?)

HO0038 McKenzie's Creek Quarry tramway, nr Horsham

RU0014 Tramway, Warranook (ballast pits line)

In addition to the above, the various goldmines around St Arnaud, Stawell and Ararat, as well as the sawmills in the Mt Cole State Forest could well repay investigation in terms of rail usage.

The 166 page report may be obtained from the Lands Conservation Council - (03) 9628 5142 - or through the usual outlets at \$9 over the counter. Any member wishing to examine the Society's copy may contact the Secretary.

Phil Rickard

NEW SOUTH WALES

BRUCE BELBIN, NSW Rail Transport Museum, Thirlmere 610mm gauge

(see LRN 113 p.8)

Perry 0-4-2T 7 (2714.51.1 of 1951) arrived at Thirlmere on September 4th. It is situated in the compound so that it can be winched onto the turntable then run onto the 2 ft gauge storage line, or the dual gauge line to the shed. The loco seems to be in quite good condition, with only minor repairs required.

Bruce Belbin 10/96

CITY OF LITHGOW GREATER MINING MUSEUM INC, State Mine Railway Heritage Park 1435mm gauge

(see LRN 113 p.8)

It is reported that train operations from Blast Furnace Park to the Museum, using the former NSWGR/Portland Cement 2-6-2ST (Dubs 2794 of 1892), are expected to commence on Sundays in 1997. Future development will extend the former State Mine branch railway line to Eskbank Station - thus linking the historic Eskbank railway precinct, Eskbank House, Blast Furnace Park, Lake Pillans wetland and the State Mine museum.

Bob McKillop 10/96

DORRIGO STEAM RAILWAY & MUSEUM 1435mm gauge

(see LRN 106 p.4)

Latest acquisition for the museum is Clyde 0-6-0DH 58-157 of 1958, a standard gauge version of the Clyde Model DHI-71 industrial loco of which large numbers were built for sugar mill service, mostly in 2 ft gauge. It arrived at Dorrigo by road on 21 September, having been acquired from the assets of the now defunct Mountain High Railway.

David McKensy 10/96; DSR&M Ltd Newsletter 10/96

THE MANILDRA GROUP 1435mm gauge

(see LRN 113 p.8)

It is now reported that the group have now purchased Clyde Co-Co DE locos 4906 (60-226 of 1960) and 4911 (62-261 of 1962). They are currently at the Clyde works at Bathurst.

Australian Locomotive News 10/96 via Editor

MOUNTAIN HIGH RAILWAY, Tumut-Batlow 1435mm gauge

(see LRN 90 p.8)

The Mountain High Railway has reportedly ceased to trade, its operator,

John Dunlop, unfortunately having had to petition for bankruptcy. [John Dunlop built a number of 2 ft gauge locomotives (mostly steam outline) for theme parks etc in the 1970s and 1980s - Ed.] Other assets of the railway are being disposed of through Mr P Olsen of the Insolvency & Trustee Service Australia, Level 1, AMA Building, 42 Macquarie Street, BARTON 2600.

David McKensey 10/96

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY, Durundur Railway, Woodford 610mm gauge

(see LRN 113 p.9)

A quantity of equipment stored for many years at Rosewood, was delivered to the Woodford site on 27 July. The locomotives concerned were:

4wPM	Motor Rail	3719	1925	ex Condong Mill, NSW
4wPM	Forrers Foundry		1928	ex Caledonian Colliery
4wPM	Forrers Foundry		1938	ex Caledonian Colliery
4wPM	Malcolm Moore	1035	1943	ex Australian Army
4wDM	Jenbach	1080	1952	ex Mt Elliott Colliery

There were also several wagons, and about 8 tons of 30 lb rail which was to be moved over a number of weeks.

The Gemco-Funkey 4wDM (built 1965) arrived from Marian Mill with a good stock of spare parts on October 2nd and was ready to enter service immediately. On Saturday 5 October, Bundaberg Foundry 0-6-2T 5 (5 of 1952) had to be withdrawn from service because of a leaking side tank, and did not return until the Sunday afternoon. In the meantime, the Gemco-Funkey handled all the passenger services.

The Country Womens Association cottage was moved onto site on 6 August and work has advanced rapidly to enable it to be put into use as a facility for members and other on-site workers.

Durundur Railway Bulletin 8/96, 9/96, 10/96 via Editor

BINGERA SUGAR CO PTY LTD 610mm gauge

(see LRN 111, p.19)

Now trading under a new name, during October this mill finally received the Walkers ex-QGRDH-class B-B DH 633 of 1969, which had been undergoing rebuilding intermittently for more than twelve months. Named *Kolan*, the loco carries a Bundaberg Foundry Engineers rebuild plate stating that it is a 36-tonne loco rebuilt in 1996. The loco has very large nameplates, and is pleasingly styled similarly to the Mackay Sugar 73-class rebuilds, with a

limited height cab and underslung fuel tanks, although with end radiator units and without the sandboxes on the side safety rails. It is finished in Bundaberg Sugar yellow and black livery.

E.M.Baldwin 0-6-0DH *Manoo* (3875-1-7-71 of 1971) was transferred to Fairymead Mill on the arrival of *Kolan*.

This year, Com-Eng 0-6-0DH locos *Invicta* (A1513 of 1956) and *Sharon* (A1935 of 1959) have been based at Wallaville, while Com-Eng 0-6-0DH *Wattle* (FD4789 of 1965) has been observed shunting in the mill yard on a number of occasions. E M Baldwin rebuild 0-6-0DH *St.Kilda* (6-2179-1-6-67 of 1967) seems to be restricted to navvy duties.

Editor 10/96, 11/96

BUNDABERG SUGAR CO LTD, Fairymead Mill 610mm gauge

(see LRN 111 p.7)

Late in October, E M Baldwin 0-6-0DH *Manoo* (3875-1-7-71 of 1971) was transferred from Bingera Mill on the arrival of the new Walkers loco there. Originally delivered to Bingera Mill as *Oakwood*, this loco was at Fairymead, numbered 71, from 1975 to 1980, following the arrival of Bingera's E M Baldwin bogie diesels. It was transferred back to Bingera in 1980 when Fairymead received its first new bogie Baldwin.

Ruston & Hornsby 4wDM 9 (339211 of 1953) was still dismantled at the mill in early November.

Editor 11/96

CSR LTD, Herbert River Mills 610mm gauge

(see LRN 114 p.7)

Victoria Mill's Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) was used on October 26th for the Maraka Festival. It ran from the start of the Nyanza line, going out about 2 miles and then propelling back.

A 12-tonne bin running on just four wheels was noted converted with two four-wheel bogies at Victoria Mill on September 27th. Victoria Mill's E M Baldwin 0-6-0DH *Hobart* (4413-1-7-72 of 1972) returned from loan at Macknade on October 1st. Also on this day, Victoria Mill's E M Baldwin 4wDH *Sugarworld Shuttle* (9109-1-9-80 of 1980) went to Macknade with the Victoria Mill ballast plough (rebuilt from Motor Rail 4wDM 10381 of 1953), returning to Victoria two or three days later.

Chris Hart 10/96

GREAVES ENTERPRISES, Bundaberg Port Road 610mm gauge

Cane farmers require water supplies when burning cane, to prevent fires

spreading out of control. Many use specially built tank road trailer vehicles for this purpose. An interesting variation noted in Bundaberg allows for the use of existing cane bin trailers to be used to carry rail-mounted water tank wagons. These rail vehicles are built solely for farmer use and can never be used in trains. They have no draw gear and their railway wheels are used solely to allow them to be winched onto cane bin trailers for transport to the site of cane burns. On return to the farm, they can be run off to allow the cane bin trailer to revert to its normal use. Two such tank wagons were noted in use by this operator.

Editor 10/96

HAUGHTON SUGAR CO PTY LTD, Invicta Mill, Giru 610mm gauge

(see LRN 114 p.10)

Some additional tramline extensions were noted in September which were had not been recorded in May. A 3 km branch has been built near the Bruce Highway in the Selkirk irrigation section, and a 4.5km extension to the Mitchell's Road line in the Mulgrave section near Clare runs as far as the Ravenswood Road and then turns west along it.

The mill has ten brake wagons. Eight of these are bogie vehicles built at the mill with E M Baldwin or F M Baldwin bogies, and are named *Burdekin*, *Strathalbyn*, *Giru*, *Scott*, *Piralko*, *Hodel*, *Cromarty* and *Minkom* to correspond with the E M Baldwin or Walkers bogie locos they are equipped to operate with. The brakevan named *Strathalbyn* appears to be the one previously known as *Mulgrave*. The other two brake wagons are also named after their locos and are built from the frames of scrapped Com-Eng 0-6-0DH locos. *Selkirk* is built from the former *Scott* (C1015 of 1957) and *Clare* from the former *Clare* (AH4080 of 1964).Editor 9/96

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610mm gauge

(see LRN 114 p.11)

A further extension of a little more than a kilometre has been built onto Racecourse Mill's Balberra line during the current season. After crossing Munbura Road at the terminus completed for the start of the season, the line parallels it before again turning west.

A Racecourse Mill cane train derailed on the Baker's Creek rail bridge on the night of September 30th, disrupting crushing operations for a number of hours, as this bridge is a bottleneck for virtually the whole of the Racecourse system. About 40 bins were derailed with estimated damage up to \$250 000. A press photograph showed a Clyde 0-6-0DH loco in the new corporate livery on its side with bins piled on top of it.

A locally designed and constructed experimental 12-tonne bin has been trialled by Racecourse Mill this season.

A safety video has been made and provided to all schools in order to provide warning of industry hazards, particularly the cane railway network.

MORETON CENTRAL SUGAR MILL CO LTD 610mm gauge

(see LRN 103 p.10)

E M Baldwin B-B DH Coolum (5565-1-10-74 of 1974), alias LORRY, leaves Moreton Mill yard with a rake of empties for Howard Street yard while his companions slumber in or near the loco shed, October 17th 1996.

Photo: Brad Peadon

E.M.Baldwin B-B DH Coolum (5565-1-10-74 of 1974) has been fitted with a large painted "nameplate" on the bonnet side carrying the word LORRY. It is understood that this is to identify the loco with a new generation cane train character featured in a locally-produced series of children's books

Brad Peadon 10/96; David Mewes 11/96

PIONEER SUGAR MILLS PTY LTD, Inkerman Mill 610mm gauge

(see LRN 114 p.12)

The new locomotive at Inkerman for the 1996 season, *Bojack*, is E M Baldwin B-B DH 7280-1-9-77 of 1977, named for a locality on the Groper's Creek line. It

was formerly *Seaforth* at Kalamia Mill, from where it was transferred at the start of the season, and has not yet been painted in Inkerman Mill livery.

Editor 9/96

PIONEER SUGAR MILLS PTY LTD, Pioneer Mill 1067mm gauge

(see LRN 113 p.11)

The loop line through the Northcote and Jardine irrigation sections to the south-west of the mill was completed for the 1995 or 1996 season, making a circuit of approximately 50 km. The loop was created by building a 10km link from near Ayr Airport westwards to the northernmost point of the Jardine line built for the 1994 season. There is also a 1km branch off this line. It would appear that there is a plan to convert the Pioneer Mill rail system to 2 ft gauge, or at least completely mixed gauge, as the Bruce Highway level crossing to the west of the mill has recently been rebuilt with rail in place for both 3ft 6 in and 2 ft gauge.

David Blakeley 8/96; Editor 9/96

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610mm gauge (see LRN 114 p.13)

The new Walkers B-B DH (628 of 1969) is numbered 11, with large metal numerals fitted to the cab side. The Plasser KMX-12T ballast tamper delivered last year is builder's number 413 of 1995. It weighs 23 tonnes and has a top travelling speed of 40 kph.

Editor 9/95

COAL CREEK HISTORICAL VILLAGE, Korumburra 610mm gauge

(see LRN 106 p.12)

The railway here has been converted from 2 ft 6 in gauge. A Ruston & Hornsby diesel, presumably 0-4-0DM 305328 of 1954, purchased from the Sandhurst Town sale (see LRN 112 p. 17) is reportedly in use with three bogie carriages, believed to be from the same source. It is believed that a steam locomotive is being sought.

An unconfirmed report has it that 762mm gauge E M Baldwin 4wDH Kasey (3225-4-2-70 of 1970) has been disposed of for use on the Walhalla Goldfields Railway.

Ian Comrie 9/96; Bob McKillop 10/96; Peter Medlin 10/96

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 114 p.15)

The State Government announced in October a further grant of \$500,000 for Gembrook restoration. The money is to be used for provision of station facilities at Gembrook, such as booking office, refreshment services, and toilets. Work on these is expected to start early in 1997.

Walkers B-B DH DH59 (646 of 1970) ran a trial trip to Lakeside on 17 October. There has been much discussion on the livery for this; it may remain in Queensland Railways green and grey livery.

A "Friends of Thomas" weekend was held on September 14th-15th. This involved the running of shuttle trips between Menzies Creek and Clematis, with 2-4-2ST *John Benn* (Couillet 43 of 1886 / Decauville 861 of 1886) at one end of the train, and 0-4-0T *Carbon* (Couillet 90 of 1890 / Decauville 986 of 1890) and 0-4-0ST *Sir John Grice* (Peckett 1711 of 1926) at the other. About 830 passengers were carried over the weekend on these trips.

As a prelude to this, a quadruple-header ran from Belgrave to Menzies Creek, hauled by *John Benn*, *Carbon*, *Sir John Grice*, and NRT1 *William H Collis* (4wDM Ruston & Hornsby 296058 of 1951). A stunning photograph of this graced the front cover of the October 1996 *Newsrail*.

For this day each engine was wearing a face, and worked under the names DEXTER DECAUVILLE, DANIELLE DECAUVILLE, PETER PECKETT, and DONNA THE DEVOIOUS DIESEL (surely NRT1 would be Victoria's *least* devious diesel?). Neither *John Benn* nor *Carbon* carry their names. *John Benn* displays the number "861" on its cab-sides and smokebox front, and is painted red. It is fitted with an ex-VR five-chime whistle, as fitted to broad-gauge steam locos, which sounds bizarre for such a small loco, and the effect is even more weird (and delightful) when *Carbon* answers with its pip-squeak whistle. *John Benn* is fitted with a Westinghouse type brake pump, a brass bell, huge headlamp front and rear, large enclosed wooden cab, spark-arresting stack, and fancy gold scroll work on the dome. *Carbon's* boiler is dark green, the side tanks and cab are yellow with dark green edging, and the rest is black. Both locos have lots of polished metal work, and the finish of both is superb. *Carbon* is not yet fitted with an air compressor, so it cannot haul a train on its own, or lead a train. For the PBPS Annual General Meeting on 19 October, *John Benn* and *Carbon* ran a shuttle trip from Nobelius Siding to Lakeside with four canopied NQR trucks. Both, together with the Peckett, are scheduled to run an all-day rail-fan trip from Belgrave to just beyond Lakeside on Cup Day, 5 November.

Frank Stamford 10/96

GISBORNE DISTRICT STEAM & ENGINE SOCIETY 610mm gauge

(see LRN 105 p.20)

Restoration of Perry 0-4-2T 9 (9737.45.1 of 1945), ex Millaquin Mill, has been completed. The loco operates on a loop line in Gisborne Steam Park on the first Sunday of each month from September to May.

Bob McKillop 10/96

SHIRE OF KERANG, Koondrook 1600mm gauge

(see LRN 55 p.15)

By 1994, the station and train, headed by replica Sentinel 7566 of 1926 - *Coffeepot* - had deteriorated to a dilapidated condition, with vandalism and termites taking their toll. A major restoration project was completed in July 1995. The station building was repainted in heritage colour and the "loco" treated with rust inhibitor and then black enamel paint with red lining. Hinksons Siding, the main intermediate station on the line has been rebuilt, and a separate tramway display as been established in the Kerang Museum. It includes an original wooden wagon, safeworking equipment and photos of the line.

Bob McKillop 10/96

SANDHURST TOWN MANAGEMENT PTY LTD 610mm gauge

(see LRN 112 p.17)

Only unconfirmed reports have so far been received as to the disposal of items, suggesting the following:

0-4-0DM	Ruston & Hornsby	354040	1953	Coal Creek with three carriages
4wDM	Ruston & Hornsby	354040	1953	Possibly to the Bass Valley Railway project
4wDM	Ruston & Hornsby	?	1945	Possibly to the Bass Valley Railway project
0-6-0	Hudswell Clarke	1553	1924	Bill Ferris & others for Walhalla Goldfields Ry (for regauging)?
0-6-0	Hudswell Clarke	1555	1925	Warrick Turner, Echuca?
0-6-2T	Perry	7967.50.3	1950	?

Your editor would appreciate receiving confirmation of these reports if possible.

WALHALLA GOLDFIELDS RAILWAY 762 mm gauge

(see LRN 112 p. 18)

From December 1st, 1996 services will operate to Happy Creek Station, 3 km from the railway's headquarters at Thomson station. Happy Creek station

(which was not a stopping place on the old railway) is a 30 minute walk from the site of the Walhalla station, along the Walhalla Tourists Road. The following timetable will operate:

On Saturdays trains will depart Thomson station at 11.30am, 1.00pm and 2.30pm; returning from Happy Creek at 12 noon, 1.30pm, and 3.00pm. On Sundays & public holidays trains will depart Thomson station at 11am, 12.30pm, 2.00pm, and 3.30pm; returning from Happy Creek at 11.30am, 1.00pm, 2.30pm, and 4.00pm.

RETURN FARES are Adults \$7, Children (under 14) and concessions \$5, Family ticket (up to 5 people with at least 1 adult) \$20.

ONE WAY FARES are Adults \$5, Children (under 14) and concessions \$3, Family ticket (up to 5 people with at least 1 adult) \$14.

MEETINGS

MELBOURNE:

Darjeeling

Ray Gardiner has kindly agreed to show us his, by all accounts, excellent video depicting the Darjeeling narrow-gauge railway in India. This world-renowned railway seems live under a constant threat of closure. It may not be long therefore before videos such as Ray's become important historical records. Don't miss the opportunity to see it.

LOCATION: Ashburton Uniting Church Hall, Ashbum Grove, Ashburton.

DATE: Thursday 12 December at 8.00 pm

SYDNEY:

Any member wishing to know details of the next meeting should contact Craig Wilson on 02-9484 7984

LOCATION Woodstock Community Centre, Church St., Burwood Note: Plenty of off street parking at the rear of the buildillg and Burwood station is only a 5 minute walk away.

DATE: Wednesday 18 December at 7.30 pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION 150 First Avenue, Royston Park

DATE: Thursday 5 December at 8.00 pm.

Australian Rails to Trails

(see LRN 106 p.3)

Members may be interested to know that groups are forming across the country to lobby for the conversion of used lines to trails. General maps have been published for each state, and members are now working on producing lists of closed lines in each state, setting out established trails and those lines which have potential for conversion to rail-trails. Any members with knowledge of light railways in NSW that have been converted into walking tracks or roads (no matter how short the section) are asked to forward details to Jim Longworth, 2 The Boulevard, Cheltenham 2119. (02) 9876 3469 (h)

Coal Creek Historical Village

(see LRN 115)

The eagle-eyed Chris Hart points out that the correct builder's number of the Ruston & Hornsby from Sandhurst Town (305328) is that shown on p.15 and not as shown on p.17. Thanks, Chris.

FIELD REPORTS

Wymah Punt, NSW

The NSW Department of Main Roads operates a vehicular ferry across the Murray Arm of the Lake Hume at Wymah. To accommodate the variation in water level, the landing stage (on the Victorian side at least) moves up and down the bank on a tramway of about 7ft 6in gauge. The landing has a rigid timber frame with eight wheels of typical timber tramway appearance. The rails are BHP 45 lb/yd dog-spiked to very long sleepers. Is the use of tramway-mounted landings a common feature of ferries and is there a "standard" gauge?

Jack Stock 12/96

Burra, SA

The Burra Burra copper mine commenced in 1845. It was worked as an open cut from 1879 to closure in 1877, and in 1876 a cable-worked incline tramway was installed. The mine site (reworked by modern open cut 1971-81) is now a State Heritage Area under the control of the National Trust. A number of ore trucks are present on the site and appear to be 2ft 3ins gauge. Outside Clode's Hardware store in the town another ore truck, possibly 3ft gauge, is on display.

Editor 12/96

RESEARCH COLUMN

Hydro-Electric Commission, Waddamanna, Tas.

John Robin (c/- Post Office, Meander 7304) provides details of a pamphlet produced by the Tasmanian Hydro-Electric Commission entitled *Waddamanna - A Retired Power Station*. This mentions a tramway linking Bothwell with Waddamanna power station, then under construction. The following quotes may be of interest:

There was no road link to the power station site at Waddamanna. Early in 1911 work began on building a 27km wooden tramway, from Red Gate, near Bothwell to Waddamanna. The 'rails' were made using 9" (225mm) square hardwood and bridges were constructed over a number of creeks and the Shannon River.

The tramway was completed in early 1912 and a regular service of a return trip every two days began. Teams of up to 15 draught horses pulled each load; the average load being about 7 tons. A road was completed in 1922 and the tramway fell into disrepair.

The pamphlet has two photos supposedly of this horse-drawn tramway. One photo shows wooden rails of considerably smaller dimensions than the 9 in quoted. The gauge appears to be 3 ft 6 in to 4 ft 0 in. Can anyone provide further details of the tramway?

Saltwater River Powder Magazine (Jacks Magazine), Maribyrnong, Vic.

Grid Ref CU145162

Background

In 1874 the Victorian Government called tenders for the construction of new powder magazines beside the Saltwater River (now the Maribyrnong River) to replace the Footscray magazine beside the Yarra River. The new magazines were designed by the Public Works Department under the supervision of William Wardell (designer of St Paul's Cathedral), constructed by George Cornwall and opened in 1878.

The original contract included two large bluestone magazine buildings (each about 65 metres long), examining room, guard room, clothes room, cooperage and barrel store (gunpowder was stored in barrels), tramways, two tunnels through the 10-metre-high blast mounds, a landing stage and shed and a bluestone boundary wall. Several additional brick buildings were later added.

Future Use

The magazine complex, once the largest in Victoria, remains virtually intact and has been listed on the Victorian Register of Historic Buildings and the Register of the National Estate. The magazine is contained within

a site owned by ADI Ltd which is being redeveloped as a joint venture with Lend Lease Development Ltd. The joint venturers are seeking expressions of interest from parties wishing to use the magazine complex within the constraints of preservation objectives imposed by the Commonwealth.

Tramways

Gunpowder was originally delivered to the magazine by barge along a 250-metre-long canal from the river and then transferred to the magazines by tramway. Later the tramway was extended to a wharf on the river.

The specifications for the magazine construction provided for 3124 ft of 4in x 4in wooden “runners” [476 metres of track] secured to 8in x 4in x 7ft Red Gum sleepers with hardwood trenails. Five turntables and a quantity of hardwood planking were also provided for the tramway. Turntables have not been used at Jack’s Magazine for many years and all remaining rail is steel. Additional (and replacement?) tramways were provided by the Commonwealth in 1909.

On a site visit on 20 November 1996 the following was noted:

- the gauge of tramway was measured (several times!) as 2 ft 6.5 in (775mm).
- much of the trackwork and all (?) of the points have been removed or buried.
- tracks are intact in the loading shed at the head of the canal and through the tunnels to the main magazines.
- some BHP 20lb/yd rail from the tramway is stored in one of the magazines
- one wooden-topped flat truck remains on the tramway in the loading shed
- two steel flat trucks are on site but not on the tramway
- a set of 18.5-inch-gauge points is stored near the entrance (probably from the adjacent Footscray ammunition factory)
- two 18.5 in gauge covered trucks with open sides are stored at one of the magazines. These trucks are painted red and numbered 5525 and 7828. These trucks are probably from the ammunition factory. [Can any reader confirm the existence of 18.5 in gauge at this site?]

Acknowledgement

The authors wish to thank Elisabeth Schwab of Lend Lease Development, Melbourne for arranging the inspection and making available documentation on the site.

JACK KENNEDY, Machinery & Surplus Sales, Kanandah Place, Broken Hill 610mm gauge?

(see LRN 108 p.7)

Gemco five tonne 4wBE Z22 (with battery box ZL09) was noted to have been moved to a corner of the machinery yard close to the road. Nearby were one blue and one yellow Eimco bogger. The two three tonne locos and the other yellow bogger previously reported were not seen.

Editor 12/96

DAVID REVELL, Wee Waa 610mm gauge

(see LRN 103 p.6)

Mr Revell is a vintage machinery enthusiast, with a fine collection of traction engines in particular, and with excellent workshop facilities. Charity steaming days are held occasionally. Hunslet 4-6-0T 306 (1218 of 1916) is in covered storage pending restoration. Charlie McClelland's bogie carriage, as well as other equipment, has been purchased, but is yet to be delivered on site. Mr Revell plans to lay 5-8km of track on a nearby property and so will be able to enjoy a leisurely train ride down to the Namoi River. He is currently interested in buying 30lb rail, and would like to hear of any possible sources.

Editor 1/97

SULPHIDE STREET STATION MUSEUM TRUST, Broken Hill 1067mm gauge

(see LRN 6 p.5)

The following locomotives from the Silverton Tramway are on display:

Y1		2-6-0	Beyer Peacock	2971	1888
W24	Malcolm Moore	4-8-2	Beyer Peacock	7553	1951
	Sam	0-6-0DM	Andrew Barclay	391	1953

There is also a 2-2-0PM railcar, rebuilt from a Dodge road vehicle by SAR and used by the STC, as well as a variety of ex STC rolling stock.

Editor 12/96

PASMINCO LTD, Broken Hill 457mm, 610mm & 915mm gauge

(see LRN 88 p.10)

The North Mine is reported to have closed in 1993, with extremes of temperatures at the still-workable levels being a factor in the decision. Operations are now concentrated at the south end of the line of lode, with large rubber-wheeled equipment predominating. The current extent (if any) of underground rail operations is unknown.

The 18 inch gauge Greenwood & Batley 4wBE preserved at the gatehouse of the North Mine (see cover LRN 80) seems likely to be 1691 or 1692 of 1940

(in spite of being labelled "1930's"). It is accompanied by two ore trucks of differing design labelled "1900".

Editor 12/96

PENROSE PARK TRUST, Silverton 1067mm gauge

Ex Silverton Tramway 2-6-0 Y11 (Beyer Peacock 3535 of 1893) is on display in the open here, behind a fence. It was repainted in 1995 in an attractive olive green livery with yellow and black lining.

Editor 12/96

SILVERTON TRAMWAY COMPANY 1435mm gauge

(see LRN 108 p.8)

A visit to the Silverton Tramway depot on 29 December found four A.E.Goodwin Co-Co diesel electric locomotives in STC yellow and blue livery. 28 and 29 (83827 and 83828 of 1961 respectively) were parked in the yard, while 37 was in the depot area and 36 was in the shed, both apparently newly painted. These latter two are presumably ex NSW SRA 4811 and 4838, but it was not clear which was which.

Editor 12/96

WEST DARLING MACHINERY PRESERVATION SOCIETY various gauges

The Conservation Centre, 479 Crystal Street, Broken Hill

(see LRN 112 p.10)

In addition to the equipment listed previously, a white Gemco 4wBE loco, possibly 18 inch gauge, together with two four-wheel man transporter cars, has been put on display here. It is numbered D25T and is marked Lot 53. It has Gemco Solid State Converter AL No.1634.

The smaller of the two battery locos previously reported has no battery box and seems to be identical to the one preserved at the Junction Mine (see above), so may well be 356mm (14 inch) gauge.

The crude 3ft 6ins gauge steam outline loco is a 4-2-0PM and is being prepared for use at a park near the city centre (see below).

PARK, Blende Street, Broken Hill 1067mm gauge

A circuit of track has been laid in this park which is opposite the Sulphide Street Railway Museum. A shed through which the track passes contains a passenger carriage, and it will be joined by the locomotive being prepared at the Conservation Centre.

Editor 12/96

WHITES MINERAL ART GALLERY AND MINING MUSEUM various gauges

1 Allendale Street, Broken Hill

This attraction, open daily, incorporates a simulated mine and a variety of models and other display material. On display outside is a variety of rolling stock including two compressed air boggers and a 2ft gauge battery electric locomotive, painted white. The loco is a Gemco, numbered B11. Its battery box is numbered BBZL16. The boggers are an Eimco numbered Z428, and a Gardner-Denver numbered B3411.

Editor 12/96

QUEENSLAND

BABINDA SUGAR LTD 610mm gauge

(see LRN 109 p.7)

For the 1996 season, a locomotive numbering scheme was adopted with the use of a ground positioning system based on satellite technology. A location display showing numbers was more appropriate than one showing names. Those locomotives currently in use have been numbered as follows:

2	Goondi	0-6-0DH	Clyde	55-56	1955
3	Daradgee	0-6-0DH	Clyde	56-90	1956
4	Harvey	0-6-0DH	Com-Eng	AD1138	1960
5	Bramston	0-6-0DH	Com-Eng	AH2460	1962
6	Allison	0-6-0DH	Com-Eng	C2234	1959
7	Morrison	0-6-0DH	Com-Eng	AD1239	1960
8	Babinda	B-B DH	Bundaberg Foundry	002	1991
9	Bartle-Frere	0-6-0DH	Com-Eng	AH3979	1964
10	Russell	0-6-0DH	Com-Eng	A2027	1958

Reportedly, no loco was allocated number 1 to avoid the implication that there was a "gun" crew. 10 *Russell* was spare loco during the 1996 season. 6 *Allison* has been fitted with an enclosed cab, while Com-Eng 0-6-0DH *Josephine* (A1821 of 1957) was undergoing a similar rebuild by December. 5 *Bramston* was being used by the navvies following the end of the crushing season. After having languished at the back of the shed for 5-6 years, Baguley 0-6-0DM *Fishery* (3387 of 1954) has been shunted onto the mill roller track in the middle of the yard. One Malcolm Moore 4wDM (1011 of 1943) was noted coupled to a bogie ballast hopper, while the other, 20, (1057 of 1943) is derelict.

Greg Stephenson 12/96

BINGERA SUGAR CO PTY LTD 610mm gauge

(See Bundaberg Sugar Co Ltd, Fairymead Mill)

BUNDABERG SUGAR CO LTD, Fairymead Mill 610mm gauge

The transfer of E M Baldwin 0-6-0DH *Manoo* (3875-1-1-71 of 1971) from Bingera to Fairymead was only a temporary one, apparently for trials in conjunction with Fairymead's similar 70 (3406-1-7-70 of 1970). *Manoo* was back at Bingera by the end of November.

Editor 11/96; Bob James 12/96

BUNDABERG SUGAR CO LTD, Mourilyan Mill 610mm gauge

(see LRN 109 p.8)

Bulk sugar was conveyed from the mill to Mourilyan Harbour by tramway during the 1996 season. Clyde 0-6-0DH 5 (66-491 of 1966) was noted hauling the bulk sugar train on two separate occasions during September and October.

Greg Stephenson 12/96

COMALCO ALUMINIUM LTD, Weipa 1435mm gauge

(see LRN 104 p.12)

A restructure of operations will involve an extension of the rail network and reduction in the road truck fleet.

Locomotives recorded here are General Motors (EMD) Bo-Bo DE 1.003 (4114 of 1946), formerly of Canadian National Railways, Clyde Co-Co DE R1001 (71-752 of 1972, rebuilt Clyde 1994) [a sister loco, R1002 (71-753 of 1972) was sold to Westrail in 1994], and Clyde Co-Co DE R1004 (built 1990), ex Goldsworthy Mining in 1992.

Townsville Bulletin 28/11/96 via Chris Hart; Editor

CSR LTD, Herbert River mills 610mm gauge

(see LRN 115 p.11)

Crushing finished at both mills on December 14th with a record combined crush of 5.25m tonnes. As Macknade's E M Baldwin 0-6-0DH 14 (6-2490-1-7-68 of 1968) was needed for cane haulage at night time, it was only used on Victoria Mill bulk sugar haulage during the day shift for the last few weeks of the season. This loco had an accident on the last day of the crush while delivering empty bins for slack season storage on the Western line. Running through a loop line, it was derailed by dirt across the line (the result of the activities of haulout tractors) and came to a sudden stop almost at an angle from the track of about 60 degrees, derailing a large number of bins.

Waiting for a lift is Macknade Mill's E M Baldwin 0-6-0DH 14 (6-2490-1-7-68 of 1968) having come to grief on the last day of the 1996 crushing, December 14th.

Photo: Chris Hart

On October 22nd, transfers of cane from Victoria to Macknade went from one trip to two trips per day, and from October 29th, two or three trips were usually run each day, although the number varied on occasion.

Another exchange of Hansen line cars took place late in the season with L CAR 2 (56 of 1972) going to Victoria from Macknade in exchange for L CAR 3 (1920 of 1978). L CAR 3 was employed on poison spraying at Macknade until part of its running gear fell apart and use reverted to L CAR 5 (34 of 1973).

Victoria Mill's new Crystal Creek line had reached Gap Creek near Abswold, more than half its eventual length, by mid-December. Earthworks were in progress in the Coolbie area, about seven kilometres to the south, where the line will parallel the QGR before curving away again.

A new 4.5km line into the Peppin's Road area, west of the Bruce Highway, had been planned to be built for 1998. This has been put in doubt as new National Highway standards now require a grade separation, necessitating the cane railway passing underneath the road, in spite of the fact that a permit for the crossing was in existence until 1992. Funding of \$1m for the grade separation is being sought by the Herbert River Canegrowers, with 300 daily crossings of the highway by haulouts at current cane production figures, which will more than double in the future.

A new type of bogie bin was noted at Victoria Mill on December 7th, and it is understood that several hundred will be built for the 1997 season. The bin is the same height and width as the existing 4-tonners, enabling it to be tipped in the double bin tipplers at Victoria, and can hold between 9.5 and

12 tonnes of cane. Testing during the 1996 season was successful but there will be none at Macknade Mill until it gets its double bin tippler, hopefully in 1998.

Chris Hart 12/96; Herbert River Express 26/11/96 & 14/12/96 via Chris Hart

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610mm gauge

(see LRN 115 p.12)

A visit to the North Eton mill site in December revealed that ex NSW SRA Walkers B-B DH locos 7331 (693 of 1972) and 7337 (699 of 1972) had been taken from storage there. 7332 (694 of 1972) was in the open in the process of being dismantled, with bogies gone and hydraulic drive removed. This leaves just 7304 (663 of 1970) and 7341 (703 of 1972) in storage at North Eton.

A 73-class frame was noted at Pleystowe Mill, where it is assumed one of the locos is to be rebuilt. The other 73 would presumably be for Marian Mill.

Editor 12/96

THE MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610mm gauge

(see LRN 113 p.15)

The ex-Hambledon Mill Clyde 0-6-0DH Model HG-3R locos with low cabs continue to operate to Redlynch to cross under the QGR bridge and serve growers on the Barron River flood plain beyond. Walkers B-B DH *Gordonvale* (595 of 1968 rebuilt Bundaberg Foundry 1995) operates to the Redlynch depot but no further because of height restrictions.

Leaving Redlynch on the return to the mill there is a steep climb with several reverse curves over the Brimsmead Gap, culminating in a horseshoe bend with double road crossing. The operating practice observed on a number of occasions was for *Gordonvale*, its rake of fulls and its brakewagon to be banked from Redlynch by a Clyde hauling its own rake of fulls and a brakewagon. Near the top of the gap, the two trains would separate and continue to the mill independently.

It has been reported that a cut and cover tunnel is to be built over the Brimsmead Gap partly as a road safety measure to eliminate at least one level crossing and preparatory to road widening.

Meanwhile, the mayor of Cairns has reportedly called for the elimination of all cane haulage by tramway beyond Edmonton and its replacement by road transport. The encroachment of suburbia onto most flood-free caneland north of Edmonton and the desire to eliminate the level crossing of the Bruce Highway there, as well as the possible need for expensive road works on the Brimsmead Gap are all relevant factors. If a crossing of the Bruce Highway in the Edmonton area remains a necessity, a tramway underpass of QGR

and Highway at Kamma and five kilometres of new track on the west of the highway is apparently the preferred option. This would probably enable the elimination of the level crossing north of Gordonvale as well as the one in Edmonton.

Two road/rail bridges on the Little Mulgrave line, Peets Bridge across the Mulgrave River and Ways Bridge across the Little Mulgrave, are to be upgraded from a six-tonne weight limit to allow for tourist buses and coaches to cross them. Peets Bridge is 79.25m long and 3.65m wide. Ironically, the bridges are regularly used by 18 tonne Com-Eng 0-6-0DM locos.

*Greg Stephenson 12/96; Cairns Sun 27/11/96 via Greg Stephenson;
David Mewes 11/96; Bob James 12/96; ARHS Bulletin 12/96 via Editor*

SOUTH JOHNSTONE MILL LTD 610mm gauge

(see LRN 112 p.14)

This mill did not work regularly through weekends for the 1996 season. As usual, three Com-Eng 0-6-0DH locos were stationed at Silkwood depot and E M Baldwin B-B DH *Liverpool* (10385-1-8-82 of 1982) with brakewagon stationed at Japoonvale. These returned to the mill at the end of the season and by November 23rd, the bridge over a branch of Bombeeta Creek between Japoonvale and Mena Creek had been removed for reconstruction. Baguley (Drewry) 0-6-0DM 15 (2520 of 1954) was parked on the northerly (mill) side of the creek.

The "Turtles Express" mill tours operate at 11am Monday to Friday during the crushing season, commencing at the James Hing Hall, South Johnstone. Advance bookings should be made.

SUNSHINE COAST RAILWAY MODELLERS SOCIETY & MODEL ENGINEERS, Florence Street, Nambour 610mm gauge

(see LRN 47 p.10)

Ex Moreton Mill Dick Kerr 0-4-0IST *Valdora*, built about 1894, has had cab, tanks and lagging removed and looks a sorry sight having been further disfigured with graffiti. Hopefully this is a stage in eventual restoration rather than final demise.

Editor 11/96

SOUTH AUSTRALIA

COBDOGLA STEAM FRIENDS SOCIETY INC, Cobdogla Irrigation Museum 610mm gauge

(see LRN 90 p.90)

Beautifully restored Bagnall 0-4-0STT Margaret (1801 of 1901) hauls the LOVEDAY FLIER at the Cobdogla Irrigation Museum, South Australia. It is doubtful if the water tank gauge glass would survive long in industrial service! January 5th 1997.

Photo: Editor

Bagnall 0-4-0ST *Margaret* (1801 of 1907) was in steam hauling trains on January 5th. It is steamed about 15 times each year. The loco is owned by the South Australian Water Corporation (formerly Engineering & Water Supply Department), and has been attached to a four-wheel tender built by Robbie Osborne in 1992 and lettered CSF in brass letters. Equipped with a LOVEDAY FLYER headboard, it was hauling three bogie vehicles, one open and one covered passenger carriage, and a guard's van / water wagon for firefighting. These were also built by Robbie Osborne. In addition there are five four-wheel cars, and on display are two skips allegedly used locally by Humes.

The track is about a kilometre in length and has a balloon loop at each end. It now extends beyond the museum grounds where originally there was a simple circuit. The track is heavy and well laid. There are plans to extend the line to Loveday along an irrigation easement. If this happens, the loco will have to be converted from coal burning to oil because of the fire risk.

Motor Rail *Simplex* 4wDM 7369 of 1939 is stored at the Loveday pumping plant still awaiting engine parts. Operating days normally fall on a Sunday, with twilight running in the summer months. Details of running days can be obtained from Barmera Travel Centre _ (088) 858 2289; after hours (088) 588 7031 or (088) 588 2603.

Editor 1/97

NATIONAL RAIL, Keswick Terminal, Adelaide 1067mm gauge

Baldwin 0-4-0ST SANDFLY (7860 of 1886) is immaculate on No.1 platform. It bears a brass plate with a summary of its history.

NATIONAL TRUST OF SOUTH AUSTRALIA (MOONTA BRANCH)

Moonta Mines Railway 610mm gauge
(see LRN 115 p.15)

Metropolitan Brickworks 4wPM Young John (built about 1960) at the restored Moonta Station on the Moonta Mines Railway, January 5th 1997.

Photo: Editor

This joint project of the local community and the National Trust of South Australia is a line some kilometres in length which traverses the State Heritage Area between the former Moonta Mines School (now Museum) and the Moonta Railway Station. There is a balloon loop at each end, the one at the Moonta Mines end being the original "Wheal Munta" circuit of 800m established 25 years ago. The track is laid in very light material, 20 lb per yard

and less.

There are four locomotives on site, two being available for trains. Details area as follows:

Young John	4wPM	Metropolitan Brick, Maylands, WA	c.1960	(a)
	4wDM	?		(b)
	4wPM	Moonta?		(c)
82	4wBE	Gemco		(d)

(a) Green. Purchased in 1981. Has MAYLANDS plate on bonnet front as well as nameplate. Operating condition.

(b) Black. Reportedly acquired from Adelaide Zoo. Fitted with crude steam outline on the lines of Beyer Peacock 0-4-0WT *Captain Hancock's Pig*. Has operated as 0-4-0 at some time. Rebuilding possibly funded in 1985 (see LRN p.13[sic]). Has plate JACK E.CONNELL, ENGINEER on "smokebox" door. Operating condition.

(c) Built on skip frame. Out of use at back of shed.

(d) White. 5 tonne unit? Number stamped in rectangle on frame. Battery box carries number 89 7.71. Presumably the unit "from Broken Hill" reported here in 1983 (see LRN 35 p.12). Stored in the open.

There are at least 12 passenger cars built on steel 4-wheeled wagon chassis fitted with handbrakes, as well as some service wagons. There is a selection of wagons on display, including some skips from Minerals Pty Ltd and at least one ore truck from North Broken Hill. There is also an Eimco bogger. A short length of 3ft 6ins track emerges from a workshop building, and there is also a section of 5ft 3ins gauge track emerging from the main shed. Inside is housed a double decker horse tram, which apparently is rarely used, if at all.

The railway operates from 11am on weekends, and on public and school holidays.

Editor 1/97

PLATFORM 1 HERITAGE FARM RAILWAY, Junction Road, Littlehampton 368mm gauge

A circuit of 1ft 4½ ins gauge track runs through the farm and there is an associated railway museum. The steam loco is *Suzie*, a "Baldwin" 0-6-0ST loco built in Adelaide in 1979 for the National Motor Museum at Birdwood. (It is believed that this gauge was adopted because of other equipment which was acquired for the museum.) Normal services are provided by a 4w-2PM passenger railcar built at Platform 1.

Editor 1/97

TASMANIA

MOUNT LYELL ABT RAILWAY SOCIETY 1067mm gauge

(see LRN 112 p.15)

Track laying has commenced, and the target year of 2000 has been set for achieving an operational line. Two thirds of the length of the Mt.Lyell line has been cleared ready for tracklaying, with clearance commencing from each end. An employment scheme has provided some of the workers, supervised by an ex-Mt.Lyell fettler who was involved in dismantling the line in 1963. Almost four kilometres from South Queenstown to Lynchford is now ready for track to be laid, with drainage work completed and the track bed graded by the local council.

The Society has taken up the lease on the Mount Lyell Museum (see LRN 53 p.10) which contains some Abt equipment and which provides a building and central point from which to co-ordinate restoration, as well as a focal point for visitors.

Tasmanian Railway Hobbyist Vol.2 No.5 1996 via Phil Rickard

VAN DIEMEN LIGHT RAILWAY SOCIETY INC, Don River Tramway 1067mm gauge

(see LRN 65 p.13)

Ex-Emu Bay Railway Dübs 4-8-0 8 (3856 of 1900) returned to steam on 19 October 1996, after a restoration lasting ten years. Very major boiler work as well as the replacement of virtually all the superstructure of locomotive and tender have been carried out. The loco has been returned to coal burning and the 1960s valences and smoke deflectors have been removed, returning the locomotive to 1930s appearance.

Further work remained to be done, including the fabrication of a new steam dome. After completion, the locomotive is expected to play a major part in the Centenary celebrations for the Emu Bay Railway, with a statewide tour scheduled for 26 September to 6 October.

Tasmanian Railway Hobbyist Vol.2 No.5 1996 via Phil Rickard

VICTORIA

WALHALLA GOLDFIELDS RAILWAY 762mm gauge

(see LRN 115 p.17)

It is confirmed that Hudswell Clarke 0-6-0 1553 of 1924 is with the Walhalla Goldfields Railway. By early November the locomotive had been stripped

and the frames grit blasted and crack detected, with only one minor repair needed. The frames were being spread for regauging from 2ft gauge. The boiler had also been grit blasted and thickness tested pending assessment by the boiler inspector.

MEETINGS

MELBOURNE:

Moreton Central Mill

Venturing far into “foreign” territory Mike McCarthy will be entertaining us with an illustrated presentation covering the Moreton Central mill at Nambour in South-East Queensland. An historic perspective will be taken but slides depicting current day activity as well as views of the past will be presented.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 13 February at 8 00 pm.

SYDNEY:

Any member wishing to know details of the next meeting should contact Craig Wilson on 02 9484 7984

LOCATION: Woodstock Community Centre, Church St., Burwood Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 26 February at 7.30 pm

ADELAIDE:

Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION 150 First Avenue, Royston Park

DATE: Thursday 6 February at 8.00 pm.

(see LRN 116 p.17)

Arnold Lockyer writes that 0-6-0ST *Suzie* was built by Clisby Engineering, probably in the 1970s. It is gas fired.

RESEARCH COLUMN

Unusual type or rail

(see LRN 112 p.4 & 114 p.2)

Jim Longworth suggests that the rail mentioned is a light-weight version of the type of rail known as "bridge rail". An advertisement for heavier bridge rail is shown on the accompanying extract from an undated British-Australian Machinery Co. Ltd. catalogue kindly provided by Roger Persson. Jim and Grant Fleming measured a section of (probably rolled or cast) bridge rail at Leconfield Colliery, NSW, during January 1997 - see sketch.

They are believed to be a 1925 Hanomag 0-8-0T (10354, 10356 or 10410) and Orenstein & Koppel 0-4-4-0T 3770 of 1909, both ex PG Krevet Baru, Krevetwetan. They are believed to have been exported to the USA in about 1989. Can anyone provide further details to the Editor?

LOCOMOTIVE, ROLLING STOCK & EQUIPMENT MANUFACTURERS

BUNDABERG FOUNDRY ENGINEERS LTD

(see LRN 114 p.6)

Ex WAGR Walkers B-B DH M1852 (681 of 1972) was inside the works by January for rebuilding for CSR's Victoria Mill. By the end of February, work seemed to be fairly well advanced on the loco chassis, which was visible in a workshop building.

Editor 2/96

WALKERS LTD, Maryborough

(see LRN 113 p.7)

Three Walkers B-B DH 73-class locomotives are being rebuilt for Mackay Sugar. Two are for Farleigh Mill and the third is for Marian. One Farleigh locomotive is 7328 (690 of 1972), while the other two are those removed from storage at North Eton before Christmas (see LRN 116 p.13). 7331 (693 of 1972) is for Farleigh and 7337 (699 of 1972) is for Marian.

NEW SOUTH WALES

HUNTER VALLEY RAILWAY TRUST, Branxton 1435 mm gauge

This is the railway museum and tourist museum based at the Rothbury Colliery and formerly known as the Rothbury Riot Railway and Steam Museum (see LRN 102 p.6). It is advised that the RRRSM still operates from the same site, but that the Trust seems to be the owner of the locomotives and rolling stock (or most of them). While most of the collection is ex-NSWGR, the Trust has 7 ex-SMR Beyer Peacock 2-8-2T locomotives, of which 17 (5570 of 1913) and 23 (6056 of 1920) are operational. The Trust plans to commence regular steam-hauled trains over the former private branch line between North Rothbury and Branxton this year. The address is PO Box 37, Branxton NSW 2335.

RF McKillop 1/97

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY, Albion Park 610 mm gauge

(see LRN 116 p.7)

The recommissioning of Baguley (Drewry) 0-6-0DM *Seymour* (2392 of 1952) took place as planned on 12 January. The loco has been restored to something like its 1950s appearance with green livery lined out in red and white block lettering on the cabsides. The main departure from original appearance is the use of expanded mesh bonnet side panels rather than louvred panels.

Passenger train duties on the day were shared with former stablemate Hudswell Clarke 0-6-0 *Cairns* (1706 of 1939). It normally alternates on Open Days with Perry 0-6-2T *Tully* No.6 (7967.49.1 of 1949). Hawthorn Leslie 0-4-0ST *Burra* (3574 of 1923) is also operational.

Work on the boiler to be fitted to Davenport 0-4-0ST *Kiama* (1596 of 1917) has been completed, and the overhaul of frame and motion is almost completed.

No.1 carriage has been modified to be fitted with a pair of Rubicon Tramway bogies rather than the Condong line bogies previously in use since 1978.

The rebuilding of Ruston & Hornsby 4wDM 304457 of 1951 has been completed and it is now in regular use in automotive-finish brown, while Ruston & Hornsby 4wDM 285298 of 1949 has an electric starter and horn.

ILRMS Review No.167 & 168 and ILRMS Annual Report via Editor

Mulwala Explosives Factory 1600 mm gauge

(see LRN 93 p.11)

The November 1996 issue of *Rail News Victoria* has a photograph and report of shunting tractor built at Explosives Factory Maribyrnong in the early 1950s for use at Mulwala (a rare looking beast). It was built on the underframe of a 4-wheel coal wagon and has a Perkins diesel engine with chain drive. It was still in use in 1987, by which time it was fitted with automatic couplers. The photograph was taken on March 14th 1987, when it was parked near the gate for the benefit of patrons of a rail tour.

RF McKillop 11/96

CITY OF LITHGOW GREATER MINING MUSEUM INC., State Mine Railway Heritage Park 1435 mm gauge

(see LRN 115 p.9)

An Open Day was held on November 17th 1996 to correspond with the Festival of the Valley. There were some 200 visitors on the day with the Steam Gallery as a central attraction. Dubs 2-6-2ST 2605 (Dubs 2794/1892) was in steam, while ex-BHP Port Kembla English Electric (Australia) B-B DE D23

(A.038 of 1960) operated up and down the recently completed shed road. 2605 has been repainted and the cab sides fitted with brass numbers, depot and builders plates. There are a number of tasks to be completed before the loco is ready for regular service.

In December, the SMRHP won the Tidy Towns Award for the Best Cultural Restoration Project in NSW towns with a population over 10,000.

There are several sections of 762 mm (2 ft 6 in gauge) track on site from the original State Mine Colliery rail network. There are three rail underground mine "tubs" on display at the Mining Museum.

RF McKillop 1/97 & 2/97

SILVERTON TRAMWAY PTY LTD, Broken Hill 1435 mm gauge

The Silvertown Tramway Goodwin-Alco Model DL-531 Co-Co DE locos are as follows:

No.	B/no.	Date	Details
27	83826	1960	New (1067 mm gauge). Sold to SAR 874, 1970
28	83827	1961	New (1067 mm gauge). To standard gauge, 1970
29	83828	1961	New (1067 mm gauge). To standard gauge, 1970
859	84705	1963	on hire from SAR 1970 (1067 mm gauge).
30	84710	1963	ex ANR 864, 1990 (1067 mm gauge to standard gauge).
31	84703	1963	ex ANR 857, 1990 (1067 mm gauge to standard gauge).
32	83820	1961	ex SRA NSW 4825, 1994 (standard gauge).
33	83824	1961	ex SRA NSW 4829, 1994 (standard gauge).
34	83715	1960	ex SRA NSW 4815, 1994 (standard gauge).
35	84133	1962?	ex SRA NSW 4843, 1994 (standard gauge).
36	83711	1959	ex SRA NSW 4811, 1994 (standard gauge).
37	84128	1962?	ex SRA NSW 4838, 1994 (standard gauge).

28 and 29 are currently allocated to shunt duties at Broken Hill while most of the other ST owned locos are being used by National Rail on contract.

TRANSFIELD BOUYGES JOINT VENTURE, Airport Link 900 mm gauge

(see LRN 113 p.8)

The joint venturers are now well under way in building the tunnel for the extension of the Cityrail network out to the domestic and international airport terminals in Sydney. A 900 mm gauge railway will be used for construction purposes. All rolling stock has been imported second hand from the channel tunnel. However, all the items observed at Tempe on 14 February 1997 looked very new.

Rolling stock at the time of this visit was four substantial Schöma 4wD

locomotives (built by Christoph Schöttler Maschinenfabrik GmbH, Diepholz, Germany), five platform cars and five four-wheeled tunnel segment cars built by Mülhauser, and one four wheel boom and basket (cherry picker) car.

One locomotive was said to have been in service on the day of the visit, and it was noticed that documentation for accreditation under the NSW Rail Safety Act was well in progress.

It is reported that Schöma have reconditioned for resale a number of locomotives used on the Transmanche-Link (Channel Tunnel) project, as well as another major project in Denmark, so further details of these locomotives are awaited with interest.

David Jehan 2/97; Ray Graf 2/97

Two 900 mm gauge Schöma four-wheel diesels at the Airport Link tunnel construction site at Tempe, NSW. February 14th, 1997.

QUEENSLAND

Sugar Industry Review Working Party Report

A report was delivered to the Queensland and Commonwealth governments at the end of November 1996. The report was stimulated by the need to examine the implications of deregulation in the sugar industry, particularly related to the longstanding tying of production from specific land areas to a specific mill. Issues canvassed included access to sugar mill tramways by "third parties", and possible improvements regarding the granting of cane tramway easements.

Canegrowers 12/96 via Editor

BOYD'S ANTIQUATORIUM, Bundaberg 610 mm gauge

It is reported that ex-Bingera Mill Bundaberg Foundry 0-6-2T *Kolan* (7 of 1953) has been sold to Warrick Turner at Echuca in Victoria. It has been displayed at Boyd Rasmussen's private museum since 1975.

Bruce Belbin 2/97

CSR LTD, Herbert River mills 610 mm gauge

(see LRN 116 p.12)

An additional 40-tonne locomotive and a brake wagon will be delivered to Victoria Mill for the 1997 season. The locomotive will be a Walkers B-B DH ex WAGR M1852 (681 of 1972), currently being rebuilt at the Bundaberg Foundry.

Macknade Mill's Clyde 0-6-0DH 12 (65-434 of 1965) has been completely stripped down and will receive the same treatment as sister loco 11 (65-383 of 1965) did a few years ago. This includes the fitting of a GM 92 series V6 motor already on site.

Last year, it was reported that the sidings at Lucinda bulk sugar terminal had been extended. Although the new points were put in, and track panels placed on site, this was as far as work went. Work resumed in January and will be finished this slack season, with lines 1, 2 and 3 being extended with line 4 joined to line 3 at its existing length.

Another incorrect prediction last year was that Victoria Mill's Walkers

B-B DH *Clem H. Mccomiskie* (605 of 1969 rebuilt 1991) was to receive a new motor. This work is currently in progress.

The 11-tonne bogie bin at Victoria Mill was inspected in January. The frame consists of three lengthwise steel beams, one in the centre and one at each side, with some angle braces. The floor is thick galvanised steel of much the same profile as "Trimdeck" roofing iron. The sides and ends are mesh, with the ends appearing identical to those fitted to the four tonne bins. The bogies are very simple, with two pieces of thick steel plate cut to shape and connected with a piece of solid square steel. Cutouts in the plates accommodate the axleboxes, above which are rubber pads similar to those used in the four tonners. The wheelsets, bearings and axleboxes appear identical to those used on the four tonne bins. This may help to explain the choice of a bogie bin prototype, as there is no need to use a larger wheelset which would be required with a four-wheeler, resulting in two standards of running gear and consequential extra costs in maintenance procedures and spares stocks. It was reported that a decision as to whether to proceed with orders of the 11-tonne bin for the 1997 season will be made in February 1997. It seems the

order will be either for 250 11-tonne bins or 750 4-tonne bins.

The model GWS 75 on order from Plasser Australia (see LRN 116 p.7) appears to be a spot tamper.

Victoria Mill plans to use Walkers locos in Hamleigh and Lower Stone this year, so those bridges between Ingham and Trebonne which have not already been attended to are being strengthened or rebuilt this slack season.

It appears that the furthest point in use on the Crystal Creek line in the 1996 season was Accenero's Siding.

Chris Hart 2/97, Herbert River Express 11/1/97 via Chris Hart

TONY GERMANOTTA, Kuttapul 600 mm gauge

(see LRN 100 p.5)

Tony still owns the two vintage German diesels Windhoff 4wDM 452 of 1940, and Gmeinder 4wDM 4574 of 1949. These are available for sale, with a number of spare parts having been obtained for restoration purposes. Tony can be contacted at the above address or at (079) 540217.

Tony Germanotta via Editor 3/97

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 116 p.13)

Your editor is ashamed to admit having (for a second time) confused a bogie brake wagon frame with a Walkers 73-class frame. The object noted at Pleystowe Mill in December was undoubtedly the former. By mid February, it had been transformed into a bogie brake wagon similar to those at Racecourse and Marian Mills.

Two Walkers 73-class B-B DH locos are being rebuilt for Farleigh Mill and one for Marian by Walkers in Maryborough (see elsewhere this issue). The Farleigh locomotives are reportedly to be named *Cedars* and *Dulverton* and are programmed to be delivered in May and August..

Com-Eng B-B DH *Finch Hatton* (NA59112 of 1977) has been transferred from Farleigh Mill to Racecourse Mill. It is reported that at a later date, possibly after the delivery of the second rebuild to Farleigh, Clyde 0-6-0DH *Bassett* (67-596 of 1967) will be transferred to Marian Mill.

The new ballast regulator ordered by Mackay Sugar from Plasser Australia is reported as having been delivered to Marian Mill.

Detailed design work and exploratory drilling for the major (\$9m) civil engineering works on Farleigh Mill's line at the Summit (see LRN 110 p.12) has taken place, with it having been a strong possibility that the work would be carried out in the 1997 slack season. Although the work has been deferred for the time being (thankfully in view of the particularly extreme wet season

conditions this year), there seems to be no doubt that it will be proceeding in the near future. Likewise, the 15 km Yalboroo line is also expected to proceed when the economic climate is right.

Tony Wells 3/97; Tom Wright via Editor 3/97

THE MULGRAVE CENTRAL SUGAR MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 116 p.13)

As suggested in the previous issue, a relocation of the former Hambledon Mill line at Brimsmead Gap is to be undertaken as a part of road upgrading works. A section of almost 1 kilometre will be relocated for the start of the 1997 crushing season and will incorporate a 200 metre section with vertical batters supported by a soil nail system with a shotcrete facing, a 270 metre cut-and-cover tunnel on a curve, and a 500 metre box cutting. Total cost is estimated at \$3m, and Gutteridge Haskins & Davey designed and documented the civil and railway track works.

GHD News No.95 via Michael Bickford 1/97

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 115 p.14)

It is reported that Proserpine Mill has been successful in purchasing two 73-class Walkers B-B DH locomotives from a private owner in Goulburn, NSW. The locomotives concerned would be two of the following:

No.	B/n.	Date
7306	665	1970
7314	673	1971
7321	683	1972
7339	701	1972

Jerry Jirasek via Editor 3/97

ALAN ROBERT, Beaudesert 610 mm gauge

(see LRN 106 p.11)

Restoration work is continuing well on Hunslet 4-6-0T *Invicta* (1215 of 1916). The wheels are being built up by welding, prior to them being turned and the treads and flanges reprofiled. Frame restoration is also progressing, with new angle irons being prepared for fitting in place of the old material, which has been removed.

Alan Robert 2/97

SOUTH AUSTRALIA

BHP LTD LONG PRODUCTS DIVISION, Whyalla 1067 & 1435 mm gauge

(see LRN 95 p.14)

The Clyde Bo-Bo DE locomotives rebuilt by Morrison Knudsen are as follows:

No.	B/n.	Date	Gauge
DE1	56-109	1956	1067 mm
DE3	56-116	1956	1067 mm
DE4	56-122	1956	1067 mm
DE7	61-236	1961	1067 mm
DE8	65-429	1965	1435 mm
DE9	65-430	1965	1435 mm

Morrison Knudsen used the BHP line for testing purposes for its rebuild program of English Electric (Australia) Co-Co DE locomotives (ex QR 1300 & TGR ZC class). Four units have been rebuilt to 1000 mm gauge for use in Malaysia. Following a collision involving three locomotives on the iron ore railway in December, a further rebuild, MKA 6 (A.225 of 1971), was placed on 1067 mm gauge bogies and entered service for BHP in December 1996.

ARHS Bulletin March 1997 via Editor; Editor

GEOFF COOPER, Kangaroo Island 610 mm gauge

This gentleman (PO Box 211, Kingscote 5223) has embarked on a two-year plan to create a fun park incorporating a 2 ft gauge railway. The locomotive for the line is powered with a Ford engine and was acquired from Fun & Mobile Amusements, South Australia. It was originally fitted with radial axles to run on a circular track, but these have now been converted to parallel. Geoff is interested in obtaining 20 lb rail as well as rolling stock for the project and can be contacted on 0848 29012.

Geoff Cooper 2/97; Barry Kenyon 2/97

PORT DOCK STATION RAILWAY MUSEUM INC, Port Dock various gauges

(see LRN 113 p.16)

A variety of ex-industrial units were to be seen at the museum as follows when visited on 31 December:

Name / No.	Type	Builder	B/no.	Date	Gauge	Note
	0-4-0DM	Ruston & Hornsby	304475	1951	1600 mm	
DE91	Bo-Bo DE	General Electric	17934	1943	1435 mm	

No.1	6wDH	Clyde	61-237	1961	1435 mm	
Y12	2-6-0	Beyer Peacock	3536	1893	1067 mm	
4	4-6-0	Baldwin	41242	1914	1067 mm	
A21	4-6-0	Beyer Peacock	5913	1915	1067 mm	
Peronne	0-6-0T	Andrew Barclay	1545	1919	1067 mm	(a)
	4wPM	Malcolm Moore	?	1940	1067 mm	(a)
W25	4-8-2	Beyer Peacock	7554	1951	1067 mm	(*)
	4wDM	Malcolm Moore	?	?	610 mm	(b)
	4wDM	Ruston & Hornsby	187078	1938	610 mm	(b)
2 Skipper	0-6-2T	Perry	1850.46.1	1946	610 mm	
	0-4-0DM	Ruston & Hornsby	393981	1956	610 mm	(b)

(*) named *H.F.(Gerry) Walsh*

(a) not on display - in running shed/workshops

(b) not on display - stored under tarpaulin

Also noted was a 2 ft gauge explosives wagon from Dry Creek, and two paste trucks, presumably from Explosives Factory Maribyrnong.

Meanwhile, on the 457 mm gauge line around the museum, 0-4-2T *Bub* (Mile End Museum, 1988) was operating passenger trains. In the workshop were noted three other units:

3 Mitzi	4-2wPM	Mile End Museum	1	1971	rebuilt 1984
5	4wPMR	Mile End Museum		1978	dismantled
7	C-C PM	?		?	

Number 7 was ex National Motor Museum, Birdwood in about 1992. Constructed as a 368 mm gauge version of a Commonwealth Railways GM class, it was rebuilt at Port Dock in 1996 to resemble a VRT class. It is planned to refit this unit with four-wheel bogies to make it a B-B.

Editor 1/97; Arnold Lockyer 2/97

PORT DOCK STATION RAILWAY MUSEUM INC, Semaphore - Fort Glanville 457 mm gauge

(see LRN 113 p.16)

This railway was operating on a daily basis during the Christmas holidays. Trains were hauled by 2-4-0 *Bill* (Willis Light Engineering 43 of 1992). The line is exceptionally well laid in heavy rail and is a great asset to the foreshore in this popular part of Adelaide. In the loco and carriage shed at Semaphore was 4wPM *Chitty* which is based here in case of emergency. This unit was originally 610 mm gauge and used at Barry's Brickworks, Torrensville, until

acquired by the (then) Mile End Railway Museum and converted to 457 mm gauge.

Editor 1/97; Arnold Lockyer 2/97

TASMANIA

EMU BAY RAILWAY CO LTD 1067 mm gauge

(see LRN 113 p.17)

Gutteridge Haskins & Davey have carried out an investigation to assess corrosion problems on the Pieman River Bridge. The original bridge, built in 1899, was replaced by the new bridge in 1978 when part of the area was flooded by a hydro scheme. It is 56 m above water level and is 138m long with a major span of 65m. Corrosion has been a problem with the 17,500 high strength bolts on the bridge. A joint checking program is now in progress in association with repainting and track replacement, and about 2500 bolts are expected to be replaced.

The body of carriage DB5 has been removed to Burnie from Guildford, where it was used as a fettlers store, and will be restored for the centenary celebrations. The car was built in 1886 by the Ashbury Railway & Carriage Co in Manchester for the Tasmanian Government Railways, and was sold to the EBR in 1957.

VICTORIA

AUSTRALIAN PAPER MANUFACTURERS LTD, Maryvale 1600 mm gauge

(see LRN 112 p.16)

The two Clyde VR T class Bo-Be DE locomotives hired for use here have subsequently been preserved. They are T334 (56-105 of 1956), preserved at Crib Point, and T342 (Clyde 56-123 of 1956) at Korumburra. The Clyde Y class which replaced them on hire, Y173 (58-593), was scrapped by Smorgans in 1996.

Australian Locomotive News 2/97 via Editor

BASS VALLEY RAILWAY 610 mm gauge

(see LRN 105 p.17)

A section of 610 mm gauge track had been laid in the grounds of the Bass Station Restaurant by October 1996 and work was continuing on a circuit of the restaurant grounds. The 4wDM Ruston & Hornsby locomotive (which one? -Ed.), 4 hopper wagons and bogie flat car came from Cheetham Salt at Laverton.

It is believed that at least the derelict unidentified Ruston & Hornsby 4wDM from Sandhurst Town has ended up at the Bass Valley Railway site.

RF McKillop 11/96, Rail News Victoria 11/96; Peter Medlin 2/97

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 115 p.16)

As forecast in LRN 115, the gasworks trio: Couillet 2-4-2ST 861 (43 of 1886), Couillet 0-4-0T 90 of 1890, and Peckett 0-4-0ST *Sir John Grice* (1711 of 1926) ran a special train from Belgrave to a point about half a mile beyond Lakeside on Melbourne Cup Day, November 5th. The train consisted of five canopied NQR trucks, and the locos were (mercifully) minus their Thomas like face-masks. The two Couillets ran another special train during December, chartered by the owner of the locos. That trip demonstrated that the spark-arresting

capabilities of the locos are not as good as one would expect, judging by their appearance.

Walkers B-B DH DH59 (646 of 1970) ran its first revenue trains on the Puffing Billy Railway, on Sunday January 5th, which was the first Total Fire Ban day of the season. On the first trip it was double-headed with 0-6-0DM D21 (TGR Launceston, 1968), this being a precaution in case of any problems with DH59. On the second trip DH 59 was solo hauling 13 carriages. It also did a third trip to Lakeside on the day. The loco was freshly repainted in the QR green and grey (DH) colour scheme with yellow painted DH 59 numbers on the cab side and buffer beams. The Walkers builders plates were fitted to the sides of the cab. Whilst operational it was missing the glass numbers on each end of the hoods and there were other minor jobs still to be done. It was subsequently called upon on several Total Fire Ban days in January and February, and was considered to have performed very well.

On the Gembrook restoration project, the last two foundations of bridge No.9 are about to be built. These are on each side of Cockatoo Creek where the water level is now the lowest it has been for many years. The rest of the bridge will be built by volunteers, and could be completed by Christmas if funds are available.

Elaborate plans have been drawn up for both Gembrook and Cockatoo stations. At Gembrook two stations are proposed. One is on the original site, and is basically a reconstruction of the original station at its peak size. The second one is new, but of heritage style, parallel to the old engine shed (which will be rebuilt). This will bring the train right into the town. The "new" station will accommodate nine car trains, the "old" one will accommodate 16 car trains. On market days trains will terminate at the "old" station, because the market will occupy the area around the new station. Not all of this will be built by the proposed opening date in October 1998.

In the long term Cockatoo is also planned to be a recreation of the station at its peak, but with an extended verandah. Initially it will be a signboard on a gravel platform. Since trains will cross at Lakeside, a second platform is proposed here, and a siding to store trains.

The initial timetable for Gembrook operations calls for one train a day, Mondays to Fridays, with a travel time of 90 minutes Belgrave to Gembrook, and arrival at Gembrook about 12 noon. On weekends and public holidays, two trains will be scheduled. The timetables are designed so that the existing Belgrave -Lakeside services will not be affected. In the longer term secure loco and rolling stock storage may be provided at Gembrook, so that trains can originate from Gembrook.

Also in the longer term, some 2 ft gauge track may be laid, as well as

an operating sawmill, but the Museum will remain at Menzies Creek, as customers from the Luncheon Train visit it.

It seems likely that Emerald - Gembrook return trips might be promoted, so that Emerald would become a much more important pick-up point on the railway.

To meet the needs of rising traffic and the Gembrook restoration, work on restoration of 2-6-2T 6A (VR Newport, 1901) has commenced, though it may not be ready until sometime after October 1998. Beyer Peacock 2-6-0+0-6-2T G42 (6268 of 1926) is expected to take another three years to complete. However, by mid January 1997, the pony and driving wheels had been placed beneath both engine units of the Garratt. It is hoped that the front and rear tanks, currently stored on 21 NQR at Emerald, will be fitted to these units within the next few months.

Peter Medlin 2/97; Frank Stamford 2/97 & 3/97

Private preservation, Heyfield 610 mm gauge

The fate of the ex Sandhurst Town Perry 0-6-2T (7967.3.50 of 1950) was discovered in a chance meeting with one of the three owners around mid November 1996. It appears that the consortium is based in Heyfield, and at the time of the meeting had not decided where the loco would be running.

Peter Medlin 2/97

PUFFING BILLY RAILWAY PRESERVATION SOCIETY, Menzies Creek Museum various gauges

(see LRN 92 p.18)

Perry 0-6-2T *Delta* (7967.50.4 of 1950) has had its smokebox removed as restoration work continues.

Hudswell Clarke 0-6-0 9 (1863 of 1952) is still under repair at the Museum. Hudswell Clarke 0-4-2ST No. 4 (1559 of 1925), Baguley 0-6-0DM *L'il Toot* (3354 of 1951), and Malcolm Moore 4wPM 1015 of c.1943 are all operational.

Peter Medlin 2/97

RED CLIFFS HISTORIC STEAM RAILWAY INC 610 mm gauge

(see LRN 108 p.22)

There were no operations of Kerr Stuart 0-4-2T 742 of 1901 over the Christmas period. Rail accreditation formalities are not yet completed, and the opportunity was taken to carry out some work on the locomotive.

John Browning 12/96

WALHALLA GOLDFIELDS RAILWAY 762 mm gauge

(P.O. Box 1576, TRARALGON Vic 3844)

(see LRN 116 p.19)

The report in the last LRN regarding services to Happy Creek station commencing on 1 December 1996 seems to have been somewhat inaccurate. Its source was the WGR's internet site. In fact 380 metres of track still needed to be laid to Happy Creek at that date, and it was planned to attempt to lay this between 7 and 12 December, working from 10 am to 8 pm.

The delay appears to have been caused by a problem in getting rails from Holbrook, NSW. An opening ceremony for the railway to Happy Creek was scheduled for Friday, 13 December, with Mark Birrell, (the Minister for Industry, Science and Technology) doing the honours. By 3 January 1997 regular trains were still not running to Happy Creek, although the additional track was in place. The problem was that it had not been officially passed as trafficable.

The trip is well worth doing as the railway clings to a ledge above Stringers Creek, with the road occasionally visible on the other side of the narrow valley, and at a much higher elevation. The track is very well laid. Some quite major works have been completed on the formation to Happy Creek to repair washaway damage, and earthworks have been carried out at Happy Creek to provide a run-round loop. A picnic area is also being developed at this site.

The trackbed between Thomson station and Erica is to be developed as a walking track, and the WGR will be managing this. Eventually it is hoped to restore this as a railway, with trains running from Erica to Walhalla. The State Sawmill site at Erica has been earmarked as a workshops site for the WGR.

Henschel 0-6-0WT 25427 of 1956 (see LRN 111 p.18 [?]) is on long term lease to the railway. As a first stage of its restoration, a detailed investigation of its mechanical condition will be made.

The team restoring Hudswell Clarke 0-6-0 1553 of 1924 would welcome any information regarding suppliers of equipment for this type of locomotive, as well as useable parts, and references to magazines or technical papers which might be helpful. If you can help, or would like to make a tax-deductible donation to its restoration, contact Dick Sibley on (03) 5174 2645.

Frank Stamford 2/97, On Track No.6

LONG TUNNEL EXTENDED TOURIST GOLD MINE, WALHALLA 610 mm gauge

(see LRN 97 p.18)

A visit here on Saturday 26 October, 1996 found that the E M Baldwin 4wDH loco (6008-1-6-75 of 1975) has gone. On being asked its whereabouts, a staff

member of the mine stated that the loco was little used and when started in the mine, where it was kept, used to fill the mine with smoke 'until it cleared its throat'. The Mine Committee decided to sell the loco, and it was sold back to E.M. Baldwin a couple of years ago. It was then apparently resold to 'a mine in Queensland'.

Peter Medlin 2/97

WESTERN AUSTRALIA

MT NEWMAN MINING CO 1435 mm gauge

The locomotive which was earmarked for Thursday Island in Queensland (see LRN 112 p.14) was Mt.Newman's Com-Eng Co-Co DE 5499 (C6096-04 of 1975). It appears that the difficulty in offloading the machine means that the idea will fall through. Instead, there is some prospect of it going to the Pilbara Railway Historical Society.

ARHS Bulletin 3/97 via Editor

OVERSEAS - ARGENTINA

FERROCARRIL AUSTRAL FUENGUINO 500 mm gauge

The Train to the end of the World, headed by 500 mm gauge Winson Engineering 2-6-2T CAMILA (15 of 1995), waits at a passing loop, January 1997.

Photo: Mrs David Burke

El tren del Fin del Mundo (The train at the end of the world) is the world's most southerly operating railway - at almost 55°S, it equates in latitude with Australia's sub-Antarctic Macquarie Island. From the port of Ushuaia (population 42,000), Cape Horn is only a matter of hours away by ship, and the start of the Antarctic Peninsula is but two days' sailing away, or as many hours by air.

There are two steam locomotives on the line. No.2 *Nora* is an 0-4-0+0-4-0T Beyer-Garratt closely based on the Tasmanian Government Railways pioneering machines for the North East Dundas Tramway. It was reportedly built locally in 1994. A second is a Winson Engineering 2-6-2T *Camila* (15 of 1995), built in England along Lynton & Barnstaple lines. Both locomotives are gas fired. There are also two diesels, of which No.1 *Rodrigo* is an Orenstein & Koppel 0-6-0DM built in 1936 and converted from 600 mm gauge, while the other is a smaller unit.

Winson Engineering also built the three superbly built side-door coaches fitted with air braking. One can be used as a buffet car. Well upholstered in burgundy fabric, the cars have proper "railway type" doors and windows which would appear to be necessary as the seven kilometre line traverses a narrowing valley of the Tierra del Fuego National park, with snow capped mountains fringing the route. Constructed for Tranex Turismo SA on the route of an early century timber tramway when remote Ushuaia contained a large penal colony, heavy steel rail and firm crushed rock ballast indicate that this tourist enterprise has not been starved of funds. All rolling stock is in green livery except the Garratt which is in Midland red.

A three times daily service is operated from a large, architecturally pleasing terminus which houses a covered platform with adjoining offices, gift shop and cafe. Adjacent, and in similar timbered style are the loco and carriage sheds. According to a locality map, an extension is planned (possibly on the original right of way) to the waterfront and new air terminal at Ushuaia where travellers gather to visit the National Park and to join one of the numerous Russian ships that offer Antarctic cruises. A ride on the Train to the end of the World is recommended, especially to find a Tasmanian K class Garratt in action.

NOTES, CORRECTIONS AND COMMENTS

Emu Bay Railway Centenary Celebrations

The Don River Railway is operating a 11 day rail and coach tour around Tasmania from 24 September to 4 October to celebrate 100 years of the Emu Bay Railway Company. Triple-headed steam trains are planned for the EBR section of the tour (1-3 October), while vintage carriages owned by Don River will be used on a special train between Burnie and Goodwood on 4 October. Other features/options include The Bush Mill, Zeehan and Glenorchy Museums and a west coast abandoned rail lines tour with Lou Rae. The actual Centenary Celebrations will be held at Burnie on 5 October, with shuttle steam trains between Burnie and Ridgley. Tour bookings through Tas Vacations (Phone 1800 030 160).

Mystery diesel loco

The small diesel which featured on the cover of LRN 102 is now confirmed to be an EE Baguley Ltd product built in Burton-in-Trent, England. The general type was produced from 1937 to the early 1960s, but the engine fitted to the one at Campbelltown is reported to have been built by Lister in 1949. The canopy and bonnet cover as now fitted are not original. Unfortunately, the Baguley records have not been very helpful in identifying this locomotive as it seems likely to have been supplied to an agent such as Railway, Mine & Plantation Equipment. The fitting of an exhaust conditioner suggests use in tunnelling or in an armaments depot. Can any of our members provide any more clues?

Southern Private Railroad

(see LRN 117 p. 3)

Chris Hart writes to say that Hanomag 0-8-0T 10410 of 1925 was indeed sold to the USA. However, the Mallet 0-4-4-0T Orenstein & Koppel 3770 of 1909 is still in Victoria.

Chris Hart 4/97 & Rob Dickinson via Editor

RESEARCH COLUMN

Bridge rail in Hunter Valley collieries

Brian Andrews writes with further information about bridge rails. They were used in coalmines by contract miners to extend the rails from the permanent travelling roads to their working places (bords). They were normally 6 ft long for easy handling by the miners (permanent rails were the normal T rail section and normally 18 ft long or even longer if it was possible to get them down the shaft) whereas permanent rails in the main travelling roads were laid by rail layers who did nothing else than extend the main travelling roads.

The Bridge rails were known generally in the mines as *miners' rails* or *bord rails*. They were butted together and spiked to a sleeper through the holes punched in the "web" of the rail. They could easily be reclaimed and reused in the next bord.

They could be roughly laid in a curve to get the line around a corner without the need for curved rails to be used. This was sufficient to get the skip into the bord. During Brian's long association with the coal mining industry, no curved miners rails were ever observed. However, at one colliery, lengths as long as 18 ft were seen. It is assumed that these sections were cut to length as

required, but as contract mining had finished at the colliery in question at the time of observation, it is assumed that these examples had never been cut.

The turnouts or points used with these miners rails consisted mostly of a steel plate about $\frac{1}{2}$ " thick with $1\frac{1}{2}$ " square section rails riveted to the plate. The square rail could easily be curved, and the turnouts were constructed similar to standard rail turnouts with checkrails etc. The plate was spiked to sleepers and the miners rails were butted against the steel plate.

As a boy growing up at West Wallsend Extended Colliery at Killingworth, Brian came across many examples of rails, turnouts etc used in the mining industry at the time. Unfortunately, many of these have disappeared forever.

The following collieries had listed in the *Schedule of Plant and Machinery* dated January 1st 1931, the following rails underground:

Colliery	T class	Bridge class
Abermain No. 1	1245 tons	237 tons
Abermain No. 2	620 tons	220 tons
Seaham No. 1	combined 490 tons	
Seaham No. 2	combined 700 tons	

All other major collieries operating at the time would have had similar amounts of rail depending upon the size of operations.

(Brian has provided some catalogue sheets for bridge rail for the 1924 to 1952 period and also his sketches of rail and turnouts. Photocopies are available from the editor on receipt of a stamped addressed envelope.)

New Caledonia (Nouvelle Calédonie)

On behalf of Kelvin Parkes, in Germany, Steve Malone enquires about narrow gauge locomotives in New Caledonia. It has been recently reported that some Decauville steam locomotives have been found there and rescued from the jungle with the help of the French Air Force. In addition, a tourist guide states that a "steam train" is preserved at the Musée de Mines at Thio. Is this a Decauville? Lastly, there appears to be mention of a "locomobile" in the same travel guide, about which details are sought. Does anyone out there have any information about the current rail situation in New Caledonia, or alternatively, if anyone is heading in that direction they may be able to follow up these clues. Responses via the Editor, please.

Yorke Peninsula, SA

Brochures put out by the Department of Environment & Natural Resources (*Innestown 1913-1930* and *Thomson-Pfitzer Plaster Trail*) and the Marion Bay Progress Association (*The early days of Marion Bay, Innestown and Stenhouse*

Bay) features the Hassel and Waratah gypsum companies and their tramways, including some photographic material.

NEW SOUTH WALES

NSW Heritage Assistance Programs 1996/7

In late 1996, the NSW Minister for Urban Affairs & Planning, Craig Knowles, announced the approval of \$2.4 million for 344 heritage projects. In addition to the Great Cobar industrial archaeological site study and Richmond Main restoration projects (mentioned below), funding of interest to LRN readers includes that for:

- Lithgow City Council for a conservation management plan of Lithgow Blast Furnace Park
- Goulburn City Council to complete the restoration of the Boiler House and Locomotive Shed at the Goulburn Steam Museum
- 3801 Ltd to restore former SMR Beyer Peacock 2-8-2T 18 (5909 of 1914)
- Hunter Valley Railway Trust to relocate five steam locomotives (ex-SMR 10-class 2-8-2Ts) to a permanent site at North Rothbury
- Greater Lithgow Mining Museum Inc. for Stage IV of the work associated with the establishment of the State Mine Museum at Lithgow.

Bob McKillop 4/97

BHP LTD, Newcastle 1435 mm gauge

(see LRN 112 p. 6)

The closure of the steelmaking plant at Newcastle by the end of 1999, announced on 29 April, will presumably mean the elimination of the remnants of the once-mighty railway system which was so lovingly recorded by Keith McDonald in the LRRSA book *Steel & Rails in Newcastle*.

The Australian 30/4/97 via Editor

CARGILL AUSTRALIA LTD, Newcastle 1435 mm gauge

Ex STATE RAIL AUTHORITY OF NEW SOUTH WALES of NSW Goodwin Co-Co DE 4812 (83712 of 1960) has been sold to this American stockfeed company who plan to open a siding in Newcastle. The loco was noted painted fluorescent yellow with a big black V on hood ends and headstocks at DELEC on 12 April, carrying the identity CAR 1.

Brad Peadon 4/97

COBAR REGIONAL MUSEUM, Great Cobar Outback Heritage Centre 1435 mm & 457 mm gauge

(see LRN 116 p. 7)

This *outback* museum has an active curator and is making impressive progress recording and presenting the social, pastoral and mining history of the district. The Museum obtained a 1996-7 Heritage Grant to undertake an industrial archaeological site study of the Great Cobar Copper Mine. The intention is to map the industrial sites, including the firewood and standard gauge electric railways, in order to provide visitors with a more detailed understanding of the site. The ex Great Cobar Mine Bagnall / British Westinghouse 4wWE of 1908 (identified as the first electric locomotive in NSW) is on display under cover next to the Far West Children's Health Scheme carriage. The electric motor and control equipment is missing. Restoration is a longer term project.

Bob McKillop 4/97

COOKS RIVER MOTOR BOAT CLUB

A broad gauge track (probably 5 ft 6 in gauge or wider) on a concrete ramp crosses Holbeach Avenue to connect the Cooks River with a boat storage yard which is served by a traverser. No motive power was seen, and so it can be imagined that a tractor is used to haul the boats.

Ray Graf 4/97

BOB HARRIS & SONS, Cawley Tunnel Mushroom Farm 610 mm gauge

(see LRN 109 p. 5)

A publication *Ghost Train Walk* by John Oates mentions that only the Cawley (No. 2) Tunnel south of Waterfall is now used for mushroom growing, and the operators' names are as given above. It is confirmed that a 4-wheel diesel locomotive is still in use to push five or six four-wheel wagons into the tunnel and pull them back out to the packing shed.

Ray Graf 4/96

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY LTD, Albion Park 610 mm gauge

(see LRN 117 p. 5)

A 25th Anniversary Celebrations and Silver Jubilee Rail Enthusiasts' Day is to be held on Saturday June 21st, starting at 1 pm and featuring night running.

ILRMS 4/97

PASMINCO LTD, Broken Hill 457 mm, 610 mm & 915 mm gauges

(see LRN 116 p. 9)

A major mine clearance sale was due to be held on 6 to 9 May at the North and South mines. A variety of equipment was advertised, and rail items are believed to include:

- Eleven 8-ton Gemco battery electric locos, 2 ft gauge
- 78 Granby ore trucks, 2 ft and 3 ft gauge
- Barber Greene mobile underground concrete hopper with seven 2 ft gauge skips
- Ammesa 85L underground backhoe on 2 ft gauge trolley
- Three 8-ton locos (spares only)
- Twelve 3 ft gauge ore trucks
- Eimco 25 rocker shovel

The following notes of battery electric locomotives were made during inspection of the items for sale:

North Mine - 2 - 3 May

RICHMOND VALE PRESERVATION CO-OPERATIVE SOCIETY LTD,

Richmond Vale Railway Museum 1435 mm gauge

(see LRN 106 p. 5)

For the 1997 Hunter Valley *Steamfest* (19-20 April), ex-South Maitland Railways Beyer Peacock 2-8-2T 24 (6125 of 1922) and Clyde 0-4-0ST *Marjorie* (462 of 1938) were in steam. 24 operated passenger trains to Pelaw Main and *Marjorie* hauled a 4-wheel brake van on shuttle services to Mulbring Road and return. Restoration of ex-J&A Brown ROD 2-8-0 locomotive 23 (Great Central Railway, 1919) to operating condition has commenced. The Society obtained a 1996-7 Heritage Grant to restore ROD 23 as well as John Brown's personal rail carriage at Richmond Main Colliery. The RVR has advertised 31 running days between April and December 1997. Rail-based activities at *Steamfest* were down on previous years, with only 3801 offering a mainline attraction with shuttle services from Maitland to Mindaribba (near Paterson).

Bob McKillop 4/97

RTZ-CRA, Southern Copper Refinery & Smelter, Port Kembla 610 mm gauge

(see LRN 81 p. 6)

This site has been purchased by Port Kembla Copper, a Japanese consortium which will spend \$250m before reopening it in two years time. The plant was

put on a care and maintenance basis in January 1995. There was a 2 ft gauge rail system with Hunslet diesels here, but it is not known whether this still exists.

Herald-Sun 19/12/96 via Ray Graf; Editor

SILVERTON TRAMWAY PTY LTD, Broken Hill 1435 mm gauge

(see LRN 117 p. 6)

Goodwin Co-Co DE locos 34 (83715 of 1960) and 35 (84133 of 1962) have recently returned to Broken Hill as their services are not currently required by Australian National. The builder's date for sister loco 37 (84128) is 1961.

Brad Peadon 4/97

SYDNEY WATER, Vacluse - Bondi Sewerage Tunnel

(see LRN 105 p. 8)

It is understood that a \$14m deep tunnel is or will be under construction between the Bondi treatment plant and Vacluse via Dover Heights and Diamond Bay, mostly following the route of Military Road. The tunnel will eliminate Sydney's last cliff-face sewage outfalls, and was expected to take two years to build from 1997.

Sydney Morning Herald 14/10/96 via Ray Graf

TRANSFIELD BOUYGES JOINT VENTURE, Airport Link 900 mm gauge

(see LRN 117 p. 7)

At this site, there are no rail operations on the surface; they are restricted to the pit leading to the underground tunnel. Equipment on the surface is stored on large concrete blocks about a metre high, and moved between surface and pit via a large rail-mounted 100 tonne gantry crane which runs the length of the pit. The crane was used to assemble a tunnel boring machine which by 22 March had progressed at least 200 metres in the direction of the City.

The locomotives appear to be identical Schöma 4wDH locomotives built in Germany. Builder's numbers noted were 4858 (No. 4), 4860 (No. 3) and 4861 (No. 2), while it is assumed that No. 1 is 4859. Type is CFL-200DCL, 225 Kw, 35 tonne, and it appears that the building date is 1985; rebuilt 1996.

The history of this batch of four locomotives appears to be as follows (depending on your editor's scanty ability to translate from the German): delivered 1995 new as 1000 mm gauge to Spie Batignolles, TGV Atlantique, Tunnels de Villejust, Marcoussis, France; regauged to 900 mm by Schöma; delivered November 1989 to MT Group I/S, Denmark, for tunnel construction as part of a massive road link across the Storebælt Strait; rebuilt by Schöma

1996 with higher profile cab for Transfield-Bouygues Joint Venture.

Rolling stock is fitted with a two-pipe continuous braking system, and some vehicles have electric head and tail lights. It appears the rolling stock may also have come from the Storebælt project. Pointwork was noted with what appeared to be French manufacturer's plates.

BUNDABERG SUGAR CO LTD, Mourilyan Mill 610 mm gauge

(see LRN 116 p. 11)

The following railway equipment has been advertised for disposal by tender:

Diesel engine: 6 cylinder Gardner engine, approx. 150 hp. 4 cylinder Ford engine, approx 60 hp driving a 3 metre railway slasher. 3 cylinder Southern Cross engine

Mark BE. C/BG. C 30 hp. Interested parties were invited to contact Henry at Mourilyan Mill phone (070) 43 8223.

Queensland Tender 8/5/97 via David Blakeley

CSR LTD, Herbert River mills 610 mm gauge

(see LRN 117)

A 50-tonne mobile pile driver working on bridge reconstruction at Boundary Creek, Fairford, capsized in the creek bed and brought down power lines on 17 March. This work is part of the program adopted to allow Victoria Mill's Walkers B-B DH locomotives to work to Hamleigh and Lower Stone in 1997.

A joint project to construct a \$1.64m road/rail high level bridge across Elphinstone Creek at Abergowrie is reportedly in danger. The problem is a lack of assistance from the State Forestry authority, which has been asked to make

a contribution along with the state Transport Infrastructure Development Scheme, the Hinchinbrook Shire Council, and local canegrowers. The new bridge would replace an existing low-level timber road bridge, and Canegrowers and CSR Victoria Mill plan to build 6.5 km of cane railway across the bridge.

Recent flooding has caused numerous washouts of track through the Herbert river district.

Herbert River Express 20/3/97 & 3/4/1977 via Chris Hart; Chris Hart 4/97

HAUGHTON SUGAR CO PTY LTD, Invicta Mill 610 mm gauge

(see LRN 115 p. 11)

A four kilometre tramline extension up river on the north side of the Haughton River is reportedly under construction for the 1997 season.

Bob James 5/97

ISIS CENTRAL SUGAR MILL Co., 610 mm gauge

(See LRN 114)

DH class contrasts: These two Isis Mill units make an interesting comparison with the relatively unaltered Walkers DH loco featured on our front cover: 2 ft gauge Walkers B-B DH ISIS No. 1 (602 of 1969) together with its brake wagon, itself built on the chassis of a Walkers B-B DH (654 of 1970). 17 October 1997.

Photo: Brad Peadon

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 117 p. 10)

Pleystowe Mill's new brake wagon was still awaiting the fitting of brake equipment when noted at the mill in early April. The mill's two Motor Rail *Simplex* 4wDM locomotives still in service have been repainted and received painted names and numbers as follows:

01	Li'l Toot	Motor Rail	21575	1956
02	Barney Bull	Motor Rail	9861	1953

A Pleystowe Mill crew was observed busy renewing the main crossing of the Eungella Road near the Balnagowan Bridge at Pleystowe in early May. They had with them rail mounted equipment labelled "John Holland 33151", which was not painted the usual yellow, but in a two tone colour scheme which

is presumably that of John Holland Constructions. The equipment consists of a small flat wagon with a standard mobile arc welding set mounted on it and another longer wagon with an arched centre which is topped by four automotive type hydraulic jacks. This is believed to be a mobile rail welding unit fitted with equipment to straighten and align the rail at joints before welding.

Racecourse Mill's Com-Eng 0-6-0DH *Oakenden* (FB3169 of 1963) was noted repainted in the corporate livery in early April.

Marian Mill's new PBR-201 ballast regulator is builder's number 481 of 1996.

At Farleigh Mill, the lack of covered accommodation meant that the two Walkers B-B DH locos, *Calen* and *Miclere* (692 of 1972 and 664 of 1970 respectively) were sheeted over with tarpaulins outside the shed for the slack season.

Editor 4/97; Barry Campbell 5/97; Bob James 5/97

THE MULGRAVE CENTRAL SUGAR MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 117 p. 10)

Work will soon be commencing to relocate the main line between Edmonton and Gordonvale in association with road works on the Bruce Highway through Edmonton including the requisite grade separation. Two options are currently under consideration, both taking the line to the south of the township.

It is believed that the new KMX 12T tamping machine was delivered to the mill from Plasser Australia around the start of May.

Bob James 5/97

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 114 p. 12)

Walkers B-B DH 4 *Carmila* (767 of 1971) was noted in the truck shop on April 3rd, having some welding done on the headstocks. A new brake wagon has been built, based on an ex-QGR wagon, and is numbered 3. Unlike the two previous examples, this unit was built at the mill. It is reported that one of the mill's two Clyde DHI-71 0-6-0DH locomotives, 2 (57-147 of 1957), is to be laid aside with its engine and other parts going towards making up one good unit, namely D1 (56-101 of 1956).

Editor 4/96

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 117 p. 11)

The two Walkers B-B DH locomotives purchased from a private individual associated with the Goulburn Roundhouse Preservation Society are 7314 (673 of 1971) and 7339 (701 of 1972). It is believed that 7314 has a seized engine, but this will be discarded and replaced.

Proserpine Mill are reportedly building a tramline extension into the Gunyarra area south of the town, into a big area of recent expansion of cane growing.

Bob James 5/97

ROTARY CLUB OF WYNNUM AND MANLY, St Helena Island project 610 mm gauge

(see LRN 115 p. 14)

Baguley 0-6-0DM 3377 of 1953 was noted still at Fisherman Island on 18 March. It has been turned around from its previous position and was being painted all over in a mid green colour, with a number of parts nearby.

Brad Peadon 4/97

TASMANIA

MOUNT LYELL ABT RAILWAY SOCIETY 1067 mm gauge

(see LRN 116 p. 18)

It was claimed in March that State government delays in making available a lease for the disused trackbed of the Mt Lyell Railway could jeopardise potential investment of \$1m. It is estimated that \$1.6m could complete restoration of the adhesion section between Queenstown and Rinadeena together with one locomotive and two carriages.

The Sunday Tasmanian 2/3/97 via Mark Plummer

REDWATER CREEK STEAM & HERITAGE SOCIETY INC, Sheffield 610 mm gauge

(see LRN 107 p. 13)

This group held its fourth *Steamfest* on 7-8 March 1997. Some 2000 visitors rode over 1 km of the 610 mm gauge steam railway operated by Krauss 0-4-0WT 5800 of 1907 (rebuilt with boiler from 5682 of 1907 - not as stated in LRN 107) with the former NE Dundas Tramway 1st class passenger car of 1898 and ex-Boulder Tramway 2nd class passenger car. Other steam exhibits

included three traction engines, a Sentinel steam wagon, a Fowler compound roller and portable engines.

Approximately 1 km of track was in use during *Steamfest*. An additional 600 metres of track have been laid across a Council road, and the foundations are in place for the final 200 metres, with a terminal run-round loop, which will complete Stage 1 of the project. Ex-Mt Lyell 0-4-0WT 10 (6067 of 1910) currently stored at the old Second River Tramway site at Karoola, is to join the railway on lease from the Queen Victoria Museum, Launceston. On arrival at Sheffield, dismantling will take place to enable a thorough boiler inspection with a view to full restoration to working order.

Operating weekends at Sheffield are the first weekend of each month. Daily operations will take place for three weeks from 27 December, and *Steamfest* 98 will be held on 7-9 March 1998.

Bob McKillop 4/97; Peter Martin 4/97

VAN DIEMEN LIGHT RAILWAY SOCIETY INC, Don River Tramway 1067 mm & 610 mm gauge

(see LRN 116 p. 18)

Ex Emu Bay Railway Dubs 4-8-0 8 (3856 of 1900) was used for 20 services on 1, 2 & 3 March. It was moved onto the turntable for publicity photos on 23 March. A number of former TGR 4-wheel goods wagons have been restored and are used for demonstration freight trains. Noted ready to enter service was ex-EBR wagon C2, which was formerly a North Mt Lyell Railway hopper wagon. Restoration of the 1910 North Mount Lyell Riley rail motor is proceeding, while John Fowler 0-6-0T 5265 of 1885 is expected to be fully restored to operating condition by 1998. Ex-Macknade 610 mm gauge Hudswell Clarke 0-6-0 No. 5 (1548/1925) has been sold to Warrick Turner of Echuca and is awaiting transport to Victoria.

VICTORIA

DEAN MARTIN, Gator Magoon's, Porepunkah 610 mm gauge

(see LRN 111 p. 14)

"Gator Magoons Recreation & Sports Centre" was noted for sale on 10 December 1996. It was not clear whether the railway was part of this complex, but the steam outline locomotive was noted on a property adjoining.

Ray Graf 4/96

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 117 p. 15)

Beyer-Peacock 2-6-0+0-6-2T G42 (6268 of 1926) now has its wheels and water tanks fitted to both engine units.

The Fordson engine has now been refitted to the TACL/Malcolm Moore 4wPM tractor (55 of 1928), along with the radiator and fuel tank.

The foundations for bridge 9, over Cockatoo Creek, have now been completed. Further work awaits funding.

The Gembrook services which have operated on average eight weekends a year since 1992 using the Peckett 0-4-0ST *Sir John Grice* (1711 of 1926) are scheduled to run on the last weekend in May this year, but they may not resume in September after the normal winter recess. One of the reasons they are not expected to resume is that the Gembrook yard will become a major worksite whilst the new station is being built.

On 19 April, 18 NBH went into service. It is the first steel framed NBH car to be built, and has a revolutionary feature - comfortable upholstered seats!!! The vehicle looks like other NBHs, except in minor details. The lamps and door handles are reclaimed from other old vehicles. Another five are to be built. The steel construction is much cheaper than the traditional timber framing.

On 19 April, several other interesting things happened on the railway. *Sir John Grice* ran a special train from Gembrook to Fielder and beyond for an official opening ceremony of Fielder station. The event was held for those involved in the station's restoration, including members of the Fielder family, and a barbecue was held at the station.

On the same day the tamper PTT 16 (Tamper 381 of 1988) and a work train were working beyond Lakeside on the track between bridges 8 and 9. 0-6-0DM D21 (TGR Launceston, 1968) then returned to Lakeside on the works train, which was then combined with the first scheduled passenger train from Lakeside to Belgrave, to make it a mixed train. It was double-headed by 2-6-2T 12A (VR Newport, 1912) and D21. Later in the day D21 returned to Lakeside attached to the back of a regular passenger train. D 21's last job for the day was to bring the workers back to Lakeside and Emerald, as there is no car access to the track beyond Wright.

On Wednesday 23 April, during school holidays, perfect weather brought out large crowds. To cope with the traffic the first train was double-headed with an NA class 2-6-2T and B-B DH DH59 (Walkers 646 of 1970) as far as Menzies Creek. DH59 then returned to Belgrave with a number of empty NBH cars. (The first train always has at least three NBH cars for bus tour groups

making single journeys as far as Menzies creek only.) The second train was then double-headed with an NA and DH59 to Lakeside and return. The third train was double-headed with an NA and D21 to Lakeside and return. The fourth and last train was hauled by an NA alone. The decision to double-head these trains was made on the day, as the traffic offering was unexpectedly high.

Frank Stamford 4/97

UPPER YARRA VALLEY HISTORICAL SOCIETY MUSEUM, Yarra Junction, 914 mm gauge

(see LRN 9 p. 20)

The 0-6-0PM tractor (rebuilt Malcolm Moore c. 1938) at Yarra Junction has been restored to working condition, but only has enough track to move about 6m. (According to *Powelltown*, this is probably a rebuilt Days tractor - Ed.)

Frank Stamford 4/97

WALHALLA GOLDFIELDS RAILWAY 762 mm gauge

(see LRN 117 p. 17)

(P O Box 1576, TRARALGON Vic 3844)

Trains commenced running to Happy Creek station at Easter. The alignment of the track at Happy Creek has been changed to allow the construction of a loop, so that trains no longer have to be propelled in one direction. Construction of the loop required rock blasting to create room for it.

Further work planned for Happy Creek includes landscaping, a footbridge for people walking to and from Walhalla, pathways, safety fences, and picnic areas. This work has to be certified by the Railway's insurers before one-way tickets to and from Happy Creek can be sold. At present passengers cannot leave the station area.

The Hudswell Clarke 0-6-0 (1553 of 1924) has been stripped down for boiler inspection, but funds are required for the project to progress.

On Track No. 7, Frank Stamford 4/97

COAL CREEK HISTORICAL VILLAGE, Korumburra 610 mm gauge

(see LRN 115 p. 15)

Coal Creek has acquired Bundaberg Foundry 0-6-2T *Kolan* (7 of 1953). It was withdrawn from service in 1973 and was later stored before being placed on display at Boyds Antiquarium, Bundaberg, in 1975 (see LRN 117 p. 8).

The locomotive needs a set of replacement boiler tubes, new funnel, new set of firebars and a fire hole door. A new steam air pump has been ordered

from Talylyn Railway Company in Wales, for the train braking system - an accreditation requirement.

The tramway (which operates each day with qualified volunteer staff) is being extended further northwards into the Coal Creek site to make the railway more accessible to our visitors and to give it a purpose - servicing the Black Diamond Coal Mine. The earthworks are virtually complete (incorporating a short section of 1 in 23 grade) and most of the ballast is now in place. This was retrieved from the Leongatha-Foster section of the abandoned V/Line railway. The volunteer track gang have inserted the turnout in the mainline just above the top station and 3005 ft red gum sleepers have been delivered to the site.

The following jobs urgently need voluntary assistance:

- Tracklaying
- Station building construction (timber on site)
- Locomotive shed (site cleared, plans and timber available)
- Repainting carriages
- Steam locomotive restoration: mechanical work, motion work refit, motion work polishing, boiler mounting refit, construction of new funnel, construction of new sliding fire hole door, repainting.

If you are interested in training to be a loco driver please contact Judy Martin on (03) 5655 1811. If sufficient interest is shown, local classes may be organised to help trainees get the necessary certificates.

The tramway has already proved a success, carrying over 3000 passengers since operations commenced just after Christmas.

WESTERN AUSTRALIA

BUNNINGS, Manjimup 1067 mm gauge

(see LRN 113 p. 21)

SSM No. 2 Beyer Peacock 2-6-0 (5475 of 1911) is preserved, presumably outside the sawmill office as recorded in LRN 3.

Industrial Railway Bulletin (UK) 615 via Ray Graf

BUNNINGS, Pemberton 1067 mm gauge

(see LRN 96 p. 17 & 18)

It is reported that a white liveried Com-Eng diesel is the locomotive here. (Can any reader confirm or provide further details? - Ed.)

Industrial Railway Bulletin (UK) 615 via Ray Graf

CARNARVON JETTY RESTORATION COMMITTEE 1067 mm gauge

(see LRN 111 p. 15)

Carnarvon's One Mile Jetty and tramway were entered permanently on WA's State Register of Heritage Places by the Heritage Council of WA in February 1997. They had been placed on an interim list in October 1996. The future of the jetty, although more assured, is not yet guaranteed. The Carnarvon Jetty Restoration Committee is still raising funds to enable a dollar-for-dollar grant of \$500 000 from the Federal Tourism Development Program which will cover the estimated \$1m restoration costs. Tourist rail services are no longer provided on the jetty, but steam trains are operating over the relaid Babbage Island line (see LRN 114 p. 18).

Northern Guardian 19/2/97 via David Whiteford

COLLIE RURAL LIFE MUSEUM narrow gauge

A Gemco 4wBE is preserved at this site, which is opposite the Tourist Information Office.

Industrial Railway Bulletin (UK) 615 via Ray Graf

COLLIE TOURIST & TRAVEL BUREAU, Collie Steam Locomotive Museum 1067 mm gauge

Among three ex-WAGR locomotives is to be found *Polly*, a converted Aveling & Porter traction engine 2-2-0WT, once used on Buckingham Brothers' timber line.

Industrial Railway Bulletin (UK) 615 via Ray Graf

MANJIMUP TIMBER MUSEUM 1067 mm gauge

A Martin 2-6-0 is preserved here. It is thought to be based on the chassis of 127 of 1895, a loco which served SAR, WAGR, CR and WAGR (again). It was supposedly sold to the Kauri Timber Co at Northcliffe in 1953, where it was resurrected using parts from Martin 8 of 1890, taking its number (109), and ending up with Bunnings from 1961. Also at this site is traction engine locomotive conversion Ransome, Sims & Jeffries 18047.

Industrial Railway Bulletin (UK) 615 via Ray Graf; Editor

MIKE MORGAN, Onslow 610 mm gauge

A 2 ft gauge tramway operated over four miles between the first Onslow jetty and town site until a new jetty and town were built in the 1920s. Three lowsided 2 ft gauge wagon frames have recently been dug out of a breakwater at Onslow indicating the possible fate of much of the 2 ft gauge stock when the 1920s 3 ft 6 in gauge jetty system was built. At least one of

the wagons has a WAR 1895 axle box cover and would have been built for the Roebourne - Cossack line, WAGR's only 2 ft gauge line which was itself replaced with 3 ft 6 in gauge in the 1930s. Mike Morgan is hoping to make one as-near-complete-as-possible wagon from the three discovered remains.

Mike Morgan & David Whiteford 3/97

ONSLow SHIRE COUNCIL 1067 mm gauge

Ex Public Works Department 0-4-0DM (ex PM) NW1 *Ashburton* (Andrew Barclay 320 of 1928) is preserved in the main street of Onslow with a four-wheel wagon and a passenger brake van. Cyclone Bobby visited the town in 1996 but the remains of the jetty railway and depot suffered little. However, the brake van lost its roof.

Mike Morgan & David Whiteford 3/97

PEMBERTON PIONEER MUSEUM 1067 mm gauge

SSM No. 8, Martin 2-6-0 (117 of 1895) is preserved here, and a short distance away is a preserved rail mounted steam driven sawing machine.

Industrial Railway Bulletin (UK) 615 via Ray Graf

ROTTNEST ISLAND RAILWAY TRUST 1067 mm gauge

(see LRN 113 p. 22)

Westrail volunteers spent much time in the latter half of 1996 extending the Rottne Island railway from its Oliver Hill terminus to a new platform at the H1 gun site, using the trackbed of the original gun siding.

New sidings for locomotive and carriage storage have been built near the Airport, freeing up the Kingston Barracks triangle, which had been used as the railway depot, for passenger operations. 500 metres of track including two sets of points and crossings were put in by the volunteers.

Westrail News Dec 96 / Jan 97 via David Whiteford

MEMBERS' ADVERTISEMENTS

Wanted - *Light Railways* 28 to 45, 49, 82 & 91 to complete sets for binding. Please state price required. All expenses on offers will be refunded. RF Hoskins, "Rio Vista", Ipswich Road, Brantham, Manningtree, CO11 1PE, UK.

For sale - Brand new copy of facsimile edition of *Light Railways* by JC Mackay. First published in 1896, it is a comprehensive survey of light and narrow gauge railways of the world at the time. 360 pages; 33 plates; 25 engravings. One of a limited run of 100 copies. \$77. 30 from Ray Graf, PO Box 1797, ORANGE 2800.

MEETINGS

MELBOURNE: Goulburn Steam Museum

Bruce Macdonald the well known founder of the Goulburn Steam Museum has kindly agreed to speak on the history of the museum. Bruce will showing some of his collection of slides in support of his presentation.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton

DATE: Thursday 12 June at 8.00 pm

SYDNEY: Any member wishing to know details of the next meeting should contact Craig Wilson on 02-9484 7984

LOCATION Woodstock Community Centre, Church St. , Burwood Note: Plenty of off street parking at the rear of the building and Burwood station is only a 5 minute walk away.

DATE: Wednesday 25 June at 7.30 pm

ADELAIDE: Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 3 June at 8.00 pm.

NOTES, CORRECTIONS AND COMMENTS

Port Kembla Copper Smelter and Refinery tour

A tour is being planned to the **Port Kembla Copper Smelter and Refinery** on Saturday 23 August. More details of this very interesting tour to a recently closed but still operational 2 ft gauge industrial railway can be found under the main heading for this location later in this issue.

Correction to photo-captions

Apologies for the **photo captions** being transposed on pages 18 & 19 of

LRN 118. Actually, it was the photographs which got transposed, not the captions!

[Note this transposition was corrected in the CD-ROM edition].

Ruston & Hornsby 0-4-0DM 305328

Ruston & Hornsby 0-4-0DM 305328 of 1954, sold by Sandhurst Town in 1996, remains unaccounted for in spite of a number of reports to the contrary (see LRN 115 p.15). Can anyone provide the appropriate news about its current ownership?

Snowy Mountains aerial tramway

An **aerial tramway** is in operation at Snubba Ridge near Blowering Reservoir in the Snowy Mountains to remove mature radiata pine from a steep plantation, as a preferred alternative to road transport. Details from the *Sydney Morning Herald* of May 6th, courtesy of Ray Graf.

Narrow Gauge Downunder

Narrow Gauge Downunder is a twice-yearly magazine of particular interest to modellers and contains some interesting prototype material. The Summer / Autumn 1997 edition, kindly provided by Roger Persson, includes the Dreamworld Baldwin 4-6-0 and the Granville-Semaphore line. Worth having a look at.

Notices of recent books to be reviewed in Light Railways:

A Crystal Century : The History of Proserpine's Sugar Mill, its Farms and its People by John Kerr. Available from Proserpine Co-operative Sugar Milling Association Ltd, PO Box 101, Proserpine 4800 for \$25 including postage. Another high quality sugar mill history. Recommended.

Bush Tram-ways and Private Railways of Tasmania - circa 1850 to 1960 by J G Branagan. Unfortunately, not recommended except to the discriminating as it seems to contain a quantity of questionable and derivative material.

Rack Railways of Australia by David Jehan. Available through NSW State Contact Craig Wilson (see above). Comprehensive and interesting, a high quality publication. Recommended.

RESEARCH COLUMN

Adelong, NSW

A photograph taken in 1896, at the Adelong Gold Field, was published

in the *Sunday Telegraph* of 13 April 1897. The photo shows a locomotive close by the headframe of one of the mines. An article on this operation is currently being prepared for publication. Any comments on the operation, particularly from anyone who has seen the photograph, would be welcomed by Jim Longworth, 2 The Boulevarde, CHELTENHAM 2119.

Light Railways in Art

The painting *The Quarry, Maria Island* (1926) by the artist Tom Roberts, is on display at an exhibition of his paintings at the NSW Art Gallery. In the bottom right hand corner of the painting, the artist has included a side-tipping V-skip and a man. The man is either loading the skip or pushing it along. Other men are shown breaking up the limestone rocks, which have tumbled down, apparently after a recent blast. Are there other light railways featured in Australian art, enquires Jim Longworth. (For a start, in the Australian War Memorial there is a Frederick McCubbin featuring a First World War 60 cm gauge Alco 2-6-2T in France - Ed.)

Trewhella history.

Mrs S Benney, 31 Abbots Way, Westbury-on-Trym, Bristol BS9 4SW, UK, is researching the Trewhella family history, and would like to learn about the Australian branch, including the Trewhella engineering company, which had connections in England and Canada. In Australia, the Trewhella company made winches as well as the well-known jacks. Please contact her direct if you can provide any information.

Cornwall Family History Journal 6/96 via Peter Medlin

Hoffman Brick & Pottery Works, Dawson St, Brunswick, Vic.

Jim Longworth has found an article on this operation in Volume 7, 1980 of *The Australian Journal of Historical Archaeology*. The article mentions the extensive light railway system around the works, without detailing it. Several maps are included that show the various track layouts.

Bridge rail

Jim Longworth suggests an alternative answer to the "Unusual Type of Rail" question (LRN 112 p.4 and subsequently [LRN118]). Perhaps the "rail" was not made for railway use at all. A vast range of bent metal strappings are used for various fixing purposes. Perhaps some enterprising and tight-pursed miners obtained a supply of the V section material at the right price, saw its potential for use as mining rail, and adapted it accordingly.

FIELD REPORTS

TRIPLET FALLS HERITAGE TRAIL, Ferguson, Otways, Victoria

A 900 metre trail was opened on 29 May by Marie Tehan, the State Minister for Natural resources and Environment. The track is very well engineered and passes the Knotts No.1 mill site, where there is a boiler, smokebox and other relics.

Norm Houghton 5/97

THE ABT RAILWAY, Queenstown - Regatta Point, Tasmania

The formation is clear for about 12 km from the Queenstown end and about 14 km from the Regatta Point (Strahan) end. The track can be followed from the main station (Miners Siding) at Queenstown. There are some properties built on the alignment, but leaving Queenstown the formation is easy to follow as it turns into a asphalted walking/bike track until the Queen River is reached and continues as a street for a number of houses on the other side of the river. Following the Lynchford Road for about 2 km from Queenstown you will find a Abt sign indicating a right turn. Cross a bridge, and turn right at the cross road to take you about 0.5km along the formation back towards Queenstown until the Queen River (sorry no bridge).

Taking the left turn at the crossroad you will come across a piece of railway track. This is where four lengths of rail have been laid as the start of the Abt restoration. A gate advises "Road Closed", but if open it is possible to drive the car for about 2 km down the track (until another road bridge is seen on the left). Views of the river when on foot in this section are fantastic and the extra height which will be gained from being in a railway carriage will be great. As the formation is narrow (single line) with medium pot holes, a slow speed is suggested. When you reach a building on the right and the road bridge on the left, this is believed to be the LYNCHFORD Station site.

From here the formation continues for about 1 km until a creek is reached. This creek was in flood when I visited and it was unable to be determined if it was safe to cross with a car. Extreme caution should be taken at this crossing as the river can flow quickly. By foot it appeared that the creek could be passed by crossing via the rocks that form a wall at the creek's junction with the Queen River. For those with the car, return to Lynchford and exit via the road bridge which will take you back to the Lynchford Road. On reaching the made road turn right and continue until just before a factory on the right hand side (approx 1.6 km). Turn right on the road just prior to this factory and park the car just outside the first gate. DO NOT park inside the gate if

open, as this could be locked whilst you are away. From here walk towards the Queen River (there are more gates which can be walked around or under) where a concrete bridge will get you across. Just up the hill is another cross road; a right turn, after crossing a culvert, will take you to what is believed to be the HALLS CREEK station site and after about 0.6 km, back to the creek junction mentioned earlier. At the cross road, to the left is a sign mentioning NO VEHICLES beyond this point, due to the derelict bridge that is about 0.3 km beyond the cross road. This bridge is single span and has boards across where vehicle traffic formerly used it. I did not travel beyond the bridge, but it is believed that the formation is clear for about 4.5 km to RINADEENA. From Halls Creek to Rinadeena is the section of the 1 in 16 climb which had the rack rail. Halls Creek is as close as you can get to the line by car from the Lynchford Road. From here you must go back into Queenstown and take the road to Strahan. I was advised that on the Strahan Road there is a sign advising the site of Rinadeena, whilst I didn't see the sign. I was also advised that the "sign had been erected but no path had been made to the formation" (cart before horse?), about 200m below the road.

The next contact with the Abt railway is on arrival at Strahan. The information centre at Strahan has information on the Abt railway. Across the bay is the yellow and red roofed station building at Regatta Point with a No.387 mobile rail crane (built by Grafton & Co. Engineers, Bedford) nearby. Follow the road around the bay, taking note of the walking track on your right side which was the TGR connection from Strahan to Regatta Point. At Regatta Point, as well as the station building, the Abt loco shed is there on the other side of the road, painted light blue at the time of my visit. Note: Another building has been erected in front of the actual loco shed.

From Regatta Point drive the car away from Strahan and some Abt remains will be noted on the right hand side including the remains of a bridge (also seen from a river cruise). Soon after, the road comes to a junction, but continue straight onto the dirt road. You are now on the Abt formation. Follow this for about 12 km until you come almost to TEEPOOKANA. It should be noted that after about 7 km the road becomes very narrow and a slow speed is recommended as other cars returning from Teepookana use the same narrow road. This trip has brilliant views of the King River (in its ecological disastrous state). As some sections of the road are right on the edge above the river it is suggested that the driver only take short little views. In most cases there is no room to stop and passing may require some backing up to a wide enough passing place. This road goes through the station of LOWANNA but I did not notice the site on my trip.

Just before arriving at Teepookana, the road has been closed. From here

it is a very short walk to the Iron Bridge. Pedestrians can walk over the Iron Bridge, and just beyond is the station site of TEEPOOKANA. Here a display has been set up which consists of a newly built station building and a length of track with a former Mt Lyell A Class open wagon (built Kelly, Melbourne in 1897) on it. From here it is about a 2 km walk to the famous Quarter Mile (QM) bridge. On the way to the QM bridge are the remains of a trestle bridge, which has been bypassed by the walking track. On arrival at the QM bridge an information display has been set up, and the remains of the QM bridge are quite evident, including an iron girder down stream.

This is about as much of the Abt line that you can see at present, until further sections are cleared, but from the above it is possible to see 26 km of cleared trackbed out of the Abt line's length of about 43 km.

Peter Medlin 5/97

LOCOMOTIVE, ROLLING STOCK & EQUIPMENT MANUFACTURERS

F & M BALDWIN, Castle Hill, NSW

This company is owned by Frank and Maurice Baldwin (ex E M Baldwin fame) and since about 1994 it has supplied equipment such as bogies for cane railway brake wagons and a few locomotives for construction projects. Following design work by the Baldwins, construction appears to be subcontracted, mostly to Kless Engineering of Marayong, Sydney.

David Jehan 6/97

GEORGE MOSS LTD, Osborne Park, WA

A substantial machinery auction conducted by Smith Broughton & Sons was to take place at the Gemco premises on 12 June. Items offered included lathes, presses, overhead cranes and welding equipment.

Sydney Morning Herald 31/5/97 via Ray Graf

HANSEN'S MOTOR & ENGINEERING WORKS, Ingham, Q

(see LRN 18 p.1)

This company, founded in 1929, recently changed hands with the retirement of its founder, Bill Hansen, 93. It produced ten cane railway personnel cars between 1972 and 1978, built around a Volkswagen industrial engine.

Herbert River Express 3/7/97 via Chris Hart; Editor

NEW SOUTH WALES

BHP LTD, Port Kembla 1435 mm gauge

(see LRN 113 p.7)

Recent visits have revealed no sign of the three A.E.Goodwin Co-Co DE locomotives previously leased from Austrac Ready Power, 101 (G-6048-09 of 1972) 102 (G-6048-13 of 1972) and 103 (84179 of c.1963). On a visit on 4 May, English Electric Co-Co DE locos D47 and D49 were noted in charge of a coal train at Eloura Colliery.

Brad Peadon 6/97

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY, Albion Park 610 mm gauge

(see LRN 118 p.6)

Ex-Corrimal Colliery Hudswell Clarke 0-4-0WT (1423 of 1922) has been transferred from Menangle Park for the winter operating period. On June 21st this locomotive and its former Corrimal Colliery stablemate, Hawthorn Leslie 0-4-0ST *Burra* (3574 of 1923) were the feature attractions at a Railway Enthusiasts Day to celebrate 25 years of the ILRM Society. They double-headed passenger trains and the diminutive 0-4-0WT hauled demonstration colliery skip and World War I wagon trains. Other operating locomotives were Hudswell Clarke 0-6-0 *Cairns* (1706 of 1939), Perry 0-6-2T *Tully 6* (7967.49.1 of 1949), Baguley-built Drewry 0-6-0DM *Seymour* (2392 of 1952), two Ruston & Hornsby 4wDMs (285298 of 1949 and 304457 of 1951), and the Gemco trolley wire electric loco (converted from BE). These locomotives (except the Gemco) participated in a cavalcade following the main 25th Anniversary ceremony. The only shadow over a successful day was a malfunction of the Mancha 4wBE locomotive which spent the day in a siding.

Noted in the shed was Davenport 0-4-0ST *Kiama* (1596 of 1917) with the boiler reunited with the frames, and behind it John Fowler 0-4-0T 16089 of 1923. Mounted on trestles was the bare frame of Ruston & Hornsby 4wDM 285301 of 1949. Behind the station building, with a tender body on top of it was a Malcolm Moore chassis and wheelsets from a wartime Ministry of Supply Ford V8 loco. This is said to have come from Hartley Main Colliery where it is believed to have worked as a 4wBE.

Other motive power units noted on the day were:

Newbold	4wPM	Krauss	2179	1889
	4wPMR	Baguley (Drewry)	1338	1924
	4wPM	Malcolm Moore		

Leichhardt	0-6-0DM	Baguley (Drewry)	2393	1952	as received
	4wPMR	R.Hague		1972	
	4w+4wTG	Lima	906	1904	dismantled
	4w+4wTG	Lima	2091	1907	dismantled
	4wBE	E M Baldwin	801-1-5-64	1964	1067 mm gauge
AIS 46	4wDMR	Fox	302	1971	1067 mm gauge
Wallaby	0-4-0ST	Hawthorn Leslie	2988	1913	1435 mm gauge

2 ft gauge Hunslet 4wDM 4578 of 1953, number 2 from the Port Kembla copper refinery & smelter, has been donated to the museum, and is believed to have arrived on site early in July. Other equipment is expected to follow (see elsewhere this issue).

Tony Madden 6/97, 7/97; Editor 6/97

McCONNELL DOWELL CONSTRUCTORS (AUST) PTY LTD, Chapman Road, Vineyard, Sydney 610 mm gauge

(see LRN 96 p.8)

A visit to this large plant storage yard shared with several other firms revealed quantities of rail equipment.

Two locomotives and much rail equipment are stored in a large open-sided shed. One locomotive is a small 4wDM originally built as a 4wPM by Metropolitan Brickworks Pty Ltd at Maylands, WA, in about 1960 (one of three based on an FC Hibberd *Planet* design and incorporating a number of parts from discarded *Planet* locomotives). This was reportedly sold by Bristile Pty Ltd (successors to Metropolitan Brick) in 1981, and has been rebuilt with diesel engine and exhaust conditioner. It has no cab or canopy and the driver sits sideways in the middle of the loco which is painted yellow. The second locomotive is a tunnelling loco numbered DL2, a 4wDM built by F & M Baldwin, Castle Hill, in 1994 (B/n.FMB8T294). It is low with a conventional cab at one end, and painted orange. It was built for use by McConnell Dowell / Obayashi Joint Venture on the Blue Mountains tunnel project section between North Katoomba and Hazelbrook.

Other equipment in the open shed included six bogie flatcars with stickers reading *S&M Welding, Lawson*, some bogie concrete and shotcrete cars (some at least by Mülhauser), and two Hagglund shuttle cars. There were also two small loaders; one numbered 40/004 was built by Eimco Great Britain (LD1141), and the other numbered 40/065 was built by Taiku, Tokyo (30/70).

In a large locked shed, at least two additional diesel locomotives were noted. They appeared to both be F & M Baldwin machines, and are understood to be a 4wDM similar to DL2, and a 4wDH rack/adhesion locomotive. These

were also built for the Blue Mountains tunnel job, with the rack loco used on a short rack section at Lawson for a few weeks in 1995. (A quantity of rack bars were noted on site.) Elsewhere noted on the site were two bogie manrider cars (numbered MC1 and MC2), two Granby cars and one platform car.

Editor 6/97; Rack Railways of Australia (David Jehan)

MENINDEE DISTRICT 610 mm gauge

It is reported that in a park either at Menindee, or along the Broken Hill - Menindee road, there is a preserved Gemco 4wBE loco, identical to the one numbered D25T at the West Darling Machinery Preservation Society, Broken Hill (see LRN 116 p.10).

Ray Graf 5/97

PORT KEMBLA COPPER, Port Kembla 610 mm gauge

(see LRN 118 p.8)

The rail system at this site will be disposed of as part of the forecast redevelopment. Following its donation of Hunslet 4wDM 2 (4578 of 1953) to the Illawarra Light Railway Museum Society at the start of July, the management has decided to make all the other remaining rail equipment available to the society also. There is one other complete locomotive, an incomplete locomotive (both as yet unidentified), and a number of bogie cars used for carrying anodes around the site, as well as track components and other useful material.

In April 1982, there were three other Hunslet diesels present, numbered 1, 3 & 4 (4577 of 1953, and 4580 & 4582 of 1955 respectively). It is understood that one of these was sold shortly afterwards.

The Illawarra Light Railway Museum Society is organising a tour of the site on Saturday August 23rd, most likely commencing at the front gate at 10 am. Intending participants must contact Tony Madden on (042) 289353 to confirm details.

Tony Madden 6/97, 7/97; Editor

NOEL RAWLINSON, Gunadoo Gold Mine, Ophir narrow gauge

(see LRN 109 p.5)

After four years of illegal tourist operation, the Gunadoo Gold Mine has finally received Cabonne Council approval for tours. The original application was lodged in May 1995.

Ray Graf 6/97

ROYAL AUSTRALIAN NAVY, Armaments Depot Newington 610 mm gauge

(see LRN 108 p.8)

After many years of almost total secrecy, detailed information about this site, situated just 18 km from the centre of Sydney, can be made available. During the last four years member Len King has had some limited access to the site, albeit under very tight security. The depot was handed over by the Commonwealth government to the NSW government on 1 July, and has become part of the development project for the Sydney Olympics under the management of the Olympic Co-ordination Authority. However, apart from about 230 acres on the southern side, which will be taken over for the Olympic village, most of the site (about 630 acres) will remain leased to the navy until the end of December 1999. It is a naval armaments depot served by a wharf on the Parramatta River close to Homebush Bay, and with a 6.6 kilometre 2 ft gauge railway system of which the first lines were built before World War I. The railway is still regularly operated using Gemco battery electric locomotives. Known as "Electros", there are four of these 3.5 ton locos, built in 1964. They haul up to eight 3-ton capacity bogie wagons. There are still three World War I vintage wagons on site. Most of the track is set in concrete and is laid in 30 lb rail. The line passes between earth mounds protecting the magazines, and at a typical magazine loading dock there is a passing loop, gantry crane and concrete loading platform. The navy recently let a contract for track repairs and the successful tenderer was the ARHS (ACT Division).

Featuring heritage buildings and open space including native bushland, this site will only be partly utilised for Olympics development. It is hoped that much of it will be retained for its heritage value, including most of its railway system. Unfortunately however, in a section taken over for the Olympic village, the line runs between pairs of 20 ft high walls of handcut sandstone which are used to retain earthen banks surrounding two munition magazines. It is not known if these will survive.

A tour to this previously inaccessible site has been organised by the NSW Division of the Society on Friday August 15th, and not surprisingly was already booked out at the time of writing.

Len King 6/97, 7/97; Paul Simpson 7/97

SILVERTON TRAMWAY PTY LTD, Broken Hill 1435 mm gauge

(see LRN 118 p.8)

At the South Mine on 5 May, Silverton Goodwin Co-Co DE locos 29 (83828 of 1961), 35 (84133 of 1962) & 28 (83827 of 1961) were shunting

the concentrate train, while 36 (83711 of 1959) & 37 (84128 of 1961) were shunting the "transfer" train ex North Mine. It seems that only 3 or 4 hoppers can be dumped at a time because of the shortness of the trestle over the ore bin, and the minimum trackage beyond it.

Ray Graf 5/97

TRANSFIELD - BOUYGES JOINT VENTURE, Sydney Airport Link 900 mm gauge

(see LRN 118 p.8)

Recent publicity material shows 900 mm gauge track laid in the tunnel extending from Tempe Reserve towards Sydney Airport. The 6 km soft ground tunnel section extends past the international and domestic terminal stations, to Mascot station and then on almost as far as Green Square station, and will not be completed until 1999.

Breakthrough at the international terminal is believed to have taken place on schedule, at midnight on Saturday 31 May. The 35 tonne locomotives are used to haul the concrete tunnel segments and other supplies to the face.

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY

Durundur Railway, Woodford 610 mm gauge

(see LRN 118 p.9)

The Society has been successful in gaining Rail Safety accreditation and has every reason to be proud of its "best practice" submission which found ready acceptance with Queensland Transport.

Progress continues on the restoration of John Fowler 0-6-0DM No.1 (18260 of 1929). The wheelsets have been cleaned and painted along with the loco's mainframes. The radiator has been tested for leaks and new engine compartment doors have been fabricated in Maryborough.

Durundur Railway Bulletin 6/97 via Editor; David Mewes 7/97

BLI BLI CANE SUPPLIERS' COMMITTEE, c/- Maroochy Shire Council, Muller Park, Bli Bli 610 mm gauge

(see LRN 54 p.7)

Fowler 0-4-2T *Bli Bli* (14418 of 1915) is in mediocre condition inside a wire cage at this roadside park, minus chimney and looking the worse for wear. It is situated in rather damp and low-lying area close to the Maroochy River, which appears subject to flooding.

Editor 5/97

CSR LTD, Herbert River mills 610 mm gauge

(see LRN 118 p.10)

CSR's Herbert River Mills in Queensland recently acquired this Plasser GWS 75 spot tamper (434 of 1997), which is seen here at Macknade Mill, 29 May 1997.

Photo: Chris Hart

The new spot tamping machine was delivered in the week ending 17 May. It is Plasser 434 of 1997, weighs 9 tonnes, and has a top speed of 18 km/h. It has seen use at both Macknade and Victoria mills. The Plane Creek Mill track jack (Plasser 371 of 1989) has been on loan since late in the slack season.

A KMX-12 tamping machine with operator has appeared on hire from Fessl, first noted on 25 June at Macknade. It arrived back in Australia recently having seen recent use in Fiji. It is 222 of 1981, previously owned by Prosperpine Mill until 1994.

Victoria Mill's new Walkers B-B DH rebuild (681 of 1972 reb. by Bundaberg Foundry M1852 of 1997) arrived during the week ending 14 June and is named *Cairns*. Its new brake van had not arrived by 26 June.

Two more lines are being built in the Victoria Mill full yard, being Line 20 on the Bambaroo side and Half Acre 4 on the Ingham side.

Rinaudo's Engineering is assembling the 200 new 11-tonne bins for Victoria Mill and they are being delivered to the Wharf line in the Macknade

Mill area. Sides and sends are being built by Firmi. Some of these bins were at Victoria Mill on 23 June, the first day of the crushing. The use of these bins will be extended to Macknade Mill for the 1998 crushing. At the end of June, Macknade Mill's Clyde 0-6-0DH 11 (65-383 of 1965) took a small rake of these bins from the Wharf line over the Herbert River for collection by a Victoria Mill loco.

Macknade Mill's Clyde 0-6-0DH 12 (65-434 of 1965) had its first run on 30 June following its major overhaul. It entered service the next day. Prior to this, E M Baldwin 0-4-0DH 17 (6-1446-1-9-65 of 1965) had been used on and off for cane haulage.

The first transfer of Victoria Mill cane to Macknade was done by Macknade's E M Baldwin B-B DH 20 (7070-4-4-77 of 1977) on the night shift of 26 June.

The new Crystal Creek line was seen to be in operation to Coolbie on 5 July. The main line terminates here currently, and there were plenty of bins ready to be picked up in the siding. A further extension to Amos Road will complete the 29 km extension for this season. South of Crystal Creek, semi-trailers carrying four bins were seen in operation, and are believed to still feed to Bambaroo. In attendance at Coolbie was Victoria Mill's E M Baldwin 4wDH 9109-1-9-80 of 1980, with ballast hoppers and rail bogies.

The Queensland State Government budget brought welcome news with the State government meeting the Hinchinbrook Shire Council's contribution towards the \$1.64m high-level Elphinstone Creek road-rail bridge project at Abergowrie. Successful completion of this project will enable 6 km of tramline extensions to be constructed.

Following a serious accident last year, efforts are being made to increase safety consciousness regarding cane railways within the community. In December 1996, a Macknade 12-year old lost part of his forearm when he fell from a moving cane train bin he was joyriding.

(see LRN 98 p.7)

Tony Gilbert's 10-tonne Henschel 0-6-0WT 29583 of 1956 has recently been advertised for sale at a price of \$80 000 o.n.o. It is described as *Boiler 100%. All fittings and plumbing complete*. Phone contact is (076) 62 4200.

Collectables Trader via Bruce Belbin

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 118 p.10)

Two Walkers rebuilds of standard gauge NSW 73 class B-B DH locomotives were seen on the Bruce Highway being delivered by road vehicles in June. On 3 June, it was *Netherdale* (Walkers 699 of 1972), for Marian Mill, while on June 25th it was *Cedars* (Walkers 690 or 693 of 1972), for Farleigh Mill. The fate of Marian's previous *Netherdale* (Com Eng 0-6-0DH B1724 of 1957) is unknown. Formerly *Tannalo*, this is the second time it has lost its name to a new loco.

Three Farleigh Mill locomotives were noted in the Mackay Sugar corporate livery in June. These were Clyde 0-6-0DH *Seaforth* (61-233 of 1961), E M Baldwin B-B DH *Foulden* (7220-1-6-77 of 1977), and Eimco B-B DH *Farleigh* (L254 of 1990). *Farleigh* has received the GM engine with DDEC3 from Walkers B-B DH *Miclere* (664 of 1970 reb.Farleigh 1996), which has received a new engine. *Farleigh's* old DDEC2 engine is now a spare. At Racecourse Mill, Clyde 0-6-0DH *Homebush* (55-58 of 1958) has also been repainted while Clyde Queensland 0-6-0DH *Broadsound* (70-710 of 1971) was being painted. This locomotive has been fitted with a new GM 92 series engine with DDEC3.

Com-Eng B-B DH *Finch Hatton* (NA59112 of 1977) was reclaimed from Racecourse Mill by Farleigh for the start of the crushing season, pending the commissioning of *Cedars*.

The bin requirement for Farleigh Mill for the 1997 season is 1165 six-tonne bins, including 325 new for the season, plus 2000 of the older four-tonne bins. Meanwhile at Pleystowe, a large number of bins were found to have cracked frames requiring remedial action during the 1997 lack season. It is reported that a 10-tonne capacity bogie bin was trialed at Racecourse Mill and then at Pleystowe in the 1996 season, proving itself able to be loaded up to 16-tonnes capacity. This bin would be the equivalent of two Racecourse 5-tonne bins. It is suggested that a 12-tonne bogie bin (double the Pleystowe 6-tonner) will be trailed in the 1997 season.

Relaying of the first 3.3 km of Pleystowe Mill's Mia Mia line was programmed to be completed for the start of the 1997 season, with the rest of the 10 km line receiving attention in subsequent slack seasons.

A \$600 000 *Goliath* bin positioner has been installed at the Racecourse Mill weighbridge. The third of its type in the industry, it is kind to bins in that the positioning forces are taken by the bin mainframe, not the axles as with conventional creeper positioners.

Interim approval has been given for a feeder semi-trailer haulage service for 160 000 tonnes of cane to the Wagoora (northern) terminus of the Farleigh Mill tramline, replacing tractor haulage. The Mackay City Council strongly

prefers a tramline extension, but the mill argued that this was currently unviable.

MORETON CENTRAL SUGAR MILL CO LTD 610 mm gauge

(see LRN 115 p.12)

With slack season maintenance in full swing, an impressive array of maintenance train vehicles were noted in the full yard at the mill, accompanied by two locomotives, Malcolm Moore 4wDM *Jimmy* (1051 of 1943) and Com-Eng 0-6-0DH *Dunethin* (H1022 of 1958 rebuilt by QGR 1974), together with a Gemco track jack. The maintenance train was composed of two 6 metre bogie drop sided wagons, a 6 metre tool wagon, an old style 8 metre navvy carriage, an 11 metre bogie car consisting of a container (001781) mounted on bogies, with its skin apparently shotcreted, and incorporating a mess van, a 10 metre steel framed bogie flat car (MOBILE 7) with a tractor and blade on it, a four-wheeled air compressor wagon, and an 11 metre steel framed bogie flat top.

The mill centenary celebrations take place on 9 August, and there are unconfirmed rumours of a visit by a "guest" steam locomotive for the occasion.

Editor 5/97; 7/97

THE MULGRAVE CENTRAL MILL CO LTD, Gordonvale 610 mm gauge

(see LRN 118 p.11)

At about 6.30 pm on 24 June, a cane train was derailed at Loridan Drive, Brimsmead, after points were apparently tampered with. The loco, which was hauling empty bins, was diverted into a short siding, off the end of the track, through a fence, and across Loridan Drive before coming to rest. Fortunately, the locomotive remained upright, and no injuries were sustained.

Cairns Post 26/6/97 via David Blakeley

PEABODY AUSTRALIA PTY LTD., Laverack Avenue, Eagle Farm, Brisbane

(see LRN 103 p.11)

Three 2 ft gauge diesel locomotives were noted on site here on 4 July. Two were large white 4wDH locomotives, described as 13 tonners, built by Peabody's predecessors, Costain, at this site in around 1992. One was numbered 0954 and the other, with the official number 0955 partly obliterated, had the painted name THE RAINBOW WARRIOR. It is understood that these locomotives originally were fitted with each wheel free to rotate on the axle, and hub driven by its own hydrostatic drive, an arrangement

subsequently altered to one slightly less unconventional.

The third locomotive was painted yellow and appeared to be an E M Baldwin 3 tonne 4wDH. It is allegedly one of two previously owned by Costain from which one good one was made up, and it seems that these were 4661-1-7-72 and 4661-2-7-72 of 1972. It did not carry its official plant number of 0937.

Further information was obtained about the Gemco-Funkey 4wDH locos 0961 and 0962 which had been seen here in 1994. These were purchased second-hand, supposedly in Brisbane, as 762 mm gauge units, and had been regauged by the expedient by cutting six inches out of the frames and fitting new axles. These locos will almost certainly be the 8 tonne units 2372/PI.0455/L621/68 and 2896/PI.0474/L620/68 of 1968, supplied new to the Melbourne & Metropolitan Board of Works, and reportedly sold by them in 1989. They were shipped in 1996 to be used by Peabody in the construction of the Kelinchi Tunnel, Malaysia. They joined there three 10-tonne and about six 8-tonne Gemco battery electric locos which were shipped out from 1994.

These battery electrics, of which two of the 8 tonners are numbered 0944 and 0945, were reportedly acquired second hand for use in tunnelling jobs undertaken by Peabody at Hazelbrook / Faulconbridge and Prospect in NSW, where the Gemco-Funkeys were also used. The Kelinchi Tunnel project has just been completed, and the locomotives and other equipment are in storage in Malaysia. It is fairly likely they will be sold to another contractor who has recently obtained a tunnelling contract in the region, rather than returning to Australia.

Meanwhile, additional information was also gleaned about the fate of the two Plymouth 4wDH locos used in the construction of the Cardstone Tunnel in north Queensland in 1990. At some point of time one was dismantled and discarded in order to provide spare parts to make up one good 2 ft gauge loco. The resulting unit was disposed of in about 1994 to Santa Fé Resources (PNG) Ltd, Paibuna-1 Oilwell, Papua New Guinea (see LRN 106 p.19).

Editor 6/97, 7/97; Tim McIlroy, 7/97; Craig Wilson 7/97

PLANE CREEK CENTRAL MILL CO LTD, Sarina 610 mm gauge

(see LRN 118 p.11)

E M Baldwin B-B DH D12 (6890-1-10-76 of 1976) has been repainted in the yellow and green livery sported by the mill's three Walkers rebuilds. This marks a definite change away from the mill's pleasant blue and yellow livery.

Tony Wells 6/97

PROSERPINE CO-OPERATIVE SUGAR MILLING ASSOCIATION LTD 610 mm gauge

(see LRN 118 p.11)

The new tramline extension to Gunyarra is reportedly part of a major long term project to divert the mill's southern tramline to a new route which will join up with the Kelsey Creek tramline and enter the mill from the west via the existing railway underpass. This route will eliminate the long run through unproductive and flood prone land in the Lethebrook area.

Russell Anderson 6/97

ROTARY CLUB OF WYNNUM & MANLY, St.Helena Island 610 mm gauge

(see LRN 118 p.12)

Baguley 0-6-0DM 3377 of 1953 was airlifted to St.Helena slung below a Chinook helicopter on 29 June, as featured prominently in Queensland TV news reports that evening. It appeared that track and stations were complete with carriages ready on site. It is understood that the transportation of the locomotive was several weeks behind schedule, but the reason for this is unknown.

SUNSHINE COAST RAILWAY MODELLERS SOCIETY & MODEL ENGINEERS, Florence Street, Nambour 610 mm gauge

(see LRN 116 p.15)

Ex Moreton Mill Dick Kerr 0-4-0IST *Valdora* (built around 1891) has been removed for restoration in Nambour by Skillshare, and in early July was to be found in their car park with cosmetic restoration three-quarters finished. A security cage is under construction at the Florence Street site within which the locomotive will be displayed when restoration is complete.

Editor 5/97; Andrew Nicholas 7/97

SOUTH AUSTRALIA

BHP LTD LONG PRODUCTS DIVISION, Whyalla 1435 mm & 1067 mm gauge

(see LRN 117 p.11)

Of the Morrison Knudsen Clyde Bo-Bo DE rebuilds listed in LRN 117, only DE1 (56-109 of 1956) was in service in mid May. DE3 (56-116 of 1956) was at AN's Port Augusta workshops with a blown motor together with DE8 (65-429 of 1965) with accident damage. DE4 (56-122 of 1956) and DE9 (65-430

of 1965) are both at the BHP Whyalla workshops with major failures. DE7 (61-236 of 1961) is stored at the Morrison Knudsen works at Whyalla with a bent underframe following its collision on November 23rd 1996 with DE8 and unrebuilt DE6 (57-156 of 1957), which has also been withdrawn as a result and is stored at the Whyalla workshops. Unrebuilt DE2 (56-111 of 1956) remains stripped at Whyalla. This leaves unrebuilt DE5 (57-136 of 1957) in service with DE1, together with English Electric Bo-Bo DE MKA 6 (A.225 of 1971) on loan from Morrison Knudsen.

The standard gauge Coffin Bay operation has reportedly closed. However, for standard gauge work around the works, it is believed that AN's A E Goodwin Co-Co DE 848 (G-6016-02 of 1969) was on hire for a while, subsequently replaced by an unidentified SAR-built 500 class.

ERIC HOWE, Tarleton 610 mm gauge

(see LRN 87 p.13 & 107 p.14)

Orenstein & Koppel 0-6-0T 4241 of 1910 is currently stored under cover by this private owner in unrestored condition.

Peter Martin 7/97

REDWATER CREEK STEAM & HERITAGE SOCIETY INC, Sheffield 610 mm gauge

(see LRN 118 p.12)

Rolling stock locked in the shed on site at the time of a visit on Friday 11 April, 1997 appeared to consist of loco No.1 (Krauss 5800 of 1907) and carriages A1, PB1, DB1 and a flat car.

Stored away from the shed in the open was a 610 mm gauge 4wBE with a number 1 on the cab. Owned by Ron Aubrey, it has a black and white striped superstructure and came from the EZ Rosebery mine. A similar locomotive, which has been donated to the society, is to be found in the shed. Its cab shell, carrying the number 2 was to be found with loco number 1.

As reported earlier, the Society has gained agreement from the Queen Victoria Museum, Launceston, to transport Krauss 0-4-0WT 10 (6067 of 1910) from Karoola to Sheffield, where the boiler will be lifted for inspection, and restoration to working order if possible. If this proves to be unviable, the locomotive will be reassembled and returned to the museum.

Peter Medlin 5/97; Peter Martin 7/97

TASMANIAN TRANSPORT MUSEUM SOCIETY INC, Glenorchy 1067 mm gauge

(see LRN 68 p.9)

Thought is being given to restoring the Climax 4w+4wTG loco 1653 of 1923, after plans to restore the ex Mount Lyell Abt No.2 (Dubs 3594 of 1898) have been shelved due to the need for expensive boiler repairs. The Climax will require extensive work to the frame as this was damaged when transported to the Glenorchy site. The Markham 1890 built 0-4-0VBTG loco removed from the bush a number of years ago, still appears to be under restoration with little visible progress since a visit five years ago.

Peter Medlin 5/97

VAN DIEMEN LIGHT RAILWAY SOCIETY INC, Don River Tramway 1067 mm & 610 mm gauge

(see LRN 118 p.13)

Ex Emu Bay Dübs 4-8-0 8 (3856 of 1900) has received attention having an anti-surge device fitted in the steam dome, and a number of leaking pipes and connections remedied. It was due to have a main line shake down run to Burnie and back.

There are three Ruston & Hornsby 4wDM 1067 mm gauge locomotives here (details from Editor's records). On display is 187072 of 1937 is a 44/48 hp loco built for The Mt.Lyell Mining & Railway Co. Ltd. In a derelict state in wagon C613 is 235667 of 1945, a 20DL loco used by the Melbourne & Metropolitan Board of Works (possibly on the Mt.Little Joe Tunnel construction), and then by the Cornwall Coal Co. Ltd., Fingal, having been crudely converted from 2 ft gauge. Finally, also on display, there is 279571 of 1949, a 40DL loco, which was supplied to the Marine Board of Burnie and was later with the Cornwall Coal Co., Fingal.

The 1067 mm gauge ex Mt Lyell carriage has been loaned to the Abt Railway Society for restoration for eventual use on the Abt line.

Peter Medlin 5/97; Don News 6/97 via Ray Graf

WEE GEORGIE WOOD STEAM RAILWAY INC, Tullah 610 mm gauge

(see LRN 117 p.13)

This railway was not operating at the time of a visit on Wednesday 9 April, 1997. However it was noted that the ex Mt Lyell 610 mm gauge passenger carriage that stood behind the Krauss loco at the West Coast Pioneer Museum at Zeehan is in use here. Krauss 0-4-0T 5988 of 1908 is under restoration at the back of the rolling stock shed. The shed also contained a (presumably 610 mm gauge) Gemco 4wBE loco without battery box which appeared to be of an underground type. Also on site is the body of former 1067 mm gauge Mt Lyell guards van, the brother to the guard's van at the Puffing Billy Museum, Victoria

The layout of the line has balloon loops at either end. At the far end of the line the loop has a point in the balloon loop area which could be the start of the extension as previously reported.

Peter Medlin 5/97

WEST COAST PIONEERS MEMORIAL MUSEUM 1067 mm & 610 mm gauge

(see LRN 53 p.10)

A 610 mm gauge track has been laid out behind the main building. Whilst the track is set out for about $\frac{3}{4}$ of a circle, only a small section is spiked down. 2 ft gauge Krauss 0-4-0T (5480 of 1906) ex Mount Lyell is on display and has the number 5479 on the left hand motion bracket and 5480 on the right hand motion bracket. Another Krauss 0-4-0 WT (4087 of 1899) ex North Mount Lyell, is out the back on blocks appearing to be awaiting restoration. Previously in a park in Devonport, this loco (fitted with the boiler from Krauss 5800 - Ed.), is painted a bright green below the running board and red above. Also out the back is English Electric 4wWE No.4 (B/No. 44525? - the 2 is not certain) ex Mount Lyell in a derelict condition.

Peter Medlin 5/97

VICTORIA

ALEXANDRA TIMBER TRAMWAY & MUSEUM INC. 610 mm gauge

(see LRN 113 p.17)

Services over the Easter weekend were all operated by Kelly & Lewis 0-6-0DM 4271 of 1935 due to the failure of John Fowler 0-6-0T 11885 of 1909 on Saturday 29 March. On the following running days of Sunday 13 April and 11 May, Motor Rail *Simplex* 4wDM 10058 of 1948 was used as the motive power. The Fowler loco is to be stored with work to be speeded up on the

restoration of Hudswell Clarke 0-6-0 1098 of 1915. In the meantime it was hoped to borrow the Puffing Billy Museum's Hudswell Clarke 0-4-2ST No.4 (1559 of 1925).

The driving wheels of Hudswell Clarke 1098 were transported to the Emerald Car Shops of the Puffing Billy Railway during June. The badly worn tyres will be re-turned to an acceptable profile.

Peter Medlin 5/97; Frank Stamford 7/97

BASS VALLEY RAILWAY 610 mm gauge

(see LRN 117 p.14)

A visit here on Wednesday 16 April, 1997 found a red painted Ruston & Hornsby 4wDM at the head of a three carriage passenger train. There was no identification on the loco, but it is believed to still have its R&H motor & gearbox. The passenger carriages were converted from Cheetham steel open trucks and two carried numbers 17 and 20 in weld on the frame; the other was not numbered. The carriages have no glass in the windows and it is proposed that you can eat your meal in the train as you travel around the circuit. One carriage has been fitted with seating and carpet up to window level; the others have not been fitted out as yet. The frame of another Ruston & Hornsby 4wDM, 320555 of 1951, (ex Cheetham 4) was on site, still in Cheetham yellow and green but in a derelict condition, possibly pulled down for repair. Track consists of a large oval about 600 metres long, though at the time of the visit one of the curved ends was still to be completed. It was proposed to open the line in early May. A staff member advised that there were three Ruston & Hornsby locos with the railway (Cheetham had four?) though only two were seen. Plans are to eventually extend the line to join up to other attractions in the area. A brochure advises that 28 carriages are available with seating for 168 people, but except for six goods vehicles and the 3 passenger carriages, there were no other frames seen on site.

The report in LRN 117 that the derelict Ruston & Hornsby from Sandhurst Town had come here seems doubtful, considering its presence at Coal Creek (see below).

Peter Medlin 5/97, Editor

COAL CREEK HISTORICAL VILLAGE, Korumburra 610 mm gauge

(see LRN 118 p.15)

A visit to this location on Wednesday 16th April, 1997 found Bundaberg Foundry 0-6-2T (7 of 1953) under repair in the shed. A Ruston & Hornsby 4wDM with a weld identification of P 3111 (believed to be 235657 or 235677 of 1945 - Ed) was also in the shed in a dismantled state. The three carriages from

Sandhurst Town (Wombat Gully B/No. 004, 005 & 007) were on site. 004 & 005 were in use hauled by black Ruston & Hornsby 1 (354040 of 1953) (formerly blue at Sandhurst Town), and car 007 was waiting repair. Currently work is being carried out on a short extension of the line to near the Black Diamond Mine. This branch line will finish at the almost completed platform in a dead end cutting with what appears to be room for a run-round loop. The 762 mm Clarkat tractor owned by Colin Rees is still on site stored in the shed. The body frame of the former Whistle Stop carriage is upside down and derelict behind the railway shed. Conversion of the line from 762 mm to 610 mm was carried out by moving in the inside rail of the circle, the outside rail remaining in place.

Peter Medlin 5/97

EMERALD TOURIST RAILWAY BOARD, PUFFING BILLY RAILWAY 762 mm gauge

(see LRN 118 p.13)

Cockatoo station yard has now been ballasted and tamped. Still unballasted is the track on both sides of Cockatoo, to Fielder and to Bridge No.9. No further work has been done to Bridge No.9.

Newport Works 2-6-2T 6A (built 1901) is now receiving a lot of attention. Its frames have been cleaned up and are said to look like new! Newport Works 2-6-2T 7A (built 1905) is undergoing a 10 year boiler examination. Its tanks have been removed and the cab has been stripped back for repainting.

Frank Stamford 4/97

WARRAGUL

The cabs of the two 1600 mm gauge Whitcomb B-B DE shunters from APM, Maryvale (61108 of 1949 and 61109 of 1950) are in a paddock south of Warragul and are destined to become pumping sheds.

ARHS Bulletin 717 via Editor

WALHALLA GOLDFIELDS RAILWAY 762 mm gauge

(P O Box 1576, TRARALGON Vic 3844)

(see LRN 118 p.14)

The loop at Thomson station has been ballasted and packed, and is now in use.

E M Baldwin 4wDH Kasey (3225-1-2-70 of 1970), which was purchased from Coal Creek will require a complete overhaul before it can be used. A third bogie passenger carriage is now under construction.

Track Record No.1, Frank Stamford 6/97

WESTERN AUSTRALIA

PEMBERTON TRAMWAY COMPANY 1067 mm gauge

Now at Pemberton, this Plymouth 4wDH locomotive was photographed out of use at Bunnings, Manjimup, Western Australia, on 8 May 1996. This loco is believed to have been delivered as a 2 ft 6 in gauge machine to the Utah-Brown-Root-Sudamericana joint venturers on the Snowy Mountains Scheme.

Photo: Peter Medlin

In LRN 113 (p.21) there was reference to a Plymouth 4wDH loco at Bunnings in Manjimup. This loco is believed to have now gone to Ian Willis at Pemberton before Christmas 1996 on a flat top wagon and will be used for track upgrading on the Northcliffe line.

The Westland 5/97 via Peter Medlin

OVERSEAS

ARGENTINA

ARGENTINE GOVERNMENT ESPERANZA ANTARCTIC BASE 762 mm gauge

Hope Bay, at approx 63°S may be the location of the world's most southerly light railway. The Argentine Antarctic Expedition built the line to assist in the

construction of the Esperanza base in the 1960s. The steel rail and sleepers line originally extended from the jetty area to the base site, a distance of close to 0.5km. Today, the tramway's extremities are buried under snow and ice, although two of the four-wheeled trolleys are positioned on a bare section of track which is incorporated in a "museum" site complete with a retired Snocat tracked vehicle, sledges and other elderly items. Presumably, manpower was used for vehicle propulsion during the base's construction.

RESEARCH COLUMN

Southern Light Railways

(see LRN 119 p.21)

Arnold Lockyer writes of a postage stamp from the French Overseas Territory of Southern and Antarctic Lands, which shows a light railway running down a jetty on Kerguelen Island, situated in the southern part of the Indian Ocean. The caption is *1930 Port Jeanne d'Arc*.

Australian Light Railways in Art

(see LRN 119 p.3)

Arnold Lockyer has come up with another painting, by Sir Arthur Streeton, entitled *Fires On, Lapstone Tunnel, 1891*. There appears to be a light railway with a skip above and to the right of the tunnel mouth, and a light railway into the tunnel.

New Caledonia (Nouvelle Caledonie)

(see LRN 118 p.4 & 119 p.22)

Greg Minter has come up with a copy of *Railways of New Caledonia* by A N Palmer, published in the New Zealand Railway Observer of June 1945. A photocopy can be provided by the LRN Editor on receipt of a SAE.

AUSTRALIAN CAPITAL TERRITORY

COCKINGTON GREEN, Belconnen narrow gauge

The Cockington Green Scenic Railway features a continental-style "well tank" locomotive with a bogie tender, of distinct narrow gauge pedigree. Perhaps a reader can provide further details.

Brad Peadon 8/97

NEW SOUTH WALES

BHP LTD, Port Kembla 1435 mm gauge

(see LRN 119 p.7)

There has been quite a lot of speculation recently about the future motive power for BHP coal traffic from the collieries in the Illawarra area, and even the future of rail operations for coal traffic. The Austrac Ready Power A E Goodwin Co-Co DE leased units 101 (G-6048-09 of 1972) & 102 (G-6048-13 of 1972), with 103 (84179 of c.1963) as a backup, have been the mainstay of traffic from Elouera Colliery, with ex-Goldsworthy English Electrics in reserve.

It is reported that BHP has been considering the use of SRA 80-class locomotives for this traffic, and two (8015 and 8039) were reported at Port Kembla for possible trials on August 20th. One source was suggesting that A E Goodwin

Co-Co DE leased units 103 (84179 of c.1963) & 102 (G-6048-13 of 1972), with ex Goldsworthy Co-Co DE D51 (English Electric (Aust) A.111 of 1965) at Wongawilli Village, August 9th 1997.

Photo: Brad Peadon

if successful, ten such units would be acquired, but later reports suggested that BHP management had come to the conclusion that purchase was uneconomic.

On 9 August, the date of an RTM tour to the BHP system, ex Goldsworthy Co-Co DE D51 (English Electric (Aust) A.111 of 1965) was noted shunting hoppers at Elouera. A while later, 102 & 103 arrived light engine and went on the head of the train to make the unusual combination of 103 + 102 + D51 all the way back to Unanderra. 102 & 103 then went on to do the normal runs for the day. When the tour train (headed by 5910) arrived at Unanderra it was joined by BHP's preserved locomotives D6 (Com-Eng Bo-Bo DE built 1950) and *Bronzewing* (Clyde 0-6-0ST 457 of 1937) for the run to the junction of the Elouera and Kemira Valley lines, where D6 was detached. D6 then followed the two steamers up the hill to Kemira Colliery loader. On arrival, a reverse took place with D6 hauling the train for the return trip with the steamers following. Co-Co DE D34 (English Electric (Aust) A.197 of 1969) was at Kemira when the tour arrived while ex-Goldsworthy Co-Co DE D47 (English Electric (Aust) A.146 of 1967) was near Unanderra with a load of empties when it returned.

BHP Collieries and Brambles Industrial Services are reported to be examining the feasibility of using a conveyor to move coal from Kemira to the

Port Kembla steelworks. It is understood that Brambles made the suggestion which involves them building, owning and operating a curved conveyor system. A number of route options are being investigated, including one following the existing railway line. Rail would continue for coal haulage from Kemira to the steelworks while the conveyor is being built, but on its commissioning, would be replaced. This option is being investigated as BHP Collieries plan to increase coal exports from its mines at Tower, Cordeaux and West Cliff.

SILVERTON TRAMWAY PTY LTD, Broken Hill 1435 mm gauge

(see LRN 119 p.10)

As of 10 August, all Silvertown units on loan to National Rail have been returned to Broken Hill except 442s2 & 442s3 which were still sitting unused at Dry Creek and were to follow soon. The hired units were ST30 to ST35, 442s1 and 442s4.

Brad Peadon 8/97

DICK SMITH, Bowylie Light Railway 610 mm gauge

This line is being built on a property just north of the Australian Capital Territory.

Dick purchased the Freudenstein 0-4-0WT *Golden Ridge* (217 of 1905), from Keith Watson some time ago. A coach has been under construction for the line in Western Australia by Enginuity Mechanical Services Pty Ltd. It is a bogie vehicle 8m long and it underwent testing on August 2nd on the Bennett Brook Railway in Perth. The carriage is a saloon style vehicle with a generous verandah at one end. At the time of the test it only required the fitting of glazing and interior fittings to be completed. Interior fitout was intended to comprise full carpeting and loose arm-chair style seating. The carriage arrived at BBR. by tilt-tray truck and after several hours successful test running was trucked back to Enginuity's workshop for completion.

Simon Mead via Bob McKillop 8/97

NEW ENGLAND ANTIMONY MINES PTY LTD, Hillgrove 610 mm gauge

(see LRN 112 p.9)

A Gemco 1½ ton 4wBE with tipping of a single 3 ton Granby car commencing, New Number 6 Level, Metz Gorge, August 22nd, 1997. [For CD-ROM edition, a close-up view is reproduced below]

Photo: Ross Mainwaring

Mining operations are currently in progress in the Metz Gorge (old Metz or West Hillgrove) side of the Bakers Creek Gorge. New Number 5 and 6 levels are now working. Stopping of the ore body in 5 Level is nearly concluded, with development work progressing in the new drive in 6 Level. This drive is in about 150 metres and has two turns in its direction (approximately south-west) to intersect the orebody. The entrance to the adit is protected from rock falls by stout timbers brought up from the coast.

New Number 6 Level is situated on the long-abandoned site of the old West Sunlight mine. The mine was operated from 1892 to 1900 (see LR 94). Adjacent to the surface tipping dock is the chimney and boiler which supplied steam to the West Sunlight shaft winding engine. The intact remains of this engine lie nearby, together with an old G & C Hoskins boiler which was most probably used for water storage. Efforts may be used to preserve this old plant in due course.

The Black Lode orebody is of antimony with only a very little gold. Scheelite is encountered in patches in the ore but it is not recovered as it is not in economic quantities. The width of the orebody is approximately 200 mm, but stringers of ore are also found. The country rock is slate, which makes for bad ground. It remains to be proved if the Black Lode is associated at depth with the West Sunlight orebody. If the orebody is kind to the company, it is planned to work down to the 9 level, but this is still an unknown quantity.

Levels are developed using Gemco 1½ ton storage battery locos and Granby cars. Each Level has a loco battery charger at the adit. On Levels 2 to 4, 1½ ton Granby cars were in service as the dimensions of the drive were 2.3m x 2.3m. For more economic working, the company workshop at Hillgrove has designed and built new 3 ton Granby cars for service at levels 5 and 6. Accordingly, at these levels the dimensions of the drive are increased to 2.5m x 2.6m. The new cars are built in modular form and transported to the adit by road transport. They have increased axle diameter as well as increased body height, length and width. They also carry names which are welded on. Eimco compressed air bidders load the broken ore at the underground face.

Tipping at the surface is accomplished rapidly with the loco simply reversing direction to return underground when the Granby is emptied. Ore on the dump is loaded by front end loader into contractors' road vehicles for the long, steep haul up to the top of the Gorge and then across to the mill at Hillgrove.

Previously on display at the entrance gate at Hillgrove was a Mancha 3-ton battery loco. This has now been taken away for return to service. new wheelsets are presently being cast in a foundry at Uralla, south of Armidale. The loco has been painted yellow and was noted lying upside down outside

the workshop awaiting arrival of the new wheels. The number 4 is affixed inside the driving position.

Ross Mainwaring 8/97

TRACTION & VEHICLE RESTORERS ASSOCIATION INC, Marsden Weir Steam Museum, Goulburn 610 mm & 1435 mm gauge

(see LRN 106 p.6)

Railway operations at this museum resumed on 19 July after a lengthy break for track restoration work. About half of the 800m line has now been rebuilt (to the correct gauge) with a third rail for standard gauge ganger trolley operations and priority is being given to finishing the remaining section to the museum entry gates. Steaming of the John Fowler 0-4-2T (believed to be 16340 of 1924, but carrying plates 17882 and fitted with a Bundaberg Foundry boiler) was delayed by heavy frost, but several trips were run from 3 pm. The locomotive is fitted with an ex-NEW SOUTH WALES GOVERNMENT RAILWAYS 19-class whistle, resulting in a commanding expression of its presence in the small valley. The F C Hibberd *Planet* 4wDM and a standard gauge ganger trolley also operated on the day, with your intrepid reporter the only outside visitor for the event. The new track gives a much improved ride. The railway will be operating during scheduled steam days, being the 1st and 3rd week-end of the month. The museum is open daily for inspection.

The Steam Museum is of major industrial heritage significance and is set in an attractive location beside the Marsden Weir. The 1883 Appleby Bros beam steam engine is the only surviving beam engine in New South Wales still in working order on its original site. Presentation has been improved with a clean-up of the beam engine, restoration of the original boiler house and Galloway boilers to static display, and a start on restoring the two stationary engines and Buffalo Pitts 14 hp traction engine (B/n 10154) standing outside. The magnificent Appleby beam engine and a Hick, Hargraves horizontal steam engine of 1864 operate on steam days. Two boilers from Goulburn Gaol have been installed in a new boiler house to operate a wider range of stationary engines and it is planned to have these operational by the year 2000.

Krauss 0-6-0T *Stella* (3423 of 1897) is still in pieces in the workshop. Some work has been done on the frames, but it is advised that this restoration is a "long term project".

Bob McKillop 7/97

QUEENSLAND

AUSTRALIAN NARROW GAUGE RAILWAY MUSEUM SOCIETY

See MORETON SUGAR LTD

BUNDABERG SUGAR LTD, Mourilyan Mill 610 mm gauge

(see LRN 118 p.9)

Seventy new 6-tonne cane bins were to be added to the rail fleet for the 1997 season.

Australian Sugar Digest 2/7/97 via Chris Hart

CSR LTD, Herbert River mills 610 mm gauge

(see LRN 119 p. 11)

Victoria Mill's new Pombel to Crystal Creek line was opened to its terminus at Amos Road, Crystal Creek, on about 24 August. The 29 km line cost \$8m and will be financed over four years by grower levies, 32 cents per tonne for those who previously carted to the Bambaroo terminus, and \$1.12 per tonne for those who previously delivered to a road transport dump point. The line as far as Coolbie, 3.6 km short of Crystal Creek, had been opened to traffic on 25 June, and the first locomotive to haul cane from there was Walkers B-B DH *Jourama* (680 of 1972, rebuilt Bundaberg Foundry 1996).

A new brake wagon arrived, most likely during July, to pair with the newly-delivered Walkers B-B DH *Cairns* (681 of 1972, rebuilt Bundaberg Foundry 1997). It appears to be built locally by Solari Engineering.

Some new bulk sugar bins, about a dozen in number, were observed during August. They have the same type of bogie as the new 11-ton bins.

The tamping machine on hire from Fessl was only used for a few weeks, solely at Macknade Mill as far as is known. The track jack from Plane Creek Mill was still at Macknade in late August.

On 13 August, following the failure of Macknade Mill 18 (Clyde 0-6-0DH DHI.5 of 1954), E M Baldwin 0-4-0DH 17 (6-1446-1-9-65 of 1965) was put onto cane haulage. 17 itself failed the same day in the Seymour Extension, with final drive troubles, and was brought back to the mill by road transport a few days later. Meanwhile, on 14 August, E M Baldwin 0-4-0DH *Albany* (6-1792-1-11-66 of 1966) had been pulled from "rotten row" and was being cleaned up at Victoria Mill. This loco seems to have been out of service for a couple of years, but went over to Macknade on 25 August for navvy use. It has had a partial repaint, sprucing it up a little.

Macknade Mill's E M Baldwin 0-6-0DH 14 (6-2490-1-7-68 of 1968) is once

again assisting with the transport of Victoria Mill bulk sugar to Lucinda, using the same arrangements as last year.

Hansen linecar L CAR 5 (34 of 1973) and the Macknade poison unit went over to Victoria Mill to do some spraying late in the slack season. The linecar failed there and stayed on at Victoria after the poison unit came back. L CAR 2 (56 of 1972) from Victoria then replaced L CAR 5 at Macknade. L CAR 3 (1920 of 1978) has since gone from Macknade to Victoria for repairs but should return when these are completed.

The integration of the Herbert River mills means that large quantities of cane can be transferred from one to the other. The traffic so far this year has been from Victoria to Macknade, with regular daily transfers as well as extraordinary ones caused by mill failure or wet weather. There are normally about three transfers per day headed by Macknade Mill's E M Baldwin B-B DH 20 (7070-4-4-77 of 1977), but when crushing is disrupted there may be many more transfers using a variety of motive power.

DREAMWORLD PRODUCTIONS PTY LTD, Coomera 610 mm gauge

(see LRN 103 p.8)

Baldwin 4-6-0 4 *Reg Colter* (45212 of 1917) was noted in July 1997 jacked up with wheelsets removed. The driving wheels had been sent to Walkers Ltd at Maryborough for rettyreing.

Bob & Peter Gough 8/97

FESSL PTY LTD

See CSR LTD, Herbert River mills

MACKAY SUGAR CO-OPERATIVE ASSOCIATION LTD 610 mm gauge

(see LRN 119 p.13)

Identities of the two Walkers 73-class locomotives rebuilt for Farleigh Mill this year are as follows:

Identity	B/n	Year	NSW number
Cedars	693	1972	7331
Dulverton	690	1972	7328

These locomotives are believed to carry a small rebuild plate inside the cab. On it, they are described as "94 class". This is believed to be the designation given by mill staff to the first Mackay Sugar 73-class rebuild, done at Pleystowe Mill in 1994. It has been suggested that a belief that the "73" designation referred to a supposed introduction date of 1973 led to the

94 class designation corresponding to a rebuild date of 1994.

A massively-long vehicle noted at Marian Mill last year has turned out to be a "bridge beam bogie". This contraption, when stationed on a bridge, supports two spans enabling piles or foundation bolts on the pier between the spans to be replaced without costly cranes or reenforcing from below.

Jerry Jirasek 7/97; Tony Wells 8/97;

Australian Canegrower 14/7/97 via Chris Hart

MORETON SUGAR LTD 610 mm gauge

(see LRN 119 p.11 & 14)

In the week commencing 4 August, Bundaberg Foundry 0-6-2T 5 (5 of 1952) was borrowed by Moreton Mill at Nambour from ANGRMS, together with some operating staff, to haul cane as part of the mill's Centenary celebrations. After transport from Woodford the day before, the steam loco entered service on Tuesday 5 August, hauling full bins from Howard Street Yard to the mill and returning with empties, up to and including Saturday 9 August. This route provided plenty of public attention as the tramline runs down the centre of public roads for the entire distance from Howard Street yard to the mill gates. The exercise provided valuable experience in using the steam loco to haul loads of up to 300 tonnes. Unfortunately, rain during the week disrupted cane harvesting and this meant that the Bundy Fowler did not see as much use as had been hoped.

Moreton Mill's E M Baldwin B-B DH *Coolum* (5565-1-10-74 of 1974), alias *Lorry*, has been provided with face front and rear. (*Lorry Loco* is the hero of a range of children's books published in Nambour). It also carries the wording *CLICKETY CLACK - STAY CLEAR OF THE TRACK*.

The mill's preserved John Fowler 0-6-0T *Eudlo* (16207 of 1925) was given a cosmetic restoration for the centenary. It was to be seen in the mill yard during the week and was placed on a low loader for the centenary parade on August 9th.

THE MULGRAVE CENTRAL SUGAR CO LTD, Gordonvale 610 mm gauge

(see LRN 119 p.14)

A photo in the *Cairns Post* featured Clyde 0-6-0DH 19 (65-435 of 1965),

which was derailed near the Redlynch depot on July 29th, together with its brakewagon and a number of cane bins. No serious damage seemed to have been done.

Cairns Post 30/7/97 via Chris Hart

QUEENSLAND SUGAR INDUSTRY CORPORATION, Mackay Harbour 1067 mm gauge

(see LRN 106 p.11)

Com-Eng 0-6-0DH F1029 of 1958 is still in regular use outside the crushing season to shunt sugar boxes around. It is unusual to see it in the same place two days running when it is in use. It does not seem to run anywhere but in the sugar loop area. The tracks in this area belong to the Sugar Corporation. Straying from that area would entail travel on QR tracks which does not seem to be allowed. There seems to be a reasonable future for the loco as it received auto couplers during the last crush although it still retains buffers as well. Use during the crush would be difficult as the only siding in the Sugar Corporation area seems to be near the loco shed itself.

Recently a small bogie crane was noticed coupled to the loco. It looked to be quite old and is probably hand operated. It appeared to have the word "Brumbles" painted roughly on the jib, apparently a joke. The crane has now disappeared and its use or whereabouts is presently unknown.

Barry Campbell 8/97

SOUTH JOHNSTONE MILL LTD 610 mm gauge

(see LRN 116 p.14)

It appears that trials have been done to use an axle-driven compressor and alternator to provide power on cane railway remotely-controlled brake wagons. These heavy wagons are marshalled at the rear of trains to provide extra braking power, particularly on downhill sections of line. If successful, this method would replace the internal-combustion engines commonly used, which are often noisy and can be costly in terms of maintenance.

The transfer station for moving road hauled cane containers from road vehicles to yard rail bogies, introduced in 1995, will this year handle 190,000 tonnes of cane hauled predominately from the Murray / Tully River area and the Atherton Tableland.

*Australian Canegrower 14/7/97 via Chris Hart;
Australian Sugarcane 6-7/97 via Chris Hart*

TULLY SUGAR LTD 610 mm gauge

(see LRN 115 p.15)

A GPS tracking system for locomotives has been in use here since 1993.

This satellite-based system is useful to the traffic office in locating each unit, and is also a valuable safety device. An audible warning sound when any two locos are less than one kilometre apart.

ARHS Bulletin 7/97; Editor

SOUTH AUSTRALIA

BHP LONG PRODUCTS DIVISION, Whyalla 1435 & 1067 mm gauge

(see LRN 119 p.17)

AN's standard gauge Bo-Bo DE 508 (built SAR Islington, 1965) has been on hire to BHP Whyalla as a result of their loco shortage.

It is reported that AN's broad gauge Clyde Bo-Bo DE CK1 (67-496 of 1967) was converted to narrow gauge at Port Augusta for loan to BHP, but that it is now requiring major mechanical repairs. However, a second MKA-class Co-Co DE locomotive (ex QGR 1300 / Tasrail ZC class) is reportedly on loan from Morrison Knudsen.

Brad Peadon 8/97; Australian Locomotive News 8/97

PENRICE SODA PRODUCTS PTY LTD, Osborne 1600 mm gauge

(see LRN 112 p.14)

AN's Bo-Bo DE 516 (built SAR Islington, 1967), normally on hire to Penrice, was noted very weathered and dusty in SAR red for maintenance at Dry Creek motive power centre on June 11th. It was temporarily replaced at Osborne, as usual, by 517 (also built 1957).

Australian Locomotive News 8/97

TASMANIA

EMU BAY RAILWAY CO LTD 1067 mm gauge

(see LRN 119 p.17)

The locomotives are being progressively repainted and now carry the wording PASMINGO EMU BAY RAILWAY.

ARHS Bulletin 8/97 via Editor

VICTORIA

BEGLEY BROTHERS, Wodonga 1435 mm gauge

(see LRN 106 p.12)

It would appear that the person who initially acquired Andrew Barclay 0-6-

OT 1470 of 1916 from Portland cement works was a Barry Dean of Orange. It has been reported that the locomotive was a donation. It was initially transported from Portland to Orange by the Army on the back of a tank transporter.

Stuart Livesey 8/97 (aus.net newsgroup)

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762 mm gauge

(see LRN 119 p.21)

Work on Bridge 9 on the Gembrook extension, at Cockatoo Creek, will recommence in October. This will involve constructing the nine piers, and is expected to take six months. Work is also under way on installing flashing lights at main road crossing in Cockatoo, even though there are no trains to use them yet.

Trains will operate at Gembrook on market days, as in the past, from September to December inclusive, and February to May 1998 inclusive, but they will not operate on the Sunday following the market days. Gembrook market day is the last Saturday in the month, except for December, when it will be the 20th.

On 31 July and 1 August six NQR wagons were delivered to Emerald. They were 29 NQR with bogies, 100 NQR with bogies, 94 NQR without bogies, 164 NQR with bogies, 208 NQR with bogies, and 169 NQR without bogies. Three spare bogies were also delivered. They came from a private collector who had them in storage at Benalla.

On Sunday 24 August 1997, a surprise 50th birthday party was held for Colin Rees at the Nobelius Packing Shed. Colin, the well known owner of the former West Melbourne Gasworks locomotives Couillet 2-4-2ST (ex 0-4-0T) 861 of 1886, and Couillet 0-4-0T 986 of 1890, has also provided a substantial amount of corporate sponsorship to Puffing Billy in recent years. Couillet 861, which emerged last year from the Puffing Billy workshops after a complete rebuild and the completion of heavy modifications commenced several years previously, played a major role in the birthday celebrations. During the evening it was officially renamed *J.C.Rees* in honour of Colin's late father. A plaque was presented to Colin by Bill Hanks, on behalf of the LRRSA, for his role in the preservation of the two locomotives, significant pieces of Australia's industrial heritage.

Frank Stamford 8/97; Bill Hanks 8/97

VECTIS LIGHT RAILWAY, Wimmera District 610 mm gauge

Motor Rail *Simplex* 4wDM 21512 of 1955, ex Marian Mill, has been purchased

from its Bundaberg owner and will be transported for use on a private line on a bush setting near Horsham. The loco will be named VJ, after the owner's wife, and had been advertised in the periodical *Collectormania*.

Rolling stock items are two cane trucks and a bogie mower chassis from Condong Sugar Mill in NSW, one tipper wagon, presumably used on a Wimmera salt operation, and a collection of construction wagons which were obtained from a farm at Gowanfield in the Victorian Mallee perhaps 20 or 30 miles from the Murray River.

The railway itself is very, very short at present. The first 40 feet is double track embedded in the concrete floor of a used-for-everything shed. Enough tram rail has been obtained to reach the door and out across an apron for an outside work area. That is real street tramway rail with the notched top, not light or cane tram rail. The rail is interesting because of its rarity and its date, 1888. Enough assorted rail is available for connections across the paddock after minor earthworks. Providing the inside track first means material can be put under cover to work on and for protection. There is also a quantity of portable track from Condong Mill.

Editor 8/97, 9/97; Collectormania 8/97 via Ray Graf

WALHALLA GOLDFIELDS RAILWAY 762 mm gauge

(see LRN 119 p.21)

(P O Box 1576, TRARALGON, Vic 3844)

The Sunday of Queen's Birthday holiday weekend (8 June) was the busiest day since the commencement of operations to Happy Creek, with 467 passengers carried on the four scheduled trains, which now run at 1½ hour intervals. The loco now runs round the train at each end.

About 100 metres of track has recently been laid beyond Happy Creek. This is still 400 metres short of the boat belly bridge, which will have to be rebuilt. It was reported in LRN 112 that a Henschel 0-6-0T (25427 of 1956) was to put into working order for operation on the railway. Unfortunately this will not be going ahead, as a satisfactory agreement with the loco's owner could not be arranged. This loco is apparently now for sale, for an asking price of \$80,000.

New 2 ft 6 in gauge axles have now been made for the Hudswell Clarke 0-6-0 (1553 of 1924), and the boiler is now being prepared for a pressure test.

A new passenger car is being built. To be classed NBC, it will have a guard's compartment, a toilet, catering preparation area, and access for disabled passengers.

Dogspike & Diesel (formerly Track Record) Nos 2 & 3; Frank Stamford 9/97

WESTERN AUSTRALIA

BHP LTD IRON ORE DIVISION, Newman & Goldsworthy 1435 mm gauge

(see LRN 96 p.18 & 117 p.18)

As part of the BHP's plans to ensure capacity is available to expand iron ore shipments from its Pilbara mines, orders have been placed for eight new locomotives and 231 ore cars. Some of this rolling stock is part of the previously announced capacity expansion program at the Nelson Point shipping facility and railroad operations. BHP Iron Ore shipped a record 62.2 million tonnes to the year ended May 1997. This program will take total capacity to more than 70 million tonnes per year.

The new locomotives, General Electric Model AC6000, are 6,000 horsepower units driving through six alternating current traction motors. The new units will have the capacity to haul a 240-car train with three locomotives, compared to the current requirement for four. Additional benefits will include higher adhesion, improved tractive effort and dynamic braking performance, fewer mechanical components resulting in reduced maintenance requirements and improved fuel efficiency.

The purchase will allow the retirement from service of eight GE Dash-7 locomotives from the Goldsworthy railroad, to be replaced by eight GE Dash-8s from the Newman fleet, which in turn will be replaced with six of the new AC6000s. In addition, the 231 ore cars will expand the ore car fleet by more than ten per cent. Each car normally carries a payload of between 110 and 115 tonnes of iron ore.

The total value of the series of contracts, let to A. Goninan & Company Limited, in Perth, is just under \$70 million. Approximately fifty per cent of the work, to be completed in the next twenty months, will be undertaken in Western Australia.

BHP Iron Ore Press Release No 44/97 1/8/97 via Chris Stratton, (aus.rail newsgroup)

PEMBERTON TRAMWAY COMPANY 1067 mm gauge

(see LRN 119 p.21)

It is confirmed that the Plymouth 4wDH from Bunnings, Manjimup, is here. Can a reader provide any clues as to the identity of this locomotive, such as identification marks or numbers?

Terry Verney 8/97; Editor

WEST AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION INC. Bennet Brook Railway, Whiteman Park 610 mm gauge

(see LRN 116 p.19)

A new coach livery has been adopted, with Midland Railway of Western Australia Indian Red and Cream replacing the old brown. A number of carriages have already been painted.

The Association recently signed a 20-year lease from 1 July 1996. A public train service is required to be operated on Saturdays, Sundays and public and school holidays.

Enthusiasts day was scheduled to occur on Saturday 13 September, and the second "Friends of Thomas the Tank Engine Day" will be held on Sunday 12 October.

OVERSEAS

FIJI

FESSL PTY LTD

See FIJI SUGAR CORPORATION

FIJI SUGAR CORPORATION 610 mm gauge

(see LRN 119 p.22)

It is reported that next slack season, Fessl will be in Fiji to carry out further track maintenance with four track machines: the Plasser KMX-12 used there last year (222 of 1981), the Plasser KMX-06 at Labasa Mill (63 of 1974), a ballast regulator and a spot tamper. The Labasa machine is in good condition, having reportedly only completed 100 hours in service, as it was unpopular when first used there.

Chris Hart 8/97

MEETINGS

MELBOURNE: Steam Gauges and Dugouts

Peter Evans will be speaking of the results of two separate but related interests to his light railway pursuits. The first concerns steam gauges as found on all boilers whether they be for locomotion or stationary purposes. The second topic will cover the history of bush dugouts for protection from forest fire.

LOCATION: Ashburton Uniting Church Hall, Ashburn Grove, Ashburton

DATE: Thursday 9 October at 8.00 pm.

SYDNEY: Any member wishing to know details of the next meeting should contact Craig Wilson on 02-94847984

LOCATION: Woodstock Community Centre, Church Street, Burwood Note:
Plenty of off street parking at the rear of the building and Burwood station is
only a 5 minute walk away.

DATE: Wednesday 22 October at 7.30 pm

ADELAIDE: Contact Arnold Lockyer for details. Phone: 08-296 9488

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 16 October at 8.00 pm.

LIGHT RAILWAY NEWS is published by the Light Railway Research Society of Australia Inc. All articles and illustrations in this publication remain the copyright of the author and publisher. Contributions of material for inclusion in *Light Railway News* are welcome and should be sent to the Editor or relevant State News Contacts. Material submitted is subject to editing, and publication is at the discretion of the Editor. Material is accepted for publication in *Light Railway News* on the proviso that the Society has the right to reprint, with acknowledgement, any material published in *Light Railway News* or include this material in other Society publications.

TWENTIETH ANNIVERSARY GUEST EDITORIAL

Light Railway News No.1 was published in December 1977, and was printed by Mike McCarthy from Gestetner stencils typed by John Browning. John had written to Council a short time before offering to start a newsletter to take over the role previously carried out by the "News, Notes and Comments" section of *Light Railways*. The Council at that time took a great leap in faith to authorise a publication which had not been budgeted for and which increased the number of mailouts to six per year.

Since then, the publication has been seen in a variety of guises, but it has maintained a very good record of regular publication, and it has attempted to provide a complete and reliable record of Australia's narrow gauge and industrial railways. It has not always completely succeeded in that endeavour, but the considerable success it has enjoyed has been as a result of a joint effort between Editors, State News Contacts, contributors, and a hard working production and distribution team. On behalf of the Society, thanks to them all.

In 1977, the Queensland Government Railways still ran a 2 ft gauge railway, steam locomotives still hauled sugar cane in Queensland, and Puffing Billy was still owned by Victorian Railways. Groups of young (and not so young) men in Brisbane, Wollongong and Perth had discarded narrow gauge locomotives stored in a variety of locations and dreamed of operating museums. There have been many changes since then. The next 20 years will surely be as exciting.

Bill Hanks, LRRSA President

A BRIEF HISTORY OF LRN

Most issues of LRN have been edited by either John Browning or Peg & Geoff Hayes, but there have been a number of acting editors who stepped into the breach when needed. Other very significant contributors in the history of LRN have been Mike McCarthy, who has been responsible for arranging the printing of most issues, and Arthur Winzenried who word processed many issues in the early 1980s. The State News Contacts listed on page 2 have always been prepared to be of assistance, with Frank Stamford in particular a great supporter ever since the inception of the publication. Finally the unsung work of the distribution team should not be forgotten.

LRN	Editor(s)	Production co-ordinator(s)
1-3	J Browning	M McCarthy (a)
4-10	J Browning	J Browning & M McCarthy (b)
11	J Browning	F Stamford (c)

99-103	J Browning	M McCarthy	(f)
104	M McCarthy	M McCarthy	(h)
105-121	J Browning	M McCarthy	(f)

- (a) Typed by John Browning on Gestetner stencils. Duplicated by Mike McCarthy
- (b) Typed by John Browning and printed at St.Peter's Lutheran College, Brisbane
- (c) Commercially typeset and printed by Newey & Beath, Newcastle
- (d) Word processed by Frank Stamford
- (e) Word processed by Arthur Winzenried
- (f) Word processed by John Browning
- (g) Word processed by Peg Hayes
- (h) Word processed by Mike McCarthy

The Society mailings have generally consisted of a mob of people gathering around a dining room table, and hurling bits of paper about in a wild frenzy. Over the years mailouts have taken place at various locations and amongst the attendees have been Frank Stamford, Arthur Winzenried, Ted Stuckey, Geoff Thorpe, Mike McCarthy, Jack Stock, Alan and Gloria Stebbing, Phil Rickard, Hugh Markwick, Bill Hanks, Colin Harvey, and no doubt others whose names escape memory at the moment. Thanks to them all.

FROM THE EDITOR

This will be the last LRN published in the current format, and if it is late, it is my fault entirely. As someone associated with every issue over 20 years, I can say that it has been loads of fun. One source of great satisfaction is that this issue is probably the most balanced ever in terms of coverage throughout Australia (there have only ever been very few reports from the Northern Territory). A second source of satisfaction is that at the time of writing this I have never had so much material waiting for the next issue, even if I should have been finished a couple of weeks ago! Keep those reports rolling in, and thank you all.

John Browning

NOTES, CORRECTIONS AND COMMENTS

Moreton Mill Centenary History

John Kerr advises that the Moreton Mill History by Berenis Alcorn and Robin Dunn is available for \$25 plus \$8 (\$6 within Queensland) from Mrs Benny Alcorn, 22 Turner St, Maroochydore 4558. The excellent book has 238 pages just under A4 size including photos and detailed tram map. It also contains much tramway information and is recommended reading.

Echoes of the Axe

Ray Graf sends a press cutting which mentions this recent book by Charles Fenning, dealing with the history of the NSW mid-north coast's timber industry. Can anyone provide further details?

Puffing Billy South African Garratt

Andrew Burnham (Editor, *Continental Modeller*) points out that an error has occurred with the recording of the PBPS South African Garratt builder's number (see LRN 114 p.16 and LRN 118 p.1). This is correctly 7430 of 1951, with an original typographical mistake being perpetuated. Apologies to all, and thanks to Andrew for taking the trouble to point out the problem!

Australian Newsprint Mills, Boyer

(see LRN 93 p.15 & 88 p.13)

A recent enquiry by Ray Graf and Phillip Graham has elicited the information that *the Boyer mill internal narrow gauge railway was sold several years ago and . . . we are unable to advise what has happened to it.* This may refer to the proposed auction of five years ago. Can any reader provide further information?

RESEARCH COLUMN

Noel Butlin Archives Centre of Australian Business, Canberra

Of concern to all researchers will be the severe curtailment of the operations of the Noel Butlin Archives Centre. Originally intending to close them completely, the Australian National University has bowed to pressure to keep the centre open for the next three years, but with very limited staff, inadequate resourcing, and access by appointment only. There still appears to be a threat of the dispersal or destruction of records. The archive contains the extensive records of CSR as well as Australian Estates and no doubt other organisations which operated light railways. A wonderful resource belonging to all Australians, and one which must surely be protected. Editor

LOCOMOTIVE, ROLLING STOCK & EQUIPMENT MANUFACTURERS

GEORGE MOSS LTD, Osborne Park, WA

(see LRN 119 p.6)

Gemco is reported to have ceased locomotive construction in the last

couple of years. This once prolific builder supplied large numbers of battery locomotives for home and export markets as well as a variety of wire electrics and diesels. Gemco's demise means that there is no really established manufacturer of narrow gauge locomotives for mining, construction or industrial use left in Australia. Perhaps this means we will revert to a predominance of imports, although cane railway loco requirements are unique in the world.

David Jehan 10/97

AUSTRALIAN CAPITAL TERRITORY

COCKINGTON GREEN, Belconnen 305mm gauge

(see LRN 120 p.3)

The locomotive on this 1ft gauge railway is an 0-4-0WT built by Ross Bishop-Wear & Colin Wear and modelled on a John Fowler 2ft gauge design, that of 16249 of 1924 for Rocky Point Mill, Queensland. There is a full description in *Australian Model Engineering* 51 (Nov-Dec 1993). Two locomotives were built with the other in private ownership.

Warwick Allison 10/97; David Proctor 10/97; Michael Bickford 10/97

NEW SOUTH WALES

THE BELLAMBI COAL CO PTY LTD, South Bulli Colliery 1067mm gauge

(see LRN 55 p.3)

With a view of the ocean from South Bulli Colliery, 4wBE B, with A E Goodwin plates, in use on the surface, July 12th 1997.

Photo: Craig Wilson

This mine was visited on 12 July. Its sale by Shell to Allied Mining, a Wollongong-based firm, had been negotiated, and all the men (about 130) were to be made redundant before the handover, anticipated on 25 August. It was thought that Allied might reopen the mine initially to complete mining of the Bulli seam and then the lower Wongawilli seam, which has not yet been mined on these leases.

Noted on the surface at Russelvale were:

D3	4wDH	E M Baldwin	diesel bay
D4	4wDH	Fox	under repair
A	4wBE		surface use
B	4wBE	A E Goodwin	surface use
C	4wBE	A E Goodwin	u/ground use
3A	4wDHR	Fox	in service
4A	4wDHR	Fox	in service
21B	4wDHR	E M Baldwin	in service

There are also a number of personnel carriers and locos located at Shaft No.4. Believed to be underground at the time of the visit were personnel carriers 15A, 20B, 22B, 23B and Baldwin diesel loco D6. Away for repairs was Fox 4wDHR 11A.

Craig Wilson 10/97

BRAMBLES INDUSTRIAL SERVICES, Carrington 1067mm gauge

Three E M Baldwin 0-6-0DH underground mining locomotives were noted in a corner of the massive yard here in mid-October. Numbers carried were 3407, 3408 and 3403(?), while at least one other similar locomotive was seen on the back of a truck near the middle of the yard. Some or all of these units are believed to have come from Liddell Colliery, and further details would be welcomed.

Brad Peadon 10/97

BHP LTD, Port Kembla 1435mm gauge

(see LRN 120 p.3)

SRA 80-class locomotives 8015 and 8039 were trialled double heading Elouera coal trains from early September. Around the middle of the month they were working Kemira Valley trains solo rather than in combination. 8018 joined them at Port Kembla on 16 September.

The 80 class have only received small modifications so far, these being the fitting of a strobe light at each end above the number board plus the customary orange lights along the side just below the skirting and blue lights at the front below the painted numbers.

The Kemira line was closed for a week in September for track replacement

BHP Port Kembla's English Electric (Australia) Co-Co DE D51 (A.111 of 1965 in yellow livery shunts out empties from the Elouera spoil dump, September 19th 1997

Photo: Brad Peadon

and removal of the BHP Stainless siding at Waters (where the Kemira line passes under the Princes Highway). Of interest was the first use of concrete sleepers on the system, while English Electric (Australia) Bo-Bo DE D42 (A.270 of 1974) was being used on ballast trains on the line.

English Electric Bo-Bo DE D17 (A.031 of 1960) is the latest unit to be painted in the new yellow livery joining three other English Electric locos:

D33	Bo-Bo DE	A.089	1964	
D49	Co-Co DE	A.242	1972	ex Goldsworthy
D51	Co-Co DE	A.111	1965	ex WAGR & Goldsworthy

The October Long Weekend was a Open Day at the Port Kembla works. On the Saturday night a trip was done around the works using preserved

Bo-Bo DE D6 (Com-Eng, 1950) and 3801 Ltd's ex South Maitland Railways Beyer Peacock 2-8-2T 18 (5909 of 1914) which also ran up to Kemira loader. Clyde 0-6-0ST *Bronzewing* (457 of 1937) has been suffering problems of late which is why it was not used with SMR 18. Trips around the works were handled by D6 on one train, and English Electric (Australia) Bo-Bo DE D36 (A.237 of 1971) on another.

It is reported that two locomotives have been purchased by Specialised

Container Transport, Com-Eng Bo-Bo DE D7 (built 1950), which will be used in Melbourne, and reportedly English Electric (Australia) D21 (A.042 of 1960), to go to Perth.

Brad Peadon 9/97, 10/97; aus.rail newsgroup (Chris Stratton)

CARGILL AUSTRALIA LTD, Newcastle 1435mm gauge

(see LRN 118 p.5)

AE Goodwin Co-Co DE CAR1 (83712 of 1960) was reportedly transferred to Cargill's new works in June.

Railway Digest 9/97 via Bob McKillop

DAY DREAM MINE, Wilson, nr Silverton narrow gauge

This mine north-east of Silverton, now a tourist attraction, opened around 1883. A town called Wilson was surveyed, and a smelter was opened in 1885. All were abandoned in the 1890s. Visiting the mine is more like touring a limestone cave than the more established mines, but it is possible to view the rail tracks which were installed by the previous operator when the mine was first re-opened. Access is by turning off the road from Broken Hill just before Silverton, and tours operate daily. A number of items of rolling stock, of various gauges, are displayed on the surface.

I A Cutter

DORRIGO STEAM RAILWAY & MUSEUM 1435mm gauge

(see LRN 115 p.9)

A recent acquisition for the museum is Andrew Barclay 0-6-0ST 12324 of 1911, formerly Commonwealth Portland Cement, Portland, number 3. This has been purchased from the Central West Railway Preservation Society at Orange.

English Electric (Australia) B-B DE D11 (A.009 of 1956) ex Port Kembla steelworks has been reserved for the museum at Simsmetal, Mascot, where it was used as a shunter.

Ray Graf 9/97; Brad Peadon 10/97; Trevor Edmonds 10/97

HUNTER VALLEY RAILWAY TRUST, Branxton 1435mm gauge

(see LRN 117 p.5)

This group has been active in rebuilding the Branxton-Rothbury branch line and restoring rolling stock at their Rothbury site. A locomotive shed has been constructed with Railway Heritage Grant assistance and six of the seven former South Maitland Railways Beyer Peacock 2-8-2T tank locomotives have been relocated from East Greta to Rothbury, along with many tonnes of spare parts and equipment. Locomotives 17 (5570 of 1913) and 20 (5998 of 1915)

have been stripped down, thoroughly cleaned, primed and repainted in preparation for steaming. There are over 100 items of rollingstock on site. Six carriages have been repainted for operations.

Peter Neve 9/97

ILLAWARRA LIGHT RAILWAY MUSEUM SOCIETY, Albion Park 610mm gauge

(see LRN 119 p.7)

On 23 August, Hunslet 4wDM 2 (4578 of 1953) was noted painted in zebra stripes outside the loco shed, having arrived recently from the Port Kembla copper refinery. It is supposedly in working order.

2	4wDH	Westfalia Becorit	14526-1-91	1991
3	4wDH	Mine Technik	22468-9-96	1996

David Jehan 10/97

OLEX CABLES, Homebush Bay

This company has the contract to lay underground cables to replace the existing 5km of overhead powerlines near the Olympic site. A press photograph shows an interesting machine apparently used in the linking together of steel tubing to contain the cables. It consists of a short length of narrow gauge track placed in the cable trench, at one end of which is a powered (and presumably self-propelled) unit. The function of the unit seems to be to rotate the newly-placed length of tubing so that it engages with the previous length by means of an internal screw arrangement which is part of each tube. Part of the project is one "major under-road tunnel".

Daily Telegraph 11/2/97 via Ray Graf

PORT KEMBLA COPPER Pty Ltd 610mm gauge

(see LRN 119 p.9)

On the ILRMS tour on 23 August, one Hunslet 4wDM (4582 of 1955) was in use, heavily graffitied, with three empty anode trucks. The train shuttled to and fro on about 50 yards of track in and out of an empty anode house, which was stripped for demolition.

Much existing trackwork was noted on site but most of it was unusable because of missing point blades, rubbish obstructing both tracks and points, and diamond crossings installed across existing trackage but with no slots cut to allow any crossing traffic.

In storage was a second, and totally dismantled, Hunslet loco, with builder's plate made unintelligible with a thick covering of paint. In the distance and inaccessible was also seen the black and yellow striped body of a third unit.

BABINDA SUGAR LTD 610mm gauge

(see LRN 114/6 & 116/10)

See Bundaberg Sugar Ltd, Mourilyan Mill

BUNDABERG SUGAR LTD, Mourilyan Mill

(see LRN 120 p.8)

Babinda's Com-Eng 0-6-0DH 1 *Josephine* (A1821 of 1957) is back in service this year, in yellow livery with green trim, now seemingly the mill's standard

livery, although some locomotives are still painted white. Com-Eng 0-6-0DH locos 6 *Allison* (C2234 of 1959) and 7 *Morrison* (AD1239 of 1960) have had new cabs fitted and have been newly fitted to work in multiple back-to-back. Baguley 0-6-0DH *Fishery* (3387 of 1954) seems to be retained available as a spare unit this season. Of the two Malcolm Moore 4wDMs, 1057 of 1943 is derelict, while 1011 of 1943 is on an isolated length of track in the mill yard with the E M Baldwin petrol line car (3092-1-10-69 of 1969) which came to Babinda from the now closed Goondi Mill.

Meanwhile, this season Mourilyan Mill has been working the ex-Goondi lines north of the Johnstone River (Daradgee, Upper Daradgee, Jogo and Garradunga) for the first time since the closure of Goondi in 1986. These areas have previously been part of Babinda Mill territory, but flexibility in working between the two mills has been maintained by the retention of the Johnstone River Bridge connecting which connected the two parts of the Goondi system.

BUNDABERG STEAM TRAMWAY PRESERVATION SOCIETY, North Bundaberg & Qunaba 610mm gauge

(see LRN 83 p.8)

The locomotive in use on Sundays at the Botanic Gardens on October 11th was been Bundaberg Foundry 0-4-2T 3 of 1952. Meanwhile, noted at the back of the loco shed at Millaquin Mill's Qunaba depot (former mill site) in October was the Society's Baldwin 0-6-2T *Felin-Hen* (46828 of 1917). This consisted of frame, wheels and boiler assembly only.

Editor 10/97

CSR LTD, Herbert River mills 610mm gauge

(see LRN 120 p.8)

Plane Creek Mill's Clyde 0-6-0DH 11 (ClydeQ 70-709 of 1970) was transferred to Victoria Mill on or shortly before 8 October. Before entering service, the wheels were to be machined as the wheel profile used at Victoria differs from that at Plane Creek. Some of the ballast weights had been removed and sent to Macknade Mill by 23 October for possible use there.

E M Baldwin 0-4-0DH *Albany* (6-1792-1-11-66 of 1966), which had been sent over from Victoria to Macknade for service with the navvies, saw service hauling cane at Macknade on September 22nd to 24th to cover a failure, and then from 3 October, when E M Baldwin B-B DH 19 (7070-3-4-77 of 1977) had a major breakdown. This continued up to 17 October, on which date it

returned to Victoria, where it is believed to have been used since for bin shop shunting.

Recently returned from its stint in Proserpine by 25 September, Victoria Mill's preserved Hudswell Clarke 0-6-0 *Homebush* (1067 of 1914) was to be used for free passenger train rides in association with the Maraka Festival on 18 October.

Work on the \$2m Elphinstone Creek road/rail bridge for Victoria Mill is expected to commence in the 1997-8 year, but will take two years to complete.

ISIS CENTRAL SUGAR MILL CO LTD 610mm gauge

(see LRN 114 p.11)

MILLAQUIN SUGAR CO PTY LTD 610mm gauge

(see LRN 98 p.10)

A \$2m rail extension of more than 10km has been built north from the terminus of Isis Mill's Gregory river line, across the Elliott River to the Gillen's Creek area on the southern approaches to Bundaberg. South of the Elliott River, the new line passes through a very attractive tract of State Forest for a distance of about 5km. Some track construction work beyond the current head of steel seems to have been disrupted by irrigation works. On 13 September, Clyde (Qld) 0-6-0DH 9 (75-812 of 1975), with two loaded ballast hoppers, was on a short isolated length of unballasted track about 200m in length which seemed to have been cut off from the end of the new construction by excavation for a link between two irrigation channels. Ballasting work seemed to have been completed on the new line up to this point. Further in the distance was further new formation indicating a junction, while a further length of track beyond further irrigation earthworks was in the process of being ballasted by a road semi-trailer.

Meanwhile the Burnett Shire Council is faced with competing applications for tramway permits from Isis and Millaquin Mills in the Gillen's Creek - New Valley Road area as they prepare for the continuing deregulation of the industry. The applications reportedly show the lines crossing each other several times as well as running on opposite sides of the same road. The Shire Council opposes the use of road reserves for tramlines, but alternative routes are being thwarted by each mill's growers being unwilling to grant an easement for the rival mill's line. Suggestions for a shared line by one Councillor have not been warmly greeted.

(see LRN 120 p.11)

The loco livery at this mill has been changed. Gone are the silver headstocks, replaced by yellow and black.

Editor 9/97

TULLY SUGAR LTD 610mm gauge

(see LRN 120 p.11)

Tramline expansion seems to be continuing, particularly in the Tully and Murray River lands south-west of the mill. A new 3km extension was noted in the Travelling Dairy Creek area north of the Tully River, while on the opposite bank of the river, the Riversdale line seems to have been extended by about 3 kilometres during the 1996 slack season. A 1.5km extension to the Warrami Extension line was being built down Blackman Road by the end of September 1997, with 0.7km of this completed. The anticipated 3.2km line in Daveson Road, El Arish, was completed for the 1997 season. Meanwhile, a rail corridor

has apparently been set aside for a line into the North Warrami area, but as the area is currently growing cane for South Johnstone and Mourilyan Mills, early construction seems unlikely. Cane for these two mills from this area is trucked for long distances by road transport, arguably heavily subsidised by the taxpayer in terms of road costs.

One of the earliest main-line diesel locomotives supplied to the sugar industry in Queensland was TULLY No.8, John Fowler 0-6-0DM 21912 of 1936, which was rebuilt to diesel hydraulic by E M Baldwin in 1963 (590-6-63). It was purchased to work the difficult section over the Walter Hill Range to El Arish which opened in 1937. This unit has generally been found in the navvy area at the mill in recent years, seeing little if any use. It was noted dismantled outside the locoshed late in September, consisting of frame wheels and cab only.

New Plasser KMX-12T ballast tamper 433 of 1997 was seen in use in September. Its builder's plate is dated 1996.

EMERALD TOURIST RAILWAY BOARD, Puffing Billy Railway 762mm gauge

(see LRN 120 p.12)

A grant of \$99 500 has been received from the State Government for work to be carried out at Lakeside. The work, which has already commenced, will involve the provision of a second platform, and a siding at the down end of the station, where trains can be stabled. This is to facilitate train operations when the line is reopened to Gembrook.

A new station building for Wright is being constructed off-site by building construction students. Cattle grids have now been fitted to the cattle pits at Wright Road level crossing, which is now the most authentic heritage level crossing on the railway. Also being constructed off-site are the piers for bridge No.9 (Cockatoo Creek). Flashing lights have now been installed at the busy, and rather complicated, McBride Road level crossing at Cockatoo.

All of this work is in preparation for the opening to Gembrook, which according to the October edition of the Puffing Billy Railway's *Monthly News*, is scheduled for 11 October 1988. Though this date is quoted in two places, it seems they might mean 1998!

2-6-2T 7A (Newport, 1905) is back in service after its ten year boiler examination, and Peckett 0-4-0T *Sir John Grice* (1701 of 1926) has also just passed its ten year boiler examination.

The former Mount Lyell Railway passenger cars, 1 NBL to 4 NBL have been

reclassified as NAL. This is because they are regarded as "First Class" vehicles.

BUNNINGS, Jardee 1067mm gauge

(see LRN 96 p.17)

An internal combustion locomotive is reportedly out of use at Jardee. It appears the mill no longer has any connection to the main line as Westrail have rationalised this station and sold most of the points and siding trackage to Ian Willis .

Ian Willis via Simon Mead 9/97

BUNNINGS, Pemberton 1067mm gauge

(see LRN 118 p.16)

A Com Eng 0-6-0DH is still at Pemberton Mill, stored out of use. (Is this BB1050 of 1961, formerly with Hawker Siddeley? - Ed.) Consideration is being given to transferring this loco to Bunnings' Diamond Woodchip Mill at Lambert in conjunction with the construction of a siding into the mill from the Pemberton Tramway at Lyall. This will allow logs for transfer to Pemberton Mill to be loaded inside the mill site, with the diesel carrying out the shunt from the mill to the station at Lyall. Currently logs are carried to the loading siding at Lyall by the mill's log handling machine, a somewhat inconvenient arrangement. It is understood that it is painted very light gray with black trim, black chassis, and orange and black zebra stripes on the headstocks and counterweights.

Simon Mead 9/97

DERBY TRAMWAY ASSOCIATION 1067mm gauge

A promising proposal to recreate the former PWD tramway at Derby on its original site has become controversial because of the proposed redevelopment of the tramway depot area (see LRN 65 p.18) by a trucking

company. The Shire Council has approved for the tramway goods sheds to be removed, but this is subject to the decision of the WA Heritage Council. The matter is complicated by the Tramway Association President seeing the possibility of \$20 000 compensation to be put towards the development of the new tramway as more attractive than the retention of the original site, an approach rejected by others committed to Derby's heritage.

Some tramway track near the jetty appears intact although overgrown and almost buried.

(The newspaper feature dealing with this issue contains a very clear photograph from the Derby Public Library collection of one of the 0-4-0PM locomotives.)

ROBE RIVER IRON ASSOCIATES 1435mm gauge

A major new mine development is planned for West Angelas, which would require a new 340-kilometre rail link. The proposed mine site is situated near the Hamersley Iron Paraburdoo line, and discussions are underway regarding a possible joint use of Hamersley's track.

Railway Digest 10/97 via Brad Peadon

SPECIALISED CONTAINER TRANSPORT, Perth 1435mm gauge

It is reported that this company has two English Electric (Australia) Bo-Bo DE H class locomotives in use at its depot, H3 (A.085 of 1964) and H5 (A.087 of 1964), both painted in pale grey livery. An earlier report suggested that H3 and H2 (A.084 of 1964) were to go east for refurbishment before possible use in Melbourne and Adelaide, and BHP Port Kembla (see elsewhere this issue) are also reported to have sold locomotives to this group.

WEST AUSTRALIAN LIGHT RAILWAY PRESERVATION ASSOCIATION, Bennett Brook Railway, Whiteman Park 610mm gauge (see LRN 120 p.15)

Showing off the bogie carriages in their new livery is John Fowler 0-6-0DM No.2 Rosalie (4110019 of 1950) on Enthusiasts' Day, September 23th, 1997

Photo: Ken Watson

Bennett Brook Railway's 1997 Enthusiast's Day on Saturday 13 September was very successful. The day was cloudy but fine, allowing photography from almost any angle. Ticket and souvenir sales were excellent. In addition to the hourly scheduled service train, a wide variety of other train movements were undertaken.

Between 11am and 5pm, 27 train movements took place over the Mussel Pool line and 16 train movements on the Bushland Loop line. This gave a total of 59 arrivals or departures at Whiteman Village Jct. station during the day. With this much activity, plus associated shunt movements, it is not surprising that the two signalmen and the train controller rostered to supervise operations at Whiteman Village Junction were hardly ever in the office to answer the phone. Trains run included light engine movements, passenger, pick-up goods, mineral, and mixed train consists, and even a ballast regulator.

Motive power featured included:

BT1	Betty Thompson	0-4-2T	Perry	8967.39.1	1939
NG15 118	Elizabeth	2-6-2	Henschel	24476	1938
No.2	Rosalie	0-6-0DM	Fowler	4110019	1950
PW27	Wyndham	4wDM	Gemco		1964
1		4wDM	F C Hibberd	2150	1938
	Maylands	4wPM	Metropolitan Brick		c.1960
TM715		ballast regulator			

Timekeeping was good considering the very tight timetable being operated, dropping about 15 minutes behind only when two motive power problems occurred at the same time, *Maylands* throwing a drive chain, and NG118 suffering steaming problems because of bad coal.

The Perry shunting the new goods shed at Mussel Pool and then banking the NG15's freight train up the 1 in 47 gradient from the station was a highlight, as were the four photo run-pasts staged during the day. The Austin 7 Car Club attended and had 6 cars on display on the station forecourt during the day, which added to the period atmosphere. The evening sausage sizzle and evening train trips were well attended and enjoyed by all.

Thomas the Tank Engine Day was held on October 12th, and once again all passenger figures were smashed. Simon Mead 9/97;

OVERSEAS

BRUNEI

JERUDONG PARK RAILWAY, Brunei Darussalam 457mm gauge

The Jerudong Park Playground is situated on the coast overlooking the South China Sea about 25 km from the capital of Brunei, Bandar Seri Begawan. The Park contains fine gardens, children's playgrounds and a variety of rides ranging from the low-adrenalin type, such as a carousel, to heart-stopping 3-D gyrations and free falls. Although open during the day, the park only comes alive in the evening as the temperature drops and most visitors come in the night as it is the coolest part of the day.

The park contains a light railway constructed and maintained by Keith Watson of Wato Engineering, WA. The gauge is 15 inches and the line is laid with 20 lb rail. The minimum radius is 25 m while on the main line the minimum is 50 m. The length is around 1.6 km roughly in the shape of a "U" with three stations - one at each end and one in the middle - named West, North and East respectively. The terminal stations consist of a passing loop and a single platform. The line terminates with a 6 m turntable at each end. North station is an island platform in the centre of a passing loop. Near East station a triangle branches from the main line; the apex then curves back to the main line to give a reversing loop. Between North and West stations a spur leads to the five-road locomotive/carriage shed with two inspection pits. The line is fully signalled and has two level crossings with automatic boom gates.

Patronage is heavy and quite often one has to wait for the next train as all the seats are occupied. Apart from functioning as a diversion in itself, the railway provides a real transportation service as the park is large and extensive walking is enervating in the high humidity environment.

The locos and rolling stock are from Severn Lamb of Stratford upon Avon, UK. There are two locomotives. These are 2-6-0 (Mogul) types based on the "Rio" pattern of the Denver and Rio Grande narrow gauge locos. They are powered by a Perkins 4-cylinder Diesel engine. Braking is provided by a twin airpipe brake system, while the caboose contains a generator set for carriage lighting.

Construction began on the site of a former rice mill on 18 June 1994 and the railway was up and running on 15 July, the date of the Sultan's birthday. This was quite a feat as the rails did not arrive until 5 July. The railway line utilising sleepers from Sarawak is laid on a bed of crushed rock surrounded by a nylon membrane which stops the whole lot sinking into the clay underneath.

The rolling stock consists of: twelve 16-seat passenger cars, two cabooses, and two construction wagons.

INDONESIA

JAVAN SUGAR MILL RAILWAYS, 600mm & 700mm gauge

Thirty-seven sugar mills are still operating narrow gauge steam locomotives, of which there are more than 150 operating, and more than 250 out of use. There are also as many as 350 diesel locomotives. Some steam locomotives are now being exported for preservation.

Antiquated infrastructure, land shortages, and the uneconomic nature of the local industry in Java means that many mills are threatened by closure, with new sugar mills likely to be established on the outer islands.

MEETINGS

MELBOURNE: Video Night

The much travelled John McCutchan will be showing some of his video collection covering Zimbabwe, India, and Tasmania. Peter Evans will again be assisting with his high quality equipment. It will be an interesting night so be sure not to miss it.

LOCATION: Asburton Uniting Church Hall, Ashburn Grove, Ashburton.

DATE: Thursday 11 December at 8.00 pm

SYDNEY: Next meeting in February 1998.

ADELAIDE: Contact Arnold Lockyer for details. Phone: 08 296 9488

LOCATION: 150 First Avenue, Royston Park.

DATE: Thursday 4 December at 8.00 pm
